CE'REA (Κερέα, Steph. B. *s. v.* Βήνη; Suid. *s. v.* Ῥιανός: *Eth.* Κερεάτης, Polyb. iv. 53. § 6), a town of Crete, which from its mention by Polybius (*l. c.*), and from a coin with the epigraph KEPAITAN, and presenting the same *type* as those of Polyrrhenia, has been inferred to have been in the neighbourhood of that town. (Eckhel, vol. ii. p. 306; Hoeck, *Kreta*, vol. i. p. 392.) [E. B. J.]

CE'REAE, a place in Asia Minor, fixed by the Table on the road between Amastris (or Mastrum, as it appears in the Table), and Sinope. The Table places Tyca 20 miles east of Amastris, and Cereae 15 miles east of Tyca. The place seems to be unknown. [G. L.]

CEREATAE (Κερεάτε, Strab.; Κιββαιᾶται, Plut.: *Eth.* Cereatinus), a town of Latium, mentioned by Strabo (v. p. 238) among those which lay on the left of the Via Latina, between Anagnia and Sora. There is no doubt that it is the same place called by Plutarch Cirrhaeatae, which was the birth-place of C. Marius. (Plut. *Mar.* 3.) He terms it a village in the territory of Arpinum; it appears to have been subsequently erected into a separate municipium, probably by Marius himself, who seems to have settled there a body of his relations and dependents. It subsequently received a fresh body of colonists from Drusus, the stepson of Augustus. Hence the "Cereatini Mariani" appear among the Municipia of Latium in the time of Pliny. (Plin. iii. 5. s. 9; Lib. Colon. p. 233; Zumpt, *de Colon.* p. 361.) The passage of Strabo affords the only clue to its position; but an inscription bearing the name of the Cereatini Mariani has been discovered at the ancient monastery of *Casa Mara* or *Casamari*, about half way between Verulae and Arpinum, and 3 miles W. of the Liris. It is thus rendered probable that this convent (which is built on ancient foundations) occupies the site of Cereatae, and retains in its name some trace of that of Marius. (*Bull. d. Inst. Arch.* 1851, p. 11.) We learn from another inscription that there was a branch of the Latin way which communicated directly with Arpinum and Sora, passing apparently by Cereatae. (*Ibid.* p. 13.) [E. H. B.]

CEREBELLIACA (Mutatio Cerebelliaca), a station in Gallia, placed in the Jerusalem Itin., between Valentia (*Valence*) and Mansio Augusta (*Aoust*). The Itin. makes it xii. M. P. from Valentia to Cerebelliaca, and x. from Cerebelliaca to Augusta. The Antonine Itin. makes the same distance between Valentia and Augusta, but omits Cerebelliaca. The site can only be guessed at. D'Anville supposes that it may be *Chabeuil*, but adds that this place is nearer *Valence* than *Aoust*. Walckenaer names a place *Les Chaberles Montoison*, as the site of Cerebelliaca. [G. L.]

CERESSUS (Κερησσός), a strong fortress in Boeotia, in the neighbourhood of, and belonging to Thespiae. The inhabitants of Ceressus retreated to this fortress after the battle of Leuctra. It was probably situated at *Paleopanaghía*. (Paus. ix. 14. § 2; Leake, *Northern Greece*, vol. ii. pp. 490, 450.)

CE'RESUS. [IACCETANI.]

CERE'TAPA (τὰ Κερέταπα: *Eth.* Κερεταπεύς), a town of Phrygia Pacatiana. The Ethnic name is known from the coins, which also show that there was near it a river or fountain Aulindenus. The place had also the name Diocaesarea. Some geographers fix it near Colossae. [G. L.]

CERFE'NNIA, a town of the Marsi, not mentioned by Pliny or the other geographers, but placed by the Itineraries on the Via Valeria, 13 miles from Alba Fucensis, and 17 from Corfinium. Its site is fixed by Holstenius at the foot of the hill on which stands the modern village of *Coll' Armeno*, where an old church of *Sta Felicità* still bears in ecclesiastical records the adjunct *in Cerfenna*. It was at the foot of the remarkable pass over the Apennines called in the Tabula the Mons Imeus (now the *Forca Caruso*), which led from thence to Corfinium. From an inscription published by Holstenius (Orell. *Inscr.* 711) we learn that this part of the Via Valeria was first constructed, or at least rendered passable for carriages, by the emperor Claudius, who continued it from Cerfennia to the Adriatic at the mouth of the Aternus. (Itin. Ant. p. 309; Tab. Peut.; Holsten. *Not. in Cluv.* pp. 153, 154; D'Anville, *Anal. Géogr. de l'Italie*, p. 175; Kramer, *Fuciner See*, pp. 60, 61.) For the discussion of the distances along this route, see VIA VALERIA. [E. H. B.]

CERGE (Κέργη), a place in Mysia, mentioned by Hierocles, quoted by Forbiger, who suggests that the name ought to be Certe, as there is a place *Kerteslek*, on the Rhyndacus, where, he says, that there are ruins; but Hamilton (*Lond. Geog. Journ.* vii. 35), who was at the place, does not mention ruins. [G. L.]

CERILLAE, or CERILLI (Κήριλλοι, Strab.; CERILLAE, Sil. Ital. viii. 581), a town of Bruttium, on the coast of the Tyrrhenian Sea, a few miles S. of the river Laus. Silius Italicus tells us (*l. c.*) that it was laid waste by Hannibal during the Second Punic War, and probably never recovered, as its name is not found either in Pliny or Ptolemy, and is merely incidentally noticed by Strabo (vi. p. 255) as a small place near Laus. It is also found under the slightly corrupted form Cerelis in the Tab. Peut., which places it 8 miles S. of the river Laus; and the name is still retained by the village of *Cirella Vecchia*, about 5 miles from that river. (Barr, *de Sit. Calabr.* p. 53; Romanelli, vol. i. p. 23.) Strabo gives the distance from thence across the isthmus of the Bruttian peninsula to the nearest point of the Tarentine Gulf in the territory of Thurium, at 300 stadia, or 30 G. miles, which is almost precisely correct. [E. H. B.]

CERINTHUS (Κήρινθος: *Eth.* Κηρίνθιος), a town upon the north-eastern coast of Euboea, and near the small river Budorus, said to have been founded by the Athenian Cothus. It is mentioned by Homer, and was still extant in the time of Strabo, who speaks of it as a small place. (Hom. *Il.* ii. 538; Scymn. Ch. 576; Strab. x. p. 446; Apoll. Rhod. i. 79; Ptol. iii. 15. § 25; Plin. iv. 12. s. 21.)

CERNE (Κέρνη), an island of the Atlantic, off the W. coast of Africa, discovered and colonized in the voyage of Hanno, and from that time the great emporium for the Carthaginian trade with W. Africa.

It lay in a bay, 3 days' voyage S. and E. of the river LIXUS; was about 5 stadia in circuit; and was reckoned by Hanno as far from the Pillars of Hercules as the Pillars were from Carthage; and as being in a straight line with Carthage (*κατ' εὐθὺ κεῖται Καρχηδόνος*), by which he seems to mean on the same meridian, falling into the error, afterwards repeated by Ptolemy, of making the W. coast of Africa to end E. of S. instead of W. of S. (Hanno, p. 3.) Scylax places it near the river Xion (which no other writer mentions: it seems to be the Lixus of Hanno and others), 7 days' voyage from the promontory SOLOEIS, and 12 days' voyage from the Straits; he adds that the sea was unnavigable beyond it on account of the shoals and mud and seaweed (but Hanno advanced much further); and he proceeds to describe the trade carried on there by the Phoenicians with the Ethiopians. (Scylax, *Peripl.* pp. 53—55.) Dionysius Periegetes places it at the S. extremity of Aethiopia (217—219):—

> Ἐν δὲ μυχοῖσι
> Βόσκοντ' ἠπείροιο πανύστατοι Αἰθιοπῆες,
> αὐτῷ ἐπ' Ὠκεανῷ πυμάτης παρὰ τέμπεα Κέρνης.

Polybius placed the island at the extreme S. of Mauretania, over against M. Atlas, one M. P. from the shore. (Plin. vi. 31. s. 36, comp. x. 8. s. 9.) Ptolemy mentions it as one of the islands adjacent to Libya, in the W. Ocean, in 5° long. and 23° 40′ N. lat., 40′ N. of the mouth of his river SUBUS. (Ptol. iv. 6. § 33; comp. § 5.) Diodorus, in his mythical narrative of the war of the Amazons of the lake Tritonis against the Atlanteans, mentions Cerne as an island and city of the latter, and as taken with immense slaughter by the former (Diod. iii. 54; comp. Palaephat. 32). Strabo only mentions Cerne in order to ridicule Eratosthenes for believing in its existence. (Strab. i. p. 47.)

The position of Cerne has been much discussed by modern geographers; and, indeed, the geography of Hanno's voyage turns very much upon it. [LIBYA.] The extreme views are those of Gosselin and Rennell. The former, who carries the whole voyage of Hanno no further S. than *C. Nun*, in about 28° N. lat., identifies Cerne with *Fedallah*, on the coast of *Fez*, in about 33° 40′ N. lat., which is pretty certainly too far N. Major Rennell places it as far S. as *Arguin*, a little S. of the southern *C. Blanco*, in about 20° 5′ N. lat. Heeren, Mannert, and others, adopt the intermediate position of *Agadir*, or *Santa Cruz*, on the coast of *Marocco*, just below *C. Ghir*, the termination of the main chain of the Atlas, in about 30° 20′ N. lat. A sound decision is hardly possible; but, on the whole, the weight of evidence seems in favour of Rennell's view. (Rennell, *Geography of Herodotus*, sect. 26, vol. ii. pp. 415, 416, 419—423; Heeren, *Researches, &c., African Nations*, vol. i. app. v. pp. 497—500.) [P. S.]

CERO'NES (*Κέρωνες*), in Britain, mentioned by Ptolemy (ii. 3. § 11), as lying next to the Epidii, and to the west of the Creones; the Epidii being to the east of the Promontory Epidium (= *Mull of Cantyre*). Parts of *Dumbarton* and *Argyleshire* are the likeliest modern equivalents. [R. G. L.]

CERRETA'NI (*Κερρῆτανοί*, Strab. iii. p. 162; Ath. xiv. p. 657; *Κερρῖτανοί*, Ptol. ii. 6. § 69), a small people of Hispania Tarraconensis, in the valleys on the S. side of the Pyrenees, especially the upper valley of the river SICORIS (*Segre*), which still retains the name of *Cerdagne*. They were of Iberian race, and were celebrated for the curing of hams, which rivalled those of Cantabria, and brought them large profits. (Strab., Ath. *ll. cc.*; Mart. xiii. 54; Sil. Ital. iii. 358.) They were situated W. of the AUSETANI and N. of the ILERGETES (Ptol.). In Pliny's time, they were divided into the Juliani and Augustani (Plin. iii. 3. s. 4). The only city mentioned as in their country (except perhaps the Brachyle of Stephanus Byz. *s. v.* Βραχύλη) is Julia Libyca (*Ἰουλία Λίβυκα*), near *Puigcerda*. (Marc. *Hisp.* p. 59; Florez, *Esp. S.* vol. v. p. 10, Append. vol. xxiv. p. 27; Ukert, vol. ii. pt. i. p. 427.) [P. S.]

CERSUS (*Κέρσος*, Xen. *Anab.* i. 4. § 4). [AMANUS, p. 116.]

CERTIMA. [CELTIBERIA.]

CERTO'NIUM, or CERTO'NUS (*Κερτώνιον, Κερτωνός*), a place in Mysia, only mentioned by Xenophon (*Anab.* vii. 8. § 8), on the road between Adramyttium and Atarneus. It has been conjectured that it may be the Cytonium (*Κυτώνιον*) of Theopompus (Steph. *s. v.* Κυτώνιον). But Cytonium was between Mysia and Lydia; and Xenophon's Certonus is in Mysia. [G. L.]

CERVA'RIA (*Cervera*), a place in Gallia close to the eastern termination of the Pyrenees, or as Mela (ii. 5) describes it, according to the text of Vossius, "between the promontoria of the Pyrenaeus are Portus Veneris, celebrated for a temple, and Cervaria, the limit of Gallia." It was in the country of the Sordones or Sardones. *Cervera* or *Serbera* is the name of a cape north of Cap *Creux*. At present it is not within the limits of France, but belongs to *Catalonia*. [G. L.]

CERYCEIUM. [BOEOTIA, p. 414, a.]

CERYNEIA (*Κερυνεία*, Scyl.; *Κερυνία, Κερωνία, Κεραυνία*, Ptol. v. 14. § 4; Diod. xiv. 59; *Κορώνεια, Κορώνη*, Steph. B.; *Κυρηνία*, Hierocl.; *Κυρηνεια*, Const. Porph.; *Κυνύρεια*, Nonnus; Corineum, Plin.; Cerinea, *Peut. Tab.*: *Eth.* *Κερυνίτης, Κερονίτης*), a town and port on the N. coast of Cyprus 8 M.P. from Lapethus (*Peut. Tab.*). The harbour, bad and small as it is, must upon so iron a bound coast as that of the E. part of the N. side of Cyprus, have always insured to the position a certain degree of importance. Though little is known of it in antiquity it became famous in the middle ages. (Wilken, *die Kreuzz*, vol. vi. p. 542.) It is now called by the Italians *Cerine*, and by the Turks *Ghirne*. On the W. side of the town are some catacombs, the only remains of ancient Cerynia. (Leake, *Asia Minor*, p. 118; Mariti, *Viaggi*, vol. i. p. 116; Engel, *Kypros*, vol. i. p. 80.) [E. B. J.]

CERYNEIA (*Κερύνεια*, also *Κερυνία, Κεραυνία, Κεραύνεια*, &c.: *Eth.* *Κερυνεύς*; respecting the orthography, see Schweigh. *ad Pol.* ii. 41; Wesseling, *ad Diod.* xv. 48; and Groskurd, *ad Strab.* vol. ii. p. 110: the two former adopt the form *Κερύνεια*, the latter *Κεραυνία*), a town of Achaia, was not originally one of the 12 Achaean cities, though it afterwards became so, succeeding to the place of Aegae. Its population was increased by a large body of Mycenaeans, when the latter abandoned their city to the Argives in 468. Ceryneia is mentioned as a member of the League on its revival in B. C. 280; and one of its citizens, Marcus, was chosen in 255 as the first sole General of the League. In the time of Strabo, Ceryneia was dependent upon Aegium. It was situated inland upon a lofty height, W. of the river Cerynites (*Bokhusia*), and a little S. of Helice. Its ruins have been discovered on the height, which rises above the left bank of the Cerynites, just where it issues from the mountains into the plain. (Pol. ii. 41, 43; Paus. vii. 6. § 1, vii. 25. § 5; Strab.

p. 387; Boblaye, *Recherches, &c.*, p. 25; Leake, *Peloponnesiaca*, p. 388.) Theophrastus stated that the wine of Ceryneia produced abortion. (Theophr. *Hist. Plant.* ix. 20; comp. Athen. p. 31; Aelian, *V. H.* xiii. 6.)

CERYNITES. [ACHAIA, p. 13, b.]

CESA'DA. [AREVACAE.]

CESERO or CESSERO, a town of Gallia Narbonensis, in the territory of the Volcae Tectosages (Ptol. ii. 3). The Itin. and the Table fix its position on the great Roman road from Arelate (*Arles*) to Narbo (*Narbonne*). The distance from Cessero to Baeterrae (*Béziers*) is 12 M. P., and the site of Cessero corresponds to *St. Tiberi* on the river *Hérault*. D'Anville shows that the monastery of *St. Tiberi* is called Cesarion in a document of A. D. 867. As the place was on the river, this explains the fact of its being named in the Antonine Itin. "Araura sive Cessero." [G. L.]

CESTRINE (Κεστρίνη, Thuc. Paus.; Κεστρινία, Steph. B. *s. v.* Καμμανία; Κεστρία, Steph. B. *s. v.* Τροΐα), a district of Epeirus in the south of Chaonia, separated from Thesprotia by the river Thyamis. (Thuc. i. 46.) It is said to have received its name from Cestrinus, son of Helenus and Andromache, having been previously called Cammania. (Paus. i. 11. § 1, ii. 23. § 6; Steph. B. *s. v.* Καμμανία.) The principal town of this district is called Cestria by Pliny (iv. 1), but its more usual name appears to have been Ilium or Troja, in memory of the Trojan colony of Helenus. (Steph. B. *s. v.* Τροΐα.) The remains of this town are still visible at the spot called *Paleá Venetia*, near the town of *Filiátes*. In the neighbourhood are those fertile pastures, which were celebrated in ancient times for the Cestrinic oxen. (Hesych. *s. v.* Κεστρινικοὶ Βοές; Schol. *ad Aristoph. Pac.* 924.) The inhabitants of the district were called Κεστρηνοί by the poet Rhianus (Steph. B. *s. v.* Χαῦνοι). (Leake, *Northern Greece*, vol. iv. pp. 73, 175.)

CESTRUS (Κέστρος), a river of Pamphylia, which rises in the mountains of Selge (Strab. p. 571). The course of the Cestrus is between that of the Catarrhactes and of the Eurymedon; and it is east of the Catarrhactes. It was navigable up to Perge, 60 stadia from its mouth (p. 667). The river is also mentioned by Mela as a navigable river (i. 14). The Cestrus is 300 ft. wide at the mouth, and 15 ft. deep within the bar, which extends across the mouth, and "so shallow as to be impassable to boats that draw more than one foot of water." The swell from the sea meeting the stream generally produces a violent surf. (Beaufort, *Karamania*, p. 142.) It must have been more open in ancient times, according to Strabo and Mela. No modern name is given to this river by Beaufort. Leake (*Asia Minor*, p. 194) names it the *Ak-su*, apparently on the authority of Koehler, and Fellows (*Asia Minor*, p. 194) gives it the same name. [G. L.]

CETAEUM. [TAPROBANE.]

CETA'RIA (Κηταρία, Ptol. iii. 1. § 4: *Eth.* Cetarinus), a small town of Sicily, placed by Ptolemy, the only author who affords any clue to its position, on the N. coast of the island between Panormus and Drepanum, but its exact site is uncertain. Fazello and Cluver fix it at the *Torre di Scupello* on the W. side of the Gulf of *Castellamare;* but if the river Bathys of Ptolemy, which he enumerates immediately after it, be the modern *Iati*, or *Fiati*, the position suggested for Cetaria is untenable. Its name was probably derived from its being the seat of tunny fisheries (cetaria); hence we should probably read Cetarini for Citarini in Cicero as well as Pliny. The former tells us it was a very small town, though enjoying its separate municipal rights. Pliny enumerates it among the stipendiary cities of Sicily. (Cic. *Verr.* iii. 43; Plin. iii. 8. s. 14.) [E. H. B.]

CETIS or CITIS. [CALYCADNUS.]

CE'TIUM, a Roman municipium in the extreme east of Noricum, at the foot of mount Cetius, from which it derived its name. (Itin. Ant. p. 234; Gruter, *Inscript.* p. 462, where it is called *Aelia* Cetiensis.) Its exact site is only matter of conjecture. [L. S.]

CE'TIUS MONS (Κήτιον ὄρος: *Kahlenberg*), a mountain of Noricum on the borders of Upper Pannonia (Ptol. ii. 14. § 1, 15. § 1), extending from Aemona to the Danube, and terminating on the west of Vindobona. [L. S.]

CE'TIUS (Κήτιον), a branch of the Caicus, a river of Mysia. Pliny (v. 30) says "Pergamum, which the Selinus flows through, Cetius flows by, descending from Mount Pindasus." Strabo (p. 616) mentions a mountain torrent Cetion, which rises in the Eleatis, and falls into another like torrent, then into another, and finally into the Caicus. Some maps make this river flow from the north, and join the Caicus on the right bank; but Strabo's river must fall into the Caicus on the left bank. It may have given name to the Ceteii (Κητεῖοι), though Strabo professes not to know who the Ceteii were, nor to understand the verse of the Odyssey (xi. 521) where they are mentioned. [G. L.]

CETOBRI'GA. [CAETOBRIX.]

CEUTRONES, a people mentioned by Caesar (*B. G.* v. 39) as subject to the Nervii. They are not mentioned by any other writer, and their position is unknown. [G. L.]

CEVELUM, a place in North Gallia, according to the Table, on the road between Noviomagus (*Nymegen*) and Atuaca, that is Aduatuca (*Tongern*). It is placed between Noviomagus and Blariacum (*Blerick*), both well known positions. D'Anville supposes that the position of Cevelum may be *Kuik* on the *Maas*, though he admits that the distance from *Nymegen* is twice as much as the Table gives. Walckenaer selects *Clevesburg* as the spot. [G. L.]

CEVENNA. [CEBENNA.]

CHA'BALA (Χαβάλα, Ptol. v. 12. § 6), a city of Albania, evidently the same which Pliny calls Cabalaca, and makes the capital of the country. [ALBANIA.]

CHABO'RAS (Χαβώρας, Ptol. v. 18. § 3; Plin. xxx. 3; CHABURA, Procop. *B. P.* ii. 5; ABORRHAS, Ἀβόρρας, Strab. xvi. p. 747; Zosim. iii. 13; Amm. Marc. xiv. 3, xxiii. 5; ABURAS, Ἄβουρας, Isid. Char. p. 4), a large river of Mesopotamia which rises in M. Masius, about 40 miles from Nisibis, and flows into the Euphrates at Circesium (*Kerkesiah*). Its present name is *Khabúr*. There is no doubt, that though differently spelt, the names all represent the same river, being only dialectical variations, or changes from the use of different aspirates. Procop. (*l. c.*) speaks of it as a river of importance, and Ammianus states that Julianus crossed it "per navalem Aborae pontem." Strabo describes it as near the town of Anthemusia. Bochart conjectured that the Chaboras is the same as the Araxes of Xenophon (*Anab.* i. 4. § 19); but though we have stated elsewhere that this is probable [ARAXES, No. 4], we are disposed, upon reconsideration, to reject the conjecture, since the

distance between Thapsacus, where Cyrus crossed the Euphrates, and this Araxes, is much greater than between Thapsacus and the river Chaboras.

The Chaboras is fed by several smaller streams, the names of which are mentioned in the later classical writers. These are, the SCIRTUS (Procop. *de Aedif.* ii. 7), the CORDES (Ibid. ii. 2), and the MYGDONIUS (Julian. *Or.* i. p. 27).

Ptolemy (v. 18. § 6) mentions a town called CHABORA (Χαβώρα), on the Euphrates, which he places near Nicephorion, and which probably derives its name from the river, and Simocat. (iv. 10) mentions Ἀβορέων φρούριον, which is, as certainly, the same place. [V.]

CHADI'SIUS (Χαδίσιος) or CHADISIA (Plin. vi. 3), a river of Pontus. There was also a town Chadisia (Χαδισία: *Eth.* Χαδίσιος). Hecataeus, quoted by Stephanus (*s. v.* Χαδισία), speaks of Chadisia as a city of the Leucosyri, that is, of the Cappadocians; and he says, "the plain Themiscyra extends from Chadisia to the Thermodon." Menippus, in his Periplus of the two Ponti, also quoted by Stephanus, says: "from the Lycastus to the village and river Chadisius is 150 stadia, and from the Chadisius to the river Iris 100 stadia." The Lycastus is 20 stadia east of Amisus (*Samsun*), and Hamilton (*Researches, &c.* vol. i. p. 288) identifies it with the *Mers Irmak*, a river between two and three miles east of the Acropolis of Amisus. The Chadisius cannot be certainly identified, for the distance from the Lycastus to the Chadisius, according to Arrian, is only 40 stadia. The whole distance from Amisus to the Iris is 270 stadia, according to Marcian, who seems to have followed Menippus, but only 160 according to Arrian. [G. L.]

CHAERONEIA (Χαιρώνεια: *Eth.* Χαιρωνεύς, fem. Χαιρωνίς: *Adj.* Χαιρωνικός: *Kápurna*), a town of Boeotia, situated near the Cephissus, upon the borders of Phocis. The town itself does not appear to have been of much importance; but it has obtained great celebrity in consequence of the battles which were fought in its neighbourhood. Its position naturally rendered it the scene of military operations, since it stood in a small plain, which commanded the entrance from Phocis into Boeotia, and which accordingly would be occupied by an army desirous of protecting Boeotia from an invading force. Chaeroneia was situated at the head of the plain, shut in by a high projecting rock, which formed, in ancient times, the citadel of the town, and was called Petrachus or Petrochus (Πέτραχος, Paus. ix. 41. § 6; Πέτρωχος, Plut. *Sull.* 17). The town lay at the foot of the hill, and is said to have derived its name from Chaeron, who, according to the statement of Plutarch, built it towards the east, whereas it had previously faced the west. (Paus. ix. 40. § 5; Steph. B. *s. v.*; Plut. *de Curiosit.* 1.)

Chaeroneia is not mentioned by Homer; but by some of the ancient writers it was supposed to be the same town as the Boeotian Arne. (Hom. *Il.* ii. 507.) [ARNE, No. 2.] In the historical period it was dependent upon Orchomenus (Thuc. iv. 76). It is first mentioned in B. C. 447. Chaeroneia had previously been in the hands of the party favourable to the Athenians; but having been seized by the opposite party, Tolmides, at the head of a small Athenian force, marched against it. He succeeded in taking the town, but was shortly afterwards defeated by the Boeotians at Cnoneia, and fell in the battle. In consequence of this battle, the Athenians lost the supremacy which they had for a short time exercised in Boeotia. (Thuc. i. 113; Diod. xii. 6.) In B. C. 424 a plot was formed to betray the town to the Athenians, but the project was betrayed, and the place was occupied by a strong Boeotian force. (Thuc. iv. 75, 89.) In the Phocian war Chaeroneia was unsuccessfully besieged by Onomarchus, the Phocian leader, but it was afterwards taken by his son Phalaecus. (Diod. xvi. 33, 39.)

A celebrated battle was fought at Chaeroneia on the 7th of August, B. C. 338, in which Philip, by defeating the united forces of the Athenians and Boeotians, crushed the liberties of Greece. Of the details of this battle we have no account, but an interesting memorial of it still remains. We learn from Pausanias (ix. 40. § 10) and Strabo (ix. p. 414) that the sepulchre of the Thebans who fell in the battle, was near Chaeroneia; and the former writer states that this sepulchre was surmounted by a lion, as an emblem of the spirit of the Thebans. The site of the monument is marked by a tumulus about a mile, or a little more, from the khan of *Kápurna*, on the right side of the road towards Orchomenus; but when the spot was visited by Leake, Dodwell and Gell, the lion had completely disappeared. A few years ago, however, the mound of earth was excavated, and a colossal lion discovered, deeply imbedded in its interior. "This noble piece of sculpture, though now strewed in detached masses about the sides and interior of the excavation, may still be said to exist nearly in its original integrity. It is evident, from the appearance of the fragments, that it was composed from the first of more than one block, although not certainly of so many as its remains now exhibit. . . . This lion may, upon the whole, be pronounced the most interesting sepulchral monument in Greece. It is the only one dating from the better days of Hellas — with the exception perhaps of the tumulus of Marathon — the identity of which is beyond dispute." (Mure.)

The third great battle fought at Chaeroneia was the one in which Sulla defeated the generals of Mithridates in B. C. 86. Of this engagement a long account is given by Plutarch, probably taken almost verbatim from the commentaries of Sulla. (Plut. *Sull.* 17, seq.) The narrative of Plutarch is illustrated by Col. Leake with his usual accuracy and sagacity. Mount Thurium, called in the time of Plutarch, Orthophagium, the summit of which was seized by Sulla, is supposed by Leake to be the highest point of the hills behind Chaeroneia; and the torrent Morius, below Mount Thurium, is probably the rivulet which joins the left bank of the Cephissus, and which separates Mt. Hedylium from Mt. Acontium.

Chaeroneia continued to exist under the Roman empire, and is memorable at that period as the birthplace of Plutarch, who spent the later years of his life in his native town. In the time of Pausanias Chaeroneia was noted for the manufacture of perfumed oils, extracted from flowers, which were used as a remedy against pain. (Paus. ix. 41. § 6.)

Chaeroneia stood upon the site of the modern village of *Kápurna*. There are not many remains of the ancient city upon the plain; but there are some ruins of the citadel upon the projecting rock already described; and on the face of this rock, fronting the plain, are traces of the ancient theatre. In the church of the Panaghía, in the village, are several remains of ancient art, and inscriptions. From the latter we learn that Serapis was worshipped in the

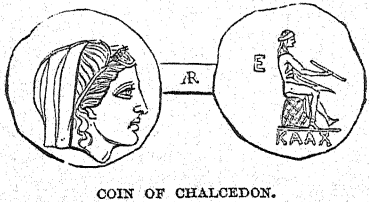
town. Pausanias does not mention the temple of this deity; but he states that the principal object of veneration in his time was the sceptre of Zeus, once borne by Agamemnon, and which was considered to be the undoubted work of the god Hephaestus. At the foot of the theatre there rises a small torrent, which flows into the Cephissus. It was called in ancient times Haemon or Thermodon, and its water was dyed by the blood of the Thebans and Boeotians in their memorable defeat by Philip. (Plut. *Dem.* 19; Leake, *Northern Greece*, vol. ii. pp. 112, seq., 192, seq.; Mure, *Tour in Greece*, vol. i. p. 212, seq.; Ulrichs, *Reisen in Griechenland*, p. 158, seq.)

CHALA (Χάλα, Isid. Char. p. 5), a town in the eastern part of ancient Assyria, probably the capital of the district called CHALONITIS, a name which is preserved in that of the river of *Holwan* (Χαλωνῖτις, Strab. xi. pp. 529, 736; Dionys. Perieg. 1015; Plin. vi. 26. s. 30; Καλωνῖτις, Polyb. v. 54). Chala is within a short distance of the M. Zagros. Diodorus (xvii. 110) relates that Xerxes, on his return from Greece, placed a colony of Boeotians in this neighbourhood, which was called from their native town CELONAE (Κέλωναι). They were most likely placed along the banks of the *Hŏlwan* river. Chala has been sometimes connected with Colacene, but its position does not answer to this identification. Pliny erred in placing the district Chalonitis on the Tigris, as it was clearly to the E. close to the mountains. [V.]

CHALAEUM (Χάλαιον; in Ptol. iii. 15. § 3, Χαλεών: *Eth.* Χαλαῖος), a town upon the coast of the Locri Ozolae, near the borders of Phocis. Leake places it at *Larnáki*. Pliny erroneously calls it a town of Phocis, and says that it was situated seven miles from Delphi: it is not improbable that he confounded it with Cirrha, which is about that distance from Delphi. (Thuc. iii. 101; Hecataeus, *ap. Steph. s. v.*; Plin. iv. 3. s. 4; Leake, *Northern Greece*, vol. ii. p. 594.)

CHALASTRA (Χαλάστρα, Strab. vii. p. 330; Χαλέστρη, Herod. vii. 123; Χαλαίστρα, Plut. *Alex.* 49; Plin. iv. 10. § 17, xxxi. 10. § 46), a town of Mygdonia in Macedonia, situated on the Thermaean gulf at the right of the mouth of the Axius, which belonged to the Thracians and possessed a harbour. (Steph. B. *s. v.*) Perseus, king of Macedonia, barbarously put all the male inhabitants to death. (Diod. *Excerpt.* 308.) Afterwards the population, with that of other towns of Mygdonia, was absorbed in great measure by Thessalonica on its foundation by Cassander. It cannot, therefore, be expected that many remains should be existing. The site may, however, be considered to be at or near the modern *Kulakiá*. (Tafel, *Thessalon.* p. 277; Leake, *Northern Greece*, vol. iii. p. 450.) [E. B. J.]

CHALCEDON (Χαλκηδών: *Eth.* Χαλκηδόνιος or Χαλκιδεύς), "a city of Bithynia, at the entrance of the Pontus, opposite to Byzantium," as Stephanus (*s. v.* Χαλκηδών) describes it; and a colony of the Megareis. (Thuc. iv. 75.)



The tract about Chalcedon was called Chalcedonia. (Herod. iv. 85.) According to Menippus, the distance along the left-hand coast from the temple of Zeus Urius and the mouth of the Pontus to Chalcedon was 120 stadia. All the coins of Chalcedon have the name written Καλχήδων, and this is also the way in which the name is written in the best MSS. of Herodotus, Xenophon, and other writers, by whom the place is mentioned. The distance from Chalcedon to Byzantium was reckoned seven stadia (Plin. v. 32), or as it is stated by Pliny elsewhere (ix. 15), one Roman mile, which is eight stadia. Polybius (iv. 39) makes the distance between Chalcedon and Byzantium 14 stadia; which is much nearer the mark. But it is difficult to say from what points these different measurements were made. The distance from *Scutari* (Chrysopolis) to the Seraglio point in Constantinople (according to a survey in the Hydrographical office of the Admiralty) is nearly one nautical mile. In the same chart a place *Caledonia* is marked, but probaby the indication is not worth much. Chalcedon, however, must have been at least two miles south of *Scutari*, perhaps more; and the distance from Chalcedon to the nearest point of the European shore is greater even than that which Polybius gives. Chrysopolis, which Strabo calls a village, and which was in the Chalcedonia (Xenophon, *Anab.* vi. 6, 38), was really at the entrance of the Bosporus on the side of the Propontis, but Chalcedon was not. It is stated that the modern Greeks give to the site of Chalcedon the name *Chalkedon*, and the Turks call it *Kadi-Kioi*. The position of Chalcedon was not so favourable as that of the opposite city of Byzantium, in the opinion of the Persian Megabazus (Herod. iv. 144), who is reported to have said that the founders of Chalcedon must have been blind, for Chalcedon was settled seventeen years before Byzantium; and the settlers, we must suppose, had the choice of the two places. It was at the mouth of a small river Chalcedon (Eustathius ad Dionys. Perieg. v. 803) or Chalcis. Pliny (v. 32) states that Chalcedon was first named Procerastis, a name which may be derived from a point of land near it: then it was named Colpusa, from the form of the harbour probably; and finally Caecorum Oppidum, or the town of the blind. The story in Herodotus does not tell us why Megabazus condemned the judgment of the founders of Chalcedon. Strabo (p. 320) observes that the shoals of the pelamys, which pass from the Euxine through the Bosporus, are frightened from the shore of Chalcedon by a projecting white rock to the opposite side, and so are carried by the stream to Byzantium, the people of which place derive a great profit from them. He also reports a story that Apollo advised the founders of Byzantium to choose a position opposite to the blind; the blind being the settlers from Megara, who chose Chalcedon as the site of their city, when there was a better place opposite. Pliny (ix. 15) has a like story about the pelamys being frightened from the Asiatic shore; and Tacitus (*Ann.* xii. 63) has the same story as Strabo. The remarks of Polybius on the position of Byzantium and Chalcedon are in his fourth book (c. 39, &c.).

Chalcedon, however, was a place of considerable trade, and a flourishing town. It contained many temples, and one of Apollo, which had an oracle. Strabo reckons his distances along the coast of Bithynia from the temple of the Chalcedonii (p. 543, and p. 546). When Darius had his bridge of boats made for crossing over to Europe in his Scythian expedition, the architect constructed it, as Herodotus supposes, half way between Byzantium and the temple at the entrance of the Pontus, and on the Asiatic side it was within the territory of Chalcedon (Herod. iv. 85, 87). But the Chalcedonia extended to the Euxine, if the temple of the Chalcedonii of Strabo (pp. 319, 563) is the temple of Zeus Urius as it seems to be. The territory of Chalcedon therefore occupied the Asiatic side of the Bosporus. Strabo, after

speaking of Chalcedon and Chrysopolis and the temple of the Chalcedonii, adds, "and the country has, a little above the sea, the fountain Azaritia, which contains small crocodiles: then follows the sea-coast of the Chalcedonii, named the bay of Astaeus, a part of the Propontis." According to this the Chalcedonii had once the bay of Astacus, which is very unlikely, for there was Astacus, a colony of the Megareis and of the Athenians, in this bay. The passage of Strabo is probably corrupt, and might easily be corrected. It is not likely at any rate that they had more than the north side of the bay of Astacus. Chalcedon was taken by the Persian Otanes, after the Scythian expedition of Darius (v. 26). When Lamachus led his men from the river Calex in Bithynia (B. C. 424), where he lost his ships by a flood in the river, he came to Chalcedon (Thucyd iv. 75), which must then have been on friendly terms with the Athenians. It afterwards changed sides, and received a Lacedaemonian Harmost (Plut. *Alcib.* c. 29); but the Athenians soon recovered it. However, at the time of the return of the Ten Thousand, it seems to have been again in the possession of the Lacedaemonians (Xenophon, *Anab.* vii. 1, 20). Chalcedon was the birth-place of the philosopher Xenocrates.

Chalcedon was included in the limits of the kingdom of Bithynia, and it came into the possession of the Romans under the testament of Nicomedes, B. C. 74. When Mithridates invaded Bithynia, Cotta, who was the governor at the time, fled to Chalcedon, and all the Romans in the neighbourhood crowded to the place for protection. Mithridates broke the chains that protected the fort, burnt four ships, and towed away the remaining sixty. Three thousand Romans lost their lives in this assault on the city. (Appian. *Mithrid.* 71; Plut. *Lucull.* 8.) Under the empire Chalcedon was made a free city. The situation of Chalcedon exposed it to attack in the decline of the empire. Some barbarians whom Zosimus (i. 34) calls Scythians, plundered it in the reign of Valerian and Gallienus. It was taken by Chosroes the Persian in A. D. 616, and "a Persian camp was maintained above ten years in the presence of Constantinople." (Gibbon, *Decline, &c.* c. 46.) But Chalcedon still existed, and its final destruction is due to the Turks, who used the materials for the mosques and other buildings of Constantinople. Chalcedon, however, seems to have contributed materials for some of the edifices of Constantinople long before the Turks laid their hands on it. (Amm. Marc. xxxi. 1, and the notes of Valesius.)

This place is noted for a General Council, which was held here A. D. 451. [G. L.]

COIN OF CHALCEDON.

CHALCERITIS. [ARETIAS.]

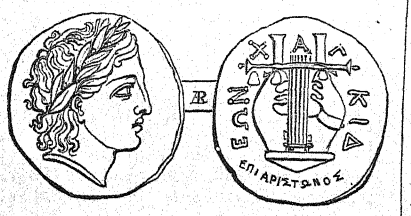
CHALCE'TOR (Χαλκήτωρ: *Eth.* Χαλκήτωρ), a place in Caria. Strabo (p. 636) says that the mountain range of Grion is parallel to Latmus, and extends east from the Milesia through Caria to Euromus and the Chalcetores, that is, the people of Chalcetor. The site of Chalcetor is not ascertained. In another passage (p. 658) Strabo names the town Chalcetor, which some writers have erroneously altered to Chalcetora; but the form Χαλκητόρων (Strab. p. 636) is the Ethnic name (Groskurd, *Transl. of Strabo*, vol. iii. p. 55).

Stephanus has a place Chalcetorium in Crete (*s. v.* Χαλκητόριον); unless we should read Caria for Crete. (See Meineke's ed.) [G. L.]

CHALCIA or CHALCE (Χαλκεία, Χαλκία, Χάλκη: *Eth.* Χαλκίτης and Χαλκαῖος, Steph. *s. v.* Χάλκη: *Chalki*), a small island, distant 80 stadia from Telus and 400 from Carpathus, and about 800 from Astypalaea: it had a small town of the same name, a temple of Apollo and a harbour (Strab. p. 488; Plin. v. 31). Thucydides who mentions the island several times (viii. 41, 44, 55) calls it Chalce. Leon and Diomedon, the Athenian commanders (B. C. 412) after their attack on Rhodes, where the Peloponnesian ships were hauled up, retired to Chalce as a more convenient place than Cos to watch the movements of the enemy's fleet from. Leake (*Asia Minor*, p. 224) mentions an inscription found in Rhodes, which contains the Ethnic name Chalcetes. The island was near the west coast of Rhodes, and probably subject to Rhodes. [G. L.]

CHALCIDEIS. [CHALCITIS, No. 2.]

CHALCI'DICE (ἡ Χαλκιδική, Ptol. iii. 13. § 11; *Eth.* and *Adj.* Χαλκιδεύς), the name applied to the whole of the great peninsula, lying southward of the ridge of Mt. Cissus (*Khortiatzi*), between the Thermaic and Strymonic Gulf. It terminates in three prongs, running out into the Aegaean Sea, called respectively Acte, Sithonia, and Pallene, the first being the most easterly, and the latter the most westerly. The peninsula of Acte, which terminates with Mt. Athos, rising out of the sea precipitously to the height of nearly 6,400 feet, is rugged, and clothed with forests, which leave only a few spots suitable for cultivation. [ATHOS.] The Middle or Sithonian peninsula (Σιθωνία: *Longos*), is also hilly and woody, though in a less degree. The peninsula of Pallene (Παλλήνη: *Kassándhra*), was pre-eminent for its rich and highly cultivated territory. The gulf between Acte and Sithonia was called the Singitic, and that between Sithonia and Pallene the Toronaic or Mecybernaean.



It must be recollected that the original Chalcidice, though the name has been extended in consequence of the influence which the people of the Chalcidic race enjoyed during the meridian period of Grecian history, did not comprehend Crossaea, nor the districts of Acanthus and Stageirus, colonies of Andrus, nor that of Potidaea, a colony of Corinth, nor even Olynthus or the territory around it to the N., which was occupied by a people who had been driven out of Bottiaeis W. of the Lydias in the early times of the Macedonian monarchy.

The principal possession of the Chalcidian settlers from Euboea (Strab. x. p. 447) in the earliest time of their migration, probably in the 7th century B. C., seems to have been the Sithonian headland, with its port and fortress Torone; from thence they extended their power inland, until at length they occupied the whole of Mygdonia to the S. of the ridges which stretched W. from the mountain range at the head of the Singitic gulf (*Nizvoro*) together with Crossaea. Artabazus, on his return from the Hellespont, having reduced Olynthus, together with some other places which had revolted from Xerxes, slew all the Bottiaei who had garrisoned Olynthus, and gave up the place

to the Chalcidians. We find the Bottiaei joined, on two occasions, with the Chalcidians as allies (Thuc. i. 65, ii. 79), and one of their silver coins with the legend Βοττιαίων is precisely similar, both in type and fabric, to those of the Chalcidians, impressed with the head of Apollo and his lyre (comp. Eckhel, vol. ii. p. 70). At the instigation of Perdiccas, the Chalcidians made war upon the Athenians who held Potidaea and other towns in their neighbourhood, and were successful in more than one engagement (Thuc. ii. 79). Brasidas was indebted to their co-operation for his first successes (Thuc. iv. 83), and it was to his expedition into Thrace that the Chalcidian republics owed their final independence. (Thuc. v. 18.) After the Peloponnesian war, in consequence of the complaints of the Apollonians of Chalcidice and Acanthians, the Lacedaemonians sent an army against Olynthus, which, after losing two of its commanders, succeeded in the 4th campaign (B. C. 379) in reducing the city to submission (Xen. *Hell.* v. 8). The history of Chalcidice, after the supremacy which Olynthus obtained over its other towns, follows the fortunes of that city. [OLYNTHUS.]

Ptolemy (*l. c.*) divides the whole peninsula into two parts, Chalcidice and Paralia (for so the word which appears as Paraxia in the printed copies should be read). Paralia contained all the maritime country between the bay of Thessalonica, and Derrhis, the Cape of Sithonia: thus the W. coast of Sithonia was at that time included in Paralia and the E. in Chalcidice, together with Acanthus, the entire peninsula of Acte, and all the coast land in the Strymonic gulf as far N. as Bromiscus, with the exception of Stageira.

An account of the different Chalcidian towns will be found under the separate heads; beginning from the W. they are AENEIA near the cape, which marks the entrance of the inner Thermaic gulf, GIGONUS, ANTIGONEIA and POTIDAEA. Between these towns lay the territory called CROSSAEA. In Pallene were the towns of SAXE, MENDE, SCIONE, THERAMBOS, AEGE, NEAPOLIS, APHYTIS, either wholly or partly colonies from Eretria. In Sithonia were MECYBERNA, SERMYLE, GALEPSUS, TORONE, SARTE, SINGUS, PILORUS, ASSA, all or most of them of Chalcidian origin. At the head of the Toronaic gulf in the interior of Chalcidice lay OLYNTHUS, APOLLONIA, SCOLUS, SPARTOLUS, ANGEIA, MIACORUS or MILCORUS. On the scanty spaces, admitted by the mountain ridge which ends in Athos, were planted some Thracian and Pelasgic settlements of the same inhabitants as those who occupied Lemnos and Imbros, with a mixture of a few Chalcidians, while the inhabitants spoke both Pelasgic and Hellenic. [ATHOS.] Near the narrow isthmus which joins this promontory to Thrace, and along the NW. coast of the Strymonic gulf were the considerable towns of SANE, ACANTHUS, STAGEIRA and ARGILUS, all colonies from Andros, to which may be added STRATONICE, BROMISCUS, and ARETHUSA. (Grote, *Hist. of Greece*, vol. iv. p. 31; Leake, *Trav. in Northern Greece*, vol. iii.; Griesebach, *Reisen*, vol. ii. pp. 6—16.) [E. B. J.]

COIN OF CHALCIDICE IN MACEDONIA.

CHALCI'DICE, a district of Syria. [CHALCIS.]

CHALCIS, in Syria. 1. The chief city of Chalcidice, one of the ten political divisions of N. Syria. (Ptol. v. 15.) It was situated 53 M. P. from Antioch (*Peut. Tab.*) and 18 M.P. from Beroea (*Anton. Itin.*). The Peutinger Tables make it out to be 29 M.P. from the latter place, while Procopius (*B. P.* ii. 12) gives the distance as 84 stadia. Both these statements are incorrect, as *Kinnisrin* is about 12 English miles from Aleppo (Pococke, *Trav.* vol. ii. p. 217; Abú-l-féda, *Tab. Syr.* p. 119.) The Hamath Zobah which was taken by Solomon (2 *Chron.* viii. 3) has been identified with Chalcis (Rosenmüller, *Handbuch der Bibl. Alt.* vol. i. pt. ii. p. 250), and the "salt vale" where David conquered Hadadezer king of Zobah, when he went to recover his border on the Euphrates, is in all probability the lake and marsh of *Jabúl* or *Sabakhah*, which in winter occupies a space to the E. of *Kinnisrin*, extending for about 12 miles, with a breadth varying from 3 to 5 miles. The powerful evaporation of the summer heat causes it to crystallize, and a white coarse-grained salt is formed in large quantities over the whole surface. (Chesney, *Exped. Euphrat.* vol. i. p. 415; Thomson, *Biblioth. Sacr.* vol. v. p. 470; comp. Winer, *Real Wort. Buch*, *s. v. Aram.*) In A. D. 542 the town of Chalcis was taken and plundered by Chosroes (Procop. *l. c.*; Gibbon, *Decl. and Fall*, vol. viii. p. 315; Le Beau, *Bas Empire*, vol. ix. p. 24; comp. vol. iii. p. 54).

2. AD BELUM. Pliny (v. 23. § 19) speaks of a city of this name in the district Chalcidene, which he describes as the most fertile of all Syria. The Chalcis, Χαλκὶς of Strabo (xvi. p. 753), was a city and district subject to Ptolemy, son of Mennaeus, who held besides the city of HELIOPOLIS (*Báalbec*), the plain of Marsyas, and the mountain region of Ituraea. Josephus expressly describes it as under Mount Lebanon (*Antiq.* xiv. 7. § 4, *B. J.* i. 9. § 2). It has been confounded with the Chalcis S. of Aleppo, but the statement of Josephus (comp. *Antiq.* xiv. 3. § 2; Reland, *Palaest.* p. 315) shows that its position must be sought for elsewhere. Ptolemy was succeeded by his son the first Lysanias; whose possessions after his murder by Antony were farmed by Zenodorus. (Joseph. *Antiq.* xv. 10. § 1, *B. J.* i. 20. § 4.) In A. D. 41 Claudius bestowed Chalcis on Herod, a brother of the elder Herod Agrippa. On his death in A.D. 48 his kingdom went to his nephew, the younger Herod Agrippa (*B. J.* ii. 12. § 1). He held it four years, and was then transferred with the title of king to the provinces of Batanaea, Trachonitis, Abilene, and others (*Antiq.* xx. 7. § 1). Afterwards Aristobulus, son of Herod, king of Chalcis, obtained his father's kingdom which had been taken from his cousin Agrippa II., and in A. D. 73 was still dynast of the district (*B. J.* vii. 7. § 1). During the reign of Domitian it appears to have become incorporated in the Roman province, and the city to have received the additional name of Flavia. (Eckhel, vol. iii. p. 263; Marquardt, *Handbuch der Röm. Alter.* p. 181; Noris. *de Epoch. Syro-Mac.* (c. ix. § 3.)

The town of Chalcis was therefore situated somewhere in the *Búkd'a*, probably S. of *Báalbec*. The valley has not yet been examined with reference to the site of this city. It has been suggested that its position may be at or near *Zahle*, in the neighbour-

hood of which at the village of *Heusn Nieha*, are some remarkable remains (comp. Chesney, *Exped. Euphrat.* vol. i. p. 472). Or perhaps at *Majdel Anjar*, where Abú-l-féda (*Tab. Syr.* p. 20) speaks of great ruins of hewn stones. (Robinson, *Biblioth. Sacr.* vol. v. p. 90). [E. B. J.]

CHALCIS (Χαλκίς: *Eth.* Χαλκιδεύς, Chalcidensis). 1. (*Egripo*, *Negropont*), the chief town of Euboea, separated from the opposite coast of Boeotia by the narrow strait of the Euripus, which is at this spot only 40 yards across. The Euripus is here divided into two channels by a rock in the middle of the strait. This rock is at present occupied by a square castle; a stone bridge, 60 or 70 feet in length, connects the Boeotian shore with this castle; and another wooden bridge, about 35 feet long, reaches from the castle to the Euboean coast. In antiquity also, as we shall presently see, a bridge also connected Chalcis with the Boeotian coast. The channel between the Boeotian coast and the rock is very shallow, being not more than three feet in depth; but the channel between the rock and Chalcis is about seven or eight feet in depth. It is in the latter channel that the extraordinary tides take place, which are frequently mentioned by the ancient writers. According to the common account the tide changed seven times in the day, and seven times in the night; but Livy states that there was no regularity in the change, and that the flux and reflux constantly varied, — a phaenomenon which he ascribes to the sudden squalls of wind from the mountains. (Strab. x. p. 403; Mela, ii. 7; Plin. ii. 97; Cic. *de Nat. Deor.* iii. 10; Liv. xxviii. 6.)

An intelligent modern traveller observes that "at times the water runs as much as eight miles an hour, with a fall under the bridge of about 1½ feet; but what is most singular is the fact, that vessels lying 150 yards from the bridge are not in the least affected by this rapid. It remains but a short time in a quiescent state, changing its direction in a few minutes, and almost immediately resuming its velocity, which is generally from four to five miles an hour either way, its greatest rapidity being however always to the southward. The results of three months' observation, in which the above phaenomena were noted, afforded no sufficient data for reducing them to any regularity." (*Penny Cyclopaedia*, vol. x. p. 59.)

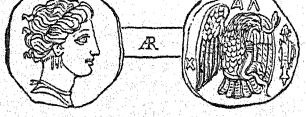
Chalcis was a city of great antiquity, and continued to be an important place from the earliest to the latest times. It is said to have been founded before the Trojan war by an Ionic colony from Athens, under the conduct of Pandorus, the son of Erechtheus. (Strab. x. p. 447; Scymn. Ch. 573.) It is mentioned by Homer. (*Il.* ii. 537.) After the Trojan war Cothus settled in the city another Ionic colony from Athens. (Strab. *l. c.*) Chalcis soon became one of the greatest of the Ionic cities, and at an early period carried on an extensive commerce with almost all parts of the Hellenic world. Its greatness at this early period is attested by the numerous colonies which it planted upon the coasts of Macedonia, Italy, Sicily, and in the islands of the Aegaean. It gave its name to the peninsula of Chalcidice between the Thermaic and Singitic gulfs, in consequence of the large number of cities which it founded in this district. Its first colony, and the earliest of the Greek settlements in the west, was Cumae in Campania, which it is said to have founded as early as B. C. 1050, in conjunction with the Aeolians of Cume and the Eretrians. Rhegium in Italy, and Naxos, Zancle, Tauromenium and other cities in Sicily, are also mentioned as Chalcidian colonies.

During the early period of its history, the government of Chalcis was in the hands of an aristocracy, called Hippobotae (Ἱπποβόται, i. e. the feeders of horses), who corresponded to the Ἱππεῖς in other Grecian states. (Herod. v. 77, vi. 100; Strab. x. p. 447; Plut. *Pericl.* 23; Aelian, *V. H.* vi. 1.) These Hippobotae were probably proprietors of the fertile plain of Lelantum, which lay between Chalcis and Eretria. The possession of this plain was a frequent subject of dispute between these two cities (Strab. x. p. 448), and probably occasioned the war between them at an early period, in which some of the most powerful states of Greece, such as Samos and Miletus, took part. (Thuc. i. 15; Herod. v. 99; Spanheim, ad Callim. *Del.* 289; Hermann, in *Rheinisches Museum*, vol. i. p. 85.)

Soon after the expulsion of the Peisistratidae from Athens, the Chalcidians joined the Boeotians in making war upon the Athenians; but the latter crossed over into Euboea with a great force, defeated the Chalcidians in a decisive battle, and divided the lands of the wealthy Hippobotae among 4000 Athenian citizens as cleruchs B. C. 506. (Her. v. 77.) These settlers, however, abandoned their possessions when the Persians, under Datis and Artaphernes, landed at Eretria. (Herod. vi. 100.) After the Persian wars, Chalcis, with the rest of Euboea, became a tributary of Athens, and continued under her rule, with the exception of a few months, till the downfal of the Athenian empire at the close of the Peloponnesian war. In B. C. 445, Chalcis joined the other Euboeans in their revolt from Athens; but the whole island was speedily reconquered by Pericles, who altered the government of Chalcis by the expulsion of the Hippobotae from the city. (Plut. *Per.* 23.)

In the 21st year of the Peloponnesian war, B. C. 411, Euboea revolted from Athens (Thuc. viii. 95), and on this occasion we first read of the construction of a bridge across the Euripus. Anxious to secure an uninterrupted communication with the Boeotians, the Chalcidians built a mole from either shore, leaving a passage in the centre for only a single ship: and fortifying by towers each side of the opening in the mole. (Diod. xiii. 47.) Chalcis was now independent for a short time; but when the Athenians had recovered a portion of their former power, it again came under their supremacy, together with the other cities in the island. (Diod. xv. 30.) In later times it was successively occupied by the Macedonians, Antiochus, Mithridates, and the Romans. It was a place of great military importance, commanding, as it did, the navigation between the north and south of Greece, and hence was often taken and retaken by the different parties contending for the supremacy of Greece. Chalcis, Corinth, and Demetrias in Thessaly, were called by the last Philip of Macedon the fetters of Greece, which could not possibly be free, as long as these fortresses were in the possession of a foreign power. (Pol. xvii. 11; Liv. xxxii. 37.)

Dicaearchus, a contemporary of Alexander the Great, describes Chalcis as 70 stadia (nearly 9 miles) in circumference, situated upon the slope of a hill, and abounding in gymnasia, temples, theatres, and other public buildings. It was well supplied with water from the fountain Arethusa. [See above, p.



197, b.] The surrounding country was planted with olives. (Dicaearch. *Bios τῆς Ἑλλάδος*, p. 146, ed. Fuhr.) When Alexander crossed over into Asia, the Chalcidians strengthened the fortifications of their city by inclosing within their walls a hill on the Boeotian side, called Canethus, which thus formed a fortified bridge-head. At the same time they fortified the bridge with towers, a wall, and gates. (Strab. x. p. 447.) Canethus, which is also mentioned by Apollonius Rhodius (i. 77), is probably the hill of *Karababá*, which rises to the height of 130 feet immediately above the modern bridge, and is the citadel of the present town.

In the second Punic war, B. C. 207, the Romans, under Sulpicius and Attalus, made an unsuccessful attack upon Chalcis, which was then subject to Philip. (Liv. xxviii. 6.) A few years afterwards, B. C. 192, when the war was resumed with Philip, the Romans surprised Chalcis and slew the inhabitants, but they had not a sufficient force with them to occupy it permanently. (Liv. xxxi. 23.) In the war between the Romans and Aetolians, Chalcis was in alliance with the former (Liv. xxxv. 37—39); but when Antiochus passed over into Greece, at the invitation of the Aetolians, the Chalcidians deserted the Romans, and received this king into their city. During his residence at Chalcis, Antiochus became enamoured of the daughter of one of the principal citizens of the place, and made her his queen. (Liv. xxxv. 50, 51, xxxvi. 11; Pol. xx. 3, 8; Dion Cass. *Fragm.* ex libr. xxxiv. p. 29, ed. Reimar.) Chalcis joined the Achaeans in their last war against the Romans; and their town was in consequence destroyed by Mummius. (Liv. *Epit.* lii.; comp. Pol. xl. 11.)

In the time of Strabo Chalcis was still the principal town of Euboea, and must therefore have been rebuilt after its destruction by Mummius. (Strab. x. p. 448.) Strabo describes the bridge across the Euripus as two plethra, or 200 Greek feet in length, with a tower at either end; and a canal (*σύριγξ*) constructed through the Euripus. (Strab. x. p. 403.) Strabo appears never to have visited the Euripus himself; and it is not improbable that his description refers to the same bridge, or rather mole, of which an account has been preserved by Diodorus (xiii. 47; see above). In this case the *σύριγξ* would be the narrow channel between the mole. (See Groskurd's *Germ. Transl. of Strabo*, vol. ii. p. 149.) Chalcis was one of the towns restored by Justinian, (Procop. *de Aedif.* iv. 3.)

The orator Isaeus and the poet Lycophron were natives of Chalcis, and Aristotle died here.

In the middle ages Chalcis was called Euripus, whence its modern name *'Egripo*. It was for some time in the hands of the Venetians, who called it *Negropont*, probably a corruption of *Egripo* and *ponte*, a bridge. It was taken by the Turks in 1470. It is now the principal, and indeed the only place of importance in the island. There are no remains of the ancient city, with the exception of some fragments of white marble in the walls of houses. (Leake, *Northern Greece*, vol. ii. p. 254, seq.; Stephani, *Reise, &c.*, p. 13.)

COIN OF CHALCIS IN EUBOEA.

2. Also called CHALCEIA, and HYPOCHALCIS (*Χάλκεια*, Pol. v. 94; *Ὑποχαλκίς*, Strab. p. 451; Steph. B. *s.v.*), a town of Aetolia, situated upon the coast, at a short distance E. of the mouth of the Evenus, and at the foot of a mountain of the same name, whence it was called Hypochalcis. Chalcis is one of the 5 Aetolian towns spoken of by Homer, who gives it the epithet of *ἀγχίαλος*, and it continued to be mentioned in the historical period. (Hom. *Il.* ii. 640; Thuc. ii. 83; Pol. v. 94; Strab. pp. 451, 459 460.) There are two great mountains situated between the river *Fidhari* (the Evenus) and the castle of *Rumili* (Antirrhium), of which the western mountain, called *Varassova*, corresponds to Chalcis, and the eastern, called *Kaki-skala*, to Taphiassus. The town of Chalcis appears to have stood in the valley between the two mountains, probably at *Ovrio-kastro*, where there are some remains of an Hellenic fortress. (Leake, *Northern Greece*, vol. i. p. 110.) There was some confusion in the ancient writers respecting the position of mount Chalcis, and Artemidorus, who called it Chalcia, placed it between the Achelous and Pleuron (Strab. p. 460); but this is clearly an error.

3. (*Khaliki*), a town of Epeirus in Mount Pindus, near which the Achelous rises. It is erroneously called by Stephanus a town of Aetolia. (Dionys. Perieg. 496; Steph. B. *s.v.*; Leake, *Northern Greece*, vol. iv. p. 214.)

CHALCITIS (*Χαλκῖτις*). 1. (*Eth.* *Χαλκίτης*: *Khalki* or *Karki*) "an island opposite to Chalcedon with copper mines." (Steph. *s.v.* *Χαλκῖτις*, who cites Artemidorus.) There is a group of small islands called the *Prince's Isles*, in the Propontis, not opposite to Chalcedon, but SE. of that city, and opposite to part of the coast which we may assume to have belonged to Chalcedon. One of these marked *Karki* in a map published by the Hydrographical Office of the Admiralty is Chalcitis. Pliny (v. 32) simply mentions Chalcitis.

2. A tract in Asia Minor in the territory of Erythrae according to Pausanias (vii. 5. § 12), which contained a promontory, in which there were sea baths (as he calls them), the most beneficial to the health of all in Ionia. One of the phylae of Erythrae, the third, derived its name from the Chalcitis.

These inhabitants of the Chalcitis seem to be the Chalcideis of Strabo (p. 644), but the passage of Strabo is not free from difficulty, and is certainly corrupt (see Groskurd's *Transl. of Strabo*, vol. iii. p. 23). The Teii and Clazomenii were on the isthmus, and the Chalcideis next to the Teii, but just within the peninsula on which Erythrae stands. This seems to be Strabo's meaning; and the Chalcideis must have been under the Teii, for Gerae, another place west of Teos, belonged to the Teii. The distance across the isthmus of Erythrae from the Alexandrium and the Chalcideis to a place on the north side of the isthmus, called Hypocremnos, was 50 stadia according to Strabo; but it is more. This Alexandrium was a grove dedicated to Alexander the Great, where games were celebrated by the community of Ionian cities (*ἀπὸ τοῦ κοινοῦ τῶν Ἰώνων*) in honour of Alexander. [G. L.]

CHALCI'TIS. [INDIA.]

CHALCODO'NIUM. [PHERAE.]

CHALDAEA (*Χαλδαία*), in a strict sense, was probably only, what Ptolemy (v. 20. § 3) considered it, a small tract of country, adjoining the deserts of

Arabia, and included in the wider extent of Babylonia. The same view is taken by Strabo (xvi. p. 739), who speaks of one tribe of Chaldaeans (φῦλόν τι τῶν Χαλδαίων), who lived near the Arabians, and on the so-called Persian Sea: this district he considered part of Babylonia (χώρα τῆς Βαβυλωνίας). That this idea prevailed till a late period is clear, since Strabo (xvi. p. 767) calls the marshes near the junction of the Euphrates and Tigris τὰ ἕλη κατὰ Χαλδαίους, and Pliny (vi. 31) Lacus Chaldaici, while the last author in another place extends them almost to the sea, where he states that they were caused by the Eulaeus and the Tigris. In the Etym. Magnum (*s. v.* 'Ασσυρία) is a remarkable notice to the effect that Assyria, which is the same as Babylonia, was first called Εὐφράτις, but afterwards Χαλδαία. From these statements we are justified in believing that at some period of ancient history, there was a district called Chaldaea, in the southern end of Babylonia, near the Persian Gulf and Arabia Deserta, though we have no certain clue to what period of history this name should be assigned. The name probably was lost, on Babylon becoming the great ruling city, and, therefore, not unnaturally imposing its name upon the country of which it was the chief town. [BABYLON.] [V.]

CHALDAEI (Χαλδαῖοι), a people who dwelt in Babylonia, taken in the most extensive sense, as extending from above Babylon to the Persian Gulf, who appear before on the stage of history under different and not always reconcileable aspects.

1. The Chaldaeans would seem to be the inhabitants of Chaldaea Proper, a district in the S. of Babylonia, extending along the Persian Gulf to Arabia Deserta. They were a people apparently in character much akin to the Arabs of the adjoining districts, and living, like them, a wandering and predatory life. As such they are described in Job (i. 17), and if Orchoe represent the Ur from which Abraham migrated (now probably *Warka*), it would be rightly termed "Ur of the Chaldees;" while it is not impossible that the passage in Isaiah (xxiii. 13), "Behold the land of the Chaldees: this people was not till the Assyrian founded it for them that dwell in the wilderness," may have reference to a period when their habits became more settled, and they ceased to be a mere roving tribe.

2. The name came to be applied without distinction, or at least with little real difference, to the inhabitants of Babylon and the subjects of the Babylonian empire. So in 2 Kings (xxv. 1—4), Nebuchadnezzar is called King of Babylon, but his army are called Chaldees; in Isaiah (xvii. 19) Babylon is termed "the glory of kingdoms, the beauty of the Chaldees' excellency;" in Isaiah (xxiii. 13), the country is called "the land of the Chaldaeans;" and in Dan. (ix. i.), Dareius is king "over the realm of the Chaldaeans." Agreeably with this view Pliny calls Babylon, "Chaldaicarum gentium caput." It has been a great question whence the Chaldaeans came, who about the time of Nebuchadnezzar play so important a part in the history of the world: and it has been urged by many modern writers, that some time previous to the reign of that prince, there must have been a conquest of Babylonia by some of the northern tribes, who, under the various names of Carduchi, Chalybes, and Chaldaei, occupied the mountainous region between Assyria and the Euxine. We cannot, however, say that we have been convinced by these arguments, which, as the advocates of these views admit, are not based upon any authentic history. No Chaldaean immigration is any where mentioned or alluded to; while, if there was, as seems most likely, a considerable tribe bearing the name of Chaldaeans at a very early period in S. Babylonia, it is much more natural to suppose that they gradually became the ruling tribe over the whole of Babylonia. The language of Cicero is definite as to his belief in a separate and distinct nation: "Chaldaei non ex artis sed ex gentis vocabulo nominati" (*de Div.* i. 1).

3. They were the name of a particular sect among the Babylonians, and a branch of the order of Babylonian Magi. (Χαλδαῖοι γένος Μάγων, Hesych.) In Dan. (ii. 2) they appear among "the magicians, sorcerers, and astrologers," and speak in the name of the rest (*Dan.* ii. 10). They are described in Dan. (v. 8) as the "king's wise men." From the pursuit of astronomy and astrology and magical arts, which are ever in early times nearly connected, it came to pass that with many ancient writers, and especially with those of a later period, the name Chaldaeans was applied, not only to the learned men of Babylon (as in Cic. *de Div. l. c.*; Strab. xv. p. 508; Diod. ii. 29), but to all impostors and magicians who, professing to interpret dreams, &c., played upon the credulity of mankind. (Joseph. *B. J.* ii. 7. § 3; Appian. *Syr.* c. 58; Curt. i. 10, v. 1; Juv. vi. 553; Cat. *R. R.* v. 4, &c.)

There were two principal schools at Borsippa and Orchoe for the study of astronomy, whence the learned Chaldaeans of those places were termed Borsippeni and Orchoeni. (Strab. xvi. p. 739.)

(Ideler, *über d. Sternkunst d. Chaldäer;* Winer, *Bibl. Real Worterbuch*, art. *Chaldäer;* Ditmar, *über die Vaterland d. Chaldäer.*) [V.]

CHALDAICI LACUS (Plin. vi. 23, 27; τὰ ἕλη τὰ κατὰ Χαλδαίους, Strab. xvi. p. 767), a wide extent of marsh land near the junction of the Euphrates and Tigris. It is not clear from the descriptions of ancient authors what extent they gave these marshes. According to Onesicritus (Strab. xv. p. 29) the Euphrates flowed into the Chaldaean Sea; according to Pliny (vi. 27) it was the Tigris which mostly contributed to form these stagnant waters. It is clear, however, that Pliny's view on the subject was very indistinct, for he says previously (vi. 23) that they comprehended the lake which the Eulaeus and Tigris make near Charax. At the present time nearly all the land above and below the junction of the Tigris and Euphrates is for great part of the year an unhealthy swamp. [V.]

CHALDONE PROMONTORIUM, placed by Pliny (vi. 28) on the Arabian side of the Persian Gulf, near its northern extremity: between a salt river, which once formed one of the mouths of the Euphrates, and his "flumen Achenum." He describes the sea off this promontory as "voraginі similius quam mari per 50 millia passuum orae." It corresponded in situation with the bay of *Koneit* or *Graen* (al. *Grane*) harbour, where Niebuhr places the modern tribe of the *Beni Khaled*, a name nearly identical with the Chaldone of Pliny (Forster, *Arabia*, vol. i. p. 49, 50). It is further determined by modern survey, minutely corroborating the classical notices. "The 'locus ubi Euphratis ostium fuit,' is D'Anville's *ancien lit de l'Euphrate;* the 'Flumen Salsum,' is *Core Boobian*, a narrow salt-water channel, laid down for the first time in the East India Company's Chart, and separating a large low island, off the mouth of the old bed of the Euphrates, from

the main land; the 'Promontorium Chaldone' is the great headland, at the entrance of the Bay of *Doat al-Kusma* from the south, opposite Pheleche island; and the 'voragini similius quam mari,' or sea broken into gulfs, of 50 miles, extending to the 'flumen Achana,' is that along the coast, between the above-named cape and the river of Khadema, a space of precisely 50 Roman miles. This tract, again, is the 'Sacer Sinus' of Ptolemy, terminating at Cape *Zoore*." (*Ib.* vol. ii. p. 213. [G. W.]

CHA'LIA (Χαλία), a town of Boeotia, mentioned by Theopompus, and in an ancient inscription: from the latter we learn that it was an independent state, perhaps one of the cities of the Boeotian league. (Theopomp. *ap. Steph. B. s. v.* Χαλία; Marmor. Oxon. 29, l. p. 67.) Theopompus stated that the Ethnic name was Χάλιοι, but in the inscription it is written ΧΑΛΕΙΔΕΙΣ. Nothing more is known of the place. Leake supposes that it was situated in the Parasopia at *Chalia*. (Leake, *Northern Greece*, vol. ii. p. 473, seq.)

CHALONI'TIS. [CHALA.]

CHALUS (Χάλος), a river of Syria, four days' march from Myriandrus, full of fish, which were held sacred by the inhabitants (Xen. *Anab.* i. 4. § 9). Though the identity has not been made out sufficiently, it is in all probability the same as the *Koweïk* which takes its rise from two sources in the high ground S. of *'Aïntâb;* the larger, owing to the abundance of its fish, has the name *Bâluk Sú* (fish river). From the pass in the *Bëilân* chain advancing NE. and keeping quite clear of the lake of *Agâ Denghiz* and the surrounding marshes, it is about 61 geographical miles to the upper part of the *Balúk Sú*, and about 68 or 70 miles from the town of Beilan, if a greater sweep be made to the N along the slopes of the hills. As there were three rivers to cross, the *Karâ Sú*, the *Aswâd* and the *'Afrin*, four days would be required for this part of the march. (Chesney, *Exped. Euphrat.* vol. i. p. 412, ii. p. 212.) [E. B. J.]

CHA'LYBES (Χάλυβες, or Χάλυβοι, as Hecataeus named them). The Ten Thousand in their march westward from Cerasus [CERASUS] came to the country of the Mossynoeci, and passing through it they came to the country of the Chalybes: the Chalybes were few in number, and most of them got their living by making iron; they were subject to the Mossynoeci (Xen. *Anab.* v. 5. § 1). After passing through the Chalybes, the Greeks came to the Tibareni, whose country was much more level; from which expression we may conclude that the country east of the Tibareni was more mountainous. The Greeks were two days in marching through the country of the Tibareni to Cotyora (*Ordou ?*). The position of these Chalybes is thus fixed within certain limits. Festus Avienus (*Descript. Orb.* v. 956) places the Tibareni and Chalybes together; Strabo (p. 549) places the Chaldaei, who, he says, were originally called Chalybes, in that part of the country which lies above Pharnacia (*Kerasunt*), and thus their position is exactly fixed: Plutarch (*Lucull.* c. 14) also calls them Chaldaei, and mentions them with the Tibareni. The tract along the coast, says Strabo, is narrow, and backed by mountains, which were full of iron ore, and covered with forests. The men on the coast were fishers; and those in the interior were chiefly iron makers: they had once silver mines.

The miners on this coast were known from the earliest recorded times; and Strabo conjectures that the Alybe of Homer (*Il.* ii. 865) may be the country of these Chalybes, whence silver came. As the Greeks called iron or steel χάλυψ, it is possible that they got both the thing and the name from these rude miners. They were the workers of iron (σιδηροτέκτονες) whom the early Greek poets mention (Aesch. *Prom.* 717). Apollonius (*Argon.* ii. 1002) has embellished his poem with a description of these rough workmen "who endure heavy toil in the midst of black soot and smoke." (Comp. Virg. *Georg.* i. 58.) The Chalybes of Herodotus (i. 28) are enumerated by him between the Mariandyni and Paphlagones, from which we may perhaps conclude that he supposed, though incorrectly, that this was their geographical position; for he includes them in the empire of Croesus, which did not extend further than the Halys. Stephanus (*s. v.* Χάλυβες) places the Chalybes on the Thermodon, a position considerably west of that assigned to them by Strabo, whom however Stephanus follows in supposing that they may be represented by the Alybe of Homer. An authority for their position may have been Eudoxus, whom he cites.

Hamilton (*Researches*, &c. vol. i. p. 275) visited in the neighbourhood of *Unieh* (Oenoe) some people who made iron. They find the ore on the hills in small nodular masses in a dark yellow clay which overlies a limestone rock. These people also burn charcoal for their own use. When they have exhausted one spot, they move to another. "All the iron is sent to Constantinople, where it is bought up by the government, and in great demand" (Hamilton). Though these people do not occupy the position of the Chalybes of Xenophon or of Strabo, they live the same laborious life as the Chalybes of antiquity; and these mountainous tracts have probably had their rude forges and smoky workmen for more than twenty-five centuries without interruption.

Before the Ten Thousand reached the Euxine they fell in with a people whom Xenophon (*Anab.* iv. 7, § 15) calls Chalybes, the most warlike people that the Greeks encountered in their retreat. They had linen corslets, and were well armed. At their belt they carried a knife, with which they killed the enemies that they caught, and then cut off their heads. The Greeks came to a river Harpasus after marching through the territory of the Chalybes, who were separated from the Scythini by this river. The Harpasus is the *Arpa Chai*, the chief branch of the Araxes. Pliny (vi. 4), who was acquainted with the Chalybes of the Pontus, mentions also (vi. 10) the Armenochalybes, who seem to be the warlike Chalybes of Xenophon. The iron workers and the fighters may have been the same nation, but we have no evidence of this except the sameness of name. [G. L.]

CHALYBON (Χαλυβών), a city in Syria, afterwards called Beroea [BEROEA, No. 3], from which came the name of Chalybonitis (Χαλυβωνῖτις, Ptol. v. 15. § 17), one of the ten districts of northern Syria, lying to the E. of Chalcidice, towards the Euphrates. [E. B. J.]

CHAMA'VI (Καμανοί, Καμαβοί, Χάμαβοι), a German tribe, perhaps the same as the Gambrivii in Strabo (vii. p. 291; comp. Tac. *Germ.* 2), appears at different times in different localities, probably in consequence of the conquests made by the Romans. They originally dwelt on the banks of the Rhine, in the country afterwards occupied by the Tubantes, and at a still later time by the Usipetes. (Tac. *Ann.* xiii. 55.) Subsequently we find them further in the interior, in the country of the Bructeri, who are said to have been destroyed

by them. (Tac. *Germ.* 33, &c.; comp. ANGRIVARII.) Hence Ptolemy (ii. 11. § 16) mentions the Chaemae, probably a branch of the Chamavi, as occupying a part of the country which formerly belonged to the Bructeri. After this, the Chamavi disappear from history, until a much later period, when they are again mentioned as a tribe belonging to the confederacy of the Franks on the Rhine (Amm. Marc. xvii. 8, 9), and when some of them even settled in Gaul (Eumen. *Panegyr.* 9). [L. S.]

CHAMMANENE. [CAPPADOCIA, p. 507, b.]

CHAON. [ARGOS, p. 201, a.]

CHA'ONES, CHAO'NIA. [EPEIRUS.]

CHARACE'NE. [CHARAX SPASINU.]

CHARACITA'NI. [CARPETANI.]

CHARACOMA (Χαράκωμα, or Χαρακμῶθα, Ptol.), a city of Arabia Petraea mentioned by Ptolemy (v. 17. § 5), the Kir of Moab of Isaiah (xv. 1), and the Χάρακα of 2 Macc. xii. 17, the Hebrew קִיר, signifying *wall* or *fortress*, as the Greek name does a *fosse*. The site of this ancient fortress of the Moabites is still occupied by a town of the same name. *Kerak* is situated about 20 miles to the east of the southern bay of the Dead Sea, and is "built upon the top of a steep hill, surrounded on all sides by a deep and narrow valley, the mountains beyond which command the town." (Burckhardt, *Travels*, p. 379; Irby and Mangles, pp. 361—368.) It was a place of considerable importance in the time of the Crusaders, who built here a strong fortress, the origin of the modern Seraglio, and called it Mons Regalis. (Robinson, *Bib. Res.* vol. ii. pp. 565—570.) [G. W.]

CHARADRA (Χαράδρα: *Eth.* Χαραδραῖος). 1. A city of Phocis, and one of the Phocian towns destroyed by Xerxes, is described by Pausanias as situated 20 stadia from Lilaea, upon a lofty and precipitous rock. He further states that the inhabitants suffered from a scarcity of water, which they obtained from the torrent Charadrus, a tributary of the Cephissus, distant three stadia from the town. (Herod. viii. 33; Paus. x. 3. § 2, x. 33. § 6; Steph. B. *s. v.*) Dodwell and Gell place Charadra at *Mariolátes*, at the foot of Parnassus, but Leake places it at *Suvála*, for two reasons:—1. Because the distance of 20 stadia is nearly that of *Suvála* from *Paleókastro*, the site of Lilaea, whereas *Mariolátes* is more distant; and 2. The torrent at the latter does not join the Cephissus. (Leake, *Northern Greece*, vol. ii. pp. 85, 86.)

2. Or CHARADRUS, a town of Epeirus, situated on the road from Ambracus to the strait of Actium. (Pol. iv. 63, xxii. 9.) It is also mentioned in a fragment of Ennius:—

"Mytilenae est pecten Charadrumque apud Ambraciai."

It is probably represented by the ruins at *Rogús*, opposite the village of *Kanzá*, situated upon the river of *St. George*, a broad and rapid torrent flowing into the Ambraciot gulf. There can be little doubt that this torrent was anciently called Charadrus, and that it gave its name to the town. (Leake, *Northern Greece*, vol. i. p. 258, vol. iv. p. 255.)

3. A town in Messenia of uncertain site, said to have been built by Pelops. (Strab. viii. p. 360.)

CHARADRIAE (Χαραδρίαι), a town on the N. coast of the peninsula of Acte, mentioned by Scylax (p. 26), which Colonel Leake (*North. Greece*, vol. iii. p. 152) identifies with *Vatopedhi* (Βατοπέδιον), the most ancient of all the monasteries in Mt. Athos, as it was founded by Constantine the Great. [E. B. J.]

CHARADRUS (Χάραδρος), a place on the coast of Cilicia, between Platanus and Cragus, according to the Stadiasmus. Strabo (p. 669), who writes it Χαραδροῦς, describes it as a fort with a port below it, and a mountain Andriclus above it. It is described by Beaufort (*Karamania*, p. 194) "as an opening through the mountains with a small river." The natives call the place *Karadran*. The mountain is mentioned in the Stadiasmus under the name Androcus. Beaufort observes that "the great arm of Mount Taurus, which proceeds in a direct line from Alaya (Coracesium) towards Cape Anamour, suddenly breaks off abreast of Karadran, and was probably the Mount Andriclus, which Strabo describes as overhanging Charadrus." The river at *Karadran*, which was also named Charadrus, was mentioned by Hecataeus in his Asia. (Steph. B. *s. v.* Χάραδρος.) [G. L.]

CHARADRUS (Χάραδρος), the name of many mountain torrents in Greece. 1. In Phocis. [CHARADRA, No. 1.]

2. In Epeirus. [CHARADRA, No. 2.]

3. In Achaia. [ACHAIA, p. 13, b.]

4. A tributary of the Inachus in Argolis. [ARGOS, p. 200, b.]

5. In Messenia, flowing by Carnasium. (Paus. iv. 33. § 5.)

6. In Cynuria in Peloponnesus, which Statius describes (*Theb.* iv. 46) as flowing in a long valley near Neris. Leake supposes it to be the *Kani*, or at least its western branch, rising in the heights near the ruins of Neris. (*Peloponnesiaca*, p. 340.)

CHARAX (Χάραξ: *Eth.* Χαρακηνός). Stephanus (*s. v.*) has collected the names of several places called Charax. One is the Charax Alexandri, near Celaenae in Phrygia. Another Charax is the old name of "Tralles in Caria;" but perhaps this is a blunder. A third was a place of great trade (ἐμπόριον) on the Gulf of Nicomedia in Bithynia, and near to Nicomedia. A fourth was in Pontice. The name, applied to a town, ought to mean a stockade or fortified place. [G. L.]

CHARAX (Χάραξ, Strab. xvii. p. 836; Φάραξ, iv. 3. § 14; Κόραξ, Stadiasm. p. 836), a seaport town, belonging to the Carthaginians, at the bottom of the Great Syrtis, very near the frontier of Cyrenaica; whence wine was exported to Cyrenaica, and *silphium* smuggled in return. (Strab. *l. c.*) Its position, like that of so many other places on the Great Syrtis, can hardly be determined with certainty. A full discussion of these localities will be found in Barth (*Wanderungen*, p. 364). [P. S.]

CHARAX MEDIAE (Ptol. vi. 2. § 2), a town, according to Ptolemy, of the Cadusii, one of the tribes of Media Atropatene. It is thought by Forbiger to be the same as the modern *Kesker*. [V.]

CHARAX SPASINU (Χάραξ Σπασίνου, Steph. B. *s. v.*; Ptol. vi. 3. § 2; Dion Cass. lxviii. 28; Plin. vi. 27. s. 31), a town in the southern end of Babylonia, or, perhaps more truly, in Susiana, between the mouths of the Tigris and Eulaeus, and near the Persian Gulf. It gave its name to the district Characene in Susiana, along the banks of the Tigris. The town appears to have borne different names at different periods of its history. It was originally founded by Alexander the Great, and called Alexandreia. Some time later, a flood destroyed the greater part of it, when it was restored by Antiochus Epiphanes, under the name of Antiochia. Lastly, it was occupied by Pasines or Spasines, the

son of Sogdonaeus, the chief of the Arabs who lived in the neighbourhood, from whom it acquired the name by which it has been best known. Pliny states that the original town was only 10 miles from the sea, but that in his time the existing place was as much as 120. These numbers are certainly exaggerated; but Pliny correctly ascribes the advance of the coast into the Persian Gulf to the rivers which flowed into it. It appears to have been a place of considerable extent in Pliny's time. It was the birthplace of Dionysius Periegetes and of Isidorus, both geographers of eminence. [V.]

CHARCHA, a fortress of Mygdonia, which the Romans, in the retreat under Jovian, passed, after leaving Meiacarire. (Amm. Marc. xxv. 6. § 8; comp. xviii. 10. § 1.) The name which in Syria signifies a town, was probably applied to several localities (Le Beau, *Bas Empire*, vol. iii. p. 155; D'Anville, *L'Euphrate et le Tigre*, p. 95). This fortress (Χαρχάς, Evagr. *H. E.* vi. 21) was situated in a fertile and populous district (Theophylact. Simocat. v. 1), and was the scene of the death of Zadesprates, the general of Baram, A. D. 591. (Le Beau, vol. x. p. 317.) The ruin, now called *Kúsr Serján*, of which only the foundations, and parts of two octagonal towers remain, may possibly represent Charcha. (*Journ. Geog. Soc.* vol. x. p. 526; Niebuhr, *Reise*, vol. ii. p. 388; Ritter, *Erdkunde*, vol. xi. pp. 150, 380, 389.) [E. B. J.]

CHARIDE'MII PR. (Χαριδήμου ἀκρωτήριον: *C. de Gata*), one of the principal headlands of the Spanish peninsula, forming the termination of the S. coast, where it first turns to the NE., and being also the S. point of Hispania Tarraconensis. It was directly opposite to the mouth of the river Malva in Mauretania. (Ptol. ii. 4. § 7.) [P. S.]

CHARIEIS (Χαριεῖς, Arrian, *Peripl.* p. 10; Charien, Plin. vi. 4. s. 4), a river of Colchis, flowing into the Euxine Sea, 90 stadia north of the Phasis. Whether it is the same river as the CHARES (Χάρης) of Strabo (xi. p. 499) is doubtful.

CHARINDA (Χαρίνδας, Ptol. vi. 2. § 2; Amm. Marc. xxiii. 6), a small river on the western boundary of Hyrcania, which flowed into the Caspian Sea. By Ptolemy and Ammianus it is reckoned to be a river of Northern Media or Atropatene. A people are met with who are called CHRENDI (Χρῆνδοι, Ptol. vi. 9. § 5). These ought probably to be called Charindi, from the river. [V.]

CHARI'SIA. [ARCADIA, p. 193, a.]

CHARMANDE (Χαρμάνδη, Xen. *Anab.* i. 5. § 10; Steph. B. *s. v.*), a large and prosperous town according to Xenophon, between the river Mascas and the northern boundary of Babylonia, on the edge of the desert. Xenophon mentions that the soldiers of Cyrus crossed the Euphrates to it, on skins stuffed with light hay, and bought there palm, wine, and corn. [V.]

CHARU'DES (Χαροῦδες), a tribe mentioned by Ptolemy (ii. 11. § 12) among the inhabitants of the Chersonesus Cimbrica. They are no doubt the same as the Charilides mentioned in the Monum. Ancyr. (Suet. vol. ii. p. 375, ed. Wolf.) It is not equally certain as to whether they were the same as the Harudes who served in the army of Ariovistus (Caes. *B. G.* i. 31, 37, 51). [L. S.]

CHARYBDIS (Χάρυβδις), a celebrated whirlpool in the Sicilian Straits, between Messana and Rhegium, but much nearer to the former. The prominent part which it assumes (together with the rock of Scylla on the opposite coast) in the Homeric narrative of the wanderings of Odysseus (Hom. *Od.* xii.) sufficiently proves the alarm which it excited in the minds of the earliest navigators of these seas, and the exaggerated accounts of its dangers which they brought home. But with full allowance for such exaggeration, there can be no doubt that the tales of Charybdis and Scylla were really associated with the dangers that beset the navigation of the Sicilian Straits, and that in this instance the identification of the localities mentioned in the Odyssey may be safely relied on. Nor were these perils by any means imaginary: and in the case of Charybdis especially had more foundation than in regard to Scylla. Captain Smyth says of it:—"To the undecked boats of the Greeks it must have been formidable: for even in the present day small craft are sometimes endangered by it, and I have seen several men-of-war, and even a seventy-four gun ship, whirled round on its surface: but by using due caution there is generally very little danger or inconvenience to be apprehended. It appears to be an agitated water, of from 70 to 90 fathoms in depth, circling in quick eddies. It is owing probably to the meeting of the harbour and lateral currents with the opposite point of *Pezzo*." (Smyth's *Sicily*, p. 123.)

Thucydides appears not to have been aware of the existence of this local vortex or whirlpool, and regards the Homeric Charybdis as only an exaggerated account of the fluctuations and agitations caused in the Straits of Messana generally by the alternations of the currents and tides from the two seas, the Tyrrhenian and Sicilian, communicating by so narrow an opening. (Thuc. iv. 24.) The agitations arising from this cause are no doubt considerable, and might often be attended with danger to the frail vessels of the ancient navigators, but the actual whirlpool is a completely local phenomenon, and is situated, as described by Strabo, a short distance from the town of Messana, just outside the low tongue of land that forms the harbour of that city. It is now called the *Galofaro*. (Strab. vi. p. 268; Smyth's *Sicily*, *l. c.*)

Homer indeed appears to describe the two dangers of Scylla and Charybdis as lying immediately opposite one another, on the two sides of the actual strait, and on this account some writers have supposed that the whirlpool was in ancient times situated near Cape Pelorus, or the *Faro Point*, which is full 9 miles from Messana. Local accuracy on such a point is certainly not to be expected from Homer, or the poets who have adopted his description. But it is not impossible that there was really some foundation for this view. Cluver, who made careful inquiries on the spot, and has given a very accurate description of the *Galofaro*, off the port of Messina, adds that there existed another vortex immediately on the S. side of Cape Pelorus, which had been known to produce similar effects. (Cluver, *Sicil.* p. 70.) It is evident, however, that Strabo knew only of the whirlpool off Messana, and this seems to be much the most considerable and permanent phenomenon of the kind: and must therefore be regarded as the true Charybdis. Strabo supposed its fluctuations to be periodical, and connected with the tides (the influence of which is strongly felt in the Straits), and that Homer only erred in describing them as occurring *three* times a day instead of *twice* (Strab. i. pp. 43, 44): but this is erroneous. The action of the whirlpool depends much more upon the wind than the tides, and is very irregular and uncertain. Seneca alludes to its

intervals of tranquillity when not agitated by the south-east wind, and Juvenal represents it as even frequented by fishermen during these periods of repose. (Seneca, *Cons. ad Marc.* 17; Juv. v. 102.) The fact stated by Strabo, and alluded to by Seneca, that the wrecks of the vessels lost in the Charybdis were first thrown up on the coast near Tauromenium, is connected with the strong currents which exist along this coast. (Strab. vi. p. 268; Senec. *Ep.* 79.)

Pliny and Mela content themselves with a mere passing notice of the once celebrated dangers of Scylla and Charybdis. (Plin. iii. 8. s. 14; Mela ii. 7. § 14.) The Latin poets, as well as the Greek ones, abound in allusions to the latter: but these almost all relate to the Homeric or fabulous account of the phenomenon: and no value can be attached to their expressions or descriptions. (Virg. *Aen.* iii. 420; Ovid. *Met.* xiii. 730; Tibull. iv. 1, 73; Apoll. Rhod. iv. 923; Lycophr. *Alex.* 743; Tzetz. *Chil.* x. 969; Eustath. *ad Odyss.* xii. 104; Cic. *Verr.* v. 56.) The name appears to have early become proverbial, in the sense of anything utterly destructive, or insatiably greedy. (Aristoph. *Eq.* 248; Lycophr. *Alex.* 668; Cic. *Phil.* ii. 27.) [E. H. B.]

CHASTIEIS. [ATTICA, p. 329, b.]

CHASUARI (Χαττουάριοι, Καουάριοι, Strab. p. 291; Ptol. ii. 11. § 22), or as Velleius (ii. 105) and Ammianus Marcellinus (xx. 10) call them, ATTUARII, were a German tribe, which, to judge from its name, seems to have been connected with the Chatti. According to Tacitus (*Germ.* 34), they dwelt behind, that is, to the east of the Bructeri. This statement, however, and still more the passage of Ptolemy, render it extremely difficult to determine to what part of Germany the Chasuari ought to be assigned. Latham places them in the country between the rivers *Ruhr*, *Lippe*, and *Rhine;* while others consider the Chasuari and the Chattuarii to be two different people. The latter hypothesis, however, does not remove the difficulties. Notwithstanding the apparent affinity with the Chatti, the Chasuari never appear in alliance with them, but with the Cherusci, the enemies of the Chatti. The most probable supposition as to the original abode of the Chasuari is that of Wilhelm (*German.* p. 189, foll.), who places them to the north of the Chatti, and to the west of the Chamavi and the river *Weser*, a supposition which removes to some extent the difficulty of Ptolemy's account, who places them south of the Suevi (for we must read with all the MSS. ὑπὸ τοὺς Σουήβους, instead of ὑπέρ), and north-west of the Chatti, about the sources of the river *Ems*. At a later period the same people appear in a different country, the neighbourhood of *Geldern*, between the Rhine and the Meuse, where they formed part of the confederacy of the Franks. (Amm. Marc. *l. c.*) In that district their name occurs even in the middle ages, in the *pagus Kattuariorum*. (Comp. Wilhelm, *Germ.* p. 181, foll.; Latham's *Tacit. Germ.* Epileg. p. lxvii. &c.) [L. S.]

CHATENI, an Arab tribe inhabiting the Sinus Capenus, which Pliny places on the west side of the Persian Gulf, and a little north of the Sinus Gerraicus (vi. 28. s. 32): "the Sinus Capenus is at once identified with *Chat*, or *Katiff* Bay, by the mention of its inhabitants, the Chateni." (Forster, *Arabia*, vol. ii. p. 216.) [G. W.]

CHATRAMIS (Χατραμίς), a country of Arabia Felix, mentioned by Dionysius Per. (957), and Eustathius (*ad loc.*) as adjacent on the south to Chaldamis, and opposite to the coast of Persia. It, therefore, corresponded with the modern district of *Oman*, at the SE. of the Arabian Peninsula, and is identified by Forster with *Dar-Charamatah*, and traced to Hadoram the Joctanite patriarch. (*Gen.* x. 27.) [CORODAMUM PROMONTORIUM.] [G. W.]

CHATRAMOTITAE, a people of the south of Arabia. (Plin. vi. 28.) The country he names Atramitae. Both names are but different forms of Adramitae [ADRAMITAE], the ancient inhabitants of that part of the southern coast of Arabia still called *Hadramaut*, originally settled, it would appear, by the descendants of the Joctanite patriarch Hazarmaveth. (*Gen.* x. 26; Forster, *Arabia*, vol. i. p. 113, vol. ii. p. 324.) [G. W.]

CHATRIAEI. [INDIA.]

CHATTI or CATTI (Χάττοι, Χάτται), one of the great tribes of Germany, which rose to great importance after the decay of the power of the Cherusci. Their name is still preserved in *Hessen* (*Hassen*). They were the chief tribe of the Hermiones (Plin. iv. 28), and are described by Caesar (*B. G.* iv. 19, vi. 10) as belonging to the Suevi, although Tacitus (*Germ.* 30, 31) clearly distinguishes them, and that justly, for no German tribe remained in its original locality more permanently than the Chatti. We first meet with their name in the campaigns of Drusus, when they acquired celebrity by their wars against the Romans, and against the Cheruscans who were their mortal enemies. (Tac. *Germ.* 36, *Ann.* i. 55, xii. 27, 28; Dion Cass. liv. 33, 36, lv. 1, lxvii. 4, 5; Tac. *Hist.* iv. 37, *Agr.* 39, 41; Flor. iv. 12; Liv. *Epit.* 140; Suet. *Domit.* 6; Frontin. *Strat.* i. 1; Plin. *Paneg.* 20.) The Romans gained, indeed, many advantages over them, and under Germanicus even destroyed Mattium, their capital (Tac. *Ann.* i. 56), but never succeeded in reducing them to permanent submission. In the time of the war against the Marcomannians, they made predatory incursions into Upper Germany and Rhaetia (Capitol. *M. Anton.* 8). The last time they are mentioned is towards the end of the fourth century. (Greg. Tur. ii. 9; Claud. *Bell. Get.* 419.) After this they disappear among the Franks. Their original habitations appear to have extended from the *Westerwald* in the west to the *Saale* in *Franconia*, and from the river *Main* in the south as far as the sources of the Elison and the *Weser*, so that they occupied exactly the modern country of *Hessen*, including, perhaps, a portion of the north-west of *Bavaria*. Ptolemy (ii. 11. § 22) places them more eastward, perhaps in consequence of their victories over the Cheruscans. The Batavi are said to have been a branch of the Chatti, who emigrated into Gaul. Some have supposed that the Cenni (Κέννοι), with whom the Romans were at war under Caracalla, were no others than the Chatti (Dion Cass. lxxvii. 14); but this is more than doubtful. (Comp. Zeuss, *Die Deutschen u. die Nachbarstämme*, p. 327, foll.; Wilhelm, *German.* p. 181, foll.; Latham, *Tac. Germ.* p. 105, foll.) [L. S.]

CHAUCI, CAUCHI, CAUCI, CAYCI (Καῦχοι, Καῦκοι), a German tribe in the east of the Frisians, between the rivers *Ems* and *Elbe*. (Plin. iv. 28, xvi. 2; Suet. *Claud.* 24; Tac. *Germ.* 35, *Ann.* xi. 18; Dion Cass. liv. 62, lxiii. 30; Vell. Pat. ii. 106; Strab. p. 291; Lucan. i. 463; Claud. *in Eutrop.* i. 379, *de Laud. Stil.* i. 225.) In the east their country bordered on that of the Saxones, in the north-west on that of the Longobards, and in the

north on that of the Angrivarii, so that the modern *Oldenburg* and *Hanover* pretty nearly represent the country of the Chauci. It was traversed by the river Visurgis, which divided the Chauci into Majores and Minores; the former occupying the western bank of the river, and the latter the eastern. (Tac. *Germ.* 35.) The Chauci are described by Tacitus as the most illustrious tribe among the Germans, and he adds that they were as distinguished for their love of justice and peace, as for their valour in case of need. Pliny (xvi. 1. 2), on the other hand, who had himself been in their country, describes them as a poor and pitiable people, who, their country being almost constantly overflown by the sea, were obliged to build their habitations on natural or artificial eminences, who lived upon fish, and had only rain-water to drink, which they kept in cisterns. This latter description can be true only if limited to that portion of the Chauci who dwelt on the sea coast, but cannot apply to those who lived further inland. The Chauci were distinguished as navigators, but also carried on piracy, in pursuit of which they sailed south as far as the coast of Gaul. (Tac. *Ann.* xi. 18; Dion Cass. lx. 30.) They were subdued by Tiberius (Vell. Pat. ii. 106), and for a time they, like the Frisians, were faithful friends of the Romans (Tac. *Ann.* ii. 8, 17, 21), until the latter exasperated them by their insolence. The consequence was, that the Romans were driven from their country, and although Gabinius Secundus gained some advantages over them, to which he even owed the honourable surname of Chaucius (Dion Cass. lx. 8; Suet. *Claud.* 24), and although Corbulo continued the war against them, yet the Romans were unable to reconquer them. (Tac. *Ann.* xi. 19, 20; Dion Cass. lx. 30.) The Chauci are mentioned in history for the last time in the third century, when in the reign of Didius Julianus, they ravaged the coasts of Gaul. (Spart. *Did. Jul.* i.) At that time they belonged to the confederacy of the Saxons, and were one of the most warlike nations of Germany (Julian. *Opera*, pp. 34, 56, ed. Spanh.; Zosim. iii. 6); they had, moreover, extended so far south and west, that they are mentioned as living on the banks of the *Rhine*. (Claud. *de Laud. Stil.* i. 225.) [L. S.]

CHAULOTAEI (Χαυλοταῖοι, Eratosth. *ap. Strab.* xvi. p. 767), an Arab tribe at the NW. of the Persian Gulf, mentioned by Eratosthenes. Dr. Wells, following Bochart and other authorities, has observed of this quarter: "In these parts by Eratosthenes are placed the Chaulothaei; by Festus Avienus the Chaulosii; by Dionysius Periegetes, the Chablasii; and by Pliny, the (Chauclei or) Chavelaei; all retaining, in their name, most of the radical letters of the word Chavilah" (cited by Forster, *Arabia*, vol. i. p. 41). This identification of the names of the classical geographers with the Scripture Havilah is proved and illustrated by Mr. Forster with much research (*l. c.* et seq.). [G. W.]

CHAUS. The Roman general Cn. Manlius marched from Tabae in Pisidia in three days, or perhaps not three whole days to the river Chaus. (Liv. xxxviii. 14.) His line of march was to Thabusion on the Indus, and thence to Cibyra. The Chaus must have been one of the upper branches of the Indus (*Dalamon Tchy*). [G. L.]

CHAZE'NE (Χαζηνή, Strab. xvi. p. 736), one of the districts into which Strabo divides the plain country of Assyria, round Ninus (Nineveh). The other two divisions were named Dolomene and Calachene. [V.]

CHEIMARRHUS. [Argolis, p. 201, a.]

CHEIME'RIUM (Χειμέριον), a promontory and harbour of Thesprotia in Epeirus, between the rivers Acheron and Thyamis, and opposite the southern point of Corcyra. In the two naval engagements between the Corcyraeans and Corinthians just before the Peloponnesian war, Cheimerium was the station of the Corinthian fleet. Leake supposes the promontory of Cheimerium to be *C. Varlám*, and the harbour that of *Arpítza*. (Thuc. i. 30, 46; Strab. vii. p. 324; Paus. viii. 7. § 2; Steph. B. *s. v.*; Leake, *Northern Greece*, vol. iii. p. 5.)

CHELAE (Χῆλαι), a place on the coast of Bithynia, marked in the Table. Arrian (p. 13) places it 20 stadia east of the island Thynias, and 180 west of the mouth of the Sangarius. It is generally identified with a cape named *Kefken* in the maps. [G.L.]

CHELENO'PHAGI. [Aethiopia, p. 58, a.]

CHELIDO'NIA. This name occurs in Strabo (p. 663) in the genitive Χελιδονίων, as the name of a town in Phrygia. Nothing is known of the place. It has been proposed to correct the reading to Φιλομηλίου. (See Groskurd, *Transl. Strab.* vol. iii. p. 63.) [G. L.]

CHELIDO'NIAE INSULAE (Χελιδόνιαι), two rocks (Steph. B. *s. v.* Χελιδόνιοι), according to Phavorinus, one called Corudela, and the other Melanippeia; but the position is not mentioned. Scylax also mentions only two. According to Strabo (p. 520), the Taurus first attains a great elevation opposite to the Chelidoniae, which are islands situated at the commencement of the sea-coast of Pamphylia, or on the borders of Lycia and Pamphylia (p. 651). They were off the Hiera Acra, three in number, rugged, and of the same extent, distant about five stadia from one another, and six stadia from the coast; one of them has an anchorage or port (p. 666). Pliny (v. 33), who places these islands opposite to the "Tauri promontorium," mentions three, and observes that they are dangerous to navigators; but no dangers were discovered by Beaufort. There are five islands off the Hiera Acra, which is now Cape *Khelidonia*: "two of these islands are from four to five hundred feet high; the other three are small and barren." (Beaufort, *Karamania*, p. 38.) The Greeks still call them Chelidoniae, of which the Italian sailors made *Celidoni*; and the Turks have adopted the Italian name, and call them *Shelidan*.

Livy (xxxiii. 41) names the Hiera Acra, or the Sacred Promontory which is opposite to the Chelidoniae, Chelidonium promontorium. [G. L.]

CHELONATAS (Χελωνάτας), a promontory of Achaia, and the most westerly point of the Peloponnesus, distant, according to Pliny, two miles from Cyllene. (Strab. viii. pp. 335, 338, 342; Paus. i. 2. § 4; Agathem. i. 5; Plin. iv. 5. s. 6; Mel. ii. 3.) It has been disputed whether Chelonatas corresponds to *C. Glaréntza* (*Klaréntza*) or to *C. Tornése*, both of them being promontories of the peninsula of *Khlemútzi*. There can be little doubt, however, that *C. Tornése*, the most southerly of the two, is the ancient Chelonatas, both because there is near it the small island mentioned by Strabo (p. 338), and because it is distant two miles from *Glaréntza*, the ancient Cyllene. It is probable, however, that the name Chelonatas was originally given to the whole peninsula of *Khlemútzi*, from its supposed resemblance to a tortoise. (Leake, *Peloponnesiaca*, p. 210.)

CHELO'NIDES LACUS (αἱ Χελωνίδες λίμναι), a series of lakes (apparently three), formed by the river Geir in Lybia Interior, the middle one being placed by Ptolemy in 49° long., and 20° N. lat. They seem to correspond to the three lakes of *Bushashim*, *Mahalu* or *Hadiba*, and *Fittre*, the last and largest of which lies E. of *Lake Tchad*, and the other two in a line to the NE. of *Fittre*. (Ptol. iv. 6. § 13; comp. GEIR and LIBYA.) [P. S.]

CHEMMIS (Χέμμις), the chief town of the Chemmite Nome in the Thebaid, and one of the most ancient cities in Egypt, stood upon the eastern bank of the Nile, opposite to a river-island of similar name. Chemmis subsequently became Panopolis, under which title it is more particularly described. [PANOPOLIS.] From the Chemmite nome, and city of the Thebaid, must be distinguished the Chemmite or Chembite nome, and floating island Chemmis or Chembis, near the city of Buto in the Delta. [BUTO.] The ethnic word *Cham* or *Ham*, and also the Coptic appellation of the Nile Valley—*El Chemi* or the Black Earth,—are apparently contained in the name of Chemmis; and the city was ancient enough to have been nearly contemporary with the aborigines of the Thebaid. [W. B. D.]

CHEN or CHENAE (Χήν, Steph. B. *s. v.*; Χῆναι, Paus., Diod.: *Eth.* Χηνεύς, Χηνιεύς), the birthplace of Myson, whom Plato and others mention as one of the Seven Sages of Greece. (Plat. *Protag.* p. 343, a.) There was a dispute among the ancients respecting this place, some placing it in Thessaly at the foot of Mt. Oeta, and others in Laconia (Diog. Laërt. i. 106); but the balance of authorities is in favour of the former of these two situations. Pausanias (x. 24. § 1) calls it a village on Mt. Oeta; and Diodorus (*Excerpt. de Virt. et Vit.* p. 235) describes Myson as a Malian, who dwelt in the village of Chenae. Stephanus B., on the other hand, places Chen in Laconia. It has been conjectured that this confusion may have arisen from the colony which the Lacedaemonians founded in the district of Oeta. (Thuc. iii. 92.)

CHENOBO'SCIA, or CHENOBO'SCIUM (Χηνοβοσκία, Ptol. iv. 5. § 72; Steph. B. *s. v.*; *Itin. Anton.* p. 166; Χηνοβοσκίον, *Not. Imp.*: *Eth.* Χηνοβοσκιάτης), or the Goose-pens, was a district of the Thebaid in Egypt, on the eastern side of the Nile, 40 miles NW. of Coptos, and in lat. 26° 3′ N. It lay nearly opposite the cities of Diospolis Parva, and Lepidôton Polis, and contained a city, or hamlet, also denominated Chenoboscia. The name of the Goose-pen indicates the purpose to which this tract of water-meadows was appropriated, although, indeed, a geographer cited by Stephanus Byz. (*s. v.*) denies the existence of goose-pastures at Chenoboscia, and says that, on the contrary, the meadows served as a pen, or preserve of crocodiles. But when it is remembered that the goose was a favourite viand of the Egyptian priests (Herod. ii. 37), that the bird was sacred to Isis, and is frequently depicted on the monumental records of Egyptian domestic life (Rosellini, *M. C.* iv., lxix., &c. &c.), and that its quills were used in writing, it seems not unlikely that some districts in the Nile Valley should have been appropriated to the rearing of geese. [W. B. D.]

CHEREU (ἡ Χερέου, or Χαιρέου, Schol. *in Nicand. Theriac.* p. 623; It. Anton. p. 154-5; Greg. Nazianz. *Or.* 21. p. 391, Bened. ed.; Athanas. *Vit. S. Anton.* p. 860), supposed to be the modern village of *Kerîún* in the Delta of Egypt. According to the rather conflicting statements in the Itineraries, Chereu was about mid-way between Alexandreia and Hermopolis, being about 20 or 24 miles from either. The name, however, is comparatively of recent date, and seems to be a purely Coptic appellation, answering to the Hellenic Σχεδία, or Packet-boat. Chereu, according to the above-cited scholiast on Nicander, was near to Schedia (comp. Strab. xvii. p. 800), and seems in Roman times to have superseded it,—such mutations in places of anchorage being common in rivers which, like the Nile, bringing down great volumes of alluvial soil periodically, change the approach to their banks. At Schedia or Chereu, was stationed a general ferry-boat, of which the toll formed part of the revenues of the Hermopolite nome. [W. B. D.]

CHERITH (Χορράθ, LXX.), a brook mentioned only in the history of Elijah (1 *Kings*, xvii. 3—7) without any further notice of its situation than that it was "before Jordan," an expression which might either signify east of the Jordan, or on the way to the Jordan. No value whatever can be attached to Dr. Robinson's attempt to identify it with *Wady Kelt* (*Bib. Res.* vol. ii. p. 288), a small stream which runs through a rocky valley immediately to the north of the road between Jerusalem and Jericho, and which is mentioned in the borders of Judah and Benjamin. (*Josh.* xv. 7.) [G. W.]

CHERSONE'SUS (Χερσόνησος), a name borne by three places in Crete. 1. A point on the W. coast, identified with *Keronisi*, near *Ponto di Corbo* (Ptol. iii. 17. § 2; Hoeck, *Kreta*, vol. i. p. 379.)

2. (Ptol. iii. 17. § 5; *Stadiasm.* § 331, 332, Hierocl.), the haven of Lyctus, with a temple of Britomartis (Strab. x. p. 479), 16 M. P. from Cnossus. (*Peut. Tab.*) Mr. Pashley (*Trav.* vol. i. p. 268) found ruins close to a little port on the shore, and the actual names of the villages *Khersónesos* and *Episcopiamó*, indicate that here is to be found what was once the ancient port of Lyctus, and afterwards became an Episcopal city. (Hoeck, vol. i. p. 408.)

3. Strabo (xvii. p. 838) describes the great harbour of Cyrenaica near the promontory of Ardanaxes as lying opposite to Chersonesus of Crete; the same author (x. p. 479) places Praesus between the Samonian promontory and Chersonesus. There must have been, therefore, a point to the S of the island bearing this name, the position of which is not known. (Hoeck, vol. i. p. 432; Eckhel, vol. ii. p. 307.) [E. B. J.]

COIN OF CHERSONESUS IN CRETE.

CHERSONESUS AUREA. [AUREA.]

CHERSONE'SUS CI'MBRICA (Χερσόνησος Κιμβρική: *Jutland*), the large peninsula terminating on the N. in the *promontorium Cimbrorum*, between the German Ocean on the W. and the *sinus Lagnus* and *Codanus* on the E. (Ptol. ii. 11. § 2; Strab. p. 293.) Strabo is the first ancient authority mentioning this peninsula, for it was only during the campaigns of Tiberius in the north-west of

Germany, that the Romans heard of its existence. According to Pliny (iv. 27), its native name was *Cartris*, which is otherwise unknown. Its common name is derived from its inhabitants, the *Cimbri*, who continued to inhabit it in the time of the Roman emperors. Comp. CIMBRI. [L. S.]

CHERSONE'SUS HERACLEOTICA or PARVA. [TAURICA CHERSONESUS.]

CHERSONE'SUS MAGNA (Χερρόνησος ἄκρα, Strab. xvii. p. 838; Χερσόνησος μεγάλη, Ptol. iv. 5. § 2; also called Χέρρουρα, *Eth.* Χερρούριος, Steph. B. *s. v.* Χερσόνησος: *Ras-et-Tin*, vulg. *Raxatin*), one of the chief promontories of N. Africa, forming the NE. headland of the great convex projection of the Cyrenaic coast, but reckoned as belonging to Marmarica. It had a city and harbour. It was called *Great* in contradistinction to the Chersonesus Parva on the coast of Egypt, half a degree W. of Alexandria. (Ptol. iv. 5. § 9; Barth, *Wanderungen*, &c. pp. 501, 547.) [P. S.]

CHERSONE'SUS TAURICA. [TAURICA CHERSONESUS.]

CHERSONE'SUS THRA'CICA (Χερσόνησος Θρᾳκία), the peninsula extending in a south-westerly direction into the Aegean, between the Hellespont and the bay of Melas. Near Agora it was protected by a wall running across it against incursions from the mainland. (Xenoph. *Hell.* iii. 2. § 10; Diod. xvi. 38; Plin. iv. 18; Agath. 5. p. 108; Plut. *Per.* 19.) The isthmus traversed by the wall was only 36 stadia in breadth (Herod. vi. 36; comp. Scyl. p. 28; Xenoph. *l. c.*); but the length of the peninsula from this wall to its southern extremity, cape Mastusia, was 420 stadia (Herod. *l. c.*). It is now called the *peninsula of the Dardanelles*, or *of Gallipoli*. It was originally inhabited by Thracians, but was colonised by the Greeks, especially Athenians, at a very early period. (Herod. vi. 34, foll.; Nepos, *Milt.* 1.) During the Persian wars it was occupied by the Persians, and after their expulsion it was, for a time, ruled over by Athens and Sparta, until it fell into the hands of the Macedonians, and became the object of contention among the successors of Alexander. The Romans at length conquered it from Antiochus. Its principal towns were, CARDIA, PACTYA, CALLIPOLIS, ALOPECONNESUS, SESTOS, MADYTUS, and ELAEUS. [L. S.]

CHERSONE'SI PROMONTORIUM (Χερσόνησος ἄκρα), placed by Ptolemy (vi. 7) towards the north-eastern extremity of the Persian Gulf, in the country of the Leaniti. It apparently formed the southern promontory of the Leanites Sinus mentioned by the same geographer, and is identified by Forster with *Ras-el-Châr*. (*Arabia*, vol. ii. p. 215, comp. vol. i. p. 48.) [G. W.]

CHERUSCI (Χέρουσκοι, Χηρούσκοι, or Χαιρουσκοί), the most celebrated of all the German tribes, and mentioned even by Caesar (*B. G.* vi. 10) as a people of the same importance as the Suevi, from whom they were separated by the Silva Bacenis. It is somewhat difficult to define the exact part of Germany occupied by them, as the ancients do not always distinguish between the Cheruscans proper, and those tribes which only belonged to the confederation of the Cheruscans But we are probably not far wrong in saying that their country extended from the Visurgis in the W. to the Albis in the E., and from Melibocus in the N. to the neighbourhood of the Sudeti in the S., so that the Chamavi and Langobardi were their northern neighbours, the Chatti the western, the Hermunduri the southern, and the Silingi and Semnones their eastern neighbours. (Comp. Caes. *l.c.*; Dion Cass. lv. 1.; Flor. iv. 12.) After the time of Caesar, they appear to have been on good terms with the Romans; but when the latter had already subdued several of the most powerful German tribes, and had made such progress as to be able to take their winter quarters in Germany, the imprudence and tyranny of Varus, the Roman commander, brought about a change in the relation between the Romans and Cheruscans; for the latter, under their chief Arminius, formed a confederation with many smaller tribes, and in A.D. 9 completely defeated the Romans in the famous battle of the Teutoburg forest. (Dion Cass. lvi. 18; Tac. *Ann.* ii. 9; Vell. Pat. ii. 118; Suet. *Aug.* 49; Strab. vii. p. 291.) After this, Germanicus waged war against them to blot out the stain which the German barbarians had cast upon the Roman name; but the Romans were unsuccessful (Tac. *Ann.* i. 57, foll., ii. 8, foll.), and it was only owing to the internal disputes and feuds among the Germans themselves, that they were conquered by the Chatti (Tac. *Germ.* 36), so that Ptolemy (ii. 11. § 19) knew them only as a small tribe on the south of the HARZ mountain, though it is possible also that several tribes which he mentions in their neighbourhood under different names, were only branches of the great Cheruscan nation. At a later period, in the beginning of the 4th century, the Cheruscans again appear in the confederation of the Franks. (Nazar. *Paneg. Const.* 18; Claudian, *de IV. Cons. Hon.* 450, *de Bell. Get.* 419; comp. Plin. iv. 28; Liv. *Epit.* 138; Zeuss, *Die Deutsch.* pp. 105, 383, foll.; Wilhelm, *Germ.* p. 190, foll.; Latham, on *Tac. Germ.* p. 129, foll.) [L. S.]

CHE'SINUS. [SARMATIA EUROPAEA.]

CHESIUS. [SAMOS.]

CHESULOTH (Χασελωθαίθ, Χασαλώθ, LXX. *Josh.* xix. 12, 18), a town near Mount Tabor, in the borders of Zabulon and Issachar. Dr. Robinson conjectures that the modern village of *Iksâl* may represent this ancient site. It is situated in the plain at the western foot of Mount Tabor, between Little Hermon, and the northern hills that form the boundary of the great plain. He writes "It is probably the Chesulloth and Chisloth-Tabor of the Book of Joshua; the Chasalus of Eusebius and Jerome in the plain near Tabor; and the Xaloth of Josephus, situated in the great plain." (*Bib. Res.* vol. iii. p. 182.) [G. W.]

CHILIOCO'MON (Χιλιόκωμον πεδίον). [AMASIA, p. 118.]

CHIMAERA (Χίμαιρα), a mountain in Lycia, in the territory of Phaselis, where there was a flame burning on a rock continually. Pliny (ii. 106; v. 27) quotes Ctesias as his authority, and the passage of Ctesias is also preserved by Photius (Cod. 72). Ctesias adds, that water did not extinguish the flame, but increased it. The flame was examined by Beaufort (*Karamania*, p. 47, &c.), who is the modern discoverer of it. This *Yanar*, as it is called, is situated on the coast of Lycia, south of the great mountains of Solyma and of Phaselis (*Tekrova*). According to Spratt's *Lycia* (vol. ii. p. 181), near *Adratchan*, not far from the ruins of Olympus, "a number of rounded serpentine hills rise among the limestone, and some of them bear up masses of that rock: at the junction of one of these masses of scaglia with the serpentine is the *Yanar*, famous as the Chimaera of the ancients: it

is nothing more than a stream of inflammable gas issuing from a crevice, such as is seen in several places in the Apennines."

It is likely enough that the story of the Chimaera in the Iliad (vi. 179) had its origin in this phenomenon. Servius (*ad Aen.* vi. 288, "flammisque armata Chimaera") gives a curious explanation of the passage in Virgil. He correctly places the fire on the top of the mountain; but adds, there are lions near it; the middle part of the mountain abounds in goats, and the lower part with serpents; which is obviously an attempt to explain the passage of Homer (comp. Ovid. *Met.* ix. 647, &c.) Strabo connects the fable of the Chimaera with the mountain of Cragus in Lycia; and he says that there is, not far off, a ravine called Chimaera, which opens into the interior from the sea (p. 665). This is not the Chimaera of Ctesias, which is near Phaselis. [G.L.]

CHIMAERA (Χίμαιρα: *Khimára*), a town of Epeirus in the district Chaonia, now gives its name to the Acroceraunian mountains, at the foot of which it stands. At *Khimára* may be seen several pieces of Hellenic work, which serve as foundations to some of the modern houses. (Plin. iv. 1; Procop. *de Aedif.* iv. 4; Leake, *Northern Greece*, vol. i. pp. 7, 82, 89, seq.)

CHIME'RIUM. [CHEIMERIUM.]

CHI'NALAPH (Χιναλάφ, Ptol. iv. 2. § 5; *VR.* Χιναφαλ: *Shellif*), the largest river of Mauretania Caesariensis, and, next to the Malva, of all N. Africa, is yet only mentioned by Ptolemy, who places its source in M. Zalacus. Its chief sources are in *Jebel Amur*, above 34° N. lat., whence it flows nearly N. to about 36° 20′ N. lat., and there turning W. waters the great valley of the Lesser Atlas, which forms one of the most important inland districts of Algeria, and in which, upon the river, are the towns of *Miliana* (Maliana) and *Orleansville* (Castellum Tingitanum). [P. S.]

CHINNERETH (Κενερέθ, LXX.), a fenced city of the tribe of Naphthali (*Josh.* xix. 35.) It was apparently situated near the Sea of Tiberias, which in the earlier books is called the Sea of Chinnereth (*Numb.* xxxiv. 11; *Deut.* iii. 17; *Josh.* xii. 3), and "the plains south of Chinneroth" (*Josh.* xi. 2) is the great valley of the Jordan — the μέγα πεδίον of Josephus. It was supposed by S. Jerome and others to be the ancient representative of the city Tiberias, and certainly Reland's argument is not valid against this theory. (*Palaest.* pp. 161, 724.) [G. W.]

CHIOS (Χίος: *Eth.* Χῖος, contracted from Χίτιος; *Adj.* Χιακός: *Khio, Scio*; *Saki Adassi*, as the Turks call it, or *Sakisadasi*, according to other authorities), an island of the Aegean, opposite to the peninsula in which Erythrae was situated. The various fanciful reasons for the name are collected by Stephanus (*s. v.* Χίος: comp. Paus. vii. 6. § 4). The earlier names of the island were Aethalia, according to Ephorus quoted by Pliny (v. 31), and Macris, an epithet probably derived from its form, and Pityusa or Pine island, from the pine forests. (Plin. *l. c.*; Strab. p. 589.)

A strait 5 miles wide in the narrowest part separates the island from the mainland of Asia. Seen from the sea to the NE. "the bold and yellow mountains of *Scio* form a striking outline against the blue sky" (Hamilton, *Researches*, &c. vol. ii. p. 5). Chios lies from north to south, and its extreme length is about 32 miles. The greatest width, which is in the northern part, is about 18 miles; and in the narrowest part, which is somewhat nearer to the southern than the northern extremity, it is only about 8 miles wide. The circuit (περίπλους) according to Strabo (p. 645) is 900 stadia; but Pliny makes it 125 Roman miles, or 1,000 stadia; and Isidorus, whom he quotes, makes it 134. The real circuit is about 110 English miles by the maps. Pliny's 125 miles may be nearly exact. The area may be somewhat about 400 square miles, English, or about thrice the area of the Isle of Wight. Clinton very erroneously makes it only 257 square miles (*Fasti, Pop. of Ancient Greece*, p. 411).

Strabo's description commences on the east side of the island, where the chief town, Chios, was situated, which had a harbour capable of holding 80 ships. His periplus is southwards. He next mentions the Posidium, now Cape *Mastico*, the southern point of the island; then Phanae (Thuc. viii. 24), where there was a deep recess, a temple of Apollo, and a grove of palm-trees. There was also a point or headland at Phanae (Steph. *s. v.* Φάναι), which Ptolemy also mentions under the name Phanaea. Livy (xliv. 28) mentions the Promontorium Phanae as a convenient place to sail from to Macedonia. It seems to correspond to Port *Mesta*, on the western coast. After Phanae, proceeding northward along the west coast, Strabo mentions Notium, a beach which was adapted for hauling up ships; and then Laii, a beach of the same character, whence the distance to the city of Chios, on the opposite coast, was 60 stadia. The position of Laii is fixed by this description at or near a place marked Port *Alumtha* in some maps. Groskurd (*Transl. Strab.* vol. iii. p. 26) proposes to change this name to Laïnus, or Laïni, "the stony shore." According to Koray, who was a native of Smyrna, the Greeks still call this coast, with the harbour *Mesta*, which belongs to it, by the name of *Lithilimena*; and he remarks that the isthmus at this part is the narrowest. But this is not true of Port *Mesta*, for the island contracts several miles north of that point.

The periplus from the town of Chios to Laii is 360 stadia (Strab.). The real distance is about 60 miles, and Strabo's measure is incorrect.

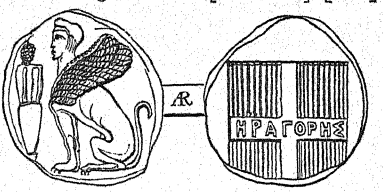
Strabo mentions no other place on the west coast, till he comes to the promontory Melaena, opposite to the island of Psyra (*Psara*), which island he places only 50 stadia from the cape, which is too little, for it is 11 or 12 miles. Melaena seems to be Cape *S. Nicolo*. After the promontory Melaena comes the Ariusia, a rocky shore without harbours, about 300 stadia in length; but this tract produced the best of all the Greek wines. Then, the mountain Pelinaeus, the highest summit in the island. This is *Mt. Elias*, a common name for mountains in the Greek archipelago. The island has a marble quarry. This is the sum of Strabo's incomplete description of Chios. He makes the distance from Chios to Lesbus 400 stadia; but the nearest points are not more than 30 miles apart.

The northern part of Chios is the most rugged and mountainous, but all the island is uneven, and the epithet παιπαλόεσσα in the Homeric Hymn, quoted by Thucydides (iii. 104), is appropriate. It is a rocky island, generally ill provided with water, and rain comes seldom. It produces, however, some corn and good wine. The wine was exported to Italy under the name of Vinum Arvisium in Pliny's time (xiv. 7), and it is often mentioned by the Roman writers. The Arvisia which produced this fine wine, is the Ariusia of Strabo. (See Vib. Sequester, p. 289, ed. Oberlin). The country about Phanae

was also a wine-growing tract (Virg. *Georg.* ii. 97, "rex ipse Phanaeus," &c.); there was a story that the people of this island claimed to be the discoverers of the art of wine making. (Theopomp. quoted by Athen. p. 26, ed. Cas.) Thevenot (*Travels into the Levant*, Engl. Transl. part i. p. 93, &c.) found the wine thick; but he must have been ill served, or have got hold of some *vino cotto*. Chandler (*Travels in Asia Minor*, c. 16), who was treated by an English resident, found the wines excellent. Another chief product of the island was the gum mastic (Plin. xii. 17), which was in great repute in ancient times, and still forms one of the chief products of the island. This resin is got from the Lentiscus by making incisions, and collecting the fluid when it has hardened. The mode of getting it is described by Thevenot and Tournefort. Chios was also noted for its figs (Varr. *de R. R.* i. 41), which had been transplanted into Italy. The island contained a clay adapted for pottery (Strab. p. 317). In Thevenot's time all the earthenware that was used in the island, was made at a village named *Armolia*. The island is healthy. The beauty of the women is celebrated by ancient writers and modern travellers. The growth of the vine, olive, lemon, orange, citron, and palm, show what the temperature is. Thevenot says that the island is subject to earthquakes; and the fall of a school-house recorded by Herodotus (vi. 27) may have been owing to an earthquake. (Sueton. *Tib.* 8.)

The town or the island of Chios was one of the places that claimed to be the birth-place of Homer, and the natives show a place on the north coast of the island, at some distance from the town, which they call Homer's school. Chandler supposed the place to have been a temple of Cybele, open at the top, and situated on the summit of a rock. It is of an oval form, and in the centre was the figure of the goddess, which wanted the head and arm when Chandler saw it. She was represented sitting, and on each side of the chair, and also behind, was the figure of a lion. Round the inside is a kind of seat. Pococke changed the goddess into Homer, and the two lions on the sides of the chair into Muses. It is a rude piece of workmanship, perhaps of great antiquity, and cut in the rock (Chandler, c. 16, and the note in the French edition). The distinguished natives of Chios were Ion, the tragic writer, Theopompus, the historian, and the sophist Theocritus. (Strabo.) Also, Metrodorus, and the geographer Scymnus.

The chief town of Chios, as already observed, had the name of Chios, though Strabo does not mention the name of the city, but the passage is probably corrupt. (See Groskurd's note, vol. iii. p. 26.) It was on the east side of the island, and is now named *Scio*, though it seems to be called *Kastro* in some maps. The city and its environs are like Genoa and its territory in miniature. Some authorities (Dionys. Perieg. 535) place it at the foot of Pellenaeus, which seems to be the same name as Strabo's Pelinaeus. Probably the name of the high range of Pelinaeus may have extended as far south as the town of Chios. Chandler could not see either stadium, odeum or theatre, the usual accompaniments of every Greek town, and we know that Chios had a theatre. As there was a marble quarry in the vicinity, there was abundance of building materials. The stones of the old Greek town have, doubtless, been used for building the modern town, for marbles and bas-reliefs are seen in the walls of the town and of the houses. On the east side of the island was a town Delphinium, in a strong position, with harbours, and not far from Chios (Thuc. viii. 38; Xen. *Hell.* i. 5. § 15). The modern site is indicated by the name *Delphino*. Bolissus (Thuc. viii. 24) is *Volisso* on the NW. coast, south of Cape *S. Nicolo*. Stephanus (*s. v.* Βολισσός) has made a mistake in placing it in Aeolis, though he quotes Thucydides (*ἐν ὀγδόῃ*), and says that the historian calls it Boliscus. Thucydides (viii. 24) also mentions a place called Leuconium (Λευκώνιον), the site of which does not appear to be known. Cardamyle, also mentioned by Thucydides (viii. 24), as a place where the Athenians landed to attack the people of Chios, is *Khardamli*, a little distance from the NE. coast of the island. According to Thevenot there is a good harbour at *Cardamila*, as he writes it, which he places two miles from the coast. The country round Cardamyle is fertile, abounds in springs, and is well adapted for the cultivation of the vine. The situation of Caucasa (Herod. v. 33), and Polichne (Herod. vi. 26), are not determined. Caucasa was probably on the west side of the island. The situation of the place called Coela (*τὰ Κοῖλα*, Herod. vi. 26) is uncertain.



The oldest inhabitants of the island were Pelasgi, according to one tradition (Eustath. *ad Dion. Perieg.* 533); and Strabo affirms (p. 621) that the Chians considered the Pelasgi from Thessaly, as "their settlers," which, if it has any exact meaning, is a statement that they were descendants of Thessalian Pelasgi. In another passage (p. 632) he gives the statement of Pherecydes, that Leleges originally possessed the Ionian coast north of Ephesus, as far as Phocaea, Chios, and Samus, by which is perhaps meant that Leleges occupied Chios, from which they were ejected by the Iones. Ion, a native of Chios, following, we may suppose, local tradition, knew of no inhabitants of Chios before the three sons of Poseidon, who were born in the island: then came Oenopion and his sons from Crete, who were followed by Carians, and Abantes from Euboea. Other settlers came from Histiaea in Euboea under Amphiclus. Hector, the fourth in descent from Amphiclus, fought with the Abantes and Carians, killed some of them, and made terms with the rest for their quitting the island. Things being settled, it came into Hector's mind that the people of Chios ought to join the Ionians in their religious festival at Panionium. (Paus. vii. 4. § 8.) But Ion, as Pausanias observes, has not said how the Chians came to be included in the Ionian confederation. Chios is enumerated by Herodotus (i. 18, 142) among the insular states of the Ionian confederation, and as having the same peculiar dialect or variety of the Greek language as the people of Erythrae on the opposite mainland. At the time of the conquest of Ionia by Cyrus (B. C. 546), the Chians were protected by their insular position, for the Persians at that time had no navy. They obtained from the Persians at that time a grant of the Atarneus [ATARNEUS], for delivering up to them Pactyes, a Lydian.

The Chians joined the rest of the Ionians in the revolt against the Persians (B. C. 499), and they had 100 ships in the great sea-fight off Miletus. After the defeat of the confederates, the Persians landed in Chios, burnt the cities and temples, and carried off all the most beautiful girls (Herod. vi. 8, 32). When Xerxes (B. C. 480) invaded Greece, the Ionians had 100 ships in the Persian navy, but it is not said which states supplied them. (Herod. vii. 94.)

The island was afterwards in alliance with Athens (Thucyd. i. 116); and at the commencement of the Peloponnesian war, the Chians were still the allies or subjects of the Athenians. (Thuc. ii. 9.) At the close of the seventh year of the war, they fell under suspicion of intending to desert the Athenians, and they, that is, the inhabitants of the town of Chios, were compelled to pull down "their new wall." (Thuc. iv. 51.) A few years afterwards (B.C. 412) they did revolt. (Thuc. viii. 14—61.) The Athenians landing at Bolissus and Cardamyle, defeated the Chians and destroyed both these places. Again, the Chians were defeated at Phanae and at Leuconium, and being unable to resist, they shut themselves up in their city, while the Athenians wasted their beautiful and well cultivated island, which had suffered no calamity since the Persian invasion. The Athenians then occupied Delphinium, which was not far from the city of Chios. During the siege, many of the slaves of the Chians made their escape, for the city possessed more slaves than any other Greek city except Lacedaemon. (Thuc. viii. 40.) Their slaves were not the subjugated old inhabitants of the island, but barbarians whom they bought. Being at last closely invested by the Athenians, both on the land side and by sea, the Chians suffered from famine. The town however was not taken, for the Athenians had plenty to look after in other quarters. The Athenians recovered Chios at a later period, but it again revolted, and during the Social War, the Athenians again besieged Chios (B.C. 357), and Chabrias, one of the Athenian commanders, lost his life there.

The subsequent history of Chios consists only of a few disconnected facts, but as they sent ambassadors to Greece at the same time with Ptolemy king of Egypt, the Rhodians, and the Athenians to put an end to the war between king Philip and the Aetolians (B.C. 208), we may infer that they maintained at that time an independent position. (Liv. xxvii. 30; comp. Polyb. v. 24.) It appears from Appian (*Maced.* 3) that Philip took Chios, the town probably, in B.C. 201, about the same time that he ravaged the Peraea of the Rhodians. In the war of the Romans with Antiochus (B.C. 190), the Romans used Chios as a depôt for their supplies from Italy (Liv. xxxvii. 27), at which time the coast of Chios was plundered by pirates, who carried off an immense booty. The Romans rewarded the Chians for their fidelity in this war with a grant of land (Liv. xxxviii. 39), but we are not told where the land was. (Polyb. xxii. 27.) The Chians were the allies of Mithridates in a sea-fight against the Rhodians (App. *Mithr.* 25); but as the king soon after suspected them of favouring the Romans, he sent Zenobius (B.C. 86) there to demand the surrender of their arms, and the children of the chief persons as hostages. The Chians, being unable to resist, for Zenobius had come on them unexpectedly with a large force, complied with both demands. A letter from Mithridates demanded of them 2000 talents, which the people raised by taking the valuable things from the temples, and the ornaments of the women. Zenobius, pretending that the tale was incomplete, summoned the Chians to the theatre, and drove them thence under the terror of the bare sword down to his ships in the harbour, and carried them off to the Black Sea. (Appian. *Mithr.* 46.) Part of them were hospitably received by the Heracleots of Bithynia, as the ships were sailing past their town, and entertained till they could return home. It appears from Appian, that at the time when Mithridates handled the Chians so roughly, Romans had settled in the island, probably in the usual way, as "negotiatores." When Sulla (B.C. 84) had compelled Mithridates to accept his terms, he treated in a friendly way the Chians and others who had been allies with the Romans, or had suffered in the war, declared them free (Liberi), and allies and Socii of the Roman people. Cicero and Pliny speak of Chios as Libera, which term signifies a certain amount of self-government under the Roman dominion, and a less direct subjection to the governor of a province. Chios was one of the places from which Verres carried off some statues. It does not seem to have been included in the Roman province of Asia; and indeed if the term "libera" applied to the whole island, it would not be under a Roman governor. At a later period, Chios was one of the islands included in the Insularum Provincia, a province which seems to have been established by Vespasian.

The modern history of *Scio* is a repetition of old calamities. In the early part of the 14th century, the Turks took the city of Chios and massacred the people. In 1346, it fell into the hands of the Genoese, who kept it for nearly two centuries and a half, when the Turks took it from them. The condition of the people under Turkish rule was on the whole very favourable, and the island was in a prosperous condition till 1822, when the Chiots joined in the insurrection against the Turks, or, as it appears, were driven into it by some Samiotes and other Greeks. The Turks came with a powerful fleet, and slaughtered the people without mercy. The women and children were made slaves, and the town was burnt. This terrible and brutal devastation, which made a frightful desert of a well cultivated country, and a ruin of a town of near 30,000 inhabitants, gives us a more lively image of the sufferings of this unlucky island twenty-three centuries before, when the barbarous Persians ravaged it. The small islands Oenussae belonged to Chios. [OENUSSAE.] [G.L.]

COIN OF CHIOS.

CHLORUS, a river of Cilicia Campestris, which Pliny (v. 27) mentions between the towns of Issus and Aegae. [G. L.]

CHOANA (Χόανα, Ptol. vi. 2. § 14), a place in Media. Forbiger suggests that perhaps it is the same as Χαώνη, a place mentioned by Diodorus (ii. 13) as one of those where Semiramis was in the habit of dwelling. It is probably represented by the modern *Kan*, or *Kum*. [V.]

CHOARE'NE (Χοαρηνή, Ptol. vi. 5. § 1; Χωρηνή, Strab. xi. p. 514; Isid. Charac.; Choara, Plin. vi. 15. s. 17), a district of Parthia immediately adjoining the Caspian Gates. It was a plain country, and had a town in it called Apameia Rhagiana [APAMEIA, No. 6], and two smaller towns, Calliope and Issatis. (Plin. *l. c.*)

2. A district of Ariana, mentioned only by Strabo (xv. p. 725), who describes it as nearest to India of all the countries which the Parthians had subdued.

It is clearly a different district from the one in Media, and ought most probably to be sought for south of the Paropamisus, as it is stated that Craterus passed through it in his march through Arachosia into Carmania. It seems not unlikely that the name is connected with the Indian *Ghaur* or *Ghor*, though it is true that it is not generally safe to trust a mere affinity of names. [V.]

CHOASPES (Χοάσπης), a river of Susiana which rising among the Laristan mountains, and after passing the town of Susa, flowed into the Tigris, a little below the junction of the latter river with the Euphrates.

The indistinctness of the ancient descriptions has led to some confusion between this river and the Eulaeus, which, at the distance of about half a degree of latitude, flows nearly parallel with it into the Tigris. Yet the course of the Choaspes is, on the whole, clearly made out, and it can hardly have been the same as the Eulaeus, though this was at one time the opinion of geographers. Herodotus (i. 188, v. 52) and Strabo (i. p. 46) distinctly state that the town of Susa was on the Choaspes, and Polycletus (*ap.* Strab. xv. p. 728) and Pliny (vi. 27. s. 31) speak of the Choaspes and Eulaeus as different rivers, though the latter states it was the Eulaeus on which Susa was situated. On the other hand, Pliny (*l. c.*) tells the same story of the Eulaeus which Herodotus (i. 188) has given to the Choaspes, viz., that the King of Persia was in the habit of drinking the water of this river only. From the agreement of the description of these two rivers, it has been conjectured by some that the Choaspes was the Persian name, and Ulai (*Dan.* viii. 8) (whence Eulaeus) the Chaldaean appellation. The difference and the similarity of these accounts may perhaps be accounted for in this way. There are two considerable rivers which unite at *Bund-i-Kir*, a little above *Ahwaz*, and form the ancient Pasitigris and modern *Karún*. Of these the western flows near, though not actually beside, the ruins of *Sus* (Susa), and is called the *Dizful* river; the eastern passes *Shuster*, and is called the *Karún*, or river of *Shuster*. It is probable that the former was sometimes supposed to be the Choaspes, though its correct name was the Coprates, and the latter the Eulaeus; while, from the fact of their uniting about 25 miles below Susa, what was strictly true of the one, came with less accuracy to be applied to the other. There seems no doubt that the *Karún* does represent the ancient Eulaeus, and the *Kerkhah* the old Choaspes. At present the main stream of the *Karún* is united with the Tigris by a canal called *Haffar*, near *Mohammerah*, but anciently it had a course direct to the sea. It may be remarked that Ptolemy only mentions the Eulaeus. (Map to Rawlinson's *March from Zohâb to Khuzistân*, in *Journ. R. G. Soc.* vol. ix. p. 116.) [V.]

CHOASPES FL., in India. [COPHEN.]

CHOATRAS (Χοάτρας, Ptol. vi. 1. § 1; Plin. v. 27), a mountain range on the borders of Media and Assyria. It is part of the outlying ranges of the great chain of Taurus, with which it is connected on the N. To the S. and SE. the chain is continued under the names of M. Zagrus and Parachoatras. It was part of the mountains of modern *Kurdistán*. In some editions of Ptolemy the name is called Chaboras. [V.]

CHOATRES, a river of Parthia, mentioned by Ammianus (xxiii. 6). It is not possible to determine which of many small streams he may have intended, but it is probable that it was in the neighbourhood of the M. Choatras. Parthia has no river of any magnitude. [V.]

CHOE'RADES. [PHARNACIA.]

CHOE'RADES (Χοιράδες νῆσοι), two small islands lying off the harbour of Tarentum, about four miles from its entrance: they are now called the *Isole di S. Pietro e S. Paolo*. As their name imports, they are little more than low rocks rising out of the sea, but must have afforded a place of anchorage, as Thucydides tells us that the Athenian generals, Demosthenes and Eurymedon, touched there on their way to Sicily (B. C. 413), and took on board some Messapian auxiliaries (Thuc. vii. 33). [E. H. B.]

CHOE'REAE (Χοιρέαι), a place in Euboea, only mentioned by Herodotus (vi. 101), appears to have been situated between Tamynae and the island Aegilia. Cramer supposes Choereae to be the islets named *Kavalleri* in modern maps.

CHOES FL. [COPHEN.]

CHOLARGUS, a demus of Attica of uncertain site. [See p. 336.]

CHOLLEIDAE. [ATTICA, p. 331, a.]

CHOLON TEICHOS (Χωλὸν τεῖχος: *Eth.* Χωλοτειχίτης), a city of Caria, mentioned by Apollonius in his Carica. (Steph. B. *s. v.*) [G. L.]

CHOMA (Χῶμα), a place in the interior of Lycia, according to Pliny (v. 27), on a river Aedesa. Ptolemy (v. 3) makes Choma one of the four cities of the Milyas, and places it near Candyba.

CHONAE. [COLOSSAE.]

CHONE, CHO'NIA. [CHONES.]

CHONES (Χῶνες), a people of Southern Italy, who inhabited a part of the countries afterwards known as Lucania and Bruttium, on the shores of the Tarentine Gulf. It appears certain that they were of the same race with the Oenotrians, and like them of Pelasgic origin. Aristotle expressly tells us that the Chones were an Oenotrian race (*Pol.* vii. 9), and Strabo (quoting from Antiochus) repeats the statement, adding that they were a more civilized race than the other Oenotrians. (Strab. vi. p. 255.) He describes them as occupying the tract about Metapontum and Siris; and Aristotle also, as well as Lycophron, place them in the fertile district of the Siritis. (Arist. *l. c.* where it seems certain that we should read Σιρῖτιν for Σύρτιν; Lycophr. *Alex.* 983.) Strabo also in another passage (vi. p. 264) represents the Ionians, who established themselves at Siris as wresting that city from the Chones, and speaks of Rhodian settlers as establishing themselves in the neighbourhood of Sybaris in Chonia (xiv. p. 654). But it seems clear that the name was used also in a much wider signification, as the city of CHONE, which, according to Apollodorus, gave name to the nation, was placed near the promontory of Crimisa, in Bruttium. (Apollod. ap. Strab. vi. p. 254.) The existence, however, of a *city* of the name at all is very uncertain: Antiochus says that the land of the Chones was named CHONE, for which Strabo and Lycophron use the more ordinary form CHONIA. (Strab. xiv. p. 654; Lycophr. *l. c.*) It seems clear on the whole, that the name was applied more or less extensively to the tribe that dwelt on the western shores of the Tarentine Gulf, from the Lacinian promontory to the neighbourhood of Metapontum: and that as they were of close kindred with the Oenotrians, they were sometimes distinguished from them, sometimes included under the same appellation. The name is evidently closely connected with that of the CHAONES in Epeirus, and this resemblance tends to

confirm the fact (attested by many other arguments) that both tribes were of Pelasgic origin, and related by close affinity of race. This point is more fully discussed under OENOTRIA, [E. H. B.]

CHORA, or CORA, a place in Gallia, mentioned by Ammianus Marcellinus (xvi. 2) as being on Julian's route from Augustodunum (*Autun*) to Autosiodurum, that is, Autissiodurum (*Auxerre*). This indicates the Roman road from *Autun* to *Auxerre*, for the road mentioned by Ammianus went "per Sedelaucum et Choram." Sedelaucum is the Sidolocum (*Saulieu*) of the Itin. Chora is therefore between *Saulieu* and *Auxerre;* and the river *Cure*, a branch of the *Yonne*, runs in the general direction of the road from *Autun* to *Auxerre*. The next station on the road to *Saulieu* is Aballo (*Avallon*). D'Anville finds a place called *Cure* on the river *Cure*, between *Avallon* and *Auxerre*, which he supposes to be Chora. Others fix Chora at *La Ville Auxerre*, near *St. Moré*, which is also between *Avallon* and *Auxerre* (H.Vales. ad Amm. Marc. xvi. 2; D'Anville, *Notice*, &c.; Walckenaer, *Géog., &c.* vol. i. p. 411, vol. ii. p. 351). [G. L.]

CHORA'SMII (Χωράσμιοι, Her. iii. 93, 117; Strab. xi. p. 513; Dionys. Per. x. 746; Arrian, iv. 15; Curt. vii. 4, viii. 1; Steph. B. *s. v.*; Ptol. vi. 12. § 4; Plin. vi. 16), an extensive tribe of Sogdiana, now represented by *Khawarezm*, in the desert country of *Khiva*, on the banks of the *Gihon*. The name is not always written exactly the same: thus Strabo (xi. p. 513) called the people Chorasmusini, which is probably an error; and in some editions of Ptolemy they are called Choramnii. They appear to have been of a Scythian stock, and are coupled by ancient authors with the Daae, Massagetae, and Soghdi. Stephanus, on the authority of Hecataeus, states that there was also a city called Chorasmia, of which the Chorasmii were the inhabitants. [V.]

CHORAZIN (Χοραζίν), mentioned only in St. Matthew (xi. 26), and the parallel passage in St. Luke (x. 13) in our Lord's denunciation. This site had strangely baffled the inquiries of travellers (Lord Lindsay's *Travels*, vol. ii. p. 91; Robinson, *B. R.* vol. iii. p. 295), until it was recovered and identified by the writer and a friend in 1842. In the hills on the north of the Sea of Tiberias, about two miles north-west of Capernaum (*Tell-Hum*) is a ruined site still called by the Bedouins who pasture it *Gerazi:* in a small plain to the east of the ruins is a fountain called by the same name. It is utterly desolate; a fragment of a shaft of a marble column alone standing in the midst of universal ruin. [G. W.]

CHORI (Χορή, Χορί, Const. Porph. *De Adm. Imp.* c. 44), a district of Armenia, situated on the NW. bank of the lake of *Ván;* if it be identified with the *Canton* of *Khorkkhorhounikh*, which belonged to a race of princes very celebrated in the history of Armenia. (St. Martin, *Mém. sur l'Armenie*, vol. i. p. 100.) [E. B. J.]

CHORSEUS (Χόρσεος, Ptol. v. 16. § 1), a river of Palestine, which formed the boundary between that country and Phoenicia, and fell into the sea between Dora and Caesarea Stratonis, now the *Coradsché* (Von Raumer, *Palestina*, p. 53; Pococke, *Trav.* vol. ii. p. 58), a name which does not occur in the maps, but is probably a mountain stream which flows only in winter. [E. B. J.]

CHORZANE, CHORZIANE'NE (Χορζάνη, Procop. *Aed.* 33; Χορζιανηνή, Procop. *B. P.* ii. 24), a district of Armenia, which Forbiger (vol. ii. p. 601) identifies with the ACILISENE (Ἀκιλισηνή) of Strabo (xi. pp. 528, 530), which lay between the N. and S. arm of the Euphrates and on the boundaries of Cappadocia, and which on account of the worship of the goddess Anahid so prevalent in that district, is undoubtedly the same as the ANAITIS, or ANAITICA of Pliny (v. 24. § 20). The plain of *Erzíngán* now represents this district. (Ritter, *Erdkunde*, vol. x. pp. 73, 81, 550, 576, 774, 796; *Journ. Geog. Soc.* vol. vi. p. 201.) [E. B. J.]

CHORZE'NE (Χορζηνή, Strab. xi. p. 528), a mountainous district, situated to the NW. of the Greater Armenia, which had originally belonged to the Iberians. (St. Martin, Append. to Le Beau, *Bas Empire*, vol. xv. p. 491.) The capital of this district was the town which appears after the 10th century under the name of *Kárs* (Κάρς, Const. Porph. *de Adm. Imp.* c. 44), and was well known as the residence of the Bagratid princes from A. D. 928—961. In A. D. 1064 the last of these princes gave up the district to Constantine Ducas in exchange for a principality in Armenia Minor (St. Martin, *Mém. sur l'Armenie*, vol. i. p. 375). The province has ever since retained the name of *Kárs*. The snow fell to such depth in this mountain tract, that Strabo (*l. c.*) speaks of whole caravans of travellers being buried in the drifts, and having to be dug out. The same author (*l. c.*) describes a curious kind of snow-worm which was found here. Mr. Brant in ascending the *Sapán Tágh* was told by his Kurd guides that they had seen this animal; one of them went to a pool of melted snow to procure a specimen, but did not succeed in the attempt. (*Journ. Geog. Soc.* vol. x. p. 410; Ritter, *Erdkunde*, vol. x. p. 423, foll.) [E. B. J.]

CHRENDI. [CHARINDA.]

CHRETES (Χρέτης), a river on the W. coast of Africa, a little S. of CERNE (Hanno, p. 3), on the position of which its identification of course depends. According to Rennell's view, it must be the river *St. John;* but those who place Cerne in the bay of *Agadir* identify the Chretes with the *Wadi Sus*, the Subus of Ptolemy. [P. S.]

CHRISTO'POLIS (Χριστόπολις), a town of Macedonia, situated on the Via Egnatia, mentioned by the writers of the Lower Empire (Georg. Acrop. c. 43; Niceph. Greg. xiii. 1. § 1, xiii. 5. § 1), which some have supposed to have occupied the site of Datum, but should more properly be identified with Acontisma. [ACONTISMA.] [E. B. J.]

CHRONOS or CHRONIUS FL. [SARMATIA EUROPAEA.]

CHRYSA (Χρύση, Χρύσα: *Eth.* Χρυσεύς). Stephanus (*s. v.*) has a list of various places so called. He does not decide which is the Chrysa of Homer (*Il.* i. 37, 390, 431). He mentions a Chrysa on the Hellespont, between Ophrynium and Abydus. Pliny (v. 30) mentions Chryse, a town of Aeolis, as no longer existing in his time. He also mentions a Chryse in the Troad, and apparently places it north of the promontory Lectum, and on the coast. He says that Chrysa did not exist, but the temple of Smintheus remained; that is, the temple of Apollo Smintheus. The name Smitheus, not Smintheus, appears on a coin of Alexandria of Troas (Harduin's note on Plin. v. 30). The Table places "Smynthium" between Alexandria and Assus, and 4 miles south of Alexandria. Strabo (p. 604) places Chrysa on a hill, and he mentions the temple of Smintheus, and speaks of a symbol, which recorded the etymon of the name, the mouse which lay at

the foot of the wooden figure, the work of Scopas. According to an old story, Apollo had his name Smintheus, as being the mouse destroyer; for Sminthus signified "mouse," according to Apion. Strabo (p. 612) has an argument to show that the Chrysa of the Iliad was not the Chrysa near Alexandria, but the other place of the same name in the plain of Thebe, or the Adramyttene. He says that this Chrysa was on the sea, and had a port, and a temple of Smintheus, but that it was deserted in his time, and the temple was transferred to the other Chrysa. There is, however, little weight in Strabo's argument, nor is the matter worth discussion. [G. L.]

CHRYSA'ORIS (Χρυσαορίς: *Eth.* Χρυσαορεύς), a town of Caria, afterwards called Idrias. According to Apollonius, in his Carica (Steph. B. *s. v.*), it was the first city of those founded by the Lycians. According to Epaphroditus, all Caria was called Chrysaoris. Herodotus (v. 118) mentions a district in Caria, named Idrias, in which the Marsyas of Caria had its source. It has been conjectured that Antiochus built his city Stratoniceia at or near the site of this old town Chrysaoris or Idrias. [G. L.]

CHRYSAO'RIUM. [CARIA; STRATONICEIA.]

CHRYSAS (Χρύσας), a river of Sicily which rises in the Heraean mountains, not far from the modern town of *Gangi*, and after flowing through the territory of Assorus, where its tutelary divinity was worshipped with peculiar honours [ASSORUS], and afterwards through that of Agyrium, joins the river Symaethus about 20 miles from its mouth. It is now called the *Dittaino*. (Cic. *Verr.* iv. 44; Diod. xiv. 95; Vib. Sequest. p. 8; Sil. Ital. xiv. 229; Cluver. *Sicil.* p. 325.) [E. H. B.]

CHRYSE. [LEMNOS.]

CHRYSE RĒGIO. [INDIA.]

CHRYSIPPA (τὰ Χρύσιππα: *Eth.* Χρυσιππανός, Χρυσιππεύς), a city of Cilicia, named from the founder Chrysippus (Steph. *s. v.* Χρύσιππα). [G. L.]

CHRYSOANA FL. [INDIA.]

CHRYSO'CERAS (Κρυσόκερας), i. e. the golden horn, a promontory near Constantinople, part of which was occupied by the ancient city of Byzantium. (Plin. iv. 18, ix. 20; Solin. 10; Mart. Cap. vi. p. 212.) [L. S.]

CHRYSO'POLIS (Χρυσόπολις: *Eth.* Χρυσοπολίτης: *Scutari*), "in Bithynia, near Chalcedon, on the right to one who is sailing upwards," that is, from the Propontis into the Thracian Bosporus. (Steph. *s. v.* Χρυσόπολις) It belonged to the Chalcedonians. Dionysius of Byzantium, in his Anaplus of the Bosporus, says that it was called Chrysopolis either because the Persians made it the place of deposit for the gold which they collected from the cities, or from Chryses, a son of Agamemnon and Chryseis. Polybius (iv. 44) says that those who intend to cross from Chalcedon to Byzantium cannot make a straight course on account of the current which comes down the Bosporus, but they make an oblique course to the promontory Bus, and the place called Chrysopolis, which the Athenians having seized by the advice of Alcibiades, set the first example of levying tolls on vessels bound for the Pontus; and those which sailed out of it too. (Diodor. xiii. 64.) Pliny (v. 32) says of Chrysopolis, "fuit." [CHALCEDON.] [G. L.]

CHRYSO'RRHOAS. [COLCHIS.]

CHRYSO'RRHOAS. [MASTAURA.]

CHRYSO'RRHOAS. [TROEZEN.]

CHUNI. [HUNNI.]

CHUS (Χούς, LXX.), mentioned only in the book of Judith (vii. 18), where *Ekrebel* is said to be "near *Chus*, which is at the torrent (i. e. the valley) of *Mochmur*." These localities were identified by Dr. Schultz in 1847, to the east of the road between Nablus and Jerusalem. "Leaving Turmus Aya, I went by Seiloon and Kariyoot, and Jalood, and *Joorish*, to *Akrabah*. Akrabah is marked nearly in the right place on Robinson's Map, but it is a large village, looking very much like a town, not a ruin. Between Joorish and Akrabah, but nearer to the former, is a valley running from east to west called *Wady Makh Fooriyeh*. Akrabah lies north of Joorish, the two places in sight of each other. Here I think you have the *Ekrebel* of the book of Judith, near *Khoos* at the Wady (Χείμαρρος) Mokhmoor; and Khoos (Χούς) must be corrected into Χουρίς." (Schultz's *Letter* in Williams's *Holy City*, vol. i. Appendix 2. p. 469.) [G. W.]

CHYTRIUM, CHYTRUM. [CLAZOMENAE.]

CHYTRUS, CHYTRI (Χύτρος, Ptol. v. 14. § 6; Χύτροι, Steph. B., Suid.; Χύθροι, Hierocl.; Κυθέρεια, Const. Porph. *De Them.* i. 39; Chytri, Plin.; Citari, *Peut. Tab.*: *Eth.* Χύτριος: *Chytria*), a town of Cyprus which lay on the road between Ceryneia and Salamis, at a distance of 23 M. P. from the former, and 24 M. P. from the latter. (*Peut. Tab.*) It was once governed by sovereign princes, and was probably an Athenian colony. (Mariti, *Viaggi*, vol. i. p. 138; Engel, *Kypros*, vol. i. p. 148.) [E. B. J.]

CIABRUS, CIAMBRUS, or CEBRUS (Κίαβρος, Κιάμβρος, Κέβρος: *Czibru* or *Zibru*), a river forming the boundary between Moesia Superior and Inferior, which, near a town of the same name, emptied itself into the Danubius. (Ptol. iii. 9. § 1, 10. § 1; Dion Cass. li. 24; *Itin. Ant.* p. 220; Not. Imp. 30.) [L. S.]

CIANUS SINUS. [CIUS.]

CI'BALAE (Κιβάλαι), a town in Lower Pannonia. In the *Itin. Hieros.* p. 563, and the *Geogr. Rav.* iv. 19, its name appears in the ablat. Cibalis, whence some writers, mistaking this for the nominative, give its name in the form Cibalis (Κιβαλίς; Dion Cass. lv. 52; Ptol. ii. 16. § 7; Zosim. ii. 18). The town was one of considerable importance, and situated on an eminence near lake Hiulcas, at an equal distance between the rivers Dravus and Savus, on the high road leading from Mursa to Sirmium. It was the birthplace of the emperor Valentinian (Amm. Marc. xxx. 7, 24), and in its vicinity Constantine, in A. D. 314, gained a decisive victory over Licinianus. (Eutrop. x. 5; Zosim. *l. c.*) According to Zosimus, the place had an amphitheatre surrounded by a shady wood. Its exact site has not yet been discovered, but it is generally believed to have been situated near the modern town of *Mikanofzi* or near *Vinkoucze*. (Comp. Aur. Vict. *Epit.* 41, 45; Sozom. *Hist. Eccles.* i. 6; *Itin. Ant.* pp. 131, 261, 267, 268.) [L. S.]

CIBRUS, or CEBRUS (Κίβρος), a town situated at the embouchure of the Ciabrus into the Danube, is now called *Zebru* or *Dsjibra-Palanca*. (*Itin. Ant.* p. 220; *Geogr. Rav.* iv. 7; Procop. *De Aedif.* iv. 6. p. 290.) [L. S.]

CI'BYRA (ἡ Κιβύρα: *Eth.* Κιβυράτης; *Adj.* Κιβυρατικός). 1. MAGNA, the chief city of a district Cibyratis. Strabo (p 631) says, that the Cibyratae are called descendants of the Lydians, of those who once occupied the Cabalis [CABALIS], but afterwards of the neighbouring Pisidians, who settled here, and removed the town to another position in a strong

place, which was about 100 stadia in circuit. It grew powerful under a good constitution, and the villages extended from Pisidia and the adjoining Milyas into Lycia, and to the Peraea of the Rhodians [CARIA]. When the three neighbouring towns of Bubon, Balbura [BUBON; BALBURA], and Oenoanda were joined to it, this confederation was called Tetrapolis. Each town had one vote, but Cibyra had two votes; for Cibyra alone could muster 30,000 infantry and 2000 cavalry. It was always under tyrants, but the government was moderate. This form of government terminated under Moagetes, for Murena put an end to it, and attached Balbura and Bubon to the Lycians. The conventus of Cibyra, however, still remained one of the greatest in Asia. The Cibyratae had four languages, the Pisidian, the Hellenic, the language of the Solymi and of the Lydians; but there was no trace of the Lydian language in Lydia. It was a peculiarity of Cibyra that the iron was easily cut with a chisel, or other sharp tool (see Groskurd's Note, *Transl. Strab.* vol. ii. p. 633, where he unnecessarily make a distinction between τορεύεσθαι and τορνεύεσθαι). The first part of this extract from Strabo is not quite clear.

Strabo (p. 629) does not fix the position of Cibyra precisely. After mentioning Antiochia on the Maeander as being in Caria, he says, "to the south the great Cibyra, Sinde, and the Cabalis, as far as Taurus and Lycia." Ptolemy (v. 3) places Cibyra in Great Phrygia, and assigns the three cities of Bubon, Balbura, and Oenoanda to the Cabalis of Lycia, which is consistent with Strabo. The latitude of Ptolemy as it stands in his text is at least 1° 40′ too far north. The site is now ascertained (Spratt, *Lycia*, vol. i. p. 256) to be at *Horzoom*, on the *Horzoom Tchy*, a branch of the *Dalamon Tchy*, or Indus, in about 37° 10′ N. lat. The place is identified by inscriptions on the spot. "The ruins cover the brow of a hill between 300 and 400 feet above the level of the plain, and about half a mile distant from the village of Horzoom." The material for the buildings was got from the limestone in the neighbourhood; and many of them are in good condition. One of the chief buildings is a theatre, in fine preservation: the diameter is 266 feet. The seats command a view of the Cibyratic plain, and of the mountains towards the Milyas. On the platform near the theatre are the ruins of several large buildings supposed to be temples, "some of the Doric and others of the Corinthian order." On a block there is an inscription, Καισαρεων Κιβυρατων ἡ βουλη και ὁ δημος, from which it appears that in the Roman period the city had also the name Caesarea. The name Καισαρεων appears on some of the coins of Cibyra. A large building about 100 yards from the theatre is supposed to have been an Odeum or music theatre. There are no traces of city walls.

The stadium, 650 feet in length and 80 in breadth, is at the lower extremity of the ridge on which the city stands. The hill side was partly excavated to make room for it; and on the side formed out of the slope of the hill "were ranged 21 rows of seats, which at the upper extremity of the stadium turned so as to make a theatre-like termination." (View in Spratt's *Lycia*.) This part of the stadium is very perfect, but the seats on the hill side are much displaced by the shrubs that have grown up between them. The seats overlook the plain of Cibyra. The seats on the side opposite to the hill were marble blocks placed on a low wall built along the edge of the terrace, formed by cutting the side of the hill. Near the entrance to the stadium a ridge runs eastward, "crowned by a paved way, bordered on each side by sarcophagi and sepulchral monuments. At the entrance to this avenue of tombs was a massive triumphal arch of Doric architecture, now in ruins."

The elevation of the Cibyratic plain is estimated to be 3500 feet above the level of the sea. It produces corn. The sites of Balbura, Bubon, and Oenoanda, which is on the Xanthus, being now ascertained, we can form a tolerably correct idea of the extent of the Cibyratis. It comprised the highest part of the basin of the Xanthus, and all the upper and probably the middle part of the basin of the Indus, for Strabo describes the Cibyratis as reaching to the Rhodian Peraea. The great range of Cadmus (*Baba Dagh*), said to be 8000 feet high, bounded it on the west, and separated it from Caria. The upper part of the basin of the Indus consists of numerous small valleys, each of which has its little stream. Pliny's brief description (v. 28) has been derived from good materials: "the river Indus, which rises in the hills of the Cibyratae, receives sixty perennial rivers, and more than a hundred torrents."

Cibyra is first mentioned by Livy (xxxviii. 14) in his history of the operations of the consul Cn. Manlius, who approached it from the upper part of the Maeander and through Caria. He probably advanced upon it by the valley of *Karaook*, through which the present road leads from the Cibyratis to Laodicea (near *Denizlee*). Manlius demanded and got from Moagetes, the tyrant of Cibyra, 100 talents and 10,000 medimni of wheat. Livy says that Moagetes had under him Syleum and Alimne, besides Cibyra. It is conjectured (Spratt, *Lycia*, vol. i. p. 254) that this Alimne may be identified with the remains of a large town on an island in the lake of *Gule Hissar*, which island is connected with the mainland by an ancient causeway. This lake lies in the angle between the Caulares [CAULARES] and the river of Cibyra. The last tyrant of Cibyra, also named Moagetes, was the son of Pancrates (Polyb. xxx. 9). He was put down by L. Licinius Murena, probably in B. C. 84, when his territory was divided, and Cibyra was attached to Phrygia. Pliny states that twenty-five cities belonged to the Jurisdictio or Conventus of Cibyra; and he adds that the town of Cibyra belonged to Phrygia. This, like many other of the Roman political arrangements, was quite at variance with the physical divisions of the country. Laodicea on the Lycus was one of the chief cities of this Conventus. Under the Romans, Cibyra was a place of great trade, as it appears (Hor. *Ep.* i. 6. 33). Its position, however, does not seem very favourable for commerce, for it is neither on the sea nor on a great road. We may conclude, however, that the Roman negotiatores and mercatores found something to do here, and probably the grain of the valley of the Indus and the wool and iron of Cibyra might furnish articles of commerce. Iron ore is plentiful in the Cibyratis. We know nothing of any artists of Cibyra, except two, whom Cicero mentions (*Verr.* ii. 4. c. 13), who were more famed for their knavery than for artistic skill. Cibyra was much damaged by an earthquake, in the time of Tiberius, who recommended a Senatus Consultum to be enacted for relieving it from payment of taxes (*tributum*) for three years. In this passage of Tacitus (*Ann.* iv. 13), it is called "civitas Cibyratica apud Asiam." [ASIA, p. 239.]

Three Greek inscriptions from Cibyra are printed

in the Appendix to Spratt's *Lycia*. All of them contain the name of the city, and all belong to the Roman period. One of them seems intended to record a statue, or some memorial set up in honour of L. Aelius, the adopted son of Hadrian, and it mentions his being in his second consulship. Aelius died in the lifetime of Hadrian, A. D. 138. L. Aelius Verus was consul for the second time in A. D. 137 (Tillemont, *Hist. des Empereurs*, vol. ii. p. 255), and we may assume that he was alive when this inscription was made. Hadrian certainly was alive then, as we may infer from the terms of the inscription. But Hadrian also died in A. D. 138. The inscription, therefore, belongs to A. D. 137.

COIN OF CIBYRA.

2. CIBYRA THE LESS, was a place in Pamphylia. Strabo (p. 667), after mentioning Side, says, "and near it is the Paralia of the Cibyratae, the Less, and then the river Melas, and a station for ships." The site of Side is well known, and is called by the Turks *Eski Adalia*. The Melas is the *Manavgat*, four miles east of Side. But there could have been no city between Side and the Melas, and it is conjectured that in Strabo's text, the paralia of the Cibyratae should come after the Melas. "The vestiges of Cibyra are probably those observed by Captain Beaufort upon a height which rises from the right bank of a considerable river about 8 miles to the eastward of the Melas, about 4 miles to the west of *Cape Karáburnu*, and nearly 2 miles from the shore" (Leake, *Asia Minor*, p. 196). Ptolemy mentions this Cibyra among the inland towns of Cilicia Trachea; but Scylax places it on the coast. There is a place, Cyberna (Κυβέρνη), mentioned in the Stadiasmus, which is placed 59 stadia east of the Melas. If the conjecture as to Strabo's text is correct, we may identify Cyberna with this Cibyra of Pamphylia. [G. L.]

CICHYRUS. [EPHYRA.]

CI'CONES (Κίκονες), a Thracian people inhabiting the coast district between the rivers Hebrus in the E. and Lissus in the W., where they appear to have lived from very remote times. (Hom. *Il.* ii. 846, *Od.* ix. 39, *seqq.*; Herod. vii. 59, 110; Orph. *Arg.* 77; Steph. Byz. *s. v.* Μαρώνεια; Mela, ii. 2, 8; Plin. iv. 18; Virg. *Georg.* iv. 520: Sil. Ital. xi. 477; Ov. *Met.* x. 2, xv. 313.) [L. S.]

CICYNE'THUS (Κικύνηθος: *Trikeri*), a small island off the coast of Thessaly in the Pagasaean gulf. (Scylax, p. 29; Artemid. ap. Strab. ix. p. 436; Mela, ii. 7; Plin. iv. 12; Leake, *Northern Greece*, vol. iv. p. 396.)

CICYNNA, a demus of Attica, of unknown site. [ATTICA, p. 334.]

CIDRAMUS, a town in Phrygia, known from its coins described by Sestini. The epigraph is Κιδραμηνων. (Cramer, *Asia Minor*, vol. ii. p. 56.) [G. L.]

CIE'RIUM (Κιέριον: *Eth.* Κιεριεύς), a town in Thessaly, which is identified by Stephanus B. with Arne (Steph. B. *s. v.* Ἀρνη), the chief town of the Aeolian Boeotians in Thessaly, from which they emigrated to Boeotia. The site of Cierium was first discovered by Leake, who from inscriptions and coins found on the spot has proved that it stood at the modern village of *Mataránga*, between the Enipeus or Apidanus, and a tributary of that river. The territory of Cierium adjoined that of Metropolis; and we learn from an inscription cited by Leake that the adjustment of their boundaries was a frequent subject of discussion between the two people. The identification of Arne and Cierium is confirmed by an inscription, which mentions Poseidon Cuerius (Κουέριος), a name evidently connected with the river Cuarius or Coralius in Boeotia. (Strab. ix. p. 411.) The expelled Boeotians gave this name to the river, and founded upon its banks a temple of Athena Itonia in memory of their former abode in Thessaly. We may therefore conclude that the river upon which Cierium stood was called Cuerius, Cuarius or Curalius, more especially as Strabo (ix. p. 438) mentions a river Curalius in Thessaly, flowing through the territory of Pharcadon in Histiaeotis past the temple of Athena Itonia into the Peneius; in which the only inaccuracy appears to be that he makes it flow directly into the Peneius. Pausanias (i. 13. § 2) also appears to speak of this temple of Athena Itonia, since he describes it as situated between Pherae and Larissa, which is sufficient to indicate the site of Cierium. Leake supposes with much probability that the name of Arne may have been disused by the Thessalian conquerors because it was of Boeotian origin, and that the new appellation may have been taken from the neighbouring river, since it was not an uncommon custom to derive the name of a town from the river upon which it stood.

Cierium is not mentioned under this name in history; but it occurs under the form Pierium, which is undoubtedly only another appellation of the same place, π and κ being, as is well known, often interchangeable. Pierium was probably the general, and Cierium the local form. Pierium is first mentioned by Thucydides (v. 13). It is called Piera and Pieria by Livy (xxxii. 15, xxxvi. 14), in both of which passages it is mentioned in connection with Metropolis. In the Armenian translation of Eusebius we find the name of Amyntas the Pierian in the list of the Strategi who governed Thessaly after the battle of Cynoscephalae. Aelian (*N. An.* iii. 37) speaks of Pierus in Thessaly. (Leake, *Transactions of Royal Society of Literature*, vol. i., *Northern Greece*, vol. iv. p. 498, seq.; Müller, *Dorians*, vol. ii. p. 476.)

CIERUS. [PRUSA AD HYPIUM.]

CILBIA'NI. [CAYSTER.]

CI'LICES (Κίλικες). The Cilices are mentioned in the Iliad as the inhabitants of the part of Mysia called Troas. Eetion, the father of Andromache, Hector's wife, lived beneath wooded Placos; and his chief city was Thebe Hypoplacie. (*Il.* vi. 395, 415.) He was king of the Cilices. Strabo observes (p. 221) that Homer makes Pelasgi border on these Cilices, for he mentions Larissa as one of the cities of the Pelasgi (*Il.* ii. 840). In another passage (pp. 586, 611) he divides the territory of these Cilices into two parts, one the Thebaice, and the other Lyrnessis; and he makes the territory of the Cilices comprehend the territories of Adramyttium, Atarneus, and Pitane, and extend to the mouth of the Caicus. It seems to have been the opinion of

some of the Greek critics that the Cilices of Homer were akin to the other Cilices; for Strabo (p. 667) observes, "they say that in the tract between Phaselis in Lycia and Attalia there are pointed out a Thebe and Lyrnessus, a part of the Troic Cilices who were ejected from the plain of Thebe having gone to Pamphylia, as Callisthenes has said." Whether Callisthenes stated the emigration of these Cilicians and the existence of these cities as a fact, or as report, seems somewhat doubtful. The passage, perhaps, means that there was a story that ruins were pointed out in these parts, which had the names of Thebe and Lyrnessus. But it was a disputed question which of the two Cilices were the parent stock; for while some pointed to places in Cilicia as evidence of an emigration of Cilicians from the Troad, as in Pamphylia they referred to a Thebe and Lyrnessus, others turned the argument the other way, and referred to an Aleian plain also in the Troad (p. 676). The discussion in Strabo is not very profitable reading. There was, however, a tradition that these Troic Cilicians drove the Syri from the country afterwards called Cilicia. There is no doubt that Cilicia was once occupied by an Aramaic race, but it cannot be determined whether the Cilices of Cilicia in the historical period derived their name from some Cilices who invaded their country from the west, or whether it was the name of the earliest known inhabitants of the country. [G. L.]

CILI'CIA (ἡ Κιλικία). The description of Cilicia is difficult; but the best way of understanding the character of this country is by following Strabo's description. Strabo calls Cilicia, which lies along the coast of the Mediterranean, "Cilicia outside of the Taurus" (ἡ ἔξω τοῦ Ταύρου), for there was a country called Cilicia which was within (ἐντός) the Taurus; which district he has described under Cappadocia. [CAPPADOCIA.] Cilicia Proper was bounded on the west by Pamphylia, on the north by Lycaonia and Cappadocia, and on the east by the range of Amanus, which extends from the interior to the shore of the Mediterranean at the gulf of Issus. The southern boundary is the Mediterranean. Cilicia is naturally divided into two parts. The western and mountainous part was called Cilicia the Rough (Τραχεῖα, Τραχειῶτις: *Eth.* Τραχειώτης). The eastern part contains a considerable extent of plain country, and was called Cilicia the Plain or Campestris (Πεδιάς).

Cilicia Trachea presents to the sea a convex outline, with a narrow tract along the coast, as Strabo describes it, and it has little or no plain country. Strabo makes Coracesium (*Alaya*) the boundary between Pamphylia and Cilicia. Pliny places the boundary at the river Melas (*Manavgat*) 26 miles west of Coracesium. Mela (i. 13) makes Anemurium, *Cape Anamour*, the boundary between Cilicia and Pamphylia. Anemurium is the most southern point of this mountainous coast, and the most southern point of the peninsula of Asia Minor; but it is above 50 miles east of Strabo's boundary. Ptolemy does not seem consistent with himself, for under Pamphylia (v. 5) he makes Side the last town in Pamphylia, his description proceeding from west to east; and he immediately after enumerates Coracesium and Syedra as coast towns of Cilicia Trachea. But under Cilicia (v. 8) he mentions Syedra as a city of Pamphylia, and he makes Cilicia Trachea commence east of Syedra. The coast of Cilicia Trachea presents a rude outline, backed by high mountains from Coracesium to *Cape Cavaliere*, a distance of above 140 miles. To the east of *Cape Cavaliere* the high mountains recede from the coast, and the appearance of the country, as seen from the sea, alters materially. (Beaufort, *Karamania*, p. 219). But Strabo extends the eastern limit of Cilicia Trachea to the river Lamus (*Lamas*), which is between the island Elaeussa and Soli. "Here," observes Beaufort, "the rocky coast finally terminates, being succeeded by a gravelly beach and broad plains, which extend inland to the foot of the mountains." Strabo reckons the distance along the coast from Coracesium to Anemurium to be 820 stadia; and the distance from Anemurium to Soli at about 500 stadia. The distance from Coracesium to Anemurium is 68 English miles; and Strabo's distance is too great. The distance from Anemurium to Soli, afterwards Pompeiopolis, is about 149 miles; and here Strabo's error is very great, or at least the error in his present text.

A branch of the great mountain mass of Taurus runs direct from Coracesium (*Alaya*) towards Anemurium, but it is interrupted off *Karadran* [CHARADRUS]. From Charadrus eastward the mountains still run near the shore; and there are no large rivers on the coast of Cilicia till we come to the Calycadnus. [CALYCADNUS.] This river is represented as rising in the range of Taurus, east of Coracesium, and as having a general eastern course to Seleuceia, below which it enters the sea. The basin of the Calycadnus is separated from the coast by a rough mountain tract, which some geographers have identified with the Imbarus of Pliny (v. 27). The northern boundary of the basin of the Calycadnus and of Cilicia Trachea is the Taurus; from which a considerable stream flows southward, and joins the Calycadnus on the left bank, a little below *Mout*, supposed to be on the site of Claudiopolis. A district named Lalassis by Ptolemy (v. 8) was probably contained in the upper and western part of the basin of the Calycadnus; and Ptolemy's Cetis may have comprehended the middle and lower basin of the same river,—the only level tract in this rugged country. Ptolemy, however, includes in Cetis, both Anemurium, Arsinoe, Celenderis, and other places on the coast.

The route from Laranda (*Karaman*), on the north side of the Taurus, through *Mout* to Celenderis, is described in Leake's *Asia Minor*, p. 103. It is one of the few passes through the Cilician mountains. Ptolemy also mentions a district Lamotis, so named from a town Lamus, which was also the name of the river that was the boundary between the Trachea and the Campestris. The mountains at the back of the coast of Cilicia Trachea contain timber trees; and Strabo mentions Hamaxia, which is between Coracesium and Selinus, as a station to which ship-timber was brought down,—chiefly cedar, which was abundant; and he adds that M. Antonius gave these parts to Cleopatra, because they were suited for the equipment of a navy.

From the Lamus the coast of Cilicia Campestris runs NE. beyond Soli, and then has an ESE. course to Cape *Karadash* (the ancient Magarsus). These two coast-lines form a considerable bay. A long straight beach extends from the Lamus to Soli; and as we advance eastward from the Lamus the mountains recede further from the shores, and leave a greater breadth of level country. The mountains that bound this plain on the north have their peaks covered with snow in June. (Beaufort.) The first river within Cilicia Campestris, which, by its direction from north to south and the length of its course,

indicates the commencement of the Cilician plain, is the Cydnus, which flows past Tarsus (*Tersoos*). Nearly due north of Tarsus is a gorge in the limestone rock of the mountains, through which the Cydnus flows from the high range of the Taurus. This difficult pass, which the Turks call *Gölek Bóghdz*, is that by which the younger Cyrus passed from Dana or Tyana, in Cappadocia, to Tarsus; and it is clearly described by Xenophon (*Anab.* i. 2. § 21). This was also the pass by which Alexander entered Cilicia, and the pass which Niger attempted to defend against Septimius Severus, who was marching against him from Cappadocia. (Herodian, iii. 8, &c.) But there was another pass between that of Laranda and the Pylae Ciliciae, which is mentioned by Xenophon (*Anab.* i. 2. § 19). Cyrus was accompanied in his march from Iconium through Lycaonia by the Cilician queen Epyaxa; and on his route through Lycaonia, he sent her with an escort into Cilicia, by the pass between Laranda and the Ciliciae Pylae. This is the pass which "leads by Kizil Chesmeh and Alan Buzuk, Karahisar and Mezetli, to Soli or Pompeiopolis, and to Tarsus." (Ainsworth, *Travels in the Track, &c.*, p. 40.) After passing through the Ciliciae Pylae, Cyrus and his army descended into the Level Cilicia, which Xenophon describes as a large, beautiful, well-watered plain, full of all kinds of forest trees and vines. It produced sesame, panic, millet, wheat, and barley,—which are cultivated there at the present day,—with rice, cotton, and the sugar-cane; the date tree is indigenous. (Ainsworth,) Xenophon describes the plain as surrounded by rugged and lofty mountains on all sides from sea to sea; by which expression we must understand that he considered the plain of Cilicia as extending eastward to the place where the Amanus runs down to the sea, and terminates in Cape *Hynzyr*, or *Ras-el-Chansir*, as it is sometimes called.

"*Cape Karadash* (Magarsus) is a white cliff, about 130 feet high, and is the first interruption of that low sandy beach, which commences near the river *Lamas*." (Beaufort.) This point may be considered as the commencement of the deep bay of Issus, now the gulf of *Iskenderun;* the corresponding point on the opposite side is Cape *Hynzyr*. The coast of this bay east of Karadash has first a general eastern, and then a north-eastern direction, to the head of the gulf of Issus. "Eastward of Karadash, the same dreary waste of sand, interspersed with partial inundations of water, again recurs, and extends to the river Jyhoon or Jyhan, the ancient Pyramus." (Beaufort.) Immediately north of the outlet of the Pyramus is the bay of *Ayas* [AEGAE], the northern part of which is "a level plain of firm soil, from ten to twenty feet above the sea." (Beaufort.) From the head or most northern part of the gulf of Issus, the coast has a general south direction, nearly as far as Alexandria (*Iskenderun*); and from *Iskenderun* to Cape *Hynzyr*, the direction of the coast is south-west, being nearly parallel to the coast on the opposite side of the bay. The form of the eastern coast is determined by the eastern or Syrian range of Amanus, which has a general southern direction as far as the latitude of *Iskenderun*, and then a SW. direction to Cape *Hynzyr*. There is only a very narrow tract between these mountains and the sea from Cape *Hynzyr* to the head of the gulf of Issus. The level land at the head of the gulf is the plain of Issus, which is bounded on the north and north-west by the other range of Amanus, which descends in a SW. direction as far as the lower course of the Pyramus. This range is crossed in going from Mopsuestia (*Misis*) to the gulf of *Iskenderun;* and the high lands, in fact, descend to the shore of the gulf of Issus, at a place called *Matakh*. This appears to be the station (ὕφορμος) which Strabo mentions as belonging to the Amanides Pylae, for he describes the SW. branch of the Amanus as reaching to the sea at this place. [AMANIDES.] These two ranges of the Amanus, the eastern or Syrian, and western or Cilician, enclose the plain of Issus, and separate it from the more extensive plain to the west, which we may call the Cilician.

Strabo (p. 676) reckons it a voyage of near 1,000 stadia, direct distance from Seleuceia in Pieria, which is the first Syrian city south of Rhosus, to Soli in Cilicia. The real distance is only about 85 English miles. Strabo further says that the south coast of Asia Minor runs eastward from the Rhodian Peraea to the mouth of the Cydnus, and that it then takes a direction nearly ESE. (ἐπὶ τὴν χειμερινὴν ἀνατολήν) as far as Issus, and that from Issus the coast makes a bend to the south as far as Phoenice. Now, this is true of the coast as far as Cape *Karadash*, but no further; and Strabo's notion of the coast east of *Karadash* makes the bay of Issus disappear altogether. Therefore, the geographer has either expressed himself very inaccurately, or he was not acquainted with the form of the bay of Issus.

The lower part of the plain of Cilicia between the Sarus and the Pyramus is the Aleian (Ἀλήιον πεδίον), which was celebrated in the mythi of the Greeks as the place of Bellerophon's wanderings (*Il.* vi. 201). The cavalry of Alexander, in his Asiatic campaign, passed through this plain from Tarsus to the Pyramus (Arrian, *Anab.* ii. 5. § 11). It is seen from the sea by those who follow the coast from the mouth of the Cydnus to Cape *Karadash;* and "as far as the eye could discern, it consists entirely of dreary sandhills, interspersed with shallow lakes." (Beaufort.)

The Cilician plain contains three large rivers. The Cydnus (*Tersoos Tchy*) is described by Strabo as having its source not far above Tarsus, passing through a deep ravine, and then immediately flowing down to Tarsus; and the stream is cold and rapid. He makes it only 120 stadia from the Cilician boundary on the north to Tarsus, and five stadia from Tarsus to the sea. But the Ciliciae Pylae are about 25 miles NNW. of Tarsus; and the distance from Tarsus to the present outlet of the river is at least 12 miles, through a level and well cultivated country. The best maps represent it as rising not further north than the Ciliciae Pylae, and on the south side of the range of Taurus, now called *Bhulgar Dagh*. The Cydnus can now only be entered by the smallest boat, the entrance being obstructed by bars; but inside of the bar "it is deep enough, and about 160 feet wide. It was navigable in ancient times up to Tarsus (Plut. *Anton.* c. 26); and probably much later. It seems that the progress of the alluvium has been very rapid at the mouth of this river, and this is the only way of explaining Strabo, who says that the Cydnus, at its mouth, flows into a kind of lake, called Rhegma, which had ancient dockyards, and the lake was the port of Tarsus. Strabo's five stadia from Tarsus were probably reckoned to the Rhegma, which the alluvium has changed into a sandy plain. But there is some error in the five stadia: the Stadiasmus makes the same distance 70 stadia. The water of the Cydnus is

cold, but not colder "than that of the other rivers which carry down the melted snow of Mount Taurus." (Beaufort.) Alexander, who is said to have been seized with a violent illness from bathing in it, threw himself into the water when he was in a great heat. (Arrian, *Anab.* ii. 4. § 10; Plut. *Alex.* c. 19.)

East of the river Tarsus the Stadiasmus places the mouth of the Sarus (in the Stadiasmus incorrectly written Areius), 70 stadia from the outlet of the Rhegma. The Sarus is the modern *Sihun*, and the coast between the mouths of these two rivers projects in a long sandy spit. This river is 270 feet wide at its mouth, and as difficult to enter as the river of Tarsus. The Sarus is not mentioned by Strabo in his description of Cilicia; but in his account of Cataonia [CATAONIA] he describes the course of the Sarus as being through Comana, and through the gorges of Taurus to the Cilician plain (p. 535). The *Sihun* is represented in some maps as having two sources far to the north, one of which is nearly in the parallel of 39° N. lat., and the other still further north. The course of these two streams is south, and a long mountain tract separates the two river basins, which unite within the mountain region. The stream then takes a very irregular course to Adana, a place which retains its name (*Adanah*); and from Adana it has a SW. course through the Cilician plain to the sea. If the course of these two branches of the Sarus is correctly represented in Kiepert's map, it is one of the large rivers of the peninsula, and at least above 200 miles long. There is, however, a third branch of the Sarus, the course of which is well ascertained, and it is laid down in the map which accompanies Hamilton's work (*Researches*, &c.). This is the branch which rises east of *Eregli* or *Ercle*, abont 37½° N. lat., much further to the south and west than either of the branches already mentioned, and passes through the great range of Taurus; that part of the range west of the gap is called *Bulghar Dagh*. The course of this branch of the river is eastward, and the road follows the waters "for some distance amidst precipitous cliffs and wooded abutments, till they sever the main chain, which is composed of a somewhat narrow and rugged belt of limestone reposing on schistus; the pass is however wide, and would permit of the passage of three chariots abreast." (Ainsworth.) The road then turns up a valley to the south-west, down which flows a stream, and joins the Sarus on the right bank. The road is over wooded rocks and hills up to the head waters of this stream, where there is an extensive flat, "at the summit of which, and at an elevation of 3812 feet, are the fortified posts of Mohammed Ali Pacha; immediately beyond which the waters again run to the S. and SE., rushing through a tremendous gap, and thence flow direct towards the Cydnus or river of Tarsus." (Ainsworth, *London Geog. Journal*, vol. x. p. 499.) Thus the road passes from the basin of this tributary of the *Sihun* into the basin of the Cydnus, and it then follows the waters of the Cydnus, which "soon lead to a deep gorge or fissure in another lofty ridge of limestone rocks; this is the narrowest and most difficult portion of the pass: it is the point to which Xenophon's description applies as just broad enough for a chariot to pass, and that would be with great difficulty; this portion of the road bears evident traces of ancient chiselling." (Ainsworth.) It is also clearly the deep ravine which Strabo describes the river Cydnus as passing through in its course to Tarsus; and that which Niger blocked up to stop the approach of Septimius Severus. Niebuhr (*Reisebeschreibung*, vol. iii. p. 108), who went through this defile, observes that this road, through the *Boghaz* from the pashalik of *Adanah* to that of *Konie*, would be as dangerous for a hostile army as Xenophon and Curtius describe it, for it is narrow, and the rocks on both sides are steep as a wall; yet the caravan, which he accompanied in December 1766 from *Adanah*, made its way through these Ciliciae Pylae without any great difficulty.

When the army of Cyrus (B. C. 401) left Tarsus, it marched to the Sarus or Psarus, as the best MSS. have it (Xenoph. *Anab.* i. 4. § 1). The march was ten parasangs or 300 stadia from Tarsus to the Sarus; and the width of the Sarus was estimated by Xenophon at 300 Greek feet. Mr. Ainsworth found the Sarus, at *Adanah*, in the month of December, 325 feet wide at the bridge, but not fordable. *Adanah*, which is on the site of the old city, is, at present, a town of some trade, and surrounded by a fertile tract of well-cultivated gardens.

From the passage of the Sarus the army of Cyrus marched five parasangs, or 150 stadia, to the Pyramus, the width of which Xenophon estimated at 600 Greek feet (*Anab.* i. 4. § 1.). The present passage of the Pyramus (*Jihun*) is at *Misis*, the site of Mopsuestia, which is on the road from Baiae (*Bayas*), on the bay of Issus, to *Adanah*. Mr. Ainsworth, however, gives some good reasons for supposing that Cyrus crossed the Pyramus below Mopsuestia, and much nearer the old mouth of the river. Niebuhr (A. D. 1766) found a handsome bridge at *Misis*, recently built, and a hundred double steps in length. The Pyramus is the largest of the Cilician rivers, It rises in Cataonia [CATAONIA], and consists of two main branches, one the Carmalas, flowing from the north, and the other from the east. [CARMALAS.] These two branches unite SW. of *Marash*, from which point the river has a SW. course, through the Taurus. It passes the site of Anazarbus and *Misis*, and at present enters the sea a little south of the inlet, already mentioned, at the eastern extremity of which *Ayas* stands. But the old bed of the river seems to have entered the sea some distance from the present mouth, and a little west of Cape *Karadash*, as Beaufort supposes; for here there is a shallow inlet of salt water, about 12 miles long. The present outlet of the *Jihun* is 23 miles east of the supposed former outlet. A short distance NE. of *Karadash*, and near the eastern extremity of this shallow inlet, is the site of Mallus, the chief town of the Mallotis. Thus Mallus would stand on the east side of the old bed of the Pyramus, and near the mouth of the river, which is consistent with all the ancient authorities.

Strabo (p. 536) describes the Pyramus as a navigable river which rises in the middle of the plain of Cataonia. There is a considerable channel, through which the clear water flows unseen for some distance under ground, and then rises to the surface. If a man lets down a spear from above into the channel, the force of the stream is so great that the spear is with difficulty dipped in the water. After its re-appearance the river runs on in a broad deep stream, but on approaching the Taurus, it is wonderfully contracted. Wonderful also is the gap in the mountains through which the bed of the river passes, for as it happens in rocks which have been rent and split asunder, that the projections on one side correspond to the recesses on the other, in such wise that

they may be fitted together, so we observed that the rocks overhanging the river on each side, and rising almost up to the summits of the mountains, at a distance of two or three hundred feet, had the receding parts corresponding to the projecting parts. The bottom between the steep sides is all rock, and has a deep and very narrow fissure in the middle, so narrow that a dog or a hare might leap over. This is the channel of the river which is full to the brim, like a broad canal [to the extent of a thousand stadia]. Owing to the winding course of the stream, and the great contraction, and the depth of the chasm, the noise falls on the ear of persons even as they approach at some distance, like the sound of thunder. Passing through the mountains the river brings down so much alluvium to the sea, some from Cataonia, and some from the Cilician plains, that a prophecy uttered about it is in vogue, to the following effect:

"In time to come broad flowing Pyramus
Shall push his banks to Cyprus' sacred shore."

The same thing happens here, adds Strabo, as in Egypt, where the Nile is continually making land of the sea by its alluvium. (See the notes on this passage of Strabo about the Pyramus, in Groskurd's Transl., vol. ii. p. 450).

Mr. Ainsworth remarks, from his own observations on the plain of Cilicia, as far as the ruins of Anazarbus, that "its bed is throughout the plain deep and narrow, from the nature of the soil, which is alluvial;" and that "in its lower part it divides into several streams on arriving at its delta." He concludes that the army of Cyrus crossed this river in the lower parts, where it is most easily forded, at which time its embouchure was probably at *Karadash*. The prophecy is not yet fulfilled; but the river still brings down a great quantity of earth and sand. This deposit has produced a plain of sand along the side of the gulf, like that formed by the Calycadnus. "The *Jyhoon*, half a mile from its mouth, is 490 feet wide, and is the largest of all the rivers on the south coast of Asia Minor" (Beaufort). It is now as shallow over its bar as the Cydnus and the Sarus; though it appears from a passage of Anna Comnena, quoted by Beaufort, that it was open for galleys even in the time of the crusades.

The remainder of Cilicia contains no large river, and is closed, as already described, by the two branches of the Amanus. It lies aronnd the Gulf of Issus, and the more particular description of this gulf, and the examination of the difficult question of the site of Issus, will come more appropriately in another place. [ISSUS].

The extensive tract of country called Cilicia has a coast line of 430 miles, from Coracesium to Rhosus, at the southern extremity of the bay of Issus. The direct distance from Coracesium to the Syrian Gates on the east side of the gulf of Issus is about 230 miles. It is, aptly enough, divided into the Mountainous (ἡ ὀρεινή, Herod. ii. 34) and the Level, and a ready communication between the extreme west and eastern parts could only be by sea. The coast, however, of the Tracheia, or Mountainous Cilicia, nearly as far east as the outlet of the Calycadnus, though included in Cilicia by the later geographers, is really a distinct country. But the valley of the Calycadnus, which lies from west to east, may be considered one of the three natural divisions of Cilicia; the other two being the plain of Tarsus and Adana, and the plain of Issus. Indeed, from the peninsula of Cape *Cavaliere*, "the last and highest of the series of noble promontories that project from this coast" (Beaufort), the rude outline of the shore is changed, and the land communication along the coast with the eastern part of Cilicia is not difficult. There is a road represented in the Table, all along the coast from the border of Pamphylia to Seleuceia on the Calycadnus, and thence eastward through Corycus, Soli (or Pompeiopolis), the Aleian plain, Mallus, Aegae, and Issus, to Rhosus. Alexander, after reaching Tarsus by the pass in the Taurus, led part of his army to Anchiale, and from Anchiale to Soli; and he afterwards advanced from Soli eastwards to Magarsus and Mallus, on the Pyramus. The two natural chief divisions of Cilicia, the basin of the Calycadnus and the plain country east of the Cydnus, are represented by the modern Turkish governments or pashalicks of *Selefkeh* (Seleuceia on the Calycadnus) and *Adanah*.

It is difficult to estimate the extent of the Cilician plain, through which the Cydnus, Sarus and Pyramus flow. The level country appears to reach somewhat north of Mopsuestia (*Misis*), Adana (*Adanah*), and Tarsus (*Tersoos*); and in this part the plain may be between 40 and 50 miles from east to west. The form of the coast makes the dimensions of the plain from north to south very unequal in different parts. The widest part extends north from Cape *Karadash*, and it may be above 30 miles. The level land, that has been named the plain of Issus, is only a narrow strip, except at the head of the gulf of Issus, where it seems to extend eight or ten miles inland. Cilicia surrounded by mountain barriers, with a long coast and numerous ports, a fertile plain, and mountains covered with forests, possessed great natural advantages. Its position between Syria on one side, and the rest of Asia Minor on the other, made it the highway from the Hellespont and the Bosporus to the eastern shore of the Mediterranean, and the middle course of the Euphrates. Its proximity to Syria invites the cupidity of any one who is master of that country; and the Greek rulers of Egypt coveted the possession of the opposite coast of Cilicia, which contains the materials for shipbuilding, which Egypt does not.

Besides the products of Cilicia mentioned above, Corycus on the coast was famed for its saffron, which was an article of export. A cloth made of goats' hair, which the Romans called Cilicium, was the work of Cilician industry; at least the thing seems to have had its name from the Cilician article.

The Cilicians, Herodotus says (vii. 91), were originally named Hypachaei, and afterwards they had the name of Cilices from Cilix, the son of Agenor, a Phoenician. According to this tradition, they were of the same stock as the Phoenicians. It is probable that they did belong to some branch of the Aramaic nations, and the Assyrian kings seem to have extended their power to the level Cilicia. [ANCHIALE.] Cilicia had a king Syennesis, who is represented as mediating, in conjunction with a king of Babylon, to make peace between Croesus the Lydian king and the Medes, B. C. 610. (Herod. i. 74.) Cilicia was the fourth division in the arrangement of Darius, and it paid the king a yearly tribute of 360 white horses and 500 talents of silver (Herod. iii. 90); of which sum 140 talents were expended on the cavalry on duty in Cilicia, and the rest came into the Persian king's treasury. Herodotus (v. 52) makes Cilicia extend north of the Taurus to the east of Cappadocia, and he makes the Euphrates the boundary between the Cilicians and the Armenians;

so that, if his statement is true, the eastern part of the later province of Cappadocia was in his time Cilician. [CAPPADOCIA.] Cilicia still had its native kings in the time of this Darius; for a Carian, Pixodarus, the son of Mausolus, was married to a daughter of the Cilician king Syennesis. (Herod. v. 118.) Cilicia was one of the subject states which contributed to form a navy for the Persians, and it supplied 100 ships for the great expedition of Xerxes, which were under the command of a Cilician, Syennesis, the son of Oromedon. (Herod. vii. 91, 98.) A king still called Syennesis was the husband of queen Epyaxa, who made herself a partisan of the younger Cyrus, when he was on his road through Cilicia to attack his brother Artaxerxes, and contrived to reconcile her husband to him. (Xen. *Anab.* i. 2. § 26.)

The mythi of the Greeks connected the history of the people of Western Asia with Cilicia [CILICES]; and they had stories of early settlements by their own nation on these shores. Amphilochus, the son of Amphiaraus, settled Posideium on the borders of the Cilicians and the Syrians (Herod. iii. 91). According to another story, Amphilochus, and Mopsus, the son of Apollo, came from Troy and founded Mallus; and in Strabo's time their tombs were pointed out at Magarsus, near the Pyramus. But the Greeks do not appear to have settled in Cilicia, if we look to historical evidence, before the time of Alexander, except in a few places on the coast. Soli is said to have been colonised by Achaei and Rhodians from Lindus. In the time of Xenophon (B. C. 401) the Cilices still appear as a distinct people. It was not till after the time of Alexander that the Greeks got a firm footing in the country, and, under Greek civilisation, Tarsus became one of the great schools of the ancient world. The name of Seleuceia on the Calycadnus, of Antiocheia ad Cragum, and Arsinoe, on the coast of the Trachea, and other Greek names, indicate the connection of Cilicia with the Greek kings of Syria and Egypt. The later Roman occupation of the country is indicated by the names Pompeiopolis, Claudiopolis, Trajanopolis, and others. The native Cilicians probably disappeared from the plain country, or were mingled both with Greeks and other foreigners; but they maintained themselves in the mountains, even to Cicero's time, under the name of Eleutherocilices. Cicero, who was governor of Cilicia, describes them as a fierce and warlike race, and he took their strong town Pindenissus. (Cic. *ad Att.* v. 20.) Strabo says that the Amanus, which lies above Cilicia on the east, was always governed by several kings or chiefs, who had strong places; and in his time, a man of mark was set over all of them, and called King by the Romans for his merits. His name was Tarcondimotus, a genuine free Cilician, no doubt.

Diodotus, surnamed Tryphon, made the stronghold Coracesium his head-quarters at the time that he caused Syria to revolt from the kings, as Strabo expresses it. Antiochus, the son of Demetrius, in B. C. 139 compelled Tryphon to seek refuge in a fort, where he killed himself. This Tryphon, adds Strabo, was the cause of the Cilicians commencing their piratical practices, and the feebleness of the kings who succeeded one another in the government of Syria and Cilicia. The Cilicians were encouraged to man-stealing by the great demand for slaves among the Romans after the destruction of Carthage and Corinth, and they found a ready sale at Delos for all the slaves that they took there. Pirates, pretending to be slave-dealers, soon started up, and did great mischief in these seas. The Romans were too remote to care about what was going on along the coast of Asia, though they knew that these disorders were owing to the weak government of the descendants of Seleucus Nicator. But it was at last necessary for the Romans to make war on the pirates, for their own safety, for even the shores of Italy and the neighbourhood of Rome were not safe against these marauders. (Cic. *pro Leg. Manil.* c. 11, &c.; Plut. *Pomp.* c. 24, &c.) During the war with Mithridates the pirates sided with the king, and when the Romans took them in hand they had to deal with a most formidable enemy. In B. C. 103, M. Antonius had Cilicia as his "provincia," that is, according to the proper sense of that word, for the sphere of his command as propraetor. This was the beginning of the war against the pirates. Also in B. C. 92, L. Sulla had Cilicia for his "provincia;" but it is not correct to infer that Cilicia was then organised as a Province. In B. C. 80 and 79, Cn. Dolabella had Cilicia as his "provincia." (Cic. *Verr.* act. i. 17.) It does not appear that he had under him any part of Cilicia, properly so called; and it has been observed, that all the crimes of Verres and Dolabella, which Cicero mentions, were committed in Lycia, Pamphylia, Pisidia, and Phrygia. But, as he had a province in Asia Minor, and it was called Cilicia, he might, we must suppose, have gone into Cilicia, if he would or could. In B. C. 78—75, P. Servilius Isauricus was sent against the pirates in these seas. He took several places in Lycia and Pamphylia, and Corycus in Cilicia (Eutrop. vi. 3); but he did not enter the Level Cilicia, which was held by Tigranes till B. C. 69, and perhaps even to B. C. 66. Yet, some writers state that Isauricus conquered Cilicia. (Vell. Pat. ii. 19.) Cn. Pompeius, who was appointed (B. C. 67) to command in the war against the pirates, brought Cilicia Trachea under Roman dominion; and, after the surrender of Tigranes, he took from him the Level Cilicia, with other of his acquisitions. The province called Cilicia was now fully organised, and it comprised six parts: Cilicia Campestris, Cilicia Aspera, Pamphylia, Pisidia, Isauria, and Lycaonia; with the greatest part of Phrygia, comprehending the Conventus of Laodicea, Apamea, and Synnada. In B. C. 58 the island of Cyprus was added, which the Romans had taken from the king of Egypt. This was the extent of the Roman province of Cilicia when Cicero was proconsul of Cilicia, B. C. 51—50. It was divided, after Roman fashion, into eight Conventus or Fora: the Conventus of Tarsus, which city was the residence of the governor; the Forum of Iconium for Lycaonia; the Forum Isauricum, conjectured to have been at Philomelium; the Forum Pamphylium, the place of which is unknown; the Forum Cibyraticum [CIBYRA], at Laodicea, on the Lycus; the Forum of Apamea; the Forum of Synnada; and Cyprus.

A change was made shortly after this time and probably by the Dictator Caesar B. C. 47. (*Bell. Alex.* 66). The Forum or Conventus of Cibyra was attached to the province of Asia, together with the greater part of Pisidia, and also Pamphylia, and as it seems, the Conventus of Apamea and Synnada. M. Antonius (B. C. 36) gave Cyprus and Cilicia Aspera to Cleopatra, and eastern Phrygia with Lycaonia, Isauria, and Pisidia, to Amyntas king of Galatia. Augustus reduced the province of Cilicia still further. Cyprus was made a separate province; and Pamphylia with Isauria and Pisidia, after the

death of Amyntas, was also made a separate province. Lycaonia was attached to the province of Galatia, which was established after Amyntas' death; and thus Cilicia was reduced to the original parts Campestris and Aspera. According to Roman fashion however (Strab. p. 671) the mountainous parts, which were not easy for a governor to manage, were left to the native princes. There were three of these native dynasties. One was that of Olbe, in the mountains between Soli and Cyinda; perhaps the Olbasa of Ptolemy. This was a priestly dynasty, which traced its descent from Ajax, a son of Teucer; and hence the rulers were generally called Ajax and Teucer. In B. C. 41, through the favour of M. Antonius, Polemo had the supreme power, who called himself on his coins M. Antonius Polemo, and had the title of chief priest of the Cennati, dynast of the sacred city of the Olbeis and Lalasseis. The name Cennati appears on coins of Diocaesarea, which is called the Metropolis of the Cennati. The Lalasseis are mentioned by Pliny and Ptolemy. As late as the reign of the emperor Claudius, there is mentioned a Polemo, king of Cilicia. Cilicia Aspera, which M. Antonius had given to Cleopatra, and which Archelaus afterwards held (Strab. p. 671), was given by Augustus after the death of Amyntas (B. C. 25) to Archelaus of Cappadocia. He had all the Aspera, except Seleuceia, and he resided in the island Elaeussa, near the mouth of the Lamus, which was called Sebaste in honour of Augustus. And here he had a palace. There is no island here now; "but there is a little peninsula opposite the town, covered with ruins, and connected with the beach by a low isthmus of drift sand; from whence it may be concluded that this peninsula was once the island Elaeussa, and that the isthmus has been of recent formation." (Beaufort, *Karamania*, p. 252.) It seems not unlikely that the family of Archelaus remained in possession of Cilicia Aspera, even after the death of Archelaus, A. D. 17, when Cappadocia was made a Roman province. Vespasian finally attached Cilicia Aspera to the province.

In the Amanus there was a King Tarcondimotus, a name already mentioned above. He assisted Pompeius in the battle at Pharsalus, but he was pardoned by Caesar. The king lost his life at the battle of Actium (Dion Cass. l. 14). Plutarch (*Ant.* 61) calls him Tarcondemus, King of Upper Cilicia. His eldest son Philopator, which is a pure Greek name, was deprived of his father's kingdom; and the younger, Tarcondimotus II., did not obtain possession of it until B. C. 20. His successor Philopator II. died A.D. 17.

Under Augustus, Cilicia was an imperial province, administered by a Legatus Aug., with the title of Propraetor. In Caracalla's time the governor was named Consularis. In the period after Constantine, Cilicia was divided into three parts: Cilicia Prima, the chief town Tarsus, under a Consularis; Cilicia Secunda, chief town Anazarbus, under a Praeses; and Isauria, originally Cilicia Aspera, chief town Seleuceia, under a Praeses.

Six free cities under Roman dominion are mentioned in Cilicia: Tarsus, which was both Libera et Immunis; Anazarbus, called also Caesarea, which had the title of Metropolis, from the time of Caracalla; Corycus; Mopsus or Mopsuestia; Seleuceia, on the Calycadnus, which was taken from under the administration of Archelaus by Augustus, and declared free; and Aegae. Selinus, afterwards Trajanopolis, was probably a Roman colony. (Becker, *Handbuch der Röm. Alter.*, continued by Marquardt.) [G. L.]

CILI'CIAE PYLAE. [CILICIA.]

CILLA (Κίλλα: *Eth.* Κιλλαῖος), a town of Mysia, mentioned in the Iliad (i. 36), with Chryse and Tenedus. Herodotus (i. 149) enumerates Cilla among the eleven old Aeolian cities of Asia. Strabo (p. 612) places Cilla in the Adramyttene: he says, "near to Thebe is now a place named Cilla, where the temple of Apollo Cillaeus is; there flows by it the river Cillos which comes from Ida; both Chrysa [CHRYSA] and Cilla are near Antandrus; also the hill Cillaeum in Lesbos derived its name from this Cilla; and there is a mountain Cillaeum between Gargara and Antandrus; Daes of Colonae says that the temple of Apollo Cillaeus was first built at Colonae by the Aeolians, who came from Hellas; and they say that a temple of Apollo Cillaeus was also built at Chrysa, but it is uncertain whether this Apollo was the same as Smintheus, or another." This river Cillos is said to be called *Zellete* or *Zikeli*, according to some authorities. [G. L.]

CILLA'NIUS CAMPUS (τὸ Κιλλάνιον), is mentioned by Strabo (p. 629) between the plain of Peltae, which is in Phrygia, and the plain of Tabae. It is difficult to say where he places it. Cramer (*Asia Minor*, vol. ii. p. 30) conjectures that it may be "Cyllanticus tractus" of Pliny (v. 42), in which passage the MSS. have "Cyllanicus" (Harduin's note), and it is not said why "Cyllanticus" has been placed in the text. The text of Pliny is hardly intelligible. [G. L.]

CILURNUM. [CELURNUM.]

CIMBRI (Κίμβροι), a tribe which in conjunction with the Teutones and others invaded the south of Europe, and successively defeated six Roman armies, until in the end they were conquered by C. Marius, B. C. 101, in the Campi Raudii near Vercellae. Previous to their joining the Teutones, they had traversed and devastated Gaul and Spain, and in the battle against Marius they are said to have lost 100,000 or even 140,000 men. Who these Cimbri were, what country they inhabited, and what was the cause of their wandering southward, are points which are not clearly defined in our ancient authorities, and modern investigations seem to have made the matter almost more obscure. All our authorities state that the original country of the Cimbri was the Chersonesus Cimbrica, the modern peninsula of *Jutland*, and it is a well known fact that Cimbri continued to dwell there as late as the time of the Roman emperors. (Tac. *Germ.* 37; Plin. iv. 27; Ptol. ii. 11. § 12; Mela, iii. 3.) This fact is further established by the very name of the peninsula, which Pliny calls Promontorium Cimbrorum. Posidonius (*ap. Strab.* vii. p. 293) does not say what country they inhabited, and only describes them as roving pirates; and Strabo (vii. pp. 291, 294), mentioning them by the side of the Brueteri and Chauci, states that they occupied the country west of the Elbe. This statement, however, cannot invalidate the testimony of Tacitus, Pliny, and Strabo, that their original home was in *Jutland*. In the reign of Augustus, moreover, the Cimbri sent an embassy to that emperor from the Cimbrian Chersonesus, to offer him presents and to sue for pardon for what they had done to the Romans a century before. (Strab. vii. p. 293; Monum. Ancyr. in Wolf's edit. of Sueton. vol. ii. p. 375.) Lastly, it is attested by all the ancients that Cimbri came from the north, and not, as some moderns assert, from the

east. (Strab. *l. c.*; Diod. v. 32; Justin, xxxviii. 3; Amm. Marc. xxxi. 5, 12; Claud. *Bell. Get.* 639.) The question as to the nationality of the Cimbri is involved in greater obscurity. Mere resemblance of name led some of the ancients to identify the Cimbri with the Cimmerians in Asia. (Strab. *l. c.*; Plut. *Mar.* 10; Polyaen. viii. 10; Diod. v. 32; Steph. Byz. *s. v.* Ἀξιοι.) This supposition has justly been abandoned by all modern writers, though they are still divided in opinion, some regarding the Cimbri as a tribe of the great Celtic nation, and others as being a Germanic tribe. The testimony of the ancients, which ought not to be set aside, except for most weighty reasons, must here decide the question. The ancients are almost unanimous in representing the Cimbri as Celts or Gauls. (Sall. *Jug.* 114; Flor. iii. 3; Appian, *de Reb. Illyr.* 4, *Bell. Civ.* i. 29, iv. 2; Diod. *l. c.* and xiv. 114; Plut. *Cam.* 15; Dion Cass. xliv. 42; Justin. xxiv. 8; Oros. v. 16.) Against this statement modern critics have urged, that the names *Galli*, *Celtae*, and *Galatae* are used very vaguely and loosely by the ancients, and that sometimes they are applied to Germans also; a second objection is, that a Celtic tribe should have dwelt so far north as *Jutland*, and so far away from other Celtic tribes These objections, however, do not weigh very heavily against the facts, that the very name of the Cimbri bears a strong resemblance to that of the Celtic Kymri; and that the armour and customs of the Cimbri, as described by Plutarch (*Mar.* 25, 27) and Strabo (vii. p. 294), are very different from those of the Germans. All these circumstances render it in the highest degree probable that the Cimbri were a Celtic or Gallic and not a Germanic nation. (Comp. H. Müller, *Die Marken des Vaterlandes*, p. 131, fol.) The circumstances which led the Cimbri to migrate southward, were undoubtedly the same as those which, during those centuries, so often set nations in motion, viz. the love of adventure and warlike enterprise, or the pressure of other immigrating people from the East. The statement that the Cimbri were driven from their country by a fearful inundation of the sea, is a mere invention without any foundation. (Strab. vii. p. 293.) Their name is said to signify "robbers." (Plut. *Mar.* 11; Fest. p. 43, ed. Müller.) For further details respecting the Cimbri, see H. Müller, *l. c.*; Zeuss, *Die Deutschen*, p. 141, foll.; Wilhelm, *Germ.* p. 172, foll.; Schiern, *De Cimbrorum Originibus et Migrationibus*, Havniae, 1842; Latham, *Appendix* to his edit. of *Tac. Germ.* p. clv. foll.) [L. S.]

CI'MBRICA CHERSONESUS. [CHERSONESUS CIMBRICA.]

CIMBRO'RUM PROMONTO'RIUM. [CIMBRI.]

CIMIATE'NE (Κιμιατηνή), a division of Paphlagonia, which took its name from a hill fort, Cimiata, at the foot of the range of Olgassys. Mithridates, called Ctistes, made this his stronghold, and so became master of the Pontus. (Strab. p. 562.) As to the proper form of the name, see Groskurd's note (*Transl. Strabo*, vol. ii. p. 502.) The name of this division is incorrectly written Κινστηνή in Casaubon's text of Strabo. [G. L.]

CI'MINUS, a mountain and lake of Southern Etruria, between Volsinii and Falerii. The former, still called *Monte Cimino*, is a conspicuous object from Rome and the whole surrounding country, and forms the culminating point of a tract or range of volcanic heights, which extend from the neighbourhood of the Tiber in a SW. direction towards the sea at *Civita Vecchia:* and separates the great plain or basin of the Roman *Campagna* from the plains of Central Etruria. The whole of this tract appears to have been covered in ancient times, as a part of it still is, with a dense forest known as the SILVA CIMINIA (Ciminius Saltus, Flor.), which, according to Livy, was regarded by the Romans in early ages with no less awe than the Hercynian forest was in the days of the historian: so that when in B. C. 310, the consul, Q. Fabius Maximus, for the first time approached it with a Roman army, the senate in alarm sent him peremptory orders not to attempt its passage. This, however, he had already effected with safety before he received the prohibition. (Liv. ix. 36—39; Florus, i. 17; Frontin. *Strat.* i. 2. § 2.) The expressions of Livy are, however, certainly exaggerated: though the forest may have presented a formidable obstacle to an invading army, it is impossible that it should not have been traversed by traders and other peaceful travellers, as well as by the armies of the Etruscans themselves, on their advance to Sutrium, in the previous campaigns. The highest point of the range exceeds 3000 feet in height, but it is far from presenting a regular and continuous ridge, the several masses or clusters of hills, of which it is composed, being separated by passes of very moderate elevation. It is across one of these, about 2 miles to the W. of the Ciminian Lake, that the ancient Via Cassia was carried from Sutrium to Forum Cassii: the modern high road from Rome to Florence abruptly ascends the heights above *Ronciglione*, and skirts the basin of the lake on its E. side. The Via Cimnia, of which we find mention in an inscription of the time of Hadrian (Orell. 3306), probably followed much the same direction.

The lake (Ciminius Lacus, Vib. Seq. p. 23; Cimini Lacus, Virg. *Aen.* vii. 697; Sil. Ital. viii. 493; Κιμινία λίμνη, Strab.) is situated in the heart of the mountain, to which the name of Mons Ciminus more properly belongs: the deep basin-shaped depression in which it is formed, is evidently the crater of an extinct volcano. A legend recorded by Servius (*ad Aen. l. c.*) attributed its formation to Hercules, while another, similar to those connected with the Lacus Albanus and Fucinus, represented it as covering the site of a town named Saccumum or Succinium, which was said to have been swallowed up by an earthquake. (Amm. Marc. xvii. 7. § 13; Sotion, *de Mir. Font.* 41.) Strabo and Columella tell us that it abounded in fish and wild fowl. (Strab. v. p. 226; Colum. viii. 16. § 2.) It is about 3 miles in circumference, and is now called the *Lago di Vico*, from a village of that name on its E. bank. [E. H. B.]

CIMME'RICUM (Κιμμερικόν, Scymn. *Frag.* xci; Anon. *Peripl.* 5), a town of the Cimmerian Bosporus situated near the mountain of the same name (Κιμμέριον, Strab. vii. p. 309: *Aghirmisch Daghi*, or *Opouk*) rising in the E. portion of the S. coast of the peninsula of *Kertsch.* (Köler, *Mém. de l'Acad. de St. Petersburg*, vol. ix. p. 649.) [E. B. J.]

CIMME'RII (Κιμμέριοι), a people who belong partly to legend and partly to history. The story of the Odyssey (xi. 14) describes them as dwelling beyond the ocean-stream, plunged in darkness and unblest by the rays of Helios. According to Herodotus, they were originally in occupation of the territory between the Borysthenes and the Tanais, and being expelled from their country by the Scythians, skirted the shores of the Euxine, and having passed through Colchis and over the river Halys, invaded Asia to the W. of that river. In this inroad they

took Sardis, all but the citadel, during the reign of Ardys. His grandson Alyattes was powerful enough finally to deliver Asia from their presence. (Herod. i. 6, 15, 103, iv. 12.) It is said that they, along with the Treres and other Thracian tribes, who are so described as to make it doubtful whether they were distinct nations, or branches of the same race, had desolated Asia Minor before the time of Ardys, and even earlier than that of Homer. (Strab. i. pp. 6, 59, 61.) The fragments preserved of the most ancient elegiac poetry vividly express the feelings with which the Ionians, and Ephesus in particular, saw these barbarous tribes who had taken Sardis, encamped with their waggons on the banks of the Cayster, when the Ephesian poet Callinus earnestly implored Zeus to save his native land from this ferocious horde. (Callin. *Fragm.* 2, 3, ed. Bergk; Strab. xiii. p. 627, xiv. pp. 633—647; comp. Mure, *Hist. of the Language and Literature of Greece*, vol. iii. p. 132; Müller, *Hist. of the Literature of Greece*, c. x. § 4; Grote, *Greece*, vol. iii. pp. 313, 331, foll.) Niebuhr (*Klein Schrift.* vol. i. p. 361) conjectured that the Cimmerians passed through Thrace, as they make their first appearance in Ionia and Lydia. The road by the Euxine, which the narrative in Herodotus presupposes, is almost entirely impassable for a Nomadic people, as the Caucasus extends to the very shores of the Euxine.

The pursuit of the Cimmerians by the Scythians is an imaginary addition. All that can be stated with any certainty of this race is that they seem to have been the chief occupants of the Tauric Chersonesus (*Crimea*). On this peninsula there was formerly a Cimmerian city, adjoining to which were fortifications, enclosing the isthmus by an earthen wall. (Strab. *l. c.*)

As vestiges of the Cimmerians still remaining in his time, Herodotus (iv. 12) mentions the tombs of the Cimmerian kings near the Tyras (*Dniester*) and several places in the Scythian country:—the Cimmerian walls — the Cimmerian ferry (*πορθμήϊα*), and the territory itself was called Cimmerian.

The names of the kings of the Bosporus correspond with Thracian names; and this fact, in connection with the circumstance that there was a Thracian tribe termed Treres, connected with the Cimmerians, has been adduced to prove that the Cimmerians were Thracians, who are supposed to have been related to the Pelasgi and Greeks. (Adelung, *Mithrid.* vol. ii. p. 353.) If the Tauri could be identified with the Cimmerians, this argument would have great weight, but they may have been later inhabitants. On the other hand, if the Caucasus was within the district of the Cimmerians, it may be inferred that the aborigines of that mountain chain, whose descendants yet retain their language and barbarous habits, are the representatives of the ancient Cimmerians, who may then be set down as a people distinct from the Thracians, and from the German or other Indo-European inhabitants of the north.

Posidonius appears first to have conjectured that the Cimbri were the same people as the Cimmerii. His opinion, which was thought to be probable by Strabo (vii. p. 293), was adopted by the Romans (Plut. *Mar.* 11); and this fanciful identity has been laid down in several modern works. There can be little doubt but that this notion rested on no other foundation than the resemblance, perhaps accidental, of two general names, and the geographical error of the ancients, who believed the coast of the Cimbri to be continuous with that which the Cimmerians were supposed to inhabit. (Prichard, *Physical Hist. of Mankind*, vol. iii. p. 100.)

Like their successors, the Scythians, the Cimmerii were a nomade race, "milkers of mares" (Callim. *Hymn. ad Dian.* 252), who moved about with their tents and herds over the grassy steppes of their territory. (Comp. Ukert, *Skythien*, p. 360; Niebuhr, *Lect. on Anc. Hist.* vol. i. p. 154; Bayer, *de Cimmeriis, Acad. Petropol.* vol. ii. p. 419.) [E.B.J.]

CIMME'RIUM (Κιμμέριον, Ptol. iii. 6. § 4; Κιμμερίς, Scymn. *Frag.* cxlviii; Κιμμερικόν, Strab. xi. p. 494; Cimmerium, Pomp. Mela, i. 19. § 15), a town of the Cimmerian Bosporus which Pliny says was situated "ultimo in ostio," and was formerly called CERBERION (vi. 6). Clarke (*Trav.* vol. ii. p. 67) identifies it with *Temruk*; Forbiger (vol. iii. p. 1128) with *Eskikrimm*. [E. B. J.]

CIMO'LIS. [CINOLIS.]

CIMO'LUS (Κίμωλος), a small island in the Aegaean sea, one of the Cyclades, lying between Siphnos and Melos, and separated from the latter by a narrow strait only half a mile in breadth. The extreme length of the island is 5 miles, and its breadth 3½ miles. Pliny relates (iv. 12. s. 23) that Cimolus was also called Echinusa, a name which is not derived from Echidna, viper, as most modern writers have supposed, but from Echinus, the sea-urchin, of which there are several fossil specimens on the west coast, and which are not found in any other of the Cyclades or Sporades, except on the opposite coast of Melos. Cimolus is not mentioned in political history, and appears to have followed the fate of the neighbouring island of Melos; but it was celebrated in antiquity on account of its earth or chalk (ἡ Κιμώλια γῆ, Cimolia Creta), which was used by fullers in washing clothes. This chalk was also employed in medicine. (Strab. x. p. 484; Eustath. *ad Dionys.* 530; Schol. *ad Aristoph. Ran.* 713; Plin. iv. 12. s. 23, xxxv. 17. s. 57; Cels. ii. 33.) This Cimolian earth is described by Tournefort as a white chalk, very heavy, without any taste, and which melts away when it is put into water. The island is covered with this white chalk, whence Ovid (*Met.* vii. 463) speaks of "cretosa rura Cimoli." The figs of Cimolus were celebrated by the comic poet Amphis (Athen. i. p. 306); and though the soil is barren, figs are still produced in the vallies. Another writer (quoted by Athenaeus, iii. p. 123, d) speaks of certain caves of the island, in which water being placed became as cold as snow, though warm before.

Cimolus contained 1200 inhabitants when it was visited by Ross in 1843. The modern town is in the SE. of the island, about a quarter of an hour from the harbour, which is both small and insecure. In the middle of the west coast there is a *Paleokastron*, situated upon a steep rock about 1000 feet in height; but it appears only to have been built as a place of refuge to be used in times of danger. The ancient town was situated at *Daskaliò*, also called *St. Andrew*, on the S. coast, opposite Melos. *Daskaliò*, or *St. Andrew*, is the name given to a rock, distant at present about 200 paces from the island, to which, however, it was originally united. The whole rock is covered with the remains of houses, among which Ross noticed a draped female figure of white marble, of good workmanship, but without head and hands. As long as the rock was united to the island by an isthmus, there was a good, though small harbour, on the eastern side of the rock. Around this harbour was the burial-place of the town; and

several of the sepulchral chambers situated above the water were opened at the end of the last and the beginning of the present centuries, and were found to contain painted vases and golden ornaments, while above them were stelae with reliefs and inscriptions; but at present nothing of the kind is discovered. The strip of coast containing the tombs is called *Hellenikà*. To the E. of *Daskalió* on the S. coast there is a small rock, containing a ruined tower, called *Pyrgos*; and N. of the present town, there is upon the east coast a good harbour, called *Prása*, where there are said to be some Hellenic sepulchral chambers. This harbour, and the one at *Daskalió*, are probably the two, which Dicaearchus assigns to Cimolos (*Descript. Graec.* 138, p. 463, ed. Fuhr):

Ἔπειτα Σίφνος καὶ Κίμωλος ἐχομένη,
Ἔχουσα λιμένας δύο.

The Greeks still call the island *Cimoli;* but it is also called *Argentièra*, because a silver mine is said to have been discovered here. Others suppose, however, that this name may have been given to it even by the ancients from its white cliffs. (Tournefort, *Travels*, &c. vol. i. p. 111, seq., transl.; Fiedler, *Reise durch Griechenland*, vol. ii. p. 344, seq.; Ross, *Reisen auf den Griech. Inseln*, vol. iii. p. 22, seq.)

CINABI, a town of Hispania Baetica, near Gades (*Cadiz*), mentioned by Livy (xxviii. 37). [P.S.]

CINAEDOCOLPI'TAE (Κιναιδοκολπίτων χώρα, Ptol.), a district on the east coast of the Red Sea mentioned by Ptolemy (vi. 7), probably identical with the DEBAE of Diodorus Siculus. [DEBAE; BAETIUS.] [G. W.]

CI'NARA or CINARUS (Κίναρος: *Zinari*), a small island in the Aegaean sea, NE. of Amorgos, named after the artichoke (κίναρα) which it produced. (Plin. iv. 12. s. 22; Mel. ii. 7; Athen. ii. p. 70; Colum. x. 235.)

CINDEVIA. [BELUS.]

CINDYE (Κίνδυη: *Eth.* Κινδυεύς, Herod. v. 118) a place in Caria, near Bargylia, of which the position is uncertain. [BARGYLIA.] [G. L.]

CINGA (*Cinca*), a river of Hispania Tarraconensis, falling into the Sicoris, a tributary of the Iberus. (Caes. *B. C.* i. 48; Lucan. iv. 21, *Cinga rapax.*) The *Cincenses* of Pliny (iii. 3. s. 4) imply a town of the same name. [P. S.]

CINGI'LIA, a town of the Vestini, mentioned only by Livy (viii. 29), among the places taken by the Roman consul, Junius Brutus, in B. C. 325. Its site is quite uncertain, as well as that of Cutina, mentioned in the same passage: Romanelli (vol. iii. p. 284) would place the latter at *Civitella* near *Civita Aquana;* and Cingilia at *Civita Retenga*, about 5 miles SE. of *Ansedonia* (Peltuinum). The names *Civita* and *Civitella* always denote ancient sites, but the identification is wholly conjectural. [E. H. B.]

CI'NGULUM (Κιγγοῦλον: *Eth.* Cingulanus: *Cingoli*), a city of Picenum, situated in the interior of the province, about 12 miles S. of Aesis, and the same distance N. of Septempeda (*S. Severino*). Silius Italicus alludes to its position on a lofty mountain, which rendered it a place of great strength (x. 34). He evidently considered it as having already existed as a fortress in the Second Punic War: but the only mention of it in history is during the Civil War between Caesar and Pompey. It appears to have been rebuilt, and, as it were, founded afresh by T. Labienus shortly before that time: notwithstanding which, it opened its gates to Caesar without a struggle. (Caes. *B. C.* i. 15; Cic. *ad Att.* vii. 11.) It is afterwards mentioned by Pliny and in the Liber Coloniarum as a municipal town of Picenum: Strabo erroneously assigns it to Umbria, from the frontiers of which it was not far distant. (Strab. v. p. 227; Plin. iii. 13. s. 18; Liber Colon. p. 254; Orell. *Inscr.* 86.) The modern town of *Cingoli* retains the same elevated site with the ancient one: and though but a small place, has preserved its episcopal see without interruption since the fifth century.

The coins published by some early numismatic writers with the name of Cingulum, and the head of Labienus, are a modern forgery. [E. H. B.]

CINIUM. [BALEARES.]

CINNERETH. [CHINNERETH.]

CINO'LIS (Κίνωλις) or CIMO'LIS (Κίμωλις), according to Strabo (p. 545), and other authorities, a place on the coast of Paphlagonia. "After Carambis," says Strabo, "come Cimolis and Anticimolis, and Aboni Teichos, a small town, and Armene." But the order of the places is not correct here; for Cinolis is east of Aboni Teichos. A place *Kinla* or *Kinoglu*, is placed in the maps about half way between Carambis (*Kerempe*) and Sinope, which is the *Kinuli* of Abulfeda, and probably the Cinolis or Cimolis of the Greek geographers. Marcian and Arrian place it east of Aboni Teichos, though they do not agree in the distance. Anticinolis was 60 stadia from Cinolis. Both of them were places where ships used to stay in their coasting voyages; and this is the reason that these and other like small spots are mentioned by the authors of Peripli. [G. L.]

CINYPS or CI'NYPHUS (Κίνυψ, Herod. iv. 175, 198; Κίνυφος, Strab. xvii. p. 835: *Cinifo* or *Wadi Quasam*), a small river of N. Africa, between the two Syrtes, rising, according to Herodotus, in the "Hill of the Graces" (Χαρίτων λόφος: probably the extremity of *M. Ghuriano*), but, according to Ptolemy, on M. Zuchabbari, much further inland, and falling into the sea E. of Leptis Magna. The fields through which it flowed were celebrated for goats with very beautiful hair. There was a town of the same name at its mouth. (Sil. Ital. iii. 60, iii. 275; Virg. *Georg.* iii. 312; Martial, vii. 94. 13, viii. 51. 11; Mela, i. 7; Plin. v. 4; Ptol. iv. 3. §§ 13, 20, 6. § 11; Scylax.) [P. S.]

CIRCEII (Κιρκαία, Dionys.: *Eth.* Κιρκαῖοι, Id., Κιρκαῖται, Pol., Circeienses), a town of Latium, situated at the foot of the Mons Circeius (*Monte Circello*), on its northern side, and at a short distance from the sea. No mention is found of a town of the name previous to the reign of Tarquinius Superbus, who established a colony there, at the same time with that of Signia. (Liv. i. 56; Dionys. iv. 63.) But it is probable, from analogy, though we have no express testimony on the subject, that there previously existed an ancient settlement on the spot, either of the Volscians, or more probably of the Tyrrhenian Pelasgians. The advantageous situation of the city for commerce, as well as its position as a bulwark against the Volscians, are mentioned by Dionysius as the motives that induced Tarquin to settle a colony there: and accordingly, we find Circeii mentioned among the maritime and commercial towns of Latium in the treaty concluded between the Romans and Carthaginians immediately after the expulsion of Tarquin. (Pol. iii. 22.) It is afterwards mentioned among the conquests ascribed to Coriolanus, who is said to have expelled the Roman colonists, and given it up to the Volscians

(Liv. ii. 39; Dionys. viii. 14): it probably really fell into the hands of the Volscians about this period, but was reconquered by the Romans, who sent a fresh colony there three years before the Gaulish War. (Diod. xiv. 102.) Not long after that event, however, the Circeians, as well as the citizens of Velitrae, also a Roman colony, revolted, and joined their arms with those of the Volscians. (Liv. vi. 12, 13, 21.) They must at this time have succeeded in establishing their independence, as at the outbreak of the great Latin War in B. C. 340, Circeii appears as one of the cities of the Latin League, and L. Numicius, a Circeian citizen, was one of the two praetors at the head of the whole nation. (Liv. viii. 3; Niebuhr, vol. iii. p. 92.) The fate of Circeii after the war is not mentioned, but it seems certain that it must have been recolonized, because we find it appear again in the Second Punic War among the thirty Latin colonies: it was one of the twelve which professed their inability to furnish their quota of supplies to the army. (Liv. xxvii. 9, xxix. 15.) It is again mentioned in B. C. 198, on occasion of the attempt of the Carthaginian hostages to excite a revolt of the slaves in this part of Italy (*Id.* xxxii. 26), but this is the last time its name is noticed in history. It appears to have declined, and sunk gradually into an insignificant place: Strabo terms it a small town (πολίχνιον), and the disadvantages of its position, cut off to a great extent from all communication with the interior, must have prevented it from rising to any consideration. It appears, however, to have been in some degree resorted to as an agreeable place of retirement by wealthy Romans under the later Republic and the Empire, and we learn that the emperors Tiberius and Domitian had villas there. (Cic. *ad Att.* xv. 10; Suet. *Tib.* 72; Mart. xi. 7. 4; Stat. *Silv.* i. 3. 85.) It possessed a peculiar source of attraction in the abundance and excellence of its oysters, which were among the most celebrated of any known to the Romans. (Hor. *Sat.* ii. 4. 33; Juv. iv. 140; Plin. xxxii. 6. s. 21.) Its insulated position also caused it to be occasionally selected as a place of exile,—and the triumvir Lepidus was banished hither by Octavian after his deposition. (Suet. *Aug.* 16.) The town of Circeii is mentioned for the last time in the Tabula, which places it 19 M. P. from Astura along the coast, and 15 from Tarracina. (Tab. Peut.) The former distance falls short of the truth, while the latter considerably exceeds the direct distance. Considerable ruins of the ancient city of Circeii are still extant on a hill called the *Monte della Cittadella*, on the N. side of the mountain, and about two miles from the sea. The remains of the ancient walls and gateway are constructed of polygonal blocks, in a very massive style of architecture, closely resembling that of Signia, which is said to have been fortified and erected into a colony at the same period. Some remains of a later Roman style are also visible on the hill now occupied by the village of *S. Felice*, nearer the sea on the S. side, but the port of Circeii is considered to have been on the W., where there is still a place of anchorage called *Porto di Paola*. (Holsten. *Not. in Cluv.* p. 208; Abeken, *Mittel Italien*, pp. 141, 148, 160; Brocchi, *Viaggio al Capo Circeo*, p. 269, in the *Bibl. Ital.* vol. vii.) [E.H.B.]

CIRCEII, or CIRCAEUS MONS, or CIRCAEUM PROMONTORIUM (τὸ Κιρκαῖον ὄρος, Strab.; Κιρκαῖον ἄκρον, Ptol.: *Monte Circeo* or *Circello*), a remarkable mountain promontory of Latium on the coast of the Tyrrhenian Sea. It is formed by a bold and abrupt mountain mass, which rises precipitously from the sea, and is wholly isolated on the land side, being separated from the Volscian mountains by the broad level tract of the Pontine marshes; while on the NW. a long strip of unbroken sandy shore extends from thence for 30 miles to the promontory of Antium (*Porto d'Anzo*). Hence when viewed from any distance it appears altogether detached from the mainland, and has the appearance of a lofty island, rather than a promontory. (Strab. v. p. 232; Dionys. iv. 63; Procop. *B. G.* i. 11.) It was hence supposed by many ancient writers that it had originally been an island. But though the alluvial deposits by which alone it is connected with the continent are in a geological sense of very recent formation, it is certain that these cannot have been formed within the period of historical memory. Pliny has strangely misconceived a passage of Theophrastus to which he refers as asserting that the Circeian promontory was still an island in the days of that author: it is quite clear that Theophrastus describes it as a promontory, and only refers to the local tradition for the fact of its having once been an island. (Theophr. *H. Plant.* v. 8. § 3; Plin. iii. 5. s. 9.)

We have no explanation of the circumstances that led the Greeks in very early times to identify this remarkable insulated promontory with the island of Circe, mentioned in the Odyssey. The latter is called by Homer Aeaea (Αἰαίη), and he describes it as a low island in the midst of a boundless sea,

> Νῆσον, τὴν πέρι πόντος ἀπείριτος ἐστεφάνωται.
> Αὐτὴ δὲ χθαμαλὴ κεῖται. *Od.* xi. 135.

The fable of Circe appears indeed to have been connected with the coast of the Tyrrhenian Sea as early as the time of Hesiod, who describes Circe as the mother of Agrius and *Latinus*, "who ruled over the illustrious Tyrrhenians in the far recesses of the sacred islands" (*Theog.* 1011—1015). But this does not explain why a mountain should have been selected, which was not an island at all, in preference to any of the numerous small islands in the same sea. Other accounts connected the name of Circe with the voyage of the Argonauts, but Apollonius, who adopts this version, does not describe the abode of Circe as an island: but expressly terms it "a promontory of the Tyrrhenian mainland" (ἀκτὴν ἠπείρου Τυρσηνίδος, iii. 312) evidently referring to the Circeian Promontory. Virgil, as might be expected, has also followed the received tradition, and places the abode of Circe between Cumae and the mouth of the Tiber. (*Aen.* vii. 10—24.) It is possible that the legend of Circe was really of Italian origin, or that some local divinity (resembling the Angitia of the Marsi) was worshipped here, who was identified by the Cumaean Greeks with the Circe of their own mythology. The mountain was said to abound in herbs of a poisonous character (Pseud. Arist. *de Mirab.* 78; Theophr. *H. P.* v. 8. § 3; Strab. *l. c.*); but this statement, as Strabo justly suggests, may very probably have been invented to confirm its claim to be the dwelling of the enchantress. Circe was certainly worshipped there in later times (Cic. *de N. D.* iii. 19), but this of course proves nothing, any more than the alleged tomb of Elpenor, one of the companions of Ulysses, or the cup of the hero himself, which was still shown by the inhabitants in the days of Strabo. (Strab. *l. c.*; Theophr. *l. c.*, Scylax. § 8.)

Theophrastus (*l. c.*) describes the Circaean moun-

tain as 80 stadia in circumference (which is very near the truth) and covered with wood, consisting of oaks, bay trees and myrtles. It is 10 miles distant from Tarracina, and forms the NW. limit of a bay, of which the other extremity is constituted by the headland of Caieta: this is evidently the Sinus Amyclanus of Pliny (xiv. 6. s. 8; Mare Amuclanum, Tac. *Ann.* iv. 59), so called from the extinct city of Amyclae. But viewed on a larger scale, the Circaean Promontory is the northern extremity of a great gulf which extends from thence to Cape Misenum, with the adjacent islands of Aenaria and Prochyta, forming an arc of which the chord is about 45 geographical miles in length. In early times this remarkable headland constituted the southern limit of Latium, before the Volscian districts (extending from thence to the Liris) were included under that appellation. (Plin. iii. 5. s. 9. § 56.)

The town of Circeii was situated at the northern foot of the mountain [CIRCEII]: besides this Strabo tells us there was a temple of Circe, which perhaps stood on the highest summit of the mountain, which is still known as the *Monte di Circe*, and is crowned by the remains of walls and substructions of a massive character. The mountain, which is wholly of a calcareous rock, contains several caverns, one of which is regarded by popular tradition as the abode of the enchantress Circe. (Brocchi, *Viagg. al Capo Circeo*, pp. 263, &c.) [E. H. B.]

CIRCE'SIUM (Κιρκήσιον, Zosim. iii. 12; Procop. *B. P.* ii. 5; Amm. Marc. xxiii. 6), a town of Mesopotamia, below Nicephorium, at the junction of the Chaboras (*Khabúr*) with the Euphrates. Ammianus speaks of it as an island surrounded by the confluence of these two rivers. Procopius (*B. P.* ii. 5) calls it the φρούριον ἔσχατον of the Romans, who do not appear to have held any fortified place beyond the *Khabúr* eastward. Procopius confirms the account of its position, stating that its fortifications formed a triangular figure at the junction of the two rivers. He adds (*de Aedif.* i. 6) that Diocletian added additional outworks to the place, which Ammianus also states. There is every reason to believe that Circesium represents the place mentioned in the Bible under the name of CARCHEMISH (2 *Chron.* xxv. 20; *Jerem.* xlvi. 2; *Isaiah*, x. 9). The name is written with slight differences by ancient authors, as Circusium (Eutrop. ix. 2), Circessum (Sext. Ruf. c. 22), &c. It is now called *Karkisia*. (Bochart, *Geog. Sac.* iv. 21.) [V.]

CIRPHIS (Κίρφις), a range of mountains in Phocis near the sea, separated from Parnassus by the valley of the Pleistus. (Strab. ix. p. 418; Leake, *Northern Greece*, vol. ii. p. 539.)

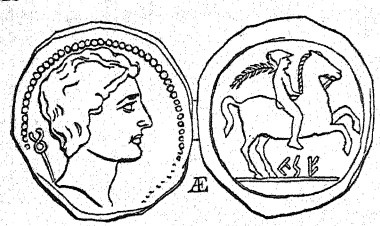
CIRRA'DAE (Κιρράδαι, Ptol. vi. 12. § 4), a tribe who lived, according to Ptolemy, along the banks of the Oxus in Sogdiana. Wilson (*Ariana*, p. 164) recognises in them an Indian people called the *Kirâtas*, foresters and mountaineers. [V.]

CIRRHA. [CRISA.]

CIRRHA'DIA. [INDIA.]

CIRTA. (Κίρτα, i. e. simply *the City*, in Phoenician, a name which it obtained from being built by Punic architects: *Eth.* Κιρτήσιοι, Cirtenses: *Constantineh*, Ru.), an inland city of the Massylii in Numidia, 48 M. P. from the sea, in a situation of remarkable beauty and fertility. It was built on a steep rock almost surrounded by a tributary of the river Ampsaga, now called the *Rummel*. It was the residence of the kings of the Massylii, whose palace appears to have been a splendid edifice. Micipsa especially enlarged and beautified it, and settled Greek colonists in it. Under him it could send forth an army of 10,000 cavalry and 20,000 infantry. It is frequently mentioned in the Punic, Jugurthine, and Civil Wars, as the strongest fortress in the country, a reputation which it has maintained in our own day, during the French conquest of *Algeria*. Under the Romans it was a colony with the surname *Julia*; and it was sometimes called *Colonia Sittianorum*, from the partisan chief Sittius, to whom it was granted by Julius Caesar. [AFRICA.] It was the central point for all the Roman roads throughout Numidia.

Having fallen into decay in process of time, Cirta was restored by Constantine, and called CONSTANTINA, the name which it still retains. Among the ruins of the ancient city, the finest remnant is a triumphal arch, which has been removed to Paris. (Strab. xvii. pp. 828, 832; Polyb. xxxvii. 3; Appian. *Pun.* 27, 106, *Numid.* Fr. iii., *B. C.* ii. 96, iv. 53, 55; Dion Cass. xliii. 3; Liv. xxx. 12; Sallust. *Jug.* 2, 21, &c.; Mela, i. 6. § 1; Plin. v. 3. s. 2; *Itin. Ant.* pp. 24, 28, 34, 35, 40, 41, 42; *Tab. Peut.*; Ptol. iv. 3. § 28, viii. 14. § 8; Shaw, *Travels*, p. 60, 2nd ed.; *Ausland*, 1837, No. 224.) [P. S.]



CISAMUS (Κίσαμος). 1. The port of Aptera in Crete. [APTERA.]

2. Another town of this name appears in the Peutinger Tables 32 M. P. to the W. of Cydonia (comp. Ptol. iii. 17. § 8; *Stadiasm.* § 322, 323, Hierocl.; Cisamum, Plin. iv. 12). In and about *Kisamo Kastéli* are 14 or 15 fragments of shafts of marble and granite columns, an Ionic capital, and remains of walls, indicating that there once existed upon this site a flourishing and important city. (Pashley, *Trav.* vol. ii. p. 43.) [E. B. J.]

CISON (Κίσων, LXX.: *Nahr el-Mukúttu*), the "ancient river," which pouring its waters through the plain of Esdraelon in such abundance "swept away" the troops of Sisera during the battle of Deborah and Barak (*Judges* v. 21, comp. iv. 13; *Ps.* lxxxiii. 9.)

The earliest writers place its source in Mt. Tabor (*Onomast. s. v.*), and this statement is correct; but a considerable supply of water flows into its bed from the S. of the plain to the W. of Little Hermon and Mt. Gilboa, as well as from the S. chain which connects Carmel and the hills of Samaria. The Kishon is not now a permanent stream, but flows only during the season of rain, though at the mouth, where it discharges itself into the sea at the S. corner of the bay of Ptolemais by the foot of Mt. Carmel, it is never dry. At the battle of Tabor between the French and Arabs, many of the latter were drowned in the stream which Burkhardt (*Trav.* p. 339) calls the *Debúrieh*, and is formed from the Wadys, NW. of Tabor. (Robinson, *Palestine*, vol. iii. pp. 228, foll.; Ritter, *Erdkunde*, vol. xv. pp. 19, 247, 296; Von Raumer, *Palestina*, p. 52.) [E. B. J.]

CISSA (Κίσσα, Polyb. iii. 76; Coins; Scissis, Liv. xxi. 60; prob. *Guisona*), an inland city of Hispania Citerior, in the neighbourhood of which Cn. Scipio defeated and took the Carthaginian general Hanno and the Spanish chieftain Indibilis, in the first year of the Second Punic War, B.C. 218. Some identify it with the CINNA (Κίννα) mentioned by Ptolemy (ii. 6. § 72) as a city of the [illegible]ni (Marca, *Hisp.* p. 202; Florez, *Esp. S.* [illegible] Sestini, pp. 132, 163; *Num. Goth.*; Ukert, [illegible] pt. i. p. 425.) [P. S.]

COIN OF CISSA.

CISSA, a small town on the river Aegos in the Thracian Chersonesus. (Plin. iv. 18.) It is undoubtedly the same place as that called Cressa (Κρήσσα) by Scylax (p. 28). Mannert (vii. p. 191) believes that it was the same place as Aegos, and identifies it with the modern *Galata*. [L. S.]

CI'SSIA (Κισσία, Herod. iii. 91, v. 49 ; Ptol. vi. 3. § 3 : *Eth.* Κίσσιοι), a district in Susiana, on both sides of the Choaspes and Eulaeus, in which was situated the town of Susa. The name is probably connected with that of the capital. Strabo (xv. p. 728) states that the people of Susa were also called Cissii, and connects the name with Cissia, the mother of Memnon (Aeschyl. *Pers.* 17, 118). This district was in ancient times exceedingly fertile, and formed the eighth satrapy of Dareius. It was probably of nearly the same extent as the modern province of *Khuzistán*. [V.]

CI'SSIDES (Κισσίδες) or CISSIDAE, a place on the coast of Lycia, 80 stadia east of the island Lagusa along the coast, according to the Stadiasmus, and 85 east of Telmessus. Leake (*Asia Minor*, p. 182) concludes that "Cissides was the name of the peninsular promontory, on the south side of which is the island and harbour of St. Nicholas." The ruins which he saw on the cape and island belonged to a late period of the Roman empire. Fellows (*Lycia*, p. 247) thinks that a place called by the Greeks *Lavisse*, of which *Macri* is the port or scala, is the site of Cissides. [G. L.]

CISSUS (Κισσός: *Khortiátzi*), a mountain of Macedonia, on which were found the lion, ounce, lynx, panther, and bear. (Xenoph. *De Venat.* xi. 1.) There was a town of the same name not far from Rhaecelus, which appears to have been the name of the promontory where Aeneas founded his city. (Lycophr. 1236.) Cissus, along with Aeneia and Chalastra, contributed to people Thessalonica. (Strab. Epit. vii. p. 330; Dionys. i. 49.) *Khortiátzi* is the only high mountain which can be conceived to have been the haunt of the beasts of prey mentioned by Xenophon. (Leake, *Northern Greece*, vol. iii. p. 453.) [E. B. J.]

CISTHE'NE (Κισθήνη). 1. A town on the coast of Mysia, deserted in Strabo's time (p. 606). It lay outside of the bay of Adramyttium and the promontory Pyrrha. It had a port. Cisthene was north of Atarneus. It is mentioned by Mela (i. 18) and Pliny (v. 30).

The Gorgoneian plains of Cisthene (Aesch. *Prom. Vinct.* v. 795) are unknown.

2. [Megiste.] [G. L.]

CISTOBO'CI (Κιστοβῶκοι), a people of Dacia (in the N. of *Moldavia*), extending also into Sarmatia Europaea, and even into Sarmatia Asiatica. (Dion Cass. lxxi. 12; Ammian. xxii. 8; Ptol. iii. 8. § 5; Inscr. *ap.* Katancsich, vol. ii. p. 287.) [P. S.]

CITHAERON (Κιθαιρών), a range of mountains, separating Boeotia from Megaris and Attica, of which a description is given elsewhere. [Attica, p. 321, seq.) It is said to have derived its name from Cithaeron, a mythical king of Plataeae, who assisted Zeus with his advice when Hera was angry with him. Hence the summit was sacred to the Cithaeronian Zeus, and here was celebrated the festival called Daedala. (Paus. ix. 2. § 4, 3. § 1, seq.; *Dict. of Ant.* art. *Daedala.*) Cithaeron was also sacred to Dionysus, and was the scene of several celebrated legends, such as the metamorphosis of Actaeon, the death of Pentheus, and the exposure of Oedipus. The forest, which covered Cithaeron, abounded in game; and at a very early period, lions and wolves are said to have been found there. The Cithaeronian lion, slain by Alcathous, was celebrated in mythology. (Paus. i. 41. § 3.)

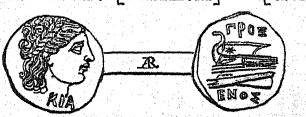
CITHARISTA, a place in the Maritime Itin. between Telo Martius (*Tou'on*) and *Marseille*. The name which corresponds is *Céreste*, but as this place is above a mile from the coast, the port is that of *Cíotat*. [G. L.]

CITHARISTES, a promontory in the south of Gallia, placed by Ptolemy (ii. 10) between Tauroentum (*Taurenti*) and Olbia (*Eoubo*); and the most southern point on this part of the coast. The promontory then is *Cap Cicier* near *Toulon*. Walckenaer makes it *Cap Cepet* at the entrance of the great road of Toulon. Mela (ii. 5) mentions Citharistes, and apparently intends to make it a town or port. It must therefore be Citharista. [G. L.]

CITHARIZON (Κιθαρίζων), a fortress of Armenia, four days' journey from Theodosiopolis, and in the province Asthianene ('Ασθιανήνη) (Procop. *Aed.* 3. 3), probably the same as the Austanitis (Αὐστανίτις) of Ptolemy (v. 13). The citadel, which was a place of great strength, was built by Justinian and was the residence of one of the five prefects whom that emperor placed over Roman Armenia with the title of "Dux." It has been identified with *Pálú*, a town on the banks of the *Murád Chai*, or E. branch of the Euphrates, where there is an old castle placed upon a mountain, crowning the town. (Ritter, *Erdkunde*, vol. x. p. 713, xi. pp. 76, 78; *Journ. Geog. Soc.* vol. x. p. 367.) [E. B. J.]

CI'TIUM (Κίτιον, Κήτιον, Κύτιον : *Eth.* Κιτιεῖς, Κιττιαῖοι, Κιτταῖοι, Citieus, Citiensis). 1. A town situated on the S. coast of Cyprus. In the Peutinger Tables it is called Cito, and is placed 24 M. P. to the E. of Amathus. Diodorus (xx. 49) is in error when he states its distance from Salamis as 200 stadia, for it is more remote. The ruins of ancient Citium are found between *Larnika* and the port now called *Salines:* to the E. there was a large basin now almost filled up, and defended by a fort the foundations of which remain ; this is probably the κλειστὸς λιμήν of Strabo (xiv. p. 682). The walls were strong, and in the foundations Phoenician inscriptions upon them have been discovered. A number of ancient tombs are still to be seen in and about *Larnika*, as well as the remains of an ancient theatre. (Mariti, *Viaggi*, vol. i. p. 51; Pococke, *Trav.* vol. ii. p. 213 ; Müller, *Archäol.* § 255.) The salt lakes of which Pliny (xxxi. 7 s. 39 ; Antig. Caryst. *Hist. Mirab.* c. 173) speaks, are still worked. The date of this, probably the most ancient city in the island, is not known, but there can be no doubt that it was originally Phoenician, and connected with the Chittim of the Scriptures. (*Gen.* x. 4 ; comp. Joseph. *Antiq.* i. 6, § 1 ; Cic. *de Fin.* iv. 20 ; Diog. Laert. *Zen.* 8 ;

Winer, *Bibl. Realwörterbuch*, *s. v.* Chittim.) From this and other places in the island the Greeks partially embraced and diffused the cruel and voluptuous rites of the Phoenician worship. It was besieged by Cimon at the close of the Persian war (Thuc. i. 12), and surrendered to him (Diod. xii. 3); he was afterwards taken ill and died on board his ship in the harbour (Plut. *Cim.* 18). It was a place of no great importance (πολίχνιον, Suid.), and we have no evidence that it coined money; though it could boast of the philosophers Zeno, Persaeus, and Philolaus, and the physicians Apollodorus and Apollonius. (Engel, *Kypros*, vol. i. pp. 12, 100.)



2. (*Máusta*), a town of Macedonia, between Pella and Beroea, in the plain before which Perseus reviewed his army before he marched into Thessaly. (Liv. xlii. 51.) The name, like that of the town in Cyprus, is of Phoenician origin, and may warrant the belief that a colony of that nation occupied at a remote period this most desirable of all the districts at the head of the Thermaic gulf. (Leake, *North. Greece*, vol. iii. p. 447.) At the upper end of a deep rocky glen, between two of the highest summits of the mountain, three tabular elevations, rising one above the other, look from the plain like enormous steps. *Máusta* occupies the middle and widest terrace. (Leake, vol. iii. p. 283.) [E. B. J.]

CITRUM (Κίτρον: *Kítro*), a place which the epitomiser of Strabo (vii. p. 330) and a scholiast on Demosthenes (*Olynth.* i. 1) assert to be the same as the ancient Pydna of Macedonia, but as their authority is of no great weight, and as the facts of history require a more southern position for Pydna, Leake (*North. Greece*, vol. iii. p. 429) fixes the site between Pydna and Methone to the SW. of the latter city. *Kítro* stands at two miles from the sea, upon a low ridge; at one time it appears to have been a place of some importance, and in its churches are to be seen squared blocks of Hellenic times. Two inscriptions, which have been found on sepulchral *stelae* at *Kítro*, are given in Leake (vol. iii. pl. xxxiii.). [E. B. J.]

CIUS (ἡ Κίος or Κῖος: *Eth.* Κιανός: *Kío* or *Ghío*), a city in Bithynia, at the head of a gulf in the Propontis, called the gulf of Cius, or Cianus Sinus. Herodotus calls it Cius of Mysia; and also Xenophon (*Hell.* i. 4. § 7),—from which it appears that Mysia, even in Xenophon's time, extended at least as far east as the head of the gulf of Cius. According to one tradition, Cius was a Milesian colony. (Plin. v. 32.) It was at the foot of Mount Arganthonius [ARGANTHONIUS], and there was a myth that Hylas, one of the companions of Hercules on the voyage to Colchis, was carried off by the nymphs, when he went to get water here; and also that Cius, another companion of Hercules, on his return from Colchis, stayed here and founded the city, to which he gave his name. (Strab. p. 564.) Pliny mentions a river Hylas and a river Cius here, one of which reminds us of the name of the youth who was stolen by the nymphs, and the other of the mythical founder. The Cius may be the channel by which the lake Ascania discharges its waters into the gulf of Cius; though Pliny speaks of the "Ascanium flumen" as flowing into the gulf, and we must assume that he gives this name to the channel which connects the lake and the sea. [ASCANIA.] If the river Cius is not identical with this channel, it must be a small stream near Cius. As Ptolemy (v. 1) speaks of the outlets of the Ascanius, it has been conjectured that there may have been two, and that they may be the Hylas and Cius of Pliny; but the plural ἐκβολαί does not necessarily mean more than a single mouth; and Pliny certainly says that the Ascanius flows into the gulf. However, his geography is a constant cause of difficulty. The position of Cius made it the port for the inland parts. Mela calls it the most convenient emporium of Phrygia, which was at no great distance from it.

Cius was taken by the Persian general Hymees, after the burning of Sardis, B. C. 499. (Herod. v. 122.) Philip V., of Macedonia, the son of Demetrius and the father of Perseus, took Cius, which he gave to Prusias, the son of Zelas. Prusias, who had assisted Philip in ruining Cius, restored it under the name of Prusias (Προυσιάς, Strab. p. 563; Polyb. xvi. 21, &c.). It was sometimes called Prusias ἐπὶ θαλάσσῃ, or "on the sea," to distinguish it from other towns of the same name (Steph. B. *s. v.* Προῦσα; Memnon, *ap. Phot. Cod.* 224, c. 43), or πρὸς Θάλασσαν. In the text of Memnon (Hoeschel's ed. of Photius) the reading is Cierus; but Memnon, both in this and other passages, has confounded Cius and Cierus. But it is remarked that Cius must either have still existed by the side of the new city, or must have recovered its old name; for Pliny mentions Cius, and also Mela (i. 19), Zosimus (i. 35), and writers of a still later date.

There are coins of Cius, with the epigraph Κιανων, belonging to the Roman imperial period; and there are coins of Prusias with the epigraph, Προυσιεων των προς Θαλασσαν. [BRYLLIUM.] [G. L.]

COIN OF CIUS.

CI'ZARI (ἡ Κίζαρι), a place in Pontus, in the district Phazemonitis, on the lake Stiphane. It was a hill fort, deserted in Strabo's time, and there was a palace built near it. (Strab. p. 560.) [STIPHANE.] [G. L.]

CLA'DEUS or CLADAUS. [OLYMPIA.]

CLAMPETIA or LAMPETIA (Λαμπέτεια, Pol *ap.* Steph. B.), a city of Bruttium, placed both by Pliny and Mela on the coast of the Tyrrhenian Sea, between Blanda and Temesa. The Tab. Peut. places it 40 M. P. south of Cerillae, and 10 N. of Temesa. Hence its position has been fixed, with some probability, on the site, or at least in the immediate neighbourhood, of the modern *Amantea*, one of the most considerable towns on this part of the coast. Clampetia is mentioned by Livy among the towns of Bruttium recovered by the Roman consul P. Sempronius during the Second Punic War (xxix. 38, xxx. 19); and it appears to have been one of the few which still continued to exist under the Roman empire, though Pliny calls it only "*locus* Clampetiae," so that it was no longer in his time a municipal town. (Mel. ii. 4. § 9; Plin. iii. 5. s. 10; Tab. Peut.) We learn from Stephanus of Byzantium that the Greek form of the name, as used by Polybius, was Lampetia; and there can be little doubt that the promontory called by Lycophron LAMPETES (Λαμπέτης), was connected with it, though he appears to describe it as the northern headland of the Hipponian gulf. There is in fact no promontory worthy of the name near *Amantea*, the coast being almost perfectly straight from the mouth of the river *Lao*

(Laus) to the headland called *Capo Suvero*, about 14 miles south of *Amantea*, which constitutes in fact the northern boundary of the gulf of Hipponium, and is probably the Lampetes of Lycophron. [E. H. B.]

CLANIS or GLANIS (Κλάνις, Strab.; Γλάνις, App.: *Chiana*), a river of Etruria, flowing through the territory of Clusium, and falling into the Tiber about 14 miles below Tuder. It is mentioned by several ancient writers as one of the principal tributaries of the Tiber (Strab. v. p. 235; Plin. iii. 5. s. 9; Tac. *Ann.* i. 79; Sil. Ital. viii. 455): but we learn from Tacitus that as early as A. D. 15, the project was formed of turning aside its waters into the Arnus. The Clanis is in fact the natural outlet that drains the remarkable valley now called the *Val di Chiana*, which extends for above 30 miles in length from N. to S., from the neighbourhood of *Arezzo* to beyond *Chiusi*, and is almost perfectly level, so that the waters which descend into it from the hills on both sides would flow indifferently in either direction. In ancient times they appear to have held their course entirely towards the S., so that Pliny considers the river as proceeding from Arretium, and calls it "Glanis Arretinus:" it formed, as it still does, a considerable lake near Clusium (Strab. v. p. 226), now called the *Lago di Chiusi*, and had from thence a course of about 30 miles to the Tiber. But repeated inundations having rendered the *Val di Chiana* marshy and unhealthy, its waters are now carried off by artificial channels; some, as before, into the lake of *Chiusi*, others to the N. towards the *Arno*, which they join a few miles from *Arezzo*. The two arms thus formed are called the *Chiana Toscana* and *Chiana Romana*. The latter falls into a stream called the *Paglia*, about 5 miles above its confluence with the Tiber. So slight is the difference of level, that it is even supposed that at one time a part of the waters of the Arnus itself quitted the main stream near Arretium, and flowed through the *Val di Chiana* to join the Tiber. [Arnus.] It is, however, improbable that this was the case in historical times. (Fossombroni, *Mem. sopra la Val di Chiana*, 8vo. 1835; Rampoldi, *Corogr. dell' Italia*, vol. i. p. 656.)

Appian mentions that in B. C. 82, a battle was fought between Sulla and Carbo, on the banks of the Clanis, near Clusium, in which the former was victorious (*B. C.* i. 89). [E. H. B.]

CLA'NIUS (Γλάνις, Dionys.: *il Lagno*), a river of Campania, which rises in the Apennines near Abella, and traverses the whole plain of Campania, falling into the sea about 4 miles S. of the Vulturnus. In the early part of its course it flowed by the town of Acerrae, which frequently suffered severely from the ravages of its waters during floods (vacuis Clanius non aequus Acerris, Virg. *G.* ii. 225; Sil. Ital. viii. 537.). At other times their stagnation rendered the country unhealthy; hence in modern times the stream has been diverted into a canal or artificial course, called *il regio Lagno*, and sometimes by corruption *l'Agno*. This is divided into two streams near its mouth, the one of which flows direct into the sea, and is known as *Foce dei Lagni*, the other takes a more southerly direction, and joins, or rather forms, a marshy lake called the *Lago di Patria* (the ancient Literna Palus), the outlet of which into the sea, about 7 miles S. of the former branch, is now called the *Foce di Patria*. This is evidently the same which was known in ancient times as the river Liternus (Liv. xxxii. 29; Strab. v. p. 243), and appears to have been then the principal, if not the only outlet of the Clanius, as Strabo, who describes the coast of Campania minutely, does not notice the latter river. (Romanelli, vol. iii. p. 496; Rampoldi, *Corogr.* vol. i. p. 37, vol. ii. p. 363). Dionysius, who mentions the Clanius on occasion of the siege of Cumae in B.C. 524, writes the name Γλάνις, as does also Lycophron, who, with his usual vagueness and inaccuracy, would seem to place the city of Neapolis at its mouth (*Alex.* 718). [E. H. B.]

CLANOVENTA, in Britain. The ninth Itinerary is *A Clanoventa Mediolano M.P. cl.* Another reading is *Clamoventa*. Of the nine stations herein given, *Mancunium*, the seventh on the list, is the only one identified with sufficient safety to serve as a basis of criticism. Mancunium is *Man*-chester. The direction of the line is evidently from north to south. This places Clanoventum somewhere on the Scottish border, and it has been variously identified with *Lan-chester*, in Durham, and with *Cockermouth*, in Cumberland. [R. G. L.]

CLANUDDA. [Blaundus.]

CLANUM, a place marked in the Antonine Itin. between Agedincum (*Sens*) and Augustobona (*Troyes*), but the site is not determined. [G. L.]

CLA'RIUS (Κλάριος), a small stream in Cyprus which ran near the town of Aepeia. (Plut. *Sol.* 26; Steph. B. *s. v.* Αἴπεια.) [E. B. J.]

CLARUS (Κλάρος: *Eth.* Κλάριος), a place in Ionia, near Colophon, where there was a temple of Apollo, and an oracle of high antiquity. (Paus. vii. 3. § 1.) Claros is mentioned in the so-called Homeric hymns (i. 40, viii. 5), and by the Latin poets. (Ovid. *Met.* i. 515; Virg. *Aen.* iii. 359.) There was an old story that Calchas, on his return from Troy, came to Clarus, and died of vexation on finding that Mopsus, the grandson of Tiresias, was a better seer than himself. (Strab. p. 642.) When Germanicus was on his way to the East, he consulted the Clarian oracle, which foretold his speedy death. The priest was selected from certain families, and generally brought from Miletus. It was only necessary to tell him the number and names of those who consulted the oracle, on which he went into a cave, drank of the water of the secret fountain, and then delivered in verse an answer to what each had in his thoughts: his answers, as usual with oracles, were ambiguous. (Tac. *Ann.* ii. 54; Plin. ii. 103.)

Chandler (*Asia Minor*, c. 31) supposes that he discovered the site of Clarus at a place called *Zillé*, where he found a spring of water, with marble steps that led down to it; and he considers that this is the sacred fountain. *Aiasaluck*, the site of Ephesus, may be seen from this spot, with the plain of Ephesus and the town of *Scala Nova*. He saw also a confused mass of ruins of a large temple, and remains of Christian churches. Pausanias, who wrote in the second century of the Christian aera, speaks of an unfinished temple of Apollo at Clarus. The French editors of Chandler suggest that the ruins at *Zillé* may be those of Notium. On the coins of Clarus from the time of Domitian to Gallienus, there is Apollo Clarius and Diana Claria. [G. L.]

CLASTI'DIUM (Κλαστίδιον: *Casteggio*), a town of Cisalpine Gaul, situated on the borders of Liguria, about 7 miles S. of the Padus. It was on the high road from Placentia to Dertona, about 18 miles from the latter city (Strab. v. p. 217). Its name is chiefly celebrated on account of the victory gained under its walls in B. C. 222 by Marcellus over the Insubrians and their allies the Gaesatae, in which Virdomarus, king of the latter tribe, was slain by the Roman

consul with his own hand. (Pol. ii. 34; Plut. *Marc.* 6; Val. Max. iii. 2. § 5; Cic. *Tusc.* iv. 22.) On this occasion the Gauls had laid siege to Clastidium, which thus appears to have been already a place of strength and importance. At the commencement of the Second Punic War it was selected by the Romans as a fortress in which they deposited large stores of corn, but the commander of the garrison, a native of Brundusium, betrayed it into the hands of Hannibal, who made it his place of arms for his operations on the Trebia. (Pol. iii. 69; Liv. xxi. 48.) Its name is afterwards repeatedly mentioned during the wars of the Romans with the Cispadane Gauls and their Ligurian allies, and appears to have been one of the most considerable places in this part of Italy. (Liv. xxxii. 29, 31.) In one passage Livy terms it a Ligurian city, but it seems certain that it was properly a Gaulish one: Polybius tells us that it was in the territory of the Andri (ii. 34), but this name is probably a corruption of Anamari or Ananes. (Schweigh. *ad loc.*) After the Roman conquest it seems to have fallen into insignificance, and though noticed by Strabo as still existing in his time, is not mentioned by any later writer, and is not found in the Itineraries. There can however be no doubt that the modern town of *Casteggio* or *Chiasteggio* retains the ancient site as well as name. [E. H. B.]

CLATERNA (Κλάτερνα: *Quaderna*), a town of Gallia Cispadana, situated on the Via Aemilia, between Bononia and Forum Cornelii. The Itineraries place it 10 M. P. from the former and 13 from the latter city. (Itin. Ant. p. 287; Itin. Hier. p. 616; Tab. Peut.) It is mentioned in history during the operations which preceded the battle of Mutina B. C. 43, on which occasion it was occupied with a garrison by Antonius, but this was afterwards expelled, and the place taken by Hirtius. (Cic. *Phil.* viii. 2, *ad Fam.* xii. 5.) Under the Roman empire it appears to have been a considerable municipal town, and as late as the 4th century is still mentioned in the Jerusalem Itinerary as a "civitas." (Strab. v. p. 216; Plin. iii. 15. s. 20; Ptol. iii. 1. § 46; Itin. Hier. *l. c.*) St. Ambrose however speaks of it as much decayed in his time (*Epist.* xxxix. 3). The period of its final decline or destruction is unknown, but it is almost the only town on the Aemilian Way which has not preserved its existence as such in modern times: the name (slightly altered into *Quaderna*) is however retained by a small stream which crosses the road about 9 miles from *Bologna*, and an old church with a few houses adjoining it, about a mile to the N. of the road, is still called *Sta Maria di Quaderna*. The ancient town was however certainly situated on the high road. [E. H. B.]

CLAUDA (Κλαύδη, *Act. Apost.* xxvii. 16; Κλαῦδος, Ptol. iii. 17. § 11), also called GAUDOS (Mel. ii. 7; Plin. iv. 12. s. 20), now *Gozza*, a small island off the SW. coast of Crete.

CLAU'DIA, a town in the northern part of Noricum (Plin. iii. 27), and perhaps the same as *Claudivium* (Κλαυδιούιον or Κλαυδόνιον) mentioned by Ptolemy (ii. 14. § 3). [L. S.]

CLAUDIO'POLIS (Κλαυδιόπολις). 1. Ammianus (xiv. 25) mentions Seleucia and Claudiopolis as cities of Cilicia, or of the country drained by the Calycadnus; and Claudiopolis was a colony of Claudius Caesar. It is described by Theophanes as situated in a plain between the two Tauri, a description which exactly corresponds to the position of the basin of the Calycadnus. [CILICIA, p. 617.] Claudiopolis may therefore be represented by *Mout*, which is higher up the valley than Seleucia, and near the junction of the northern and western branches of the Calycadnus. It is also the place to which the pass over the northern Taurus leads from Laranda. (Leake, *Asia Minor*, pp. 117, 319.) Pliny (v. 24) mentions a Claudiopolis of Cappadocia, and Ptolemy (v. 7) has a Claudiopolis in Cataonia. Both these passages and those of Ammianus and Theophanes are cited by Forbiger to prove that there is a Claudiopolis in Cataonia, though it is manifest that the passage in Ammianus at least can only apply to a town in the valley of the Calycadnus in Cilicia Trachea. The two Tauri of Theophanes might mean the Taurus and Antitaurus. But Hierocles places Claudiopolis in Isauria, a description which cannot apply to the Claudiopolis of Pliny and Ptolemy.

2. A town of the Trocmi in Galatia; the site is unknown. (Ptol. v. 4.)

3. [BITHYNIUM.] [G. L.]

CLAU'DIUS MONS, a mountain range in Pannonia, the eastern slope of which was inhabited by the Taurisci, and the western slope by the Scordisci. (Plin. iii. 28.) This range is probably the same as the mountains near Warasdin on the river Drave. [L. S.]

CLAUDI'VIUM. [CLAUDIA.]

CLAUSENTUM, in Britain, the first station of the seventh Itinerary between Regnum and Londinium, distant from the former 20 miles. Ten miles beyond Clausentum lay *Venta* Belgarum = *Winchester*. This places Clausentum in the neighbourhood of *Southampton*, and it has been identified with that town and also with *Bishop's Waltham*. [R.G.L.]

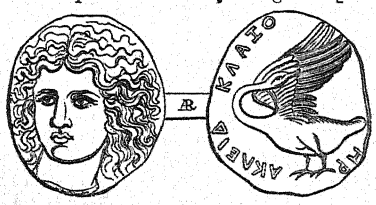
CLAU'SULA. [BARBANA.]

CLAUTINA'TII (Κλαυτινάτιοι), a Vindelician tribe mentioned by Strabo (p. 206), and apparently the same as the *Catenates* in the inscription in Pliny (iii. 24). [L. S.]

CLAVENNA, a town of Rhaetia, but on the Italian side of the Alps, still called *Chiavenna*, was situated about 10 miles from the head of the Lacus Larius, at the foot of the pass which led from thence over the *Splügen*. The ancient name of this pass is not preserved to us, but we learn from the Itineraries that it was frequented in ancient times; as well as another, which separated from it at Clavenna, and led by a more circuitous route over the *Mt. Septimer* to Curia (*Coire*), where it rejoined the preceding road. (Itin. Ant. pp. 277, 278; Tab. Peut.; P. Diac. vi. 29.) It was by one or other of these passes that Stilicho crossed the Alps in mid-winter, an exploit celebrated by Claudian. (*de B. Get.* 320—358.) Clavenna probably derived some importance from its position at the junction of these two passes: as does the modern town of *Chiavenna*, which is the capital of the surrounding district. [E. H. B.]

CLAZO'MENAE (Κλαζομεναί: *Eth.* Κλαζομένιος: *Kelisman*), one of the cities of Ionia. Strabo (p. 644) fixes its position within certain limits accurately enough. Clazomenae occupied the northern side of an isthmus, of which the Teii had the southern part; and this isthmus is the neck of land that connects the peninsula on which Erythrae stands with the mainland. The Clazomenii had the Smyrnaei for their neighbours on the east, and the Erythraei on the west; and on the west side, at the point where the isthmus commenced, there was a rugged spot which was the boundary of the territories of Erythrae and Clazomenae. Between Erythrae, which was on the west coast of the peninsula, and this rugged boundary was the promontory of Mimas, a mountain

covered with forests. Close upon the boundary was a place called Chytrium, as it is in Strabo's text, which, he says, was the original site of Clazomenae; and next to it was the city of Clazomenae, as it existed in his time, with eight small islands in front of it, which were cultivated. Pliny (v. 31) names numerous islands in this part, and Thucydides (viii. 31) mentions three, which are in Pliny's list, Pele, Drymussa, and Marathussa. Chandler (*Asia Minor*, c. 24) could only count six, and all uncultivated. This name Chytrium is not mentioned by any writer except Strabo, but it is evidently the place which Stephanus (*s. v. Χυτόν*) calls Chytum; and Aristotle (Pol. v. 3) Chytrum.



Clazomenae was on the south side of the bay of Smyrna, as Strabo's description shows. The original settlement was on the mainland, but the people through fear of the Persians passed over to *the* island (Paus. vii. 3. § 8). Alexander, as Pausanias says, intended to make Clazomenae a peninsula by uniting it to the mainland by a causeway. It appears that this was done, for Chandler found near *Vourla*, on the south side of the bay of Smyrna, a causeway about a quarter of a mile in length, and about 30 ft. wide, which connected the mainland with a small island. He estimated the length of the island at a mile, and the breadth at a quarter of a mile. The town was small, and the port was to the NNW. Near the sea Chandler found traces of the walls, and on a hill the remains of a theatre. It appears from this that the site of Clazomenae must have been very contracted, and the city inconsiderable.

Clazomenae, it is said, did not exist before the Ionians settled in Asia. The greater part of the first settlers were not Ionians, but people from Cleonae and Phlius, who left these cities when the Dorians came into the Peloponnesus. These emigrants first occupied a place in the territory of Colophon, named Scyppium or Schyphia (Steph. *s. v. Σκυφία*), and finally they removed to the place called Clazomenae (Paus. vii. 3. § 8). This old town was on the mainland, and it successfully resisted the attacks of Alyattes king of Lydia (Herod. i. 16). The enterprise of the people is shown by an early attempt to colonise Abdera in Thrace, and by their trade with Egypt (Herod. i. 168, ii. 178). In the time of Croesus the Clazomenii had a treasury at Delphi (i. 51). Herodotus enumerates Clazomenae among the states of Ionia that were on the mainland, for the only insular states which he names are, Chios and Samos; and yet the city of Clazomenae was on the island in his time. But as the territory of the Clazomenii was on the mainland, and the city was merely their stronghold on a small island close to the main, it could not be properly called an insular state like Chios and Samos (Herod. i. 142). Otanes the Persian took Clazomenae soon after the commencement of the Ionian revolt (Herod. v. 123) and we must suppose that the city at that time was on the island.

Clazomenae became a dependency of Athens, but after the losses of the Athenians in Sicily, it revolted with Chios and Erythrae. The Clazomenii at the same time began to fortify Polichne on the main as a place of refuge, if it should be necessary. The Athenians took Polichne, and removed the people back to the island, except those who had been most active in the revolt; and they went off to a place called Daphnus (Thuc. viii. 14, 23). Clazomenae was now again in alliance with or dependence on Athens; but Astyochus the Lacedaemonian commander arriving soon after bade those who were of the Athenian party, remove from Clazomenae to Daphnus, which they refused to do, and Astyochus failed in the attack that he made on Clazomenae, though it was unwalled (Thuc. viii. 31). Some critics have argued that Polichne is not the name of a place, and that it is Daphnus; but this does not appear to be so. Xenophon (*Hell.* v. 1. § 28) speaks of Clazomenae as an island even after the close of the Peloponnesian War, and this is consistent with the story in Pausanias. The walls of the city may have been built after the construction of the causeway, for Thucydides speaks of Clazomenae as unwalled. Stephanus (*s. v. Λάμψος*), on the authority of Ephorus, names Lampsus as a part of the territory of Clazomenae. Strabo (p. 646) also speaks of a temple of Apollo, and warm springs between Clazomenae and the bay of Smyrna, and he appears to place them in the territory of Clazomenae. These are the springs (*λούτρα*) mentioned by Pausanias (vii. 5. § 11); and those which Chandler visited on the road from *Smyrna* to *Vourla*, a place which is not far from the site of Clazomenae. He found the heat of the water "in the vein" to be 150 degrees (of Fahrenheit).

When the Romans settled the affairs of this part of Asia after their treaty with Antiochus (B.C. 188), they made the Clazomenii "immunes" or tax-free, and gave them the island Drymussa, one of the small islands near Clazomenae, not a very valuable present (Liv. xxxviii. 39; Polyb. xxii. 27). At the time when L. Sulla was in Asia, after bringing Mithridates to terms (B. C. 84), Clazomenae and other places on this coast were plundered by the pirates who infested the Aegean sea. (Appian, *Mithrid.* 63.) Clazomenae was included in the Roman province of Asia.

Clazomenae was the birthplace of Anaxagoras (*ὁ φυσικός*), who was one of the masters of Archelaus, and the dramatist Euripides. Hamilton (*Researches, &c.* vol. ii. p. 9) obtained a few coins of Clazomenae at *Ritri* (Erythrae), and accordingly not far from the site of the place to which they belonged. [G. L.]

COIN OF CLAZOMENAE.

CLEANDRIA. [RHODUS.]

CLEIDES (Κλεῖδες), a group of small islands which lay off the NE. extremity of Cyprus. (Strab. xiv. p. 682.) They were four in number (Plin. v. 31; comp. *Anthol. Graec.* ed. Jacobs, vol. iii. p. 45). The name of these islands has been transferred to the Cape (Herod. v. 108), which Pliny (*l. c.*) calls Dinaretum, and Ptolemy (v. 14. § 3) BOOSURA (Palat. Κλεῖδες). Strabo does not name this headland, but observes that above it was a mountain named Olympus, with a temple consecrated to Aphrodite Acraea from which women were excluded (comp. Claud. *de Nupt. Honor. et Mar.* 49). It is now called *Sant' Andrea*. There is an autonomous coin with the epigraph of Cleides. (Eckhel, vol. iii. p. 88; Engel, *Kypros*, vol. i. p. 88; Pococke, *Trav.* vol. ii. p. 219.) [E. B. J.]

CLEITOR (Κλείτωρ; Clitorium, Plin. iv. 6. s. 10; *Eth.* Κλειτόριος), a town in Arcadia, the name

of which is derived by Müller, from its being situated in an enclosed plain (from κλείω), while others connect it with Clivia and Clusium. (Müller, *Dorians*, vol. ii. p. 444, transl.; Lobeck, *Rhemat.* 293.) It possessed a small territory called Cleitoria (Κλειτορία, Polyb. iv. 10. § 6), bounded on the E. by the territory of Pheneus, on the W. by that of Psophis, on the N. by that of Cynaetha and Achaia, and on the S. by the territories of Caphyae, Tripolis, and Thelpusa. The lofty Aroanian mountains formed the NE. boundary of the territory of Cleitor, separating it from that of Pheneus. In these mountains the river Aroanius (*Katzána*) rises, which flowed through the territory of Cleitor from N. to S., and falls in the Ladon near the sources of the latter. The valley of this river opens out into two plains. In the upper plain, now called the plain of *Sudhená*, was situated Lusi, at one time an independent town, but at a later period a dependency of Cleitor. [Lusi.] In the lower plain, now called the plain of *Katzána*, or *Katzánes*, was the town of Cleitor itself.

Besides the valley of the Aroanius, the upper valley of the Ladon also formed part of the territory of Cleitor. The latter flows through this district, and flowed through the southern part of it in a south-westerly direction. The road from Caphyae to Psophis passed through the Cleitoria, and was traversed by Pausanias (viii. 23. §§ 8, 9). At the distance of seven stadia from Caphyae was Lasi, in the territory of the latter city; and 50 stadia beyond, the road crossed the Ladon, but Pausanias does not mention where the territory of Cleitor began. The road then entered a forest of oaks called Soron, and passed through Argeathae, Lycuntes, and Scotane, till it arrived at the ruins of Paus, situated at the end of the forest, and not far from See, which was distant 30 stadia from Psophis, and was the boundary between the Cleitorii and Psophidii. There are still some remains of this forest, which, in the time of Pausanias, contained bears and wild boars. The position of these places is uncertain; though Leake attempts to identify some of them. (*Peloponnesiaca*, p. 221.) Paus is also mentioned by Herodotus (Παῦον, or Πάγου πόλις, vi. 127), who speaks of it as a town of Azania.

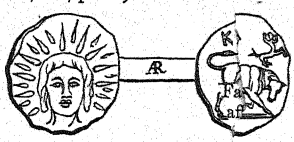
Cleitor was situated in the midst of the plain of *Katzana*, upon a hill of moderate height between two rivulets. The more important of these streams, running S. of the town, was also called Cleitor, now *Klítora*. The other stream, now called the river of *Karnési*, rises in the district of Lusi, and falls into the *Klítora* just beyond the remains of the ancient city. The Cleitor, after flowing rapidly through the plain, falls into the Aroanius, at the distance of seven stadia from the city of Cleitor, according to Pausanias; but the real distance is at least double. (Paus. viii. 21. § 1; "rapidus Clitor," Stat. *Theb.* iv. 289; Athen. v. iii. p. 331, d.; κλειτὸὲν ὕδωρ ποταμὸς Ἀρκαδίας, Hesych.) A little north of the junction of the river Cleitor with the Aroanius is the Kalývia of *Mázi* upon a gentle elevation, in the neighbourhood of which Dodwell discovered the remains of a small Doric temple.

Cleitor is said to have been founded by a hero of the same name, the son of the Arcadian king Azan. (Paus. viii. 4. § 5, viii. 21. § 3.) The Cleitoria formed an important part of the Azanian district. The Cleitorian fountain, of which we shall speak presently, was regarded as one of the curiosities of Azania; and the Aroanian mountains, on the summits of which the daughters of Proetus wandered in their madness, are called the Azanian mountains. (Eudoxus, *ap. Steph. s. v.* Ἀζανία.) The Cleitorians were renowned among the Peloponnesians for their love of liberty (τὸ Κλειτορίων φιλελεύθερον καὶ γενναῖον), of which an instance is cited even from the mythical times, in the brave resistance they offered to Sous, king of Sparta. (Plut. *Lyc.* 2, *Apophth.* p. 234.) Their power was increased by the conquest of Lusi, Paus, and other towns in their neighbourhood. In commemoration of these conquests they dedicated at Olympia a brazen statue of Zeus, 18 feet in height, which was extant in the time of Pausanias, who has preserved the inscription upon it. (Paus. v. 23. § 7.) Cleitor seems to have occupied an important position among the Arcadian cities. In the Theban war it carried on hostilities against Orchomenus. (Xen. *Hell.* v. 4. § 36.) In the Social War it belonged to the Achaean League, and bravely repelled the assaults of the Aetolians, who attempted to scale the walls. (Polyb. iv. 18, 19, ix. 38.) It was sometimes used as the place of meeting of the Achaean League. (Polyb. xxiii. 5; Liv. xxxix. 5.) Strabo (viii. p. 388) mentions Cleitor among the Arcadian towns destroyed in his time, or of which scarcely any traces existed; but this is not correct, since it was not only in existence in the time of Pausanias, but it continued to coin money as late as the reign of Septimius Severus.

Pausanias gives only a brief description of Cleitor. He says that its three principal temples were those of Demeter, Asclepius, and Eileithyia; that at the distance of four stadia from the city the Cleitorians possessed a temple of the Dioscuri, whom they called the great gods; and that further on the summit of a mountain, at the distance of 30 stadia from the city, there was a temple of Athena Coria. (Paus. viii. 21. § 3.) The ruins of Cleitor are now called *Paleópoli*, distant about three miles from a village which still bears the name of the ancient town. It would seem, as Leake remarks, that the river, having preserved its name after the city had ceased to exist, at length gave that name to a village built at its sources. The walls of the ancient city may still be traced in nearly their full extent. They inclose an irregular oblong space, not more than a mile in circumference; they were about 15 feet in thickness, and were fortified with towers. But the space inclosed by these walls seems to have been properly the acropolis of the ancient city, since the whole plain between the river of *Klítora* and the river of *Karnési* is covered with stones and pottery, mixed with quadrangular blocks and remains of columns. There are remains of a theatre towards the western end of the hill.

In the territory of Cleitor was a celebrated fountain, of which those who drank lost for ever their taste for wine:

> "Clitorio quicunque sitim de fonte levarit,
> Vina fugit: gaudetque meris abstemius undis."



(Ov. *Met.* xv. 322; comp. Phylarch. ap. Athen. ii. p. 43; Vitruv. viii. 3; Plin. xxxi. 2. s. 13.) A spring of water, gushing forth from the hill on which the ruins stand, is usually supposed to be this miraculous fountain; but Curtius places it in the territory of Lusi, because it is said to have been situated upon the confines of the Cleitoria, and is mentioned in connection with the purification of the daughters of Proetus by Melampus, which is said to have taken place at Lusi. (Εἰτισκαὶ πηγὴ παρὰ τοῖς Κλειτορίοις, Hesych.; situated ἀν' ἐσχατιὰς Κλείτορος, Vitruv. *l. c.*; ἐν Κλείτορι in Phylarch. ap. Athen. *l. c.*, is to be understood of the territory.) [Lusi.]

Another marvel in the territory of Cleitor was the singing fish of the river Aroanius. These fish, which were called ποικιλίαι, were said to sing like thrushes. Pausanias relates (viii. 21. § 2) that he had seen these fish caught; but that he had never heard them sing, although he had remained for that purpose on the banks of the river till sunset, when they were supposed to be most vocal. These singing fish are also mentioned by Athenaeus and Pliny. The former writer cites three authorities in proof of their existence, of whom Philostephanos placed them on the Ladon, Mnaseas in the Cleitor, and the Peripatetic Clearchus in the Pheneatic Aroanius. (Athen. viii. pp. 331, 332.) Pliny improperly identifies them with the exocoetus or adonis, which was a sea-fish. (Plin. ix. 19.) The ποικιλία was probably trout, and was so called from its spotted and many-coloured scales. The trout of the Aroanius are described by Dodwell as "of a fine bright colour, and beautifully variegated." (Dodwell, *Classical Tour*, vol. ii. p. 442; Leake, *Morea*, vol. ii. p. 257, seq.; Boblaye, *Recherches*, &c. p. 156; Curtius, *Peloponnesiaca*, p. 374, seq.)

CLEO'NAE (Κλεωναί: *Eth.* Κλεωναῖος). 1. A city in Peloponnesus, described by writers of the Roman period as a city of Argolis, but never included in the Argeia or territory of Argos, in the flourishing period of Greek history. Cleonae was situated on the road from Argos to Corinth, at the distance of 120 stadia from the former city, and 80 stadia from the latter. (Strab. viii. p. 377.) The narrow pass through the mountains, called Tretus, leading from Argos to Cleonae, is described elsewhere [p. 201, a.]. Cleonae stood in a small plain upon a river flowing into the Corinthian gulf a little westward of Lechaeum. This river is now called *Longo:* its ancient name appears to have been Langeia (Stat. *Theb.* iv. 51; Leake, *Peloponnesiaca*, p. 391). In its territory was Mt. Apesas, now called *Fuka*, connected with the Acro-Corinthus by a rugged range of hills. Both Strabo and Pausanias describe Cleonae as a small place; and the former writer, who saw it from the Acrocorinthus, says that it is situated upon a hill surrounded on all sides by buildings, and well walled, so as to deserve the epithet given to it by Homer (*Il.* ii. 570):—ἐὐκτιμένας Κλεωνάς. Statius also speaks of "ingenti turritae mole Cleonae." (*Theb.* iv. 47.) The existing ruins, though scanty, justify these descriptions. They are found at a hamlet still called *Klenes*, not far from the village *Kurtési*. According to Dodwell, they occupy "a circular and insulated hill, which seems to have been completely covered with buildings. On the side of the hill are six ancient terrace walls rising one above another, on which the houses and streets are situated."

Cleonae possessed only a small territory. It derived its chief importance from the Nemean games being celebrated in its territory, in the grove of Nemea, between Cleonae and Phlius. [NEMEA.] Hence the festival is called by Pindar ἀγὼν Κλεωναῖος (*Nem.* iv. 27). Hercules is said to have slain Eurytus and Cteatus, the sons of Actor, near Cleonae; and Diodorus mentions a temple of Hercules erected in the neighbourhood of the city in memory of that event. (Paus. v. 2. § 1, seq.; Pind. *Ol.* x. 36; Diod. iv. 33.)

Cleonae is said to have derived its name either from Cleones, the son of Pelops, or from Cleone, the daughter of the river-god Asopus. (Paus. ii. 15. § 1.) It was conquered by the Dorians, whereupon some of its inhabitants, together with those of the neighbouring town of Phlius, are said to have founded Clazomenae in Asia Minor. (Paus. vii. 3. § 9.) In the Dorian conquest, Cleonae formed part of the lot of Temenus, and in early times was one of the confederated allies or subordinates of Argos. (Grote, *History of Greece*, vol. ii. p. 417.) Indeed in the historical period, Cleonae was for the most part closely connected with Argos. After the Persian wars, the Cleonaeans assisted the Argives in subduing Mycenae (Strab. viii. p. 377); and they fought as the allies of Argos at the battle of Mantineia, B. C. 418. (Thuc. v. 67.) Of their subsequent history nothing is known, though their city is occasionally mentioned down to the time of Ptolemy. (Xen. *Hell.* vii. 2. § 15; Polyb. ii. 52; Liv. xxxiii. 14, xxxiv. 2; Ov. *Met.* vi. 417; Paus. ii. 15; Plin. iv. 6. s. 8; Ptol. iii. 16. § 20; Dodwell, *Classical Tour*, vol. ii. p. 206; Leake, *Morea*, vol. iii. p. 324, seq.; Boblaye, *Recherches*, &c., p. 41.)

COIN OF CLEONAE.

2. A town of Chalcidice, in Macedonia, situated on the peninsula of Mt. Athos, and probably on the western coast, south of Thyssus. (Herod. vii. 22; Thuc. iv. 109; Scylax, p. 26; Strab. vii. p. 331; Mela, ii. 2; Plin. iv. 10. s. 17; Leake, *Northern Greece*, vol. iii. p. 149, seq.)

3. A town of Phocis. [HYAMPOLI.]

CLEOPATRIS. [ARSINOE, No. 1.]

CLEPSYDRA FONS. [ATHENAE, p. 286.]

CLEVUM. [GLEVA.]

CLIMAX (Κλῖμαξ, steps, or a ladder, a name equivalent to the French *Echelle* and Italian *Scala*. It was used by the Greeks to signify a narrow and difficult pass.

1. On the east coast of Lycia the range of Taurus comes close upon the sea, and in the part between Phaselis and Olbia the pass is between the mountains and the sea. (Strab. p. 666.) Strabo describes it accurately: "about Phaselis is the narrow pass on the coast through which Alexander led his army; a mountain called Climax hangs over the Pamphylian sea, leaving a narrow passage along the beach, which is bare when there is no wind, and passable for travellers; but when the sea is swollen, it is for the most part covered by the waves; the road over the mountain is circuitous and steep, and people use the sea-road in fine weather. Alexander happened to be here in the winter season, and, trusting to his fortune, he set out before the waters had abated, and accordingly it happened that the men had to march all day in the water, up to the middle." Arrian (*Anab.* i. 26) says that Alexander made the passage easily, in consequence of the north wind having blown back the water which the south wind had brought upon the coast. He does not give any name to the pass. Mount Climax is that part of the coast which forms the eastern limit of Lycia, and the west side of the bay of *Adalia*. Beaufort observes (*Karamania*, p. 116): "the road along the coast is, however, interrupted in some places by projecting cliffs, which would have been difficult to surmount, but round which the men could readily pass by wading through the water."

He observes that Arrian "ascribes the reflux of the sea to its true cause, the influence of the wind." Alexander himself, in his letters, which Plutarch refers to (*Alex.* c. 17), simply states the fact of his passing by the Climax; but it became a fine subject for embellishment in the hands of many of the historians, who describe the sea as making way for the conqueror.

2. Polybius (v. 72) speaks of the narrow defiles about the so-called Climax (*τὴν καλουμένην κλίμακα*), and he says that one of the defiles leads to Saporda. It seems that the name Climax extended from the mountains on the Lycian coast northward into the interior, and that the range which formed a boundary between Milyas and Pamphylia and Pisidia was named Climax. Saporda was one of the passes that led over this range from Milyas into Pisidia. Garsyeris (Polyb. v. 72) led his troops from Milyas by a pass in the Climax to Perge. When Alexander led his men along the beach at the base of the mountains from Phaselis, he sent a part of the army by an inland route over the hills to Perge. This route was not so far north as that by which Garsyeris reached the same place. Arrian observes that the Thracians had made a road over the hills for Alexander's troops, which shows that though there was then no road in that part, it was possible to make one.

3. Climax is the name of a place on the coast of Paphlagonia between Cytorus and Cape Carambis. Marcian (*Peripl.* p. 71) places it 50 stadia east of Crobialus. Ptolemy (v. 4) mentions it in his Galatia, and it is the first place after Cytorus which he mentions on this coast. [G. L.]

CLIMAX, in the Argeia. [ARGOS, p. 201.]

CLIMAX MONS (Κλίμαξ ὄρος, Ptol.), a mountain of Arabia Felix, mentioned as a landmark several times in Ptolemy's description of the country (vi. 7). Niebuhr identifies it with *Sumâra*, or *Nakil Sumâra*, the largest and highest mountain traversed by him in Yemen. (*Descrip. de l'Arabie*, vol. iii. p. 207.) This is confirmed by Forster (*Arabia*, vol. i. p. 94, vol. ii. p. 270), who suggests that its Greek name, nearly identical in meaning with the Arabic *Nakil*, may be derived from the flights of steps, scooped in the rocky sides of the mountains, by which, according to Niebuhr, the roads ascend the steep hills of the Djebal (*l. c.* n.*). [G. W.]

CLIMBERRIS or CLIMBERRUM, a town of the Ausci, an Aquitanian people, afterwards Augusta. [AUGUSTA.] Vossius says (Mela, iii. 2) that the reading of all the MSS. is *Elium berrum*, except one Vatican MS. which has Climberrum. He adds that the reading of the Table is Cliberrum, and D'Anville also says that it is Cliberre. But Walckenaer observes that in the good edition of the Table by Von Scheyb the name is Eliberre. In the Antonine Itin. it is Climberrum. The termination *berre* is Basque, and is said to mean "new;" and *irum* is said to mean "town." It is doubtful if Climberris is the true form. There is a town and river Illiberris between Ruscino and the Pyrenaeum Promontorium; and this may be the same name as that of the chief town of the Ausci. [G. L.]

CLITAE (Κλεῖται), a place in the interior of Bithynia, mentioned by Ptolemy (v. 1), east of the Parthenius. The site is unknown. [G. L.]

CLITAE, a Cilician people who are mentioned by Tacitus (*Ann.* vi. 41) as subjects of a Cappadocian Archelaus, in the time of Tiberius. This Archelaus appears to have been a king of Cilicia Trachea, certainly not the last king of Cappadocia for he was dead before the time to which Tacitus refers in the passage cited above. [CAPPADOCIA p. 507.] The Clitae refused to submit to the regulations of the Roman census, and to pay taxes, and retired to the heights of Taurus. There they successfully resisted the king, until M. Trebellius was sent by Vitellius, the governor of Syria, who blockaded them in their hill forts, Cadra and Davara, and compelled them to surrender. In the reign of Claudius the Clitae again fortified themselves on the mountains, under a leader Trosobores, whence they descended to the coast and the towns, plundering the cultivators, townspeople, shipmasters, and merchants. They besieged the town of Anemurium, a place probably near the promontory, from which and the other circumstances we collect that the Clitae were a nation in Cilicia Trachea. At last Antiochus, who was king of this coast, by pleasing the common sort and cajoling the leader, succeeded in putting Trosobores and a few of the chiefs to death, and pacified the rest by his mild measures. (Tac. *Ann.* xii. 55.) [G. L.]

CLITE'RNIA, or CLITERNUM. 1. (Κλείτερνον, Ptol.: *Eth.* Cliternius), a city of the Aequiculi, and one of the only two assigned to that people both by Pliny and Ptolemy. It was included in the Fourth Region of Augustus, as well as Carseoli. The discovery of an inscription to a "Duumvir Cliterniae" at a place called *Capradosso* about 9 miles from *Rieti* in the upper valley of the *Salto*, affords some reason for regarding this spot (where there exist vestiges of an ancient town) as the site of Cliternia, though, as the inscription is merely sepulchral, the evidence is far from conclusive. (Bunsen, *Antichi Stabilimenti Italici*, p. 113, in the *Annali dell' Inst. Arch.* vol. vi.; Abeken, *M. I.* p. 88.)

2. A town of Apulia situated in the northern part of the province between the Tifernus and the Frento. (Plin. iii. 11. s. 16; Mela, ii. 4. § 6.) Ancient writers afford no further clue to its position, but local antiquarians have indicated its site at a place called *Licchiano*, on the left of the torrent of *Saccione*, about 5 miles E. of *S. Martino*. The spot, which is now uninhabited, is said to be called in documents of the middle ages Cliternianum, and considerable vestiges of an ancient city are visible there. (Tria. *Storia di Larino*, pp. 17, 18, 356—8; Romanelli, vol. iii. p. 22.) [E. H. B.]

CLITOR. [CLEITOR.]

CLITUMNUS (*Clitunno*), a small river of Umbria, celebrated for the clearness of its waters, and the beauty of the cattle that pastured on its banks. Its source, of which a well-known and very accurate description has been left us by the younger Pliny (*Ep.* viii. 8), is situated about half way between *Spoleto* and *Foligno*, at a place called *Le Vene*, from the numerous sources or springs of water that gush forth from under the limestone rock. These speedily unite into one stream, of sufficient magnitude to be navigable for boats, the waters of which are deep and clear as crystal: it has a course of about 9 miles to Mevania (*Bevagna*), below which it assumes the name of *Timia*: and appears to have been in ancient times also known as the Timia or Tinia from thence to the Tiber. [TINIA.] In the upper part of its course it is still called the *Clitunno*. Pliny describes the source of the Clitumnus in a manner that sufficiently shows it was regarded, not only as a object of local veneration, but as a sight to be visited by

strangers; and accordingly we find the emperor Caligula undertaking a journey for this express purpose, and Honorius turning aside from his progress along the Flaminian Way for the same object. (Suet. *Cal.* 43; Claudian. *de VI. Cons. Hon.* 506.) The hill immediately above the principal source was clothed, in Pliny's time, with a grove of ancient cypresses: close above the water was a temple of Clitumnus himself, while numerous smaller shrines or chapels (*sacella*) of local divinities were scattered around. The peculiar sanctity with which the spot was regarded caused these to be preserved down to a late period; and it is mentioned in the Jerusalem Itinerary (p. 613) under the name of Sacraria, without any notice of the Clitumnus. One only of these numerous small temples still remains, converted into a Christian chapel, but otherwise unaltered; from its position near the principal source it probably occupies the site of the temple of Clitumnus himself, but is certainly not the same building described by Pliny, its architecture being of a debased character, and belonging to the period of the Lower Empire. (Forsyth's *Italy*, p. 324, 4th ed.; Eustace's *Class. Tour*, vol. i. p. 325.) Pliny tells us (*l. c.*) that the temple and grove of Clitumnus were bestowed by Augustus upon the people of Hispellum, who erected public baths and other buildings there. The nearest town to the spot was Trebia (*Trevi*), from which it was only 4 miles distant. (Itin. Hier. p. 613.) The valley through which the Clitumnus flows, from its sources to Mevania, is a broad strip of perfectly level plain, bounded by the lateral ranges of the Apennines on each side. It is a tract of great fertility, and its rich and luxuriant pasturages furnished in ancient times a particularly fine breed of pure white cattle, which on account of their size and beauty were set apart as victims to be sacrificed only on occasions of triumphs or other peculiar solemnities. Their colour was thought to result from their drinking and bathing in the extremely pure waters of the Clitumnus: but though the same tradition is preserved by the inhabitants of the valley, the cattle are no longer remarkable for their whiteness. (Virg. *Geor.* ii. 146; Propert. ii. 19. 25; Sil. Ital. viii. 452; Juv. xii. 13, and Schol. ad loc.; Stat. *Silv.* i. 4. 129; Vib. Seq. p. 9; Cluver. *Ital.* p. 702.) [E. H. B.]

CLODIA'NA, a town in Illyria, situated upon the Via Egnatia, at the point where this road divided, one branch leading to Dyrrhachium, and the other to Apollonia. It probably derived its name from App. Claudius, who encamped upon the river Genusus in B. C. 168. (*Itin. Ant.*; *Tab. Peut.*; Liv. xliv. 30; Leake, *Northern Greece*, vol. iii. p. 279, seq.)

CLODIA'NUS (Κλωδιανός: *Llobregat Meñor* or *Muga*), a river of Hispania Tarraconensis, at the E. end of the Pyrenees, forming at its mouth the harbour of EMPORIAE. (Mela, ii. 6; Ptol. ii. 6. § 20; Strab. iii. p. 160, where it is referred to, but not named.) [P. S.]

CLOTA, in Britain, mentioned by both Tacitus (*Agric.* 23) and Ptolemy. Name for name, and place for place, it is the river *Clyde*. [R. G. L.]

CLUANA, a town of Picenum, mentioned by Mela and Pliny, both of whom place it on the coast between Cupra and Potentia. (Mela, ii. 4. § 6.; Plin. iii. 13. s. 18.) Its site has been fixed by a local topographer, on that of a small town, now called *S. Elpidio a Mare*, about 4 miles from the sea, and the same distance N. of *Fermo*. (Bacci, *Notizie dell' antica Cluana*, 4to. Macerata, 1716; Abeken, *Mittel Italien*, p. 120.) [E. H. B.]

CLUDRUS. [EUMENIA.]

CLU'NIA (Κλουνία κολωνία, Ptol. ii. 6. § 56), a city of the Arevacae in Hispania Tarraconensis, the last considerable place in Celtiberia, on the W. (*Celtiberiae finis*, Plin. iii. 3. s. 4.) It was a colony, and the seat of a *conventus juridicus*, comprising 14 peoples of the Varduli, 4 of the Turmodigi, 5 of the Carietes and Vennenses, 4 of the Pelendones, 18 of the Vaccaei, 7 of the Cantabri, 10 of the Autrigones, 6 of the Arevacae, and 22 of the Astures (at least this appears to be the meaning of Pliny's enumeration). The ruins of the city are visible on the summit of an isolated hill, surrounded with rocks which form a natural wall, between *Coruña del Conde* and *Pennalda de Castro* (Dion Cass. xxxix. 54; Plut. *Galba*, 6; Florez, *Esp. S.* vol. vii. p. 268, v. p. 51: coins, Florez, *Med.* vol. i. p. 364, vol. ii. p. 641; Mionnet, vol. i. p. 39, Suppl. vol. i. p. 79; Eckhel, vol. i. p. 46.) [P. S.]

CLU'SIUM (Κλούσιον: *Eth.* Clusīnus: *Chiusi*), an inland city of Etruria, one of the most ancient and powerful in that country, and without doubt one of the twelve which formed the Etruscan confederation. [On this point, see ETRURIA.] It was situated about 20 miles S. of Cortona, on a gentle hill rising above the valley of the Clanis, near a small lake, to which it gave name (ἡ περὶ Κλούσιον λίμνη, Strab. v. p. 226): this is still called the *Lago di Chiusi*. Strabo says it was distant 800 stadia (100 Roman miles) from Rome; this agrees very nearly with the Antonine Itinerary, which gives the distance by the Via Cassia at 102 miles, and must be very near the truth. (Strab. *l. c.*; *Itin. Ant.* p. 285.) All accounts agree in representing Clusium as a very ancient city, and in accordance with this belief Virgil places it among the cities of Etruria that assisted Aeneas against Turnus (*Aen.* x. 167). We are told that its original name was Camars, whence it has been inferred that it was originally an Umbrian city (a fact in itself highly probable), and that it obtained the name of Clusium when it fell into the hands of the Etruscans. (Cluver. *Ital.* p. 567; Müller, *Etrusker*, vol. i. p. 102.) Servius (*ad Aen.* x. 167) derives its name from Clusius, a son of Tyrrhenus, which may be thought to favour this view; but no dependence can be placed on such statements. When Clusium first appears in history it was one of the most important and powerful of the Etruscan states; but there is no authority for supposing it, as some authors have done, to have been the metropolis of Etruria, or to have exercised any more than a temporary and occasional superiority over the other cities of the League. The prominence that it assumed under the rule of Porsena was evidently owing in great part to the personal abilities and reputation of that monarch (Liv. ii. 9), and neither Livy nor Dionysius represent him as commanding any other forces than those of his own state, though later rhetorical writers call him "rex Etruscorum." (Liv. *l. c.*; Dionys. v. 21; Flor. i. 10; Plut. *Popl.* 16.) At an earlier period also Dionysius speaks of the Clusians as uniting with four other Etruscan cities (Arretium, Volaterrae, Rusellae, and Vetulonia) in a league against Tarquin the Elder, where all five appear on a footing of perfect equality. (Dionys. iii. 51.) It is impossible to say how much of the legendary history of the siege of Rome by Porsena can be received as historical, but there seems no reason to doubt the fact of his expedition, and much ground for supposing that it really ended in the capture of Rome. (Niebuhr, vol. i. pp. 546—548.) He subsequently sent

an army under his son Aruns to attack Aricia, but the young prince was defeated and killed. (Liv. ii. 14; Dionys. v. 36.) From this time we hear no more of Clusium till the invasion of the Senonian Gauls in B.C. 391, an event which was believed to have been brought about by a citizen of Clusium, who sought to avenge his private dishonour by betraying his country to the barbarians. The Gauls, however, though they in the first instance laid siege to Clusium, were soon induced to turn their arms against Rome, and the former city thus escaped from destruction. (Liv. v. 33, 35, 36; Dionys. Exc. Mai, xiii. 14—17; Diod. xiv. 113; Plut. *Camill.* 15—17.) Near a century later Clusium witnessed a second invasion of the same barbarians, the Senones having, in B.C. 295, made a sudden irruption into Etruria, and cut to pieces a Roman legion which was stationed there. (Liv. x. 25, 26; Pol. ii. 19.) During the wars of the Romans with the Etruscans, we hear but little of Clusium, the Clusini being only once mentioned, in conjunction with the Perusians, among the enemies of Rome (Liv. x. 30); and we have no account of the period at which they passed under the Roman yoke. The city is next mentioned in B.C. 225 during the great Gaulish war, when those formidable invaders for the third time appeared under its walls, shortly before their decisive defeat at Telamon. (Pol. ii. 25.) During the Second Punic War, the Clusians were active in supplying corn and timber for the fleet of Scipio (Liv. xxviii. 45); and in the civil wars of Sulla and Marius they appear, in common with many other cities of Etruria, to have espoused the cause of the Marian party. Two successive battles were fought in the immediate neighbourhood of Clusium, in both of which the partisans of Sulla were victorious. (Vell. Pat. ii. 28; Appian. *B. C.* i. 89; Liv. *Epit.* lxxxviii.) Very little is known of Clusium under the Roman empire, but inscriptions attest its continued existence as a municipal town, and Pliny distinguishes the "Clusini novi" and "Clusini veteres," whence it would appear that, like Arretium, it must have received a fresh colony of citizens who enjoyed separate rights; but the period and circumstances of this are wholly unknown. The name of Clusium is still found in the Itineraries, as well as in Ptolemy: it early became the see of a bishop, a distinction which it has retained without interruption to the present day; and it appears certain that it never ceased to be inhabited. Dante speaks of it as in his time going fast to decay, but it has considerably revived, and is now a flourishing though small city, with about 3000 inhabitants. (Plin. iii. 5. s. 8; Ptol. iii. 1. § 49; *Itin. Ant.* p. 285; *Tab. Peut.*; Gori, *Inscr. Etr.* vol. ii. pp. 399—424; Dennis's *Etruria*, vol. ii. p. 331.)

Chiusi retains but very few vestiges of her early greatness in the form of ruins or remains of edifices; but some portion of her walls are still visible, which in their style of construction resemble those of Perusia and Tuder; and a few fragments of architectural decorations are scattered through the buildings of the modern town. But the numerous sepulchres which have been excavated in the neighbourhood have yielded a rich harvest of Etruscan relics,—sepulchral urns, pottery, bronzes, and other objects. Many of these are interesting as exhibiting apparently the purest specimens of Etruscan art, unaltered by Greek influences; much of the pottery in particular is of a very peculiar style, "a coarse, black, unbaked ware, of uncouth forms, grotesque decorations, rude workmanship, and no artistic beauty." The figures with which it is adorned are in relief, and represent for the most part monsters and uncouth figures of a very Oriental character. The painted vases, on the other hand, which have also been found here in considerable numbers, though much less than at Tarquinii and Vulci, uniformly represent subjects from the Greek mythology, and bear the obvious impress of Greek art. The urns in stone and *terra-cotta* resemble those found at *Volterra*, and belong for the most part to a late period. Several of the sepulchral chambers also have their walls painted in a style very similar to those of Tarquinii. (For a full description of these works of art, see Dennis's *Etruria*, vol. ii. pp. 325—384.)

About 3 miles NNE. of *Chiusi* is a hill of conical form, called the *Poggio Gajella*, which has been proved, by recent excavations, to have been converted in ancient times into a vast sepulchral monument, containing numerous tombs, and a number of labyrinthine passages, penetrating in all directions into the heart of the hill. This has been supposed by some writers to be no other than the celebrated tomb of Porsena, of which a marvellous account has been preserved to us by Pliny from Varro; but the only resemblance is the fact that in that case also there was a labyrinth in the basement of the tomb. The description of the superstructure or external monument (which was probably taken by Varro from some Etruscan author) can hardly be received as other than fabulous, and is justly treated as such by Pliny himself, though some modern writers have believed it literally, and attempted a restoration of the monument in accordance with it. (Plin. xxxvi. 13. s. 19; Müller, *Etrusker*, vol. ii. p. 224; Abeken, *Mittel-Italien*, pp. 244, 245; Dennis, *l. c.*, pp. 385—400, where the opinions of numerous modern authors on this much controverted subject are cited and referred to.)

The territory of Clusium probably included several smaller and dependent towns. Etruscan remains have been found at the modern towns of *Cetona*, *Sarteano*, *Chianciano*, and *Montepulciano*, all of them situated within a few miles of *Chiusi;* but we have no trace of the ancient names of any of these places. The district adjoining the city (probably the valley of the Clanis) was celebrated, in ancient as well as modern times, for its great fertility, and the excellence of its wheat and spelt. (Plin. xviii. 7. s. 12; Colum. ii. 6. § 3.) Horace also alludes to its possessing sulphureous springs, frequented for medicinal purposes (*Ep.* i. 15. 9). [E. H. B.]

CLU'SIUS (Κλούσιος), a river of Gallia Transpadana, now called the *Chiese*, which rises in the Rhaetian Alps, and forms a considerable lake now known as the *Lago d'Idro*, but not mentioned by any ancient writer; after emerging from which it has a winding course for some distance through the *Val Sabbia*, and from thence flows for near 30 miles due S. through the plains of Cisalpine Gaul, till it joins the Ollius (*Oglio*), about 20 miles above its confluence with the Padus. Polybius (ii. 32) speaks of it as forming the limit between the Insubrians and the Cenomani, but it is difficult to understand that this could ever have been the case; it certainly was not so in later times. The name is written in the Tab. Peut. "Cleusis," which is a close approximation to its modern form of *Chiese*. [E. H. B.]

CLYDAE (Κλυδαί), a place in Caria in the Rhodian Peraea. (Ptol. v. 3.) The MSS. of Ptolemy and the older editions (Pirckheymer's, for instance) are said to have Chydae; but the name is Clydae

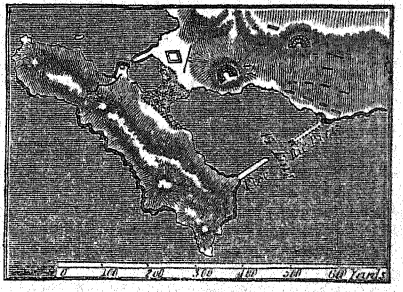
in the Stadiasmus, which places it 30 stadia east of the Promontory Pedalium, probably Cape *Bokomadhi*. [G. L.]

CLY'PEA. [ASPIS.]

CLYSMA (Κλῦσμα), the name given by Eusebius to the Heroopolitan or western gulf of the Red Sea, through which the Israelites passed on dry land. (*Onomast. s. v.* Βεελσεφών.) Philostorgius (*H. E.* iii. 5) says that the gulf was so called from the place where it terminated; which would seem to indicate that the site of the modern *Suez* was anciently occupied by a town of this name. In corroboration of this, Epiphanius (*adv. Haer.* lib. ii. p. 618) mentions τὸ κάστρον τοῦ Κλύσματος as one of the three ports of the Red Sea,—the others being Aïla or Elath, and Berenice (anciently Ezion-geber), both situated on the Elanitic gulf. (Reland. *Palaest.* pp. 471, 472, 556.) [G. W.]

CNA'CALUS MONS. [CAPHYAE.]

CNACION. [LACONIA.]



CNAUSUM. [ARCADIA, p. 193, a.]

CNEMI'DES. [CNEMIS.]

CNEMIS (Κνῆμις), a range of mountains forming the boundary between Phocis and the Epicnemidii Locri, who received their distinguishing name from this mountain. Mount Cnemis was a continuation of Callidromus, with which it was connected by a ridge, at the foot of which is the modern town of *Pundonitza*. (Strab. ix. pp. 416, 425; Leake, *Northern Greece*, vol. ii. pp. 66, 180.) A spur of this mountain, running out into the sea, formed the promontory CNEMIDES (Κνημῖδες), opposite the islands called Lichades and the Euboean promontory Cenaeum. Upon this promontory stood a fortress, also called Cnemides, distant 20 stadia from Thronium. It was near the modern *Nikoráki*. (Strab. ix. p. 426; Ptol. iii. 15. § 10; Mela, ii. 3. § 6; called Cnemis by Scylax, p. 23, and Plin. iv. 7. s. 12; comp. Leake, *Northern Greece*, vol. ii. p. 177.)

CNIDUS (Κνίδος, Cnidus: *Eth.* Κνίδιος), a city in Caria, at the western extremity of a long peninsula, which forms the southern side of the bay called Ceramicus. Strabo (p. 656) describes Cnidus accurately: "it has two ports, one of which can be closed, and is intended for triremes, and it has a station for twenty ships; there lies in front of the city an island about seven stadia in circuit, lofty, in the form of a theatre, joined by a causeway to the mainland, and making Cnidus in a manner two cities, for a large part of Cnidus is on the island, which covers both the harbours." This island, now called Cape *Krio*, is united to the main by a sandy isthmus. The island is about 600 yards long, with an average width of about 150 yards. Strabo's dimensions are pretty near the mark. On the west side towards the sea the island is steep in some parts, and it slopes down eastward towards the two harbours, which gives it the appearance that Strabo mentions. "On each side of the isthmus there is an artificial harbour; the smallest (on the north side) has a narrow entrance between high piers, and was evidently the closed basin for triremes which Strabo mentions. The southern and largest port is formed by two transverse moles; these noble works were carried into the sea to the depth of nearly a hundred feet; one of them is almost perfect; the other, which is more exposed to the south-west swell, can only be seen under water." (Beaufort, *Karamania*, p. 81.) A few yards from the end of the west pier there is very deep water at the entrance of the southern harbour: it is marked 17 fathoms in Beaufort's plan. The water shoals from the entrance of each harbour to the sandy isthmus which connects Cape *Krio* with the mainland, and the Cnidians doubtless found no great depth of water between the island and the main when they constructed their causeway. Pausanias, who wrote after Strabo, in two different passages (viii. 30. § 2, v. 24. § 7), says that the island of Cnidus was separated from the mainland by a narrow channel, which he calls Euripus; and in one of the passages he says that there was a bridge over it. He adds that the chief part of the city is on the mainland of Caria, as he calls it, and most of the chief buildings. There is perhaps no inconsistency between Strabo and Pausanias, for if there was a bridge, there was probably a causeway too.

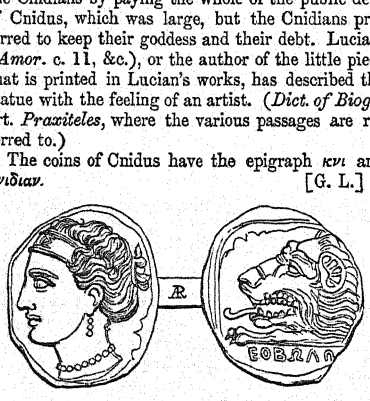
The site of Cnidus is covered with ruins "in every direction, particularly on the NE. side of the harbour. To the SW. are the remains of an ancient quay, supported by Cyclopian walls, and in some places cut out of the steep limestone rocks, which rise abruptly from the water's edge." (Hamilton, *Researches*, &c. vol. ii. p. 39.) Hamilton found the walls of Cnidus very perfect, and traced them throughout their whole extent to the east of the harbour. "The city is enclosed by two walls, one running east and west, the other almost north and south, and united at the summit of the hill to the NE. of the town; the former is partly Cyclopian, and partly pseudisodomous, but the style improves as it ascends. The northern part of the wall is very perfect, and contains two or three towers in a state of great preservation; it is also the best constructed, being probably of a later date and purely isodomous. —The walls in the peninsula are also well preserved, containing a round tower of great beauty at the extremity, near the northern harbour." (Hamilton.) No ancient city has been more mercilessly plundered than Cnidus; its proximity to the sea may account for its present condition. There are two theatres, one of which had a diameter of 400 feet, both in a ruined condition, a Doric stoa, and the basement of a large building which may have been a temple. The two theatres were on the mainland side. On the site of the town there are circular or pear-shaped holes in the ground covered with cement, which must have been cisterns, as Hamilton supposes, for holding rain water; "for there is neither stream nor fountain anywhere near." Cnidus contains examples of Greek architecture of different kinds, both Doric and Ionic. The drawings of the most important remains are published in the Ionian Antiquities of the Dilettanti Society.

HARBOUR AND RUINS OF CNIDUS.

(From Beaufort's *Karamania*.)

About a mile or more from the eastern gate of Cnidus are numerous tombs, some of which are buildings of considerable extent. "One of the largest is a square of 120 feet, with walls of beautiful polygonal construction and a regular coping of flat slabs; within this space are two or three small buildings, apparently tombs." (Hamilton.) The front wall of these tombs is in some few cases built in horizontal courses, but the polygonal blocks are most frequent. In the interior there are either "arched vaults or narrow passages covered with flat stones; the vaults are either formed of large Cyclopian blocks, or of small stones firmly cemented together." (Hamilton.) "The existence of Cyclopian masonry," Mr. Hamilton observes, "thus intimately connected with regular arches, seems to prove that the polygonal style must have been in use at a much later period than is usually believed." He further says, that this Cyclopian masonry, as it is called, is not decisive evidence of the great antiquity of a building; and few good critics will dispute the truth of this remark now. An inscription was found among these Cyclopian tombs which belongs to the Roman period.

The extreme western point of the Cnidian peninsula was the Triopium Promontorium, as Scylax calls it, now Cape *Krio*, and perhaps Herodotus (i. 174) limits the name Triopium to this promontory. But the territory of Cnidus (ἡ Κνιδία) extended eastward to Bubassus at the head of the gulf of *Syme*, and here is the narrow isthmus which the Cnidians attempted to cut through in the time of Cyrus the Persian. [BUBASSUS.] This long narrow peninsula is about 40 miles in length, and its greatest width about 10 miles. It does not seem to have been accurately examined by any modern traveller, but we know its form now from the late British survey. Herodotus certainly calls all this peninsula the Cnidia, and he describes it more clearly than any other writer. Pliny (v. 28) is very brief and confused; perhaps he gives the name Triopia to the small peninsula, or he may include in this term the western part of the whole peninsula. His term Doris may perhaps include the whole peninsula. Pausanias (i. 1. § 3) has no name for it, unless it be the Carian Chersonesus, for he speaks of Cnidus as being in the Carian Chersonesus; but in another passage (v. 24. § 7) he clearly gives the name Chersonesus only to the island, which is now Cape *Krio*, and he says that the chief part of Cnidus is built on the Carian mainland. [Compare BUBASSUS and CARIA.] As the narrow isthmus which the Cnidians attempted to cut through is at the eastern extremity of the peninsula, it is a fair conclusion that all the part west of the isthmus belonged to the Cnidii; and as there is no other city to whose territory it could conveniently be attached, it seems a certain conclusion that they had the whole of the peninsula. Cnidus is mentioned in one of the so-called Homeric hymns, but we can conclude nothing from this. It was a Lacedaemonian colony, and the leader of the colony according to tradition was Triopas. (Paus. x. 11. § 1.) It was one of the members of the Dorian Hexapolis, which was reduced to five cities after the exclusion of Halicarnassus. (Herod. i. 144.) These Dorian colonies, Cnidus, Cos, and Lindus, Ialysus and Camirus in Rhodes, formed a confederation. Their place of meeting was at the temple of the Triopian Apollo, where they had games, and bronze tripods for prizes. The site of the Triopian temple was on the island, now Cape *Krio*. (Thucyd. viii. 35.) The Cnidians traded to Egypt at an early period (Herod. ii. 178); and they had a treasury at Delphi (Paus. x. 11. § 5). The position of the place was favourable for trade, and Cnidus acquired wealth. They colonised Lipara, one of the Aeolian islands off the north coast of Sicily. After their unsuccessful attempt to cut across their isthmus [BUBASSUS], the Cnidians surrendered to Harpagus, the general of Cyrus the Persian, and so far as we know they remained quiet. At the commencement of the Peloponnesian War they were dependents on Athens, for we must suppose that Thucydides (ii. 9) includes them in the term "Dorians dwelling close to the Carians." Cnidus deserted the Athenians after their losses in Sicily, and the Athenians made an unsuccessful attempt to seize the place. Thucydides (viii. 35), after speaking of the Athenians surprising some vessels at the Triopian promontory, says that they then sailed down upon Cnidus, and attacking the city, which was unwalled, nearly took it. The city is evidently the town on the mainland, and as this city was then unwalled, the walls which Hamilton describes must be of later date than the Peloponnesian War. In B. C. 394 Conon, who commanded a Persian and Hellenic fleet, defeated the Lacedaemonians under Pisander off Cnidus and destroyed the supremacy of Sparta. (Xen. *Hell.* iv. 3. § 10; Isocrates, *Panegyr.* c. 39.)



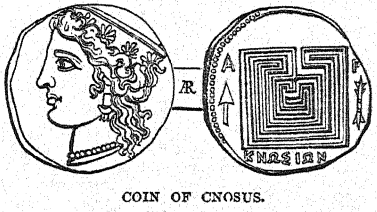
In the war of the Romans with Antiochus the Cnidii readily obeyed the orders of the Romans. (Liv. xxxvii. 16.) One of the very few occasions on which anything is recorded of the military operations of the Cnidii is their sending relief to Calynda, when it had revolted from Caunus (Polyb. xxxi. 17), about B. C. 163. On the settlement of the province of Asia they were included in it, and in Pliny's time Cnidus was "Libera," and probably at an earlier time. It was taken by the pirates who infested these seas before they were cleared out by Cn. Pompeius B. C. 67 (Cic. *Pro Lege Manilia*, c. 12), at the same time that Samos, Colophon and other places on the coast were plundered.

Hamilton (*Researches* and *Appendix*, vol. ii.) copied several inscriptions at Cnidus. None of them are ancient, and most of them belong to the Roman period. The Doric form appears in δαμος and other words. The name of Apollo Carneius occurs in one inscription; and Apollo was worshipped under this name at Corinth, and by all the Dorians (Paus. iii. 13. § 4). This inscription is a memorial in honour of Caius Julius Theopompus (Theupompus in the inscription) the son of Artemidorus (as it stands in Hamilton's copy), and it was erected by his friend Marcus Aephicius Apollonius, the son of Marcus. There was a Theopompus, a native of Cnidus, an historical writer and friend of the dictator Caesar (Strab. p. 656); and Theopompus had a son Artemidorus, but according to this inscription Theopompus was the son of Artemidorus. An Artemidorus informed Caesar of the conspiracy against him. (Plut. *Caes.* c. 65.) The inscription shows that Theopompus was a Greek who had after Greek fashion taken the praenomen and nomen of his patron, and this Theopompus may have been the man whom the dictator patronised. Hamilton conjectures that Apollonius may be Molon, the rhetorician, the teacher of Caesar and Cicero; but if that is so, his father must have received the Roman citizenship, for he is called Marcus in the inscription.

Eudoxus the mathematician, as Strabo calls him, one of the friends of Plato, was a native of Cnidus; but he is chiefly known as an astronomer. Strabo

(p. 119, 806) speaks of his observatory (σκοπή) at Cnidus, from which he saw the star Canopus: his observatory was not much higher than the houses. Ctesias, a physician, and the author of a Persian history, was a native of Cnidus; and also Agatharchides, who wrote a treatise on the Erythraean sea and other works. The Cnidians were fond of art, though the city did not produce artists. They placed a statue of Jupiter at Olympia, with a statue of Pelops on one side of it, and the river Alpheius on the other. (Paus. v. 24. § 7.) They also set up at Delphi a statue of Triopas, the so-called founder of their city, a figure of a man standing by a horse; and a Leto, and Apollo and Artemis, shooting their arrows at Tityus. (Paus. x. 11. § 1.) The painting of Polygnotus, at Delphi, called Lesche, was an offering of the Cnidii. (Paus. x. 25. § 1.) Aphrodite was worshipped at Cnidus, and the place was supposed to be one of her favourite abodes. (Hor. *Od.* i. 30; iii. 28.) Pausanias mentions three temples of Aphrodite at Cnidus; in the oldest she was worshipped as Doritis, in a second as Acraea, and in the third and most recent as Cnidia, or, as the Cnidians called her, Euploea, the deity of mariners (i. 1. § 3). Cnidus possessed the statue of the naked Aphrodite of Praxiteles, of Parian marble, one of the great works of Grecian genius. The statue stood in a chamber with two doors, so that the figure could be seen on both sides. People used to visit Cnidus to see the beautiful goddess. (Plin. xxxvii. 5.) Nicomedes, king of Bithynia, offered to buy this precious work from the Cnidians by paying the whole of the public debt of Cnidus, which was large, but the Cnidians preferred to keep their goddess and their debt. Lucian, (*Amor.* c. 11, &c.), or the author of the little piece that is printed in Lucian's works, has described the statue with the feeling of an artist. (*Dict. of Biogr.* art. *Praxiteles*, where the various passages are referred to.)

The coins of Cnidus have the epigraph κνι and κνιδιαν. [G. L.]



COIN OF CNIDUS.

CNOPU'POLIS. [ERYTHRAE.]

CNOPUS. [BOEOTIA, p. 413, b.]

CNOSUS, or GNOSUS, subsequently CNOSSUS, or GNOSSUS (Κνωσός, Κνωσσός, Γνωσός, Γνωσσός: *Eth.* and *Adj.* Κνώσιος, Κνώσσιος, Γνώσιος, Γνώσσιος, Gnosius, Gnosiacus, *fem.* Gnosis, Gnosias: *Mákro-Teikho*), the royal city of Crete, situated to the N. of the island, SE. of Matium, and 23 M. P. from Gortyna (*Peut. Tab.*). It originally was called CAERATUS (Καίρατος, Strab. x. p. 476) from the small river of that name which flowed beneath its walls. (Callim. *Hymn. Dian.* v. 44.) Tritta (Hesych. *s. v.* Τρίττα), was a name that had been some time applied to it. Pliny (iv. 20), who places Cnossus among the inland cities, and Ptolemy (iii. 17. § 10), are quite wrong in the positions they assign to it. Strabo's text (*l. c.*) is undoubtedly corrupt (comp. Groskurd, *in loc.*; Hoeck, *Creta*, vol. i. p. 402); and this may in part serve to account for the difficulty that has been found in reconciling the statements of this writer, who was so intimately connected with Cnossus, with the known position of the city. Its foundation was attributed to the hero of Cretan romance, Minos, who made it his chief residence. (Hom. *Od.* xix. 178). Cnossus and its neighbourhood was the chosen seat of legend; and the whole district was peculiarly connected with Zeus. At the river Tethris, or Theron, according to tradition, the marriage of Zeus and Hera was celebrated. (Diod. v. 72.) The most received mythus assigned the birth-place as well as the tombs of the "Father of gods and men" to this locality. The well-known Cretan labyrinth is uniformly attached to Cnossus. It was described as a building erected by Daedalus, and the abode of the Minotaur (Diod. i. 61; Apollod. iii. 4). This monument could never have had any actual existence, but must be considered simply as a work of the imagination of the later poets and writers. The Homeric poems, Hesiod and Herodotus, are all equally silent on the subject of this edifice. The labyrinthial construction is essentially Aegyptian, and it would seem probable that the natural caverns and excavated sepulchres still to be seen near Cnossus, and which were originally used for religious worship, suggested, after the introduction of Aegyptian mythology into Greece, the idea of the labyrinth and its fabled occupant. (Comp. Hoeck, *Kreta*, vol. i. pp. 56, foll.)

Cnossus was at an early time colonized by Dorians, and from it Dorian institutions spread over the whole island. It preserved its rank among the chief cities of Crete for some time, and by its alliance with Gortyna obtained the dominion over nearly the whole island. Polybius (iv. 53) has given an account of the civil wars which distracted Crete, and in which Cnossus took part. Afterwards it became a Roman colony. (Strab. x. p. 477.) All the now existing vestiges of the ancient "metropolis" of Crete are some rude masses of Roman brick-work, parts of the so-called long wall, from which the modern name of the site has been derived. (Pashley, *Trav.* vol. i. p. 204.) Chersiphron, or Ctesiphon, and his son Metagenes, the architects of the great temple of Artemis, were natives of this city, as well as Aenesidemus the philosopher, and Ergoteles, whose victories in the Olympian, Pythian, and Isthmian games, are celebrated by Pindar (*Olymp.* xii. 19). For coins of Cnossus, both autonomous and imperial, see Eckhel, vol. ii. p. 307. The usual type is the labyrinth; the forms, since they represent only a poetical creation, are naturally varied. [E. B. J.]

COIN OF CNOSUS.

COBULATUS, or, as Polybius (xxii. 18) writes it, COLOBATUS (Κολόβατος), a river which the Roman general Cn. Manlius crossed on his march from the Caulares [CAULARES] to Isionda (Liv xxxviii. 15). After crossing the Caulares he passed the Caralitis Palus [CARALITIS], and came to Mandropolis; from thence to Lagon, near the source

of the Lysis, and the next day to the Cobulatus. In the map that accompanies Spratt's *Lycia*, the Lysis and the Cobulatus are marked as the two upper branches of the Catarrhactes (*Duden-Su*); but this requires further examination. Arundell (*Asia Minor*, vol. ii. p. 154) supposes the Cobulatus to be the Catarrhactes. [G. L.]

CO'CALA (*τὰ Κώκαλα*, Arrian, *Ind.* 23), a small place on the coast of Gedrosia, where Nearchus spent several days on his return with his fleet from India. Its position is uncertain. [V.]

COCCIUM, in Britain, mentioned in the tenth Itinerary, as being 27 miles from Bremetonacae, and 18 from Mancunium. Rib-*chester* is generally considered to be its modern equivalent. [R. G. L.]

COCHE (*Κωχή* or *Χωχή*, Steph. B.), a small village on the Tigris, not far from Seleuceia, on the authority of Stephanus, who quotes Arrian. There has been considerable doubt, from the indistinct account of ancient authors, whether or not Coche is to be considered to be a different place from Seleuceia, or to be only an earlier name of that town. On the whole, the balance of opinions seems in favour of the former. The words of Arrian, as quoted by Stephanus, are precise enough. Again, in describing the march of Julianus, Ammianus (xxiv. 6) speaks of the army arriving at Coche after having thrown a bridge across the river Tigris. Orosius (vii. 24) speaks of Ctesiphon and Coche as the two most illustrious cities of the Parthians, and Gregor. Nazian. (*Orat. in Julian.* 2) calls Coche a *φρούριον*, of equal strength with Ctesiphon, and so situated that those two places might be considered as one town, divided only by the river. Lastly, Eutropius (ix. 12) calls it "*urbem*" in the time of the emperor Carus. On the other hand, Ammianus (xxiv. 5) has, on the emendation of Gelenius (for before his time the passage was held to be corrupt) "Cochem, quam Seleuciam nominant," which would imply that Coche was the older name: to which Zosimus (iii. 23) probably refers, though he calls the place Zochasa, in the passage *τῆς πρότερον μὲν Ζωχάσης, νῦν δὲ Σελευκείας ὀνομαζομένης*. Pliny (vii. 27) speaks of *Campi Cauchae*, which probably refer to the same place. [V.]

COCHE (*Κώχη* al. *Χόκη*), a town of Arabia Deserta, near the Euphrates, in lat. 72° 30′, lon. 32° 30′, of Ptolemy (v. 19). [G. W.]

COCHLIU'SA (*Κοχλίουσα*, Steph. B. *s. v.*; *Eth.* *Κοχλιούσιος*), an island near the coast of Lycia, which has its name from the shells found there, as Alexander said in his work on Lycia. [G. L.]

COCINTHUS or COCINTHUM (*Κόκυνθος*, Pol.), a promontory of Bruttium, which is described by Polybius (ii. 14) as the southernmost extremity of Italy, on which account he considers it as the point of separation between the Ionian and Sicilian Seas. But it is evident that this is founded upon a very erroneous conception of the geography of this part of Italy. For it is clear from Pliny (who himself alludes to this mistaken idea) that the promontory of Cocinthum lay to the N. of Caulonia, between that city and the Scyllacian gulf (Plin. iii. 10. s. 15), and can therefore be no other than the headland now called *Punta di Stilo*. In another passage (iii. 5. s. 6) Pliny not unaptly compares the configuration of this part of Italy to an Amazonian shield, of which Cocinthus forms the central projection, and the two promontories of Lacinium and Leucopetra the two horns; the latter, however, should rather be the Promontory of Hercules, or *Cape Spartivento*. Mela appears to confound it with the Zephyrian Promontory, which is certainly the modern *Capo di Bruzzano*, much further south. (Mel. ii. 4.) The modern name of *Capo di Stilo* is evidently derived from some column (*στήλη* or *στυλίς*) erected on the headland as a landmark, and appears to date from an early period, as it is already marked by the name of "Stilida" in the Maritime Itinerary. (*Itin. Marit.* p. 490.) The Itinerary of Antoninus, on the contrary, mentions "Cocinto" (p. 114), as if there were a town or village of the name; but it was probably a mere station. [E. H. B.]

COCOSA or COEQUOSA, as it is written in the Antonine Itin., is the first place on a road from Aquae Tarbellicae (*Dax*) to Burdigala (*Bordeaux*). It is placed 24 M. P. from *Dax*, and is supposed to be a place called *Caussèque*. If this is rightly determined, we ascertain the position of the Cocosates, one of the Aquitanian tribes whom P. Crassus compelled to submit to him in the third year of the Gallic war, B. C. 56 (Caes. *B. G.* iii. 27). Pliny (v. 19) calls the people "Cocossates Sexsignani," which seems to mean that it was a garrison town. He calls the Tarbelli "Quatuorsignani." The position of the Cocosates is in the southern part of the department of *Les Landes*; and "the inhabitants of the Landes are still divided into two classes; the Bouges, or those of the north or of the *Tête-de-Buch*; and the Cousiots, those of the south." (Walckenaer, *Géog.*, &c. vol. i. p. 303) [BOII]. [G. L.]

COCY'LIUM (*Κοκύλιον*: *Eth.* *Κοκυλίτης*), a place in Mysia, mentioned by Xenophon with Neandria and Ilium. (Xen. *Hell.* iii. 1. § 16.) In Pliny's time (v. 30) it had disappeared. He mentions it between Cilla and Thebe. A place called *Kutchulan*, or, as others write it, *Cotschiolan-Kuni*, is supposed to represent Cocylium. [G. L.]

COCY'TUS, a tributary of the river Acheron in Epeirus. [ACHERON.]

CODANI, a people of Arabia Felix, mentioned by Pliny between the Arsi and the Yadei (vi. 28). Forster finds them in the tribe of Kodad near Mekka. (*Arabia*, vol. ii. p. 142, note †.) [G. W.]

CODANO'NIA. [SCANDIA.]

CODA'NUS SINUS, the sea to the east of the Chersonesus Cimbrorum (*Jutland*), which, as Pomp. Mela (iii. 4) states, is filled with islands, all of which belong to the modern kingdom of *Denmark*. It was therefore the southern part of the *Baltic*. According to Pliny (iv. 27) it extended north as far as the prom. Cimbrorum. [L. S.]

CODDINUS. [SIPYLUS.]

CODRION, a fortified town in Illyria, which surrendered to the Romans upon the capture of Antipatria, B. C. 200. It was probably near the latter city, upon the river Apsus. (Liv. xxxi. 27.) It was probably the same town, which is called Chrysondyon by Polybius (v. 108). (Leake, *Northern Greece*, vol. iii. p. 326, seq.)

COELA (*τὰ Κοῖλα τῆς Εὐβοίας*), "the Hollows," a part of the coast of Euboea, which was very dangerous to vessels in stormy weather, and where a squadron of the Persian fleet was wrecked just before the battle of Artemisium. (Herod. viii. 13.) Strabo (x. p. 445) describes it as a place between Aulis and Geraestus; but as Aulis is misplaced in a description of the Euboean coast, many critics have proposed to read Chalcis. The Epitomizer of Strabo has Caphareus instead of Aulis, a correction which appears to have been made from Ptolemy (iii. 15. § 25), who places the Coela between Caphareus and the promontory Chersonesus. But Ptolemy is the only

writer who places the Coela on the eastern side of the island; all other ancient writers suppose them to have been on the western coast. (Liv. xxxi. 47; Val. Max. i. 8. § 10; Lucan, v. 196, 230.) The Persian fleet must therefore have sailed round the promontory of Geraestus before they were overtaken by the storm. (Groskurd and Kramer, *ad Strab. l. c.*)

COELE. [ATTICA, p. 302, b.]

COELESYRIA. [SYRIA.]

COELE'TAE, a Thracian people, divided into *majores* and *minores*, the former of whom dwelt at the foot of Mount Haemus, and the latter about Mount Rhodope. (Plin. iv. 18; Liv. xxxviii. 40; Tac. *Ann.* iii. 38.) The district which they inhabited was called *Coeletica*. [L. S.]

COELOS, COELA, COELIA, or CELA (Κοιλὸς λιμήν, Κοῖλα, Κοιλία), a port-town in the Thracian Chersonesus on the Hellespont, near which the Spartans were defeated by the Athenians, and where the latter erected a trophy by the side of the tomb of Hecuba. (Mela, ii. 2. 7; Plin. iv. 18, Ptol. iii. 12. § 4; Nicet. v. p. 81; Anna Comn. xiv. p. 429; Amm. Marc. xxii. 8; Hierocl. p. 634.) There still exist coins of the town of Coelos, respecting which see Eckhel, vol. ii. p. 50. Its modern name is *Kilidbahr*. [L. S.]

COENOPHRU'RIUM, a town on the Thracian coast of the Propontis, on the road from Apollonia to Selymbria; in it the emperor Aurelian was murdered in A. D. 275. (Eutrop. ix. 9; Vopisc. *Aurel.* 35; Itin. Ant. pp. 138, 230, 322, where the place is called Cenophrurium.) It is generally identified with the modern *Bivados*. [L. S.)

COENYRA. [THASUS.]

COEQUOSA. [COCOSA.]

COETAE (Κοῖται), are mentioned by Xenophon at the end of the Anabasis (vii. 8. § 25) among the nations that the Ten Thousand passed through. They are mentioned between the Mossynoeci and the Tibareni. The name does not occur in any other part of the work, nor elsewhere. [G. L.]

COEUS. [PAMISUS.]

COGAEONUM (Κωγαιώνιον), a mountain in the district of the Getae, which, from its connection with the legend of Zamolxis, was considered sacred. A river bearing the same name was in its neighbourhood. (Strab. vii. p. 298.) Neither the mountain nor the river can be identified, as it is uncertain whether we should look for them in the E. Carpathians or in the earlier settlements of the Getae, S. of the Ister. (Comp. Schafarik, *Slavische Alterthum*, vol. i. p. 489.) [E. B. J.]

COGAMUS. [HERMUS.]

COLACEIA (Κολακεία), a town in Malis of uncertain site. (Theopomp. ap. Athen. vi. p. 254, f.)

COLA'NIA, in Britain, mentioned by Ptolemy as one of the cities of the Damnii, to the NE. of the Selgovae (*Solway*). Identified with *Carstairs*, and with *Crawfurd*. [CORIA.] [R. G. L.]

CO'LAPIS, a river in the country of the Iapodes, in Pannonia, the district about the mouth of which was occupied by the tribe called *Colapiani*. (Strab. pp. 207, 214; Plin. iii. 28.) Dion Cassius calls the river *Colops* (xlix. 38, its modern name is *Kulpa*), and, according to Strabo, it flowed from the Alps, and having, in its course, become navigable, emptied itself into the Savus near Siscia or Segestica. [L. S.]

COLCHI INDIAE (Κόλχοι, Peripl. *Mar. Erythr.* p. 33; Tab. Peuting. Colchis Indorum; Κόλχοι ἐμπόριον, Ptol. vii. 1. § 10), a port on the Malabar coast, to the NE. of the present *Cape Comorin*, in that subdivision of India which the ancients called *India intra Gangem*. According to Ptolemy (vii. 1. § 10) it gave its name to a gulf which was called the Κολπὸς Κολχικός. Its present representative has not been determined; but the position is sufficiently identified by the description of the neighbouring coast, which was and is celebrated for its pearl fisheries. Dr. Vincent, in his Commentary on the Periplus (vol. ii. p. 444), has shown that near it, on the northern shore of Ceylon, was the island of Epiodorus (now the island of *Manaar*), and one of the most celebrated seats of the pearl fisheries. It is not improbable that many other names which are mentioned in the immediate neighbourhood, as Colias, Prom. Coliacum, Coniaci (Κωνιακοί, Strab. xv. p. 689), are really connected with that of Colchi. Indeed, the text of the Periplus is so corrupt, that it is difficult to have faith in the emendations even of the very learned men who have made it their study. (Vincent, *Periplus of Erythraean Sea*, vol. ii.; *Asiatic Researches*, vol. v. p. 395.) [V.]

CO'LCHICUS SINUS. [COLCHI INDIAE.]

COLCHIS (ἡ Κολχίς: *Eth.* Κολχός: *Adj.* Κολχικός), a district of western Asia bounded on the SW. by the province of Pontus, from which it was separated by the river Phasis, on the W. by the Pontus Euxinus as far as the river Corax, on the N. by the chain of the Caucasus, which lay between it and Asiatic Sarmatia, on the E. by Iberia and Mts. Moschici, and on the S. by Armenia. There is some little difference in authors as to the extent of the country westward: thus Strabo (xii. p. 498) makes Colchis begin at Trapezus, while Ptolemy, on the other hand, extends Pontus to the river Phasis. It may be gathered from Strab. xi. p 497; Plin. vi. 5. s. 5; Theodor. *Hist. Eccl.* v. 34; Procop. *B. G.* iv. 4; Zosim. i. 32, that Pityûs was the last town to the S. in Colchis, and from Strabo, *l. c.*, Arrian Peripl. p. 11. (ed. Huds.); Mela, i. 19; Ammian. xxii. 15; Ptol. v. 10; that the position of Dioscurias (which, according to Arrian and some other writers, was subsequently called Sebastopolis) was in the northern part of Colchis, and distant from Pityus, according to Strabo 366, and according to Arrian 350 stadia. The order of the tribes on this eastern coast of the Euxine was according to Strabo, and commencing from the N., the Zygi, Heniochi, Cercetae, Moschi and Colchi; it would, however, appear that the whole district popularly known as Colchis occupied the greater part of the territory on which these smaller tribes or subdivisions of people were settled; and may, therefore, as stated, be considered roughly to extend from Trapezus to Dioscurias. The district comprehends the modern provinces of Mingrelia and part of Abbasia, south and west of Mt. Elburz. Aeschylus and Pindar appear to be the earliest authors who have given to this land its historical name of Colchis. The earlier writers only speak of it under the name of Aea, the residence of the mythical king Aeetes. The inhabitants, called Colchi, were according to the opinion of Herodotus (ii. 104, 105) and Diodorus (i. 28) the remains of the army of Sesostris, and therefore of Egyptian origin. Herodotus argues that the people of Colchis were the relics of this army, because of the many customs which were similar to them and to the Egyptians, and not in use originally in other nations, as the rite of circumcision, and the working of linen (which the

Greeks called Sardonic, or, as Larcher thinks, Sardian, from Sardes), and also from their language, from the natural complexion of their skin, which was of a dusky colour, like that of the ancient inhabitants of the valley of the Nile, and from their having curly hair. Strabo (*l. c.*) alludes to, but seems hardly to credit, this story. Yet many modern scholars have held that there is some truth in it, and have attempted variously to account for the connection between the two people. (Comp. Heeren, *Ideen*, vol. i. pt. 1 p.405; Michaelis, *Laws of Moses*, vol. iv. p. 185, &c.) Herodotus is so far a good authority, that he does not speak from hearsay, but from personal observation. Pindar (*Pyth.* 4.378), too, calls the Colchians dark-complexioned. Ammianus (xxii. 8) probably merely copies the words of Herodotus. Dionysius Perieg. (v. 689) confirms the general tradition of the Egyptian descent of the Colchians.

The Colchi were subdivided into numerous tribes, chiefly settled, as we have stated, along the coast of the Euxine: as the Machelones, Heniochi, Zydretae, Lazi, to the S. of the river Phasis: the Apsidae, Abasci, Samigae, Coraxi, to the N. of it; the Coli, Melanchlaeni, Geloni, and Suani, along the mountain range of the Caucasus to the N. and W., and the Moschi to the SE., among the Moschici Montes, an outlying spur of the same great chain. (See under these names.) It may be remarked here, that of these tribes, the Lazi gave their name to the Regio Lazica, a title whereby the whole country was known at a late period of history (Procop. *B. P.* ii. 15, *Goth.* iv. 1; Ptol. v. 10. § 5, as compared with Arrian, *Periplus*, p. 11), and that the Abasci have no doubt perpetuated their name in the modern *Abbasia* (Rennell's Map) or *Abkhasia* (Ritter). It may also be noticed that the names Coli, and Colias, are found in connection with the Indian Colchis; not impossibly through the carelessness of transcribers or editors. [COLCHI INDIAE.] The only river of any importance was the Phasis (now *Fáz* or *Rioni*), which was according to some writers the S. boundary of Colchis, but more probably flowed through the middle of that country from the Caucasus W. by S. to the Euxine, and the Anticites or Afficitus (now *Kuban*). Arrian (*Periplus*, p. 10) mentions many others by name, but they would seem to have been little more than mountain torrents: the most important of them were Charieis, Chobus or Cobus, Singames, Tarsuras, Hippus, Astelephus, Chrysorrhoas, several of which are also noticed by Ptolemy and Pliny The chief towns were Dioscurias or Dioscuris (under the Romans called Sebastopolis) on the sea-board of the Euxine, Sarapana (now *Scharapani*), Surium, Archaeopolis, Macheiresis, and Cyta or Cutatisium (now *Kchitais*), the traditional birth-place of Medea.

The country itself was celebrated, as we have seen, from the earliest times for its cultivation of the trade in linen (Her. ii. 105; Strab. xi. p. 498). During the time of the Romans, and still later under Constantine, many castles and factories occupied its coasts, so as to maintain the general trade of the district (Procop. *B. G.* iv. 2, *B. P.* ii. 28; Zosim. ii. 33); which produced, besides linen, timber for ship-building, hemp, flax, wax, pitch, and gold dust. (Strab. xi. p. 498; Appian. *Mithr.* c. 103.) Among many of the poets of antiquity, and especially among those of the later and Roman times, Colchis, as the scene of the parentage of Medea, and of the subsequent voyage of the Argonauts and the capture of the Golden Fleece, was the native seat of all sorceries and witchcrafts. (Horat. *Carm.* ii. 13. 8, *Epod.* v. 21, xvi. 57; Juv. vi. 643; Propert. ii. 1. 53; Martial. x. 4. 35.) The existence and growth in the country of the Iris plant (Dioscor. *in Proem.* lib. vi.; Plin. xxviii. 9), from the bulbous root of which the medicine we call Colchicum is extracted, may have led to some of the tales of sorcery attributed to Medea. (Ovid. *A. Am.* ii. 89; Lucan. vi. 441.)

We have occasional notices of the history of Colchis incidentally recorded in various passages of the classical writers, from which we may gather:—

1. That during the time of Herodotus it was the northern limit of the Persian empire (Her. iii. 97); though subsequently the people appear to have thrown off this yoke, and to have formed an independent state (Xen. *Anab.* iv. 8. § 9, vii. 8. § 25). Still later, in the time of Alexander the Great, the Colchians were not included in the sway of the Persians. (Arrian, *Anab.* iv. 15. § 4.)

2. During the period of the contests between Mithridates and the Romans, Colchis was considered to be one of the territories which the king of Pontus had annexed to his paternal territory (Appian, *Mithr.* 15), though its allegiance was even then uncertain and doubtful (*Ibid.* 64). During the Second Mithridatic War, Mithridates made his son Machares king of Colchis (*Ibid.* 67), who appears to have held his power but for a short period. Finally, on the overthrow and death of Mithridates, Pompey made Aristarchus the governor of this district. (*Ibid.* 114; comp. Dion Cass. xxxvi. 33, xxxvii. 3.) On the fall of Pompey, Pharnaces, son of Mithridates, took advantage of Caesar being occupied in Egypt, and reduced Colchis, Armenia, and some part of Cappadocia,—defeating Cn. Domitius Calvinus, whom Caesar subsequently sent against him. His triumph was, however, short-lived. (Dion Cass. xlii. 45.)

3. Under Polemon, the son and successor of Pharnaces, Colchis was part of the kingdom of Pontus and the Bosporus. (Strab. xi. pp. 493—499.)

Lastly, from Theoph. Byzant. (*Fragm.* 4), it appears that in the eighth year of Justin, A. D. 572, the Colchians and Abasgi joined the king of Armenia as the allies of Chosroes in his war against Marcian. At this period the district itself, as already remarked, was generally known as Terra Lazica. (Menand. Prot. *Fragm.* 3 of his *Continuation of the History of Agathias.*) [V.]

COLENDA (Κολένδα: perhaps *Cuellar*), a city of the Arevacae in Hispania Tarraconensis, mentioned by Appian (*Hisp.* 99, 100; Ukert, vol. ii. pt. 1, p. 456). [P. S.]

COLI (Κῶλοι), a people of the Caucasus, in the north of Colchis, inhabiting a district called after them, Κωλική. The northern part of the Caucasus was also called Κωλικὰ ὄρη. (Steph. B. *s. v.* Κῶλοι; Scylax, p. 31, where Κωλική should be read for Κωρική; Plin. vi. 5. s. 5; Mela, i. 19.)

COLIAS. [ATHENAE, p. 305, b.]

COLICARIA, a place in Gallia Cisalpina, on the Po, between Mutina and Hostilia, near *Mirandola.* (It. Ant.)

COLIS (Κωλίς, Dion. Perieg. 1148; Mela, iii. 7; Fest. Avienus, v. 1355), a district on the Malabar coast, opposite to Ceylon, and a little to the northward of *Cape Comorin.* As stated elsewhere [COLCHI INDIAE], there is a great confusion in the names which the ancients have preserved of the places on this coast; and it is very likely that the names Calligicum, Co-

liacum, Colis, and Colias, refer to one and the same district. That it was N. of *Cape Comorin* is quite clear; and if Colias and Colis be one and the same, it is clear that it was not far to the N., as Dionysius (v. 951) evidently describes the former as opposite to *Ceylon*. Ptolemy and Marcian connect with Calligicum another promontory, which they call Cory (Κῶρυ ἄκρον), a projecting strip of land to the E. of the *Sinus Colchicus*: it has been supposed by Ritter (*Erdk.* v. p. 517) to be the same as the present *Panban*, opposite the island of *Ramanan Kor*. Pliny (vi. 20. s. 23) speaks of a Promontory Calingon, — doubtless the Calligicum of Ptolemy. [V.]

COLLA'TIA (Κολλατία: *Eth.* Κολλατῖνος, Collatinus: *Castel dell' Osa*), an ancient city of Latium, situated about 10 miles E. of Rome, between Gabii and the Anio. Virgil notices it as one of the colonies of Alba Longa (*Aen.* vi. 774); a clear proof that he considered it as a Latin town; and Dionysius also distinctly attributes it to that people: it is strange, therefore, that Livy speaks of it as if it had been a Sabine city previous to its conquest by the Romans. The first occasion on which its name appears in history is during the reign of Tarquinius Priscus, by whom it was reduced to a state of subjection to Rome. (Liv. i. 38; Dionys. iii. 50.) Livy has preserved to us the formula of "deditio" on this occasion, and there can be no doubt that the fact is historically true, as the city never appears again as an independent state. Tarquin is said to have established a garrison there, whence he is erroneously represented by some late grammarians as the founder of the city (Serv. *ad Aen.* vi. 744): he at the same time appointed his nephew Egerius as governor, who in consequence obtained the surname of Collatinus, which he transmitted to his descendants; and Lucius Tarquinius, the husband of Lucretia, is represented as residing at Collatia at the time of the siege of Ardea. (Liv. i. 57—59; Dionys. iv. 64.) Silius Italicus also represents it as the birthplace of the elder Brutus (viii. 363); but there is no other authority for this. No subsequent mention of Collatia occurs in history; but it appears to have gradually declined. Cicero incidentally notices it as one of the municipal towns of Latium which was in his time in a very decayed condition. Strabo tells us it was reduced to a mere village, and Pliny enumerates it among the "populi" of ancient Latium which were then no longer in existence. (Cic. *de Leg. Agr.* ii. 35; Strab. v. p. 230; Plin. iii. 5. s. 9.) This is the last mention of the name that we meet with; but the memory of its existence was preserved by the Via Collatia or Collatina, which is noticed more than once by Frontinus (*de Aquaeduct.* 5, 10), from whom we learn that it lay to the left of the Via Praenestina, from which it was separated by a short interval. This is the only clue to the position of Collatia, the site of which has in consequence been generally fixed at a place called *Castellaccio* or *Castel dell' Osa*, a ruined castle of the middle ages, on the N. bank of a little stream called the *Osa*, little more than 2 miles from its confluence with the Anio, and about the same distance from the site of Gabii. There remain on this spot some very inconsiderable fragments of walls on the side towards the stream, where it presents a steep and abrupt face of tufo rock, but on the other side it is wholly without defences, and Gell is of opinion that the site was little adapted for that of an ancient city. Hence he inclines (as well as Westphal) to place Collatia at *Lunghezza*, another mediaeval fortress on a bold and nearly isolated hill just above the confluence of the *Osa* with the Anio. The position of *Lunghezza* is certainly one better adapted by nature for the site of an ancient city than that of *Castel dell Osa*, and would accord much better with Virgil's expressions ("Collatinas imponent montibus arces," *Aen. l. c.*) but no ruins have been discovered there. (Gell, *Top. of Rome*, pp. 171—175; Nibby, *Dintorni*, vol. i. pp. 478—482; Westphal, *Röm. Kampagne*, pp. 100, 101; Abeken, *Mittel Ital.* p. 78.) [E. H. B.]

COLLOPS MAGNUS or CULLU (Κόλλοψ μέγας ἢ Κόλλου, Ptol. iv. 3. § 3; Chulli Municipium, *Itin. Ant.* p. 19; Chullu, *Tab. Peut.*; Chulla, Solin. 29; *Collo*, Ru.), a city of Numidia, upon a headland on the W. side of the Sinus Olcachites (*Bay of Stora*), E. of the Pr. Tretum, and 50 M. P. west of Rusicada, celebrated for its purple-dyeing establishments, and probably, therefore, a Phoenician colony. (Brun, *Africa*, p. 214.) Ptolemy mentions a Κόλλοψ μίκρος, considerably to the E. of this, in a position apparently near the opposite side of the bay. (Ptol. *ibid.* § 4.) [P. S.]

COLLYTUS. [ATHENAE, p. 302.]

COLOBATUS. [COBULATUS.]

CO'LOBI (Κολοβοί, Diod. iii. 32; Agatharch. p. 46; Ptol. iv. 7. § 28), a tribe of Troglodytes situated on a strip of land in the vicinity of the promontory of Bazium in lat. 24° N., and on the western shore of the Red Sea. Ptolemy (iv. 7. § 7) mentions a mountain (Κολοβὸν ὄρος, ἄκρον), and Strabo (xvi. p. 771) a forest, of the Colobi (Κολοβῶν ἄλσος) in this region, between Berenice and the harbour of Antiphilos. Pomponius Mela (iii. 8) places a town of Coloba between the promontory of Aeneum and Philoteris. The Colobi, like the entire Troglodytic nation, were the subject of many fables. In the Greek language their name imports "the mutilated," and they seem to have practised the rite of circumcision after a manner peculiar to themselves (Aristot. *Hist. An.* iii. 8. § 6; Diod. iii. 32). They were probably a dwarfish people, and among the varieties of the Aethiopict race whose low stature or deformity led finally to the fable of the Pygmies. The region which they inhabited was barren, and they were excluded from the pasture grounds to the west of it by their stronger kinsmen or neighbours. Hence their diet was principally shell-fish and the casual products of the chase, and their curtailed proportions were confirmed by their poor diet. [W. B. D.]

COLOE (Κολόη λίμνη, Ptol. iv. 7. § 24, 31; Steph. Byz. *s. v.*), a lake in Aethiopia, lat. 12° N., through which flows, but with little intermixture of their several waters, the river Astapus (*Bahr-el-Azrek*), the Blue or Dark River. The lake Coloë is probably the Ψεβώ or Ψέβοα of Strabo (xvii. p. 822), and is the modern Lake *Dembea* or *Tzana*. There was also in Aethiopia a town named Coloë (Κολόη πόλις, Ptol. iv. 7. § 25) of which the site is uncertain (Arrian, *Peripl. Mar. Erythr.* p. 3; Mannert. *Geograph.* vol. xii. p. 167). [W. B. D.]

COLO'NAE (Κολωναί) or COLO'NE, a town in the Troad, 140 stadia from Ilium. (Strab. pp. 589, 604; Thuc. i. 131; Xen. *Hell.* iii. 1. § 13; Paus. x. 14. § 1.) According to tradition, Colonae was in early times the residence of a Thracian prince Cycnus, who possessed the adjoining country and the island of Tenedos, opposite to which Colonae was situated on the mainland. Colonae was probably one of the towns from which the inhabitants were removed to supply the population of Alexandria in Troas. Pliny (v. 30) places it in the interior, and

speaks of it as one of the places that had disappeared.

There was a Colonae near Lampsacus on the Hellespont, a foundation of the Milesians. (Strab. p. 589; Arrian, *Anab.* i. 12. § 11.) [G. L.]

COLO'NIA, in Britain. The criticism which applies to Camulodunum [CAMULODUNUM] has been postponed to the present notice, because the place, to which the general assent of investigators has assigned the honour of having been the first Roman colony in Britain — the *Colonia κατ' ἐξόχην* — is the *Caer Colun* of the British, and the Camulodunum of the classical writers. *Cair Colun* is a name in Nennius's list of British cities. In Beda and the earlier Anglo-Saxon authorities we have such forms as *Colnaceaster*, *Colecestria*, &c., evidently meaning *Colchester* in Essex. Lastly, in Henry of Huntingdon, we find the special statement that the British *Caer Colun* and the A.-S. *Colecestria* are one and the same. The identity of *Camulodunum* with the town thus named from Colonia is another question. Few writers, however, have disconnected them. The chief grounds for the identification lie in two passages of Tacitus.

After the reduction of the Iceni (in Norfolk and Suffolk), and the Cangi (on the Irish Sea); after, too, a diversion against the Brigantes (to the north of the Humber), the fierce nation of Silures required repression. For this purpose a colony is established at Camulodunum — "Silurum gens non atrocitate, non clementia mutabatur, quin bellum exerceret, castrisque legionum premenda foret. *Id quo promptius veniret*, colonia Camulodunum, valida veteranorum manu, deducitur in agros captivos, subsidium adversus rebelles, et imbuendis sociis ad officia legum. Itum *inde* ad Siluras." (*Ann.* xii. 32, 33.) Attention is directed to the words in Italics. Reference is also made to the article CANGI. The section, too, of Tacitus preceding the one quoted should be read. This tells us that Ostorius had already fortified the valleys of the Sabrina and the Autona — the Sabrina meaning the *Severn*, whatever may have been the meaning of Autona (? Aufona).

Now, with stations already effected on the Severn, and another river, which was certainly nearer to Wales than any river of Essex, how can we reconcile the probable movements of Ostorius with either of the accredited sites of Camulodunum? This is well known to have been either *Maldon*, or *Writtle* (near *Colchester*), each in Essex, and each in the very last place imaginable for the operations of a Silurian, a Brigantian, or a Cangian campaign, even if it be allowed to suit an Icenian.

The solution to these difficulties probably lies in the fact of Tacitus's authority being of a high value only for those parts of our island with which his father-in-law Agricola came in contact, and for that period of our early history during which that general was so important an actor. Now, the parts that he knew best lay in the west and north — in Wales and Scotland — rather than in the eastern counties.

In A.D. 61, the name of Camulodunum re-appears (*Ann.* xiv. 31); its geographical and political relations being comparatively clear. Thus, the war is against the famous Queen of the Iceni (Boadicea), and the population of the neighbourhood is that of the Trinobantes (*Middlesex*). At the same time, the campaign in Wales is interrupted by the Icenian revolt; a fact to which we may possibly trace the confusion in the account of Ostorius. The actual movement from west to east directed the attention of the historian towards Wales, whilst the probable rapidity with which Paullinus (the general now under notice) effected it, abridged the distance.

Be this as it may, the Camulodunum of the Icenian campaign is a place of pleasure, rather than a military fortification — "Nullis munimentis septam — dum amoenitati prius quam usui consulitur." This is not quite what we expect. It contains a temple, an image of victory, a *curia*, and a theatre.

Where does Tacitus place it? He is generally said to place Camulodunum on the aestuary of the Thames: by which a slight complication, and the necessity of carrying that river as far north as the *Blackwater*, is engendered. Nevertheless, though the context favours this view, it does not absolutely enforce it — "externos fremitus in curia eorum auditos; consonuisse ululatibus theatrum, visamque speciem *in aestuario Tamesae* subversae coloniae." This by no means says that the population of Camulodunum saw it. It might have been seen in London. The passage continues — "jam oceanum cruento aspectu; dilabente aestu, humanorum corporum effigies relictas, ut Britanni ad spem, ita *veterani* ad metum trahebant." As these *veterans* were the real occupants of Camulodunum, the extract is, *pro tanto*, in favour of Tacitus's having placed it on the Thames. Still, as already stated, it is not conclusive. The chief reason, however, for giving the passage in full will appear in the sequel.

Ptolemy's Camudolanum is a town of the Trinoantes, on the Imensa aestuary, the Trinoantes being east of the Simeni, whose town is Venta. The current explanation of this passage is, that the Simeni are the Iceni of the other authors, and Venta the Venta Icenorum (=*Norwich*). In a previous passage, we have, in the following order, from north to south, (1) the Metaris aestuary (= the Wash), (2) the river *Gariennus* (*Yare*), (3) a promontory, (4) the outlets of the river Idumannia, (5) the Tamissa aestuary. Now, the Tamissa aestuary is the Imensa aestuary, and the Ei-*du*-mannia the *Black*-water. At least, such is the view suggested by the element *du* (= *black*).

Turning from Ptolemy to the Itineraries, we find equal elements of confusion. In the *fifth*, we have *Colonia;* in the *ninth*, *Camulodunum*.

Colonia is 52 miles from London, Camulodunum 51.

From London to	M.P.	*From Camulodunum to*	M.P.
Caesaromagus -	xxviii.		
Colonia - -	xxiiii.	Canonium - -	viii.
		Caesaromagus -	xii.
	lii.	Durolitum - -	xvi.
		London - -	xv.
			li.

The distance between Caesaromagus and Colonia coincides somewhat less closely.

Even the identification of Colonia with *Col*chester is shaded by a doubt. It is difficult to believe that the river *Coln* took its name from *Colonia*, and it is not easy to believe that *Col*-chester is other than the Camp upon the *Colne*.

Notwithstanding the prevalence of the contrary opinion, the present writer, after balancing the conflicting difficulties, finds the best solution in doubting the identity of *Colonia* and *Camulodunum*. The first he believes to have been *Col*-chester, the second *Maldon*, name for name in each case. [R. G. L.]

COLO'NIA AGRIPPI'NA, or AGRIPPINENSIS, or simply AGRIPPI'NA (*Cologne*, as the French and English call it; *Cöln*, and *Köln*, as the Germans call it), a town on the left bank of the Rhine on the Roman road, which ran from Augusta Rauracorum (*Augst* near *Bâle*) past *Strassburg*, *Worms*, *Mainz*, *Bingen*, *Coblenz*, and *Bonn*. The road was continued on the left bank of the Rhine from *Cologne*, through Novesium (*Neuss*), Colonia Trajana (*Kellen* near *Cleves*), Noviomagus (*Nymegen*), and thence to Lugdunum (*Leyden*). The position is determined by the Itineraries and by the name. There are also medals of Colonia Agrippinensis, and the name occurs on inscriptions.

This town was originally called Oppidum Ubiorum (Tacit. *Ann.* i. 36), and it was the chief town of the Ubii, a German nation. The Ubii were on the east side of the Rhine in Caesar's time; but under Augustus they removed across the Rhine under the protection of M. Vipsanius Agrippa, to escape from the attacks of their neighbours the Catti. Agrippina, the wife of Claudius and the daughter of Germanicus Caesar, who was born at the Oppidum Ubiorum while her father commanded in these parts prevailed on her husband (A. D. 51) to send a colony of veteran soldiers there, and from that time the place had her name. (Tacit. *Ann.* xii. 27; Strabo, p. 194.) The Agrippinenses were made Juris Italici (Paulus, *Dig.* 50. tit. 15. s. 8), that is, the place had the Jus Italicum, which was a great privilege; but it does not appear whether it was conferred at the time of the colonisation or afterwards. An inscription in Gruter (p. 436) shows that it was also called Colonia Claudia Augusta Agrippinensium. Tacitus (*Germ.* c. 28; *Hist.* iv. 28) observes that the Ubii were willingly called Agrippinenses, from the name of their founder (conditoris sui), as if Agrippa founded the colony, though, in the passage already cited, Tacitus ascribes the foundation of the colony to Agrippina, or to her interest at least. (See the note of Lipsius on this passage.)

Cologne is well placed for a large town, being just below the point where the flats of the Netherlands commence, in a fertile country, and forming a convenient place of transit between the countries on the east and west sides of the Rhine. Its position on the German frontier involved it in trouble during the insurrection of Civilis, whom the people at length joined. The Transrhenane Germans were jealous of Cologne, which had grown rich. (Tacit. *Hist.* iv. 28.) The Colonia was protected by a wall, which the rude Germans on the other bank of the Rhine considered a badge of slavery. The Roman settlers and the Germans in the place had intermarried. The town had a transit trade, which was burdened with duties; and probably the people levied tolls on the boats that went up and down the river (Tacit. *Hist.* iv. 63—65), an obstacle to commerce which long existed on the Rhine.

Cologne became the chief town of Germania Secunda or Inferior. Aulus Vitellius was at Cologne, as governor of the Lower Germania, when he was proclaimed emperor by the soldiers. (Sueton. *Vitell.* c. 8.) There was a temple of Mars at Cologne, in which a sword was hung up, that was said to have been the sword of Divus Julius. Vitellius went about the most crowded streets of Cologne with this sword in his hand, when he was proclaimed emperor, and carried it off with him. But he sent the sword with which Otho killed himself, to be dedicated in the temple of Mars at Cologne. (*Vitell.* c. 10.)

Trajan was also at Cologne when Nerva died A.D. 98, and he assumed the imperial insignia there. (Oros. vii. 12.) Ammianus (xv. 11) mentions Cologne under the name of Agrippina, and Tungri (*Tongern*), as large and rich cities of Secunda Germania. The place was taken by the Franks, but was recovered by Julian about A. D. 356, at which time it was a strongly fortified place. It is also mentioned by Zosimus (i. 38), under the name of Agrippina, as a very large city. In the Notitia it is called "Metropolis civitas Agrippinensium."

The Roman remains of Cologne consist of what is called the Pfaffenporte, supposed to be the old Porta Claudia, with the inscription C. C. A. A., and some remains of the walls. Many statues, sarcophagi, and other Roman remains have been found there. Some authorities speak of traces of a subterranean passage from Cologne to Trèves, which is an absurd fiction. There was a Roman road from Augusta Trevirorum to Cologne, the line of which appears to be indicated plain enough in some parts by the directions and position of the modern road. The old town of Cologne was that which was surrounded with walls by the Romans, and until near the close of the twelfth century was called the "civitas intra coloniam." The circuit of the ancient Colonia is described by Gelenius (*De admiranda sacra et civili magnitudine Coloniae*, Col. 1645, 4to.; referred to by Eichhorn). About A.D. 1180 a new wall inclosed the suburbs.

Cologne was made a Roman city "juris Italici," which means that the municipal government and a limited jurisdiction in civil matters were in the hands of the city magistrates, whether they were called Duumviri or by any other name, and of an Ordo (Curia). The criminal jurisdiction and the jurisdiction in more important civil matters were in the hands of the Consularis or governor of Germania Secunda, whose residence was at Cologne. It seems a very reasonable conjecture that this important city never entirely lost its original constitution, and that its municipal system as it existed in the middle ages, as they are called, is of Roman original. Though this cannot be proved, it is shown to be very probable by Eichhorn (*Ueber den Ursprung der Städtischen Verfassung in Deutschland. Zeitschrift für Geschicht Rechtswissenschaft*, Band ii). The place fell into the hands of the Franks in the first half of the fifth century, A. D.; and if it be true that the Roman general Aëtius recovered it, as some assume, the Romans did not keep it, for Childeric, the father of Chlodowig, had possession of the place. He spared the fortifications of Cologne, though he destroyed those of Trèves. It was the residence of the Frankish kings in Chlodowig's time, and is often mentioned in Frankish history as a strongly fortified place. It is well known that, as a general rule, the Franks allowed their Roman subjects to retain their own law, and it necessarily follows that they must have allowed them, to some extent at least, to retain the Roman institutions, without which the Roman law could not have been applied. Cologne was the first large Roman town that the Frankish kings got possession of, and there were reasons sufficient why they should allow this ancient and powerful city to retain its municipal constitution; and it is difficult to think of any reasons why they should destroy it. The investigation of this subject by Eichhorn is highly interesting. [G. L.]

COLO'NIA EQUESTRIS NOIODUNUM (*Nyon*), a town in the country of the Helvetii, which the

Itineraries place on the road from *Geneva* to Lacus Lausonius (*Lausanne*). It is first mentioned by Pliny (iv. 7), and then by Ptolemy (ii. 9), who assigns it to the Sequani. Pliny and Ptolemy simply name it Equestris; and so it is named in the Itineraries. On some inscriptions it is called Civ. Equestrium, and Col. Julia Equ.; from which some have concluded that it was founded by C. Julius Caesar. In the Notitia it is called Civ. Equestrium Noiodunum. The name Noiodunum, and the position of Equestris in the Itineraries, determine the site of the place with certainty. The district in which *Nyon* stands is called Pagus Equestricus in a document of the year 1011; and it is said that the people of the country still call this district *Enquestre*. (D'Anville, *Notice, &c.*; Walckenaer, *Géographie, &c., des Gaules*, vol. ii. p. 316.) [G. L.]

COLO'NIA TRAJA'NA, is only mentioned in the Antonine Itinerary and the Table. It is on the road from Colonia Agrippinensis (*Cologne*) to Lugdunum (*Leyden*). Colonia Trajana is between Vetera and Burginatium. It is agreed that the place is *Kellen* or *Kelln*, near *Clèves*, or *Clèves* itself, as some suppose. [G. L.]

COLO'NIDES (Κολωνίδες), a town in the SW. of Messenia, described by Pausanias as standing upon a height at a short distance from the sea, and 40 stadia from Asine. The inhabitants affirmed that they were not Messenians, but a colony led from Athens by Colaenus. It is mentioned by Plutarch (*Philop.* 18) under the name of Colonis (Κολωνίς) as a place which Philopoemen marched to relieve; but according to the narrative of Livy (xxxix. 49) Corone was the place towards which Philopoemen marched. [CORONE.] The site of Colonides is uncertain. Leake places it upon the Messenian gulf at *Kastélia*, where are some remains of ancient buildings, N. of *Koroni*, the site of Asine; but the French commission suppose it to have stood on the bay of Phoenicus, NW. of the promontory Acritas. (Paus. iv. 34. §§ 8, 12; Ptol. iii. 15. § 7, who calls it Κολώνη; Leake, *Peloponnesiaca*, p. 195; Boblaye, *Recherches*, &c., p. 112.)

COLO'NIS, an island mentioned by Pliny (iv. 12. s. 19) as off the coast of Argolis. From the order in which he enumerates the names, and from Colonis occurring in his text in the place of Hydreia ("Tiparenus, Aeropia, Colonis, Aristera, Calauria"), Leake conjectures that Colonis and Hydreia were one and the same island (*Peloponnesiaca*, p. 286); but Kiepert gives the name of Colonis to the small island S. of *Spétzia*.

COLO'NUS AGORAEUS. [ATHENAE, p. 298, b.]

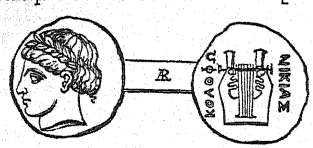
COLO'NUS HI'PPIUS. [ATTICA, p. 326, a.]

COLOPE'NE, CULUPE'NE, or CALUPENE (Καλουπηνή), a district in Pontus on the border of Armenia Minor. (Strab. p. 560.) Pliny (vi. 3) places Sebastia and Sebastopolis in Colopene. As to the position of this district, see PONTUS. [G. L.]

CO'LOPHON (Κολοφών: *Eth.* Κολοφώνιος), one of the Ionian cities of Asia, founded, according to tradition, by Andraemon. The tomb of Andraemon was on the left as a man went from Colophon, after crossing the river Calaon. (Pausan. vii. 3. § 5.) It was 120 stadia from Lebedus, which was north of it; and from Ephesus, which was south of it, 70 stadia, direct sailing, but 120 along the coast. (Strab. p. 643.) The little river Hales or Ales flowed by Colophon, and was noted for the coolness of its water. (Paus. viii. 28. § 3.) The place was a short distance from the coast; and its port was Notium (Νότιον), with respect to which Colophon was called the upper city (ἡ ἄνω πόλις, Thuc. iii. 34).

Colophon and Ephesus did not, like the other Ionian cities of Asia, celebrate the festival of the Apaturia; for some reason or other connected with an affair of blood. (Herod. i. 147.) At an early period in the history of Colophon, some of the citizens being exiled by the opposite faction, retired to Smyrna, where they were received. But, watching an opportunity, they seized the town, and the matter was at last settled by the Smyrnaeans agreeing to go away with all their moveables, and leaving Smyrna in possession of the Colophonian exiles. (Herod. i. 150; compare the confused story in Strabo, p. 633, about Smyrna and Colophon.) Herodotus mentions Notium as an Aeolian city (i. 149); and some critics have supposed that he means the Notium which was the port or lower city of Colophon; a supposition that needs no refutation.

Colophon was taken by Gyges, king of Lydia. (Herod. i. 14.) Alyattes, one of his successors, took "Smyrna, the city that was founded from Colophon" (Herod. i. 16),—in which passage Herodotus appears to allude to the story of Smyrna that he tells in another place (i. 150). Colophon is seldom mentioned. Early in the Peloponnesian War the Persians got possession of the upper town or Colophon, owing to the people quarrelling among themselves. The party who were expelled maintained themselves in Notium; but even they could not agree, and a Persian faction was formed in Notium. The party opposed to the Persians called in Paches, the Athenian commander, who drove the Persian party out of Notium, and gave it back to the Colophonians, except those who had been on the Persian side. Afterwards the Athenians sent some settlers to Notium, and collected there all the Colophonians that they could from the cities to which they had fled. (Thuc. iii. 34.) Notium and Colophon are mentioned by Xenophon (*Hell.* i. 1. § 4) as distinct towns.



Lysimachus, a Macedonian, and one of Alexander's body-guard, who, after Alexander's death, made himself king of the Thracians, destroyed Lebedus and Colophon, and removed the people to his new city of Ephesus. (Paus. i. 9. § 7, vii. 3. § 4.) The Colophonii were the only people of those removed to Ephesus who resisted Lysimachus and his Macedonians; and those who fell in the battle were buried on the way from Colophon to Clarus, on the left side of the road. Probably a large mound was raised over the dead. Antiochus, king of Syria, in his war with the Romans (B. C. 190), unsuccessfully besieged Notium, which Livy (xxxvii. 26) calls "oppidum Colophonium," and he observes that it was about two miles from Old Colophon. On the settlement of affairs after the war with Antiochus, the Romans gave to the Colophonii "who dwelt in Notium" freedom from taxation (immunitas), as a reward for their fidelity to them in the war. (Liv. xxxviii. 39.) Polybius also calls the Colophonii "those who dwelt in Notium" (xxii. 27). But it was still the fashion to speak of Colophon as Cicero does (*pro Leg. Manil.* c. 12) when he mentions Colophon as one of the cities plundered by the pirates in his own time. This Colophon seems to be Notium. Strabo does not mention Notium; and he speaks of Colophon as if the old city existed when he wrote, though his remarks on the distance from Ephesus seem to apply rather to Notium or New Colophon than to the old town. Mela (i. 17) mentions Colo-

phon, and not Notium. Pliny (v. 29) says that Colophon is in the interior, and that the Halesus (the Ales of Pausanias) flows by it. "Next is the temple of Apollo of Clarus, Lebedus: there was also Notium, a town." This is a good example of Pliny's careless compilation. Thucydides tells us that Notium was the town on the coast or naval town, and that Colophon was the upper town; and Livy distinguishes the two clearly, and gives the distance of Old Colophon from the coast. The site of Notium and Colophon is easily determined, being near to Clarus. [CLARUS.] Chandler says that there are no ruins at Notium, and only some miserable cabins on the site of Colophon. Notium must have been as old as Colophon: it was mentioned by Hecataeus in his Asia as a city of Ionia (Steph. B. *s. v.* Νότιον).

Strabo says that the Colophonians had once a good navy, and an excellent cavalry. Their cavalry was so superior as to assure the victory to the side on which it fought, whence he says came the proverb, "He has put the Colophon to it" (τὸν Κολοφῶνα ἐπέθηκεν) whenever a matter was brought to a certain termination. The Scholiast on the Theaetetus of Plato (on the words τὸν Κολοφῶνα ἀναγκάζω προσθιβάζων) gives a different explanation. He says that when the twelve Ionian states assembled at the Panionium, if the votes were equal, the Colophonii had the casting vote, for they received the Smyrnaeans to live with them, on behalf of whom they had this vote; whence the proverb was used to express a casting or deciding vote.

Colophon was one of the places that claimed to be the birthplace of Homer. It was the native city of Mimnermus, an elegiac poet; of the musician Polymnestus; of Phoenix, a writer of iambi (Paus. i. 9. § 7.); of Hermesianax, an elegiac writer (Athen. p. 597, who quotes a large fragment); of Antimachus, an epic poet; of Xenophanes, a writer of silli; and of Nicander, whose Theriaca is extant.

The resin of Colophon is mentioned by Pliny as an article of commerce; and it is also mentioned by Dioscorides (Pliny, xiv. 20, and Harduin's note) under the name Colophonia, which the French call *Colophane*. The mountain Gallesus, near Colophon (Strab. p. 642.), is a huge mass covered with noble pines, and it abounds in water. The mountain supplied the pine wood for the resin. [G. L.]

COIN OF COLOPHON.

COLOSSAE (Κολοσσαί: *Eth.* Κολοσσηνός, Κολοσσαεύς), a city of Phrygia, first mentioned by Herodotus (vii. 30) as a large city of Phrygia, on the Lycus, a branch of the Maeander. Xerxes, on his march to Sardes, B. C. 481, reached Colossae after leaving Anaua. [ANAUA.] The younger Cyrus, on his march from Sardes towards the Euphrates, B. C. 401, passed through Colossae. He crossed the Maeander, and after a march through Phrygia of 8 parasangs from the river, he came to Colossae, a large and prosperous city. (*Anab.* i. 2. § 6, &c.) The march of Cyrus from Colossae to Celaenae was 20 parasangs. The position of Colossae south of the Maeander is determined by these two authorities. Strabo (pp. 576—578) places Colossae near Laodiceia on the Lycus. In his time Apameia Cibotus and Laodiceia were the largest cities in this part of Phrygia. Laodiceia was then the chief town of a conventus, to which Colossae and more than twenty other towns belonged. Both Laodiceia and Colossae were famed for their wool, and the people of Colossae also derived a great profit from their skill in dyeing it. (See Groskurd's note on the passage of Strabo, p. 578; *Transl. Strab.* vol. ii. p. 533.) The upper valley of the Maeander was a sheep-feeding country.

Colossae had become a place of comparatively little importance in Strabo's time. In the middle ages there arose near it a town called Chonae (Χῶναι, or Χοναί), and Colossae disappeared. Chonae was the birthplace of Nicetas Choniates, one of the Byzantine historians. East of *Denizli* there is a place now called *Khonos*, or *Chonos*, situated at the base of the mountain range of Cadmus. Arundell (*Asia Minor*, vol. ii. p. 159, &c.) supposes that *Khonos*, which is certainly the site of Chonae, is also the site of Colossae; and that the name Chonae superseded that of Colossae under the Byzantine Empire. His description is not clear. Hamilton (*Researches*, &c. vol. i. p. 508) found extensive ruins of an ancient city about three miles north of *Khonos*. On this site are large blocks of stone, foundations of buildings, and fragments of columns, architraves and cornices. He also found "the hollow cavea of a theatre, built on the side of a low sloping hill, and of which several seats were still *in situ*." He does not mention any inscriptions. Herodotus says that the Lycus disappears *in* Colonae by sinking into a cleft (χάσμα γῆς), and after running about five stadia under ground it appears again and flows into the Maeander. If this cleft or hole can be determined, we may be pretty certain that we have ascertained the site of Colossae. Hamilton, who examined the ground carefully, found the necropolis or burying place of this city, of which we have spoken, to be on one side of a river, and the theatre and other ruins on the opposite side. There is a bridge, which crosses a rapid stream, flowing from east to west; and this river is "formed by the junction of three rivers, which unite their waters immediately above the bridge." The chief stream is called the *Tchoruk*, which Hamilton supposes to be the Lycus. Another stream is called *Ak-su* (white water), and possesses highly petrifying qualities. Below the bridge is a narrow gorge, through which the waters of the united rivers flow. He found that the *Ak-su* had once fallen into the Lycus lower down than where it now does, exactly at the place where the chasm is narrowest. Another large stream falls over the cliff on the south side of the river, or the side opposite to the *Ak-su* which runs from the NW. This river has also the same qualities as the *Ak-su*, and makes a great deposit, forming cliffs of travertine, and burying the plants and other substances that are in its way. This operation is going on rapidly, and the cliffs on each side have been formed by it. Hamilton adds, "it is evident, that if the water always flowed in the same channel, these cliffs would approach each other, and continue to overhang the river until a natural bridge were completed by the touching of the opposite sides, while the arch or passage of the river below would be kept clear, the rapidity of the stream not allowing the deposit of the calcareous matter. It is indeed most apparent that this has been the case, that the two cliffs have been here joined, and thus formed the χάσμα γῆς, through which, as Herodotus

reports, the water flowed by a subterranean channel for half a mile, the soft crust having been in all probability subsequently broken up by an earthquake. In the hollow below the bridge are several mills, which are turned by the petrifying stream of the *Ak-su;* in consequence of the rapid accumulation of calcareous matter, it has been frequently necessary to change their position; they would otherwise be soon choked up, and buried in the calcareous silt deposited round them by the spray and overflowings of the mill stream." This very clear and instructive explanation, founded on the examination of the spot by a practised eye, leaves no doubt about the conclusion, that this is the spot within Colossae which Herodotus describes, though, as Hamilton observes, it may still be doubted whether the Lycus is the river which now flows through the centre of the plain, or the *Ak-su.* This, however, is not very material: one of these streams is certainly the Lycus. The passage in Pliny (xxxi. 2) is now fully explained: "at Colossae there is a stream, into which if bricks are thrown, they come out stones." Hamilton observes that the *Ak-su*, which joins the *Tchoruk* in the centre of the town, would soon cover a brick with a thick incrustation, and even fill the pores by infiltration. This is, no doubt, what Pliny means.

Colossae was one of the early Christian churches of Asia, and the apostle Paul addressed one of his epistles to the people of this place. It does not appear from the epistle that he visited Colossae, and an expression (ii. 1, 4) has been cited to show that he had not been there; and also another (ii. 1). But the want of words to prove directly that he was at Colossae, does not justify the conclusion that he never was there, especially as we know that he went over all the country of Galatia and Phrygia.

The epigraph on the coins of Colossae is δημος Κολοσσηνων. [G. L.]

COLTA (τὰ Κόλτα, Arrian, *Indic.* 26), a small place on the coast of Gedrosia, visited by the fleet of Nearchus. Its position is uncertain. [V.]

COLTHE'NE (Κολθηνή, Ptol. v. 13), a district in the E. of Armenia, on the banks of the Araxes. St. Martin (*Mém. sur l'Armenie*, vol. i. p. 127) identifies it with *Koghthen* in *Vasbouragan.* (Comp. Ritter, *Erdkunde*, vol. x. p. 547.) [E. B. J.]

COLUBRA'RIA. [BALEARES.]

COLUMBA. [BALEARES.]

COLY'ERGIA (Κωλυεργία), a promontory of Argolis, placed by Pausanias (ii. 34. § 8) between Bucephala and Buporthmus; but as there are no promontories on this coast, Leake conjectures that Colyergia may have been the eastern cape of the island of Hydreia. (*Peloponnesiaca*, p. 285, seq.; comp. Boblaye, *Recherches*, &c., p. 60.)

COLYTUS. [COLLYTUS.]

COMANA. 1. IN PONTUS (Κόμανα τὰ ἐν τῷ Πόντῳ, or Κόμανα τὰ Ποντικά; *Gumenek*), a place in Pontus above Phanoroea, as Strabo says (p. 557), who has a long notice of this place. Ptolemy (v. 6) fixes it in Pontus Galaticus, but it afterwards belonged to Pontus Polemoniacus. Justinian placed it in one of the four divisions of Armenia, which division he called the Second Armenia, as appears from one of his Novellae (*Nov.* 31. c. 1). The Table places Comana on a road that runs east from Tavium, but it is not possible to make much of this route. Strabo (p. 547) describing the course of the river Iris says, that it flows from the country called Phanaroea, and has its sources in Pontus itself: its course is through Comana Pontica, and through the fertile plain Daximonitis to the west: it then turns to the north at Gaziura. We thus learn that it was in the upper valley of the Iris, and we know from Gregorius of Nyssa that it was near Neocaesarea (*Niksar*). In the book on the Alexandrine War (c. 35), a lofty range of hills, covered with forests, is said to extend from Pontic Comana to Armenia Minor, which range divides Cappadocia from Armenia. Hamilton (*Researches*, &c., vol. i. p. 450) discovered at a place called *Gumenek* on the *Tocat-su*, the modern name of the Iris, some remains of an ancient town, and part of a bridge apparently of Roman construction. There seems no doubt that *Gumenek* is the site of Comana Pontica. It is about seven miles north-east of *Tocat.* Pliny simply speaks of Comana as a Manteium, or the seat of an oracle (vi. 3). It is stated that it appears from inscriptions to have got the name of Hierocaesarea under the Romans (Forbiger, vol. ii. p. 428, note), the prefix Hiero or "sacred," indicating the character of the place. The position of Comana made it a great mart (ἐμπορεῖον) for the merchants that came from Armenia.

Comana was dedicated to the same goddess as Comana in Cappadocia, and was said to be a colony or settlement from the Cappadocian city. The religious ceremonial was nearly the same in both places, and the priests had like privileges. Under the early kings of Pontus, there were annually two great processions in honour of the goddess, on which occasions the chief priest wore a diadem, and he was next in dignity to the king. Dorylaus, the son of a sister of the Dorylaus who was an ancestor of Strabo's mother, once held the high-priesthood of Comana, which Mithridates the Great gave him. After Cn. Pompeius succeeded L. Lucullus in the command in these parts, he gave the high-priesthood to Archelaus, and he added to the lands of the temple a district of 60 stadia, by which expression Strabo probably means all the country round the temple within 60 stadia. Archelaus was sovereign of the people within these limits, and he was the owner of all the hieroduli, or temple slaves, within the city of Comana; but he had not the power of selling them. These slaves seem to have been attached to the soil. Their number was not less than 6000. This Archelaus was the son of the Archelaus who was honoured by L. Sulla and the Roman senate, as Strabo has it, and he was the friend of A. Gabinius. His father was, in fact, the best commander that Mithridates ever had. The son Archelaus, the priest, contrived to marry Berenice, the elder sister of Cleopatra, whose father, Ptolemaeus Auletes, had been driven out of Egypt; and Archelaus had a six months' reign with her. He fell in battle against Gabinius, who restored Auletes (B. C. 55). Archelaus was succeeded in the priesthood by his son Archelaus (Strabo, pp. 558, 796), but C. Julius Caesar, who came into Pontus after defeating Pharnaces, gave the priesthood to Lycomedes (Appian, *Mithrid.* c. 121), who received an addition of territory, as Strabo says. The author of the Alexandrine War (c. 61) says, that it was the priesthood of Comana in Cappadocia that Caesar gave to Lycomedes. It seems that he is perhaps mistaken as to the Comana, but it is clear that he means the Comana in Cappadocia. In a previous chapter (c. 35) he had spoken of Comana in Pontus. He knew that there were two places of the name; and in c. 66 it is certain, both from his description of the place, and the rest of the narrative, that he

means the Cappadocian Comana. Cleon, a robber on Olympus, a friend of M. Antonius, deserted him in the war that ended in the battle of Actium, and went over to Octavianus Caesar, who made a prince and a priest of him. In addition to the priesthood of Zeus Abrettenus, Caesar gave him the rich place at Comana. But he only held this preferment one month, having died of an acute disease, brought on by excess, or the anger of the goddess, it is not certain which, though the ministers of the temple attributed it to the goddess. Within the circuit of the sacred ground (*τέμενος*) were the residences of the priest and the priestess, and among other rules for securing the purity of the place, it was forbidden to eat swine's flesh within the sacred enclosure: indeed, no pig was allowed to come within the city. The robber priest, who had been accustomed to eat swine's flesh in the forests of Olympus, broke the rule immediately on entering on his new office; and it was supposed that his speedy death was the consequence of it. (Strabo, p. 575.)

In Strabo's time Dyteutus was high-priest of Comana. He was the son of Adiatorix, a Galatian chief, whom Octavianus Caesar exhibited in his triumphal procession after the battle of Actium. Adiatorix was guilty of the crime of having been on the side of M. Antonius; and accordingly Caesar, after his triumph, gave orders to put to death the chief, and his eldest son. But the second son persisted in declaring to the executioner that he was the eldest, and the two brothers disputed which should die. Their parents induced the elder to yield, and thus the younger died in his place. Caesar, on hearing this, rewarded the eldest son with the priesthood of Comana. Thus we have a Gaul in the list of the priests of Comana.

Comana was populous. At the processions of the goddess, her *ἐξόδοι*, as Strabo calls them, there was a great concourse of people from the towns and country all around, men and women. The population was also increased by people who resided there pursuant to their vows, and made sacrifices to the goddess. The people were fond of good living, and their lands produced plenty of wine. The number of prostitutes in Comana was large, most of whom belonged to the temple. So it was, says Strabo, a kind of little Corinth, where people, merchants and others, got eased of their money.

There are autonomous and imperial coins of Comana, with the legends *Κομανων* and *Κομανεων*.

COIN OF COMANA IN PONTUS.

2. IN CAPPADOCIA (*τὰ Κόμανα τῆς Καππαδοκίας*), was also called Chryse, or the golden, as appears from one of the Novellae of Justinian (*Nov.* 31. c. 1), to distinguish it from the other Comana. Justinian calls this Comana "the other, which is also named Chryse." It was in the division which he named the Third Armenia, and which, he observes, contained Melitene, near the Euphrates. Comana was in Cataonia in the Antitaurus (Strabo, p. 521), in a deep valley; the river Sarus flowed through the city. It is generally supposed that the modern town of *Al-Bostan*, on the *Sihoon* or Sarus, is on or near the site of this Comana. *Al-Bostan* is situated in a fine plain, well watered, and well cultivated; and is a town of 8000 or 9000 inhabitants. Here was the temple of Enyo, as Strabo (p. 535) names the goddess. It contained a great number of persons devoted to the worship of the deity, and a great number of hieroduli. The inhabitants were Cataonians. They acknowledged the supremacy of the king of Cappadocia, but were under the immediate jurisdiction of the priest. This priest was chiefly (*τὸ πλέον*, whatever that means) master of the temple and of the hieroduli, who, at the time of Strabo's visit, were above 6000, men and women. The temple possessed large estates, the produce of which was enjoyed by the priest, who was next in rank to the king, and the priest was generally a member of the royal family. It was too good a thing to give to any body else. There was a tradition that Orestes, with his sister, brought from Tauric Scythia the sacred rites of this temple, which were those of Tauropolos Artemis. Here Orestes deposited the hair that he cut from his head to commemorate the end of his sufferings (*ἡ πένθιμος κόμη*), and hence, according to an absurd etymology of the Greeks, came the name of the place, Comana. And in later times, to make the name suit the absurd story better, as it was supposed, it was changed to *ἡ Κόμανα*. (Eustath. ad Dionys. v. 694; Procop. *Persic.* i. 17.)

This deity of Comana is supposed to have been called Ma in the language of the country, and to be the moon-goddess, as in Caria the moon-god was worshipped under the name of Men. The passage in Strabo, . . . *τὰ Κόμανα, καὶ τὸ τῆς Ἐννοῦς ἱερὸν ὃ ἐκεῖνοι Κόμανα ὀνομάζουσι*,—so it stands in Casaubon's text,—is certainly corrupt. We cannot suppose that Strabo means to say that they call the temple of Enyo by the name of Comana. Groskurd observes (Transl. Strabo, vol. ii. p. 449), that when Hirtius (*De Bell. Alex.* c. 66) says: "Venit Comana, sanctissimum in Cappadocia Bellonae templum," he means the town; and we cannot justify Strabo's text by this passage. It appears that most of the MSS. of Strabo have *Μᾶ* in place of *Κόμανα*, and Groskurd proposes to read *Μᾶς* with Koray. Accordingly the latter part of the passage means, "which they call the temple of Ma." Groskurd is, however, rather inclined to read *ἣν ἐκεῖνοι Μᾶ* or *Μᾶν ὀνομάζουσι*.

The place was made a Roman colony after the time of Caracalla. Cramer assumes that it was a colony in the time of Antoninus Pius; but Caracalla was also called Antoninus, and this may be the cause of Cramer's mistake, if it is one. The coins have the epigraphs Col. Aug. Comana; and Col. Iul. Aug. Comanenoru, or Comainoru. [G. L.]

COMANIA (*Κομανία*), a place only mentioned by Xenophon (*Anab.* vii. 8. § 15). It appears to be not far from Pergamum in the basin of the Caïcus. [G. L.]

COMARIA (*Κομαρία*, Ptol. vii. 1. § 9), according to Ptolemy, a promontory and town in the S. part of *India intra Gangem*. There can be little doubt that this name is preserved in that of *Cape Comorin*, the most southern cape of the peninsula of Hindostan. [V.]

COMARUS. [NICOPOLIS.]

COMBARISTUM, a place in Gallia, which the Table places 16 Gallic leagues from Juliomagus (*Angers*), on the road to Condate (*Rennes*). The site appears to be *Combré*, though the number 16 is erroneous, and D'Anville suggests that it ought to be 21. [G. L.]

COMBREIA. [CRUSIS.]

COMBRETO'NIUM, in Britain, mentioned in the ninth Itinerary as the second station from Venta Icenorum (*Norwich*), the first being Sitomagus. Horsley places Com-*breton*-ium at the confluence of the rivers *Breton* and Stour, relying upon the similarity of name. This places it near *Strat*-ford, a locality with a Roman name. Others have identified *Stratford* with Ad ansam, the next station to Combretonium. Horsley's view seems the safer. [R.G.L.]

COMBUSTA, a place in Gallia on the road from Narbo (*Narbonne*) to Juncaria (*Jonquière*). The distance from Narbo to Ad Vigesimum in the Antonine Itin. is 20 M. P.; from Ad Vigesimum to Combusta is 14; and from Combusta to Ruscino (*Castel-Roussillon*, near the *Tet*) is 6. The position of Combusta is thus fixed within certain limits, but the exact site is not known. [G. L.]

COMBUSTA INSULA (Κατακεκαυμένη), an island, in the Gulf of Arabia (Ptol. vi. 7), supposed to be *Camaran*, to the south of the *Gulf of Loheia*. [G. W.]

COMENSES, a people of Galatia, mentioned by Pliny (v. 32) among those of some note. Hamilton (*Researches*, vol. i. p. 413) discovered the remains of an ancient town at *Akjah Tash*, NE. of Angora, which he thinks may be the city of the Comenses of Pliny. There is an eminence which may have been an acropolis; and there are many ancient remains in the walls of houses in the village. He copied two Greek inscriptions, one of which (No. 100, Appendix), "was on a large block of stone, with a bas-relief above, representing the bust of a Roman senator." The other inscription (No. 101) "was on a stone in the wall of the same house, with two figures above, and below them a half-length figure with the toga, enclosed within a wreath or garland." He says that the second inscription leads him to think that this place is the site of Come, the capital of the Comenses. But this is very doubtful. The inscription contains κωμης, but it may be part of a word. At any rate, this part of the inscription is not intelligible. [G. L.]

COMIDAVA (Κομίδαυα, Ptol. iii. 8. § 8), a town of Dacia, which Sulzer (*Geschichte Daciens*, vol. i. p. 416) places near the remarkable fortress of *Niamtz*, situated on a hill between the rivers *Bistritza* and *Moldava*. [E. B. J.]

COMI'NIUM (Κομίνιον), a city of Samnium, the situation of which is very uncertain. There are, indeed, strong reasons to suppose that there were two places of the same name. It is first mentioned by Livy (x. 39—43) during the campaign of the Roman consuls Carvilius and Papirius in Samnium, B.C. 293, when Carvilius besieged Cominium, while his colleague assailed Aquilonia. It appears from the detailed narrative of Livy that the two cities were not much more than 20 miles apart, and both sufficiently near to Bovianum for the fugitives of the Samnite armies to find refuge in that city. Cominium was taken by Carvilius, and burnt to the ground. (Liv. x. 44.) Two years later Dionysius speaks of Cominium (evidently the same place) as again in the hands of the Samnites, from whom it was taken by the consul Postumius Megellus, B.C. 291. (Dionys. Exc. xvi. 16, 17.) During the Second Punic War, on the other hand, Livy mentions a town which he calls "Cominium Ceritum," where Hanno received the news of the defeat of his army and the capture of his camp near Beneventum, B.C. 212. (Liv. xxv. 14.) It appears from his narrative that this place could hardly have been very distant from Beneventum, and it is at least a plausible conjecture that the modern town of *Cerreto*, about 16 miles NW. of Beneventum, represents the Cominium Ceritum of Livy. But it is very doubtful whether this is the same place with the Cominium mentioned in the earlier Samnite wars. Holstenius had suggested that this was to be sought in the Apennines near the sources of the Fibrenus; and later Italian topographers have shown that the names of "Cominum" and "territorium Cominense" are still found in medieval writers and documents in reference to the district of *Alvito*, just in this part of the mountains. Hence the ruins still visible at a place called *Santa Maria del Campo*, on the road from *Alvito* to *S. Donato*, and about 5 miles NW. of *Atina*, are supposed by Romanelli to be those of Cominium. (Holsten. *Not. ad Cluv.* p. 223; Giovenazzi, *Sito di Aveja*, p. 50; Romanelli, vol. ii. pp. 496—500, iii. pp. 357—359.) This situation, however, appears too remote from Bovianum, and the position both of Cominium, and the Aquilonia connected with it, must still be regarded as undetermined. [AQUILONIA.]

The Comini mentioned by Pliny as an extinct community of the Aequiculi must be certainly distinct from either of the preceding. [E. H. B.]

COMISE'NE (Κομισηνή, Ptol. vi. 5. § 1; Strab. xi. p. 514), one of the divisions of Parthia, according to Ptolemy, adjoining Hyrcania. Isidorus Charax (p. 7) describes it as adjacent to Choarene or Chorene, and as containing eight villages. Strabo would seem to place it in Armenia. It is not unlikely that a district he calls *Camisene* (xii. p. 559) may be the same as the Comisene of the other geographers. Its present name is said to be *Komis*. [V.]

COMMAGE'NE (Κομμαγηνή, Ptol. v. 15; Strab. xi. p. 521, xii. pp. 533, 535, xvi. p. 749; Plin. v. 12. s. 24; Tac. *Ann.* ii. 42), a district of Syria, lying to the N., bounded on the E. by the Euphrates, on the W. by Cilicia, and on the N. by Amanus. It was celebrated for its rich and fertile country (Strab. xii. p. 535; Tac. *Ann.* xv. 12), and was attached to the Syrian kingdom in the flourishing period of the Seleucidae. But in the civil wars of Grypus and his brothers, and in the disorders which followed, Commagene gradually acquired independence, and had its own sovereigns connected with the Seleucid family. It remained an independent kingdom for upwards of a century. It is only necessary to give here a list of the kings of Commagene; since a full account of them will be found in the *Dictionary of Biography* under each name: ANTIOCHUS I.; MITHRIDATES I.; ANTIOCHUS II.; MITHRIDATES II.; ANTIOCHUS III. After the death of Antiochus III. in A.D. 17, Commagene became for a short time a Roman province, but was afterwards given in A.D. 38 to the son of the late king ANTIOCHUS IV. In A.D. 73, it was again reduced to the condition of a province, and its capital SAMOSATA received the additional name of FLAVIA, and a new aera which commences with the year A.D. 71. (Eckhel, vol. iii. p. 252; Clinton, *F. R.* vol. i. p. 60; Suet. *Vesp.* 8; Eutrop. viii. 19; Oros. vii. 9.)

In later time this district, united with that of Cyrrhestica, received the name of Euphratensis (Amm. Marc. xiv. 8. § 7, xxiii. 6. § 21; Procop. *Aed.* ii. 8, *B. P.* i. 17, ii. 20), or Augusto-phratensis (Aurel. Vict. *Epit.* ix. 13), and was placed under a "praeses." Constantine made HIERAPOLIS the capital instead of Samosata (Malal. *Chron.* xiii. p. 317). In A. D. 543 the Persians under Chosroes made an inroad upon Euphratensis, intending to advance by that route upon Jerusalem, but were compelled to retreat by Belisarius. (Le Beau, *Bas Empire*, vol. ix. p. 68; Norisius, *de Epoch. Syro-Mac.* Diss ii. c. 4; Clinton, *F. H.* vol. iii. p. 343; St. Martin, *Mém. sur l'Armenie*, vol. i. p. 193; Ritter, *Erdkunde*, vol. x. p. 929.) [E. B. J.]

COMMENASES (Κομμενάσης, Arrian, *Indic.* ii. 4), a large river which flowed into the Ganges. There has been some doubt with what modern river it can be identified, and Rennell, Mannert, and Forbiger, have held different opinions on the subject. On the whole, we are inclined to think that Forbiger is right in supposing it to be the *Gumty*, which enters the Ganges on its left bank, between *Benares* and *Ghazipur*. Rennell thought it was the Caramassa, and Mannert the Gogra. (Rennell, *Hindostan;* Mannert, vol. v. pt. 1, p. 70.) [V.]

CO'MMONI (Κομμονοί), the name of a Gallic, or perhaps Ligurian tribe, mentioned by Ptolemy (ii. 10). D'Anville supposes that they may have been a division or tribe of the Salyes. Nothing more is known of them. [G. L.]

COMMORIS, a town of the Eleutherocilices, which M. Cicero took during his proconsulship of Cilicia, in his campaign against the mountaineers of the Amanus (*ad Fam.* xv. 4, *ad Att.* v. 20), or the Amanienses, as he calls them in another passage (*ad Fam.* ii. 10). [G. L.]

CO'MPLEGA (Κομπλέγα), a city of the Celtiberi, in Hispania Tarraconensis, mentioned by Appian (*Hisp.* 42, 43). Its position is very uncertain. [P.S.]

COMPLEU'TICA (*Itin. Ant.* p. 423; Κομπλούτικα, Ptol. ii. 6. § 39), a town of the Callaici Bracarii, in Hispania Tarraconensis, on the high road from Bracara to Asturica. [P. S.]

COMPLU'TUM (*Alcalá de Henares*), a town of the Carpetani, in Hispania Tarraconensis, on the high road from Emerita to Caesaraugusta. (*Itin. Ant.* pp. 436, 438.) It was a *civitas stipendiaria*, and belonged to the *conventus* of Carthago Nova. (Plin. iii. 3. s. 4.) It is not certain whether it stood on the exact site of *Alcalá*, or on the hill of *Zulema*, on the opposite side of the river *Henares*. Its name has become famous in modern times for the Complutensian Polyglott, published at *Alcalá* under the auspices of Cardinal Ximenes. [P. S.]

COMPSA (Κῶμψα, Ptol.: *Eth.* Compsanus and Consanus: *Conza*), a considerable city of the Hirpini, situated near the sources of the Aufidus, and not far from the confines of Lucania, on which account Ptolemy reckons it as a Lucanian town. Livy, on the contrary, expressly assigns it to the Hirpini, and this is confirmed by Pliny; while the Liber Coloniarum erroneously includes it among the cities of Apulia. (Liv. xxiii. 1; Plin. iii. 11. s. 16; Ptol. iii. 1. § 70; *Lib. Colon.* p. 261.) From its position on a lofty eminence immediately above the valley of the Aufidus, it seems to have been a place of great strength, on which account Hannibal, to whom it opened its gates after the battle of Cannae (B. C. 216), deposited there his baggage and booty, while he himself advanced into Campania. It was, however, retaken by the Romans under Fabius Maximus two years afterwards, B. C. 214. (Liv. xxiii. 1, xxiv. 20.) According to Velleius Paterculus (ii. 68), it was in an attack on Compsa that Milo, the rival of Clodius, was killed; but this seems to be certainly a mistake, as that event is said by Caesar to have occurred at Cosa in Lucania. (Caes. *B. C.* iii. 22.) No further mention of Compsa occurs in history; but we learn from Cicero that it enjoyed in his time the rights of a municipium (*Verr.* v. 61, 63), and its continued municipal existence under the Roman empire is proved by inscriptions, in one of which it is called "Res Publica Cossana," so that the confusion between the two forms Cossa and Compsa seems to have been of very early date. In the passages also of Cicero just cited, the MSS. vary between *Consanus* and *Cossanus*, though, according to Zumpt and Orelli, the former reading is the best supported. The strength of its position rendered it a place of great importance in the middle ages, and in the 10th century it became the see of an archbishop, a rank which it still retains, though now but a poor decayed place with only 1100 inhabitants. The only ancient remains there are some inscriptions and sarcophagi of Roman date. (Romanelli, vol. ii. pp. 356—358; Orell. *Inscr.* 3108, 3854; Giustiniani, *Diz. Geogr* vol. iv. p. 119.)

Livy mentions incidentally a temple "in agro Compsano," dedicated to Jupiter *Vicilinus*, an epithet otherwise unknown (xxiv. 44). According to a local antiquary, some remains of it were still visible at a spot named *Voghino* in the neighbourhood of *Conza*. (Romanelli, *l. c.*, p. 360.) [E. H. B.]

COMPSATUS (Κόμψατος), a river of Thrace, which flowing through Lake Bistonis emptied itself into the Aegean. (Herod. vii. 109.) [L. S.]

COMPU'LTERIA or COMBU'LTERIA (*Eth.* Compulterinus), a city of Samnium on the borders of Campania, situated on the right bank of the Vulturnus, between Calatia and Allifae. Livy mentions it among the cities of Samnium which had revolted to Hannibal, but were recovered by Fabius Maximus. (Liv. xxiii. 39, xxiv. 20.) We learn from coins that its Oscan name was Cupelteria; the coins themselves have KVPELTERNVM, which is the genitive plural of the Ethnic name. (Friedländer, *Oskisch. Münz.* p. 5.) Hence even in Latin inscriptions we find the various forms "Cubulteria, Cubulterini, Cupulterini," and are thus enabled to recognise the "Cubulterini" of Pliny (whom he enumerates in the first region of Italy, probably because they were on the right bank of the Vulturnus) as the people of Compulteria, though Livy expressly assigns that city to Samnium, and not to Campania. The exact site of the ancient city was first pointed out by Pellegrini, on a small hill in the territory of *Alvignano*, to the left of the high road from *Caiazzo* to *Alife*, now occupied by the church of *S. Ferrante*. The numerous inscriptions which have been discovered on this spot leave no doubt of the correctness of its determination. One of these mentions a temple of Juno, on the ruins of which it is probable that the church of *S. Ferrante* has been erected. (Orell. *Inscr.* 681, 2418; Muratori, *Inscr.* p. 1040, nos. 1, 2; Romanelli, vol. ii. pp. 435—437; Pellegrini, *Discorsi della Campania*, vol. i. p. 429; Iorio, *Dissertazione sul Sito di Combulteria*, Napoli, 1834.) From others we learn that Compulteria must have been a flourishing municipal town at least as late as the reign of Hadrian: but we have no account of its subsequent history. [E. H. B.]

COMUM (Κῶμον: *Eth.* Κωμίτης, Comensis:

Como), an important city of Cisalpine Gaul, situated at the southern extremity of the Lacus Larius, immediately at the foot of the Alps; and distant 28 miles from Milan. (*Itin. Ant.* p. 278, where we should certainly read xxviii. for xviii. The Tab. Peut. gives xxxv., which considerably exceeds the truth.) It was included in the territory of the Insubrian Gauls (Ptol. iii. 1, § 33); though according to Pliny, Cato assigned the foundation of Comum as well as Bergomum to a people called the Orobii, who are not mentioned by any other author, and would seem to have been extinct in the time of Pliny himself. (Cato ap. Plin. iii. 17. s. 21.) Justin mentions Comum among the cities founded by the Gauls after their occupation of this part of Italy, but without indicating the particular tribe. (Justin. xx. 5.) Its name occurs only once during the wars of the Romans with the Gauls, in B. C. 196, when the Comenses joined their arms with those of the Insubrians; but their united forces were defeated by Marcellus, and the town of Comum itself taken. (Liv. xxxiii. 36.) After the reduction of Cisalpine Gaul, it appears early to have been occupied by a body of Roman settlers; but these having suffered severely from the incursions of the neighbouring Rhaetians, a more considerable body of colonists was established there by Pompeius Strabo, to which 3000 more were soon after added by C. (?) Scipio. A still more important accession to their numbers was made by Julius Caesar, who settled there 5000 new colonists, of whom 500 were Greeks of distinction. (Strab. v. p. 213.) Whether the site of the town was changed at this time does not appear, but the new colony assumed the title of Novum Comum, by which it is designated by Catullus (xxxv. 3): Greek writers term it Νεόκωμον, and the inhabitants Νεοκωμῖται (Appian, *B. C.* ii. 26; Strab. *l. c.*; Ptolemy has *νέα κώμη*, but this is probably erroneous). The new colonists had obtained the Latin franchise; but just before the outbreak of the civil war, the enemies of Caesar endeavoured to cancel this privilege; and the consul C. Marcellus even went so far as to order a magistrate of the colony to be scourged, by way of an insult to Caesar. (Appian, *l. c.*; Suet. *Caes.* 28; Plut. *Caes.* 29; Cic. *ad Att.* v. 11.) But after the victory of the latter, the citizens of Comum obtained the full Roman civitas, in common with the rest of the Transpadane Gauls (B. C. 49); and it from this time ceased to be a colony, ranking only as a municipium, though it was one of the most populous and flourishing towns in this part of Italy. The name of *New* Comum seems to have been early laid aside, and it was called simply Comum. It is probable that it was the birthplace of both the elder and the younger Pliny, though we have no direct testimony to this effect; the latter certainly made the adjoining lake his favourite place of residence, and had several villas on its banks, one of which, about five miles from *Como*, is still known as the *Pliniana*. There is little doubt that his native place (patria), to which he repeatedly alludes, and which he enriched with public works, as well as with a library and other institutions for purposes of education, is no other than Comum. (Plin. *Ep.* i. 3, 8, iii. 6, iv. 13; Orell. *Inscr.* 1172.) With this exception, however, we hear little of it under the Roman Empire: inscriptions prove that it continued to be a flourishing municipal town, and one of these, in honour of a grammarian named Septicianus, shows that the efforts of Pliny to render it a school of learning were not altogether fruitless. (Orell. *Inscr.* 1197, 3898.) It was, however, more noted for its iron foundries, which were among the most celebrated in Italy. (Plin. xxxiv. 14. s. 41.) Its position at the southern end of the Lacus Larius, the fertile and beautiful shores of which were comprised, in great part at least, within its territory, must, in itself, have secured its prosperity: it was also the point from whence travellers, proceeding across the Rhaetian Alps, used to embark on the lake; a route which appears to have been one very much frequented during the latter ages of the Empire. (*Itin. Ant.* p. 279; Claudian. *B. Get.* 319; Cassiod. *Var.* xi. 14.) It appears to have retained its prosperity down to the close of the Roman Empire, and is still mentioned as a flourishing city under the Goths and Lombards. In the 4th century we find that a fleet was stationed there for the protection of the lake; and Cassiodorus speaks of it as one of the bulwarks of Italy in a military point of view, while he extols the beauty of its situation, and the richness of the villas or palaces with which the neighbouring shores were adorned. (Not. Dign. ii. p. 118; Cassiod. *l. c.*; P. Diac. v. 38.) Comum continued to be a city of importance in the middle ages, and is still a populous and flourishing place; but contains no remains of antiquity, except numerous inscriptions, several of which relate to the family of the two Plinies.

The Lacus Larius, now called the *Lake of Como*, was already under the Roman Empire sometimes termed Lacus Comacinus. (*Itin. Ant.* p. 278.) P. Diaconus (v. 38) calls it Comatianus Lacus. [E. H. B.]

CONANA (Κόνανα), a place in Pisidia, which is erroneously written Comana in Ptolemy (v. 5); for there are coins of this place of the Roman imperial period, with the epigraph Κοναγεων. The site is unknown. [G. L.]

CONCANGII, in Britain, mentioned in the Notitia as the station of a *Numerus Vigilum:* Identified with *Ken*-dal, in Westmoreland. [R.G.L.]

CONCANI. [CANTABRIA.]

CONCOBAR (Κογκοβάρ), a place in Media, with a temple of Artemis (Isidor. Char. p. 7; Tab. Peut.; Geogr. Rav.) It still retains its name, but slightly changed, *Kangawâr*. [V.]

CONCO'RDIA, a Gallic town on the Rhine between Brocomagus (*Brumat*) and Noviomagus (*Speyer*), according to the Antonine Itin. D'Anville fixes Concordia at *Alt-stadt* on the *Lauter*, near *Weissenburg;* and Walckenaer at *Lauterburg*. The distances, as usual, do not completely agree; and the exact site cannot be ascertained. Schöpflin, a good authority, fixes it near *Weissenburg*. Chnodomarius, king of the Alemanni, who was defeated by Julian near Argentoratum, had his camp near Concordia, which was a Roman fort. (Amm. Marc. xvi. 12.) [G. L.]

CONCO'RDIA (Κογκορδία: *Eth.* Concordiensis: *Concordia*), a considerable city of Venetia, situated about 10 miles from the Adriatic, on the high road from Altinum to Aquileia, from each of which cities it was distant 31 Roman miles. (*Itin. Ant.* pp. 126, 128.) Both Pliny and Ptolemy notice it as a Roman colony, and we find it bearing on inscriptions the titles Colonia *Julia* Concordia, whence it seems probable that it was one of the colonies founded by Augustus to celebrate the restoration of peace. (Plin. iii. 18. s. 22; Ptol. iii. 1. § 29; Mel. ii. 4; Orell. *Inscr.* 4082; Gruter. *Inscr.* p. 365. 1, 549. 7; Zumpt, *de Colon.* p. 348.) It is reckoned by Strabo (v. p. 214) among the smaller towns of Venetia, but seems to have rapidly risen into importance, and is

repeatedly mentioned during the later ages of the Roman Empire, as one of the most considerable cities in this part of Italy. (Eutrop. viii. 10; Zosim. v. 37; Victor. *Epit.* 16.) In A. D. 452, it was taken and destroyed by Attila (*Hist. Miscell.* xv. p. 549), but seems to have been again partially inhabited at a later period (Cassiodor. *Var.* xii. 26), and retained its episcopal see throughout the middle ages, though most of the inhabitants migrated to *Caorle*, in the adjoining lagunes, as those of Altinum did to *Torcello*. It is now a mere village, with about 400 inhabitants, though still the nominal see of a bishop, who resides at the neighbouring town of *Porto Gruaro*, while *Concordia* retains the ancient site, as well as name, but has no remains of antiquity beyond a few inscriptions. It is situated on a small river, now called the *Lemene*, which appears to have been navigable in ancient times. (Strab. *l. c.*) This must be the same with the "flumen Romatinum" of Pliny, which he places between the Liquentia (*Livenza*) and Tilavemptus (*Tagliamento*): it had a port of the same name at its mouth. [E. H. B.]

CONCO'RDIA JU'LIA. [NERTOBRIGA.]

CONDATE, is the name of several Gallic towns, situated at the angle formed by the junction of two rivers; from which it may be concluded that the Gallic term had a meaning which expressed this fact. The French names *Condat*, *Condé*, or *Cône*, appear to be various forms of Condate.

1. Condate (Κονδάτε: *Rennes*), is mentioned in the Antonine Itin. and in Ptolemy (ii. 8). It was the capital of the Redones, and in the Notitia it is named Civitas Redonum, whence has come the modern name. *Rennes* stands at the point where the *Vilaine* receives a small stream.

2. Another Condate is fixed by the Itin. on the road between Melodunum (*Melun*) and Agedincum (*Sens*). The place was at the junction of the *Yonne* and the *Seine*; but it is now named *Montereau*, a corruption of Monasteriolum.

3. A third is fixed by the Itin. between Noviomagus, the chief town of the Lexovii, and Durocasses (*Dreux*). This is *Condé*, on the *Iton*, at the junction of two branches of that river.

4. A fourth is fixed by the Itin. on the road from Augustodunum (*Autun*) to Paris. It is placed between Nevirnum (*Nevers*) and Brivodurum [BRIVODURUM]; and it corresponds to *Cosne*, at the confluence of the little river *Nouain* with the *Loire*.

5. The Table places another Condate on the road between Mediolanum Santonum or Santones (*Saintes*), and Vesunna or Petrocorii (*Perigueux*). *Cognac*, on the *Charente*, probably represents the ancient place.

6. Ausonius (*Ep.* v. 31) speaks of a Condatis portus:—

> "Unus Domnotoni te litore perferet aestus
> Condatem ad portum, si modo deproperes."

D'Anville supposes this place to be represented by *Condat*, an old castle near *Libourne*, which town is at the junction of the *L'Isle* and the *Dordogne*; nearly due east of *Bordeaux*.

7. The Table places another Condate in the country of the Gabali, west of the Cevenna, and on the road from Anderitum [ANDERITUM] to Revessium. The site is uncertain; but we may certainly assume that it was on the Elaver (*Allier*), which is crossed on the road between Anderitum and Revessium.

8. The Table places a Condate between Etanna (*Yenne*), on the Rhone, and Geneva. The site is supposed to be *Seissel*, at the junction of the *Sier* and the *Rhone*, in the territory of the Allobroges, and the Provincia or Gallia Narbonensis. [G. L.]

CONDATE, in Britain, mentioned twice in the Itinerary; firstly, as being 18 miles from Mancunium (*Manchester*), and 20 from Deva (*Chester*); secondly, as 18 miles from Mancunium, and 18 from Mediolanum. A good measure of the circuitous character of the lines of the Itinerary is to be found in the comparison of these two notices. The Mediolanum, which in the tenth Itinerary is simply eighteen miles from Condate, in the second stands thus: CONDATE—DEVA M. P. XX.; BOVIO M. P. X.; MEDIOLANO M. P. XX. With these numbers, assuming their absolute correctness, it would not be difficult to fix the locality of Condate, if that of Mediolanum were certain. This, however, is scarcely the case. *Congleton*, in Cheshire, on the strength of the partial similarity of name, has been claimed as the representative of Condate; and—with the assumption that Mediolanum = *Drayton* in Shropshire—*Northwich*, on the strength of the locality. This latter view is Horsley's. The present writer favours a notion of Dr. Tilsted's that *Condate*, name for name, is *Kinderton*, near Middlewich. [R.G.L.]

CONDATOMAGUS, another example of a name Condate, with the addition of *mag*, a common Gallic ending. The Table places Condatomagus between Segodunum or Ruteni (*Rodez*) and Luteva (*Lodève*), which was within the limits of the Provincia or Gallia Narbonensis. The site cannot be ascertained, but we may assume that it is on some of the rivers that are crossed on the road from *Rodez* to *Lodève*. [G. L.]

CONDERATES, are only known from a Roman inscription, which records that the boatmen (nautae) of the *Saône* and the *Loire*, and also the boatmen of the *Arconée* and the Conderates, dedicated a funeral monument to the memory of their patron Tauricius Florens. The inscription is as follows: D. M. Tauricio . Florenti Taurici . Tauriciani filio Veneto . allectori . Galliae patrono nautarum Araricorum et Legyricor. Item Areccarorum et Conderatium . Provinciae Galliae. Their position is represented by *Condrieu* on the west side of the *Rhone*, about ten miles below *Vienne*. *Condrieu* is still a small port on the *Rhone*, partly inhabited by people well skilled in the navigation of the river, and by carpenters who build boats. "Allector" is explained by Muratori to be "tributorum susceptor," a tax-collector. Forcellini has an article on the word.

The name Conderates implies a place Conderate, or something like it; and this is another example of the element *Cond* in Gallic names. [CONDATE.] (Walckenaer, *Géog.*, &c., vol. i. p. 337.) [G. L.]

CONDERCUM, in Britain. The station of the first wing of the Asti, according to the Notitia. Generally identified as the *Benwell Hill* in Northumberland. [R. G. L.]

CONDIVICNUM, or (Κονδιουίγκον) CONDIVINCUM, according to Ptolemy (ii. 8), was the name of the capital of the Nannetes or Namnetes, a Celtic people on the lower *Loire*, and on the north side. The name appears to be compounded of the Celtic word *Cond* and another name. The town of *Nantes* represents Condivicnum. The old town of *Nantes* was nearly comprised in the angle formed by the junction of the *Erdre* with the *Loire*. Condivicnum was known to the Romans at an early period

Among several Roman inscriptions found there, one, if it is rightly copied, contains the name of the emperor Tib. Claudius Caesar; and another contains the name of Nero Claudius Caesar Augustus Germanicus. Caesar (*B. G.* iii. 9) built ships on the Loire for his war with the Veneti; and if there was a town on the site of *Nantes* in his time, his ships passed it in their way down the Loire. There was a Roman road from Limonum (*Poitiers*) to *Nantes*, which in the Table is named Portu Namnetu. There was also a road along the north bank of the Loire from Juliomagus (*Angers*) to *Nantes*. A Roman road ran from *Nantes* NW. through Dariorigum (*Vannes*) to Gesocribate (*Brest*). All these routes determine the position of the Portus Namnetum, and show that it was of importance. Parts of the Roman road between *Nantes* and *Vannes* are said to be well preserved. [G. L.]

CONDOCHATES (Κονδοχάτης, Arrian, *Indic.* 4; Plin. vi. 18. s. 22), a river which flowed into the Ganges, and was, according to Pliny, navigable. Modern geographers are agreed that it is now represented by the *Gunduk*. [V.]

CONDRU'SI. The Condrusi are mentioned by Caesar (*B. G.* ii. 4) with other tribes, as called by the general name of Germani. They were within the limits of the Belgae of Caesar, and joined the great Belgic confederation to oppose the Roman proconsul (B. C. 57). The Condrusi and Eburones were dependent on the Treviri (*B. G.* iv. 6.) The chief part of the territory of the Eburones was between the Mosa (*Maas*) and the *Rhine*, and their neighbours on the north were the Menapii. The Segni and Condrusi were between the Eburones and Treviri. Their position is therefore fixed. A document of the middle ages places the Comitatus Condrustus, or Condorustus, between the Arduennenses and the Ripuarii; and the Ripuarii were on the Rhine. There is a district in the *Pays de Liège* still called *Condroz* or *Condrost*, east of the *Maas*. D'Anville states that the archdeaconry of *Condroz*, in the bishopric of Liège, is "along the *Maas*, on both sides of the *Ourthe*," which is not quite clear. Walckenaer makes the Condrusi extend on the east side of the *Maas* from *Liège* to *Dinant*. *Huy*, on the east side of the *Maas*, about half way between *Liège* and *Namur*, is the chief place in *Condroz*.

CONDYLON, in Thessaly, is mentioned by Livy as one of the four fortresses which defended Tempe. (Liv. xliv. 6.) It was also called Gonno-Condylon, and was one of the towns of the Perrhaebi. (Liv. xxxix. 25.) Leake places it on the left bank of the Peneus between *Balamút* and the ascent to *Rápsani*. (Leake, *Northern Greece*, vol. iii. p. 397.)

CONEMBRI'CA (*Leynas*, S. of *Coimbra*), a city of Lusitania, on the high road from Olisipo to Bracara. (*Itin. Ant.* p. 421; Plin. iv. 35; Phleg. Trall. *de Longaev.* 1.) [P. S.]

CONFLUENTES (*Coblenz*), a town in Gallia, at the junction of the *Rhine* and *Mosel*, is first mentioned by Suetonius. [Ambiatinus.] Ammianus (xvi. 3) describes it as a place "ubi amnis Mosella confunditur Rheno." This description and the identity of the name prove the position of Confluentes; but it is said that there is not a trace of Roman remains on the spot. The Antonine Itin., the Table, and the Notitia also mention the place, which must have been an important position on the Rhenish frontier.

Caesar does not mention Confluentes under any name; nor does he mention the *Mosel*, unless he means this river by the words "ad confluentem Mosae et Rheni" (*B. G.* iv. 15); and that he does mean the junction of the *Mosel* and *Rhine* seems to be quite clear from the narrative of his attack on the Germans and their defeat. Confluentes was in the territory of the Treviri, as we may collect from Caesar; and a middle age authority, quoted by D'Anville, says "Cophelince urbs, Treviricae civitatis archiepiscopi."

The term "confluentes" was used by the Romans to express the junction of two rivers, as in Livy (iv. 17).

There is a *Coblenz* in Switzerland in the canton of *Aargau*, at the junction of the Aar and the Rhine. It is said that many Roman antiquities have been found here; and we may infer that the Roman name of the place was Confluentes. [G. L.]

CONGAVATA, in Britain, mentioned in the Notitia as the station of the Second Cohort of the Lergi. Generally identified with *Stanwix* in Cumberland. [R. G. L.]

CO'NGEDUS (*Codes*), a tributary of the Iberus, near Bilbilis, mentioned by Martial (*Epig.* i. 50). [P. S.]

CONGUSTUS (Κόγγουστος), a place in Galatia, mentioned by Ptolemy (v. 4), and apparently the Congusso of the Table, which it places on a road from Amorium to Salaberina. [G. L.]

CONIACI. [Colchi Indiae.]

CONI'ACI, CONISCI. [Cantabria.]

CO'NII or CUNEI (Κούνεοι, Appian, *Hisp.* 57; Κόνιοι, Polyb. x. 7. § 5), a people in the S. of Lusitania, W. of the Pillars of Hercules and of Baetica, with a capital city called Conistorgis or Conistorsis. (Strab. iii. p. 141.) They may perhaps be identified with the Κυνήσιοι, whom Herodotus makes the westernmost people of the whole earth (ii. 33, iv. 49). They dwelt in that part of Lusitania which the Romans called Cuneus, a name appropriate to the shape of the land, and thus furnishing one of the many examples in which the etymological significance of a name coincides accidentally with its historical usage. [P. S.]

CONISTORGIS, CONISTORSIS. [Conii.]

CONNI, in Phrygia Magna, is placed by the Table between Eucarpia and Nacolea, 32 miles from Eucarpia and 40 from Nacolea. Pliny (v. 32) means this place when he speaks of Conium, and Ptolemy (v. 2) has it Conna. Harduin observes on the passage of Pliny (v. 32) that the old reading was Iconium. Under the Byzantine empire Conna was called Cone, and was a bishopric of Phrygia Salutaris, of which Synnada was the metropolis. It is very difficult to fix the position of this place from the Table and from Ptolemy. Leake supposes that Conni may be "not far to the southward of *Altun Tash*, near where the roads to *Altun Tash*, both from *Karahissár* and from *Sandukli*, cross the ancient road." (Leake, *Asia Minor*, p. 166.) *Altun Tash* is a little north of 39° N. lat., and due south of *Kutahiyah*. [G. L.]

CONO'PE, afterwards ARSI'NOE (Κωνώπη: *Eth.* Κωνωπεύς, Κωνωπίτης, Κωνωπαῖος: Ἀρσινόη: *Eth.* Ἀρσινοίτης, Ἀρσινοεύς: *Anghelokastro*), a town of Aetolia, near the eastern bank of the Achelous, and 20 stadia from the ford of this river. It was only a village, till it was enlarged by Arsinoë, the wife and sister of Ptolemy Philadelphus. Polybius, in his history of the Social War (B. C. 220—217), calls it Conope, though elsewhere he calls it Arsinoë or Arsinoia (Ἀρσινοΐα). It is mentioned by Cicero under the name of Arsinoë. Near this town the

river Cyathus flowed into the Achelous from the lake Hyria, which is also called Conope by Antoninus Liberalis. (Strab. p. 460; Pol. iv. 64, v. 6, 7, 13, ix. 45, xxx. 14; Cic. c. *Pis.* 37; Antonin. Lib. 12; Steph. B. *s. v.*; Leake, *Northern Greece*, vol. i. p. 152.) [AETOLIA, p. 64, a.]

CONOPEIUM (Κονωπεῖον or Κονώπιον). East of the mouth of the Halys, Arrian (p. 16) mentions a marsh and port Naustathmus, 90 stadia from the Halys, or 120 according to Marcian. Fifty stadia further along the coast Arrian places Conopeium, a marsh. The site seems to be *Koumjaas*, on the coast SE. of the mouth of the Halys or *Kizil Irmak*. Hamilton (*Researches*, vol. i. p. 293) makes Conopeium 16 miles from Amisus (*Samsun*), which is to the south, and about 5 miles from Naustathmus, which is to the north. [G. L.]

CONO'VIUM, in Britain, one of the four places of the eleventh Itinerary, Segovium, Varis, and Deva being the other three: probably *Conway*. [R. G. L.]

CONSA'BRUM. [CARPETANI.]

CONSE'NTIA (Κωνσεντία, Appian; Κωσεντία, Strab.; Κονσεντία, Ptol.: *Eth.* Consentinus: *Cosenza*), an inland city of Bruttium, situated on a hill rising above the valley of the Crathis, near the sources of that river. Strabo calls it the metropolis of the Bruttians (vi. p. 256); and it appears to have been from an early period the most considerable town belonging to that people, as distinguished from the Greek cities on the coast. It first appears in history during the expedition of Alexander, king of Epeirus, and Livy mentions it among the places taken by that monarch; but this seems to be a mistake, as it was still in the hands of the enemy at the time of his death, which took place near Pandosia, in the same part of Bruttium: after that event his mutilated remains were sent to Consentia, and interred there. (Liv. viii. 24.) During the Second Punic War, Consentia at first held aloof from the rest of the Bruttians, when they espoused the alliance of Hannibal; but it was soon after reduced by the Carthaginian general Himilco. (Id. xxiii. 30.) Three years later (B.C. 213) the Consentini are mentioned as returning to the Roman alliance; but notwithstanding this statement, we find them again appearing among the cities hostile to Rome, and it was not till B.C. 204 that Consentia, together with Pandosia and Clampetia, was reduced or compelled to submit. (Liv. xxv. 1, xxviii. 11, xxix. 38, xxx. 19; Appian, *Annib.* 56.) Appian calls it at this time a large city: it appears to have been less severely treated than most of the Bruttian towns, and continued to be a place of importance. Lucilius alludes to the Consentini as possessing superior refinement to the rest of the Bruttians, and more on a par with the Sicilians and Tarentines. (Lucil. ap. Cic. *de Fin.* i. 3.) It is mentioned as a town of importance during the war of Spartacus (Oros. v. 24), and in B.C. 40 it was besieged for some time by Sextus Pompeius, but without success. (Appian, *B. C.* v. 56, 58.) Under Augustus it received a body of colonists, and continued to enjoy municipal rights under the Roman empire, but did not rank as a colony. (Plin. iii. 5. s. 10; Ptol. iii. 1. § 74; Lib. Colon. p. 209.) Its territory was noted for its apple-trees, which bore fruit twice a year. (Varr. *R. R.* i. 7. § 6.) Towards the close of the Roman empire, Consentia is again mentioned in history as the scene of the death of Alaric, who had made it his head-quarters, while planning a descent upon Sicily, a few months only after the capture of Rome, A.D. 410. He was buried in the bed of a little river or torrent, which falls into the Crathis, just below Consentia. This is now called the *Busento*: the ancient name is variously written Basentus, Basentius, and by Jornandes Basentinus. (Jornand. *R. Get.* 30; P. Diac. *Hist. Miscell.* xiii. p. 535.) Consentia continued to be a place of importance through the middle ages: and the modern city of *Cosenza* is still the capital of the province of *Calabria Citra*.

Consentia stood on the line of the high road which led through Bruttium from Muranum, in Lucania, to Rhegium. The Itinerary places it 49 M.P. from Muranum, and 57 from Vibo Valentia: and these distances are confirmed by a remarkable inscription, found at *Polla* (the ancient Forum Popillii), in which, as well as in the Tab. Peut., the name is written Cosentia. (*Itin. Ant.* p. 110; Orell. *Inscr.* 3308; Mommsen, *Inscr. Neap.* 6276.) [E. H. B.]

CONSILI'NUM or COSILI'NUM, a town of Lucania, mentioned only in the Liber Coloniarum, which enumerates it among the Praefecturae of that province (p. 209), and by Cassiodorus (*Varr.* viii. 33), who calls it "antiquissima civitas." We learn from the latter that a great fair was held every year in a suburb of the town, to which he gives the name of Marcilianum. This is in all probability the same place called in the Itinerary Marcelliana (*Itin. Ant.* p. 110), and a local antiquary has pointed out a spot still called *Marciliana*, between *La Sala* and *Padula*, in the valley of the *Tanagro*, where there is a remarkable fountain, corresponding to one mentioned by Cassiodorus. The situation of Consilinum is said to be indicated by some ruins on a hill near *Padula*. (Romanelli, vol. i. pp. 405—409.) [E. H. B.]

CONSORANI, enumerated by Pliny (iv. 19) among the peoples of Aquitania. He mentions them between the Tarnates and Ausci. In another place, where he is describing the Narbonensis Provincia (iii. 4), he says, "In ora regio Sardonum, intusque Consuaranorum." The Consorani seem to have occupied the country called *Conserans* or *Couserans*, at the base of the Pyrenees, between *Bigorre* and *Foix*. The names Consoranni and Consuarani appear to be the same, and yet Pliny assigns one people to Aquitania, and the other to Narbonensis. The conclusion is, that, according to the divisions of Pliny's time, part of the Consorani were within Aquitania, and part within Narbonensis. We have an instance like this in the case of the Ruteni, who in Caesar's time were divided into Ruteni Provinciales in the Provincia, and Ruteni beyond the limits of the Provincia. It is probable that before the time of Augustus all the Consorani were in the Narbonensis. The modern *St. Lizier*, in the department of *Arriège*, was within the limits of the Consorani. [G. L.]

CONSTA'NTIA or CONSTANTI'NA (Κωνσταντία, Hier. p. 714; Κωνσταντίνα, Suid., Steph. B. *s. v. Nicephorium*; Procop. *B. P.* ii. 13; Amm. Marc. xviii. 7), a town of some importance in Mesopotamia, on the road between Nisibis and Carrhae, at no distance from Edessa, which, after his departure from Nisibis, was the residence of the Dux Mesopotamiae till the foundation of Dara (Procop. *de Aed.* ii. 5). There is considerable variation in different authors in the way in which the name of this town is written. Stephanus B calls it Constantina, and states that it was another name for Nicephorium; Suidas, Constantina and Constanteia, which latter form occurs also in the Itinerary of Hierocles. In the Excerpt. Procop. ap. Photium, it is called

Constantia; so also in the Notit. Imp. Roman. under the Dux Mesopotamiae. Evagrius (*H. E.* i.) entitles Sophronius Κωνσταντιναίων Ἐπισκόπον, and in the list of the bishops who subscribed the Council of Chalcedon, he is called Bishop of Constantinopolis in the province of Osrhoene. It appears to have borne other names, as Antoninopolis and Maximianopolis, in the fourth century, to have been nearly destroyed by an earthquake, but to have been rebuilt by Constantinus. (Chron. Edess. ap. Asseman. *Bibl. Or.* i. p. 395; Malala, *Chron.* xii. p. 312.) [V.]

CONSTA'NTIA (*Coutances*), a place in the NW. of Gallia, which Ammianus (xv. 11) calls Castra Constantia. In the Notitia the Civitas Constantia is mentioned as being in Lugdunensis Secunda. A local tradition assigns the foundation of this place to Constantius Chlorus, the father of Constantine. Ammianus says that the Sequana (*Seine*) enters the sea near Constantia; but his geography of Gallia is very inexact. The name of the Pagus Constantinus is the origin of the name *Côtantin*, which in the ante-revolutionary geography of France designated the peninsula in which *Coutances* is situated. [G.L.]

CONSTA'NTIA CYPRI. [Salamis.]

CONSTA'NTIA PHOENICIAE. [Antaradus.]

CONSTANTIA'NA (Κωνσταντιανά: *Kostendsje*), a town in Moesia, on the coast of the Euxine, south-east of Istropolis. (Procop. *De Aedif.* iv. 11. p. 307; Hierocl. p. 637.) [L. S.]

CONSTANTI'NA. [Cirta.]

CONSTANTINO'POLIS, the capital of the Lower Empire, and founded by Constantine the Great on the site of the ancient Byzantium.

I. History of Byzantium.

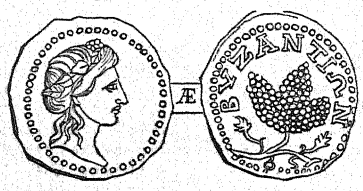
Byzantium (Βυζάντιον: *Eth.* Βυζάντιος, Byzantius: *Adj.* Βυζαντιακός, Βυζαντιάς, Βυζαντίς, Βυζαντιανός, Βυζαντειανός). The foundation of this city was ascribed to the Megarians in B.C. 667, a few years later than its neighbour Chalcedon (Euseb. *Chron.*; Clinton, *F. H.* vol. i. p. 194) on the site of a town called Lygos (Plin. iv. 18; Auson. *Clar. Urb.* 13.). In B.C. 628 a second colony was sent out from Megaris under Zeuxippus. (Lydus *de Mag. Rom.* iii. 70; Clinton, *F. H.* vol. i. p. 208.) The transmission of the worship of Hera (whose temple both here and at Argos was on the citadel), and the traditions concerning Io confirm the general assertion of Hesychius of Miletus that the Argives had a share in the foundation of the city. (Müller, *Dor.* vol. i. p. 133. trans.) Byzantium was situated at the apex of the triangle which faces the shores of Asia, and meets the waters of the Thracian Bosporus. The oracle of Apollo which commanded the colonists to build their new city opposite to the "land of the blind," alluding to the superiority of the site of Byzantium to that of Chalcedon (Herod. iv. 144; Strab. vii. p. 320; Tac. *Ann.* xii. 63) did not compromise the infallibility of the Pythoness by its advice. Few cities could boast so magnificent a position: commanding the two opposite shores of Europe and Asia, it united the advantages of security and great facilities for trade, with the choicest gifts of nature, and the most strikingly picturesque scenery. (Polyb. iv. 39; Zosim. ii. 30.) On the S. it was bathed by the waters of the Propontis, on the N. by those of the Golden Horn (τὸ κέρας). The river Lycus poured into this arm of the Bosporus a perpetual stream of fresh water, which cleansed the bottom, and afforded a retreat for the periodical shoals of fish, especially of the Pelamys kind, which come down from the Palus Maeotis, and round by the E. and S. coast of the Euxine into the channel (Strab. *l. c.*). This fishery employed and supported a large number of the poorer class of freemen. (Arist. *Pol.* iv. 4. § 1.) The fish was salted and became an article of considerable traffic, and the harbour obtained its epithet of golden from the riches derived from this source. (Plin. ix. 20.) The port, which is about 7 miles in length, was both secure and capacious; and as the tide is scarcely felt, the constant depth of the water allowed vessels to land their goods conveniently, as the largest ships might rest their heads against the houses, while their sterns float in the water. (Procop. *de Aed.* i. 5.) As the key of the Euxine and the Aegean no vessel could pass from the one sea to the other without the leave of the people of Byzantium, who gained a considerable revenue from the duties they levied on the corn-ships which passed in and out from the Euxine. (Polyb. iv. 38.)

In the reign of Dareius Hystaspis, Byzantium was taken by Otanes, general of the forces on the coast of Thrace. (Herod. v. 26.) Afterwards, it sided with the Ionians in their revolt (Herod. v. 103), but on the arrival of the Phoenician fleet the inhabitants, without even waiting for it, fled to Mesambria. (Herod. vi. 33.) Pausanias, after the battle of Plataea, wrested it from the Medes. (Thuc. i. 94.) And hence Justin (ix. 1. § 3) calls him the founder of Byzantium. After an interval of 7 years Cimon obtained it for the Athenians. (Diod. xi. 60; Plut. *Cim.* 5; Thuc. i. 131.) In 440, the Byzantines joined the Samians and revolted from Athens, but afterwards submitted. (Thuc. i. 117.) In 416, in common with the Chalcedonians, they made an expedition into Bithynia, and perpetrated great cruelties. (Diod. xii. 82.) In 408, Byzantium was besieged by the united forces of the Athenians under Alcibiades, a wall of circumvallation was drawn around it, and various attacks made by missiles and battering engines. These had no effect upon the Lacedaemonian garrison; but when the blockade was strictly kept up, and the population were dying of hunger, in the absence of Clearchus the Spartan commander, Cydon and a Byzantine party opened the gates by night and admitted the Athenians into the wide inner square called the Thrakion. Favourable terms were granted to the town, which was replaced in its condition of a dependent ally upon Athens. (Xen. *Hell.* i. 3. § 15—22; Diod. xiii. 67; Plut. *Alcib.* 31; Frontin. iii. 2. § 3; Polyaen. i. 48. § 2.) In 405, after the battle of Aegos-Potami, Lysander recaptured Byzantium, and placed Sthenelaus there as "harmost" with a garrison (Xen. *Hell.* ii. 2. § 2.). It was under the power of the Lacedaemonians when the Ten Thousand made their retreat; in consequence of the fraud and harsh dealing of the Admiral Anaxibius, the soldiers were exasperated, became masters of the town, and Byzantium would have been sacked had it not been for the energy and eloquence of Xenophon. (*Anab.* vii. i. §§ 5—32.) In 390, Thrasybulus changed the government of Byzantium, which was already in alliance with Athens, from an oligarchy into a democracy, and sold the tenths of the merchant vessels sailing out of the Euxine. (Xen. *Hell.* iv. 8. §§ 25—27.) In 363, Epaminondas visited Byzantium, drove off Laches with the Athenian squadron, and prevailed upon several of the allies of Athens to declare in his favour. (Isocr. *Orat. v. Philip.* 53; Diod. xv. 79.)

In 356, Byzantium, along with Rhodes and Chios, united with the newly-flourishing commonwealth of Cos, and Mausolus king of Caria, in an endeavour to throw off the Athenian dominion: an engagement which was to have taken place by sea, was prevented by a storm. (Diod. xvi. 21.) In 340, the Athenians, urged on by Demosthenes, sent succours to Byzantium, which was besieged by Philip; the combined fleet under the command of Chares met Amyntas and the Macedonian ships, and were defeated. In the following year Chares was superseded by Phocion, when the Athenians behaved with such moderation to their allies, and showed so much courage against the besiegers, that Philip was compelled to raise the siege. (Diod. xvi. 77; Plut. *Phoc.* 14.) During this memorable attack, on a dark night when the Macedonians were on the point of seizing upon the town, a light appeared in the heavens and revealed to the inhabitants their danger. (Steph. B. *s. v.* Βόσπορος; Eustath. *ad Dionys.* 143.) Hesychius the Milesian, who tells the same story, adds that an image in honour of this interference was erected to Torch-bearing Hecate. The crescent, which is found on Byzantine coins (Mionnet, *Descr. des Med.* vol. i. p. 378), and which was adopted by the Turks as their device after the capture of Constantinople (comp. Von Hammer, *Gesch. der Osman*, vol. i. p. 93) is supposed to commemorate the portent. This repulse to the successful career of Philip was one of the proudest feats of the great orator, and in his speech upon the crown Demosthenes often recurs to it. The Byzantines, in gratitude for the valuable assistance they had received, decreed to the Athenians the right of isopolity, the extraordinary privilege of precedence at games and public ceremonies, with exemption from compulsory "liturgies." The decree, which with all the original Dorisms is preserved in Demosthenes (*de Cor.* p. 255), directed that in perpetual memory of the benefit, 3 statues each 16 cubits high, representing the people of Byzantium and Perinthus crowning the Athenians, should be placed in a public part of the city.

The Byzantines were afterwards engaged in perpetual warfare with the neighbouring barbarians, and were unable to keep them off either by resistance or tribute. To crown the other evils of war, their harvests were either carried off or destroyed by the enemy, till, in 279, they agreed to pay the Gauls a yearly tribute of 3000, 5000, and 10,000 pieces of gold, and at last the large sum of 80 talents, on condition that their lands should not be ravaged. (Polyb. iv. 46; Liv. xxxviii. 16; Böckh, *Econ. of Athens*, p. 595, trans.) Their sufferings in this respect compelled them to have recourse to many extraordinary measures for procuring money, and finally to the imposition of the transit duties which involved them in the war with Rhodes. Still, during this time, while suffering the penalty of Tantalus (Polyb. *l. c.*), they enjoyed municipal independence. (Diod. xix. 77.) In this war Byzantium was supported by Attalus, king of Pergamus. Prusias, king of Bithynia, was a partizan of Rhodes, and the Byzantines endeavoured to set up Tibœtes, an uncle of Prusias, as rival for his throne. Prusias seized on their Asiatic possessions, while the Thracians pressed hard upon them on the European side; and in 219 a peace, under the mediation of the Gallo-Grecian king Cavarus, was concluded on very unfavourable terms for Byzantium. (Polyb. iv. 46—52.) While Rome was contending against the pseudo-Philip of Macedon, Antiochus, and Mithridates, it granted to Byzantium, for good services rendered on the occasion, the rank of a free and confederate city. Disputes arose, and an appeal was made to Rome, which resulted in a decree, proposed by Clodius, and put in force by Piso, who exhibited himself rather as a conqueror than an ally and magistrate. (Cic. *de Prov. Consul.* 2—4; Tac. *Ann.* xii. 62.) It appears that Claudius remitted the tribute Byzantium had to pay, for five years, in consequence of the losses of the Thracian war (Tac. *Ann.* xii. 63), and that Vespasian stripped it of its privileges, and reduced it to the condition of a Roman province. (Suet. *Vesp.* 8.) In the civil wars between Severus and Pescennius Niger, Byzantium took the part of the latter, and, after a resistance of three years, was taken in 196. Severus treated the inhabitants with his usual indifference to human life or suffering. The famous walls of massive square stones, so well fastened together by iron bolts that the whole seemed to be one block, were levelled with the earth. The soldiers and magistrates were put to death, the property of the citizens confiscated, and the town itself, deprived of all political existence (τὸ ἀξίωμα τὸ πολιτικόν), made over to the Perinthians. (Dion Cass. lxxiv. 6—14; Herodian, iii. 1—7; Zosim. i. 8.) Severus afterwards relented, and, visiting Byzantium, embellished the town with magnificent baths, porticoes round the Hippodrome, and other buildings. The name of Augusta Antonina was given it, in honour of Antoninus Bassianus. (Suid. *s. v.* Σεβῆρος; Zosim. ii. 30; Cedren. p. 252.) Caracalla restored to the inhabitants their rights and franchises. (Spartian. *Caracall.* 1.) It is remarked by Gibbon (*Decl. and Fall*, vol. i. p. 205), that the charge against Severus of having deprived the Roman people of the strongest bulwark against the barbarians of Pontus and Asia, was but too well justified when, in the succeeding age, the fleets of the Goths covered the Euxine, and passed through the undefended Bosporus into the centre of the Mediterranean. The soldiers of Gallienus massacred most of the citizens, and not one old family remained in later times, except those who had previously left the town. (Trebell. Poll. *Gallien.* 6.) Under Claudius II. the remainder of the Byzantines fought bravely against the Goths. (Trebell. Poll. *Claud.* 9.) In the civil wars which succeeded the abdication of Diocletian, the fortifications of Byzantium had been strengthened: Licinius, after the battle of Adrianople, retired to this stronghold; Constantine pursued the siege so vigorously, by constructing mounds of an equal height with the ramparts, and erecting towers upon their foundation, from which the besieged were galled by large stones and darts hurled by engines, that the town at length surrendered.

The constitution of Byzantium was at first royal; though there is some doubt about this, as Hesychius the Milesian calls Dineus general of the Byzantines. (Müller, *Dor.* vol. ii. p. 174, trans.) It afterwards became an aristocracy,—the native inhabitants, the Bithynians, being in precisely the same condition as the Helots. (Phylarch. *ap. Athen.* vi. p. 271.) The oligarchy which succeeded was, in 390, changed into a democracy by Thrasybulus the Athenian; and equal privileges were at the same time probably granted to the new citizens, who, on account of their demands, had been driven from the city by the ancient colonists. (Arist. *Pol.* v. 2. § 10.) After this the democracy seems to have continued for a long time. (Theopomp. *ap. Athen.* xii. p. 256.) In the document quoted by Demosthenes (*de Cor. l. c.*)



the senate (*βουλά*) transfers a decree in its first stage (*ῥήτρα*) to an individual, in order to bring it before an assembly of the people (*ἁλία*). The office of Hieromnamon occurs in decrees (Dem. *l. c.*; Polyb. iv. 52) and on coins, as also does that of Archon, which probably came in with the democracy. From the habit of the townspeople passing their time in the market-place and harbour, and the number of foreign and native traders who resorted to it, Byzantium displayed the usual characteristics of a large seaport town. They were an idle luxurious race, spending their days in the numerous public-houses, where the excellent wine which was furnished by Maronea and other regions, offered great temptations. They not only tippled in taverns, but also fed like gluttons, according to Diphilus (*ap. Athen.* iv. p. 132). They devoured such quantities of young tunnies that their whole frame became well nigh glutinous, and it was thought they would have been absorbed in mucilage. To sustain their valour, which took fright at the sound of a trumpet, the general, Leo or Leonidas, was obliged during the siege of Philip of Macedon to allow cook-shops and canteens to be established along the ramparts. (Athen. x. p. 442; Aelian, iii. 14; Müller, *Dor.* vol. ii. p. 411, trans.) A democracy of such boon companions was not, as may be supposed, very orderly, and seems to have acted upon the "laissez faire" principle enounced by a certain Byzantine demagogue who, when he was asked what the law enjoined, replied, "whatever I please." (Sext. Empir. *adv. Rhet.* § 37.)

Iron money was coined at Byzantium for the home circulation, that the silver might be used for foreign trade and the purposes of war. It was current in the Peloponnesian war, and bore the Doric name Sidareos (Aristoph. *Nub.* 250; Pollux, vii. § 106, ix. § 78; Hesych. *s. v.*; Böckh, *Econ. Ath.* p. 596, trans.). None of this iron money is now extant. For coins of this city, see Eckhel, vol. ii. p. 26; Rasche, vol. i. p. 1636; Bandur. vol. ii. p. 456.

The dialect of the district appears to have contained many Dorisms. (Dem. *l. c.*; Chandler, *Inscript. Append.* p. 95.)

The origin of the Byzantine church is somewhat uncertain: the modern Greeks, in their zeal not to yield to the Latins the advantage of antiquity, attribute its foundation to the Apostle St. Andrew. It is certain that during the time of Severus there were many Christians at Byzantium. (Le Quien, *Orient. Christ.* vol. i. pp. 8, 196; Tertull. *ad Scapul.* c. 3; Le Beau, *Bas Emp.* vol. i. p. 300.)

Ancient Byzantium was situated on the first of the seven hills upon which, rising one above another, the modern city stands; but its area occupied more than the first region of the later town. In all probability it extended over the three regions which lie behind the triangular space now filled by the Seraglio. According to Dionysius of Byzantium, its circumference was 40 stadia. (Comp. Zosim. ii. 30; Gyllius, *de Top. Const.* i. 2.)

COIN OF BYZANTIUM.

II. Foundation of Constantinople.

It was upon this gently sloping promontory, which serves as a connecting link between the Eastern and the Western world, and which nature has intended for the centre of a great monarchy, that Constantine, after determining to remove the seat of empire from the banks of the Tiber, determined to fix the city which bore the name of its founder. The modern European, as well as the Arabic (*Constanije*) name of the city, preserves the memory of the first emperor of the East. The Turkish *Istambul* or *Stambul*, is a corruption of the Greek *εἰς τὴν πόλιν*. Like the ancient mistress of the world, its foundations were to be laid upon seven hills, and the emperor called it the New Rome,—a title which he confirmed by a law, engraved on a column of marble, in a place called the *Strategion;* but, however much his capital might outwardly resemble the elder Rome, it was not permitted to bear the name of the Eternal City.

The foundations of the city were laid according to an Imperial edict (Theodos. *Cod.* xiii. 5. s. 7), in obedience to the commands of Heaven. On foot with a lance in his hand, the emperor led a stately procession which was to mark the boundaries of Constantinople. As he did not pause, the attendants, astonished at the enormous size of the future capital, asked him how far he intended to advance. Constantine replied "when He that goes before me shall stop." (Philostorg. ii. 9.) At a later period, the honour of having inspired the choice of a founder was attributed to the Virgin Mother, who became the tutelary guardian of the city. Constantinople arose, if not a Christian, certainly not a Pagan city. The ceremonial of the dedication exhibited that strange compound of religions of which Constantine himself was a type. After a most splendid exhibition of chariot games in the Hippodrome, the emperor was carried in a magnificent car through the most public part of the city, surrounded by his guards, in the attire of some religious ceremonial with torches in their hands. The emperor bore a golden statue of the Fortune of the city in his hands. The rites of inauguration lasted forty days, though the 11th of May, A. D. 330, is considered as the birth-day of the city.

III. Extent, Limits, and Population.

The walls of Constantine across the enlarged breadth of the triangle, were begun at a distance of 15 stadia from the old fortifications, and stretching from the port to the Propontis, enclosed five out of the seven hills upon which the city stood, but were not finished before the reign of Constantius. In 401, Arcadius repaired these walls which had fallen in the earthquake that had taken place in that year. In 413, during the minority of Theodosius II., Anthemius, the Praetorian praefect, razed the old fortifications and built a new inclosure of walls. In 447 this was thrown down by an earthquake, and rebuilt in three months by the diligence of the praefect Cyrus. This double line of strong and lofty stone walls have, except on the land side, almost disappeared, but in a dilapidated state they still exist, extending from the port to the sea of Marmora for about 4 English miles, presenting magnificent and picturesque specimens of mural ruins. The wall was flanked at short intervals by towers, mostly rectangular. The extreme length of the city at this period, and it never to any great extent exceeded these limits, was about 3 M. P.,

and the circuit rather less than 13 M. P. The Sycae, or fig trees, formed the thirteenth region beyond the harbour, and were much embellished by Justinian. The suburb of Blachernae was not taken into the city till the reign of Heraclius. Constantine had been most anxious to have his capital frequented: he summoned senators from Rome, and, according to the vague expression of Eusebius, drained other cities in its behalf, yet its population never became considerable when compared with ancient Rome, and modern capitals. By far the larger part of the inhabitants were Christians, but these were not estimated by Chrysostom (*In Act. Apost.* hom. xi. vol. ix. p. 108) at more than 100 000.

IV. History.

Were it even possible in any form which could be useful to the reader to trace the fortunes of the Lower Empire, within the limited space of an article like this, a sketch of Byzantine history would not fall within the province of a work, which confines itself to the age of Grecian and Roman civilisation. But as the topography of the city can hardly be understood without some knowledge of the facts of the history being presupposed, it has been thought advisable to subjoin a short summary of the most memorable events connected with Constantinople itself.

The city of Constantine, the birth of an elder and effete age, has throughout its long history borne the stamp of its parentage, and displayed the vices of its original conformation. The position of the Byzantine empire is unique; geographically it was European, but nationally it reflected the Oriental type of character. It had indeed Roman blood, but the people who had sprung from the loins of Mars, and were suckled by the she-wolf, gave it little but their name. It did not speak their tongue, and was completely severed from the old republican associations and free spirit which still survived the fall of Roman liberty. The despotism of the court of Constantinople could not endure even the forms of free institutions, and the relics of municipal privileges which inherited from Rome have had so much influence in moulding the law and constitution of modern Europe. The Caesar of the East was the counterpart of his Moslem conqueror, and the change from the Proto Sebast to the Sultan would have been one simply of name, had it not been for the superior energy and virtues of the first Osmanli princes. The one like the other had his viziers, his janissaries, his slaves, and his eunuchs alternately cajoling and tyrannizing over prince and people. Through the dreary monotony of the history of the Eastern empire, so deficient in moral and political interest, there are always coming into view the characteristic features of Asiatic tyranny:—the domestic treason,—the prince born in the purple,—the unnatural queen-mother,—the son or the brothers murdered or blinded,—the sudden revolutions of the throne,—the deposition of the sovereign, but the government remaining the same,—and the people careless as to who or what their tyrant might be. Every thing by which a people can outwardly show what is within—literature, art, and architecture, displays the influence of the East. The literature learned, artificial, florid, but deficient in elegance and grace, and without a spark of genius to illumine it. The art but the figure of their ceremonial life, deficient in all deep and sincere feeling, and showing, under the hardness of the shape, and the sameness of the expression, the dull and slavish constraint to which it was subject. A purer faith had indeed freed the later Greeks from the degradation of the seraglio, had given an impulse to intellectual development, and infused a sense of the responsibilities of power to which their Ottoman conquerors were strangers. But even Christianity failed to reconcile the conflicting elements and hostile influences of the East and West, and was itself penetrated by an admixture of Oriental thought and sentiment. And in later times, after the severance of Constantinople from the Latin Communion, the rest of Europe had no sympathy for what was considered an alien creed. Standing in this isolated position on the very outposts of Western civilisation, and cut off from that by differences of language, manners, and religion, Constantinople, unable to comprehend but rather despising that vigorous Teuton stock upon which the elder races were engrafted, did not incorporate any of those elements which have gone to make up the aggregate of modern Europe; while, on the other hand, it is difficult to trace the slight reaction that the Greek empire has had upon the West, till its fall, when it contributed so mainly to the revival of letters and the modern spirit, by the dispersion of ancient literature and culture. Up to A. D. 1204, Constantinople remained the capital of the E., or Lower Roman Empire: in that year it was captured by "the blind old Dandolo" and the French. From A. D. 1204 to 1261 it became the seat of the Latin Empire, and on the morning of the 25th of July, 1261, reverted to the undisputed possession of the Greeks.

On the 29th of May, 1453, Constantine XIII., the last of the Palaeologi, fell upon the walls of his capital, with the words, Θέλω δανεῖν μᾶλλον ἢ ζῆν. Since that period it has been looked up to by the people of the East as the seat of the supreme temporal and spiritual power, and the Sultan has become the heir of the Caesars.

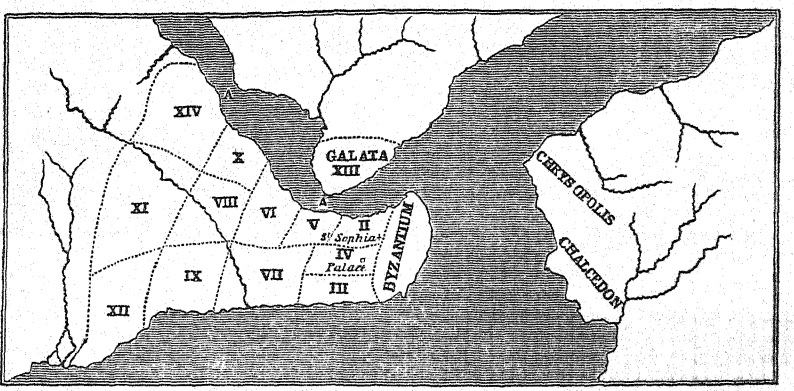
More cannot be done here than enumerate a few of the leading events of which Constantinople itself has been the theatre during this long period of its existence. It would be unnecessary to refer those who wish to know more on this subject to the masterly work of Gibbon. Le Beau (*Histoire du Bas Empire*) is a writer less known, and though deficient in criticism, his work contains much information. The notes appended by St. Martin, the well-known Oriental scholar, will be found eminently useful. The History of the Iconoclast Princes can be read in Schlosser (*Geschichte der Bilder-Stürmenden Kaiser*).

The empire of the East began with the reign of Arcadius, A. D. 395. Justinian, A. D. 527—595, has the honour of being considered the second founder of Constantinople. In the fifth year of his reign the factions of the Circus and the memorable sedition of the *Nika* almost laid the city in ashes. A description of the buildings with which the emperor adorned his ruined capital is reserved for the topography of the city. In 616 Chosroes maintained his camp for ten years in the presence of the city. In 626 Heraclius delivered it from the Persians and Avars. In 668—675, the Arabs for the first time besieged Constantinople, but, baffled by the strength of the walls, and the strange effects of the Greek fire, fell to the number of 30,000 men. In the second siege, 716—718, they were again compelled to retreat. In 865 the

first expedition of the Russians against Constantinople took place; followed by a second in 904; a third in 941; and a fourth in 1043. In 1203 the Latins first besieged and conquered, and in 1204 took by storm and pillaged the imperial city: A. D. 1261 forms a new aera for Constantinople, in consequence of its recovery by the Greeks. In 1422 Constantinople was besieged by Amurath II., but the Byzantine empire was respited for a space of thirty years till it fell, in 1453, before the conquering sword of Mohammed II.

It would be interesting to trace the domestic character and training of the citizens which hastened the ruin of the Eastern empire. The writers of Byzantine history do not furnish many distinct statements, but hints and allusions are to be found in the rebukes of the pulpit orator, or from the petty prohibitions of the imperial code. On this subject much valuable information may be obtained in Montfaucon (*Mém. de l'Acad. des Inscrip.* vol. xiii. p. 474; Müller, *De Genio, Moribus, et Luxu Aevi Theodosiani;* Milman, *Hist. of Christianity;* and the *Quarterly Review*, vol. lxxviii. p. 346). While the life of the upper classes was characterised by the pomp and prodigality of civilisation without any of its ennobling or humanizing influences, the lower ranks were inordinately devoted to amusement. The athletic games of ancient Greece had given way to the vulgar exhibitions of juggling, rope-dancing, and tumbling. The drama was supplanted by mimes and pantomimes; and though no gladiator was butchered to make a holiday for the populace of Constantinople, it would seem that the interest which was concentred upon the chariot races and the Circus was a compensation for the excitement of those games which were forbidden by the new religion. The passion and animosity which sprung from the struggle of the Blue and Green factions was as furious and as bitter as any that has arisen among contending parties, where the most sacred rights of liberty or faith were at stake.

V. Architecture and Buildings.



In the new capital of Constantine, emancipated from the restraint of Pagan associations and art, the Byzantine builders founded an architecture peculiarly their own. Of this the cupola was the great characteristic, to which every other feature was subordinate. In consequence of this principle, that which at Athens was straight, angular, and square, became in Constantinople curved and rounded, concave within, and convex without. Thus the old architecture of Greece owed its destruction to the same nation from which it had taken its first birth. (Comp. Hope, *Architecture*, p. 121; Freeman, *Hist. of Architecture*, p. 164; Couchaud, *Choix d'Eglises Bysantines en Grèce.*)

In describing the buildings of the city, it is more convenient to follow the historical succession than to take the topographical arrangement. For, it must be recollected, how little now remains. Where they first arose there they also fell. Constantinople, ravaged by earthquakes, fires, the internal strife, and the foreign foe, when the last of the Constantines lost his empire and life, possessed perhaps not one edifice which the first Constantine or even Justinian had seen; especially, too, as the fury of the Latin crusaders destroyed every work of art that had escaped former disasters. A plan of the city, as it existed in the reign of Arcadius, divided into its 14 regions, is given on the next page, by which the position of the different buildings may be clearly seen.

At the siege of Byzantium, Constantine had pitched his tent upon the second hill; to commemorate his success, he chose this site for the principal forum (Zosim. ii. 31, 35), which appears to have been of an elliptical form. The two opposite entrances formed triumphal arches; the porticoes, which enclosed it on every side, were filled with statues of the tutelar deities of Greece.

At each end were two shrines, one of which held the statue of Cybele, which was said to have been placed by the Argonauts upon Mt. Dindymus, but deprived of her lions and of her hands from the attitude of command distorted into that of a suppliant for the city; in the other was the Fortune of Byzantium (Euseb. *Vit. Const.* iii. 54; Sozomen. *H. E.* ii. 5). The centre of the forum was occupied by a lofty pillar, which, formed of marble and porphyry, rose to the height of 120 feet. On this column Constantine, with singular shamelessness, placed his own statue with the attributes of Christ and Apollo, and substituted the nails of the Passion for the rays of the Sun; Constantine was replaced by Julian, Julian by Theodosius. In A. D. 1412 the keystone was loosened by an earthquake. The statue fell under Alexius Comnenus, and was replaced by the Cross. The Palladium was said to be buried under the pillar. (Von Hammer, *Constantinopel und die Bosporus*, vol. i. p. 162.) Besides the principal forum was a second one, which has been sometimes confounded with the other; it was square, with porticoes surrounding it, consisting of two ranks of columns; in this the Augusteum, or court of the palace, stood the Golden Miliarium, which, though it served the same purpose as its namesake at Rome, did not resemble it in appearance, as this was an elevated arcade, embellished with statues.

The Circus or Hippodrome was a stately building. The space between the two metae or goals was filled with statues and obelisks. The Turks retain the translated name of the horse-course (*Atmeidan*), but the ancient splendour of the place has disappeared; it is no longer a circus, but an oblong open space, about 300 paces long by 150 wide. (Hobhouse, *Albania*, vol. ii. p. 950.) At the upper end is a granite obelisk of rather mean proportions, and covered with hieroglyphics of poor workmanship. It is called after Theodosius, but was probably moved by that emperor, after it had been erected by Constantine, to some other part of the city. An epigram on the pedestal records the success of Proclus, praefect of the city, under Theodosius the Great, in setting the obelisk upright. (*Anthol. Graec.* iv. 17.) Near this stands the wreathed column of bronze, which, according to legend, bore the golden tripod of Delphi, and was shattered by the iron mace of Mohammed II. Clarke (*Trav.* vol. ii. p. 58) treated the latter circumstance as a fiction of Thévenot; be the former true or not, the relic is now a poor mutilated thing, with one end in the ground, above which it does not rise more than 7 feet, and the end open and filled with rubbish. Fourteen churches, fourteen palaces, several triumphal arches, and eight public baths are assigned to the founder of the city. Constantine, and in this his example was followed by his successors, imitated Ancient Rome in the construction of sewers. Two large subterranean cisterns or reservoirs of water, constructed by the Greek emperors in case of a siege, still remain; one called by the Turks the

PLAN OF CONSTANTINOPLE. (AA, Chrysoceras, Golden Horn.)

I. REGION.

House of Placidia Augusta.
House of Marina.
Baths of Arcadius.
29 streets, 118 houses, 2 porticoes of great length.

II. REGION.

Church of S. Sophia.
The old Church.
Senate House.
Tribunal with porphyry steps.
Baths of Zeuxippus.
A Theatre.
An Amphitheatre.
34 streets, 98 large houses, 4 great porticoes.

III. REGION.

The Circus Maximus.
House of Pulcheria Augusta.
The New Port.
The Sigma Portico.
Tribunal of the Forum of Constantine.
94 great houses, 5 large porticoes.

IV. REGION.

palace of the "Thousand and One Pillars," is now perfectly dry. The other still existing as a cistern, and called the "Subterranean Palace," may be described as an underground lake, with an arched roof to cover it, supported on 336 marble pillars.

From the throne, seated upon which the emperor viewed the games of the Circus, a winding staircase called cochlea descended to the palace. This was a magnificent building, covering a great extent of ground, on the banks of the Propontis, between the Hippodrome and the church of S. Sophia, now the Seraglio. The baths of Zeuxippus, the site of which it is difficult to fix, as, while history seems to connect them with S. Sophia and the palace, the original plan places them on the other side of the city, near the harbour, were so embellished by Constantine with statues of marble and bronze, that they became famed as the most beautiful in the world. These statues were brought from their local sanctuaries to adorn the squares and baths of Constantinople,—the Athene of Lyndus, the Muses of Helicon, the Amphitrite of Rhodes, the Pan which was consecrated by the Greeks after the defeat of Xerxes. Theodosius the younger pulled down the Dioscuri, who overlooked the Hippodrome. It was reserved

for the Latin crusaders to destroy these precious remains of ancient art, and the four bronze horses of San Marco at Venice are the only remains of the handywork of the Grecian artists with which Constantinople was peopled.

While private houses and public buildings for business, for convenience, for amusement, and splendour rose with the rapidity of enchantment, one class of edifices was wanting. A few temples, such as those of the Sun, the Moon, and Aphrodite, were permitted to stand in the Heropolis, though deprived of their revenues. (Malala, *Constant.* x.) But few churches were built; of these one was dedicated to the Supreme Wisdom. The ancient Temple of Peace, which afterwards formed part of Santa Sophia, was appropriately transformed into a church. The Church of the Twelve Apostles appears from Eusebius (*Vit. Const.* iv. 58) to have been finished a few days before the death of Constantine; it fell to ruin 20 years afterwards, was repaired by Constantius, rebuilt by Justinian, and demolished by Mohammed II.

Theodosius the Great built the principal gate of Constantinople, "The Golden Gate," so celebrated by the Byzantine writers; this gate, on the S. of the town, was that by which the emperors made their solemn entry, and stood at the beginning of the principal street, which crossed the town up to the Bosporus. Gyllius (Bandur. *Imp. Orient.* vol. ii. p. 595), in the 16th century, saw the remains of it. It is now sought for in vain, though a gate entirely blocked up is sometimes shown to travellers for it. The Empress Eudoxia, wife of Arcadius, ornamented her city with a palace and baths. Theodosius II. loved the arts, and himself cultivated painting and sculpture; he encouraged architecture, and executed considerable works; in his reign the walls of Constantinople were in great measure rebuilt, and the city adorned with thermae, a forum, and two palaces for the sisters of Pulcheria. In 447, after the great earthquake, the edifices of Constantinople were restored with renewed splendour. Marcian turned his attention chiefly to the aqueducts; Leo I. Thrax to the churches of Constantinople. Nothing is recorded as having been constructed under Zeno and Anastasius. Justin I., besides his great works at Antioch, contributed to the embellishments, or rather restoration of Constantinople. The reign of Justinian is the most brilliant epoch of the Neo-Greek or Byzantine architecture; and, like Hadrian, this emperor was entitled to the proud distinction of being called by his contemporaries "reparator orbis." The great ornament of Constantinople was the temple reared by Justinian in honour of the Eternal Wisdom (S. Sophia). This, the principal church of Constantinople, had been twice destroyed by fire, after the exile of John Chrysostom, and during the *Nika* of the Blue and Green factions. Anthemius of Tralles, and Isidorus of Miletus, were the builders employed by Justinian to rebuild the church on a plan in which, as Mr. Hope (*Hist. of Architecture*, p. 126) remarks, the wisdom of man shows but little. Disregarding the cardinal rule that all architectural trick is inconsistent with good taste, they endeavoured to make it appear entirely hovering in air without the least earthly resting-place. The attempt was unsuccessful, for, in A.D. 558, twenty-one years after the dedication, an earthquake nearly destroyed it; another Isidorus, nephew of the former, was employed to restore it; an elevation of 20 feet more than it had before its fall was given to the dome, and the originally circular was changed to an elliptical form. Though such was the lightness of the dome that it appeared suspended "by a chain from Heaven," the circle which encompasses the dome rested on four strong arches, supported on four massive piles, assisted on the N. and S. side by four columns of granite, each of a shaft 40 feet long. Two larger and six smaller semi-domes sprouted out and encircled the central cupola. The ground-plan describes the figure of a Greek cross within a quadrangle, but on the inside was oval. (Comp. Procop. *de Aed.* i. 1; Agath. v. pp. 152, 153; Paul. Silentiar. ad calc. Ann. Comnen. *Alex.*; Evag. iv. 31; Dallaway, *Ancient and Modern Constantinople*, p. 52.) The best description of this magnificent church is to be seen in Batissier (*Histoire de l'Art Monumental*, p. 386, foll.). Besides this great model of Eastern architecture, Justinian erected more than twenty-five churches in Constantinople and its suburbs. In honour of himself a colossal statue, representing the emperor mounted on horseback and in an attitude of defiance, was placed upon a column in the Augusteum before S. Sophia. This statue existed as late as the 16th century, when it was melted into cannon by the Turks. (Gyllius, *de Top. Const.* ii. 13.) The palace was also restored by Justinian, and magnificently adorned with bronze, many coloured marbles and mosaics, representing the glories of the African and Italian triumphs. From the time of Heraclius to the hour of her fall, the outward glories of Constantinople shared the same fate as her renown and greatness. Here and there some emperor might endeavour to repair the ravages which time, nature, or violence had wrought upon the mighty works of his predecessors. In the 10th century the palace, the ceremonies of which have been described by Constantine Porphyrogenitus (*de Caer. Aul. Byz.*), was pre-eminent for its size, strength, and magnificence. (Ducange, *Constantinop. Christian.* ii. 4.) A large and irregular building, each separate part bore the character of its founder, and the times.

The Latin crusaders, Mohammed II., and subsequent neglect and recklessness, have effected such results, that it may be said, with almost literal truth of the city of Constantine and Justinian, not one stone resteth upon another.

VI. Government and Administration.

With the foundation of a new capital a new order of things in the civil and military administration was introduced; commenced by Diocletian it was perfected by Constantine.

In the hierarchy of the state the magistrates were divided into 3 classes,

I. The "Illustrious."

II. The "Spectabiles."

III. The "Clarissimi."

There were 2 inferior ranks conferred on those who were not raised to the senatorial dignity.

IV. The "Perfectissimi."

V. The "Egregii."

The 3rd epithet belonged to the senatorial rank, the 2nd to those of superior distinction; the 1st was granted only to

I. Consuls and patricians.

II. The Praetorian praefects, with the praefects of Rome and Constantinople.

III. The masters-general of the infantry and cavalry.

IV. The seven ministers of the palace who ex-

ercised "sacred" functions about the person of the emperor.

1. The consuls who, though their office had degenerated into an empty name, were still the highest officers of the state, were inaugurated at the imperial residence with the utmost splendour. The title of patricians became, under Constantine, a personal and not an hereditary distinction, bestowed on the ministers and favourites of the court.

2. The praetorian praefects were the civil magistrates of the provinces, as the immediate representatives of the imperial majesty: everything was under their control. The accompanying table taken from Marquardt (*Handbuch der Röm. Alterthum*, p. 240), gives the division of the empire under these four great officers. Rome and Constantinople were alone exempted from their jurisdiction, but were respectively under a praefect of the city, and a perfect equality was established between the two municipal and the four praetorian praefects. The "spectabiles," in which were included the 3 proconsuls of Asia, Achaia, and Africa, with the lieutenant-generals and military counts and dukes, formed an intermediate class between the "illustrious" praefects and "honourable" magistrates of the provinces.

DIVISION OF THE ROMAN EMPIRE, A.D. 400.

I. Praefectus Praetorio Galliarum.

A. *Vicarius Hispaniae.*

1. Consularis Baeticae.
2. " Lusitaniae.
3. " Gallaeciae.
4. Praeses Tarraconensis.
5. " Carthaginiensis.
6. " Tingitaniae.
7. " Insularum Balearium.

B. *Vicarius Septem Provinciarum.*

1. Consularis Viennensis.
2. " Lugdunensis.
3. " Germaniae I.
4. " Germaniae II.
5. " Belgicae I.
6. " Belgicae II.
7. Praeses Alpium Maritimarum
8. " Poeninarum et Graiarum
9. " Maximae Sequanorum.
10. " Aquitanicae I.
11. " Aquitanicae II.
12. " Novempopulanae.
13. " Narbonensis I.
14. " Narbonensis II.
15. " Lugdunensis II.
16. " Lugdunensis III.
17. " Lugdunensis Senoniae.

C. *Vicarius Britanniarum.*

1. Consularis Maximae Caesariensis.
2. " Valentiae.
3. Praeses Britanniae I.
4. " Britanniae II.
5. " Flaviae Caesariensis.

II Praefectus Praetorio Italiae.

A. *Vicarius Urbis Romae*

1. Consularis Campaniae.
2. " Tusciae et Umbriae.
3. " Piceni Suburbicarii.
4. " Siciliae.
5. Corrector Apuliae et Calabriae.
6. " Bruttiorum et Lucaniae
7. Praeses Samnii.
8. " Sardiniae.
9. " Corsicae.
10. " Valeriae.

B. *Vicarius Italiae.*

1. Consularis Venetiae et Histriae.
2. " Aemiliae.
3. " Liguriae.
4. " Flaminiae et Piceni Annonarii.
5. Praeses Alpium Cottiarum.
6. " Rhaetiae I.
7. " Rhaetiae II.

Illyrium Occidentale.
8. Consularis Pannoniae II.
9. Corrector Saviae.
10. Praeses Pannoniae I.
11. " Dalmatiae.
12. " Noricum Mediterraneum.
13. " Noricum Ripense.
14. Dux Valeriae Ripensis.

C. *Vicarius Africae.*

1. Consularis Byzacii.
2. " Numidiae.
3. Praeses Tripolitanae.
4. " Mauritaniae Sifetensis.
5. " Mauritaniae Caesariensis.

The Proconsul of Africa was directly under the Emperor, and not under the Praefectus Praet. Ital.

III. Praefectus Praetorio Illyrici.

A. *Directly under the Praefect*

The Diocese of Dacia.

1. Consularis Daciae Mediterraneae.
2. Praeses Moesiae I.
3. " Praevalitanae.
4. " Dardaniae.
4. Dux Daciae Ripensis.

B. *Under a Proconsul*

Achaia.

C. *Under the Vicarius Macedoniae.*

1. Consularis Macedoniae.
2. " Cretae.
3. Praeses Thessaliae.
4. " Epiri Veteris.
5. " Epiri Novae.
6. " Macedoniae Salutaris.

A part of this last belonged to the Diocoesis Dacia.

IV. Praefectus Praetorio Orientis.

A. *Comes Orientis.*

1. Consularis Palaestinae I
2. " Phoenices.
3. " Syriae I.
4. " Ciliciae.
5. " Cypri.
6. Praeses Palaestinae II.
7. " Palaestinae Salutaris.
8. " Phoenices Libani.
9. " Euphratensis.
10. " Syriae Salutaris.
11. " Osrhoënae.
12. " Mesopotamiae.
13. " Ciliciae II.
14. Comes Rei Militaris Isauriae.
15. Dux Arabiae.

B. *Praefectus Augustalis.*

1. Praeses Lybiae Sup.
2. " Lybiae Inf.
3. " Thebaidos.
4. " Aegypti.
5. " Arcadiae.
6. Corrector Augustamnicae.

C. *Vicarius dioceseos Asianae.*

1. Consularis Pamphyliae.
2. " Lydiae.
3. " Cariae.
4. " Lyciae.
5. " Lycaoniae.
6. " Pisidiae.
7. " Phrygiae Pacatianae.
8. " Phrygiae Salutaris.

D. *Vicarius Ponticae.*

1. Consularis Bithyniae.
2. " Galatiae.
3. Corrector Paphlagoniae.
4. Praeses Honoriados.

(Praefectus Praetorio Orientis.)

5. " Galatiae Salutaris.
6. " Cappadociae I.
7. " Cappadociae II.
8. " Helenoponti.
9. " Ponti Polemoniaci.
10. " Armeniae I.
11. " Armeniae II.

E. *Vicarius Thraciarum.*

1. Consularis Europae.
2. " Thraciae
3. Praeses Haemimonti.
4. " Rhodopae.
5. " Moesiae II.
6. " Scythiae.

Directly under the Emperor, the Proconsul of Asia was under him,

1. Consularis Hellesponti.
2. Praeses Insularum.

The great framework of the Roman empire was broken up into 116 provinces, each of which supported an expensive establishment. Of these 3 were governed by "Proconsules;" 37 by "Consulares;" 5 by "Correctores;" 71 by "Praesides."

All these were entrusted with the administration of justice and the finances in their respective districts. They were drawn from the profession of the law.

The defence of the Roman empire on the im-

portant frontiers of the Rhine, the Upper and Lower Danube and the Euphrates, was committed to 8 masters-general of cavalry and infantry: under them were stationed 35 military commanders in the provinces; 3 in Britain; 6 in Gaul; 1 in Spain; 1 in Italy; 5 on the Upper Danube; 4 on the Lower Danube; 8 in Asia; 3 in Aegypt; 4 in Africa. These were distinguished by the titles of "dux" or duke, and "comes," counts or companions. There were 583 stations or garrisons established on the frontiers, and the effective force of the troops under the successors of Constantine was computed at 645,000 soldiers. From the difficulty of the levies, they were compelled to have recourse to barbarian auxiliaries.

Besides these magistrates and generals 7 great officers of state remained at court.

1. The eunuch, "praepositus," or praefect of the bed-chamber, under whom were "comites" to regulate the wardrobe and table of the emperor.

2. The "masters of the offices," the supreme magistrate of the palace, who inspected the discipline of the civil and military schools. In his office the public correspondence was managed in the 4 *scrinia* or bureaux.

3. The "quaestor," who may be compared with a modern chancellor.

4. The "count of the sacred largesses," or treasurer general of the revenue.

5. The "count of the private estate," or privy purse.

6, 7. The "counts of the domestics," or officers in command of the horse and foot guards, consisting of 7 battalions of 500 men each.

To facilitate intercourse between the court and the provinces "posts" were established: by an intolerable abuse the agents employed for this purpose became the official spies; and as in the new jurisdiction of the empire the "quaestio" or torture was permitted in any offence where "hostile intention" against prince or state was presumed, the terrors of malicious informations were materially increased.

The treasury was supplied by a system of direct taxation, and the word *indiction* was transferred from the solemn edict of the emperor to the measure of tribute which it prescribed, and the term allowed for payment. The "decurions," who formed the corporations of the cities, were charged with assessing according to the census of property prepared by the "tabularii" the payment due from each proprietor. Besides the land-tax, which was in its operation a proprietor or landlord's tax, there was a capitation tax on all who were not possessed of landed property. Certain classes were gradually exempted, till at length it fell solely on the "coloni" and agricultural slaves. (Comp. Savigny, *Abhand. der Berlin. Acad.* 1822-23. p. 27.) Besides these general taxes upon industry "benevolences," under the name of "coronary gold," were also exacted from communities on certain occasions.

It must be admitted that the Byzantine fiscal system, though so rapacious that it extracted for the government the whole annual surplus of the people's industry, was constructed with great financial skill. One fact may be cited to show how wisely this branch of the public service was administered. From the fall of the Western Roman Empire to the conquest of Constantinople by the Crusaders the gold coinage of the Empire was maintained constantly of the same weight and standard. The concave gold byzants of Isaac II. are precisely of the same weight and value as the solidus of Leo the Great and Zeno the Isaurian.

Gold was the circulating medium of the Empire, and the purity of the Byzantine coinage rendered it for many centuries the only gold currency that circulated in Europe.

An admirable account of the internal administration of the empire, and the social condition of the people will be found in Mr. Finlay's learned volumes, *Greece under the Romans*, and *Mediaeval Greece*. See also Hullmann, *Geschichte der Byzantischen Handels*.

For the topography of Constantinople the following works can be consulted:—Von Hammer, *Constantinopel und die Bosporus;* Dallaway, *Constantinople, Ancient and Modern;* Andreossy, *Constantinople et le Bosphore;* Carbognano, *Descr. Topograph. di Const.;* Banduri, *Imp. Orient.;* Codinus, *de Orig. Constant.;* Ducange, *Constant. Christ.* [E. B. J.]

CONSUANTAE, or CONSUANTES (Κονσουανται), a Celtic tribe of Vindelicia, on the upper *Lech*, in the neighbourhood of *Schwangau*. (Ptol. ii. 13. § 1; Plin. iii. 24, who calls them *Consuanetes.*) [L. S.]

CONTACOSSYLA (Κοντακόσσυλα, Ptol. vii. 1 § 15), a place called by Ptolemy an emporium in the country of Maesolia or Masalia, in the S. of India. It has been conjectured, with good reason, to be the same as the modern *Masulipatam.* [V.]

CONTENEBRA, a town of Etruria, mentioned only by Livy (vi. 4), from whom it appears that it was situated in the territory of Tarquinii. It was taken and destroyed by the Romans in B.C. 388, at the same time with Cortuosa, the site of which is equally unknown. [E. H. B.]

CONTESTA'NI (Κοντεστανοί), a people in the SE. of Hispania Tarraconensis, E. of the Bastetani. Their country, called Contestania, extended along the coast from the city of Urci, at the E. extremity of Baetica, to the river Sucro, and corresponded to *Murcia* and the S. part of *Valencia*. Besides CARTHAGO NOVA, and Saetabis, they possessed the following less important cities: on the coast, Lucenti or LUCENTUM (Λουκέντοι ἢ Λούκεντον), Alonae (Ἄλωναι), the port ILICI (Ἰλλικιτανὸς λιμήν: the city itself stood a little inland); and, in the interior, MENLARIA (Μενλαρία), VALENTIA (Οὐαλεντία), Saetabicula (Σαιταβίκουλα), and Iaspis (Ἴασπις: Ptol. ii. 6. §§ 14. 62; Plin. iii. 3. s. 4; Liv. Fr. xci.). [P. S.]

CONTHYLE (Κονθύλη), a demus of Attica of unknown site. [See p. 334.]

CONTOPO'RIA. [ARGOS, p. 201, b.]

CONTRA AGINNUM is placed by the Anton. Itin. half way between Augusta Veromanduorum (*St. Quentin*) and Augusta Suessionum (*Soissons*), 13 M. P. from each. The Table makes the distance 25 M. P. between these two places, and does not mention Contra Aginnum. D'Anville places Contra Aginnum at *Condran* on the *Oise*. The Notitia mentions a body of Batavi Contraginnenses who were stationed at Noviomagus Belgicae Secundae or *Noyon*. [G. L.]

CONTRE'BIA (Contrebienses). 1. One of the chief cities, and, according to Valerius Maximus, the capital of Celtiberia. It is conspicuous in the history of the Celtiberian War; and in the Sertorian War, it was the scene of one of those obstinate defences which so often occur in Spanish history its reduction costing Sertorius forty-four days and

many lives. Its site appears to have been near *Albarracin*, SE. of Caesaraugusta. (Liv. xi. 33; Val. Max. ii. 7. § 10, vii. 4. § 5; Flor. ii. 7; Vell. Paterc. ii. 5; Liv. Fr. xci.; Geogr. Rav. iv. 43; Ukert, vol. ii. pt. 1. pp. 461, 462.)

2. CONTREBIA LEUCAS, in the territory of the Berones, is a different place. [BERONES.] [P.S.]

CONVALLIS. [FORTUNATAE INSULAE.]

CO'NVENAE (Κονουέναι), a people on the north side of the Pyrenees, in Aquitania according to Pliny (iv. 19), who says, "in oppidum contributi Convenae." Strabo (pp. 190, 191) says, "close to the Pyrenees is the country of the Convenae, that is, of those who were a mixed people; where there is a town Lugdunum, and the warm springs of the Onesii." [AQUAE CONVENARUM.] He adds that they received the Jus Latii. It appears from the name "Convenae," the expression of Pliny "contributi," and Strabo's explanation of the term, that it contains the elementary parts of the Latin verb "convenire." Hieronymus (*Adv. Vigilantium*) has a story that Cn. Pompeius, after terminating the war with Sertorius, settled a number of Spanish robbers and such like people here. In this neighbourhood was Calagorris, an Iberian name; but this place may be of older date than the settlement of the Convenae. The town Lugdunum, afterwards Convenae, is *St. Bertrand de Cominge* in the district of Cominge. De Valois observes that the "fugitivi ab saltu Pyrenaeo praedonesque" (Caes. *B. C.* iii. 19) mean the Convenae, which seems very doubtful.

The name Convenae appears in Ptolemy (ii. 7) in a corrupt form Κομονένοι; in the old Latin version, Cumueni. [G. L.]

COPAE (Κῶπαι: *Eth.* Κωπαιεύς, Thuc.; Κωπαΐτης, Steph. B.: *Topolia*), a town of Boeotia, and a member of the Boeotian confederacy, was situated upon the northern extremity of the lake Copais, which derived its name from this town. It is mentioned by Homer (*Il.* ii. 502); but it was a small place, and its name rarely occurs in Grecian history. It was still in existence in the time of Pausanias, who mentions here the temples of Demeter, Dionysus and Sarapis. (Thuc. iv. 93; Strab. ix. pp. 406, 410; Paus. ix. 24. § 1, seq.; Plin. iv. 7. § 12.) The modern village of *Topólia* occupies the site of Copae. It stands upon a promontory in the lake which is connected with the mainland by only a narrow causeway. (Dodwell, *Classical Tour*, vol. ii. p. 56; Leake, *Northern Greece*, vol. ii. p. 306; Ulrichs, *Reisen in Griechenland*, p. 216.)

COPA'IS LACUS. [BOEOTIA, pp. 410, 411, 414, b.]

COPHANTA. [COPHAS.]

COPHAS (Κωφάς, Marcian. p. 23; Arrian, *Indic.* c. 27; Κωφάντα λιμήν, Ptol. vi. 8. § 9; Κωφάντα πόλις, Ptol. vi. 8. § 14), a small port in Gedrosia to which the fleet of Nearchus came on their way from the Indus to *C. Jask*. Vincent places it to the east of *C. Guadel*, because this appears on the whole to coincide best with the words of Arrian. There can be little doubt that Cophas was the real name, though Ptolemy has Cophanta. [V.]

COPHEN or COPHES (Κωφήν, -ῆνος, Arrian. *Ind.* i. 4, *Anab.* iv. 22, v. 1; Κώφης, -ου, Dionys. Per. 1140; Strab. xi. p. 697; Plin. vi. 17. s. 21, 20. s. 23; Mela, iii. 7. § 6), a river in the western part of India, which flowed into the Indus. From the order in which the rivers of the *Panjáb* are mentioned, it seems likely that the Cophes is represented by the river of *Kábul*. (Lassen, *z. Gesch. d. Kon. v. Baktrien*, v. p. 129; Ritter, *Erdkunde*, vol. iii. p. 420, vol. v. p. 449.) Its principal tributaries are the Choaspes (Strab. p. 697; Curt. viii. 10), the modern *Attok*, and the Choes (Χόης, Arrian, *Anab.* iv. 23), the modern *Kameh*. [V.]

COPHEN (Κωφήν, Steph. B. *s. v.* Ἀραχωσία; Plin. vi. 23), a name given by Stephanus and Pliny to the town of Arachosia. Some editions of Pliny read "Cutin" instead of Cophen. It is not improbable that there has been some confusion between the name of this town and that of the most westerly of the great rivers of the *Panjáb*, mentioned above. [ARACHOSIA.] [V.]

COPHUS (Κωφός: *Kufó*), the harbour of Torone in Sithonia, which was so called because, being separated from the outer sea by two narrow passages, the noise of the waves was not heard in it; hence the proverb Κωφότερος τοῦ Τορωναίου λιμένος. (Zenob. *Prov. Graec.* cent. 4, pr. 68; Strab. Epit. vii. p. 330; Mela, ii. 3.) Leake (*North. Greece*, vol. iii. p. 119) suggests that it may be the same as what Thucydides (v. 2) called the harbour of the Colophonians, and that we should read Κωφῶν instead of Κολοφωνίων. The modern harbour of *Kufó* still preserves the ancient name. [E. B. J.]

COPIA. [THURII.]

COPRATES (Κοπράτης, Strab. xv. p. 729; Diod. xix. 18), a river of Susiana, which rises in the NE. mountains of *Laristan* near *Buru-jird*, and according to Diodorus flows into the Tigris. It is clear, however, from his context, that for Tigris we must read Pasitigris. Antigonus was marching to meet Eumenes, whose camp was pitched on the banks of the Pasitigris (now *Karun*), and he was as would seem at least one day's march beyond Susa. Diodorus (xvii. 67) calls the Pasitigris Tigris, when describing the march of Alexander from Susa, ἐπὶ τὸν Τίγριν; and Curtius (v. 3) translates this passage "ad flumen, Pasitigrim incolae vocant." The Coprates is now called the river of *Dizful*. [V.]

COPTOS (Κοπτός or Κοπτίς, Ptol. iv. 5. § 73; Κοπτώ, Plut. *de Is. et Osir.* c. 14), in hieroglyphics KOBTO, the modern *Kouft* or *Keft*, was the principal city of the nome Coptites in the Upper Thebaid, the Thebais Secunda of the Itineraries. It was situated in lat. 26° N., on the right bank of the Nile, and about a mile in distance from the river. In the immediate neighbourhood of Coptos a valley opened to the south-east leading to the porphyry-quarries in the Arabian desert, and to Berenice (*Cosseir*) on the Red Sea. When in B. C. 266, Ptolemy Philadelphus constructed the town and harbour of Berenice, he erected also four public inns or watering places between his new city and Coptos, in order that the caravans might have convenient halting-places during their twelve days' journey through the eastern desert. From this epoch Coptos was enriched by the active commerce between Libya and Egypt, on the one part, and Arabia and India on the other, and the city continued to flourish, until it was nearly destroyed by the emperor Diocletian in A. D. 292. It survived however this calamity; and remained a considerable place down to the latest period of the Roman empire. In the reign of Justinian, in the first half of the 7th century A. D., Coptos for a brief interval bore the name of Justinianopolis. (*Notit. Eccles.*) Coptos being comparatively a modern town of the Thebaid possesses no monuments of the Pharaonic era. In the church, however, which the Christian population of the present *Kouft* have built, are imbedded stones inscribed with the ovals of Thothmes III. and Nec-

tanebus. (Wilkinson, *Mod. Egypt and Thebes*, ii. p. 123.) Neither, as might have been expected from its origin, does it exhibit any remarkable Hellenic remains. The principal objects of interest there are the ruins of Roman buildings. The neighbouring hills contained emeralds and a few other precious stones: and the vineyards produced a thin and not much esteemed wine, which, however, from its lightness of body was administered in febrile disorders. (Aelian, *H. An.* vii. 18; Athen. i. p. 33: Plin. *N. H.* xxxvii. 17, 18, 55. 56.) [W. B. D.]

CORA (Κόρα: *Eth.* Κορανός: Coranus: *Cori*), a city of Latium, situated on the left of the Appian Way, between Velitrae and Norba, and about 37 miles distant from Rome. It stands on a bold hill, on the outskirts of the Volscian mountains, and overlooking the plain of the Pomptine Marshes. All accounts agree in representing it as a very ancient city. Virgil notices it as one of the colonies of Alba Longa, and this is confirmed by Diodorus and the author of the *Origo Urbis Romae*, both of whom include it in their lists of the colonies founded by Latinus Silvius. (Virg. *Aen.* vi. 776; Diod. vii. *Fr. ap. Euseb. Arm.* p. 184; *Orig. U. Rom.* 17.) Pliny, on the contrary, ascribes its foundation to Dardanus (Plin. iii. 5. s. 9; Solin. 2. § 7), while another tradition seems to have represented it as deriving both its name and its origin from Coras, a brother of Tiburtus, the eponymous hero of Tibur. (Serv. *ad Aen.* vii. 672; Solin. 2. § 8.) Both these last traditions may be regarded as pointing to a Pelasgic origin. It is certain that it was at a very early period one of the most considerable cities of Latium. Thus Cato mentions it as one of those which took part in the consecration of the grove and sanctuary of Diana in the Nemus Aricinum; and we find it included by Dionysius in the list of the thirty Latin cities which composed the League in B. C. 493. (Cato *ap. Priscian.* iv. 4. § 21; Dionys. v. 61; Niebuhr, vol. ii. p. 17, note.) At an earlier period also one of the two generals chosen to command the confederate armies was Ancus Publicius of Cora. (Dionys. iii. 34.) Its subsequent relations both with Latium and Rome are very obscure. In B. C. 503, Livy calls it a "colonia Latina," and speaks of it as revolting, together with Pometia, to join the Aurunci, but shortly after both Cora and Pometia appear as Volscian towns. (Liv. ii. 16, 22; Niebuhr, vol. ii. pp. 108, 261.) It appears certain that it must have fallen into the hands of the Volscians at the time that nation was at the height of its power: and it was probably occupied by a fresh body of colonists when it was recovered by the Romans and Latins. Propertius (iv. 10. 26) appears to place this reconquest *before* B. C. 428, but it is doubtful whether we can trust to his historical accuracy on this point. It is, however, probable that Cora resumed the position of a Latin colony about this period, as well as Norba and Setia, and on this account we find no mention of any of the three in the great Latin War of B. C. 340, or the pacification that followed. But a few years later, B. C. 330, their territories were laid waste by the Privernates under Vitruvius Vaccus. (Liv. viii. 19.) It seems certain therefore that they were at this time dependencies of Rome. Livy includes Cora among the twelve Latin colonies, which, in B. C. 209, refused any further supplies (xxvii. 9): but where the same list is repeated (xxix. 15), the name is written *Sora*, and it seems most probable that this is the town really meant. (Madvig. *de Colon.* p. 268, note.) In another passage he notices it among the Municipia on the Appian Way (Liv. xxvi. 8), and it seems to have been at this time still a considerable town, but from henceforth we hear little of it. According to Florus, it was ravaged by Spartacus (iii. 20. § 5, but this reading is probably corrupt); and there seems reason to suppose that it suffered severely during the Civil Wars. (Lucan. vii. 392.) But no subsequent mention of it occurs in history; and though the name is still found in Strabo and Pliny, and an inscription attests its municipal rank in the first century of the empire, it seems probable that it must have soon after fallen into complete decay. Nor is any trace of its existence found in the middle ages till the 13th century, when it reappears under its ancient name, which it still retains, and is now a considerable town. (Plin. iii. 5. s. 9; Strab. v. p. 237; Nibby, *Dintorni*, vol. i. p. 493.)

Few cities of Latium possess more considerable remains of antiquity than Cora. Among these are numerous portions of the ancient walls, constructed of massive polygonal blocks, together with terraces and substructions of a similar character, resembling in style the massive fortifications of Norba and Signia, but inferior in extent and preservation. They appear when perfect to have formed three successive tiers or circuits, the uppermost of which enclosed the highest summit of the hill, and constituted the citadel of the ancient town. Within this enclosure, and on the highest point of the whole city, stands a small Doric temple (commonly known, but without any authority, as that of Hercules), the tetrastyle portico of which is in good preservation, and an inscription over the entrance records its construction by the Duumvirs of the town. From the orthography of this inscription, as well as the style of architecture, there seems reason to assign the erection of it to the last century of the Roman Republic. Lower down the town are the remains of another temple of far superior style and execution, but of which only two columns now exist: they are of Corinthian order and of beautiful workmanship; from a fragment of the inscription on the architrave, we learn that it was consecrated to Castor and Pollux; its date is uncertain, but it must certainly be referred to the best period of Roman architecture. Many other fragments of buildings are to be found in the town, and several inscriptions, but all belonging to the early ages of the Roman empire, or the end of the Republican period. Just outside the town, on the road to Norba, is an ancient bridge of a single arch, thrown over a deep ravine, which is one of the most remarkable monuments of its kind in Italy. From the irregularity of its construction, it is probable that this is the work of an early period, and belongs to the old Latin colony of Cora. Many of the other remains, and some parts at least of the fortifications, may probably be referred to the time of Sulla. (Nibby, *Dintorni di Roma*, vol. i. pp. 497—512. The bridge and specimens of the walls are figured by Dodwell, *Pelasgic Remains*, pl. 88—91.) [E. H. B.]

CORACE'SIUM (Κορακήσιον), Strabo's boundary on the coast of Asia Minor between Pamphylia and Cilicia. [CILICIA, p. 617.] At *Alâya*, which is the site of Coracesium, begins the mountainous coast which extends eastward to Cape *Cavalière*. A mountain a little east of *Alâya*, and near the coast, is marked 4800 feet high in Beaufort's map. "The promontory of *Alâya* (Coracesium) rises abruptly

from a low sandy isthmus, which is separated from the mountains by a broad plain; two of its sides are cliffs of great height, and absolutely perpendicular; and the eastern side, on which the town is placed, is so steep that the houses seem to rest on each other: in short, it forms a natural fortress that might be rendered impregnable; and the numerous walls and towers prove how anxiously its former possessors laboured to make it so." (Beaufort's *Karamania*, p. 172.) "The bay is open to southerly winds, the anchorage indifferent, and there is no harbour or pier." (Beaufort.) Beaufort supposes that there may, however, have been a mole constructed here, but circumstances prevented him from examining into that matter. The cliffs at *Alâya* are from 500 to 600 feet above the sea, and their perpendicular direction is continued for 60 or 70 feet below it. They are of compact white limestone, "tinged by a red dross on the outside." On the summit of the hill there are the remains of a Cyclopian wall, and a few broken columns; but no Greek inscriptions were discovered.

Strabo's brief description of Coracesium (p. 668) agrees with the facts. The natural strength of this position, a lofty and almost insulated rock, resembling Gibraltar, will explain its historical importance. Antiochus, king of Syria, was occupied with the siege of Coracesium when the Rhodians sent him the message which is mentioned by Livy (xxxiii. 20). It was the only place on the Cilician coast that had not submitted to him. The rebel Tryphon afterwards maintained himself for some time at Coracesium. [CILICIA, p. 621.] The pirates of Cilicia, against whom the Romans sent Cn. Pompeius, kept their plunder in the strong places of the Taurus, but their naval station was Coracesium, where with their fleet they awaited the attack of the Roman admiral, who defeated them. (Plut. *Pomp.* c. 28.) "In the old maps *Alâya* is called *Castel Ubaldo*, which may possibly have been the name given to it by the Venetians and Genoese, when in possession of this and other strongholds upon the Caramanian coast, but there is no recollection of the name in this country at present." (Leake, *Asia Minor*, p. 126.) [G. L.]

CORA'CIUS MONS (τὸ Κοράκιον ὄρος) is placed by Strabo (p. 643) between Colophon and Lebedus. As the word Κοράκιον is an adjective, the name of the mountain may be Corax. When Strabo speaks of a mountain between Colophon and Lebedus, he means that some high land is crossed in going from one place to the other; but this high land runs north, and occupies the tract that extends from Colophon and Lebedus north, towards the gulf of Smyrna. Chandler therefore may be right when he gives the name Corax to the mountains which were on his left hand as he passed from Smyrna to *Vourla*, near the site of Clazomenae. (*Asia Minor*, c. 23.) [G. L.]

CORALIS. [CARALLIS.]

CORA'LIUS. [BOEOTIA, p. 412, b.]

CORALLA (τὰ Κόραλλα), a cape on the coast of Pontus, now Cape *Kereli*. It is identified clearly enough by the name. (Hamilton's *Researches*, &c., vol. i. p. 252.) It is placed by Arrian, and the anonymous author of the Periplus, 100 stadia east of Philocalia, and Philocalia is 110 stadia east of Tripolis, *Tireboli*, a well-known position. [G. L.]

CORANITAE, an inland people of Arabia, mentioned by Pliny (vi. 28. s. 32), without any further clue to their position (Forster, *Arabia*, vol. ii. p. 55.) [G. W.]

CORA'SSIAE or CO'RSEAE (Κορασσίαι, Strab. x. p. 488; Plin. iv. 12. s. 23; Κορσίαι, or Κορσεαί, Strab. xiv. p. 636; Agathem. i. 4; Steph. B. *s. v.* Κορσεαί), a group of islands between Icaria and Samos, distant, according to Agathemerus, 30 stadia from the promontory Ampelos in Samos. They are now called *Phurni* and *Krusi*. (Ross, *Reisen auf den Griech. Inseln*, vol. ii. pp. 134, 156.) Some modern writers suppose that Corassiae and Corseae are names of two different groups of islands, the former being SW. of Icaria, and the latter near Samos; but upon a comparison of the two passages of Strabo in which the names occur, it would appear that he speaks of the same groups under these two names.

CORAX. [AETOLIA, p. 63.]

CORAX (Κόραξ, Ptol. v. 9. §§ 7, 10, 31, v. 10. § 1), a small river placed by Ptolemy in Sarmatia Asiatica, and which, rising in the Coraxici Montes, —a western portion of the chain of the Caucasus,— flowed SW. into the Euxine Sea. It was the northern limit of Colchis. It is probable that the Chariens of Arrian (*Peripl.* p. 10), the Charien of Pliny (vi. 3. 4), the Charis of Strabo (xi. p. 499), and the Charistos of Ptolemy (v. 10. § 2), are one and the same river with it. Its present name is *Sukum*. [V.]

CORAXI. 1. (Κόραξοι, Aristot. *Meteor.* i. 13; Hecat. *Fragm.* 185; Steph. B. *s. v.*; Mela, i. 19, iii. 5; Scylax, p. 31; Plin. vi. 5. s. 5), a tribe of Pontus to the NW. of Colchis, and close to the outlying spurs of the Caucasus. They probably occupied the western bank of the Corax in the neighbourhood of Dioscurias. In the same district, according to Stephanus, was Coraxicus Murus and Coraxica Regio.

2. A Scythian tribe mentioned by Ptolemy (vi. 14. § 10), but not, that we are aware, noticed in any other author. [V.]

CORA'XICI MONTES (Mela, i. 19. § 3; Plin. vi. 9. s. 10, vi. 12. s. 15; Mart. Cap. c. 6; ὁ Κόραξ ὄρος, Ptol. v. 9. §§ 14, 15, 18), the western part of the chain of the Caucasus to the N. of Colchis. It was the source, according to Ptolemy, of the river Cambyses; according to Mela and Pliny, of the Cyrus and Cambyses. [V.]

CO'RBASA (Κόρβασα), a town of Pisidia (Ptol. v. 5. § 6), the same apparently as the Colbasa of Hierocles. Ptolemy's Corbasa seems to be somewhere about Termessus. [G. L.]

CORBEUS (Κορβεούς), a city of the Tectosages, in Galatia, according to Ptolemy (v. 4. § 8). It is Gorbeius (Γορβειούς) in the text of Strabo (p. 568). Corbeus was the residence of Castor the son of Saocondarius. Saocondarius married the daughter of Deiotarus, who murdered his son-in-law and his own daughter, destroyed the castle, and ruined the greater part of Corbeus. As to these Galatian princes see Orelli *Onomasticon Tull.* (*s. v. Castor*). The name Corbeus occurs in the Antonine Itin. and in the Table, but the Table is quite unintelligible. In the Antonine Itin. Corbeus is placed between Ancyra (*Angora*), and a place called Rosologiacum, XX. M. P. from Ancyra and XII. M. P. from Rosologiacum. Cramer (*Asia Minor*, vol. ii. p. 97) says that "Corbeus answers doubtless to the site of *Corbega*, a few miles from the modern road leading from *Angora* to *Kaisarieh*." [G. L.]

CORBIANA (Κορβιανή, Strab. xvi. p. 745), one of the three praefectures into which Elymais was anciently divided. They were Massabatica, Gabiana, and Corbiana. [V.]

CO'RBILO (Κορβίλων), a trading town in Gallia

on the *Loire*. It was a flourishing place in the time of Pytheas. (Strab. p. 190.) No extant writer except Strabo mentions the place. De Valois and D'Anville would fix it at *Coeron*, about two leagues below *Nantes*, and on the same side of the river. Walckenaer supposes that it may be *Corsep*, because Corsep is nearer the mouth of the *Loire;* but Strabo simply says that Corbilo was on the river. [G.L.]

CORBIO (Κορβιών: *Rocca Priore*), an ancient city of Latium, situated on the NE. side of the Alban Hills, which plays a considerable part in the wars between the Romans and the Aequians in the early ages of the Republic. It appears probable that it was at one period one of the cities of the Latin League, as the name of the Κορβίνται, which is found in the best MSS. of Dionysius in the catalogue of the thirty cities, must certainly mean the citizens of Corbio. (Dionys. v. 61; Niebuhr, vol. ii. p 17., note 21.) Yet Dionysius represents it as a fortress in the hands of the Romans, and wrested from them by the Latins at the outbreak of the war (vi. 3). There can at least be no doubt that it was originally a Latin city, but fell into the power of the Aequians, as they gradually extended their conquests over the neighbouring towns of Latium; and in accordance with this view we find it included among the conquests attributed to Coriolanus. (Liv. ii. 39; Dionys. viii. 19.) At a somewhat later period it appears as an Aequian city, which, according to the received history, fell into the hands of the dictator Cincinnatus in consequence of his great victory on Mount Algidus, B. C. 458. It was again taken by the Aequians the following year, but recovered by the Roman consul Horatius Pulvillus, who is said to have utterly destroyed it. (Liv. iii. 28, 30; Dionys. x. 24, 26, 30.) The name, indeed, appears again some years later B. C. 446, when a fresh victory was obtained over the Volscians and Aequians by Quintius Capitolinus "ad Corbionem" (Liv. iii. 66, 69); but this does not prove that the city itself was re-established; and from this time it altogether disappears; nor is the name found in any of the geographers. All the accounts of the military operations in which Corbio appears point to it as being in close proximity to Mount Algidus, and a place of great natural strength. Hence there is little doubt that Holstenius was correct in fixing it on the site of *Rocca Priore*, a mediaeval fortress, occupying the summit of a lofty hill, about 3 miles from Tusculum, and one of the range which sweeps round from thence to join the heights of Mt. Algidus, and constitutes the NE. side of the great encircling barrier of the Alban Mountains. Some slight remains of antiquity are still visible at *Rocca Priore*, and the position was one well adapted for an ancient fortress, and must always have been of importance in connection with military operations on Mt. Algidus. The site appears to have been occupied in imperial times by a Roman villa. (Holsten. *Not. ad Cluv.* p. 162; Nibby, *Dintorni di Roma*, vol. iii. pp. 21—24; Abeken, *Mittel-Italien*, p. 68.) [E. H. B.]

CORBULO'NIS MUNIMENTUM, a fort built by Corbulo in the country of the Frisians, which probably was the foundation of the modern town of *Groningen*. In the year 1818 a bridge was discovered in the neighbourhood, leading through a marsh, about 3 miles long, and 12 feet broad: this bridge was probably connected with the fort of Corbulo. (Tac. *Ann.* xi. 19; comp. Wilhelm, *German.* p. 154.) [L. S.]

CORCY'RA (Κέρκυρα, Herod., Thuc.; Κόρκυρα, Strab. and later writers, and always on coins: *Eth.* Κέρκυρ, -υρος, Alcman. ap. Etym. M.; usually Κερκυραῖος, Κορκυραῖος, Corcyraeus: *Corfu*), an island in the Ionian sea, opposite the coast of Chaonia in Epeirus. The channel, by which it is separated from the mainland, is narrowest at its northern entrance, being only about 2 miles in width; it then expands into an open gulf between the two coasts, being in some places 14 miles across; but S. of the promontory Leucimme it again contracts into a breadth of 4 or 5 miles. The length of the island from N. to S. is about 38 miles. Its breadth is very irregular; in the northern part of the island it is 20 miles; it then becomes only 6 miles; widens again near the city of Corcyra to about 11 miles; south of which it contracts again to about 3 or 4 miles, terminating in a high narrow cape. The island contains 227 square miles.

Four promontories are mentioned by the ancient writers: — 1. CASSIOPE (Κασσιόπη, Ptol. iii. 14. § 11; *C. St. Catherine*), the NE. point of the island. 2. PHALACRUM (Φαλακρόν, Strab. vii. p. 324; Ptol. *l. c.*; Plin. iv. 12. s. 19; *C. Drasti*), the NW. point. 3. LEUCIMME or LEUCIMNA (Λευκίμμη, Thuc. i. 30, 47; Λεύκιμμα, Strab. vii. p. 324; Ptol., Plin. *ll. cc.*: *C. Léfkimo*), a low sandy point on the E. coast, about 6 or 7 miles from the southern extremity of the island. 4. AMPHIPAGUS (Ἀμφίπαγος, Ptol. *l.c.*: *C. Bianco*), the southern extremity of the island.

Corcyra is generally mountainous. The loftiest mountains are in the northern part of the island, extending across the island from E. to W.: the highest summit, which is now called *Pandokrátora* by the Greeks, and *San Salvatore* by the Italians, is between 3000 and 4000 feet above the sea, and is covered with luxuriant groves of olive, cypress, and ilex. From these mountains there runs a lower ridge from N. to S., extending as far as the southern extremity of the island. The position of Mt. ISTONE (Ἰστώνη), where the nobles entrenched themselves during the civil dissensions of Corcyra, is uncertain. (Thuc. iii. 85, iv. 46; Polyaen. *Strat.* vi. 20; Steph. B. *s. v.*) It was evidently at no great distance from the city; but it could hardly have been the summit of *San Salvatore* as some writers suppose, since the nobles, after their fortress on Mt. Istone had been captured, took refuge on higher ground. (Thuc. iv. 46.) Istone has been identified by Cramer and others with the hill mentioned by Xenophon (*Hell.* vi. 2. § 7) as distant only 5 stadia from the city; but this is purely conjectural. The only other ancient name of any of the mountains of Corcyra, which has been preserved, is MELITEIUM (Μελιτεῖον, Apoll. Rhod. iv. 1150, with Schol.); but as to its position we have no clue whatsoever.

Corcyra was celebrated for its fertility in antiquity, and was diligently cultivated by its inhabitants. Xenophon (*Hell.* vi. 2. § 6) describes it as ἐξειργασμένην μὲν παγκάλως καὶ πεφυτευμένην; and one of the later Roman poets celebrates it as "Corcȳra compta solum, locupleti Corcȳra sulco." (Avien. *Descr. Orb.* 663.) These praises are not undeserved; for modern writers celebrate the luxuriance and fertility of its numerous vallies. The chief production of the island now is oil, of which large quantities are exported. It also produces wine, which, though not so celebrated as in antiquity (Athen. i. p. 33, b.; Xen. *l. c.*), is still used in the town of *Corfu* and in the adjacent islands.

The most ancient name of the island is said to have been Drepane (Δρεπάνη), apparently from its

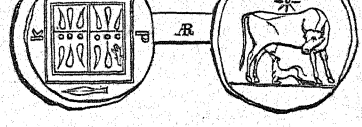
resemblance in shape to a scythe. (Apoll. Rhod. iv. 983, with Schol.; Callimach. ap. Plin. iv. 12. s. 19.) It is further said that its next name was Scheria (Σχερίη), which Homer describes as a fertile and lovely island, inhabited by the Phaeacians, an enterprizing seafaring people, the subjects of king Alcinous. (*Od.* v. 34, seq.) Although the Corcyraeans identified their island with the Homeric Scheria, and prided themselves upon the nautical fame of their Phaeacian ancestors (Thuc. i. 25), yet it is very doubtful whether the Homeric Scheria ought to be regarded as an island, which ever had any real existence. It is not unlikely that the Phaeacians are only a creation of the poet, to whom he assigns a place in the far distant West, the scene of so many marvels in the Odyssey. (Comp. Welcker, *Ueber die Homerischen Phaeaken*, in *Rheinisches Museum*, vol. i. pp. 219—283.)

The first historical fact recorded respecting Corcyra is its colonization by the Corinthians; for we may pass over the earlier Eretrian colony, which rests upon the authority of Plutarch alone. (*Quaest. Graec.* c. 11.) Archias, the founder of Syracuse, is said to have touched at Corcyra on his way to Sicily, and to have left behind him Chersicrates, one of the Heraclidae, who expelled the Liburnians, then inhabiting the island, and built the city of Corcyra, which he peopled with Corinthian settlers. (Strab. vi. p. 269; Timaeus, ap. Schol. ad Apoll. Rhod. iv. 1216.) This event we may place in B. C. 734, the date usually assigned to the foundation of Syracuse. [SYRACUSAE.] Corcyra rapidly rose to be one of the first maritime powers in Greece. We are told that it was at variance with the mother country almost from the very time of its foundation (Herod. iii. 49), which was no doubt owing to its being the commercial rival of Corinth in the western seas of Greece. The dissensions between the two states broke out into open hostilities as early as B. C. 665, when a naval engagement took place between them, which is mentioned by Thucydides as the first sea-fight on record. (Thuc. i. 13.) In B. C. 617 the Corcyraeans founded Epidamnus on the Illyrian coast; but notwithstanding their hostility to the mother country, they so far complied with Grecian usages as to choose a Corinthian as the Oekist or founder of the new colony. (Thuc. i. 24.) Periander, who ruled at Corinth from B. C. 625 to 585, reduced Corcyra to subjection in the course of his reign; but of the details of its subjugation we have no account. Herodotus tells an interesting story of the murder of Lycophron, the son of Periander, by the Corcyraeans, and of the cruel way in which Periander attempted to take revenge. (Herod. iii. 49, seq.) It was during the time that Corcyra was subject to Periander, that Apollonia and Anactorium were founded by the two states conjointly.

After the death of Periander the Corcyraeans seem to have recovered their independence; but in the Persian wars they made use of it in a manner little creditable to their Hellenic patriotism. Having promised their aid to the confederate Greeks, they sent a fleet of 60 ships, but with orders to advance no further than the promontory of Taenarus, there to await the issue of the struggle between the Persians and the Greeks, and to join the victorious party. (Herod. vii. 168.) Of their subsequent history till the time of the Peloponnesian war, we know nothing. Having quarrelled with the Corinthians respecting Epidamnus, a war ensued between the states, which was one of the immediate causes of the Peloponnesian war. As the history of this quarrel and of the war which followed is related at length in all histories of Greece, it is only necessary in this place to mention the leading events, and such as chiefly serve to illustrate the geography of Corcyra.

The first fleet, which the Corinthians sent against the Corcyraeans, was completely defeated by the latter off Cape Actium, B. C. 435. (Thuc. i. 29.) Deeply humbled by this defeat, the Corinthians spent two whole years in preparations for retrieving it; and by active exertions among their allies, they were in a condition in the third year to put to sea with a fleet of 150 sail. The Corcyraeans, unable to cope single-handed with so formidable an armament, applied for aid to the Athenians, who concluded a defensive alliance with them, fearing lest their powerful navy should fall into the hands of the Peloponnesians. Soon afterwards the war was renewed. The Corinthian fleet of 150 ships took up its station at Cape Cheimerium on the coast of Epeirus, a little south of Corcyra. The Corcyraean fleet of 110 sail, together with 10 Athenian ships, were posted at one of the islands called Sybota (Σύβοτα), now *Sývota*, which lie off the coast of Epeirus to the north of Cape Cheimerium, and opposite the coast of Corcyra, between Capes Leucimme and Amphipagos. Their land force was stationed at Leucimme. The engagement took place in the open sea between Cape Cheimerium and the Sybota; the Corcyraeans were defeated; and the Corinthians were preparing to renew the attack in the afternoon, but were deterred by the arrival of a fresh Athenian squadron, and sailed away home. (Thuc. i. 44, seq.) Each party claimed the victory. The Corinthians erected their trophy at "the continental Sybota" (ἐν τοῖς ἐν τῇ ἠπείρῳ Συβότοις), and the Corcyraeans set up theirs at the "insular Sybota" (ἐν τοῖς ἐν τῇ νήσῳ Συβότοις, Thuc. i. 54). We learn from Col. Leake that there is a sheltered bay between the two principal islands, called *Sývota*, and another between the inner island and the main. The "continental Sybota" was probably the name of a village on the inner strait. (Leake, *Northern Greece*, vol. iii. pp. 2, 3.) Shortly afterwards the island was distracted by civil dissensions between the aristocratical and democratical parties, in which the latter finally gained the upper hand, and massacred all their opponents with the most frightful atrocities, B. C. 425. (Thuc. iv. 46—48.)

Corcyra remained in the Athenian alliance till the close of the Peloponnesian war. It was the place of rendezvous for the fleet of the Athenians and their allies, which was destined to invade Sicily, B. C. 415. (Thuc. vi. 42.) Whether Corcyra was enrolled a member of the Spartan confederacy after the downfall of Athens, we are not informed: but in B. C. 375 Timotheus brought the island again under the dominion of Athens. (Xen. *Hell.* v. 4. § 64; comp. Corn. Nep. *Tim.* 2; Diod. xv. 36.) Two years afterwards, B. C. 373, a large Peloponnesian force, under the command of the Lacedaemonian Mnasippus, was sent to wrest the island from the Athenians. The Athenian fleet had already quitted Corcyra; and the inhabitants, having been defeated in battle by the invaders, were obliged to take refuge within the walls of their city. Xenophon, in a passage already referred to, describes the country at that time as in the highest state of cultivation, abounding in beautiful houses, the cellars of which were stored with excellent wine. After ravaging the country, Mnasippus laid siege to the city, which soon began



to suffer from want of provisions; but the Corcyraeans availing themselves of the negligence of the besiegers, who had become careless, through certainty of success, made a vigorous sally from the city, in which they slew Mnasippus, and many of his troops. Shortly afterwards news arrived of the approach of an Athenian fleet, whereupon the Peloponnesians quitted the island in haste. (Xen. *Hell.* vi. 2. §§ 3—26; Diod. xv. 47.)

After the death of Alexander the Great the Corcyraeans appear to have taken an active part in opposition to Cassander. In B.C. 312, they expelled the Macedonian garrisons from Apollonia and Epidamnus. (Diod. xix. 78.) In B.C. 303 Cleonymus, the Spartan king, who had collected a body of mercenaries in Italy, invaded the island and became master of the city. (Diod. xx. 104, 105.) Cleonymus appears to have quitted the island soon afterwards; for it was again independent in B.C. 300, when Cassander laid siege to the city. From this danger it was delivered by Agathocles, the tyrant of Syracuse, who burnt the Macedonian fleet. (Diod. xxi. Eclog. 2. p. 489, ed. Wesseling.) But Agathocles only expelled the Macedonians in order to appropriate the island to himself, which he is recorded to have laid waste, probably in consequence of the opposition of the inhabitants to his dominion. (Plut. *de Ser. Num. Vind.* p. 557.) Shortly afterwards Agathocles gave Corcyra as a dowry to his daughter Lanassa upon her marriage with Pyrrhus, king of Epeirus. It remained in his hands for some years; but Lanassa, indignant at being neglected by Pyrrhus for his barbarian wives, withdrew to Corcyra, and offered her hand and the island to Demetrius, king of Macedonia. Demetrius accepted her proposal, and, sailing to Corcyra, celebrated his nuptials with her, left a garrison in the island, and returned to Macedonia. This happened shortly before he was expelled from Macedonia by Pyrrhus, B.C. 287. (Plut. *Pyrrh.* 9, 10; Diod. xxi. p. 490.) Pausanias says (i. 11. § 6) that Pyrrhus conquered Corcyra soon after he had recovered his hereditary dominions; but as Pyrrhus began to reign some years before he deprived Demetrius of the Macedonian throne, it has been conjectured that he may have invaded Corcyra, while it was in the possession of Agathocles, and that the latter was contented to cede to him the island, together with his daughter Lanassa. At a later period, probably after his return from Italy, B.C. 274, Pyrrhus recovered Corcyra by the energy of his son Ptolemaeus. (Justin, xxv. 3.)

After the death of Pyrrhus Corcyra again enjoyed a brief period of independence; but the Illyrian pirates, in the reign of their queen Teuta, conquered the island after defeating the Achaean and Aetolian fleets which had come to the assistance of the Corcyraeans. Almost immediately afterwards a Roman fleet, which had been sent to punish these pirates, appeared before Corcyra; whereupon Demetrius, the Pharian, who had been left in charge of the island with an Illyrian garrison, surrendered it to the enemy without striking a blow, B.C. 229. (Pol. ii. 9—11.) From this time Corcyra continued in the hands of the Romans, and was an important station for their fleet in their subsequent wars in Greece. The Romans made the capital a free state (Plin. iv. 12. s. 19); but its inhabitants were so little liked even at this period, as to give rise to the proverb ἐλευθέρα Κόρκυρα, χέζ' ὅπου θέλεις (Strab. vii. p. 329). It is unnecessary to follow further the history of the island. In the reign of Justinian it was still called Κέρκυρα (Procop. *B. G.* iv. 22). It is now one of the seven Ionian islands under the protection of Great Britain, and the seat of government.

Corcyra, the capital of the island, was situated upon the eastern coast, upon a peninsula a little S. of the modern town of *Corfu*. This peninsula is formed on the one side by a small gulf or lagoon, called the *Peschiera*, or Lake of *Calichiopulo*; and on the other side by a bay, which separates the peninsula from the promontory occupied by the modern citadel. The peninsula is called Palaeopoli, but the only ancient remains which it contains are the ruins of a small Doric temple on the eastern shore, facing Epeirus. Of the two ports mentioned by Thucydides (ii. 72), the *Peschiera* seems to be the one which he calls Hyllaicus (Ὑλλαϊκός); and the bay between the peninsula and the modern citadel to be the one which he describes as lying towards Epeirus. Scylax speaks of three harbours, one of which was most beautiful: hence it would appear that the present harbour, although at some distance from the ancient city, was also used in ancient times. The small island of *Vido*, in front of the present harbour, is probably the island of PTYCHIA (Πτυχία), where the leaders of the aristocratical party were placed after their surrender in B.C. 425. (Thuc. iv. 46.) We learn from Thucydides (ii. 72) that the Acropolis was near the portus Hyllaicus, and the agora near the other harbour. The ancient Acropolis is the long undulating promontory south of the modern town, and did not occupy the site of the modern citadel, which is a nearly insulated rock, with its summit split into two lofty peaks. These two peaks must have been always a striking object from the ancient town, and are probably the "aerias Phaeacum arces" of Virgil (*Aen.* iii. 291), a passage from which Dodwell and others erroneously concluded that they were the Acropolis of Corcyra. In the middle ages these two rocks, which then became the citadel, were called Κορυφὼ or Κορυφοί, from whence has come, slightly corrupted, (Κορφοί) the modern name of the town and of the island. We have no further information respecting the other localities of the ancient city. Among its public buildings mention is made of temples of Zeus, Hera, Dionysus, the Dioscuri, and Alcinous. (Thuc. iii. 70, 75, 81.)

The only other city in the island was CASSIOPE (Κασσιόπη), situated upon the north-eastern extremity of the island, opposite a town upon the coast of Epeirus of the same name. Cassiope possessed a harbour, and was distant, according to Cicero (*ad Fam.* xvi. 9), 120 stadia from Corcyra. It was celebrated for its temple of Zeus Cassius, or Casius, at whose altar Nero sang: the head of the god, with the epigraph Ζεὺς Κάσιος, frequently occurs on coins. (Suet. *Ner.* 22; Plin. iv. 12. s. 19; Procop. *B. G.* iv. 22; Eckhel, vol. ii. p. 179, seq.) There are remains of the ancient town near the village, still called *Cassopo*. (Marmora, *Historia*

COIN OF CORCYRA.

di Corfu, Venice, 1672; Mustoxides, *Illustrazioni Corcíresi*, Milan, 1811—1814, 2 vols. 8vo.; Dodwell, *Classical Tour*, vol. i. p. 32, seq.; Mure, *Tour in Greece*, vol. i. p. 1, foll.; and especially G. C. A. Müller, *De Corcyraeorum Republica*, Göttingen, 1835.)

CORCYRA NIGRA (ἡ Μέλαινα Κόρκυρα: *Curzola*, in Slavonic *Karkar*), an island off the coast of Illyria, called the "Black," from the dark colour of the pine woods covering its sides. It contained a Greek town, which was said to have been founded by the Cnidians. The island still abounds in trees, growing down to the water's edge: the proportion of land covered with wood is 43,471 acres, out of a total of 57,130. Of its ancient history we know nothing; a full account of its modern history and of the present condition of the island is given in the work of Sir G. Wilkinson, quoted below. (Strab. ii. p. 124, vii. p. 315; Mela, ii. 7; Plin iii. 26. s. 30: Sir G. Wilkinson, *Dalmatia and Montenegro*, vol. i. p. 251, seq.)

CORDA, in Britain, mentioned by Ptolemy as one of the cities of the Selgovae. Identified, on scarcely sufficient grounds, with *Cumnock*, and with *Castle Over*, in Eskdale. [R. G. L.]

CORDES (Κόρδης, Procop. *de Aedif.* ii. 2), a small stream of Mesopotamia which rose in the M. Masius, and was a tributary of the Chaboras or *Khabûr*, itself a tributary of the Euphrates. The town of Dara was situated upon its banks. [V.]

CO'RDUBA (Κόρδυβα, Κορδύβη, Κορδούβα: *Eth.* and *Adj.* Cordubensis: *Cordoba* or *Cordova*), one of the chief cities of Hispania, in the territory of the Turduli. It stood on the right bank of the Baetis (*Guadalquivir*), a little below the spot where the navigation of the river commenced, at the distance of 1200 stadia from the sea. [Baetis.] Its foundation was ascribed to Marcellus, whom we find making it his head-quarters in the Celtiberian War. (Strab. iii. p. 141; Polyb. xxxv. 2.) It was occupied from the first by a chosen mixt population of Romans and natives of the surrounding country; and it was the first colony of the Romans in those parts. Strabo's language implies that it was a colony from its very foundation, that is, from B. C. 152. It was regarded as the capital of the extensive and fertile district of Baeturia, comprising the country between the Anas and the Baetis, the richness of which combined with its position on a great navigable river, and on the great high road connecting the E. and NE. parts of the peninsula with the S., to raise it to a position only second to Gades as a commercial city. (Strab. *l. c.*, and p. 160.)

In the great Civil War Corduba suffered severely on several occasions, and was at last taken by Caesar, soon after the battle of Munda, when 22,000 of its inhabitants were put to the sword, B. C. 45. (Caes. *B. C.* ii. 19; Hirt. *Bell. Alex.* 49, 57, 59, 60, *Bell. Hisp.* 32—34; Appian, *B. C.* ii. 104, 105; Dion Cass. xliii. 32.)

Corduba was the seat of one of the four *conventus juridici* of the province of Baetica, and the usual residence of the praetor; hence it was generally regarded as the capital of the province. (Plin. iii. 1. s. 3; Appian, *Hisp.* 65.) It bore the surname of Patricia (Plin. *l. c.*; Mela, ii. 6. § 4), on account, as is said, of the number of patricians who were among the colonists; and, to the present day, *Cordova* is so conspicuous, even among Spanish cities, for the pride of its nobles in their "azure blood" that the Great Captain, Gonzalo de Cordova, used to say that "other towns might be better to live in, but none was better to be born in." (Ford, *Handbook*, p. 73.)

In the annals of Roman literature Corduba is conspicuous as the birthplace of Lucan and the two Senecas, besides others, whose works justified the epithet of "facunda," applied to it by Martial (*Ep.* i. 62. 8):—

"Duosque Senecas, unicumque Lucanum
Facunda loquitur Corduba."

(Comp. ix. 61, and the beautiful epigram of Seneca, ap. Wernsdorf, *Poet. Lat. Min.* vol. v. pt. 3, p. 1364.)

Numerous coins of the city are extant, bearing the names of Corduba, Patricia, and Colonia Patricia. (Florez, *Med. de Esp.* vol. i. p. 373, vol. ii. p. 536; Mionnet, vol. i. p. 11, Suppl. vol. i. p. 23; Sestini, p. 46; Eckhel, vol. i. p. 18.) There are now scarcely any remains of the Roman city, except a ruined building, which the people dignify with the title of Seneca's House. (Florez, *Esp. Sagr.* vol. x. p. 132; Miñano, *Diccion.* vol. iii. p. 170.) The city is one of Ptolemy's places of recorded astronomical observations, having 14 hrs. 25 min. for its longest day, and being distant 3⅔ hrs. W. of Alexandria. (Ptol. ii. 4. § 11, viii. 4. § 4.) [P. S.]

CORDYE'NE, GORDYE'NE (Γορδυηνή, Γορδηνή, Γορδυαία: *Eth.* Γορδυαῖοι, Κορδυαῖοι, Κορδύεοι, Γορδυηνοί, Cordueni), a district lying to the E. of the river Tigris, and occupied by the wandering tribes of the Carduchi. (Strab. xvi. p. 747.) The name Cordyeni, like *Kurdistán*, which more or less in modern times may be said to represent it, is simply a geographical expression, signifying a mere aggregate of people without political union or intercourse.

The Romans became acquainted with it first during the campaign of Lucullus, when, after the fall of Tigranocerta, he took up his winter-quarters in this district, and received the submission of several of the petty chieftains who had been formerly subject to the yoke of Tigranes, king of Armenia. (Plut. *Lucull.* 29.) Under Pompey it was annexed to the Roman province (Dion Cass. xxxvii. 5). Corduene was one of the five provinces which Galerius wrested from the Persian king Narses; it was afterwards given up to Chosroes in the disastrous negotiation which followed on the retreat of Jovian (Amm. Marc. xxv. 7; Le Beau, *Bas Empire*, vol. iii. p. 161). The geography of this wild mountainous district has been as yet but little investigated, and further discoveries have still to be made. But a correct idea of it may be formed by considering it a region of lofty terrasses, separated by valleys, forming a series of parallel ranges of mountain elevations, the general direction of which is nearly NNW. and SSE. (Ritter, *Erdkunde*, vol. xi. p. 141; St. Martin, *Mém. sur l'Armenie*, vol. i. p. 176; *Journ. Geog. Soc.* vol. xi. p. 21, foll.) [E. B. J.]

CORDYLE (Κορδύλη) or PORTUS CHORDYLE (Plin. vi. 4), a place on the coast of Pontus, 40 or 45 stadia east of Hieron Oros or *Yoros*. (Arrian, p. 17; Anon. p. 13.) Hamilton (*Researches, &c.* vol. i. p. 248) identifies it with *Akjah Káleh*, a ruined fort on a rocky promontory, half-way between Platana and Cape *Yoros*: "it possesses a small open roadstead, called by the Turks a liman or port, to the east of the promontory." The name occurs in the Table in the form Cordile. There appears to be some confusion in Ptolemy (v. 6) about this place. [G. L.]

CORE'SSIA or CORESSUS. [CEOS.]

CORESSUS. [EPHESUS; MESSOGIS.]

CORFI'NIUM (Κορφίνιον: *Eth.* Corfiniensis: *S. Pelino*), the chief city of the Peligni, situated in the valley of the Aternus, near the point where that river suddenly makes a sharp angle, and turns from a SE. to a NE. course, which it pursues from thence to the Adriatic. It was distant 7 miles from Sulmo, and 30 from Alba Fucensis by the Via Valeria. There can be no doubt that Corfinium was from an early period the capital city of the Peligni, and one of the chief towns in this part of Italy; but no mention of its name is found in history until the outbreak of the Marsic or Social War, B. C. 90, when it was selected by the confederates to be their common capital, and the seat of their government. It was probably to the importance of its situation in a military point of view that it was mainly indebted for this distinction; but the allied nations seem to have destined it to be the permanent capital of Italy, and the rival of Rome, as they changed its name to Italica, and adorned it with a new and spacious forum and senate house, and other public buildings of a style corresponding to its intended greatness. (Strab. v. p. 241; Vell. Pat. ii. 16; Diod. xxxvii. Exc. Phot. p. 538.) But before the end of the second year of the war they were compelled to abandon their new capital, and transfer the seat of government to Aesernia. (Diod. *l. c.* p. 539.) The fate of Corfinium after this is not mentioned, but it probably fell into the hands of the Romans without resistance, and in consequence did not suffer; for we find it at the outbreak of the Civil War between Caesar and Pompey, B. C. 49, still retaining its position as a city of importance and a strong fortress. On this account it was occupied by L. Domitius with 30 cohorts, and was the only place which offered any effectual resistance to the arms of Caesar during his advance through Italy. Nor was it reduced by force, but the disaffection which rapidly spread among his officers compelled Domitius to surrender after a siege of only seven days. (Caes. *B. C.* i. 15—23; Appian, *B. C.* ii. 38; Cic. *ad Att.* viii. 3, 5, ix. 7; Suet. *Caes.* 34; Lucan. ii. 478—510.) From this time we hear but little of Corfinium; but inscriptions attest that it continued to be a flourishing municipal town under the Roman empire, and its prosperity is proved by the fact that its inhabitants were able to construct two aqueducts for supplying it with water, both of which are in great part hewn in the solid rock, and one of them is carried through a tunnel nearly 3 miles in length. (Romanelli, vol. iii. pp. 149—151; Orell. *Inscr.* 3695, 3696; Mommsen, *Inscr. Neap.* 5350, foll.) A part of the territory of Corfinium had been portioned out to new settlers as early as the time of the Gracchi: it received a fresh body of colonists under Augustus, but never assumed the title of a colony, all inscriptions giving it that of a municipium only. (*Lib. Colon.* pp. 228, 255.) It still appears in the Itineraries as a place of importance (*Itin. Ant.* p. 310; *Tab. Peut.*), and even seems to have been in the fourth century regarded as the capital of the province of Valeria, and the residence of its Praeses or governor. (Ughelli, ap. Romanelli, vol. iii. p. 151.) The period of its destruction is unknown, but it seems to have been still in existence as late as the tenth century. After that time we find a city named *Valva*, which appears to have succeeded to the site of Corfinium, but has now also disappeared, though the adjoining valley is still called *La Pianata di Valva*. The site of Corfinium is clearly marked in the immediate neighbourhood of *Pentima* (a large village about 3 miles from *Popoli*, and 6 from *Sulmona*); the ruins of the ancient city, which are very inconsiderable, and consist of little more than shapeless fragments of buildings, are scattered round an ancient church called *San Pelino*, which was at one time the cathedral of *Valva*. But the numerous inscriptions discovered on the spot leave no doubt that this is the true site of Corfinium. The bridge over the Aternus, three miles from the latter city, is mentioned both by Caesar and Strabo, and must always have been a military point of the highest importance. Hence Domitius committed a capital error in neglecting to occupy it in sufficient force when Caesar was advancing upon Corfinium. (Caes. *B. C.* i. 16; Lucan. ii. 484—504; Strab. v. p. 242.) This bridge must evidently be the same, close to which the modern town of *Popoli* has grown up; this has been erroneously supposed by some authors to occupy the site of Corfinium. (Cluver. *Ital.* p. 758; Romanelli, vol. iii. pp. 148—156; Craven's *Abruzzi*, vol. ii. p. 18) [E. H. B.]

CORIA, in Britain, mentioned by Ptolemy as one of the towns of the Damnii. Perhaps, *Craw*-furd, Colonia [COLONIA] being *Carstairs*. [R. G. L.]

CORIALLUM, a town of Gallia, at the termination of a road, in the Table, which begins at Condate (*Rennes*), the chief town of the Redones. Coriallum is 29 Gallic leagues from the next station, Legedia. D'Anville places Coriallum at *Gouril*, the name of a small harbour in the *Côtantin*, between rocks under *Cap de la Hogue*, and at the point where the mainland projects furthest into the sea. Others suppose it to be *Cherbourg*. [G. L.]

CORIENDI, in Ireland, mentioned by Ptolemy as lying between the Menapii and Brigantes, *i. e.* in the county of *Wexford*, or thereabouts. [R. G. L.]

CORI'NEA (Κορινέα, Ptol. v. 13), a district of Armenia, which, from the position assigned to it by Ptolemy (*l. c.*), is in the neighbourhood of the lake of *Ván*. [THOSPITIS.] [E. B. J.]

CORINEUM, in Britain, mentioned by Ptolemy as a town of the Dobuni. Name for name, and place for place *Corin*-eum, *Ciren*-cester, where Roman remains are abundant. [R. G. L.]

CORINTHIACUS ISTHMUS. [CORINTHUS.]

CORINTHIACUS SINUS (Κορινθιακὸς, or Κορίνθιος κόλπος: *Gulf of Lepanto*), the gulf between Northern Greece or Hellas Proper, and the Peloponnesus. It commenced, according to Strabo (viii. p. 335, seq.), at the mouth of the Evenus in Aetolia (some said at the mouth of the Achelous) and the promontory Araxus in Achaia, and extended to the Isthmus of Corinth. It consisted of two distant portions, an outer and an inner sea, separated from one another by the narrow strait, between the promontories Rhium and Antirrhium. The inner sea, west of these promontories, was called originally the Crissaean gulf (ὁ Κρισσαῖος or Κρισαῖος κόλπος), a name which occurs as early as in the Homeric Hymn to Apollo (Κρίσης κόλπος ἀπείρων, 431), and was used even by Thucydides (i. 107, ii. 86). But soon after the time of the latter historian, the Corinthian gulf became the more general designation (Xen. *Hell.* iv. 2. § 9; Polyb. v. 3; Liv. xxvi. 26, xxviii. 7, 8.) Still the more ancient name never went entirely out of use. While Strabo calls the whole sea, from the promontory of Araxus to the Isthmus of Corinth, by the general name of the Corinthian gulf, he gives to the sea within the promontories of Rhium and Antirrhium the specific

designation of the Crissaean gulf. (Strab. *l. c.*) It appears from Scylax that the latter sea was also called the Delphian gulf (ὁ Δελφικὸς κόλπος). Pliny, on the contrary, confines the term Corinthiacus Sinus to the inner sea, and gives the name of the Crissaean gulf to the bay near the town of Oeanthe, the modern *Gulf of Salona*. (Plin. iv. 2. s. 3, 3. s. 4.) At the eastern extremity of the inner sea there were two bays, separated from one another by the rocky promontory north of the Isthmus, the more northerly being called the Alcyonian sea (ἡ Ἀλκυονὶς θάλασσα), and the more southerly the bay of Lechaeum. [See CORINTHUS.] In one passage of Strabo (viii. p. 336) we read "the sea from Antirrhium to the Isthmus is called Alcyonis, being a portion of the Crisaean gulf;" but the text is evidently faulty, and is not in accordance with other passages of Strabo, in which the name of Alcyonis is given to the bay at the eastern extremity of the gulf, beginning at Creusa in Boeotia and the promontory Olmiae in the Corinthia. (Comp. Strab. ix. pp. 393, 400.) Hence in the passage first quoted it has been proposed with great probability to read, "the sea from Antirrhium to the Isthmus is the Crissaean gulf; but from the city Creusa it is called Alcyonis." (Groskurd, *German Translation of Strabo*, vol. ii. p. 11.)

Strabo says (viii. p. 336) that the circuit of the Corinthian gulf from the Evenus to the Araxus is 2230 stadia. Pliny (iv. 4. s. 5) makes the length 85 miles, Agathemerus (i. 4) 720 stadia. Respecting the breadth of the strait between Rhium and Antirrhium, see ACHAIA, p. 13.

The Corinthian gulf resembles a large inland lake. It is surrounded by mountains, and the heights towards the west shut out the view of the open sea. In beauty of scenery it surpasses even the most picturesque lakes of Switzerland and Northern Italy. "Its coasts, broken into an infinite variety of outline by the ever-changing mixture of bold promontory, gentle slope, and cultivated level, are crowned on every side by lofty mountains of the most majestic forms." (Leake.) Sailing from Corinth one sees in the distance, on the left the top of Erymanthus, rising like a colossal pyramid, and on the right the lofty heights of Helicon and Parnassus. (Leake, *Morea*, vol. iii. p. 397; Ulrichs, *Reisen in Griechenland*, p. 3; Curtius, *Peloponnesos*, vol. i. pp. 7, 404, 422.)

CORINTHUS (Κόρινθος: *Eth.* Κορίνθιος: *Gortho*), one of the most important cities of Greece.

I. SITUATION.

Corinth stood upon the Isthmus, which connected the northern division of Greece, or Hellas Proper, with the Peloponnesus. On either side of the Isthmus, which is a rocky and sterile plain, rise the mountains of Northern Greece and Peloponnesus respectively. The mountains to the north of the Isthmus, which bore the name of Geraneia, extend across the Isthmus from sea to sea. There are only three passes through them, of which the most celebrated, being the shortest road between Corinth and Megara, is upon the shore of the Saronic Gulf, and bore the name of the Scironian rocks. A more particular account of the Geraneian mountains is given under Megara, to which they more properly belong. [MEGARA.] The mountains to the south of the Isthmus were called the Oneian ridge, from their resemblance to an ass's back (τὸ Ὄνειον, Thuc. iv. 44; Xen. *Hell.* vi. 5. § 51; τὰ Ὄνεια, Strab. viii. p. 380.)* They did not, however, occupy the whole breadth of the Isthmus. The lofty rock, which formed the citadel of Corinth, and which was hence called the Acrocorinthus, is properly an offshoot of the Oneian ridge, but is separated from the latter by a ravine, and seen from the north appears to be an isolated mountain. The Oneian ridge extends eastwards as far as the Saronic Gulf. Westward, the Acrocorinthus does not reach the sea; but there is a narrow level space between the foot of the mountain and the sea. This level space was protected by the two long walls connecting the city with its port town Lechaeum; while eastward of the city there were only two passes, through which an invading force could penetrate, one through the ravine, which separated the Acrocorinthus and the Oneian mountains (Pol. ii. 52), and the other along the shore at Cenchreae. (Xen. *Hell.* vi. 5. § 51.) Thus Corinth completely commanded the three passes, which alone led from the Isthmus to the Peloponnesus, the one upon the shore of the Corinthian Gulf being occupied by the Long Walls, the one through the ravine between the Acrocorinthus and the Oneian mountains being under the very fortifications of the citadel, and the third upon the Saronic Gulf, being under the walls of Cenchreae. From its position, Corinth was called by the last Philip of Macedon one of the fetters of Greece; the other two being Chalcis in Euboea, and Demetrias in Thessaly. (Pol. xvii. 11; Liv. xxxii. 37.)

The Corinthia (ἡ Κορινθία), or territory of Corinth, was not fertile (χώραν δ' ἔσχεν οὐκ εὔγεων σφόδρα, ἀλλὰ σκολιάν τε καὶ τραχεῖαν, Strab. viii. p. 382). Neither the rocky sides of the Geraneian and Oneian mountains, nor the stony and sandy plain of the Isthmus, were suitable for corn. The only arable land in the territory of any extent is the plain upon the coast, lying between Corinth and Sicyon, and belonging to these two cities. The fertility of this plain is praised in the highest terms by the ancient writers (ager nobilissimae fertilitatis, Liv. xxvii. 31): and such was its value, that to possess "what lies between Corinth and Sicyon" became a proverbial expression for great wealth. (Athen. v. p. 219, a.) It must not, however, be inferred from these and similar expressions, that this plain surpassed in fertility every other district in Peloponnesus; but its proximity to the wealthy and populous city of Corinth greatly enhanced its value; and hence an estate in this plain produced a much larger revenue than one of a similar size in the most fertile parts of Peloponnesus. It was watered by the mountain torrents coming from Nemea and Cleonae; and it furnished Corinth and its port towns with fruit and vegetables, but could not have yielded any large supply of corn. Of the other products of the Corinthia scarcely any mention is made; its wine was very bad (ὁ Κορίνθιος οἶνος βασανισμὸς ἐστι, Athen. i. p. 30, f.).

Shut in within this narrow territory by the mountain barriers towards the north and the south, and unable to obtain from the soil a sufficient supply of the necessaries of life, the inhabitants were naturally led to try their fortune on the sea, to which their situation invited them. Corinth was destined

* Strabo in this passage confounds the Oneia with the Geraneia, and erroneously represents the former as extending as far as Boeotia and Cithaeron. (Curtius, *Peloponnesos*, vol. i. p. 25.)

by nature to be a great maritime power. Standing upon a narrow isthmus between two important seas, at a time when all navigation was performed by coasting vessels, and it was difficult and dangerous to convey goods round the Peloponnesus, Corinth became the highway of ancient commerce. In consequence of its position it formed by far the most direct communication between the two principal Grecian seas, uniting the Ionian and Sicilian seas on the one hand, with the Aegaean, the Hellespont, and the Pontus on the other. It thus became the emporium of the trade between the East and the West. The position of Corinth is well described by Cicero (*de Leg. Agr.* ii. 32):—"Erat posita in angustiis atque in faucibus Graeciae sic, ut terrâ claustra locorum teneret, et duo maria, maxime navigationi diversa, paene conjungeret, quum pertenui discrimine separentur." Hence also Euripides (*Troad.* 1097) describes Corinth, as δίπορον κορυφὰν Ἰσθμιον, ἔνθα πύλας Πέλοπος ἔχουσιν ἕδραι; and Horace (*Carm.* i. 7) speaks of "bimaris Corinthi moenia."

II. History.

The favourable position of Corinth for commerce could not have escaped the notice of the Phoenicians, who had settlements on other parts of the Grecian coast. There can be little doubt that a Phoenician colony at an early period took possession of the Acrocorinthus. If there were no other evidence for this fact, it would have been sufficiently proved by the Oriental character of the worship of Aphrodite in this city, of which a further account is given below. But in addition to this, the recollection of the early Phoenician settlement was perpetuated by the Corinthian mountain called Phoenicaeum (Φοινίκαιον, Ephor. *ap. Steph. B. s. v.*), and by the worship of the Phoenician Athena (Φοινίκη ἡ Ἀθῆνα ἐν Κορίνθῳ, Tzetzes, *ad Lycophr.* 658.)

Thucydides mentions (iv. 42) Aeolians as the inhabitants of Corinth at the time of the Dorian invasion; but there can be no doubt that Ionians also formed a considerable part of the population in the earliest times, since Ionians were in possession of the coasts on either side of the Isthmus, and on the Isthmus itself was the most revered seat of Poseidon, the chief deity of the Ionic race. Still the earliest rulers of Corinth are uniformly represented as Aeolians. The founder of this dynasty was Sisyphus, whose cunning and love of gain may typify the commercial enterprise of the early maritime population, who overreached the simple inhabitants of the interior. Under the sway of Sisyphus and his descendants Corinth became one of the richest and most powerful cities in Greece. Sisyphus had two sons, Glaucus and Ornytion. From Glaucus sprang the celebrated hero Bellerophon, who was worshipped with heroic honours at Corinth, and whose exploits were a favourite subject among the Corinthians down to the latest times. Hence we constantly find upon the coins of Corinth and her colonies the figure of the winged horse Pegasus, which Bellerophon caught at the fountain of Peirene on the Acrocorinthus. Bellerophon, as is well known, settled in Lycia; and the descendants of Ornytion continued to rule at Corinth till the overthrow of the Sisyphid dynasty by the conquering Dorians.

The most ancient name of the city was Ephyra (Ἐφύρη). At what time it exchanged this name for that of Corinth is unknown. Müller, relying upon a passage of Velleius Paterculus (i. 3) supposes that it received the name of Corinth upon occasion of the Dorian conquest; but Homer uses both names indiscriminately. (Ἐφύρη, *Il.* vi. 152, 210; Κόρινθος, ii. 570, xiii. 664.) According to the Corinthians themselves Corinthus, from whom the city derived its name, was a son of Zeus; but the epic poet Eumelus, one of the Corinthian Bacchiadae, gave a less exalted origin to the eponymous hero. This poet carried up the history of his native place to a still earlier period than the rule of the Sisyphids. According to the legend, related by him, the gods Poseidon and Helios (the Sun) contended for the possession of the Corinthian land. By the award of Briareus Poseidon obtained the Isthmus; and Helios the rock, afterwards called the Acrocorinthus, and then Ephyra, from Ephyra, a daughter of Oceanus and Tethys, and the primitive inhabitant of the country. Helios had two sons Aeëtes and Aloeus: to the former he gave Ephyra, to the latter Asopia (Sicyon). Aeëtes, going to Colchis, left his country under the government of Bunus, a son of Hermes; upon whose death Epopeus, the son of Aloeus, obtained Ephyra as well as Asopia. Marathon, the son of Epopeus, who had left the country during his lifetime, returned at his death, and divided his territory between his sons Corinthus and Sicyon, from whom the two towns obtained their names. Corinthus dying without children, the Corinthians invited Medea from Iolcos, as the daughter of Aeëtes; and thus her husband Jason obtained the sovereignty of Corinth. Medea afterwards returned to Iolcos, leaving the throne to Sisyphus, with whom she is said to have been in love. (Paus. i. 1. § 2, i. 3. § 10; Schol. *ad Pind. Ol.* xiii. 74.) Upon this legend Mr. Grote justly remarks, that "the incidents in it are imagined and arranged with a view to the supremacy of Medea; the emigration of Aeëtes, and the conditions under which he transferred his sceptre being so laid out as to confer upon Medea an hereditary title to the throne. . . . . We may consider the legend of Medea as having been originally quite independent of that of Sisyphus, but fitted on to it, in seeming chronological sequence, so as to satisfy the feelings of those Aeolids of Corinth who passed for his descendants." (*Hist. of Greece*, vol. i. p. 165, seq.)

The first really historical fact in the history of Corinth is its conquest by the Dorians. It is said that this conquest was not effected till the generation after the return of the Heracleidae into Peloponnesus. When the Heracleidae were on the point of crossing over from Naupactus, Hippotes, also a descendant of Hercules, but not through Hyllus, slew the prophet Carnus, in consequence of which he was banished for ten years, and not allowed to take part in the enterprise. His son Aletes, who derived his name from his long wanderings, was afterwards the leader of the Dorian conquerors of Corinth, and the first Dorian king of the city. (Paus. ii. 4. § 3.) It appears from the account of Thucydides (iv. 42) that the Dorian invaders took possession of the hill called Solygeius, near the Saronic gulf, from which they carried on war against the Aeolian inhabitants of Corinth till they reduced the city.

The Dorians, though the ruling class, appear to have formed only a small proportion of the population of Corinth. The non-Dorian inhabitants must have been admitted at an early period to the citizenship; since we find mention of eight Corinthian tribes (Πάντα ὀκτώ, Phot., Suidas), whereas

three was the standard number in all purely Doric states. It was impossible to preserve in a city like Corinth the regular Doric institutions; since the wealth acquired by commerce greatly exceeded the value of landed property, and necessarily conferred upon its possessors, even though not Dorians, great influence and power. Aletes and his descendants held the royal power for 12 generations. Their names and the length of their reign are thus given:

		Years.
Aletes	reigned	38
Ixion	„	38
Agelas	„	37
Prymnis	„	35
Bacchis	„	35
Agelas	„	30
Eudemus	„	25
Aristodemes	„	35
Agemon	„	16
Alexander	„	25
Telestes	„	12
Automenes	„	1
		327

Pausanias speaks as if Prymnis was the last descendant of Aletes, and Bacchis, the founder of a new, though still an Heracleid dynasty; but Diodorus describes all these kings as descendants of Aletes, but in consequence of the celebrity of Bacchis, his successors took the name of Bacchidae in place of that of Aletiadae or Heracleidae. After Automenes had reigned one year, the Bacchiad family, amounting to about 200 persons, determined to abolish royalty, and to elect out of their own number an annual Prytanis. The Bacchiad oligarchy had possession of the government for 90 years, until it was overthrown by Cypselus, with the help of the lower classes, in B. C. 657. (Diod. vi. fragm. 6, p. 635, Wess.; Paus. ii. 4. § 4; Herod. v. 92.) Strabo says (viii. p. 378) that the Bacchiad oligarchy lasted nearly 200 years; but he probably included within this period a portion of the time that the Bacchiads possessed the royal power. The Bacchiads, after their deposition by Cypselus, were for the most part driven into exile, and are said to have taken refuge in different parts of Greece, and even in Italy. (Plut. *Lysand.* 1; Liv. i. 34.)

According to the mythical chronology the return of the Heracleidae took place in B. C. 1104. As the Dorian conquest of Corinth was placed one generation (30 years) after this event, the reign of Aletes commenced B. C. 1074. His family therefore reigned from B. C. 1074 to 747; and the Bacchiad oligarchy lasted from B. C. 747 to 657.

Under the Bacchiadae the Corinthians were distinguished by great commercial enterprise. They traded chiefly with the western part of Greece; since the eastern sea was the domain of the Aeginetans. The sea, formerly called the Crissaean from the town of Crissa, was now named the Corinthian after them; and in order to secure the strait which led into the western waters, they founded Molycria opposite the promontory of Rhium (Thuc. iii. 102.) It was under the sway of the Bacchiadae that the important colonies of Syracuse and Corcyra were founded by the Corinthians (B. C. 734), and that a navy of ships of war was created for the first time in Greece; for we have the express testimony of Thucydides that triremes were first built at Corinth. (Thuc. i. 13.) The prosperity of Corinth suffered no diminution from the revolution, which made Cypselus despot or tyrant of Corinth. Both this prince and his son Periander, who succeeded him, were distinguished by the vigour of their administration and by their patronage of commerce and the fine arts. Following the plans of colonization, which had been commenced by the Bacchiadae, they planted numerous colonies upon the western shores of Greece, by means of which they exercised a sovereign power in these seas. Ambracia, Anactorium, Leucas, Apollonia and other important colonies, were founded by Cypselus or his son. Corcyra, which had thrown off the supremacy of Corinth, and whose navy had defeated that of the mother country in B. C. 665, was reduced to subjection again in the reign of Periander. It has been noticed by Müller that all these colonies were sent out from the harbour of Lechaeum on the Corinthian gulf; and that the only colony despatched from the harbour of Cenchreae on the Saronic gulf was the one which founded Potidaea, on the coast of Chalcidice in Macedonia. (Müller, *Dor.* i. 6. § 7.)

Cypselus reigned 30 years (B. C. 657—627), and Periander 44 years (B. C. 627—583). For the history of these tyrants the reader is referred to the *Dict. of Biogr. s. vv.* Periander was succeeded by his nephew Psammetichus, who reigned only three years. He was without doubt overthrown by the Spartans, who put down so many of the Grecian despots about this period. The government established at Corinth, under the auspices of Sparta, was again aristocratical, but apparently of a less exclusive character than that of the hereditary oligarchy of the Bacchiadae. The gerusia was probably composed of certain noble families, such as the Oligaethidae mentioned by Pindar, whom he describes as *οἶκος ἄμερος ἀστοῖς*. (Pind. *Ol.* xiii. 2, 133.) From the time of the deposition of Psammetichus Corinth became an ally of Sparta, and one of the most powerful and influential members of the Peloponnesian confederacy. At an early period the Corinthians were on friendly terms with the Athenians. They refused to assist Cleomenes, king of Sparta, in restoring Hippias to Athens, and they lent the Athenians 20 ships to carry on the war against Aegina (Herod. v. 92; Thuc. i. 41); but the rapid growth of the Athenian power after the Persian war excited the jealousy of Corinth; and the accession of Megara to the Athenian alliance was speedily followed by open hostilities between the two states. The Corinthians marched into the territory of Megara, but were there defeated with great loss by the Athenian commander, Myronides, B. C. 457. (Thuc. i. 103—106.) Peace was shortly afterwards concluded; but the enmity which the Corinthians felt against the Athenians was still further increased by the assistance which the latter afforded to the Corcyraeans in their quarrel with Corinth. This step was the immediate cause of the Peloponnesian war; for the Corinthians now exerted all their influence to persuade Sparta and the other Peloponnesian states to declare war against Athens.

In the Peloponnesian war the Corinthians at first furnished the greater part of the Peloponnesian fleet. Throughout the whole war their enmity against the Athenians continued unabated; and when the Spartans concluded with the latter in B. C. 421 the peace, usually called the peace of Nicias, the Corinthians refused to be parties to it, and were so indignant with Sparta, that they endeavoured to form a new Peloponnesian league with Argos, Mantineia and

Elis. (Thuc. v. 17, seq.) But their anger against Sparta soon cooled down (Thuc. v. 48); and shortly afterwards they returned to the Spartan alliance, to which they remained faithful till the close of the war. When Athens was obliged to surrender to the Spartans after the battle of Aegospotami, the Corinthians and Boeotians urged them to raze the city to the ground. (Xen. *Hell.* ii. 2. § 19.)

But after Athens had been effectually humbled, and Sparta began to exercise sovereignty over the rest of Greece, the Corinthians and other Grecian states came to be jealous of her increasing power. Tithraustes, the satrap of Lydia, determined to avail himself of this jealousy, in order to stir up a war in Greece against the Spartans, and thus compel them to recall Agesilaus from his victorious career in Asia. Accordingly he sent over Timocrates, the Rhodian, to Greece with the sum of 50 talents, which he was to distribute among the leading men in the Grecian states, and thus excite a war against Sparta, B.C. 395. (Xen. *Hell.* iii. 5. § 2.) Timocrates had no difficulty in executing his commission; and shortly afterwards the Corinthians united with their old enemies the Athenians as well as with the Boeotians and Argives in declaring war against Persia. Deputies from these states met at Corinth to take measures for the prosecution of the war, which was hence called the Corinthian war. In the following year, B. C. 394, a battle was fought near Corinth between the allied Greeks and the Lacedaemonians, in which the latter gained the victory (Xen. *Hell.* iv. 2. § 9, seq.) Later in the same year the Corinthians fought a second battle along with the other allies at Coroneia in Boeotia, whither they had marched to oppose Agesilaus, who had been recalled from Asia by the Persians, and was now on his march homewards. The Spartans again gained the victory, but not without much loss on their own side. (Xen. *Hell.* iv. 3. § 15, seq., *Ages.* ii. 9. seq.)

In B.C. 393 and 392 the war was carried on in the Corinthian territory, the Spartans being posted at Sicyon and the allies maintaining a line across the Isthmus from Lechaeum to Cenchreae, with Corinth as the centre. A great part of the fertile plain between Sicyon and Corinth belonged to the latter state; and the Corinthian proprietors suffered so much from the devastation of their lands, that many of them became anxious to renew their old alliance with Sparta. A large number of the other Corinthians participated in these feelings, and the leading men in the government, who were violently opposed to Sparta, became so alarmed at the wide-spread disaffection among the citizens, that they introduced a body of Argives into the city during the celebration of the festival of the Eucleia, and massacred numbers of the opposite party in the market-place and in the theatre. The government, being now dependent upon Argos, formed a close union with this state, and is said to have even incorporated their Corinthian territory with that of Argos, and to have given the name of Argos to their own city. But the opposition party at Corinth, which was still numerous, contrived to admit Praxitas, the Lacedaemonian commander at Sicyon, within the long walls which connected Corinth with Lechaeum. In the space between the walls, which was of considerable breadth, and about 1½ mile in length, a battle took place between the Lacedaemonians and the Corinthians, who had marched out of the city to dislodge them. The Corinthians, however, were defeated, and this victory was followed by the demolition of a considerable part of the long walls by Praxitas. The Lacedaemonians now marched across the Isthmus, and captured Sidus and Crommyon. These events happened in B.C. 392. (Xen. *Hell.* iv. 4. § 1, seq.)

The Athenians, feeling that their own city was no longer secure from an attack of the Lacedaemonians, marched to Corinth in the following year (B.C. 391), and repaired the long walls between Corinth and Lechaeum; but in the course of the same summer Agesilaus and Teleutias not only retook the long walls, but also captured Lechaeum, which was now garrisoned by Lacedaemonian troops. (Xen. *Hell.* iv. 4. §§ 18, 19; Diod. xiv. 86, who erroneously places the capture of Lechaeum in the preceding year; see Grote, *Hist. of Greece*, vol. ix. p. 471, seq.) These successes, however, of the Lacedaemonians were checked by the destruction in the next year (B.C. 390) of one of their morae by Iphicrates, the Athenian general, with his peltasts or light-armed troops. Shortly afterwards Agesilaus marched back to Sparta; whereupon Iphicrates retook Crommyon, Sidus, Peiraeum and Oenoë, which had been garrisoned by Lacedaemonian troops. (Xen. *Hell.* iv. 5. § 1, seq.) The Corinthians appear to have suffered little from this time to the end of the war, which was brought to a conclusion by the peace of Antalcidas in B.C. 387. The effect of this peace was the restoration of Corinth to the Lacedaemonian alliance; for as soon as it was concluded, Agesilaus compelled the Argives to withdraw their troops from the city, and the Corinthians to restore the exiles who had been in favour of the Lacedaemonians. Those Corinthians who had taken an active part in the massacre of their fellow-citizens at the festival of the Eucleia fled from Corinth, and took refuge, partly at Argos, and partly at Athens. (Xen. *Hell.* v. 1. § 34; Dem. *c. Lept.* p. 473.)

In the war between Thebes and Sparta, which soon afterwards broke out, the Corinthians remained faithful to the latter; but having suffered much from the war, they at length obtained permission from Sparta to conclude a separate peace with the Thebans. (Xen. *Hell.* vii. 4. § 6, seq.) In the subsequent events of Grecian history down to the Macedonian period, Corinth took little part. The government continued to be oligarchical; and the attempt of Timophanes to make himself tyrant of Corinth was frustrated by his murder by his own brother Timoleon, B.C. 344. (Diod. xvi. 65; Plut. *Tim.* 4; Cornel. Nep. *Tim.* 1; Aristot. *Polit.* v. 5. § 9.) From the time of the battle of Chaeroneia, Corinth was held by the Macedonian kings, who always kept a strong garrison in the important fortress of the Acrocorinthus. In B.C. 243 it was surprised by Aratus, delivered from the garrison of Antigonus Gonatas, and annexed to the Achaean league. (Pol. ii. 43.) But in B.C. 223 Corinth was surrendered by the Achaeans to Antigonus Doson, in order to secure his support against the Aetolians and Cleomenes. (Pol. ii. 52, 54.) It continued in the hands of Philip, the successor of Antigonus Doson; but after the defeat of this monarch at the battle of Cynoscephalae, B.C. 196, Corinth was declared free by the Romans, and was again united to the Achaean league. The Acrocorinthus, however, as well as Chalcis and Demetrias, which were regarded as the three fortresses of Greece, were occupied by Roman garrisons. (Pol. xviii. 28, 29; Liv. xxxiii. 31.)

When the Achaeans were mad enough to enter into a contest with Rome, Corinth was the seat of government of the Achaean league, and it was here that the Roman ambassadors were maltreated, who

had been sent to the League with the ultimatum of the senate. The Achaean troops were at once defeated, and L. Mummius entered Corinth unopposed. The vengeance which he took upon the unhappy city was fearful. All the males were put to the sword, and the women and children sold as slaves. Corinth was the richest city in Greece, and abounded in statues, paintings, and other works of art. The most valuable works of art were carried to Rome; and after it had been pillaged by the Roman soldiers, it was at a given signal set on fire; and thus was extinguished what Cicero calls the *lumen totius Graeciae* (B.C. 146). (Strab. viii. p. 381; Pol. xl. 7; Paus. ii. 1. § 2, vii. 16. § 7; Liv. *Epit.* 52; Flor. ii. 16; Oros. v. 3; Vell. Pat. i. 13; Cic. *pro Leg. Man.* 5.)

Corinth remained in ruins for a century. The site on which it had stood was devoted to the gods, and was not allowed to be inhabited (Macrob. *Sat.* iii. 9); a portion of its territory was given to the Sicyonians, who undertook the superintendence of the Isthmian games (Strab. viii. p. 381); the remainder became part of the ager publicus, and was consequently included in the vectigalia of the Roman people. (Lex Thoria, c. 50; Cic. *de Leg. Agr.* i. 2, ii. 19.) The greater part of its commerce passed over to Delos. In B.C. 46 Julius Caesar determined to rebuild Corinth, and sent a numerous colony thither, consisting of his veterans and freedmen. (Strab. viii. p. 381; Paus. ii. 1. § 2; Plut. *Caes.* 57; Dion Cass. xliii. 50; Diod. *Excerpt.* p. 591, Wess.; Plin. iv. 4. s. 5.) Henceforth it was called on coins and inscriptions COLONIA IVLIA CORINTHVS, also LAVS IVLI CORINT., and C. I. C. A., i. e., Colonia Julia Corinthus Augusta. The colonists were called Corinthienses, and not Corinthii, as the ancient inhabitants had been named. (Festus, p. 60, ed. Müller.) It soon rose again to be a prosperous and populous city; and when St. Paul visited it about 100 years after it had been rebuilt by the colony of Julius Caesar, it was the residence of Junius Gallio, the proconsul of Achaia. (*Acta Apost.* xviii. 12.) St. Paul founded here a flourishing Christian church, to which he addressed two of his epistles. When it was visited by Pausanias in the second century of the Christian era, it contained numerous public buildings, of which he has given us an account; and at a still later period it continued to be the capital of Achaia. (Hierocl. p. 646; Böckh, *Inscr. Graec.* no. 1086.)

III. Art, Literature, Character, &c.

It has been already noticed that Corinth was one of the earliest seats of Grecian art. (Strab. viii. p. 382.) It was in this city that painting was said to have been invented by Ardicas, Cleophantus, and Cleanthes (Plin. xxxv. 5), and at the time of its capture by the Romans it possessed some of the finest paintings in Greece. Among these was the celebrated picture of Dionysus by Aristeides of Thebes, for which Attalus offered the sum of 600,000 sesterces, and which was afterwards exhibited at Rome in the temple of Ceres. (Strab. viii. p. 381; Plin. xxxv. 8.) The numerous splendid temples which the wealth of the Corinthians enabled them to erect gave an impulse to architecture; and the most elaborate order of architecture was, as is well known, named after them. Statuary also flourished at Corinth, which was particularly celebrated for its works in bronze; and the name of *Aes Corinthiacum* was given to the finest kind of bronze. (See *Dict. of Ant.* p. 25, 2nd ed.) One of the earlier works of Corinthian art, which retained its celebrity in later times, was the celebrated chest of Cypselus, made of cedar wood and adorned with figures. It was dedicated at Olympia, where it was seen by Pausanias, who has given a minute description of it (v. 17, seq.). The Corinthian vases of terra cotta were among the finest in Greece; and such was their beauty, that all the cemeteries of the city were ransacked by the colonists of Julius Caesar, who sent them to Rome, where they fetched enormous prices. (Strab. viii. p. 381.)

In the time of Periander poetry likewise flourished at Corinth. It was here that Arion introduced those improvements into the dithyramb, which caused him to be regarded as its inventor, and which led Pindar to speak of Corinth as the city in which Μοῖσ' ἀδύπνοος ἀνθεῖ. (Herod. i. 23; Pind. *Ol.* xiii. 31.) Among the most ancient Cyclic poets we also find the names of Aeson, Eumelus, and Eumolpus, all of whom were natives of Corinth. (Schol. *ad Pind. l. c.*) But after the time of Periander little attention was paid to literature at Corinth; and among the illustrious writers of Greece not a single Corinthian appears. It is mentioned by Cicero that Corinth did not produce an orator (*Brut.* 13); and Deinarchus, the last and least important of the Attic orators, is no exception, since, though a native of Corinth, he was brought up at Athens, and practised his art in the latter city.

The wealth of the Corinthians gave rise to luxury and sensual indulgence. It was the most licentious city in all Greece; and the number of merchants who frequented it caused it to be the favourite resort of courtezans. The patron goddess of the city was Aphrodite, who had a splendid temple on the Acrocorinthus, where there were kept more than a thousand sacred female slaves (*ἱερόδουλοι*) for the service of strangers. (Strab. viii. p. 378.) Hence they are called by Pindar (*Fragm.* p. 244, Bergk) Πολλάξεναι νεάνιδες, ἀμφίπολοι Πειθοῦς ἐν ἀφνειῷ Κορίνθῳ. In no other city of Greece do we find this institution of *Hieroduli* as a regular part of the worship of Aphrodite; and there can be no doubt that it was introduced into Corinth by the Phoenicians. [See above, p. 675, a.] Many of the Corinthian courtezans, such as Lais, obtained such high sums as often to ruin the merchants who visited the city; whence arose the proverb (Strab. viii. p. 378): —

οὐ παντὸς ἀνδρὸς ἐς Κόρινθον ἔσθ' ὁ πλοῦς:

which Horace renders (*Ep.* i. 17. 36): —

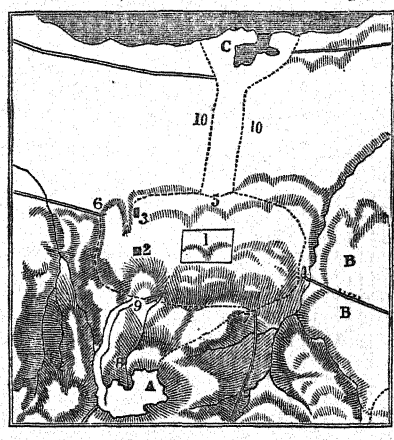
"Non cuivis homini contingit adire Corinthum."

So celebrated were the Corinthian courtezans, that they gave rise to many other proverbial expressions. (Κορινθιάζεσθαι = *μαστροπεύειν ἢ ἑταιρεῖν*, Pollux, ix. 6. § 75; *Κορινθία κόρη*, i. e. a courtezan, Plat. *Rep.* iii. p. 404, d.; so *Κορινθία παῖς*, Poll. x. 7. § 25; Suidas, *s. v.* *χοῖρος*; Müller, *Dor.* iv. 4. § 6.)

IV. Topography of the City and of the Port-Towns.

Of the topography of the ancient city before its destruction by Mummius we know next to nothing; but of the new city which was built by the Roman colonists, both Strabo (viii. p. 379) and Pausanias (ii. 2, seq.) have left us an account. The following is the description of Strabo: — "A lofty mountain, called Acrocorinthus, being 3½ stadia in perpendicular height and 30 stadia in the ascent by the

road, ends in a sharp point. Its northern side is the steepest, under which the city lies upon a level spot in the form of a trapezium, close to the very roots of the Acrocorinthus. The city itself was 40 stadia in circumference, and was surrounded with walls wherever it was not protected by the mountain. The mountain of the Acrocorinthus also was included within the same inclosure, so far as it was able to receive a wall; and as we ascended, the remains of the line of fortifications were visible. The whole circuit of the walls amounted to about 85 stadia. On the other sides the mountain is less steep, but it is here spread out further, and presents a wide prospect. On the summit is a small temple of Aphrodite; and under the summit is the small fountain of Peirene, having no outlet, but always full of clear and drinkable water. They say that from this fountain and from some other subterraneous veins the fountain bursts forth, which is at the foot of the mountain, and which flows into the city, supplying the latter with a sufficiency of water. There is also an abundance of wells in the city; and, as it is said, in the Acrocorinthus likewise, but we did not see any. Below the Peirene is the Sisypheium, preserving considerable remains of a temple or palace built of white marble. From the summit towards the north are seen the lofty mountains of Parnassus and Helicon, covered with snow."



Strabo's account of the Acrocorinthus is very accurate; and his estimate of the height agrees very nearly with that of the French surveyors, according to whom the perpendicular height of the mountain above the sea is 575 metres, equal to 1886 English feet, which is equal to three stadia and a tenth at 607 feet to the stadium. (Leake, *Peloponnesiaca*, p. 392.) All modern travellers agree that the Acrocorinthus, rising abruptly and isolated from the plain, is one of the most striking objects of its class that they had ever seen. Col. Mure observes that "neither the Acropolis of Athens, nor the Larissa of Argos, nor any of the more celebrated mountain fortresses of western Europe—not even Gibraltar—can enter into the remotest competition with this gigantic citadel. It is one of those objects more frequently, perhaps, to be met with in Greece than in any other country of Europe, of which no drawing can convey other than a very faint notion. The outline, indeed, of this colossal mass of rugged rock and green sward, interspersed here and there, but scantily, with the customary fringe of shrubs, although from a distance it enters into fine composition with the surrounding landscape, can in itself hardly be called picturesque; and the formal line of embattled Turkish or Venetian wall, which crowns the summit, does not set it off to advantage. Its vast size and height produce the greatest effect, as viewed from the seven Doric columns, standing nearly in the centre of the wilderness of rubbish and hovels that now mark the site of the city which it formerly protected." The Acrocorinthus is well described by Livy (xlv. 28) as, "arx in immanem altitudinem edita;" and Statius is not guilty of much exaggeration in the lines (*Theb.* vii. 106):

> . . . . "qua summas caput Acrocorinthus in auras
> Tollit, et alterna geminum mare protegit umbra."

The view from the Acrocorinthus comprehends "a greater number of celebrated objects than any other in Greece. Hymettus bounds the horizon to the eastward, and the Parthenon is distinctly seen at a direct distance of not much less than 50 English miles. Beyond the isthmus and bay of Lechaeum are seen all the great summits of Locris, Phocis, Boeotia, and Attica, and the two gulfs from the hill of *Koryfé* (Gonoessa) on the Corinthiac, to Sunium at the entrance of the Saronic gulf. To the westward the view is impeded by a great hill, which may be called the λῆμμα, or eye-sore, of the Acrocorinthus, especially with regard to modern war. Its summit is a truncated peak, which may be reached on horseback, by turning to the right of the road which leads to the Acrocorinthus, at a small distance short of the first gate." (Leake.)

The city of Corinth lay at the northern foot of the Acrocorinthus. It did not stand in the plain, but upon a broad, level rock, which is nearly 200 feet in height above the plain, lying between it and the bay of Lechaeum. Across this plain, as we have already mentioned, ran the long walls connecting Corinth and its port-town Lechaeum.

Corinth was one of the largest cities in Greece, and was in size inferior only to Athens. According to Strabo the walls of the city were 40 stadia, and those of the city and Acrocorinthus together 85 stadia. Each of the two Long Walls connecting Corinth and Lechaeum was 12 stadia in length; and adding to these the fortification of Lechaeum, the whole circuit of the fortifications was about 120 stadia; but a considerable portion of the space thus included was probably not covered with houses. The fortifications were very strong; and so lofty and thick were the walls, that Agis, the son of Archidamus, is reported to have exclaimed upon beholding them, "What women are these that dwell in this city." (Plut. *Apophth. Lac.* p. 215.) Of the population of Corinth we have no trustworthy accounts. Clinton computes the population of the whole state at about 100,000 persons, of whom he supposes 70,000 or 80,000 to have inhabited the city, and the remaining 20,000 or 30,000 to have been distributed through the country. According to a statement in Athenaeus (vi. p. 272) Corinth had 460,000 slaves; but this number is quite incredible, and ought probably to be corrected to 60,000. In that case the free popula-

PLAN OF CORINTH.

A. Acrocorinthus.
B. Suburb Craneium.
C. Lechaeum.
1. Agora.
2. Temple of Athena Chalinitis.
3. Temple of Apollo.
4. Gate of Cenchreae.
5. Gate of Lechaeum.
6. Gate of Sicyon.
7. Gate of Tenea.
8. Fountain of Peirene.
9. Sisypheium.

tion would have been about 40,000. These numbers of Clinton, however, are only conjectural, and are at the best only an approximation to the truth. (Clinton, *Fasti Hell.* vol. ii. p. 423, 2nd ed.)

Notwithstanding the destruction of Corinth by Mummius, some of the ancient buildings still existed at a later time Pausanias begins his description of the city by stating that "it contained many things worthy of notice, some being the relics of the ancient city, but the greater part executed in the flourishing period afterwards" (ii. 2. § 6). He appears to have come to Corinth from Cenchreae. The road leading to the city was lined with sepulchral monuments; and on either side of the road was a grove of cypresses adorned with temples of Bellerophon and Aphrodite, the sepulchre of Lais, and many other monuments. This suburb, called CRANEION (Κράνειον), was the aristocratic quarter of the city, and the favourite place of residence of the wealthy Corinthians, like Collytus at Athens, and Pitane at Sparta (Plut. *de Exsil.* 6, p. 601; see ATHENAE, p. 302, a.) Hence it was the chief promenade of Corinth. Here Diogenes of Sinope used to bask in the sun, a striking contrast to the luxury and splendour around him; and close to the city gate his tomb was still shown even in the time of Pausanias. (Paus. ii. 2. § 4; Alciphr. iii. 60; Lucian, *Quom. Hist. conscrib.* 3.) Xenophon mentions the Craneium in his account of the civil dissensions of Corinth in B. C. 392, as the place where one of the parties took refuge and from thence escaped to the Acrocorinthus. (*Hell.* iv. 4. § 4.)

Upon entering Corinth through the gate which probably bore the name of Cenchreae, Pausanias proceeded to the Agora, where the greatest number of temples stood. He mentions an Artemis Ephesia; — two wooden statues of Dionysus; — a temple of Tyché (Fortune); — a temple sacred to all the gods; — near the latter a fountain, issuing from a dolphin at the foot of a Poseidon in bronze; — statues of Apollo Clarius, Aphrodite, Hermes, and Zeus. In the middle of the Agora was a statue of a bronze Athena, on the basis of which were the figures of the Muses in the relief. Above the Agora was a temple of Octavia, the sister of Augustus (ii. 2. § 6 — ii. 3. § 1).

From the Agora four principal streets branched off, one leading to Cenchreae, by which Pausanias entered the city, the second leading to Lechaeum, the third to Sicyon, and the fourth to the Acrocorinthus.

Pausanias next describes the monuments on the road towards Lechaeum. On leaving the Agora to go to Lechaeum a person passed through the Propylaea, on which stood two gilded chariots, one bearing Phaethon and the other the Sun. A little beyond, to the right of the road, was the fountain of Peirene. This fountain was adorned with white marble; and the water flowed from certain artificial caverns into an open receptacle. It was pleasant to drink, and was said to have contributed to the excellence of the Corinthian bronze, when it was plunged into the water red hot (ii. 3. §§ 2, 3). Further on in his account of the Acrocorinthus, Pausanias says that a fountain rises behind the temple of Aphrodite on the summit of the mountain, and that this fountain is supposed to be the same as that of Peirene in the city, and that the water flowed underground from the former to the latter (ii. 5. § 1). This agrees with the statement of Strabo already quoted so far as relates to the rise of the Peirene in the Acrocorinthus, and its connection with the fountain in the lower city; but the two writers differ respecting the position of the latter fountain, Strabo placing it at the foot of the Acrocorinthus, and Pausanias on the road from the Agora to Lechaeum. It would thus appear that there were three sources at Corinth, all of which were at some period of time at least known by the name of Peirene. Col. Leake remarks that all the three are still observable; namely, the well in the Acrocorinthus, the rivulets which issue at the foot of that hill as described by Strabo, and the single source below the brow of the height on which the town is situated, in the position alluded to by Pausanias. The same author adds, with much probability, that "it is not difficult to imagine, that between the times of Strabo and Pausanias a change may have taken place in the application of the name Peirene in the lower city, in consequence of the water of the northern fountain having been found by experience better than that at the sources at the foot of the Acrocorinthus. The practice of the modern Corinthians gives countenance to this supposition; for they use the former fountain alone for drinking, while the water which issues from below the Acrocorinthus, instead of being thought the lightest in Greece, as Athenaeus describes that of Peirene, is considered heavy: the water is little used for drinking, and the springs are the constant resort of women washing clothes. As the remark of Athenaeus is nearly of the same date as the description of Pausanias (ii. p. 43, b.), it is fair to apply them both to the same source of water." (*Morea*, vol. iii. p. 242, seq.) The grotto inclosing the fountain of Peirene upon the Acrocorinthus is described by Göttling in the *Archäologische Zeitung* for 1844 (p. 326, seq.). A representation of it is given in the *Dict. of Ant.* (p. 544, 2nd ed.)

The fountain of Peirene is frequently mentioned by the ancient writers. So celebrated was it that Corinth is called by Pindar "the city of Peirene" (ἄστυ Πειράνας, Pind. *Ol.* xiii. 86), and the Corinthians are described in one of the oracles of the Pythia at Delphi, as "those dwelling around the beautiful Peirene" (οἱ περὶ καλὴν Πειρήνην οἰκεῖτε, Herod. v. 92). The fountain in the lower city was the favourite place of resort of the Corinthian elders, where they used to assemble to play at draughts and converse with one another (σεμνὸν ἀμφὶ Πειρήνης ὕδωρ, Eurip. *Med.* 69.) It was at the fountain of Peirene that Bellerophon is said to have caught the winged horse Pegasus, which is hence called by Euripides the Peirenaean steed. (Eurip. *Electr.* 475; Strab. viii. p. 379.) As Pegasus was in some legends represented as the horse of the Muses, Peirene is mentioned by the Roman poets as a fountain sacred to these goddesses. (Stat. *Silv.* i. 4. 27; Pers. *Prolog.* 4.) The Roman poets frequently use the adjective *Pirenis* in the general sense of Corinthian. (Ov. *Met.* vii. 391, *ex Pont.* i. 3. 75.)

Notwithstanding the excellence of the water of the Peirene, the inhabitants of the Roman colony were not contented with it; and the Emperor Hadrian accordingly constructed an aqueduct 20 miles in length, to bring water for them from Stymphalus. This aqueduct, as well as the native sources, supplied the public baths and fountains, which abounded in Corinth. (Paus. ii. 3. § 5, viii. 22. § 3.) Some remains of this aqueduct may still be seen not far from the sea, west of Corinth, near some mills upon the river *Lungo-potamos*. (Stauffert, in the Appendix to Forster's *Bauzeitung*, 1844, p. 70.)

Returning to the road leading from the agora to

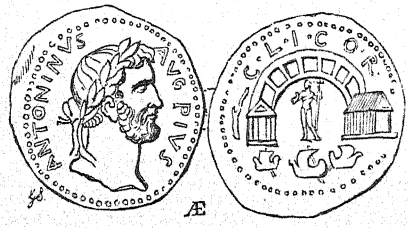
Lechaeum, Pausanias mentions near the Peirene a statue of Apollo; and next along the road a statue of Hermes with a ram, and statues also of Poseidon, Leucothea, and Palaemon upon a dolphin. Near the statue of Poseidon were the baths constructed by Eurycles, the Laconian, which were the most splendid in all Corinth, and were adorned with various kinds of marble, particularly with that which came from Croceae, in Laconia. Further on was the most remarkable of all the fountains in Corinth; it represented Bellerophon mounted on Pegasus, through whose hoof the water flowed (ii. 3. §§ 3—5).

Pausanias next describes the monuments in the street leading from the Agora to Sicyon. (Comp. "Porta, quae fert Sicyonem," Liv. xxxii. 23.) These were, in succession, the Temple of Apollo, with a bronze statue of the god; the fountain of Glauce; the Odeium, probably the covered theatre, built by Herodes Atticus, in imitation of the one he had erected at Athens, but of smaller size (*θέατρον ὑπωρόφιον*, Philostr. *Vit. Soph.* 236, Kays.); the tomb of Medea's children; the temple of Athena Chalinitis, so called because she gave Bellerophon the bridle by which he secured Pegasus; the theatre (comp. Plut. *Arat.* 23; Polyb. v. 27); the temple of Jupiter Capitolinus; the ancient gymnasium and the fountain called Lerna, surrounded with columns and seats; and close to the gymnasium two temples sacred to Zeus and Asclepius respectively (ii. 3. § 6, iii. 4. §§ 1—5).

Pausanias then ascends the Acrocorinthus. In Roman Corinth no part of the Acrocorinthus appears to have been inhabited: there were only a few public buildings by the side of the road leading up to the summit. Pausanias mentions in the ascent two sacred enclosures of Isis, and two of Sarapis; altars of the Sun, and a sanctuary of Necessity and Force, which no one was allowed to enter; a temple of the Mother of the Gods, containing a pillar and a throne, both made of stone; a temple of Juno Bunasa; and upon the summit a temple of Aphrodite, to whom the whole mountain was sacred (ii. 4. §§ 6, 7). Pausanias does not mention the Sisypheium, which Strabo describes (viii. p. 379) as situated below the Peirene. This building is mentioned by Diodorus Siculus (xx. 103), who says that part of the garrison of Cassander took refuge in the Acrocorinthus, and part in the Sisypheium, when Demetrius was admitted into the town by a part of the citizens. From this narrative it is clear that the Sisypheium was near the fountain issuing at the foot of the Acrocorinthus, and not near the one upon the top of the mountain: from Strabo's words above, it is not clear which of the two fountains adjoined the Sisypheium. From its name we may conclude that it was regarded as the ancient palace of the kings of the race of Sisyphus.

On descending from the Acrocorinthus, Pausanias did not go back to the lower city, but turned to the south, and quitted Corinth by the Teneatic gate, near which was a temple of Eileithyia. All the other gates of the city led towards the sea; but this one conducted into the mountainous country in the interior. Hence it is described as the gate behind the mountain (*ἡ Τενεατικὴ πύλη*, Paus. ii. 5. § 4; *αἱ μετὰ κορυφὴν πύλαι*, Polyaen. iv. 17. § 8).

Scarcely any thing remains of ancient Corinth. The most important relics are seven Doric columns on the western outskirts of the modern town. Five of these columns belonged to one of the fronts of a temple, and three (counting the angular column twice) to one of the sides of the peristyle. The diameter of the columns, 5 feet 10 inches, is greater than that of any other columns of the same order now existing in Greece. When Wheeler visited Greece in 1676, there were twelve columns standing; and the ruin was in the same state when described by Stuart 90 years afterwards. It was in its present condition when visited by Mr. Hawkins in 1795. This temple appears to have had originally six columns in front. It is conjectured by Leake to have been the temple of Athena Chalinitis. At a short distance to the northward of these seven columns, on the brow of the cliffs overlooking the plain and bay of Lechaeum, Leake remarked upon an artificial level, the foundations of a large building, and some fragments of Doric columns, sufficient, in his opinion, to prove that in this spot there stood another of the principal edifices of *Grecian* Corinth. He supposes that it was a hexastyle temple, about 75 feet in breadth, and that from its dimensions and position, it was one of the chief temples of the lower city. He further conjectures that this was the temple of Apollo, which Pausanias describes as on the road to Sicyon; and that as the temple of Aphrodite was the chief sanctuary on the Acrocorinthus, so this of Apollo was the principal sacred building in the lower city. This seems to be supported by the fact mentioned by Herodotus, that in the edict issued by Periander, whoever held any converse with his son, Lycophron, was to pay a fine to Apollo. (Herod. iii. 52.)

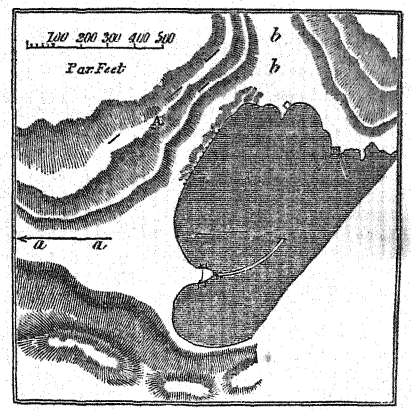


Besides these remains of Grecian Corinth, there are ruins of two buildings of Roman Corinth. The Roman remains are:—1. A large mass of brickwork on the northern side of the bazaar of modern Corinth, perhaps a part of one of the baths built by Hadrian. 2. An amphitheatre, excavated in the rock on the eastern side of the modern town. As this amphitheatre is not noticed by Pausanias, it is possibly a work posterior to his time. The area below is 290 feet by 190: the thickness of the remaining part of the cavea is 100 feet. At one end of the amphitheatre are the remains of a subterraneous entrance for the wild beasts, or gladiators. This amphitheatre is apparently the place of meeting of the Corinthians, described in a passage of Dion Chrysostom, to which Leake has directed attention (*ἔξω τῆς πόλεως ἐν χαράδρᾳ τινὶ, πλήθος μὲν δυναμένῳ δέξασθαι, τύπῳ δὲ ῥυπαρῷ ἄλλως, Or. Rhod.*, p. 347, Morell; Leake, *Peloponnesiaca*, p. 393).

The most important of the isolated antiquities of Corinth is the *περιστόμιον* or mouth of an ancient well, the exterior of which is sculptured with ten figures of divinities in very low relief. This beautiful work of art, which was seen by Dodwell, Leake and others in the garden of Notará's house at Corinth, is now in London, in the collection of the Earl of Guildford. The subject represents the introduction of Aphrodite into Olympus. (Dodwell, *Classical Tour*, vol. ii. p. 200; Leake, *Morea*, vol. iii. p. 264; Welcker, *Alte Denkmäler*, vol. ii. p. 27.) Curtius noticed before the present government buildings a fine torso of Aphrodite. It has been asserted, but without proof, that the four bronze horses of St. Mark at Venice, came from Corinth.

Corinth is now a small town, but is extremely unhealthy in the summer and autumn in consequence of the malaria, for which it is difficult to account, as it receives the sea breezes from either side. It is called by the inhabitants *Gortho*, which is only a corruption of the ancient name.

Port-Towns.—Lechaeum (τὸ Λεχαῖον, Lecheae, Plin. iv. 4. s. 5; Lecheum, Stat. *Silv.* iv. 3. 59), the port on the Corinthian gulf connected with the city by means of the Long Walls, 12 stadia in length, already mentioned. (Strab. viii. p. 380; Xen. *Hell.* iv. 4. § 17.) The Long Walls ran nearly due north, so that the wall on the right hand was called the eastern, and the one on the left hand the western or Sicyonian. The space between them must have been considerable; since, as we have already seen, there was sufficient space for an army to be drawn up for battle. [See above, p. 677, a.] The flat country between Corinth and Lechaeum is composed only of the sand washed up by the sea; and the port must have been originally artificial (χωστὸς λίμην, Dionys.), though it was no doubt rendered both spacious and convenient by the wealthy Corinthians. The site of the port is now indicated by a lagoon, surrounded by hillocks of sand. Lechaeum was the chief station of the Corinthian ships of war; and during the occupation of Corinth by the Macedonians, it was one of the stations of the royal fleet. It was also the emporium of the traffic with the western parts of Greece, and with Italy and Sicily. The proximity of Lechaeum to Corinth prevented it from becoming an important town like Peiraeeus. The only public buildings in the place mentioned by Pausanias (ii. 2. § 3) was a temple of Poseidon, who is hence called Lechaeus by Callimachus. (*Del.* 271.) The temple of the Olympian Zeus was probably situated upon the low ground between Corinth and the shore of Lechaeum. (Paus. iii. 9. § 2; Theophr. *Caus. Plant.* v. 14.)



Cenchreae (Κεγχρεαί, Strab. viii. p. 380; Paus. ii. 2. § 3; Ptol. iii. 16. § 13; Κεγχρειά, Thuc. iv. 42; Κεγχρειαί, Thuc. viii. 20; Κερχνίς, Callim. *Del.* 271; Cenchreis or Cenchris, Ov. *Trist.* i. 10. 9), the port of the Saronic gulf, was distant from Corinth about 70 stadia, and was the emporium of the trade with Asia. (Strab. *l. c.*) This port was not simply an artificial one, like that of Lechaeum. It is a bay protected by two promontories on the north and south, from which the Corinthians carried out moles, as the existing remains prove, in order to render the harbour more secure. On a Corinthian coin of Antoninus Pius (figured below) the port of Cenchreae is represented as inclosed between two promontories, on each of which stands a temple, and between them at the entrance of the harbour a statue of Poseidon, holding a trident in one hand and a dolphin in the other. This agrees with the description of Pausanias, from whom we learn that the brazen Poseidon stood upon a rock in the sea, that to the right of the entrance was the temple of Aphrodite, and to the left, in the direction of the warm springs,

Colonial Coin of Corinth.—(On the obverse the head of Antoninus Pius; on the reverse the port of Cenchreae. The letters C.L.I. COR. stand for COLONIA LAVS IVLIA CORINTHVS: see above, p. 678, a.)

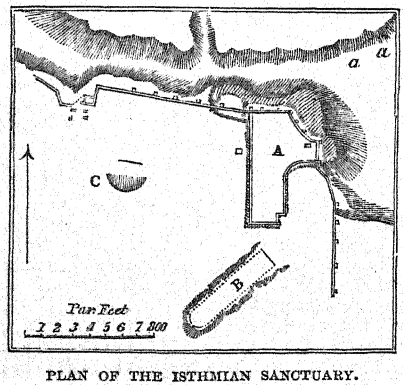
were the sanctuaries of Asclepius and of Isis (Paus. ii. 2. § 3, in which passage instead of ῥεύματι, we ought either to adopt Leake's emendation, ἕρματι, or else χάσματι.)

Cenchreae is mentioned in the history of St. Paul (*Act. Apost.* xviii. 18; *Ep. ad Rom.* xvi. 1.) It is now deserted, but it retains its name in the form *Kekhriés*. The ancient town stood upon the slopes of the hill above the town, as the numerous remains of its foundations prove. Between this hill and the heights to the right and the left there were two small plains, through one of which ran the road leading to Schoenus, and through the other the road leading to Corinth.

HARBOUR OF CENCHREAE.
A. Site of the town.
a a. Road to Corinth.
b b. Road to Schoenus.

Pausanias mentions (*l. c.*) certain luke-warm salt-springs, flowing from a rock into the sea over against Cenchreae, and called the bath of Helen. They are found about a mile SW. of Cenchreae, on the west promontory. They rise at a sufficient distance and height from the sea to turn a mill in their passage.

The road from Cenchreae to Corinth ran in a southwesterly direction through a narrow valley, shut in by two ranges of mountains, which almost served the purpose of long walls. On the left hand were the high ranges of the Oneian mountains; on the right the continuation of the heights on which Cenchreae stood.



V. The Isthmus.

The most important part of the territory of Corinth was the Isthmus, both as the place across which merchandize was carried from the eastern to the western sea, and more especially as hallowed by the celebration of the Isthmian games. The word *Isthmus* (Ἰσθμός) probably comes from the root ι, which appears in ἰ-έναι "to go," and the Latin *i-re*, and hence originally meant a passage. From being the proper name of this spot, it came to be applied to the neck of any peninsula. The situation of the Isthmus, a stony plain lying between the mountain barriers of the Geraneia on the north and the Oneia on the south, has been already described. [See above, p. 674.] The word was used both in a wider and a narrower signification. In its wider use it indicated the whole land lying between the two gulfs, and hence Corinth is said to have been situated on the Isthmus (Κόρινθος ἐπὶ τῷ Ἰσθμῷ

κείμενος, Strab. viii. p. 380; Corinthum in Isthmo condidit, Vell. Pat. i. 3): in its more restricted sense it was applied to the narrowest part of the Isthmus, and especially to the neighbourhood of the Poseideium and the locality of the Isthmian games (τὴν εἰς Κεγχρέας ἰόντων ἐξ Ἰσθμοῦ, Paus. ii. 2. § 3; τὰ Ἰσθμοῖ ἀγάλματα, Philostr. *Vit. Her.* 5.) Most of the Greek writers make the breadth of the Isthmus 40 stadia. (Strab. viii. p. 335; Diod. xi. 16; Scylax, p. 15.) Pliny states it as 5 miles (iv. 4. s. 5), and Mela 4 miles (ii. 3). The last statement is the most correct, the real breadth being about 3¼ English miles in direct distance. In the Byzantine time it was called τὸ ἑξαμίλιον, the name which the village on the Isthmus still bears, and which was also given to the Isthmus of Mount Athos.

The only town on the Isthmus in ancient times was SCHOENUS on the Saronic gulf. (ὁ Σχοινοῦς, viii. p. 380; Portus Schoenitas, Mel. ii. 3.) Situated at the narrowest part of the Isthmus, it was the port of the Isthmian sanctuary, and the place at which goods, not intended for the Corinthian market, were transported across the Isthmus by means of the Diolcos. This harbour, which is now called *Kalamáki*, is exposed to the east and south-east: the site of the town is indicated by a few fragments of Doric columns.

The Isthmian sanctuary lies rather less than a mile south-east of Schoenus. It was a level spot, of an irregular quadrangular form, containing the temple of Poseidon and other sanctuaries, and was surrounded on all sides by a strong wall, which can still be clearly traced. The northern and north-eastern parts of the enclosure were protected by the wall, which extended across the Isthmus, and of which we shall speak presently. On the other sides it was shut in by its own walls, which are in some cases more than 12 feet thick. The enclosure is about 640 feet in length; but its breadth varies, being about 600 feet broad on the north and north-east, but only 300 feet broad at its southern end. Its form, as well as the way in which it was connected with the Isthmic wall, is shown in the annexed plan copied from Curtius, which is taken with a slight improvement from Leake. The interior of the enclosure is a heap of ruins, which in consequence of earthquakes and other devastating causes have been so mixed, that it is impossible without extensive excavations to discover the ground-plan of the different buildings.

PLAN OF THE ISTHMIAN SANCTUARY.

A. The Sanctuary.
B. The Stadium.
C. The Theatre.
a a. Road to Schoenus.

Pausanias's account of the Isthmian sanctuary is unusually brief and unsatisfactory (ii. 1). He came to it from the port. Towards his left he saw the stadium and theatre, both constructed of white marble, of which there are still some vestiges. Both lay outside the sacred enclosure, the stadium towards the south, and the theatre towards the west. Here the Isthmian games were celebrated; and these buildings were connected with the sacred enclosure by a grove of pine trees. (Strab. viii. p. 380.) The main gate of the sanctuary appears to have been in the eastern wall, through which Pausanias entered. The road leading from this gate to the temple of Poseidon, was lined on one side by the statues of conquerors in the Isthmian games, and on the other side by a row of pine trees. Upon the temple, which was not large, stood Tritons, probably serving as weather-cocks, like the Triton on the Horologium of Andronicus Cyrrhestes at Athens. In the pronaus Pausanias saw two statues of Poseidon, and by their side statues of Amphitrite and Thalassa. The principal ornament of the cella was a magnificent gift of Herodes Atticus, consisting of four gilded horses with ivory hoofs, drawing the chariot of Poseidon, Amphitrite and Palaemon. The chariot rested upon a base, on which were represented in bas-relief Thalassa with her child Aphrodite in the centre, while on either side were the Nereids. The fragments of Doric columns found within the enclosure may be assigned to this temple. Leake measured the end of the fluting of one of these shafts, and found it ten inches and a half.

Within the sacred enclosure, to the west, was the Palaemonion, consisting of two sanctuaries, one above ground, containing statues of Poseidon, Leucothea, and Palaemon; and a subterraneous adytum, where Palaemon was said to have been buried. This adytum was the most sacred spot in the Isthmus, since the festival was originally in honour of Palaemon. Poseidon was subsequently substituted for this local divinity as the patron god of the festival; but Palaemon continued to receive special honour, and in his adytum the most sacred oaths were sworn. Pausanias also mentions an ancient sanctuary, called the altar of the Cyclopes. Sisyphus and Neleus were said to have been buried here, but the site of their graves was unknown.

These are all the buildings in the Isthmic sanctuary mentioned by Pausanias; but we learn, from an inscription discovered by Wheeler in 1676, and now preserved at Verona, that there were several other buildings besides. (See the inscription in Böckh, *Corp. Inscr.* n. 1104.) It contains a list of the Isthmian edifices erected by Publius Licinius Priscus Juventianus, high priest for life at Roman Corinth. "He built lodgings for the athletae, who came to the Isthmian games from the whole world. He erected, at his own expense, the Palaemonium, with its decorations;—the ἐναγιαστήριον, probably the subterraneous adytum, spoken of by Pausanias;—the sacred avenue;—the altars of the native gods, with the peribolus and the pronaos (perhaps the sanctuary containing the altars of the Cyclopes);—the houses in which the athletae were examined;—the temple of Helios, together with the statue and peribolus;—moreover, the peribolus of the Sacred Grove, and within it temples of Demeter, Core, Dionysus and Artemis, with their statues, decorations and pronai. He repaired the temples of Eueteria, of Core, of Pluto, and the steps and terrace-walls, which had fallen into decay by earth-

quakes and antiquity He also decorated the portico at the Stadium, with the arched apartments and the decorations belonging to them."

It has been already mentioned that the northern portion of the walls which surrounded the Isthmic sanctuary belonged to a line of fortification, which extended at one period across the Isthmus. This wall may still be traced in its whole extent across the narrowest part of the Isthmus, beginning at the bay of Lechaeum and terminating at the bay of Schoenus. It was fortified with square towers on its northern side in the direction of Megaris, showing that it was intended for the defence of Peloponnesus against attacks from the north. It was not built in a straight line, but followed the crest of a range of low hills, the last falls of the Oneian mountains. The length of the wall, according to Boblaye, is 7300 mètres, while the breadth of the Isthmus at its narrowest part is only 5950 mètres. At what period this wall was erected, is uncertain. The first Isthmian wall, mentioned in history, was the one thrown up in haste by the Peloponnesians when Xerxes was marching into Greece. (Herod. viii. 71; Diod. xi. 66.) But this was a work of haste, and could not have been the same as the massive walls, of which the remains are extant. Moreover, it is evident from the military operations in the Corinthia, recorded by Thucydides and Xenophon, that in their time the Isthmus was not defended by a line of fortifications: the difficulties of an invading army always begin with the passes through the Oneian mountains. Diodorus (xv. 68) speaks of a temporary line of fortifications, consisting of palisades and trenches, which were thrown across the Isthmus by the Spartans and their allies, to prevent the Thebans from marching into Peloponnesus (B. C. 369), from which it clearly appears that there was no permanent wall. Moreover, Xenophon (*Hell.* vii. 1. § 15, seq.) does not even mention the palisading and trenches, but places the Lacedaemonians and their allies upon the Oneian mountains. It is not till we come to the period of the decline of the Roman empire, that we find mention of the Isthmian wall. It was then regarded as an important defence against the invasions of the barbarians. Hence, it was restored by Valerian in the middle of the third century (Zosim. i. 29), by Justinian towards the end of the sixth (Procop. *de Aedif.* iv. 2), by the Greeks against the Turks in 1415, and after it had been destroyed by the Turks it was rebuilt by the Venetians in 1463. It was a second time destroyed by the Turks; and by the treaty of Carlowitz, in 1699, the remains of the old walls were made the boundary line between the territories of the Turks and Venetians.

The Isthmian wall formed with the passes of the Geraneian and with those of the Oneian mountains three distinct lines of defence, which are enumerated in the following passage of Claudian (*de Bell. Get.* 188):—

> "Vallata mari Scironia rupes,
> Et duo continuo connectens aequora muro
> Isthmus, et angusti patuerunt claustra Lechaei."

A short distance north of the Isthmian wall, where the ground was the most level, was the Diolcos (*δίολκος*, Strab. viii. p. 335). It was a level road, upon which smaller vessels were drawn by moving rollers from one sea to the other. The cargoes of those ships, which were too large for this mode of transport, were unloaded, carried across, and put on board other vessels upon the opposite coast. Hence we find the expressions *διϊσθμεῖν τὰς ναῦς*, *ὑπερισθμεῖν* (Pol. iv. 19), *ὑπερφέρειν* (Thuc. viii. 7), *διελκύειν* (Diod. iv. 56). In some seasons of the year there was an uninterrupted traffic upon the Diolcos, to which allusion is made in one of the jokes of Aristophanes (*Thesmoph.* 647).

The narrow breadth of the Isthmus, and the important traffic across it, frequently suggested the idea of cutting a canal through it. This project is said to have been formed by Periander (Diog. Laërt. i. 99), Demetrius Poliorcetes (Strab. i. p. 54), Julius Caesar (Dion Cass. xliv. 5; Suet. *Caes.* 44; Plut. *Caes.* 58), Caligula (Suet. *Calig.* 21), Nero, and Herodes Atticus (Philostr. *Vit. Soph.* ii. 6). But the only one who actually commenced the work was Nero. This emperor opened the undertaking with great pomp, and cut out part of the earth with his own hands; but the work had advanced only four stadia, when he was obliged to give it up, in consequence of the insurrection of Julius Vindex in Gaul. (Dion Cass. lxv. 16; Suet. *Ner.* 19; Paus. ii. 1. § 5; Plin. iv. 4. s. 5; Lucian, *de Fossa Isthmi.*) The canal was commenced upon the western shore close to the Diolcos, and traces of it may still be seen at right angles to the shore. It has now little depth; but it is 200 feet wide, and may be traced for about 1200 yards. It ceased where the rocky ground begins to rise; for even the Isthmus is not a perfect level, but rises gradually from either shore, and steeper from the eastern than the western side. Curtius says that the highest point is 246 feet above the level of the sea. The existing remains of the canal leave no doubt respecting its position; but since it was said by some authorities to commence *ἀπὸ τοῦ Λεχαίου*, Chandler erroneously concluded that it commenced at the port of Lechaeum. Leake, however, has shown that the bay of the Corinthian gulf at the Isthmus bore the name of Lechaeum, and that we are to understand the bay, and not the port, in the passages referred to.

VI. Topography of the Corinthia.

The territory of Corinth extended some distance to the north and south of the Isthmus. At an earlier period the boundary line between the Corinthia and Megaris commenced at Crommyon; but at a later time the Corinthia extended as far as the Scironian rocks and the other passes of the Geraneia. South of the Isthmus Corinth possessed the part of the Peloponnesus extending as far as the northern slopes of the Argive mountains, and along the coast of the Saronic gulf as far as the territory of Epidaurus. The direct distances in English miles, from the city of Corinth to its frontiers, as measured by Clinton, are: to the river Nemea, which divided Corinthia from Sicyonia, 7½ miles; to the confines of Epidauria, 13¾ miles; to the confines of Megaris, 12 miles. Corinth was only 8½ miles from Cleonae, which stood beyond the Corinthian frontiers towards Argos. In the time of the Roman empire the Corinthia was included under Argolis (*ἡ Κορινθία χώρα μοῖρα οὖσα τῆς Ἀργείας*, Paus. ii. 1. § 1).

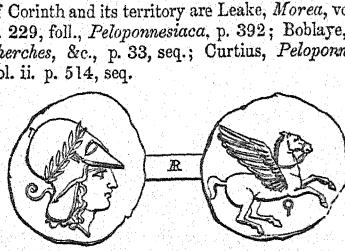
South of Cenchreae the Oneium runs out into the Saronic gulf, forming a promontory called Chersonesus. Between this promontory and a spot called Rheitus or the stream is a bay with a flat shore, where the Athenians under Nicias landed in B.C. 425, intending to take possession of the mountain called Solygeius (*Σολύγειος*), which had been formerly seized by the Dorian invaders for the pur-

pose of carrying on war against the then inhabitants of Corinth. This hill is described by Thucydides as distant 12 stadia from the shore, 60 from Corinth, and 20 from the Isthmus; and upon it there stood the village of SOLYGEIA (Σολύγεια). The sepulchres between *Mertési* and *Galatáki* probably belonged to Solygeia. It was here that a very ancient vase was found, which Dodwell procured at Corinth. (*Classical Tour*, vol. ii. p. 197.) The attempt of Nicias failed. The Corinthians, having received information of the Athenian movements, stationed a body of troops at Cenchreae, lest the Athenians should endeavour to seize the port of Crommyon, outside of the Isthmus, and with the remainder of their army occupied Solygeia. A battle took place in the broken ground between the village and the sea, in which the Athenians gained the victory. The Corinthian detachment at Cenchreae, who could not see the battle in consequence of the interposition of the ridge of Oneium, marched to the scene of action as soon as the dust of the fugitives informed them of what was taking place; and as other reinforcements were also approaching, Nicias thought it more prudent to re-embark his men, and sailed away to the neighbouring islands. (Thuc. iv. 42, foll.; Σολύγης λόφος, Polyaen. i. 39; and the map of the scene of action in the 2nd volume of Arnold's Thucydides.)

Beyond Solygeius, to the SE., was a harbour, called PEIRAEUS (Πειραιός), which is described by Thucydides as uninhabited, and the last port towards the confines of Epidaurus. In this harbour some Peloponnesian ships, which had fled hither for refuge, were kept blockaded by an Athenian fleet during a great part of the summer of B.C. 412. The Athenian fleet took up their station at a small island opposite the entrance of the harbour. (Thuc. viii. 10, 11.) Peiraeus is the harbour now called *Frango-Limióna* or *Porto Franco;* and the small island alluded to bears the name of *Ovrio-nisi*, or *Ovrió-kastro*, Jews-Castle. Ptolemy (iii. 16. § 12) gives the following list of places on this part of the coast:—Ἐπίδαυρος, Σπείραιον ἄκρον, Ἀθηναίων λιμήν, Βουκέφαλος λιμήν, Κεγχρεαὶ ἐπίνειον. In Pliny (iv. 4. s. 5) we find "Spiraeum promontorium, portus Anthedus et Bucephalus et Cenchreae." Both Ptolemy and Pliny omit the harbour Peiraeus; but the promontory Speiraeum is probably the same name. Müller indeed proposed to read Speiraeus instead of Peiraeus in Thucydides; but this is hardly admissible, since Stephanus B. (*s.v.* Πειραῖος) read Peiraeus.

South of Corinth, on the northern slopes of the Argive mountains, lay Tenea, at the distance of 60 stadia from the capital [TENEA]; and in the same mountainous district we may perhaps place PETRA, the residence of Eetion, the father of Cypselus. (Herod. v. 92.)

The Corinthian territory, north of the Isthmus, may be divided into two parts, the eastern half consisting of a series of small plains between the Geraneian mountains sloping down to the Saronic Gulf, while the western half is composed of a mass of mountains, running out into the Corinthian Gulf, in the form of a quadrangular peninsula. The north-eastern point of this peninsula was called the promontory OLMIAE (Ὄλμιαι, Strab. viii. p. 380, x. p. 409), which lay opposite Creusis, the port of Thespiae, in Boeotia, and formed along with the latter the entrance to the bay called Alcyonis. The south-western point of the peninsula was the promontory HERAEUM (now *C. St. Nikolaos* or *Melankávi*), of which we shall speak further presently, and which along with the opposite Sicyonian coast formed the entrance to the bay of Lechaeum.



This district bore the general name of PERAEA (Περαία, Steph. B. *s. v.*), or the country beyond the Isthmus. The possession of it was of great importance to the Corinthians, who obtained from its mountains a supply of timber, and found here pasturage for their cattle, when the grass in the plains was burnt up. Moreover, the shortest road to Boeotia and Phocis ran across this mountainous district. The chief place in this district was PEIRAEUM (Πείραιον, Xen. *Hell.* iv. 5. § 1, *Ages.* ii. 18), now called *Perachóra*, lying inland between the promontories Heraeum and Olmiae, and not to be confounded with the above-mentioned port of Peiraeus on the Saronic Gulf. Peiraeum was a strong fortress, and formed one of a chain of fortresses, intended to secure this part of the country from the attacks of the Megarians and Athenians. To the east of Peiraeum, and near the Alcyonian Gulf, was the fortress OENOE (Xen. *Hell.* iv. 5. § 5; Strab. viii. p. 380, x. p. 409), the site of which is marked by a quadrangular tower above the harbour of *Skino* The third fortress stood on the promontory at the western corner of the peninsula, which was called the HERAEUM, from its being the site of the temple and oracle of HERA ACRAEA (Strab. viii. p. 380; Xen. *Hell.* iv. 5. § 5; Plut. *Cleom.* 20; Liv. xxxii. 23.) The fortress consisted of the temple itself, which stood upon the extremity of the promontory, and was surrounded with strong walls, of which the remains are still extant. A little way inland is a chapel of St. Nikolaos, also surrounded with walls, and probably the site of an ancient sanctuary: perhaps it was a temple of Poseidon, who is frequently represented by St. Nikolaos.

The geography of the Peraea is illustrated by the campaign of Agesilaus in B.C. 390, when he took Peiraeum, Oenoe and the Heraeum. (Xen. *Hell.* iv. 5. § 1, seq., *Ages.* ii. 18.) Xenophon, in his account of this campaign, mentions certain THERMA (τὰ Θερμὰ) or warm springs, situated on the road to Peiraeum by the bay of Lechaeum (*Hell.* iv. 5. §§ 3, 8). These warm springs are still visible at the small village and port of *Lutráki*, which derives its name from them. They are situated close to the sea at the foot of the mountain of Peiraeum, where the level ground of the Isthmus ends and the mountains of the Peraean peninsula begin. (Ulrichs, *Reisen in Griechenland*, p. 3.) The lake near the Heraeum, on the banks of which Agesilaus was seated, when he received the news of the destruction of the Lacedaemonian mora by Iphicrates (Xen. *Hell.* iv. 5. § 6. seq.), is now called *Vuliasméni*. It is a salt lake surrounded by mountains, except on the side open to the sea; and it is conjectured by Curtius, with great probability, to be the same as the lake ESCHATIOTIS (Ἐσχατιῶτις λίμνη). Gorgo, the daughter of Megareus and wife of Corinthus, is said to have plunged into this lake upon receiving intelligence of the murder of her children, in consequence of which it received the name of Gorgopis. (Etym. M. *s. v.* Ἐσχατιῶτις; Phavorin. *Ecl.* p. 209, Dind.; Aesch. *Agam.* 302.)

Towards the Saronic gulf the Geraneian mountains are not nearly so lofty and rugged as in the Peraea. Between the flat ground of the Isthmus and the Scironian rocks there are three plains upon the coast. The chief town in this district was Crommyon [CROMMYON], and the name Crommyonia was some-

times given to the whole country between Megara and Schoenus. Between Crommyon and Schoenus was the village of Sidus. [SIDUS.] To the east of Crommyon, at the western extremity of the Scironian rocks, was a temple of Apollo Latous, which marked the boundaries of the Corinthia and Megaris in the time of Pausanias (i. 44. § 10). This temple must have been near the modern village of *Kinéta*, a little above which the road leads over the Scironian rocks to Megara. [MEGARA.]

The best modern authorities on the topography of Corinth and its territory are Leake, *Morea*, vol. iii. p. 229, foll., *Peloponnesiaca*, p. 392; Boblaye, *Recherches*, &c., p. 33, seq.; Curtius, *Peloponnesos*, vol. ii. p. 514, seq.

COIN OF CORINTH.

CORI'OLI (Κοριόλα, Dionys.; Κοριόλλα, Steph. B.: *Eth.* Κοριολάνος, Coriolanus), an ancient city of Latium, celebrated from its connection with the legend of C. Marcius Coriolanus. There can be no doubt that it was originally a Latin city. Pliny enumerates it among those which shared in the sacrifices on the Alban Mount (iii. 5. s. 9.) Dionysius represents Turnus Herdonius, who endeavoured to excite the Latins to insurrection against Tarquinius Superbus, as a citizen of Corioli, though Livy, with more probability, calls him a native of Aricia. (Dionys. iv. 45*; Liv. i. 50). But when Corioli first appears in Roman history it had fallen into the hands of the Volscians, from whom it was wrested by the Roman consul Postumus Cominius at the same time with Longula and Pollusca, B. C. 493. It is probable that all three were small towns, and it is merely one of the fictions of the poetic legend when Dionysius and Plutarch represent it as the capital or chief city of the Volscians. (Liv. ii. 33; Dionys. vi. 92—94; Plut. *Coriol.* 8; Val. Max. iv. 3. § 4). Its name again appears, associated with those of Satricum, Longula and Pollusca, among the towns which, according to the legendary history, Coriolanus reduced at the head of the Volscian armies. (Liv. ii. 39; Dionys. viii. 19.) It is not improbable that the fact of its conquest by the Volscians at this period is historically true: we have no mention of its subsequent fate: but in B. C. 443, it is alluded to as if it were no longer in existence, the district disputed between Ardea and Aricia being claimed by the Romans as having formed part of the territory of Corioli. (Liv. iii. 71.) Its name never again appears in history, and it is noticed by Pliny (*l. c.*) among the cities of Latium of which no trace remained in his day.

The site of Corioli, like that of most of the cities of Latium mentioned only in the early Roman history, is very uncertain. We can only infer from the notices of it, that it was not very far distant from Antium, and that its territory adjoined those of Ardea and Aricia. Nibby is disposed to fix it on a hill called *Monte Giove*, about 19 miles from Rome, on the left of the modern road to *Porto d'Anzo* (Antium), near a spot called *Fonte di Papa*. This hill, which is the farthest extremity towards the plain of a ridge that descends from the Alban Hills, retains no traces of ancient buildings: but the site is one well adapted for that of an ancient city. Gell also speaks of *Monte Giove* as "the most eligible position that could be assigned to Corioli, if there were any ruins to confirm it." The identification is, however, purely conjectural: a hill near the *Osteria di Civita*, 4 miles nearer Antium, supposed by Nibby to be the site of Pollusca [POLLUSCA], would be at least as plausible a position for Corioli. (Gell, *Top. of Rome*, pp. 180—184; Nibby, *Dintorni*, vol. i. p. 513; Abeken, *Mittel-Italien*, p. 66.) [E. H. B.]

* The name is written in this passage Κορίλλα, which must, without doubt, be a mere false reading for Κοριόλα or Κοριόλλα, though the corruption is of very early date, as it is cited by Stephanus of Byzantium under this form (*s. v.* Κορίλλα.).

CORIOVALLUM or CORTOVALLUM, a place in the north of Gallia, on a road from Castellum (*Cassel*) to Colonia Agrippina (*Cologne*), between Aduatuca (*Tongern*) and Juliacum (*Juliers*). The Antonine Itin. makes it 16 Gallic leagues from Aduatuca to Coriovallum, and 12 from Coriovallum to Juliacum. The distances in the Table are the same, but in the Table the name is Cortovallum or Cortovallium, as it seems. Cortovallum is perhaps the true name, as a place named *Corten* seems to agree very well with the distance from *Juliers*, and also to preserve the ancient name. [G. L.]

CORISOPITI, a Gallic people, not mentioned by any authority earlier than the Notitia. In the middle ages the diocese of *Quimper* was called Corisopitensis, and it is therefore certain that the Corisopiti occupied the diocese of *Quimper* in *Bretagne*. *Quimper* is now in the department of *Finistere*. There are good reasons for supposing that the Corisopiti were a small tribe dependent on the Osismii, whom Caesar mentions (*B. G.* iii. 9). [G. L.]

CORITANI (*Coritavi*), in Britain, mentioned by Ptolemy as having *Lindum* and *Rhage* (*Lincoln* and *Leicester*), for their towns. [R. G. L.]

CO'RIUM (Κόριον: *Eth.* Κορήσιος, Steph. B.: *Kurná*), a town of Crete, near which was a temple to Athena (comp. Paus. viii. 21. § 4; Cic. *N. D.* iii. 23) and lake (λίμνη Κορησία). As there is no other lake in the island, Mr. Pashley (*Trav.* vol. i. p. 73; comp. Hoeck, *Kreta*, vol. i. p. 432; Sieber, *Reise*, vol. ii. p. 467), from the identity of this physical feature, fixes the position near the small lake *Kurna*, at the foot of the hills on the S. edge of the plain which runs along the shore from *Armyro* eastward. [E. B. J.]

CO'RIUS (Κόριος, Marcian, p. 20; Ptol. vi. 8. § 4; Coros, Pomp. Mela, iii. 8. § 4), a small river of Carmania, which flows into the Persian Gulf, opposite the Island Ooracta (now *Keishm*). It has been supposed that it is the same as that now called the *Shúr* or *Dio Rud*. [V.]

CORMA (Tac. *Ann.* xii. 14), a small stream of Assyria, which Forbiger considers to have been one of the tributaries of the Dioela. [V.]

CO'RMASA or CURMASA (Κύρμασα), a place which the Roman consul Cn. Manlius came to in his march described by Livy (xxxviii. 15). It is written Curmasa in Polybius (xxii. 19). The Table gives a road from Laodiceia on the Lycus to Perge in Pamphylia. But Leake (*Asia Minor*, p. 154) remarks that "although the direct distance (between Laodiceia and Perge) is upwards of 100 geog. miles there are only 46 M. P. marked in the Table: namely,

34 between Themisonium and Cormasa, and 12 from Cormasa to Perge." Ptolemy (v. 5) enumerates Cormasa among the cities of Pisidia. It does not seem possible to make any conjecture as to the site of Cormasa. [G. L.]

CORNA'BII or CORNA'VII. 1. In North Britain, mentioned by Ptolemy as lying in the extreme north-east of Scotland; consequently in the present county of *Caithness*.

2. In North Britain, mentioned by Ptolemy as lying east of the Ordovices (*North Wales*), with Deuna for their town. This gives parts of Stafford, Chester, and Shropshire, as their area. [See DEUNA.] [R. G. L.]

CO'RNACUM (Κόρνακον), a town in Lower Pannonia, where, according to the Notit. Imper. several detachments of cavalry were in garrison. (Ptol. ii. 16. § 5; Itin. Ant. p. 243.) [L. S.]

CORNE'LIA CASTRA. [CASTRA.]

CORNI'CULUM (Κορνίκολος, Dionys.; Κόρνικλος, Steph. B.: *Eth.* Κορνικολανός, Corniculanus), an ancient city of Latium, which appears to have occupied one of the summits of the remarkable group of isolated hills that rises boldly from the plain of the *Campagna*, about 3 miles from the foot of the lofty *Monte Gennaro* (Lucretilis Mons). These hills, now known as the *Monticelli*, were called in ancient times the MONTES CORNICULANI (τὰ Κόρνικλα ὄρεα, Dionys. i. 16); both their principal summits present remains of ancient cities, and it is probable that one or other of these must have been the site of Corniculum: but we have no information from ancient writers to assist us in deciding between them. Corniculum only figures in Roman history during the war of Tarquinius Priscus with the Latins, when it is mentioned among the places reduced by that monarch by force of arms. (Liv. i. 38; Dionys. iii. 50.) It was on this occasion that, according to the received tradition, Ocrisia, the mother of Servius Tullius, fell into the hands of the Romans as a captive. (Liv. i. 39; Dionys. iv. 1; Ovid, *Fast.* vi. 628.) At this time Livy reckons it one of the cities of the "Prisci Latini." Dionysius tells us that it was strongly fortified, and withstood a long siege, but after its capture was plundered and burnt by Tarquin. He does not speak of the city as *destroyed*; and it is probable that it did not cease to exist at so early a period. In the list of the thirty cities of the Latin League given by Dionysius (v. 61), we find the Corni (Κόρνοι), who are probably, as suggested by Niebuhr, the citizens of Corniculum. (Niebuhr, vol. ii. p. 17, note 21.) Florus also alludes to Corniculum as having taken part in the wars of the Latins against the *Republic* (i. 11. § 6), though the passage is so rhetorical, that little value can be attached to it. But in later times no mention is found of Corniculum, and it is only noticed by Pliny among the cities of Latium, of which no trace remained in his day. (Plin. iii. 5. s. 9.)

The Montes Corniculani are a very striking feature of the Roman Campagna. They form an isolated group, wholly detached from the main range of the Apennines, consisting of three rocky peaks of considerable elevation, and very steep and difficult of access. Notwithstanding this, all three were inhabited in the middle ages, and two of them still are so. The northernmost and highest of the three, now occupied by a poor village called *S. Angelo in Capoccia*, presents considerable remains of ancient walls of a very rude and primitive style of construction, more resembling the earliest specimens of the Cyclopean style than any other ruins of the class in Latium. (See the figure in Gell, *Top. of Rome*, p. 56.) These are considered by Sir W. Gell to be the remains of Corniculum. On the southernmost peak stands the modern village of *Monticelli*, which retains no vestiges of very remote antiquity, but presents numerous fragments of buildings, and a small temple or Sacellum, constructed in brick, and obviously of the time of the Roman empire. Nibby, Abeken, and others consider this hill to be the site of Corniculum, and refer the more ancient ruins on that of *S. Angelo* to Medullia, a city which must probably be placed in the immediate vicinity of Corniculum. [MEDULLIA.] Gell, however, is of opinion that there could never have been an ancient city on the site of *Monticelli*, and that the walls at *S. Angelo* must therefore be those of Corniculum. (*Top. of Rome*, pp. 55, 319; Nibby, *Dintorni*, vol. ii. pp. 327, 367; Abeken, *M. I.* p. 78.) [E. H. B.]

CORNUS (Κόρνος, Ptol. iii. 3. § 7; Corni, *Itin. Ant.* p. 84), a city on the W. coast of Sardinia, called by Livy the capital of that part of the island. It was made their head-quarters and place of refuge by the Sardinian tribes who revolted against the Romans during the Second Punic War, but after the defeat of Hampsicora was besieged and taken by the praetor T. Manlius, B. C. 215. (Liv. xxiii. 40, 41.) Ptolemy erroneously reckons it among the inland towns of Sardinia; the Itinerary places it on the road along the west coast of the island, 18 miles from Bosa, and the same distance from Tharros. These distances coincide with the site of the existing ruins, which are still visible on the sea-coast between *Capo Nieddu* and *Capo Mannu*, about 13 miles N. of *Oristano*. Numerous fragments of buildings, parts of an aqueduct, necropolis, and the walls of the port, are still standing. Carthaginian and Roman coins are found there in abundance. (Tyndale's *Sardinia*, vol. ii. pp. 300, 301.) [E. H. B.]

COROBI'LIUM, a town of Gallia, is placed in the Table on a road from Durocortorum (*Reims*) to Andematunum (*Langres*). The next station to Durocortorum is Durocatalaunum (*Châlons*), which is omitted in the Table. There is an old road from *Châlons* to *Langres* on which *Corbeil* stands, and this must be Corbilium; yet the distances do not agree. The Table makes it 42 Gallic leagues from *Corbeil* to *Langres*, but the real distance is greater. [G. L.]

COROC (Κορόκ, Isid. Char. p. 8), a small place in Drangiana mentioned by Isidorus. It has been supposed by Forbiger to be the same as that now called *Kohec*. [V.]

COROCONDAME (Κοροκονδάμη, Strab. xi. pp. 494, 496; Ptol. v. 9. §§ 6, 8; Mela, i. 19; Steph. B. *s. v.*), a small place close to the Bosporus Cimmerius in the country of the Bosporani, and adjoining one of the mouths of the river Anticites (now *Kuban*). It gave its name to a lake of some size, called Corocondamitis (Strab. *l. c.*), which appears to have been formed by one of the branches of the same river. There is some indistinctness in the ancient accounts of this district; and, according to some, as Mela (i. 19), and Dionysius Perieg. (550), Corocondame would seem to be the name of a peninsula or island, formed by the Bosporus, the Maeotis, and the river. [V.]

CORODAMUM PROM. (Κορόδαμον ἄκρον), a promontory at the NE. extremity of the country of the Sachalitae, immediately without the straits of the Persian gulf. Mr. Forster fixes it at *Ras-el-*

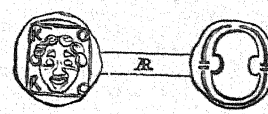
Had, the easternmost promontory in Arabia, and follows Bochart in identifying the name with that of the Joktanite patriarch Hadoram. (*Arabia*, vol. i. pp. 140—142.) Others find Corodamum in *Corroomb Point*, immediately north of *Muscat*. [G. W.]

COROMANIS (Κορομανὶς πόλις), a town of the Abucaei, on the Sacer Sinus, at the NW. extremity of the Persian gulf. Mr. Forster identifies it with "the town of *Graan Harb*, a mart of commerce on the Persian gulf, at the foot of the bay of *Koueit* or *Dooat-al-Khusma*." (*Arabia*, vol. i. p. 263, vol. ii. p. 213.) [G. W.]

CORO'NE (Κορώνη: *Eth.* Κορωναεύς, Strab. viii. p. 411; Κορωνεύς, Κορωναιεύς, Κορωναῖος, Steph. B.: *Petalidhi*), a town of Messenia, situated upon the western side of the Messenian gulf, which was sometimes called after it, the Coronaean. (Plin. iv. 5. s. 7.) According to Pausanias, it was built on the site of the Homeric Aepeia, at the time of the restoration of the Messenians to their native country, by Epaminondas; and received the name of Coroneia because Epimelides, who founded the new town, was a native of Coroneia, in Boeotia. This name was changed by the Messenians into that of Corone. According to others, Corone corresponded to the Homeric Pedasus. (Strab. viii. p. 360.) In the acropolis of the city was a brazen statue of Athena, who became the patron deity of Corone in consequence of her worship at Coroneia. [CORONEIA.] In the agora there was a statue of Zeus Zoter, as at Messene; and there were likewise in the lower city temples of Artemis, of Dionysus, and of Asclepius. The harbour of Corone was called the port of the Achaeans, probably because the city belonged to the Achaean league. (Paus. iv. 34.)

Pausanias says that Corone was situated to the right of the Pamisus, close to the sea, and at the foot of a mountain called Temathia or Mathia (the reading is doubtful). The present name of the mountain is *Lykódimo*, at the foot of which stands *Petalidhi*, on the site of Corone, in a small but fertile plain. Within the last few years a colony of Mainotes has settled here, and restored to the place its ancient name. The modern town of *Koróni*, however, which is situated upon a promontory some distance south of *Petalidhi*, occupies the site of Asine. It is probable that the inhabitants of Corone migrated at some period to Asine, carrying with them their ancient name. [ASINE.]

There are considerable remains of Corone. Part of a mole may still be traced jutting out into the sea, and in the plain have been found foundations of houses and walls, and some works of ancient art. There are likewise traces of the walls of the acropolis upon the heights above the plain.



Corone was supplied with water for drinking from the fountain Plataniston, which flowed from a hollow plane tree 20 stadia from the road, leading from the Pamisus. Eighty stadia south of Corone, near the coast, was the temple of Apollo Corynthus, the site of which is probably indicated by some ancient remains on the hill of St. Elias, near the sea, above the village of *Kastélia*.

Corone, as already stated, belonged to the Achaean league. It was on his march to relieve this city that Philopoemen was made prisoner, and put to death at Messene on the following day. (Liv. xxxix. 49.) Plutarch, however, relates that Philopoemen was captured on his march towards Colonis (Plut. *Philopoem.* 18); but the statement of Livy is the more probable one. [COLONIDES.] Corone is also mentioned by Ptolemy (iii. 16. § 8). (Leake, *Morea*, vol. i. p. 439, seq.; *Peloponnesiaca*, p. 195, seq.; Boblaye, *Recherches*, &c., p. 111; Curtius, *Peloponnesos*, vol. ii. p. 165, seq.)

CORONEIA (Κορώνεια: *Eth.* Κορώνιος, Κορωνεύς), the name of several places in Greece, derived from κορώνη, a hill. 1. A town of Boeotia, and a member of the Boeotian league, is described by Strabo as situated upon a height near Mt. Helicon (ix. p. 411). Its territory was called Κορωνειακή. (Strab. ix. pp. 407, 411.) The town stood upon an insulated hill at the entrance of a valley leading southwards to Mt. Helicon, the principal summit of which is seen at the head of the valley. From this hill there is a fine view over the lake Copais, and at its foot there is a broad plain extending as far as the marshes of the lake. On either side of the hill flowed two streams, one on the eastern or right hand side, called Coralius or Cuarius, and the other on the left, named Phalarus: a tributary of the latter was the Isomantus or Hoplias. [See above, pp. 412, 413.] Coroneia is said to have been founded by the Boeotians from Arne in Thessaly, after they had been driven out of their original homes by the Thessalians; and they appear to have called it Coroneia after the Thessalian town of this name. [See No. 2.] At the same time they built in the plain in front of the city a temple of Athena Itonica, also named after the one in Thessaly, and likewise gave to the river which flowed by the temple the name of Cuarius or Curalius, after the Thessalian river. [CIERIUM.] In this temple was held the festival of the Pamboeotia, which was common to all the Boeotians. (Strab. ix. p. 411; Paus. ix. 34. § 1.) The Thessalian origin of Coroneia is also attested by Pausanias, who ascribes its foundation, as well as that of Haliartus, to Athamas and his descendants, who came from Thessaly (ix. 34. § 7, seq.).

Coroneia is mentioned by Homer in conjunction with Haliartus. (*Il.* ii. 503.) In historical times several important battles were fought in the plain in front of the town. It was here that the Athenians under Tolmides were defeated by the Boeotians in B. C. 447, in consequence of which defeat the Athenians lost the sovereignty which they had for some years exercised over Boeotia. (Thuc. i. 113.) The plain of Coroneia was also the scene of the victory gained by Agesilaus over the Thebans and their allies in B. C. 394. (Xen. *Hell.* iv. 3. § 15, seq.; Plut. *Ages.* 17.) In the Sacred War Coroneia was twice taken by the Phocians under Onomarchus. (Diod. xvi. 35, 58.) Philip, after the conquest of the Phocians, gave up the town to the Thebans. (Dem. *de Pac.* p. 62, *Philip.* ii. p. 69.) Coroneia espoused the cause both of Philip and of Perseus in their wars with the Romans. (Polyb. xx. 7, xxvii. 1, xxix. 6, a.; Liv. xxxiii. 29, xlii. 44, 67.)

Pausanias says (ix. 34. § 3) that the most remarkable objects in Coroneia were altars of Hermes Epimelius and of the winds, and a little below them the temple of Hera. The principal remains of the ancient city are those of the theatre, of the temple of Hera, and of the agora. The coins of Coroneia are very rare. The one annexed is a hemidrachma,

COIN OF CORONEIA.

with the Boeotian shield on one side, and on the other a full-faced mask or Gorgonian head, with the epigraph KOPO. (Dodwell, vol. i. p. 247; Leake, *Northern Greece*, vol. ii. p. 132, seq.; Forchhammer, *Hellenika*, p. 185.)

2. A town of Thessaly in Phthiotis, from which the Boeotian Coroneia probably derived its name. It is placed by Leake at *Tjeutmá*. (Strab. ix. p. 434; Ptol. iii. 13. § 46; Steph. B. *s. v.*; Leake, *Northern Greece*, vol. iv. p. 471.)

CORONTA (*τὰ Κόροντα*: *Eth.* Κορονταῖος: near *Pródhromo*), a small town in the interior of Acarnania, probably lying between Metropolis and Old Oenia. [OENIADAE.] At a mile from *Pródhromo* Leake discovered on an insulated hill the ruins of Hellenic walls, which are probably the remains of Coronta. (Thuc. ii. 102; Steph. B. *s. v.*; Leake, *Northern Greece*, vol. iii. p. 514.)

CORO'NUS MONS (Κορωνός, Ptol. vi. 2. § 4. vi. 5. § 1, vi. 9. §§ 3, 4), the eastern part of the great chain of mountains which extends along the southern shore of the Caspian Sea, and of which Orontes, M. Jasonium, and M. Coronus were the principal peaks. Coronus is the most eastern of the three, and was on the borders of Hyrcania and Parthia. It is probably represented now by the mountains between *Damghan* and *Asterabad*. [V.]

COROPISSUS (Κοροπισσός: *Eth.* Κοροπισσεύς), as the name appears on the coins. It is Coropassus in Strabo (p. 568, 663), who says that the boundary between the Lycaonians and the Cappadocians is the tract between the village Coropassus in Lycaonia and Gareathyra, a small town of the Cappadocians. The distance between these two small places was about 120 stadia. In the second of these two passages the name of the Cappadocian town is written Garsaura, which is the true name. The place is therefore near the western border of Cappadocia, south of the salt lake of Tatta. Adopissus in Ptolemy (v. 6) is probably the same place. [G.L.]

COROS. [CORIUS; CYRUS PERSIDIS.]

CORPILLI, a Thracian tribe on the river Hebrus (Plin. iv. 18), which inhabited the district of Corpialica (Κορπιαλική, Ptol. iii. 11. § 9). [L. S.]

CORRAGUM, a fortress of Illyria, of uncertain site, taken by the Romans in B. C. 200, along with the two other forts of Gerunium and Orgessus. (Liv. xxxi. 27.)

CO'RSEAE. [CORASSIAE.]

CORSEIA (Κορσεία). 1. A town of Boeotia, sometimes included in Opuntian Locris, was the first place which the traveller reached after crossing Mt. *Khlomó* from Cyrtones. In the Sacred War it was taken by the Phocians, along with Orchomenus and Coroneia. In the plain below, the river Platanius joined the sea. Its site is probably represented by the village *Proskynú*, on the heights above which are the remains of an ancient acropolis. (Paus. ix. 24. § 5; Diod. xvi. 58; Dem. *de Fals. Leg.* p. 385; called Χορσία by Steph. B. *s. v.*; Leake, *Northern Greece*, vol. ii. p. 184; Forchhammer, *Hellenika*, p. 179.)

2. Scylax mentions Κορσίαι as a port of Boeotia on the Corinthian gulf. It appears from Pliny that there was a second town of this name in the western part of Boeotia, and that it was distinguished from the other by the name of Thebae Corsicae. ("Thebis quae Corsicae cognominatae sunt juxta Heliconem," Plin. iv. 3. s. 4.) It is probably represented by the modern *Khósia*. (Leake, *Northern Greece*, vol. ii. p. 521.)

CORSI (Κορσιοι or Κορσοί, Ptol.), a people of Sardinia, enumerated both by Pliny and Ptolemy among the tribes of the interior of that island. Their name indicates that they must have emigrated from the neighbouring island of Corsica, which is expressly stated by Pausanias, who adds that the strength of their mountain abodes enabled them to maintain their independence against the Carthaginians. In accordance with this, Ptolemy places them in the northern part of Sardinia, adjoining the Tibulatii, who inhabited its NE. extremity, near to the strait that separates it from Corsica. (Plin. iii. 7. s. 13; Ptol. iii. 3. § 6; Paus. x. 17. § 8.) [E. H. B.]

CO'RSICA, called by the Greeks CYRNUS (Κύρνος: *Eth.* Κύρνιος and Κυρναῖος: later Greek writers, however, use also Κορσίς and Κορσίκα; Dionys. Per.; Strab.; Ptol., &c.: the Latin Ethnic is Corsus, which Ovid uses also for the adjective: Corsicanus is the adjective form in Servius and Solinus), one of the principal islands in the Mediterranean, situated to the N. of Sardinia, from which it was separated only by a narrow strait. It was generally reckoned the third in magnitude of the seven great islands in that sea (Alexius, *ap. Eustath. ad Dionys. Per.* 4; Strab. ii. p. 123), though other authors gave it only the sixth place. (Diod. v. 17; Scylax, § 113.) Pliny says that it was 150 miles long, and for the most part 50 broad, and gives its circumference at 325 miles; Strabo, on the other hand, states its length at 160 miles, and its greatest breadth at 70. (Plin. iii. 6. s. 12; Strab. v. p. 224.) Both these statements exceed the truth; the real length of the island is just about 100 geographical (125 Roman) miles, while its breadth nowhere exceeds 46 geographical or 58 Roman miles. Both Strabo and Diodorus reckon it 300 stadia distant from the island of Aethalia or Ilva, which is very little more than the truth; the former correctly states that it is visible from the mainland near Populonium, but he was misled by his guides when they led him to believe that Sardinia was so too. The northern extremity of Corsica, formed by a narrow ridge of mountains, extending like a great promontory near 30 miles from the main body of the island, is distinctly visible from many points on the coast of Etruria, and even from that of Liguria. The distance of this part of the island from Vada Volaterrana is correctly given by Pliny at 62 M.P., but it is not more than 58 from Populonium, which is the nearest point on the mainland. (Plin. *l. c.*; Strab. v. p. 223; Diod. v. 13.)

Almost the whole of Corsica is occupied by a range of lofty and rugged mountains, extending from N. to S. from one extremity of the island to the other. The highest summits of this range attain an elevation of from 8000 to 9000 feet, and are in consequence covered with snow during the greater part of the year; their sides are furrowed by deep torrents, and intersected by narrow, crooked valleys or ravines, while they are covered almost throughout with dense forests. The vast extent of these, and the magnitude and excellence of the timber which they produced, have been celebrated in all ages. (Theophrast. *H. P.* v. 8. §§ 1, 2; Dionys. Per. 460; Diod. *l. c.*) But notwithstanding this advantage, as well as the excellent ports with which the W. and S. coasts of the island abound, its rugged and inaccessible nature rendered it in ancient, as they still do in modern times, one of the wildest and least civilised portions of Southern Europe. Theophrastus says that the whole island was "shaggy and savage," from the

vast forests with which it was covered (*δασείαν καὶ ὥσπερ ἠγριωμένην τῇ ὕλῃ, l. c.*). Strabo speaks of the inhabitants of the mountain districts as "wilder than the very beasts" (*ἀγριώτεροι θηρίων*, v. p. 224), and of so untameable a character, that when they were brought to Rome as slaves it was impossible to make any use of them, or accustom them to domestic habits. The judgment of Diodorus on this point is more favourable. He says the Corsican slaves were very docile, and readily adapted themselves to the ways of civilised life; and that the natives of the island, though ignorant of tillage, and subsisting wholly on meat, milk, and honey, were remarkable for their love of justice. (Diod. v. 13, 14.) Seneca, who was banished to the island in A.D. 41, and lived there eight years in exile, naturally takes an unfavourable view of it, and speaks in exaggerated terms of the barrenness of its soil, as well as the barbarism of its inhabitants, and the unhealthiness of its climate. (Sen. *Cons. ad Helv.* 6. § 4; Anthol. Lat. 129, 130.) In the latter respect, however, it had greatly the advantage of the neighbouring island of Sardinia; the low grounds on the E. coast are indeed very unhealthy, but the greater part of the island is free from the scourge of malaria; and ancient writers speak of the native Corsicans as remarkable for their longevity. (Eustath. *ad Dion. Per.* 458.)

We have very little information as to the origin of the native population of Corsica, but there seems little doubt that it was derived principally from a Ligurian source. This is the opinion of Seneca, though he tells us that there were some tribes in the island of Spanish or Iberian extraction, whose manners and dress resembled those of the Cantabrians, and appears inclined to regard these as the earliest inhabitants, and the Ligurians as subsequent settlers. (Sen. *l. c.* 8.) Solinus, however, following authors now lost, who had written fully concerning Corsica, expressly ascribes its first population to the Ligurians, and this is confirmed by the legend which derived its name from a Ligurian woman of the name of Corsa, who was fabled to have first discovered and visited its shores. (Solin. 3. § 3; Eustath. *l. c.*; Isidor. *Origg.* xiv. 6.) We are expressly told that Corsica was the *native* name of the island, adopted from them by the Romans (Diod. v. 13; Dionys. Per. 459); the origin of that of Cyrnus, by which it was known to the Greeks, is wholly unknown, though late writers, as usual, derived it from a hero Cyrnus, whom they pretended to be a son of Hercules.

The island appears to have been early known to the Greeks, and the Phocaeans founded the city of Alalia on its eastern coast as early as B.C. 564. (Herod. i. 165; Seneca, *l. c*) Twenty years later they established themselves in much greater force, but after a stay of only a few years were compelled to abandon it again [ALERIA]; and from this period we hear nothing more of Greek colonies on the island. According to Diodorus, the Tyrrhenians, who had united their arms with the Carthaginians to expel the Phocaeans, established their authority over the island, in which they founded the city of Nicaea (a name that certainly appears rather to point to a *Greek* origin), and exacted from the inhabitants a tribute of resin, wax, and honey. (Diod. v. 13.) Their supremacy fell with the decline of their naval power, and Corsica, as well as Sardinia, appears to have been in a state of dependency, if not of subjection, to Carthage at the time of the First Punic War. On this account it was attacked, in B.C. 259, by a Roman fleet under L. Scipio, who took the city of Aleria, and compelled the inhabitants to acknowledge the sovereignty of Rome, and give hostages for their fidelity. (Zonar. viii. 11; Flor. ii. 2. § 16; Liv. Epit. xvii.; Orell. *Inscr.* 552.) It is probable that the submission of the wild tribes of the native Corsicans was at this time little more than nominal; and after the close of the First Punic War we find them again repeatedly in arms, together with their neighbours the Sardinians; at length, in B.C. 231, C. Papirius Maso is said to have effectually subdued them, for which he claimed the honour of a triumph. (Zonar. viii. 18; Liv. Epit. xx.; Fast. Capit.) Yet long after this, repeated revolts attest the imperfect nature of their subjection; and the victories of the Roman praetors appear to have effected nothing beyond a nominal submission, and the payment of an occasional tribute. (Liv. xl. 19, 34, xlii. 7, 21.) Before the close of the Republic, however, the maritime parts of the island at least were brought under complete subjection, and two colonies of Roman citizens were established on its E. coast, that of Mariana by Marius, and Aleria by Sulla. (Plin. iii. 6. s. 12; Mel. ii. 7. § 9; Seneca, *Cons. ad Helv.* 8. § 2.) This example, however, was not followed; and under the Roman empire little pains were taken to extend the civilisation of Italy to an island which was regarded as wild and inhospitable. Even in the time of Augustus, Strabo describes the mountain tribes of the interior as subsisting principally by robbery and plunder; while the Roman governors from time to time made an attack upon their fastnesses, and carried off a number of prisoners, whom they sold as slaves. (Strab. v. p. 224.) The fact that it was selected as a place of banishment for political exiles (of which Seneca was the most illustrious example) in itself shows the unfavourable estimation in which it was held. Its name only once occurs in the history of this period, during the civil wars of A.D. 69, when a vain attempt was made by Decimus Pacarius to arouse the Corsicans in favour of Vitellius, though their coasts were exposed to the fleet of Otho. (Tac. *Hist.* ii. 16.) Under the Roman Republic, Corsica had been united in one province with Sardinia, and subject to the same praetor. Tacitus speaks of it apparently as having then a separate Procurator, but this was probably exceptional. After the time of Constantine, however, the two islands were separated, and each had its own governor, with the title of Praeses. (Not. Dign. ii. pp. 6, 64; P. Diac. ii. 22.) The seat of government was probably at Aleria. On the fall of the Western Empire, Corsica fell into the hands of the Vandals, from whom it was wrested by Belisarius, but was again conquered by the Goths under Totila. (Procop. *B. V.* ii. 5, *B. G.* iv. 24.) It was, however, recovered by the Exarchs of Ravenna, and continued a dependency of the Byzantine empire, till it was conquered in the 8th century by the Saracens.

The physical character of Corsica has been already adverted to. The great chain of mountains which fills up almost the whole island approaches, however, somewhat nearer to the W. than the E. coast; the former is in consequence extremely rugged, and broken by great mountain promontories, with deep bays between them, many of which afford excellent harbours, though these are rendered comparatively useless by the difficulty of communication with the interior. The E. coast, on the contrary, is lower and more regular, presenting a nearly unbroken line for a distance of 75 miles, from the

neighbourhood of *Bastia* to the Gulf of *Porto Vecchio;* but near its southern extremity this also is indented by two deep inlets, one of which, called in ancient times the Portus Syracusanus (now *Porto Vecchio*), constitutes a harbour of first-rate excellence. (Diod. v. 3.) The central mass of the mountain chain, now called the *Monte Rotondo*, is apparently that which is called by Ptolemy the Mons Aureus (τὸ Χρυσοῦν ὄρος). It is in this group that the two principal rivers of the island have their rise: the Rhotanus of Ptolemy, now known as the *Tavignano;* and the Tuola or Tavola (Τουόλας or Ταυόλας), now called the *Golo*. Both of these flow from W. to E., and enter the sea, the first near the colony of Aleria, the second close to that of Mariana. The other rivers of the island are of inferior magnitude; of those which flow to the W. coast, Ptolemy mentions the Circidius (Κιρκίδιος), which is probably the modern *Liamone;* and the Locras, Ticarius, and Pitanus, which cannot be identified with any certainty. The Hierus or Sacer fluvius (Ἱερός πόταμος), which he places on the E. coast, S. of Aleria, may probably be the *Fiume Orbo;* and the Valerius (Οὐαλέριος or Οὐολέριος), described by him as entering the sea in the middle of the N. coast, can be no other than the small stream now called the *Cigno*, which flows by *S. Fiorenzo*.

The same author, to whom we are indebted for what little information we possess concerning the ancient geography of Corsica, gives us the names of a number of headlands, and bays or harbours; but very few of these can be identified with any approach to certainty. A glance at a good map will show how irregular and broken is the whole W. coast of the island, so that it is idle to choose a few out of the number of bold headlands and deep inlets that it presents, and assume them to be those intended by Ptolemy.* The northernmost point of the island, now called *Capo Corso*, appears to be that called by him the Sacred Promontory (Ἱερὸν ἄκρον); and the southern extremity, near *Bonifacio*, *may* be that which he calls Marianum, adjoining which was a city of the same name (Μαριανὸν ἄκρον καὶ πόλις). Between these (proceeding from N. to S. along the W. coast of the island) he enumerates: Tilox Pr., the Caesian shore (Καισίας αἰγιαλός), the Attian Pr., the Gulf of Casalus, the Prom. of Viriballum, the Rhoetian mountain, the Prom. of Rhium, the Sandy Shore (Ἀμμώδης αἰγιαλός), the Portus Titianus. The Portus Syracusanus in the SE. part of the island is probably, as already observed, the Gulf of *Porto Vecchio*. (Ptol. iii. 2. §§ 3—5.)

Our knowledge of the internal geography of the island is extremely vague and uncertain. Neither Strabo nor Pliny give us the names of any of the tribes into which the native population was doubtless divided. The former says merely that some parts of the island were habitable, and contained the towns of the Blesini, Charax, Eniconiae, and Vapanes. (Strab. v. p. 224.) Pliny tells us that Corsica contained thirty-three "civitates," besides the two Roman colonies, but without giving the names of any. Ptolemy, on the contrary, gives us the following list: "The Cervini occupy the W. side beneath the Golden Mountain; then follow the Tarrabenii, the Titiani, the Balatonii. The most northerly promontory is occupied by the Vanaceni; next to whom come the Cilebensii, then the Licnini, Macrini, Opini, Simbri, and Comaceni, and furthest to the S. the Subasani" (iii. 2. § 6). Nothing more is known of any of these obscure tribes, who, as Ptolemy expressly tells us, dwelt only in scattered villages; besides these, he enumerates 14 *towns* in the interior, all of which are utterly unknown. Even those towns which he places on the W. coast of the island cannot be determined with any approach to certainty, their position depending on those of the promontories and bays, the geography of which (as already observed) is extremely vague. The names of these places are as follows: Urcinium (Οὐρκίνιον), Pauca (Παῦκα), Ficaria (Φικαρία), and Marianum, near the promontory of the same name. On the E. coast our data are rather more precise; the site of the two Roman colonies of ALERIA and MARIANA being known with certainty. The Itinerary of Antoninus also gives us a line of road (the only one in the island) along this coast from Mariana to Pallae, a city mentioned also by Ptolemy, which was probably situated at the head of the gulf called the Portus Syracusanus. The intermediate stations between this and Aleria are the Portus Favonii (still called *Porto Favone*, and probably identical with the Φιλωνίου λιμήν of Ptolemy), and Praesidium, half way between Portus Favonii and Aleria, probably, from its name, a mere military post. (*Itin. Ant.* p. 85; Ptol. iii. 2. § 5.) Besides these, Ptolemy mentions Rubra and Alista, which he places between the Portus Syracusanus and Aleria; and the towns of Mantinum, Clunium, Centuria, and Canelate, all of which are to be sought in the northern part of the island, N. of Mariana. Nicaea, which from its name would appear to have been a Greek colony, but is called by Diodorus (v. 13) a Tyrrhenian one, is not mentioned by any of the geographers and its position is quite unknown. It is a plausible conjecture of Cluverius that it was the same place afterwards called Mariana.

Of the natural productions of Corsica, the chief, as already observed, is timber, of which it furnished an almost unlimited supply. Theophrastus speaks with especial admiration of the pine and fir trees that grew on the island, and of which the Romans made great use for their fleets. (Theophr. *H. P.* v. 8. § 1.) The same forests produced resin and pitch, and abounded in wild bees, so that wax and honey were in all ages among the chief exports of the island, and we find the Corsicans on one occasion compelled to pay 200,000 pounds of wax as a punishment for their revolt. (Liv. xlii. 7; Diod. v. 13; Plin. xxi. 14. s. 49.) The longevity of the inhabitants was supposed by some writers to arise from their abundant use of honey as an article of food. (Steph. B. *s. v.* Κύρνος.) Yet the Corsican honey had a bitter taste, owing to the bees feeding on the box trees, which rendered it unpalatable to strangers. (Theophr. *H. P.* iii. 15. § 5; Diod. *l. c.*; Virg. *Ecl.* ix. 30; Ovid, *Amor.* i. 12. 10.) Sheep, goats, and cattle were also abundant, though the former were allowed to run almost wild about the mountains. (Pol. xii. 4.) But the island produced little corn, and even under the Roman empire the cultivation of fruit trees, vines, and olives was almost wholly neglected. (Senec. *Cons. ad Helv.* 9. § 2; Anthol. Lat. 130.) Of wild animals, according to Polybius, there were

* Mannert and Reichart have endeavoured to assign the position of all these points mentioned by Ptolemy, as well as the obscure towns enumerated by him; but the entire divergence of their results sufficiently shows how little dependence is to be placed upon them. It has not been thought worth while to repeat a list of mere conjectures; they are both given by Forbiger.

found abundance of foxes and rabbits, but no wolves, hares, or deer; the wild goat also was unknown, but the wild sheep or mousmon (*μούσμων*) was found in the mountains of Corsica, as well as of Sardinia. Strabo mentions it in the latter island only, but it is still common to them both. (Pol. xii. 3, 4.) The mines of Corsica seem to have been neglected by the Romans; but its granite, which is of a very fine quality, was worked for architectural purposes; and the Roman quarries in two little islets a few miles from *Bonifacio*, at the southern extremity of Corsica, are still visible. (Valery, *Voyage en Corse*, chap. 80.) [E. H. B.]

CORSO'TE (Κορσώτη, Xen. *Anab.* i. 5. § 4), a town in Mesopotamia, on the river Mascas, where Cyrus passed three days on his march against his brother Artaxerxes. It is described by Xenophon as deserted, and it is not mentioned by any other writer. It has been conjectured by Rennell (*Illustrations of the Retreat of the Ten Thousand*, p. 103) that it may be represented by some large ruins, now called *Erzi* or *Irsah*, which were observed by the travellers Balbi and Rauwolf, when passing down the Euphrates. Xenophon states that the Mascas flowed round Corsote: perhaps the town was situated at the junction of the Euphrates and that river. [V.]

CORSTORPITUM, in Britain, mentioned in the first Itinerary. Probably *Corbridge* in Northumberland. [R. G. L.]

CORSYMUS or CORSYNUS. It appears, from the coins of Aphrodisias, in Caria, that there was a river Corsymus, or Corsynus, there. In the article APHRODISIAS the river is named Mosynus. The name in the editions of Harduin and Sillig (Plin. v. 29) is Orsinus. Harduin says that the editions of Pliny have Mossinus. It seems likely that Corsynus or Corsymus is the true name, and that the other forms are corruptions. [G. L.]

CORTERATE, a town in Gallia, placed by the Table on the road from Burdigala (*Bordeaux*) to Vesunna (*Perigueux*). The place seems to be *Coutras*, on a branch of the *Dordogne*. [G. L.]

CORTO'NA (Κόρτωνα, Ptol.: *Eth.* Cortonensis: *Cortona*), one of the most ancient and powerful of the inland cities of Etruria, situated on a lofty hill between Arretium and Clusium. It was distant only about 9 miles from the Lacus Trasimenus. There is great confusion about its ancient name. The Greek legend which represented it as founded by Dardanus, called it CORYTHUS, a form frequently used in consequence by the Latin poets. (Virg. *Aen.* iii. 167—170, vii. 206—210, &c.; Sil. Ital. iv. 721, v. 122.) But there is little doubt that this was a mere transplanting of a Greek tradition (Müller, *Etrusker*, vol. i. p. 277), and the native name seems to have been Cortona, or some form closely resembling it. Dionysius writes the name Croton, and says it was changed to Cortona (which he writes Κοθορνία, probably an error of the MSS. for Κορθωνία), when it received a Roman colony. Livy, however, calls it Cortona at a much earlier period, without any allusion to its having changed its name. The confusion between *Cor* and *Cro* is so natural that it is no wonder the Greeks should write it Κρότων, even if the Roman form was the correct one: but it is not improbable that the Etruscans, who did not use the letter o, would have written the name KPVTVNA, as they wrote Pupluna for Populonium. (Dionys. i. 26; Steph. Byz. *s. v.* Κρότων; Müller. *l. c.* pp. 268. 277.) Polybius, however (iii. 82), writes the name Κυρτώνιον, and there can be no doubt that the Γορτυναία, in Tyrrhenia, of Lycophron and Theopompus, the foundation of which was ascribed by the latter to Ulysses, is merely a corruption of the same name. (Lycophr. *Alex.* 806; Theopomp. *ap. Tzetz. ad loc.*)

All accounts agree in representing Cortona as one of the most ancient cities of Etruria, and at a very early period one of the most powerful of the confederation. Dionysius expressly tells us that it was originally an Umbrian city, and was wrested from that people by the Pelasgians. (Dionys. i. 20.) It is evidently to the *Pelasgic* city only that the legend of its foundation by Dardanus, to which so prominent a place has been assigned by Virgil, can be referred: various other legends also appear to point to the same connection, and may be considered as proving that the Pelasgic character of the inhabitants was strongly marked and recognised by the Greeks. But, notwithstanding the high authority of Niebuhr, it seems impossible to admit the view of Dionysius, who refers to this city and not to Creston in Thrace, the statement of Herodotus concerning the language spoken by the Pelasgians in his day. (Herod. i. 57; Dionys. i. 29. On this much disputed question compare Niebuhr, vol. i. p. 34, note 89; Müller, *Etrusker*, vol. i. p. 94—98; Lepsius, *Tyrrhenische Pelasger*, p. 18, &c.) Dionysius represents Cortona as having been made by the Pelasgians a stronghold and centre of operations from whence they gradually extended their arms over the rest of Etruria: and it is, doubtless, with reference to this statement that Stephanus of Byzantium terms it the metropolis of the Tyrrhenians. (Dionys. i. 20; Steph. Byz. *s. v.* Κρότων.) There are, indeed, circumstances which would lead us to infer that the dominion of the Etruscans, properly so called (the Rasena), was also extended from Cortona, or its neighbourhood, over the more southern parts of Etruria; and it would be a natural surmise that Dionysius had made a confusion between the Pelasgian Tyrrhenians and the Etruscans proper: but it seems more probable that both conquests may really have emanated from the same quarter. [ETRURIA.]

Important as is the part which Cortona bears in these early traditions, it is singular how little we subsequently hear of it. There can be no doubt that it was one of the twelve cities of the Etruscan confederation: and hence in B. C. 310 Livy speaks of Perusia, Cortona, and Arretium, as at that period among the chief cities of Etruria ("ferme capita Etruriae populorum." Liv. ix. 37.) They on this occasion obtained a peace for 30 years, which was soon broken; but the name of Cortona is not again mentioned: and we have no account of the time at which it fell under the subjection of Rome. In the Second Punic War it is incidentally mentioned: Hannibal having marched beneath its walls, and laid waste its territory just before the battle of the Thrasymenian Lake (Pol. iii. 82; Liv. xxii. 4), but the inaccessible position of the city itself rendered it secure from attack. At the same time the broad and fertile valley beneath it offered no obstacles to the march of an army, and it is probably for this reason that we hear so little of Cortona in history successive swarms of invaders having swept past it, without caring to attack its almost impregnable position. We learn incidentally from Dionysius (i. 26) that Cortona had received a Roman colony not long before his time: there can be no doubt that this must be referred to the times of Sulla, and that

it was one of the cities of Etruria, which he repeopled after his devastation of that country. (Zumpt, *de Colon.* p. 252.) It was not subsequently renewed, and therefore does not figure in the lists either of Pliny or Ptolemy as a colony. Both those authors, however, mention it among the towns of Etruria (Plin. iii. 5. s. 8; Ptol. iii. 1. § 48): but this is the last notice of its existence in ancient times, though inscriptions prove it to have continued to subsist under the Roman Empire. (Gori, *Inscr. Etr.* vol. ii. pp. 361—398.) It became an episcopal see in the early ages of Christianity, and probably never ceased to exist, though no trace of it is again found in history till the 13th century.

The modern city of Cortona (which is still the see of a bishop, with about 5000 inhabitants) retains the site of the ancient one, on the summit of a high hill, almost deserving to be termed a mountain, and extending from its highest point down a steep slope facing towards the W., so that the gate at its lowest extremity is about half way down the hill. The ancient city was of oblong form, and about two miles in circumference; the circuit of its walls may be easily traced, as the modern ones are for the most part based upon them, though at the higher end of the city they enclosed a considerably wider space. "They may be traced in fragments more or less preserved almost entirely round the city, and are composed of rectangular blocks of great size, arranged without much regularity, though with more regard to horizontality and distinct courses than is observable in the walls of Volterra or Populonia, and often joined with great nicety like the masonry of Fiesole." . . . "The finest relic of this regular masonry at Cortona, and perhaps in all Italy, is at a spot called Terra Mozza, outside the Fortress, at the highest part of the city, where is a fragment 120 feet in length, composed of blocks of enormous magnitude. They vary from 2½ to 5 feet in height, and from 6 or 7 feet or 11 and 12 in length; and are sometimes as much or more in depth." The material of which they are composed is a grey sandstone much resembling that of *Fiesole*. (Dennis, *Etruria*, vol. ii. p. 436.) A few other fragments of Etruscan construction similar to the above, are found within the walls of the city: but only one trifling remnant of a Roman building. Outside the lower gate, on the slope of the hill, is a curious monument called the *Tanella di Pitagora* (from the confusion commonly made between Cortona and Crotona), which was in reality an Etruscan tomb, constructed of vast blocks and slabs of stone, instead of being excavated in the rock, as was their more common practice. A remarkable mound, commonly called *Il Melone*, which stands at the foot of the hill near *Camuscia*, has been also proved by excavation to be sepulchral. Numerous minor relics of antiquity have been discovered at Cortona, and are preserved in the Museum there: this is more rich in bronzes than pottery, and among the former is a bronze lamp of large size, which for beauty of workmanship is considered to surpass all other specimens of this description of Etruscan art. (Dennis, *l. c.* p. 442: who has given a full account of all the ancient remains still visible at Cortona.) [E. H. B.]

CORTORIACUM. The Notitia mentions the Cortoriacenses as under the command of the general of the cavalry in the Galliae. The Cortoriacenses imply a place Cortoriacum, which was afterwards written Curtricum, and is now *Courtrai*, in the Belgian province of West Flanders. In the Capitularies of Charles the Bold, A. D. 853, the Pagus Curtricisus is mentioned between "Adertisus et Flandra." The Flemish name of *Courtrai* is *Cortryk*. (D'Anville, *Notice*, &c.) [G. L.]

CORTUOSA, a town of Etruria, taken and destroyed by the Romans, B. C. 388. (Liv. vi. 4.) It appears to have been situated in the territory of Tarquinii, and a mere dependency of that city, as well as Contenebra, mentioned in the same passage. Both are otherwise wholly unknown. [E. H. B.]

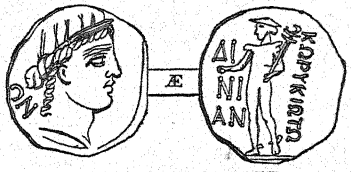
CORY (Κῶρυ, Ptol. vii. 1. § 96), according to Ptolemy, an island in the Sinus Argaricus, at the southern end of the peninsula of Hindostan. There can be little doubt that it is the same place which he describes elsewhere (vii. 1. § 11) as a promontory: Κῶρυ ἄκρον τὸ καὶ Καλλιγίκον, — implying that it bore also the name of Calligicum. There can be little doubt that the name is preserved in the present *Ramiseram* or *Ramanam Kor*. [COLCHI; COLIS.] [V.]

CORYBANTIUM. [HAMAXITUS.]

CORYBISSA. [SCEPSIS.]

CORY'CIUM. [DELPHI.]

CO'RYCUS (Κώρυκος: *Eth.* Κωρύκιος, Κωρυκιώτης). 1. In Lycia, is mentioned in the Stadiasmus, which places it betwen Olympus (*Deliktash*) and Phaselis. This agrees with Strabo, who speaks of the Κώρυκος αἰγιαλός, on the coast of Lycia (p. 666). The Turks call this coast north of Olympus, *Tchiraly*. (Beaufort, *Karamania*, p. 47.)



2. The name of a promontory on the coast of Cilicia Tracheia. (Strab. p. 670.) Cape Corycus is now *Korghoz*, plainly a corruption of the ancient name. After mentioning the Calycadnus, Strabo — whose description proceeds from west to east — mentions a rock called Poecile; then Anemurium, a promontory of the same name as the other [ANEMURIUM]; then the island Crambusa, and the promontory Corycus, 20 stadia above which — that is, 20 stadia inland — is the Corycian cave. Beaufort found it difficult to select a point which should correspond to this Anemurium. North of the mouth of the Calycadnus he found "two decayed and uninhabited fortresses, called *Korghos Kaluler* (castles); the one standing on the mainland, and connected with the ruins of an ancient town; and the other covering the whole of a small island close to the shore." He thinks that the little fortified island may be Strabo's Crambusa, and that Cape Corycus is perhaps a small point of land towards which the ruins of the city extend. (*Karamania*, p. 240, &c.) Leake supposes the island to be what Strabo calls the promontory; and the castle on the shore to stand on the site of Corycus, a town which Strabo has not noticed. But a town Corycus is mentioned by Livy (xxxiii. 20), and by Pliny (v. 27), and Mela (i. 13), and Stephanus (*s. v.* Κώρυκος).

The walls of the castle on the mainland contain many pieces of columns; and "a mole of great unhewn rocks projects from one angle of the fortress about a hundred yards across the bay." (Beaufort.) The walls of the ancient city may still be traced, and there appear to be sufficient remains to invite a careful examination of the spot. There are coins of Corycus.

In the Corycian cave, says Strabo, the best crocus (saffron) grows. He describes this cave as a great hollow, of a circular form, surrounded by a margin of rock, on all sides of a considerable height; on descending into this cavity, the ground is found to be uneven and generally rocky, and it is filled with

shrubs, both evergreen and cultivated; in some parts the saffron is cultivated: there is also a cave here which contains a large source, which pours forth a river of pure, pellucid water, but it immediately sinks into the earth, and flowing underground enters the sea: they call it the Bitter Water. Mela has a long description of the same place, apparently from the same authority that Strabo followed, but more embellished. This place is probably on the top of the mountain above Corycus, but it does not appear to have been examined by any modern traveller. If Mela saw the place himself, he has more imagination than most geographers.

This place is famed in mythical story. It is the Cilician cave of Pindar (*Pyth.* i. 31), and of Aeschylus (*Prom. Vinct.* 350), and the bed of the giant Typhon or Typhoeus. (Mela, i. 13.)

COIN OF CORYCUS IN CILICIA.

3. In Lydia (Thuc. viii. 14, 33, 34; Liv. xxxvi. 44), a lofty mountain (Strab. p. 644) in the peninsula on which Erythrae is situated. Casystes, a port, was at the base of Corycus, which is now *Koraka* or *Kurko*. This bold headland, called the Coryceon Promontorium (Plin. v. 29), looks towards Samos, and forms the western point of the bay on which Teos is situated. This appears to be the place which Thucydides calls Corycus, in the territory of Erythrae; and this supposition agrees with the movements of the fleet described in viii. 34. It is also clearly indicated in Livy's account of the movements of the Romans and Eumenes, though Livy calls it a promontory of the Teii. This rugged coast was once inhabited by a piratical people, called Corycaei, who carried on their trade in a systematic manner, by keeping spies in the various ports, to find out what the traders had in their ships, and where they were bound to, and so attacked them on the sea and robbed them. Hence came the proverb which Strabo mentions (p. 644; comp. Steph. B., *s. v.* Κώρυκος, who quotes the *Asia* of Hecataeus, and cites the passage of Strabo). [CASYSTES.]

4. In Pamphylia near Attaleia. [ATTALEIA, p. 321, a.] [G. L.]

CORYCUS (Κώρυκος, Ptol. iii. 17. § 2: *Grabúsa*), the NW. promontory of Crete. In Strabo the name appears as Cimarus (Κίμαρος, x. p. 474). Elsewhere Strabo (xvii. p. 838) states that Corycus was the point whence the distances to the several ports of Peloponnesus were measured: as *Grabúsa* ends in two projecting points, it is probable that the W. point was called Cimaros, the E. Corycus. We learn from Pliny (iv. 20) that the islands which lie off this promontory were called Corycae, and that part of the mass of rock which forms this point went by the name of Mount Corycus. Ptolemy (*l. c.*) mentions a city of this name, and there is a passage in which Juvenal (xiv. 267) mentions a Corycian vessel which evidently belonged to this Cretan town. When the Florentine traveller Buondelmonte visited the island in A. D. 1415, he found remains existing. (Cornelius, *Creta Sacra*, vol. i. p. 87; Pashley, *Trav.* vol. ii. p. 74; Hoeck, *Kreta*, vol. i. p. 377.) [E.B.J.]

CORYDALLA (Κορύδαλλα: *Eth.* Κορυδαλλεύς), a city of the Rhodii, according to Hecataeus, quoted by Stephanus (*s. v.*). But it was not in Rhodes, nor was it one of the Rhodian possessions in the Peraea [CARIA]. (Plin. v. 25; Ptol. v. 3.) The Table marks Corydalla (*Coridallo*) on the road from Phaselis, in Lycia, to Patara, and makes the distance between these two places 29 M. P. Pliny (v. 25) places Corydalla in the interior of Lycia, and Ptolemy mentions it with Sagalassus, Rhodia, Phellus, Myra, and other places, as about Mons Massicytus. There are coins of Corydalla of the imperial period, with the epigraph Κορυδαλλεων. It is not difficult to see where this place should be looked for. The present site is a village called *Hadgivella*, on the east side of a small stream, about 16 miles, direct distance, south-west of Phaselis. (Spratt and Forbes, *Lycia*, vol. i. p. 164.) There was discovered, in an old wall, "a squared block, with its inscribed face turned towards the stones, on which, in beautifully preserved letters, was the name of the city—Corydalla." There are at Corydalla the remains of a small theatre, of a Roman aqueduct, and a massive Hellenic wall. The inscription copied from Corydalla (vol. ii. p. 277) is of the time of M. Aurelius Antoninus; and it shows that Corydalla had the usual Greek constitution, a senate and a popular body. Pliny mentions Gagae, Corydalla, and Rhodiopolis, in this order; and Rhodiopolis was found by Spratt and Forbes near Corydalla. [G. L.]

CORYDALLUS. [ATTICA, p. 325.]

CORYLEIUM (Κορύλειον: *Eth.* Κορυλειεύς), according to Stephanus (*s. v.*) a noted *Come* in Paphlagonia, so called from a king Corylas. It does not appear what is the authority of Stephanus. Xenophon (*Anab.* vi. 1. § 2) mentions Corylas as the king of Paphlagonia at the time when he passed through the country. [G. L.]

CORYNE. [ERYTHRAE.]

CORYPHANTA, a town in Bithynia, mentioned by Pliny (v. 32) as a place that once existed. [G. L.]

CORYPHANTIS (Κορυφαντίς: *Eth.* Coryphantenus), one of the settlements of the Mytilenaeans, on the coast of Aeolis, opposite to Lesbos, and north of Atarneus. Pliny (v. 30) names it Coryphas. It is evidently the same place which appears in the Table under the name Corifanio, between Adramyttium and Elatia,—whatever Elatia may mean. Strabo (p. 607) mentions Coryphantis and Heraclea, and "after them, Attea." [ATTEA.] The next place in the Table to Elatia is Attalia. The oysters of Coryphas are mentioned by Pliny (xxxii. 6). [G. L.]

CORYPHA'SIUM. [PYLUS.]

CORYTHEIS. [TEGEA.]

COS (Κῶς, Κόως; Cos, P. Mela; Cous, Liv., Tac.; Cea, Plin.: *Eth.* Κῶος (Κώτης in modern Greek): *Stanko*, or *Stanchio*, a corruption of ἐς τὰν Κῶ), an island in the Myrtoan sea, "one of the most renowned of that beautiful chain, which covers the western shore of Asia Minor." One of its earlier names was Meropis (Thuc. viii. 41), another was Nymphaea (Plin. v. 31. s. 36). It appears from an inscription mentioned by Ross, that it was called *Lango* in the time of the Knights. Its situation is nearly opposite the gulf of Halicarnassus, and it is separated by a narrow strait from Cnidus and the Triopian promontory. Its length lies NE. and SW. Strabo gives the names of three promontories, Scandarium on the NE., Lacter on the S. (with the town of Halisarna near it), and Drecanon on the W. (near the town of Stomalimne). Its principal city, bearing the name of

the island, was near the first of these promontories, in lat. 36° 53′ and long. 27° 17′. The circumference of the island, according to Strabo (xiv. p. 657), was 550 stadia, and according to Pliny (*l. c.*) 100 Roman miles; but neither of these dimensions is correct: the true circumference is about 65 geographical miles, and the length about 23. The relation of Cos to the neighbouring coast and islands is vividly illustrated by such voyages as those which are described in Liv. xxxvii. 16; Lucan. viii. 244—250; *Act. Apost.* xx. xxi.

Tradition connects the earliest Greek inhabitants of Cos with a migration from Epidaurus; and the common worship of Aesculapius seems to have maintained a link between the two down to a late period. (Paus, iii. 23. § 4; Müller, *Dor.* bk. i. ch. 6.) In Homer we find the people of the island fighting against the Carians. (*Il.* ii. 677, 867.) As we approach the period of distinct history, the city of Cos appears as a member of the Dorian Pentapolis, whose sanctuary was on the Triopian promontory. (Herod. i. 144.) Under the Athenian rule it had no walls, and it was first fortified by Alcibiades at the close of the Peloponnesian War. (Thuc. viii. 108) In subsequent times it shared the general fate of the neighbouring coasts and islands. For its relations with Rhodes in the wars against Antiochus and the Romans, see Polyb. xxx. 7; and Livy, *l. c.* The emperor Claudius bestowed upon it the privileges of a free state (Tac. *Ann.* xii. 61), and Antoninus Pius rebuilt the city, after it had been destoyed by an earthquake. (Paus. viii. 43). The ancient constitution of the island seems to have been monarchical, and traces of its continuance are observed in an inscription as late as Vespasian. It was illustrious as the birthplace of Ptolemy Philadelphus (Theoc. xvii. 57), and of the painter Apelles, and the physician Hippocrates. An interesting inscription (Böckh, No. 2502) associates it with Herod the tetrarch, whose father had conferred many favours on Cos, as we learn from Josephus (*B. J.* i. 21. § 11).

The present mixed population of Greeks and Turks amounts to about 8000. The island still gives proof of the natural productiveness which was celebrated by Strabo. It was known in the old world for its ointment and purple dye, but especially for its wines (Hor. *Sat.* ii. 4, 29; Pers. *Sat.* v. 135), and the light transparent dresses called "Coae vestes." (Tibull. ii. 3. 53; Propert. i. 2.) The island is generally mountainous, especially on the south and west: but there is a large tract of level and fruitful ground towards the north and east.

The most ancient capital was called Astypalaea, the position of which is extremely doubtful. The city of Cos itself has continued to our own times. An unhealthy lagoon, on the north of the modern town, marks the position of the ancient harbour. Close to it is the Turkish castle, which Christian travellers are not allowed to enter. In its walls are some elaborate sculptures, which may perhaps have belonged to the Asklepieium or temple of Aesculapius. This sanctuary was anciently the object of greatest interest in the island. A school of physicians was attached to it, and its great collection of votive models made it almost a museum of anatomy and pathology. Strabo describes the temple as standing in a suburb of the town: but the site has not been yet positively identified.

An account of Cos will be found in Clarke's *Travels*, vol. ii. pt. i. pp. 196—213, and vol. ii. pt. ii. pp. 321—333. But the best description is in Ross, *Reisen nach Kos, Halicarnassos, u. s. w.* (Halle, 1852), with which his *Reisen auf den Griech. Inseln* should be compared, vol. ii. pp. 86—92, vol. iii. pp. 126—139. There is a monograph on the island by Küster (*De Co Insula*, Halle, 1833), and a very useful paper on the subject by Col. Leake (in the *Trans. of the Royal Soc. of Literature*, vol. i., second series). Both Leake and Ross give a map of Cos, reduced from the recent survey: but for full information, the Admiralty Charts should be consulted. Of these, No. 1604 exhibits the situation of the town and the roadstead in their relation to the opposite coast; No. 1550 shows the town in detail, with a view of it from the anchorage; and No. 1898 gives a general delineation of the whole island. See also No. 1899. With these charts it is desirable to compare Purdy's *Sailing Directory*, p. 114. [J.S.H.]

COIN OF COS.

COSA or COSSA. 1. (Κόσσαι, Strab. Ptol.: *Eth.* Cosanus: *Ansedonia*) a city of Etruria, situated on the sea-coast between the Portus Herculis and Graviscae; immediately adjoining the southernmost of the two necks of sand which connect the *Monte Argentaro* with the main land. [Argentarius Mons.] It is mentioned by Virgil (*Aen.* x. 167) among the cities supposed to have furnished auxiliaries to Aeneas against Mezentius, but this is the only intimation we find of its having been in very early times a place of consideration: there is no authority for the supposition of some writers who would rank it among the twelve cities of the Etruscan League. Pliny speaks of it as a dependency of Volci, from which it was only 20 miles distant (Cosa Volcientium, Plin. iii. 5. s. 8); and though this may apply to the time of the author, it is certain that we find no evidence of its having ever been an independent city: indeed its name appears for the first time in history in B.C. 273, when a Roman colony was established there (Liv. Epit. xiv.; Vell. Pat. i. 14). This statement has been regarded by Madvig and Mommsen as referring to Cosa in Lucania (see No. 2), but that appears to have been always an obscure place, and Zumpt is certainly correct in referring the Roman colony to the Etruscan Cosa. As the Romans had triumphed over the Volcientes only seven years before (Fast. Capit.), it was natural enough that they should seek to establish their power in this part of Etruria by planting a colony in their territory. (Madvig, *de Colon.* p. 298; Mommsen, *Röm. Münzwesen*, p. 232; Zumpt, *de Colon.* p. 257.) In the Second Punic War Cosa was one of the eighteen colonies which were still able and ready to furnish their required quota of supplies (Liv. xxvii. 10); but it seems nevertheless to have suffered severely from the war, so that in B.C. 199 we find the Cosani petitioning for a reinforcement of colonists. Their request was at first refused, but granted three years afterwards, when 1000 new colonists

were settled there. (Id. xxxii. 2, xxxiii. 24.) The chief importance of Cosa was derived from its port, known as the Portus Cosanus, which became a frequent point of departure for the Roman fleets and squadrons, from its ready communication with the islands of Ilva, Corsica, and Sardinia. (Liv. xxii. 11, xxx. 39.) It was from thence that Lepidus embarked for Sardinia, when driven from Italy by his colleague Catulus in B.C. 78. (Rutil. *Itin.* i. 297.) It was in the neighbourhood of Cosa also that during the Civil War of B.C. 49, Domitius assembled a small force and a squadron, with which he proceeded to occupy Massilia. (Caes. *B. C.* i. 34; Cic. *ad Att.* ix. 6, 9.) The town of Cosa is not again mentioned in history, but its name is found in all the geographers, and inscriptions prove it to have been still in existence in the third century. Rutilius, however, speaks of it as in his time utterly desolate and lying in ruins, and relates a ridiculous legend as the cause of its abandonment. (*Itin.* i. 285—290.) The city does not appear to have been ever again inhabited, and the origin of the name of *Ansedonia*, now given to its ruins, is uncertain.

The remains of Cosa are of much interest, and present a very striking specimen of ancient fortifications. Strabo correctly describes the city as standing on a lofty height above the bay, at a short distance from the sea (v. p. 225). A steep ascent of above a mile leads to the gates; and remains of the ancient road are visible all the way. The walls, which are preserved more or less perfectly, in their whole extent, enclosed a rude quadrangle, hardly a mile in circuit, forming the level summit of the hill, which rises about 600 feet above the sea. They vary from 12 to 30 feet in height, and are composed of polygonal blocks of hard limestone, fitted together with great nicety: the upper course of the masonry presenting a marked approximation to a horizontal and regular style. They are moreover strengthened at intervals by square towers, projecting from the front of the walls, 14 of which are still standing or distinctly to be traced, forming a continuous chain of towers round the W. and S. portions of the city. No other instance of this regular employment of towers is known in the Etruscan cities, or the massive polygonal walls of so many cities in Latium: while it precisely resembles that adopted by the Romans at Falerii and Alba Fucensis. It therefore furnishes a strong argument for supposing that the walls now standing, were either erected, or at least in great measure rebuilt, when Cosa became a Roman colony. Dennis, however, from whom the above description is taken, strenuously maintains their high antiquity and Pelasgic origin. (Dennis's *Etruria*, vol. ii. pp. 269—289; Micali, *Antichi Popoli Italiani*, vol. i. p. 152, iii. p. 6.) The small extent of the space enclosed within the walls sufficiently proves that Cosa could never have been a very powerful city.

The Itinerary of Antoninus places Cosa on the Via Aurelia, and gives also another line of route passing through Tarquinii to Cosa (*Itin. Ant.* pp. 292, 300); but it is clear that the high road could never have ascended the hill to the city itself: and the Tab. Peut. gives the name of Succosa (Subcosa), which appears to have been a station or Mutatio at the foot of it. The port of Cosa, called by Livy Portus Cosanus, is evidently the same which is termed by Strabo and Rutilius the Portus Herculis, and is still called *Porto d'Ercole:* it is on the opposite side of the bay from Cosa itself, under the shoulder of the Mons Argentarius, the whole of which remarkable promontory appears to have been included in the territory of Cosa. Hence it is termed by Tacitus "Cosa, a promontory of Etruria" (*Ann.* ii.), where he is certainly speaking of the *Monte Argentaro.*

2. A town of Lucania, mentioned by Caesar, who calls it "Cosa in agro Thurino" (*B. C.* iii. 22), and relates that Milo laid siege to it and was killed under its walls. Velleius, however, refers the same event to Compsa in the Hirpini (ii. 68), and Pliny speaks of the death of Milo as occurring "juxta castellum Carissanum" (ii. 56), for which Sillig would read Compsanum. But the reading in Caesar is well supported, and there is no reason to reject it: the Cosa there mentioned would appear, however, to have been but an obscure place, a mere Castellum in the territory of Thurii, and there is clearly no ground for supposing the Roman colony of B.C. 273 to have been settled here instead of at Cosa in Etruria. It is not improbable that we should read in Pliny 'Cossanum' or 'Cassanum' for 'Carissanum,' and that the name is still retained by the modern town of *Cassano*, near which is a place called *Civita*, where the ruins of an ancient city are said to be still visible. (Cluver. *Ital.* p. 1205; Romanelli, vol. i. p. 238). Stephanus of Byzantium cites from Hecataeus a city of Cossa (Κόσσα), as existing in the interior of Oenotria, which may probably be identical with the preceding. [E. H. B.]

COSA, a town in Gallia, is placed in the Table on a road from Tolosa (*Toulouse*) to Divona (*Cahors*). The distance of Cosa from Divona is marked 20 Gallic leagues; which is too much, if the place is *Cos* or *Coz*,—as it seems to be,—on the river *Aveiron*, which flows into the *Tarn*, a branch of the *Garonne.* [G. L.]

COSCI'NIA (τὰ Κοσκίνια) or CO'SCINUS (Plin. v. 29), a place in Caria. Strabo (p. 650) speaks of Coscinia and Orthosia as considerable places (κατοικίαι), by which he means, perhaps, something less than towns. In another passage (p. 587) he says that the river which flows from Coscinia to Alabanda has many fords, by which he seems to mean that a traveller must cross it many times. We may probably infer that Coscinia was higher up the stream than Alabanda. Leake says (*Asia Minor*, p. 234), "if Alabanda was at *Arabissar*, *Tshina*, where Pococke found considerable remains, may be the site of Coscinia, and its modern name may possibly be a corruption of the ancient." [G. L.]

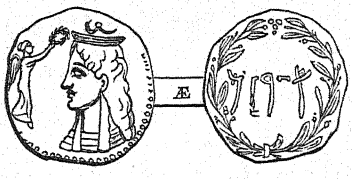
COSE'DIA, a place in Gallia, in the country of the Unelli. The Antonine Itin. places it on a road from Alauna (*Aleaume*) to Condate (*Rennes*). The Table gives a route from Coriallum (*Cherbourg*) to Condate through Cosedia, which is the next place to Coriallum. D'Anville discusses the site of Cosedia without determining its position, for there is great difficulty about the distances. Some geographers take Cosedia to be *La Cousinière*; and there are other guesses. [G. L.]

COSETA'NI (Κοσητανοί, Ptol. ii. 6. § 17; Plin. iii. 3. s. 4; Cositani, Inscr. ap. Gruter, p. 499), a small people of Hispania Tarraconensis, along the coast, from the mouth of the Iberus (*Ebro*) northwards to the LALETANI. Their territory, called Cosetania or Cossetania, contained the capital city TARRACO and the river SUBUR. [P. S.]

COSSA (Κόσσα or Κῶσα, Ptol. vii. 1. § 65), a town in India, mentioned by Ptolemy as a place famous for the diamonds found there. It has been conjectured by Forbiger to be the present *Cotta*, on the river *Zesul.* [V.]

COSSAEI (Κοσσαῖοι), a warlike tribe inhabiting a mountainous district called Cossaea (Κοσσαία), on the borders of Susiana to the S., and of Media Magna to the N. They were a hill tribe, and were armed with bows and arrows. Their land was sterile and unproductive, and they lived the life of robbers. Strabo (xi. p. 744) speaks of them as constantly at war with their neighbours, and testifies to their power when he says that they sent 13,000 men to assist the Elymaei in a war against the people of Babylonia and Susiana. Alexander led his forces against them and subdued them, at least for a time. (Diod. xvii. 111.) The Persian kings had never been able to reduce them, but had been in the habit of paying them a tribute, when they moved their court annually from Ecbatana to Babylon, to pass their winter at the latter place. (Strab. xi. p. 524.) In character, they seem to have resembled the *Bakhtiari* tribes, who now roam over the same mountains which they formerly occupied. There is some variety in the orthography of their name in ancient authors. Pliny (vi. 27. s. 31) calls them Cussii, and in some places they are apparently confounded with the Cissii. It is possible that their name may be connected with the modern *Khuzistán*. [V.]

COSSINI (Κόσσινοι). According to a fragment of Artemidorus, cited by Stephanus (*s. v.* Ὀστίωνες), the Ostiones were a people on the Western Ocean, who were also called Cossini by Artemidorus, but Ostiaei by Pytheas. It seems probable, that these Ostiones or Ostiaei are the Osismii of Caesar. (*B. G.* ii. 34.) Walckenaer, who is ingenious on such obscure names, does not admit that these Cossini are the same as the Ostiaei, but he assumes them to be a neighbouring tribe at the western extremity of Bretagne. There is a place *Coesnou* or *Coueznou* near *Brest*. [G. L.]



COSSINI'TES (Κοσσινίτης), a Thracian river, flowing probably by the town of Consintus, and emptying itself into the Aegean. (Aelian, *H. A.* xv. 25; Itin. Ant. p. 321.) [L. S.]

COSSIO or COSSIUM (Κόσσιον), a town of the Vasates, a people in Gallia on the Garumna, above Burdigala (*Bordeaux*). The Vasates of Ptolemy (ii. 7), and the Vocates of Caesar (*B. G.* iii. 27), an Aquitanian people, seem to be the same. They are also perhaps the Basabocates of Pliny (iv. 19), unless the name indicates two conterminous peoples. The latter part of Pliny's name is clearly Vocates, and the former part (Basa) happens to be the modern name of Cossio, which is *Bazas*, in the department of *Gironde*. The diocese of *Bazas* probably corresponds to the territory of the Vasates. Walckenaer (*Géogr. &c.*, vol. i. p. 302) conjectures, that as the Garonne cuts this diocese into two parts, the southern part was the country of the Vasates, and the northern part between the Garonne and the *Dordogne* was the country of the Vocates.

In the Antonine Itin., Cossio, named "Civitas Vasatas," is on the road from *Bordeaux* to *Narbonne*, and 37½ M. P. from *Bordeaux*. The name Vasates occurs in Ausonius (*Id.* ii. 4), who says that his family was from this place, though settled at Burdigala. In another passage (*Parent.* xxiv. 8), he speaks of "Cossio Vasatum." Ammianus Marcellinus (xv. 11) has the name Vasatae. *Bazas* is in a dry sandy country. There is a description of the place by Sidonius Apoll. (Lib. viii. Ep. 12). [G.L.]

COSSOANUS (Κοσσόανος, Arrian. *Indic.* 4), one of the many tributaries of the Ganges, recorded by Arrian. It is probably the same as that which Pliny (vi. 18. s. 22) calls Cossoagus. It has been conjectured that it is the same as that now called Cosi or Cosa. [V.]

COSSURA, COSSYRA, or COSYRA (Κόσσουρα, Strab.; Κόσσυρα, Ptol. iv. 3. § 37; Κόσυρος, Scyl. p. 50. § 110: *Eth.* Cossurensis: *Pantellaria*), a small island in the Mediterranean Sea, about half way between Sicily and the coast of Africa. (Strab. ii. p. 123; Plin. iii. 8. s. 14; Mel. ii. 7. § 18.) Scylax, the earliest author by whom it is mentioned, says it was one day's voyage from the Hermaean Promontory in Africa. Strabo reckons it about 88 miles from Lilybaeum, and the same distance from Clypea, on the coast of Africa (vi. p. 277): but in another passage (xvii. p. 834) he describes it as directly opposite to Selinus on the coast of Sicily, and distant from thence about 600 stadia, which is almost exactly correct. Its real distance from the nearest point of Africa does not, however, exceed 38 geog. miles. The distances given in the Maritime Itinerary (p. 517) are altogether erroneous. Strabo adds that it contained a town of the same name, and was 150 stadia in circumference, — but this is much below the truth: according to Capt. Smyth it is about 30 miles in circuit. Ovid speaks of it as a barren island, and contrasts it with its more fertile neighbour Melita (*Fast.* iii. 567), and Silius Italicus calls it "parva Cossyra" (xiv. 272). It naturally fell in early times into the hands of the Carthaginians: from whom it was taken by the Roman consuls M. Aemilius and Ser. Fulvius in the First Punic War, a conquest which (strangely enough) was thought worthy to be mentioned in the triumphal Fasti though the Carthaginians recovered possession of it the next year. (Zonar. viii. 14; Fast. Capit.) The island of *Pantellaria* is in modern times a dependency of Sicily, and contains about 5000 inhabitants: it is wholly of volcanic origin, and is tolerably fertile, especially in fruit and vines. (Smyth's *Sicily*, p. 281.) [E. H. B.]

COIN OF COSSURA.

COSTOBO'CI (Κοιστοβῶκοι, Ptol. iii. 5. § 21; Κοστουβῶκοι, Dion Cass. lxxi. 12; Costobocci, Plin. vi. 7; Costobocae, Amm. Marc. xxii. 8. § 42; Costoboci, Capitolin. *M. Antonin.* c. 22), a people of Dacia, probably belonging to the Wendish stock (Schafarik, *Slavische Alterthum*, vol. i. p. 122). Their position has been sought in the district of *Tschernigow*. [E. B. J.]

COTES PROM. [AMPELUSIA.]

COTHON. [CARTHAGO.]

COTIAEUM (Κοτιάειον: *Eth.* Κοτιαεύς: *Kutahiyah*). The name is written Cotyaeum (Κοτυάειον) in the text of Strabo (p. 576), but the epigraph on the coins is said to be always Κοτιαέων. It was on the Roman road from Dorylaeum (*Eski-Shehr*) to Philadelphia (*Allah-Shehr*), and in Phrygia Epictetus, according to Strabo. It is mentioned by Pliny (v. 32). *Kutahiyah* is a considerable

town, on a river which some geographers take to be the Thymbrius. Cotiaeum was the birthplace of Alexander, the son of Asclepiades, a very learned grammarian. There are no remains of importance at *Kutahiyah*. In the Table the name is miswritten Cocleo. [G. L.]

COTINAE (*αἱ Κωτίναι*), a town of Hispania Baetica, famous for its mines of copper mixt with gold, lay somewhere in the range of mountains which border the valley of the Baetis on the N. (Strab. iii. p. 142.) There seems no sufficient ground for the conjecture of Vossius (*ad Mel.* iii. 1), identifying it with OLEASTRUM. [P. S.]

COTINUSSA. [GADES.]

COTTABANI (*Κατταβῆνοι*), a people of Arabia, to the east of the Omanitae, the modern *Omán*, extending to the mountains of the *Asabi*, at the entrance to the Persian gulf. (Ptol. vi. 7.) They are referred by Forster to the *Beni-Kahtan*, or Joctanite family of Arabs, the classical name being merely an inversion of their well-known native appellation. (*Arabia*, vol. i. p. lxxvi., vol. ii. p. 154.) [G. W.]

COTTAEOBRI'GA. [VETTONES.]

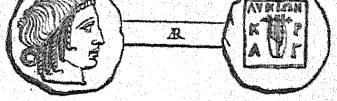
COTTIAE ALPES. [ALPES, p. 107.]

COTTIARA (*Κοττιάρα*, Ptol. vii. 1. § 9), the chief city, according to Ptolemy, of the Aei, a tribe who occupied the lower part of the Peninsula of Hindostan. It is probably the same place which is mentioned by Pliny (vi. 23. 26) under the names of Cottona or Cottonara, and from which the best pepper was obtained, according to the author of the *Periplus* (p. 32). It has been supposed by some to be represented now by *Cochin*, *Calicat*, or *Travancore*; on the whole, *Cochin* is probably the most likely. [V.]

COTTIARIS (Ptol. vii. 3. § 3; Marcian. p. 30), a river of China, at the southern end of that empire, on the banks of which lived, according to Ptolemy, the Aethiopian Icthyophagi. It is difficult to determine to what river this name ought to be referred; hence Mannert has conjectured that it is a river of Borneo, and Forbiger that it is the *Si Kiang*, the river of Canton, which, agreeably with this view, he imagines to be the same as the Cattigara of Ptolemy. This seems the best suggestion. [V.]

COTTONA. [COTTIARA.]

COTYLAEUM (*Κοτύλαιον*), a mountain in Euboea, at the foot of which Tamynae was situated. (Aeschin. *in Ctesiph.* p. 480; Steph. B. *s. v.*)



COTY'LIUS. [PHIGALEA.]

COTYLUS. [IDA.]

COTYO'RA (*τὰ Κοτύωρα*: *Eth.* *Κοτυωρίτης*, Steph. B. *s. v.*) and COTYORUM (Plin. vi. 4), in Pontus. According to Xenophon (*Anab.* v. 5. § 4), a colony of Sinope, which furnished supplies for the Ten Thousand in their retreat. It was in the country of the Tibareni. The place was on the coast, and on a bay called after the town. Strabo (p. 548), where the name is written in a corrupt form, speaks of it as a small place; and Arrian as a village,—which was owing to the neighbouring town of Pharnacia being supplied with part of its population from it. The Maritime Itins. on this coast make the distance from Cotyora to the river Melanthius 60 stadia. Hamilton (*Researches, &c.* vol. i. p. 267) says: "Cotyora perhaps stood on the site of *Ordou*, where some remains of an ancient port cut out of the solid rock are still visible." But he remarks that some writers suppose that Cotyora was on the modern bay of *Pershembah*, "which is certainly more sheltered than *Ordou*, and its distance from the river Melanthius agrees better with the 60 stadia of Arrian and the anonymous Periplus, than the site of *Ordou*." [G. L.]

COTYRTA (*Κοτύρτα*: *Eth.* *Κοτυρταῖος*), a town in the S. of Laconia, near the promontory Malea, which was garrisoned by the Lacedaemonians, along with Aphrodisias, in the Peloponnesian War, in order to protect this part of the coast from the ravages of the Athenians, who had established themselves at Cythera. (Thuc. iv. 56; Steph. B. *s. v.*)

CRAGUS (*Κράγος*: *Eth.* *Κράγιος*), a mountainous tract in Lycia. Strabo (p. 665), whose description proceeds from west to east, after the promontory Telmissus, mentions Anticragus, on which is Carmylessus [CARMYLESSUS], and then Cragus, which has eight summits (or he may mean capes), and a city of the same name. Pinara, in the interior, was at the base of Cragus. There are coins of the town Cragus of the Roman imperial period, with the epigraph *Λυκιων Κρ.* or *Κρα.* or *Κραγ.* The range of Anticragus and Cragus is represented in the map in Spratt and Forbes (*Lycia*, vol. ii) as running south from the neighbourhood of Telmissus, and forming the western boundary of the lower basin of the river Xanthus. The southern part is Cragus. The direction of the range shows that it must abut on the sea in bold headlands. In Beaufort's map of the coast of Karamania, the Anticragus is marked 6000 feet high. Beaufort's examination of this coast began at "*Yedy-Booroon*, which means the Seven-Capes, a knot of high and rugged mountains that appear to have been the ancient Mount Cragus of Lycia." (*Karamania*, p. 1.) The ruins of Pinara are where Strabo describes them, on the east side of this range, about half way between Telmissus and the termination of the range on the south coast. There is a "pass leading between the summits of Cragus and Anticragus. Between the two chief peaks is a plain 4000 feet above the sea; and above it rises the highest peak of Cragus, more than 2500 feet above this elevated plain. The first half of the ascent from the plain is through a thick forest, and the remainder over bare rock. From the summit there is a view of the whole plain of Xanthus, and of the gorges of the Massicytus, which lies east of it. The side towards the sea is so steep, that from this lofty summit the waves are seen breaking white against the base of this precipitous mountain mass." (Spratt's and Forbes's *Lycia*, vol. ii. p. 301.) It appears that Strabo is right when he describes a valley or depression as separating Anticragus and Cragus; and the highest part, which towers above the sea at the Seven Capes, seems to be the eight summits that Strabo speaks of. There was a promontory Cragus, according to Scylax and Pliny (v. 27), which must be the Seven Capes. The Hiera Acra of the Stadiasmus seems also to be the Seven Capes. The position of the Cragus between Xanthus and Telmissus is mentioned by Mela (i. 15), and he also probably means the same striking part of the range. It is observed, that "there is not in all Europe a wilder or grander scene than this pass through the Seven Capes of Cragus." (Spratt and

COIN OF CRAGUS.

Forbes, vol. i. p. 23.) The rocks and forests of Cragus were embellished by poetic fictions as the occasional residence of Diana. (Hor. *Carm.* i. 21.) Here, according to the authority quoted by Stephanus (*s. v.* Κράγος), were the so-called Θεῶν ἀγρίων ἄντρα. The site of the city Cragus has not been determined. Leake (*Geog. Journal*, vol. xii. p. 164) conjectures that Cragus may be the same city as Sidyma, a place that is first mentioned by Pliny. [SIDYMA.]

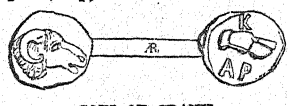
There was a Cragus on the Cilician coast. See ANTIOCHEIA, p. 146. [G. L.]

CRAMBU'SA (Κράμβουσα, *Eth.* Κραμβούσιος, Κραμβουσαῖος). 1. A small island off the south-east coast of Lycia, which Strabo (p. 666) places between the Sacred Promontory and Olbia. It is NE. of the Insulae Chelidoniae, and is easily identified by its modern name *Grambousa*. It is a sharp and barren ridge of rock, and yet a small stream of excellent water bursts out on the eastern side. As it does not seem possible that such a rock can contain a sufficient quantity of rain to supply the spring, it is conjectured that the water comes from the mountains on the mainland, and it must therefore pass under the sea, which is 170 feet deep between the island and the land. (Beaufort, *Karamania*, p. 39.) The Stadiasmus makes the distance between Phaselis and Crambusa to be 100 stadia, but it is more. Leake and others take it to be the Dionysia of Scylax (p. 39) and of Pliny (v. 31); but Pliny mentions Crambussa, and though his text is confused by a number of names heaped together, he seems to mean the island of which we are speaking. Ptolemy (v. 5) mentions Crambusa as an island adjacent to Pamphylia; but this does not agree with the position of the Crambusa of Lycia.

2. The Stadiasmus mentions a Crambusa on the Cilician coast. The description of the Stadiasmus proceeds from east to west. The text seems to mean as follows: "from Crauni to the Pisurgia, having on the left the Crambusa, 45 stadia." The next place to the west is Berenice, 50 stadia. [BERENICE.] Beaufort (*Karamania*, p. 210) describes two small islands east of Celenderis, named *Papadoula;* and it has been conjectured that these may represent the Crambusa of the Stadiasmus. But this is only a guess.

3. Strabo (p. 670) mentions another Crambusa on the Cilician coast. [CORYCUS.] [G. L.]

CRANAE (Κρανάη), an island in the Laconian gulf, opposite Gytheium, whither Paris carried off Helen from Sparta. This little island, now called *Marathonisi*, is described by a modern traveller as "low and flat, and at the distance of only 100 yards from the shore. The ruined foundation of a temple supports at present a Greek chapel." (Hom. *Il.* iii. 442; Paus. iii. 22. § 1; Walpole's *Memoirs*, vol. i. p. 58.)



CRANAOS. [ANTIOCHEIA, No. 5, p. 146.]

CRANEIA. [AMBRACIA, p. 121, a.]

CRANEION. [CORINTHUS, p. 680, a.]

CRA'NII (Κράνιοι), a town of Cephallenia, situated at the head of a bay on the western coast. In B. C. 431 it joined the Athenian alliance, together with the other Cephallenian towns (Thuc. ii. 30); in consequence of which the Corinthians made a descent upon the territory of Cranii, but were repulsed with loss. (Thuc. ii. 33.) In B. C. 421 the Athenians settled at Cranii the Messenians who were withdrawn from Pylos on the surrender of that fortress to the Lacedaemonians. (Thuc. v. 35.) Cranii surrendered to the Romans without resistance in B. C. 189. (Liv. xxxviii. 28.) It is mentioned both by Strabo (x. p. 455) and Pliny (iv. 12. s. 19).

The ruins of Cranii are near the modern town of *Argostóli*. Leake remarks that "the walls of Cranii are among the best extant specimens of the military architecture of the Greeks, and a curious example of their attention to strength of position in preference to other conveniences; for nothing can be more rugged or forbidding than the greater part of the site. The enclosure, which was of a quadrilateral form, and little, if at all, less than three miles in circumference, followed the crests of several rocky summits, surrounding an elevated hollow which falls to the south-western extremity of the gulf of *Argostóli*." The walls may be traced in nearly their whole circumference. (Leake, *Northern Greece*, vol. iii. p. 61, seq.)

COIN OF CRANII.

CRANON or CRANNON (Κρανών, Κραννών; the name is written indifferently with the single and double *ν* in inscriptions and coins, as well as in ancient authors: *Eth.* Κρανώνιος), a town of Pelasgiotis, in Thessaly, situated S.W. of Larissa, and at the distance of 100 stadia from Gyrton, according to Strabo (vii. p. 330, frag. 14). Its most ancient name is said to have been Ephyra; and Homer, in his account of the wars of the Ephyri and Phlegyae, is supposed by the ancient commentators to have meant the people afterwards called Crannonians and Gyrtonians respectively. (*Il.* xiii. 301; Strab. *l. c.* ix. p. 442; Steph. B. *s. v.* Κραννών). Pindar likewise speaks of the Crannonii under the name of Ephyraei (*Pyth.* x. 85). Crannon was the residence of the wealthy and powerful family of the Scopadae, whose numerous flocks and herds grazed in the fertile plain surrounding the city. (Theocr. xvi. 36.) Diactorides, one of the Scopadae of Crannon, was a suitor for the hand of the daughter of Cleisthenes of Sicyon. (Herod. vi. 127.) Simonides resided some time at Crannon, under the patronage of the Scopadae; and there was a celebrated story current in antiquity respecting the mode in which the Dioscuri preserved the poet's life when the Scopadae were crushed by the falling in of the roof of a building. (Cic. *de Orat.* ii. 86: the story is related in the *Dict. of Biogr.* vol. iii. p. 834.)

In the first year of the Peloponnesian War (B. C. 431) the Crannonians, together with some of the other Thessalians, sent troops to the assistance of the Athenians. (Thuc. ii. 22.) In B.C. 394 they are mentioned as allies of the Boeotians, who molested Agesilaus in his march through Thessaly on his return from Asia. (Xen. *Hell.* iv. 3. § 3.) In B.C. 191 Crannon was taken by Antiochus. (Liv. xxxvi. 10.) It is mentioned again in the war with Perseus. (Liv. xlii. 65.) Catullus (lxiv. 35) speaks of it as a declining place in his time:—

"Deseritur Scyros: linquunt Phthiotica Tempe,
Crannonisque domos, ac moenia Larissaea."

Its name occurs in Pliny (iv. 8. § 15). Its site has been fixed by Leake at some ruins called *Paleá Lárissa*, situated half an hour from *Hadjilár*, which is distant 2 hours and 27 minutes from *Lárissa*. At *Pálea Lárissa* Leake found an ancient inscription

containing the name of Crannon. The name of the ruins shows that they were once more considerable than they are at present; but even now "some foundations of the walls of the town, or more probably of the citadel, may be traced along the edge of a quadrangular height called *Paléokastro*, which is nearly a mile in circumference, and towards the upper part of which are some vestiges of a transverse wall, forming a double inclosure. This height, and all the fields around, are covered with pottery; and on the side of the height, or on the rise of the hills behind it, are eight or nine small tumuli." (Leake, *Northern Greece*, vol. iii. p. 363, seq.)

CRATAEIS (Κραταιΐς), a small river of Bruttium, flowing near the Scyllaean promontory. It derived its name from a nymph Crataeis, who, according to Homer, was the mother of Scylla. (Hom. *Od.* xii. 124; Ovid, *Met.* xiii. 749.) The river, which is mentioned only by Pliny (iii. 5. s. 10), and Solinus (2. § 22), was probably a small stream which falls into the sea about 3 miles E. of *Scilla*, and is called the *Fiume di Solano*, from a village of that name, or *Fiume dei Pesci*. (Romanelli, vol. i. p. 74.) [E. H. B.]

CRATEIA (Κρατεία), is placed by Ptolemy (v. 1) in the interior of Bithynia, and he gives it also the name Flaviopolis, which clearly dates from the imperial period, and probably the time of Vespasian. The Antonine Itin. places it between Claudiopolis and Ancyra of Galatia, and 24 M. P. from Claudiopolis. An autonomous coin with the epigraph κρη is attributed to this place; and there are coins of the imperial period, from Antoninus Pius to Gallienus. It became an episcopal see. There is nothing to determine the position of Crateia, and it is placed in the maps purely at hazard. [G. L.]

CRATEIAE (Κρατειαί: *Krato*), some small islands lying off the coast of Liburnia in Illyricum. (Scylax, p. 8; Plin. iii. 26. s. 30.)

CRATER (ὁ Κρατὴρ) was the name given by the Greeks, according to Strabo (v. p. 242), to the beautiful gulf now known as the *Bay of Naples*, one of the most remarkable natural features on the coast of Italy. It was called by Eratosthenes the CUMAEAN GULF (ὁ Κύμαιος κόλπος, *ap. Strab.* i. p. 22, 23); Appian terms it the Gulf above Cumae (ὁ κόλπος ὁ ὑπὲρ Κύμης, *B. C.* v. 81); it appears to have been generally known to Roman writers as the Gulf of Puteoli. (SINUS PUTEOLANUS, Plin. iii. 6. s. 12; Mela ii. 4; Suet. *Aug.* 98.) Its boundaries and natural characters have been already described under the article CAMPANIA. [E. H. B.]

CRATHIS. [ACHAIA, p. 13, b.]

CRATHIS (Κράθις), one of the most considerable rivers of Bruttium, which in the northern part of its course forms the boundary between that province and Lucania. It rises in the central mountain group of Bruttium (the *Sila*), a few miles S. of Consentia, flows below the walls of that town, where it is joined by the smaller stream of the Basentus or Busentus (*Busento*), and has a course nearly due N. through the centre of the Bruttian peninsula, till it approaches the confines of Lucania, when it turns abruptly to the E. and flows into the Gulf of Tarentum, immediately to the S. of the ancient site of Thurii. At the present day it receives, at a distance of above three miles from its mouth, the waters of the river Sybaris (now called the *Coscile*), which in ancient times pursued their own course to the sea. [SYBARIS.] From its close proximity to the celebrated city of Sybaris the Crathis is noticed by many ancient writers. (Lycophr. *Alex.* 919; Theocr. v. 16.) Euripides sings its praises, and alludes to the peculiar golden-red tinge it was supposed to impart to the hair, a fact which is also noticed by Ovid and other writers. (Eur. *Troad.* 228; Ovid. *Met.* xv. 315; Strab. vi. p. 263; Plin. xxxi. 2. s. 10; Vib. Seq. p. 9; Timaeus *ap. Antig. Caryst.* 149.) The plains through which the Crathis flows in the latter part of its course were noticed in ancient times for their fertility: they are now become marshy and unhealthy. Like all streams which descend from a mountainous region, and afterwards flow through a flat alluvial tract, the river was subject to violent inundations and sudden changes of its course: during the flourishing days of Sybaris it was doubtless restrained by dams and artificial embankments; and hence when the citizens of Crotona, after their great victory over the Sybarites in B.C. 510, determined to annihilate the rival city, they broke down the banks of the Crathis, and turned its waters on to the site of Sybaris. (Strab. vi. p. 263.) Hence Herodotus incidentally notices the *dry bed* of the Crathis (v. 45), which was evidently its ancient channel. The same author expressly tells us that the Italian river was named by the Achaeans who founded Sybaris, after the less celebrated stream of the same name in their native country. (Herod. i. 145; Strab. viii. p. 386.) [E. H. B.]

CRAUGA'LLIUM (Κραυγάλλιον), a town of Phocis, in the neighbourhood of Cirrha, whose inhabitants are said to have joined the Cirrhaeans in maltreating the pilgrims who came to consult the oracle at Delphi. It was destroyed along with Cirrha at the end of the First Sacred War, and its name does not occur again. [CRISSA.] The name of the people is variously written Craugallidae, Crauallidae, and Acragallidae. Leake conjectures that *Xeropigadho* is the site of this town. (Aeschin. *c. Ctesiph.* p. 68, ed. Steph.; Harpocrat. *s. v.* Κραυαλλίδαι; Leake, *Northern Greece*, vol. ii. p. 587.)

CRAUNI (Κραῦνοι), a promontory on the Cilician coast, mentioned in the Stadiasmus: "from the Melas river to the point Crauni, 40 stadia." [CRAMBUSA, No. 2.] Leake observes (*Asia Minor*, p. 206), "The river which joins the sea at the bottom of the bay of *Papadúla*, being the largest stream on the part of the coast under consideration, seems to be the Melas of the Stadiasmus; and the cape which lies midway between that stream and Celenderis may possibly be the Crauni of the same authority." [G.L.]

CREMASTE (Κρεμαστή), a place mentioned by Xenophon (*Hell.* iv. 8. § 37). He speaks of the plain near Cremaste, "where there are the gold mines of the Abydeni." If Cremaste was a village, it was probably on a hill above the plain. As Strabo speaks of gold mines at Astyra [ASTYRA], it has been conjectured that Astyra and Cremaste are either the same place, or two adjacent places. Gold mines belonging to Lampsacus are mentioned by Pliny (xxxvii. 11) and by Polyaenus (ii. 1. § 26); and they may be the same as those of Cremaste, if we suppose Cremaste to be between Abydus and Lampsacus. [G. L.]

CRE'MERA (Κρεμέρα), a small river of Etruria, flowing into the Tiber a few miles above Rome. It is celebrated for the memorable defeat of the 300 Fabii, who established on its banks a fortified post, from whence they carried on hostilities against the Veientes, and laid waste their territory, until they were at length decoyed into an ambuscade, and all put to the sword, B.C. 477. (Liv. ii. 49, 50; Dionys.

ix. 15, 18—22; Diod. xi. 53; Ovid. *Fast.* ii. 193—242; Flor. i. 12; Gell. xvii. 21. § 13.) According to Livy (vi. 1) this disaster occurred on the same day of the year (the 16th of July), which was afterwards marked by the still more calamitous defeat on the Allia. No other mention of it occurs in history, nor is its name found in any of the geographers: it is evident, therefore, that it was but an inconsiderable stream. Cluverius was the first to identify it with a small river called the *Fosso di Valca* or *Varca*, which has its source in the crater-formed basin of *Baccano*, flows by the site of the ancient Veii, and falls into the Tiber immediately opposite to *Castel Giubileo* (the site of Fidenae), about 6 miles from Rome. (Cluver. *Ital.* p. 536.) But though the authority of Cluverius has been followed on this point (apparently without investigation) by all subsequent topographers (Gell, Nibby, Westphal, &c.), the arguments which led him to fix upon this stream as the Cremera are based upon his erroneous views as to the position of Veii; and the site of that city being now fixed with certainty near *Isola Farnese*, it is difficult to admit any longer that the *Fosso di Valca* can be the ancient Cremera. Dionysius speaks of that river (ix. 15) as *not far distant* from the city of Veii—an expression which could hardly apply to a stream that flowed immediately below its walls: and a still stronger objection is that the stream in question could scarcely be said to lie between the Veientes and Rome, so as to intercept the forays of the former people. It is certain that the little brook now called *Acqua Traversa*, which crosses the Flaminian Way and falls into the Tiber almost 3 miles nearer Rome, would correspond far better with the position requisite for such a post as that of the Fabii: and though a very trifling stream, its banks as well as those of the *Valca*, are in many places lofty and precipitous, and would afford an advantageous site for their fortress. Ovid indeed speaks of the Cremera as a violent torrent (*Cremeram rapacem*), but adds that this was when it was swollen by winter rains. At any other time indeed such an expression would be equally inapplicable to both streams: the *Fosso di Valca* being itself but a small and sluggish brook, though flowing through a deep valley with lofty banks. In the upper part of its course it is known as the *Fosso di Formello*.

The castle of the Fabii, to which both Livy and Dionysius give the name of Cremera, was evidently a mere fortified post which was destroyed by the Veientines: and it is idle to attempt its identification, as has been done by some Italian antiquaries. [E. H. B.]

CREMNA (ἡ Κρήμνα or Κρέμνα), a place in Pisidia, and, as its name imports, a strong post on an eminence. It was taken by the Galatian king Amyntas, a contemporary of Strabo (p. 569). It became a Roman colony, as Strabo says; and there are imperial coins with the epigraph COL. IVL. AVG. CREMNA. The passage of Strabo about Cremna has caused great difficulty. He says that Amyntas did not take Sandalium, which is situated between Cremna and Sagalassus. Strabo adds, "Sagalassus is distant from Apameia a day's journey, having a descent of about 30 stadia from the fort (τοῦ ἐρύματος), and they call it also Selgessus." Cramer (*Asia Minor*, vol. ii. p. 299) supposes Strabo to mean that "at the distance of 30 stadia from Sagalassus, in a northerly direction, was the important fortress of Cremna;" on which it may be useful to some readers to observe, that where a Greek text presents a difficulty, Cramer is often wrong in explaining it. But there is no difficulty here. The French translation of Strabo makes a like mistake; and Groskurd the same, for he translates it "hat fast dreissig stadien hinabsteigung von jener veste," by which it appears that he means Cremna. Arundell (*Asia Minor*, vol. ii. p. 81) properly remarks that, if there were only 30 stadia between Cremna and Sagalassus, "it is hardly conceivable that Sandalium should be between them." It is not conceivable at all; and Strabo's text, whatever fault there may be in it, clearly places Cremna at some distance from Sagalassus, and "the fort" is not Cremna. But there is nothing in the passage of Strabo from which we can determine the distance between Sagalassus and Cremna, nor their relative position. Ptolemy (v. 5) mentions the Cremna Colonia, and according to him it is in the same longitude as Sagalassus. Arundell found a place called *Germè* fifteen miles SSE. of the village of *Allahsún*, which is near the ruins of Sagalassus. There is a view of *Germè* in Arundell's work. It is a striking position, "a terrific precipice on three sides." The ruins are described by Arundell. There are the remains of a theatre, of temples, of a colonnade, and of what is supposed to be a triumphal arch. Most of the buildings seemed to be of the Roman period.

There is a story in Zosimus (i. 69) of an Isaurian robber, named Lydius, who seized Cremna, a city of Lycia, as he calls it. There is no doubt that he means the same place which Strabo does. [G. L.]

CREMNI (Κρήμνοι), a town of European Sarmatia, W. of the promontory Agarum, and called by Herodotus (iv. 20, 110) a factory of the free Scythians on the W. of the Palus Maeotis. Mannert (vol. iv. p. 114; comp. Ritter, *Vorhalle*, p. 156) places it in the neighbourhood of *Taganrog*. By others it has been sought for at *Stari-Krim* near *Mariupol*. (Reichardt, *Klein. Geogr. Schrift.* p. 285; comp. Eichwald, *Alte Geogr. d. Casp. Meer*, p. 309.) [E. B. J.]

CREMNISCI (Κρημνίσκοι, Anon. *Peripl. Pont. Eux.* p. 10; Cremniscos, Plin. iv. 26), a town on the Euxine, which Artemidorus, the geographer, placed at 480 stadia from the river Tyras. Forbiger (vol. iii. p. 1129) places it near the lake *Burmasaka*, or near *Islama*. [E. B. J.]

CREMO'NA (Κρεμόνη, Pol. et Strab.; Κρέμωνα, Ptol.; Κρεμών, App.: *Eth.* Cremonensis: *Cremona*), a city of Cisalpine Gaul, situated on the left bank of the Padus, about 6 miles below the confluence of the Addua. Both Pliny and Ptolemy reckon it among the cities of the Cenomani (Plin. iii. 19. s. 23; Ptol. iii. 1. § 31), but it would seem from the expression of Livy (coloniae deductae *in agro de Gallis capto*, Epit. xx.) that it was originally included in the territory of the Insubres. We have no account of its existence previous to the Roman conquest, but after the great Gaulish war in B. C. 225, the Romans, being desirous to establish a firmer footing in this part of Italy, settled two colonies of 6000 men each at Cremona and Placentia, the one on the left and the other on the right bank of the Padus, B. C. 219. (Liv. Epit. xx.; Vell. Pat. i. 14; Pol. iii. 40; Tac. *Hist.* iii. 34.) The new colonies were, however, scarcely established when the news of the approach of Hannibal led the Boians and Insubrians to take up arms afresh; but though they ravaged the newly occupied lands, and even drove the settlers to take refuge at Mutina, it is certain

that they did not take either of the two cities, which are mentioned in the following year as affording a shelter and winter-quarters to the army of Scipio after the battle of the Trebia. (Liv. xxi. 25, 56; Pol. *l. c.*; Appian, *Hann.* 7.) At a later period of the Second Punic War Cremona was one of the colonies which remained faithful, when twelve of them refused any further supplies. (Liv. xxvii. 10.) Its territory suffered severely from the ravages of the Gauls, and after the close of the war, the city itself had a narrow escape, being closely besieged by the insurgent Gauls under Hamilcar, who had already taken and destroyed the neighbouring colony of Placentia. Cremona, however, was able to hold out till the arrival of the praetor L. Furius, who defeated the Gauls in a great battle under its walls, B. C. 200. The city had, nevertheless, suffered so much from the repeated wars in this part of Gaul, that in B. C. 190, a fresh body of colonists was sent thither, and 6000 new families were divided between it and Placentia. (Liv. xxviii. 11, xxxi. 10, 21, xxxvii. 46.) From this time till near the end of the Republic, we hear nothing more of Cremona,—but we learn that it became a populous and flourishing colony, and rose to be one of the most considerable cities in this part of Italy. The fertility of its territory and the advantages of its situation in connection with the great rivers were the sources of its prosperity. (Tac. *Hist.* iii. 34.)

During the civil wars after the death of Caesar, Cremona espoused the cause of Brutus, and was in consequence one of the cities of which the territory was confiscated and assigned to his veterans by Octavian. It is to this event that Virgil alludes in the well-known line,

"Mantua vae miserae nimium vicina Cremonae,"

a part of the territory of Mantua having shared the same fate with that of the neighbouring city. (Virg. *Ecl.* ix. 28, and Serv. *ad loc.*) But this change of proprietors did not injure the prosperity of the city itself, which is described by Strabo (v. p. 216) as one of the chief places in this part of Italy, and appears from Tacitus to have been a flourishing and wealthy city when the civil wars of A.D. 69 inflicted a fatal blow on its prosperity. During the contest between Otho and Vitellius, Cremona was one of the first places occupied by the generals of the latter. Caecina, when repulsed from Placentia, made it his head-quarters, and the first battle of Bedriacum, which led to the defeat and death of Otho, was fought between that town and Cremona. To celebrate this victory Caecina shortly after exhibited a show of gladiators at Cremona, at which Vitellius himself was present; and an amphitheatre was expressly constructed for the occasion. (Tac. *Hist.* ii. 17, 22, 23, 67, 70; Dion Cass. lv. 1.) A few months after, Cremona again became the head-quarters of the Vitellian forces, which were opposed to Antonius Primus, the general of Vespasian: and these after their defeat in the second battle of Bedriacum (which was fought only a few miles from Cremona), fell back upon the city, immediately adjoining to which they had a fortified camp. But the troops of Antonius, following up their advantage, successively took by storm both the camp, and the city itself, notwithstanding that the latter was strongly fortified with walls and towers. The troops of Caecina were admitted to terms of capitulation, but the whole city was given up to plunder, and after having been exposed for four days to the fury of the soldiery was ultimately burnt to the ground. Neither temples nor public buildings were spared, and only one of the former survived the catastrophe. (Tac. *Hist.* ii. 100, iii. 15—33.) So great a calamity falling upon one of the most flourishing cities of Italy, necessarily brought great odium upon Vespasian, who, after he had established his power, sought as far as possible to repair the mischief, and encouraged the rebuilding of the city, which soon rose again from its ashes. (Tac. *l. c.* 34.) But though its public buildings were restored, and it retained its colonial rank, it appears never to have recovered its former prosperity. Its continued existence under the Roman Empire is attested by the Itineraries as well as by inscriptions: it is noticed by Zosimus as a considerable place under the reign of Honorius, and we learn from the Notitia that it was regarded as a military post of importance (Zosim. v. 37; Itin. Ant. p. 283; Tab. Peut.; Not. Dign. p. 121; Orell. *Inscr.* 1765, 3750, 3843.) But in A. D. 605 it was taken, and for the second time utterly destroyed by the Lombard king Agilulfus. (P. Diac. *Hist. Lang.* iv. 29.) In the Middle Ages, however, it again rose to great prosperity, and became a large and populous city: though much decayed since then, it still contains near 30,000 inhabitants. No remains of antiquity are now visible there, except a few Roman inscriptions, one of which is interesting as referring to the worship of the goddess Mefitis, whose temple, according to Tacitus, was the only one that escaped in the conflagration of the city. (Tac. *Hist.* iii. 33; Orell. *Inscr.* 1795.) The mention of this deity shows that the low and marshy lands in the neighbourhood of Cremona were unhealthy, in ancient as well as modern times. We learn from Donatus that Virgil, though born in the neighbourhood of Mantua, spent the earliest years of his life, and received the first rudiments of his education at Cremona. (Donat. *Vit. Virg.*) [E. H. B.]

CREMO'NIS JUGUM. [ALPES, p. 107.]

CRENAE. [ARGOS AMPHILOCHICUM.]

CRE'NIDES (Κρηνίδες), or CRANIDES (Κρανίδες; *Eth.* Κρανίτης, Steph. *s. v.*), a place on the coast of Bithynia, according to Arrian 60 stadia east of Sandaraca; according to Marcian only 20 stadia. It was between Heraclea and the mouth of the Billaeus. [G. L.]

CRENIDES. [PHILIPPI.]

CREONES, in North Britain, mentioned by Ptolemy as lying west of the Cerones [CERONES], occupied parts of Ross and Inverness. [R. G. L.]

CREO'PHAGI (Κρεωφάγοι, Strab. xvi. p. 771.), a Troglodytic race on the western shore of the Red Sea, and, as their name of "the flesh-eaters" imports, a pastoral people who lived upon the produce of their herds of cattle. Strabo (*l. c.*) seems to regard the Colobi and Creophagi as the same tribes. [W.B.D.]

CRESSA (Κρῆσσα: *Eth.* Κρησσαῖος). 1. According to Stephanus (*s. v.*) a city of Paphlagonia, founded by Meriones after the war of Troy. Zeilas, the son of Nicomedes, took it. Cramer (*Asia Minor*, vol. i. p. 241), says, "that it was probably on the sea coast, and perhaps should be identified with Carussa." But there is no foundation for this guess. [CARUSA.]

2. There is a Cressa on the coast of Caria, which Pliny (v. 27) calls Cressa Portus, and places 20 M.P. from Rhodus. It is also mentioned by Ptolemy (v. 2). Leake (*Asia Minor*, p. 222) says "that the excellent harbour of Cressa is now called

Aplothika by the Greeks, and *Porto Cavaliere* by the Italians; and on its western shore are the ruins of an Hellenic fortress and town, which are undoubtedly those of Loryma." [G. L.]

CRESSA. [CRISSA.]

CRESTON. [CRESTONIA.]

CRESTO'NIA (Κρηστωνία, Κρηστωνική: *Eth.* Κρηστωναῖος, Κρηστωνιήτης: *Adj.* Κρηστωνικός), a district of Macedonia, which adjoined Mygdonia to the N.; for the Echidorus, which flowed through Mygdonia into the gulf near the marsh of the Axius, had its sources in Crestonia. (Herod. vii. 127.) It was chiefly occupied by a remnant of Pelasgi, who spoke a different language from their neighbours. (Herod. i. 57; comp. Thuc. iv. 109.) In Thucydides (ii. 99) the name should not be written Γρηστωνία, but Κρηστωνία. Crestonia contained the town of Creston or Crestone (Κρήστων, Κρηστώνη, Steph. B.), and Gallicum (*Kilkitj*), a place situated 16 M. P. from Thessalonica, on the Roman road to Stobi (*Peut. Tab.*). (Leake, *North. Greece*, vol. iii. p. 440.) [E. B. J.]

CRETA (Κρήτη: *Eth.* and *adj.* Κρής, Κρήσση, Κρηταῖος, Κρητεύς, Κρητῆος, Κρητῆος, Κρηταιεύς, Κρήσιος, Κρῆτις, Κρήσις, Κρήτικος, Steph. B.; Cretaeus, Cretanus, Cretensis, Creticus, Cretis: *Kriti*; the common European name *Candia* is unknown in the island; the Saracenic "Khandax" *Megálo-Kástron* became with the Venetian writers *Candia*; the word for a long time denoted only the principal city of the island, which retained its ancient name in the chroniclers, and in Dante, *Inferno*, xiv. 94).

I. *Situation and Extent.*—Crete, an island situated in the Aegean basin of the Mediterranean sea, is described by Strabo (x. p. 474) as lying between Cyrenaica and that part of Hellas which extends from Sunium to Laconia, and parallel in its length from W. to E. to these two points. The words μέχρι Λακωνικῆς may be understood either of Malea or Taenarum; it is probable that this geographer extended Crete as far as Taenarum, as from other passages in his work (ii. p. 124, viii. p. 863), it would appear that he considered it and the W. points of Crete as under the same meridian. It is still more difficult to understand the position assigned to Crete with regard to Cyrenaica (xvii. p. 838). Strabo is far nearer the truth, though contradicting his former statements, where he makes Cimarus the NW. promontory of Crete 700 stadia from Malea (x. p. 174), and Cape Sammonium 1000 stadia from Rhodes (ii. p. 106), which was one of the best-ascertained points in ancient geography.

The whole circumference of the island was estimated by Artemidorus at 4100 stadia; but Sosicrates, whose description was most accurate, computed the length at more than 2300 stadia, and the circumference at more than 5000 stadia (Strab. x. p. 476). Hieronymus (*l. c.*) in reckoning the length alone at 2000 stadia far exceeded Artemidorus. In Pliny (iv. 20) the extent of Crete in length was about 270 M. P. and nearly 539 M. P. in circuit. The broadest part (400 stadia) was in the middle, between the promontories of Dium and Matalum; the narrowest (60 stadia) further E., between Minoa and Hierapytna. The W. coast was 200 stadia broad, but towards the E. between Amphimalla and Phoenix contracted to 100 stadia. (Comp. Strab. p. 475.)

II. *Structure and Natural Features.*—The interior was very mountainous, woody, and intersected by fertile valleys. The whole island may be considered as a prolongation of that mountain chain which breasts the waters at Cape Malea, with the island of Cythera interposed. The geological formation resembles that of the Hellenic peninsula; from the traces of the action of the sea upon the cliffs, especially at the W. end, it seems that the island has been pushed up from its foundations by powerful subterranean forces, which were in operation at very remote times. (*Journ. Geog. Soc.* vol. xxii. p. 277.)

A continuous mass of high-land runs through its whole length, about the middle of which Mt. Ida, composed of a congeries of hills, terminating in three lofty peaks, rises to the height of 7674 feet: the base occupied a circumference of nearly 600 stadia; to the W. it was connected with a chain called Λευκὰ ὄρη, or the White Mountains, whose snow-clad summits and bold and beautiful outlines extend over a range of 300 stadia (Strab. p. 475). The prolongation to the E. formed the ridge of Dicte (Δίκτη, Strab. p. 478). It is curious that, though tradition spoke of those ancient workers in iron and bronze—the Idaean Dactyls, no traces of mining operations have been found.

The island had but one lake (Λίμνη Κορησία); the drainage is carried off by several rivers, mostly summer torrents, which are dried up during the summer season; but the number and copiousness of the springs give the country a very different aspect to the parched tracts of continental Greece.

Mt. Ida, connected in ancient story with metallurgy, was, as its name implied, covered with wood, which was extensively used in forging and smelting. The forests could boast of the fruit-bearing poplar (Theophrast. *H. P.* iii. 5); the evergreen platane (*H. P.* i. 15; Varr. *de Re Rust.* i. 7; Plin. xii. 1) trees, which it need hardly be said can no longer be found; the cypress (Theophrast. *H. P.* ii. 2), palm (*H. P.* ii. 8; Plin. xiii. 4), and cedar (Plin xvi. 39; Vitruv. ii. 9). According to Pliny (xxv. 8; comp. Theophrast. *H. P.* ix. 16), everything grew better in Crete than elsewhere; among the medicinal herbs for which it was famed was the "dictamnon" so celebrated among physicians, naturalists (Theophrast. *l. c.*; Plin. *l. c.*), and poets (Virg. *Aen.* xii. 412; comp. Tasso, *Gerusalem. Lib.* xi. 72). The ancients frequently speak of the Cretan wines (Aelian. *V. H.* xii. 31; Athen. x. p. 440; Plin. xiv. 9). Among these the "passum," or raisin wine, was the most highly prized (Mart. xiii. 106; Juv. xiv. 270). Its honey played a conspicuous part in the myths concerning Zeus (Diod. v. 70; Callim. *Hym. in Jov.* 50). The island was free from all wild beasts and noxious animals (Aelian, *N. A.* iii. 32; Plin. viii. 83), a blessing which it owed to Heracles (Diod. iv. 17); but the Cretan dogs could vie with the hounds of Sparta (Aelian. *N.A.* iii. 2); and the Cretan "Agrimi," or real wild goat, is the supposed origin of all our domestic varieties.

III. *History.*—The cycle of myths connected with Minos and his family threw a splendour over Crete, to which its estrangement from the rest of Greece during the historic period presents a great contrast. The "lying Cretans" dared to show, not only the birthplace, but also the tomb of the "father of gods and men" (Callim. *Hym in Jov.* 8), and the Dorian invaders made Crete the head-quarters of the worship of Apollo (Müller, *Dor.* vol. i. p. 226, trans.). Since the Grecian islands formed, from the earliest times, stepping stones by which the migratory population of Europe and Asia have crossed over to either continent, it has been assumed that Aegypt, Phoenicia, and Phrygia founded cities in Crete, and contributed

new arts and knowledge to the island. No proof of Aegyptian colonisation can be adduced; and from the national character, it is probable that settlers of pure Aegyptian blood never crossed the Aegean. Traces of Phoenician settlements may undoubtedly be pointed out; and by what cannot be called more than an ingenious conjecture, the mythical genealogy of Minos has been construed to denote a combination of the orgiastic worship of Zeus indigenous among the Eteocretes, with the worship of the moon imported from Phoenicia, and signified by the names Europe, Pasiphae, and Ariadne. There is an evident analogy between the religion of Crete and Phrygia; and the legendary Curetes and Idaean Dactyls are connected, on the one hand with the orgiastic worship, and on the other with the arts of Phrygia. But no historical use can be made of these scanty and uncertain notices, or of the Minos of the poets and logographers with his contradictory and romantic attributes. The Dorians first appear in Crete during the heroic period; the Homeric poems mention different languages and different races of men — Eteocretes, Cydonians, thrice divided Dorians, Achaeans, and Pelasgians, as all co-existing in the island, which they describe to be populous, and to contain ninety cities (*Od.* xix. 174). These Dorian mountaineers converted into mariners — the Norman sea-kings of Greece — must therefore have come to Crete at a period, according to the received legendary chronology, long before the return of the Heraclidae.

In the same poems they appear as hardy and daring corsairs; and this characteristic gave rise to that naval supremacy which was assigned by Herodotus, Thucydides, and Aristotle, to the traditionary Minos and his Cretan subjects.

Theophrastus (*De Ventis*, v. 13. p. 762, ed. Schneidewin) stated that the deserted sites of Cretan villages, which according to the primitive Greek practice the inhabitants had occupied in the central and mountain regions, were to be seen in his time. The social fabric which the ancients found in Crete so nearly resembled that of Sparta, that they were in doubt whether it should be considered as the archetype or copy. (Arist. *Pol.* ii. 7; Strab. p. 482.) But the analogy between the institutions of the Cretan communities and Sparta, is one rather of form than of spirit. The most remarkable resemblance consisted in the custom of the public messes, "Syssitia," while there is a marked difference in the want of that rigid private training and military discipline which characterized the Spartan government. The distinction between the condition of the Dorian freeman and the serf comes out vividly in the drinking song of the Cretan Hybrias (Athen. xv. p. 695); but there was only one stage of inferiority, as the Cretan Perioecus had no Helots below him. Polybius (vi. 45—48), who has expressed his surprise how the best-informed ancient authors, Plato, Xenophon, Ephorus, and Callisthenes, could compare the Cretan polity to the old Lacedaemonian, as the main features were so different, among other divergencies especially dwelt upon the inequality of property in Crete, with that fancied equality which he believed was secured by the legislation of Lycurgus. It is hazardous to determine the amount of credit to be given to the minute descriptions which the ancient authors have made, of the machinery by which the nicely balanced constitution of early Crete was regulated. Their statements as to the civil virtues and the public education of the Cretans, can be nothing but the mere declamation of after ages, seeking to contrast in a rhetorical manner the virtues of the good old times with modern decay and degradation.

The generous friendship of the heroic ages which was singularly regulated by the law (Ephorus *ap. Strab.* p. 483), had degenerated into a frightful licence (Arist. *Pol.* ii. 10); and as early as about B. C. 600, the Cretan stood self-condemned as an habitual liar, an evil beast, and an indolent glutton, if St. Paul in his Epistle to Titus (i. 12) alludes to Epimenides. (Comp. Polyb. iv. 47, 53, vi. 46.)

The island, which collectively stood aloof both in the Persian and Peloponnesian Wars, consisted of a number of independent towns, who coined their own money, had a senate and public assembly (Böckh, *Inscr. Gr.* vol. ii. 2554—2612), were at constant feud with each other, but when assailed by foreign enemies laid aside their private quarrels, in defence of their common country, to which they gave the affectionate appellation of mother-land (*μητρίς*), a word peculiar to the Cretans. (Plat. *Rep.* ix. p. 575; Aelian, *V. H.* xiii. 38, *N. A.* xvii. 35, 40; Synes. *Ep.* xciv.). Hence the well-known Syncretism (Plut. *de Frat. Am.* § 19, p. 490; *Etym. Mag. s. v.* *συγκρητίσαι*). Afterwards centres of states were formed by CNOSSUS, GORTYNA, and CYDONIA, and after the decay of the latter, LYCTUS. The first two had a "hegemony," and were generally hostile to each other.

These internal disorders had become so violent that they were under the necessity of summoning Philip IV. of Macedon as a mediator, whose command was all-powerful (*προστάτης*, Polyb. vii. 12). It would seem, however, that the effects of his intervention had ceased before the Roman war. (Niebuhr, *Lect. on Anc. Hist.* vol. iii. p. 366.) Finally, in B. C. 67, Crete was taken by Q. Metellus Creticus, after more than one unsuccessful attempt by other commanders during a lingering war, the history of which is fully given in Drumann (*Geschich. Rom.* vol. ii. pp. 51, foll.). It was annexed to Cyrene, and became a Roman province (Vell. ii. 34, 38; Justin. xxxix. 5; Flor. iii. 7; Eutrop. vi. 11; Dion Cass. xxxvi. 2). In the division of the provinces under Augustus, Creta-Cyrene, or Creta et Cyrene (Orelli, *Inscr.* n. 3658), became a senatorial province (Dion Cass. lii. 12), under the government of a propraetor (Strab. p. 840) with the title of proconsul (Orelli, *l.c.*), with a legatus (Dion Cass. lvii. 14) and a quaestor, or perhaps two as in Sicily (Suet. *Vesp.* 2). Under Constantine, a division took place (Zosim. ii. 32); as Crete was placed under a "Consularis" (Hierocl.), and Cyrene, now Libya Superior, under a "praeses" (Marquardt, *Handbuch der Röm Alt.* p. 222.) In A. D. 823, the Arabs wrested it from the Lower Empire (*Script. post Theophrast.* pp. 1—162; Cedren. *Hist. Comp.* p. 506). In A. D. 961, the island after a memorable siege of ten months by Nicephorus Phocas, the great domestic or general of the East, once more submitted to the Greek rule (Zonar. ii. p. 194). After the taking of Constantinople by the Franks, Baldwin I. gave it to Boniface, Marquess of Montferrat, who sold it, in A.D. 1204, to the Venetians, and it became the first of the three subject kingdoms whose flags waved over the square of San Marco.

The Cretan soldiers had a high reputation as light troops and archers, and served as mercenaries both in Greek and Barbarian armies (Thuc. vii. 57; Xen. *Anab.* iii. 3. § 6; Polyb. iv. 8, v. 14; Justin. xxxv. 2). Fashions change but little in the East; Mr. Pashley (*Trav.* vol. i. p. 245) has detected in the games and dances of modern Crete, the tumblers

(Hom. *Il.* xviii. 604) and the old cyclic chorus of three thousand years ago. (*Il.* xviii. 590; Athen. v. p. 81.) The dress of the peasant continues to resemble that of his ancestors; he still wears the boots (*ὑποδήματα*), as described by Galen (*Com. in Hippocrat. de Art.* iv. 14, vol. xviii. p. 682, ed. Kühn), and the short cloak, *Κρητικόν*, mentioned by Eupolis (*ap. Phot. Lex.* vol. i. p. 178), and Aristophanes (*Thesm.* 730).

It is doubtful whether there are any genuine autonomous coins of Crete; several of the Imperial period exist, with the *epigraph* KOINON KPHTΩN, and *types* referring to the legendary history of the island. (Eckhel, vol. ii. p. 300.)

IV. *Itinerary and Towns.*—Crete, in its flourishing days, had a hundred cities, as narrated by Stephanus, Ptolemy, Strabo, and other authors:—

"Centum urbes habitant magnas uberrima regna."
Virg. *Aen.* iii. 106.

(Comp. Hom. *Il.* ii. 649; Hor. *Carm.* iii. 27. 34, *Ep.* ix. 29.) These cities were destroyed by the Romans under Q. Metellus, but ruins belonging to many of them may still be traced. The ancients have left several itineraries. The Stadiasmus of the Mediterranean, starting from Sammonium, made a periplus of the island, commencing on the S. coast. Ptolemy began at Corycus, and travelled in the contrary direction, also making a complete tour of the coast; after which, starting again from the W. extremity of the island, he has enumerated several inland cities as far as Lyctus. Pliny began at nearly the same place as Ptolemy, but travelled in the contrary direction, till he arrived at Hierapolis; after which he made mention of several inland towns at random. Scylax commenced at the W. coast, and proceeded to the E., grouping inland and coast towns together. Hierocles set out from Gortyna eastward by Hierapytna, nearly completing the tour of the coast; while the Peutinger Table, commencing at Tharrus, pursued the opposite route, with occasional deviations.

In the library of the Marciana at Venice are several reports addressed to the Serene Republic by the Proveditori of Candia, some of which contain notices at more or less length of its antiquities. One of these, a MS. of the 16th century, *La Descrizione dell' Isola di Candia*, has been translated in the *Museum of Classical Antiquities*, vol. ii. p. 263, and contains much interesting and valuable matter. In the same paper will be found a very accurate map of Crete, constructed on the outline of the French map of Dumas, Gauttier, and Lassie, 1825, corrected at the E. and W. extremities from the hydrographic charts of the Admiralty, executed from recent surveys by Captains Graves and Spratt.

Crete has been fortunate in the amount of attention which has been paid to it. The diligent and laborious Meursius (*Creta, Cyprus, Rhodus*, Amstel. 1675) has collected everything which the ancients have written connected with the island. Höck (*Kreta*, Göttingen, 1829, 3 vols.) is a writer of great merit, and has given a full account of the mythological history of Crete, in which much curious information is found. Mr. Pashley (*Travels in Crete*, London, 1837, 2 vols.) is a traveller of the same stamp as Colonel Leake, and has illustrated the geography of the island by his own personal observation and sound judgment. Bishop Thirlwall (*Hist. of Greece*, vol. i. p. 283, foll.) has given a very vivid outline of the Cretan institutions as they were conceived to have existed by Aristotle, Strabo, and others.

The following is a list of the Cretan towns, an account of the chief of which is given separately:—

On the N. coast, in the direction from W. to E.: Agneum, Cisamus, Methymna, Dictynna, Pergamum, Cydonia, Minoa, Marathusa, Aptera, Cisamus, Amphimatrium, Hydramum, Amphimalla, Rhithymna, Pantomatrium, Astale, Panormus, Dium, Cytaeum, Apollonia, Matium, Heracleum, Amnisus, Chersonesus, Olus, Miletus, Camara, Naxus, Minoa, Istron, Etea, Grammium.

On the E. coast: Itanus, Ampelos.

On the S. coast, in the direction from E. to W.: Erythraea, Hierapytna, Hippocronium, Histoë, Prianssus, Leben, Matalia, Sulia, Pyschium, Apollonias, Phoenix, Tarrha, Poecilasium, Syia, Lissus, Calamyda.

On the W. coast: Inachorium, Rhamnus, Chersonesus, Phalasarna, Corycus.

In the interior of the island, from W. to E.: Eleaea, Polyrrhenia, Rocca, Achaea, Dulopolis, Cantanus, Hyrtacina, Elyrus, Caeno, Cerea, Arden or Anopolis, Polichna, Mycenae, Lappa or Lampa, Corium, Aulon, Osmida, Sybritia, Eleutherna, Axus, Gortyn or Gortyna, Phaestus, Pylorus, Boebe, Bene, Asterusia, Rhytium, Stelae, Inatus, Biennus, Pyranthus, Rhaucus, Tylissus, Cnossus, Thenae, Omphalium, Pannona, Lyctus, Arcadia, Olerus, Allaria, Praesus. [E. B. J.]

CRE'TICUM MARE. [AEGAEUM MARE.]

CRETO'POLIS (*Κρητόπολις*, Ptol. v. 5; *Κρητῶν πόλις*, Polyb. v. 72). Ptolemy places Cretopolis in the part of Cabalia, which he attaches to Pamphylia. Garsyeris encamped at Cretopolis before he attempted the pass of Climax [CLIMAX]; and Cretopolis is, therefore, west of the Climax, and in the Milyas, as Polybius says (v. 72). Cretopolis is twice mentioned by Diodorus (xviii. 44, 47). The site is unknown. [G. L.]

CREU'SA, or CREU'SIS (*Κρέουσα, Κρεουσία*, Strab.; Creusa, Liv.; *Κρεῦσις*, Xen., Paus., Steph. B.: *Eth.* *Κρεύσιος*), a town of Boeotia, at the head of a small bay in the Corinthian gulf, described by ancient writers as the port of Thespiae. (Strab. ix. pp. 405, 409; Paus. ix. 32. § 1; "Creusa, Thespiensium emporium, in intimo sinu Corinthiaco retractum," Liv. xxxvi. 21.) The navigation from Peloponnesus to Creusis is described by Pausanias (*l. c.*) as insecure, on account of the many headlands which it was necessary to double, and of the violent gusts of wind rushing down from the mountains. Creusis was on the borders of Megaris. One of the highest points of Mt. Cithaeron projects into the sea between Creusis and Aegosthenae, the frontier town in Megaris, leaving no passage along the shore except a narrow path on the side of the mountain. In confirmation of Pausanias, Leake remarks that this termination of Mt. Cithaeron, as well as all the adjoining part of the Alcyonic sea, is subject to sudden gusts of wind, by which the passage of such a cornice is sometimes rendered dangerous. On two occasions the Lacedaemonians retreated from Boeotia by this route, in order to avoid the more direct roads across Mt. Cithaeron. On the first of these occasions, in B. C. 378, the Lacedaemonian army under Cleombrotus was overtaken by such a violent storm, that the shields of the soldiers were wrested from their hands by the wind, and many of the beasts of burden were blown over the precipices. (Xen. *Hell.* v. 4. § 16, seq.) The second time that they took this route was after the fatal battle of Leuctra, in B. C. 371. (Xen. *Hell.* vi. 4.

§ 25, seq.) The exact site of Creusis is uncertain, but there can be no doubt that it must be placed with Leake somewhere in the bay of *Livadhóstra*. (Leake, *Northern Greece*, vol. ii. pp. 406, 505.)

CRIMISA or CRIMISSA (Κρίμισα, Steph. B. *s. v.*; Lycophr. *Alex.* 913; Κρίμισσα, Strab. vi. p. 254), a promontory on the E. coast of Bruttium, in the territory of Crotona; on which, according to a received tradition of the Greeks, Philoctetes founded a small city. This settlement is distinctly connected by Strabo with that of Chone in the same neighbourhood: both were in all probability Oenotrian towns, and not Greek colonies at all: Strabo calls it "the ancient Crimissa," and it appears from his expressions that it was no longer in existence in his time. Lycophron also terms it a small town (βραχύπτολις Κρίμισα, *l. c.*), and there is no trace of it found in history. The promontory of Crimissa may probably be identified with that now called *Capo dell' Alice*, about 22 miles N. of Crotona: the town of *Cirò*, about 5 miles inland, is supposed by local writers to occupy the site of the city of Philoctetes, but this is mere conjecture. (Barr, *de Sit. Calabr.* iv. 23; Romanelli, vol. i p. 213.) Stephanus of Byzantium mentions a river of the same name, which is supposed by the authorities just cited to be the stream called *Fiumenicà*, about 10 miles W. of the *Capo dell' Alice*, but it seems very probable that Stephanus meant the more celebrated river Crimissus in Sicily. (Cluver. *Sicil.* p. 267.) [E. H. B.]

CRIMISUS, or CRIMISSUS (Κριμισός, Lycophr., Dion. Hal.; Κριμησός, Plut.; Κριμισσός, Ael.), a river of Sicily, in the neighbourhood of Segesta, celebrated for the great battle fought on its banks in B.C. 339, in which Timoleon, with only about 11,000 troops, partly Syracusans, partly mercenaries, totally defeated a Carthaginian army of above 70,000 men. This victory was one of the greatest blows ever sustained by the Carthaginian power, and secured to the Greek cities in Sicily a long period of tranquillity. (Plut. *Timol.* 25—29; Diod. xvi. 77—81; Corn. Nep. *Tim.* 2.) But though the battle itself is described in considerable detail both by Plutarch and Diodorus, they afford scarcely any information concerning its locality, except that it was fought in the part of the island at that time subject to Carthage (ἐν τῇ τῶν Καρχηδονίων ἐπικρατείᾳ). The river Crimisus itself is described as a considerable stream, which being flooded at the time by storms of rain, contributed much to cause confusion in the Carthaginian army. Yet its name is not found in any of the ancient geographers, and the only clue to its position is afforded by the fables which connect it with the city of Segesta. According to the legend received among the Greeks, Aegestes or Aegestus (the Acestes of Virgil), the founder and eponymous hero of Egesta, was the son of a Trojan woman by the river-god Crimisus, who cohabited with her under the form of a dog. (Lycophr. 961; Tzetz. *ad loc.*; Virg. *Aen.* v. 38; and Serv. *ad Aen.* i. 550.) For this reason the river Crimisus continued to be worshipped by the Segestans, and its effigy as a dog was placed on their coins (Ael. *V. H.* ii. 33; Eckhel, vol. i. p. 234): Dionysius also distinctly speaks of the Trojans under Elymus and Aegestus as settling in the territory of the Sicani, about the river Crimisus (i. 52); hence it seems certain that we must look for that river in the neighbourhood, or at least within the territory of Segesta, and it is probable that Fazello was correct in identifying it with the stream now called *Fiume di S. Bartolommeo* or *Fiume Freddo*, which flows about 5 miles E. of Segesta, and falls into the *Gulf of Castellamare* at a short distance from the town of that name. Cluverius supposed it to be the stream which flows by the ruins of Entella, and falls into the Hypsas or *Belici*, thus flowing to the S. coast: but the arguments which he derives from the account of the operations of Timoleon are not sufficient to outweigh those which connect the Crimisus with Segesta. (Fazell. *de Reb. Sic.* vii. p. 299; Cluver. *Sicil.* p. 269.) [E. H. B.]

CRISSA or CRISA (Κρίσσα, Κρῖσα: *Eth.* Κρισσαῖος), and CIRRHA (Κίρρα: *Eth.* Κιρραῖος), in Phocis. There has been considerable discussion whether these two names denoted the same place or two different places. That there was a town of the name of Cirrha on the coast, which served as the harbour of Delphi, admits of no dispute. (Polyb. v. 27; Liv. xlii. 15.) Pausanias (x. 37. § 5) supposes this Cirrha to be a later name of the Homeric Crissa; and his authority has been followed by K. O. Müller, Dissen, Wachsmuth, K. F. Hermann, and most of the German scholars. Strabo (ix. p. 418) on the other hand, distinguishes the two places; and his statement has been adopted by Leake, Kruse, Mannert, Ulrichs, and Grote. The most complete and satisfactory investigation of the subject has been made by Ulrichs, who carefully examined the topography of the district; and since the publication of his work, it has been generally admitted that Crissa and Cirrha were two separate places. The arguments in favour of this opinion will be best stated by narrating the history of the places.

Crissa was more ancient than Cirrha. It was situated inland a little SW. of Delphi, at the southern end of a projecting spur of Mt. Parnassus. Its ruins may still be seen at a short distance from the modern village of *Chrysó*, surrounding the church of the Forty Saints. They consist of very ancient polygonal walls, still as high as 10 feet in some parts, and as broad as 18 feet on the northern side, and 12 on the western. The ancient town of Crissa gave its name to the bay above which it stood; and the name was extended from this bay to the whole of the Corinthian gulf, which was called Crissaean in the most ancient times. (See above, p. 673.) Cirrha was built subsequently at the head of the bay, and rose into a town from being the port of Crissa. This is in accordance with what we find in the history of other Grecian states. The original town is built upon a height at some distance from the sea, to secure it against hostile attacks, especially by sea; but in course of time, when property has become more secure, and the town itself has grown in power, a second place springs up on that part of the coast which had served previously as the port of the inland town. This was undoubtedly the origin of Cirrha, which was situated at the mouth of the river Pleistus (Paus. x. 8. § 8), and at the foot of Mount Cirphis (Strab. ix. p. 418). Its ruins may be seen close to the sea, at the distance of about ten minutes from the Pleistus. They bear the name of *Magúla*. The remains of walls, enclosing a quadrangular space about a mile in circuit, may still be traced; and both within and without this space are the foundations of many large and small buildings.

Although Strabo was correct in distinguishing between Crissa and Cirrha, he makes a mistake respecting the position of the former. Cirrha, as we have already seen, he rightly places on the coast at the foot of Mt. Cirphis; but he erroneously supposes

that Crissa likewise was on the coast, more to the east, in the direction of Anticyra. Strabo, who had never visited this part of Greece, was probably led into this error from the name of the Crissaean gulf, which seemed to imply the existence of a maritime Crissa.

Between Crissa and Cirrha was a fertile plain, bounded on the north by Parnassus, on the east by Cirphis, and on the west by the mountains of the Ozolian Locrians. On the western side it extended as far north as Amphissa, which was situated at the head of that part of the plain. (Herod. viii. 32; Strab. ix. p. 419.) This plain, as lying between Crissa and Cirrha, might be called either the Crissaean or Cirrhaean, and is sometimes so designated by the ancient writers; but, properly speaking, there appears to have been a distinction between the two plains. The Cirrhaean plain was the small plain near the town of Cirrha, extending from the sea as far as the modern village of *Xeropégado*, where it is divided by two projecting rocks from the larger and more fertile Crissaean plain, which stretches, as we have already said, as far as Crissa and Amphissa. The small Cirrhaean plain on the coast was the one dedicated to Apollo after the destruction of Cirrha, as related below (τὸ Κιρραῖον πεδίον, Aeschin. *c. Ctesiph.* p. 68, ed. Steph.; ἡ Κιρραία χώρα, Dem. *de Cor.* pp. 277, 278, Reiske; Diod. xvi. 23; Dion Cass. lxiii. 14; Polyaen. iii. 5; ἱερὰ γᾶ, Böckh, *Corp. Inscr.* no. 1688; ἡ Κιρραία, Paus. x. 37. § 6). The name of the Crissaean plain in its more extended sense might include the Cirrhaean, so that the latter may be regarded as a part of the former. The boundaries of the land dedicated to the god were inscribed on one of the walls of the Delphian temple, and may perhaps be yet discovered among the ruins of the temple. (Böckh, *Corp. Inscr.* no. 1711.)

Crissa was regarded as one of the most ancient cities in Greece. It is mentioned in the Catalogue of the Iliad as the "divine Crissa" (Κρῖσα ζαθέη, *Il.* ii. 520). According to the Homeric hymn to Apollo, it was founded by a colony of Cretans, who were led to the spot by Apollo himself, and whom the god had chosen to be his priests in the sanctuary which he had intended to establish at Pytho. (Hom. *Hymn. in Apoll.* 438.) In this hymn, Crissa is described (l. 269) as situated under Parnassus, where no chariots rolled, and no trampling of horses was heard, — a description suitable to the site of Crissa upon the rocks, as explained above, but quite inapplicable to a town upon the sea-shore. In like manner, Nonnus, following the description of the ancient epic poets, speaks of Crissa as surrounded by rocks. (*Dionys.* p. 358, vs. 127.) Moreover, the statement of Pindar, that the road to Delphi from the Hippodrome on the coast led over the Crissaean hill (*Pyth.* v. 46), leaves no doubt of the true position of Crissa, since the road from the plain to Delphi must pass by the projecting spur of Parnassus on which *Chrysó* stands. In the Homeric hymn to Apollo, Crissa appears as a powerful place, possessing as its territory the rich plain stretching down to the sea, and also the adjoining sanctuary of Pytho itself, which had not yet become a separate town. In fact, Crissa is in this hymn identified with Delphi (l. 282, where the position of Delphi is clearly described under the name of Crissa). Even in Pindar, the name of Crissa is used as synonymous with Delphi, just as Pisa occurs in the poets as equivalent to Olympia. (Pind. *Isthm.* ii. 26.) Metapontium in Italy is said to have been a colony of Crissa. (Strab. vi. p. 264.)

In course of time the sea-port town of Cirrha increased at the expense of Crissa; and the sanctuary of Pytho grew into the town of Delphi, which claimed to be independent of Crissa. Thus Crissa declined, as Cirrha and Delphi rose in importance. The power of Cirrha excited the jealousy of the Delphians, more especially as the inhabitants of the former city commanded the approach to the temple by sea. Moreover, the Cirrhaeans levied exorbitant tolls upon the pilgrims who landed at the town upon their way to Delphi, and were said to have maltreated Phocian women on their return from the temple. (Aeschin. *c. Ctesiph.* p. 68; Strab. ix. p. 418; Athen. xiii. p. 560.) In consequence of these outrages, the Amphictyons declared war against the Cirrhaeans about B. C. 595, and at the end of ten years succeeded in taking the city, which was razed to the ground, and the plain in its neighbourhood dedicated to the god, and curses imprecated upon any one who should till or dwell in it. Cirrha is said to have been taken by a stratagem which is ascribed by some to Solon. The town was supplied with water by a canal from the river Pleistus. This canal was turned off, filled with hellebore, and then allowed to resume its former course; but scarcely had the thirsty Crissaeans drank of the poisoned water, than they were so weakened by its purgative effects that they could no longer defend their walls. (Paus. x. 37. § 7; Polyaen. iii. 6; Frontin. *Strateg.* iii. 7. § 6.) This account sounds like a romance; but it is a curious circumstance that near the ruins of Cirrha there is a salt spring having a purgative effect like the hellebore of the ancients.

Cirrha was thus destroyed; but the fate of Crissa is uncertain. It is not improbable that Crissa had sunk into insignificance before this war, and that some of its inhabitants had settled at Delphi, and others at Cirrha. At all events, it is certain that Cirrha was the town against which the vengeance of the Amphictyons was directed; and Strabo, in his account of the war, substitutes Crissa for Cirrha, because he supposed Crissa to have been situated upon the coast.

The spoils of Cirrha were employed by the Amphictyons in founding the Pythian games. Near the ruins of the town in the Cirrhaean plain was the Hippodrome (Paus. x. 37. § 4), and in the time of Pindar the Stadium also. (*Pyth.* xi. 20, 73.) The Hippodrome always remained in the maritime plain; but at a later time the Stadium was removed to Delphi. [DELPHI.]

Cirrha remained in ruins, and the Cirrhaean plain continued uncultivated down to the time of Philip, the father of Alexander the Great, when the Amphissians dared to cultivate again the sacred plain, and attempted to rebuild the ruined town. This led to the Second Sacred War, in which Amphissa was taken by Philip, to whom the Amphictyons had entrusted the conduct of the war, B. C. 338. [AMPHISSA.]

Cirrha, however, was afterwards rebuilt as the port of Delphi. It is first mentioned again by Polybius (v. 27); and in the time of Pausanias it contained a temple common to Apollo, Artemis, and Leto, in which were statues of Attic work. (Leake, *Northern Greece*, vol. ii. p. 583; and more especially Ulrichs, *Reisen in Griechenland*, p. 7, seq.)

CRISSAEUS SINUS. [CORINTHIACUS SINUS.]

CRITALLA (τὰ Κρίταλλα), a place in Cappa-

docia, where all the army of Xerxes was mustered, and from which he set out to march to Sardis. (Herod. vii. 26.) He crossed the Halys after leaving Critalla, and came to Celaenae in Phrygia. This is the only indication of the position of Critalla. [G. L.]

CRITHO'TE. [ACARNANIA, p. 9, b.]

CRIU-METOPON (Κριοῦ μέτωπον, Ptol. iii. 6. § 2; Scymn. Ch. *Fr.* 80; Anon. *Peripl. Pont. Eux.* p. 6; Pomp. Mela, ii. 1. § 3; Plin. iv. 26, x. 30; Avien. 228; Priscian, 92: *Aia-burun*), the great southern headland of the Crimea, which, looking across the Euxine to the promontory of Casambis on the coast of Asia Minor, divides it, as it were, into two parts by a line which the imagination supplies between the 31st and 32d degrees of longitude, and which, according to the ancients, gave the whole sea the shape of a Scythian bow. The two points of land are so remarkable, that many navigators, as Strabo (ii. p. 124, vii. p. 309, xi. p. 496, xii. p. 545) reports, affirmed that they had in sailing between them seen both lands to the N. and S. at once, though the distance between the two capes is 2500 stadia. According to Plutarch (*De Flum.* p. 28), it was called by the natives Brixaba (Βρίξαβα), which meant Ram's Head. *Cape Aia*, the southernmost of the three headlands, is described as a very high, bluff, bold-looking land, much like the North Foreland, but much higher, and in a sketch of the coast line it is estimated at about 1200 feet, the same elevation which is assigned to it by Pallas. (*Journ. Geog. Soc.* vol. i. p. 113.) [E. B. J.]

CRIU-METOPON (Κριοῦ μέτωπον, Ptol. iii. §2; Scylax; *Stadiasm.* §§ 317, 318; Pomp. Mel. ii. 7. § 12; Plin. iv. 12. s. 20, v. 5. s. 5: *Kávo Krío*), the SW. promontory of Crete, 125 M.P. from Phycus of Cyrenaica (Plin. iv. 12. s. 20), or two days and two nights' sail. (Strab. x. p. 475; Dion Per. 87.) Off this headland lay the three small islands called Musagorae *Elaphonesia*. (Plin. *l. c.*). [E. B. J.]

CRIUS. [ACHAIA, p. 13, b.]

CROBIALUS (Κρωβίαλος: *Eth.* Κρωβιαλεύς), a place on the Paphlagonian coast, mentioned by Apollonius Rhodius (*Arg.* ii. 944), with Cromna and Cytorus; and Valerius Flaccus (*Arg.* v. 103) has the same name. Stephanus (*s. v.*) quotes the verse of Apollonius. We may assume that it was in the neighbourhood of Cromna and Cytorus. Strabo (p. 545) observes of the line in Homer (*Il.* ii. 855),—

Κρῶμνάν τ' Αἰγιαλόν τε καὶ ὑψηλοὺς 'Ερυθίνους,—

that some persons write Κώβιαλον in place of Αἰγιαλόν. Crobialus and Cobialus seem to be the same place, as Cramer observes. If, then, Crobialus is the same as Aegialos, it is that part of the Paphlagonian coast, which extends in a long line for more than 100 stadia, immediately east of Cytorus. [G. L.]

CROBYZI (Κρόβυζοι), a people of Moesia, near the frontiers of Thrace. (Ptol. iii. 10. § 9; Strab. p. 318; comp. Herod. iv. 49; Anonym. *Peripl. Pont. Eux.* p. 13.) [L. S.]

CRO'CEAE (Κροκέαι: *Eth.* Κροκεάτης), a village of Laconia on the road from Sparta to Gythium, and near the latter place, celebrated for its marble quarries. Pausanias describes the marble as difficult to work, but when wrought forming beautiful decorations for temples, baths, and fountains. There was a marble statue of Zeus Croceates before the village, and at the quarries bronze statues of the Dioscuri. (Paus. iii. 21. § 4.) The most celebrated of the Corinthian baths was adorned with marble from the quarries at Croceae. (Paus. ii. 3. § 5.) These quarries have been discovered by the French Commission two miles SE. of *Levétzova*; and near the village have been found some blocks of marble, probably the remains of the statue of Zeus Croceates. A memorial of the worship of the Dioscuri at this place still exists in a bas-relief, representing the two gods with their horses: beneath is a Latin inscription. The marble in these quarries is green porphyry; and though not suitable for Grecian temples, it would be greatly prized by the Romans, who employed extensively variegated kinds of marble for the decoration of their buildings. Hence it is probable that the marble celebrated by the Romans under the name of Laconian was this green porphyry from Croceae; and that it was the quarries of this place which Strabo says (viii. p. 367), were opened by the Romans at Taygetus. (*Description de la Morée, Géognosie*, vol. ii. pt. ii. p. 129; Leake, *Peloponnesiaca*, p. 170; Curtius, *Peloponnesos*, vol. ii. p. 266.]

CROCIA'TONUM (Κροκιάτονον, Ptol. ii. 8), CRONCIACONNUM in the Table. Ptolemy makes it a port of the Unelli or Veneli, a Gallic nation who occupied part of *Bretagne*. The Table contains a route from Alauna (*Alleaume*) to Caesarodunum (*Tours*), in which the next station to Alauna is Cronciaconnum, distant 10½ M. P. from Alauna. Its position, therefore, depends on that of Alauna. Crociatonum lies between Alauna and Augustodorus (*Bayeux*), from which it is 31½ M. P. distant. D'Anville, who places Alauna at the *Moutiers d'Alonne*, fixes Crociatonum at *Valognes*, in the department of *La Manche*. Accordingly he considers that there is an error in Ptolemy, for the place is called a port in one MS. at least. But if Alauna is near *Valognes*, Crociatonum must be looked for elsewhere. Walckenaer places it at the village of *Turqueville*, west of *Audouville*, at the entrance of the bay of *Issigny*. There may have been both a town and a port of the same name. Some geographers would fix Crociatonum at *Carentan*, west of *Issigny*. [G. L.]

CROCOCOLANUM, in Britain, mentioned in the sixth Itinerary as 12 miles from Lindum (*Lincoln*). Identified, on insufficient grounds, with *Brough* in Nottinghamshire. [R. G. L.]

CROCODEILON, a river of Syria, near which there was formerly a town of the same name (Κροκοδείλων πόλις), between Caesarea Palaestinae and Ptolemaïs (Strab. xvi. p. 758; Plin. v. 17. s. 19). It is now identified with the *Nâhr Zerka*, in which, according to Pococke (*Trav.* vol. ii. p. 58.), crocodiles have been found. (Von Raumer, *Palästina*, pp. 53, 191.) [E. B. J.]

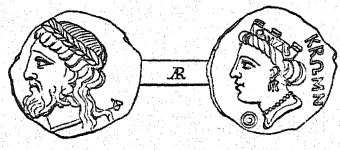
CROCODILO'POLIS (Κροκοδείλων πόλις, Ptol. iv. 5. § 65: *Eth.* Κροκοδειλοπολίτης), the name of several cities in Egypt, derived from the local worship of the crocodile.

1. Arsinoe in the Heptanomis, and the Arsinoite nome of the Ptolemaic era, were, under the Pharaohs, called respectively Crocodilopolis and the Crocodilopolite nome. (Steph. B. *s. v.*) The crocodile was here domesticated and worshipped. It fed from the hands of the priests of Arsinoe. [ARSINOE]. (Aelian, *H. An.* x. 24; Plin. *N. H.* v. 9, 11, xxxvi. 16.)

2. A town in the Aphroditopolite nome of the Thebaid, on the western bank of the Nile, lat. 25° 6′ N., of which ruins are still visible at *Embeshanda*, on the verge of the Libyan desert. [W. B. D.]

CROCYLEIA, or CROCYLEIUM. [ITHACA.]

CROCYLEIUM (Κροκύλειον), a town in Aetolia Epictetus, on the borders of Locris, and one day's march from Potidania. (Thuc. iii. 96.) This town is confounded by Stephanus B. (*s. v.*) with Crocyleia in Ithaca.



CRODUNUM, a place in the Gallia Provincia, mentioned by Cicero (*pro Font.* c. 4). There is no indication of its site except what may be derived from this corrupt passage of Cicero. A duty (portorium) was levied on wine carried from *Narbonne* to *Toulouse*, and it was levied at Cobiomachum, which was between these two places. If the merchants avoided Cobiomachum, they were caught either at Crodunum or Vulchalo; which we must assume to be places that a man must go through to reach *Toulouse* from *Narbonne*, if he avoided Cobiomachum. This is all that we know; and yet people will tell us what is the modern site of Crodunum. [G. L.]

CROMI, or CROMNUS (Κρῶμοι, Paus. viii. 3. § 4, 27. § 4, 34. § 6; Κρῶμνος, Xen. *Hell.* vii. 4. § 21; Κρῶμνα, Steph. B. *s. v.*), a town of Arcadia on the frontiers of Messenia, the inhabitants of which were removed to Megalopolis, on the foundation of the latter city in B. C. 371. Its territory is called CROMITIS (Κρωμῖτις) by Pausanias (viii. 34. § 6). It is placed by Boblaye at *Neokhório*, but by Leake at *Samará*, a little westward of *Londári*, since the latter writer conceives it to have been on the route leading from Megalopolis to Carnasium, and not on the one leading to Messene. (Boblaye, *Recherches*, p. 169; Leake, *Morea*, vol. ii. pp. 44, 297, *Peloponnesiaca*, p. 234.)

CRO'MMYON (Κρομμύων ἄκρα, Ptol. v. 14. § 3; Κρομμύου ἄκρα, Strab. xiv. pp. 669, 682; Κρομμυακόν, *Stadiasm.* § 294; Cic. *ad Fam.* xii. 13: *Cormachite*), the most N. point of the island of Cyprus, NW. of Lapethus. It lay opposite to Cape Anemurium of Cilicia, from which it was distant 350 stadia. (Strab. xiv. p. 682; Engel, *Kypros*, vol. i. p. 77.) [E. B. J.]

CRO'MMYON (Κρομμυών, Thuc., Xen., Strab.; Κρομυών, Paus.; Cromyon, Ov. *Met.* vii. 435; Κρεμμυών, Scylax, Steph. B. *s. v.*; Cremmyon, Plin. iv. 7. s. 11: *Eth.* Κρομμυώνιος), a village of the Corinthia on the Saronic gulf, but originally the last town of Megaris. It was the chief place between the isthmus, properly so called, and Megara; whence the whole of this coast was called the Crommyonia (ἡ Κρομμυωνία, Strab. viii. p. 380). Crommyon was distant 120 stadia from Corinth (Thuc. iv. 45), and appears to have therefore occupied the site of the ruins near the chapel of St. Theodorus. The village of *Kinéta*, which many modern travellers suppose to correspond to Crommyon, is much further from Corinth than 120 stadia. Crommyon is said by Pausanias to have derived its name from Crommus, the son of Poseidon. It is celebrated in mythology as the haunt of the wild boar destroyed by Theseus. (Paus. ii. 1. § 3; Strab. *l. c.*; Plut. *Thes.* 9; Ov. *l. c.*) It was taken by the Lacedaemonians in the Corinthian War, but was recovered by Iphicrates. (Xen. *Hell.* iv. 4. § 13, iv. 5. § 19.) (Leake, *Morea*, vol. iii. p. 307, *Peloponnesiaca*, p. 308; Boblaye, *Recherches*, &c. p. 35; Curtius, *Peloponnesos*, vol. ii. p. 555.)

CROMNA (Κρῶμνα: *Eth.* Κρωμνίτης, Κρωμναῖος, Κρωμναιεύς, Steph. B. *s. v.*), a place on the Paphlagonian coast mentioned by Homer (*Il.* ii. 855; CROBIALUS). It was 60 stadia east of Erythini and 90 west of Cytorus. There are autonomous coins of Cromna. [AMASTRIS.] [G. L.]

COIN OF CROMNA.

CRO'NIUS MONS. [OLYMPIA.]

CRO'PIA, or CROPEIA. [ATTICA, p. 326, a.]

CROSSA (Κρόσσα: *Eth.* Κροσσαῖος), a city on the Pontus, mentioned by Hecataeus in his *Asia*. (Steph. B. *s. v.*) [G. L.]

CROSSAEA. [CRUSIS.]

CROTON or CROTONA (Κρότων: *Eth.* Κροτωνιάτης, Crotoniensis and Crotonensis, but Cicero uses Crotoniatae for the people: *Cotrone*), one of the most celebrated of the Greek colonies in Southern Italy, situated on the E. coast of the Bruttian peninsula, at the mouth of the little river Aesarus, and about 6 miles N. of the Lacinian Promontory. It was founded by a colony of Achaeans, led by Myscellus, a native of Rhypae in Achaia, in obedience to the express injunction of the oracle at Delphi. (Strab. vi. p. 262; Diod. viii. Exc. Vat. pp. 8, 9; Dionys. ii. 59; Ovid. *Met.* xv. 9—59; Scymn. Ch. 325.) The date of its foundation is fixed by Dionysius at B. C. 710, and his authority may probably be relied on, though Eusebius and Hieronymus would place it some years later. (Clinton, *F. H.* vol. i. p. 174; Grote's *Greece*, vol. iii. p. 401.) A tradition recorded by Strabo (*l. c.*), which would connect its foundation with that of Syracuse by Archias, would therefore seem to be chronologically inadmissible. Its name was derived, according to the current legend, from a person of the name of Croton, who afforded a hospitable reception to Hercules during the wanderings of that hero; but having been accidentally killed by him, was buried on the spot, which Hercules foretold would eventually become the site of a mighty city. (Diod. iv. 24; Iambl. *Vit. Pyth.* 50; Ovid, *Met.* xv. 12—18, 55; Etym. M. *v.* Κρότων.) Hence we find Croton sometimes called the founder of the city, while the Crotoniats themselves paid peculiar honours to Hercules as their tutelary divinity and Oekist. (Heraclid. Pont. 36; Iambl. *Vit. Pyth.* 40; Eckhel, vol. i. p. 172.)

Crotona, as well as its neighbour Sybaris, seems to have rapidly risen to great prosperity; but the general fact of its size, wealth, and power, is almost all that we know concerning it; its history during the first two centuries from its foundation being almost a blank to us. But the fact that the walls of the city enclosed a space of not less than 12 miles in circuit (Liv. xxiv. 3), sufficiently proves the great power to which it had attained; and it is during this early period also that we find the Crotoniats extending their dominion across the Bruttian peninsula, and founding the colony of Terina on the coast of the Tyrrhenian Sea, as well as that of Caulonia between the parent city and Locri. Lametium also, or Lametini, on the Hipponian Gulf, as well as Scyllacium on the opposite side of the isthmus, must at this period have been subject to its rule. The great wealth and prosperity enjoyed by the two neighbouring cities of Crotona and Sybaris, seems to prove that they continued for a long time on terms of friendship, in accordance with their common Achaean

origin; and the Oenotrian tribes of the interior were not powerful enough to offer any obstacle to their growth. They thus became during the sixth century B. C. two of the most populous, wealthy, and powerful cities of the Hellenic name. Crotona, however, was far less luxurious than its rival; its inhabitants devoted themselves particularly to athletic exercises, and became celebrated for the number of the prizes which they carried off at the Olympic games. (Strab. vi. p. 262.) The government of Crotona appears to have been of an oligarchic character; the supreme power being in the hands of a council of one thousand persons, who were, or claimed to be, descendants from the original settlers. (Iambl. *V. P.* 45; Val. Max. viii. 15. Ext. § 1.) This state of things continued without interruption, till the arrival of Pythagoras, an event that led to great changes both at Crotona and in the neighbouring cities. It was, apparently, about the middle of the sixth century (between B. C. 540 and 530) that that philosopher first established himself at Crotona, where he quickly attained to great power and influence, which he appears to have employed not only for philosophical, but for political purposes. But the nature of the political changes which he introduced, as well as the revolutions that followed, is involved in great obscurity. We learn, however, that besides the general influence which Pythagoras exerted over the citizens, and even over the Great Council, he formed a peculiar society of 300 young men among the most zealous of his disciples, who, without any legal authority, exercised the greatest influence over the deliberations of the supreme assembly. This state of things continued for some time, until the growing unpopularity of the Pythagoreans led to a democratic revolution, which ended in their expulsion from Crotona and the overthrow of the Great Council, a democratic form of government being substituted for the oligarchy. This revolution was not confined to Crotona, but extended to several other cities of Magna Graecia, where the Pythagoreans had obtained a similar footing; their expulsion led to a period of confusion and disorder throughout the south of Italy. (Justin. xx. 4; Val. Max. viii. 15. Ext. § 1; Diog. Laert. viii. 1. § 3; Iambl. *Vit. Pyth.* 248—251, 255—262; Porphyr. *Vit. Pyth.* 54, 55; Grote's *Greece*, vol. iv. pp. 525—550.)

It was during the period of the Pythagorean influence (so far as we can trust the very confused and uncertain chronology of these events), that the war occurred between Crotona and Sybaris which ended in the destruction of the latter city. The celebrated athlete Milo, himself a leading disciple of Pythagoras, was the commander of the Crotoniat army, which is said to have amounted to 100,000 men, while that of the Sybarites was three times as numerous; notwithstanding which the former obtained a complete victory on the banks of the Traeis, and following up their advantage took the city of Sybaris, and utterly destroyed it. The received date of this event is B. C. 510. (Diod. xii. 9; Strab. vi. p. 263; Herod. v. 44, vi. 21; Iambl. *Vit. Pyth.* 260; Scymn. Ch. 357—360.) Polybius, however, represents the Crotoniats as concluding a league with *Sybaris* and Caulonia, *after* the expulsion of the Pythagoreans, a statement wholly irreconcilable with the history transmitted by other authors. (Pol. ii. 39. See on this point Grote's *Greece* vol. iv. p. 559.)

The next event of importance in the history of Crotona, would appear to be the great defeat which the Crotoniats in their turn sustained at the river Sagras, where it is said that their army, though consisting of 130,000 men, was routed by 10,000 Locrians and Rhegians with such slaughter, as to inflict an indelible blow upon the prosperity of their city. (Strab. vi. pp. 261, 263; Cic. *de N. D.* ii. 2; Suid. *s. v.* ἀληθέστερα.) Justin, on the contrary (xx. 2, 3), represents this event as having taken place before the arrival of Pythagoras; but the authority of Strabo seems decidedly preferable on this point, and is more consistent with the general history of Crotona. Heyne, however, follows Justin, and places the battle of the Sagras as early as 360 B. C., and Mr. Grote inclines to the same view. As no notice is found in the extant books of Diodorus of so important an event, it seems certain that it must have occurred before B. C. 480. (Heyne, *Prolus. Acad.* x. p. 184; Grote's *Greece*, vol. iv. p. 552.) Strabo has, however, certainly exaggerated the importance of this disaster in its effects on Crotona; for nearly a century later that city is still spoken of as the most populous and powerful of the Greek colonies in this part of Italy. (Diod. xiv. 103.)

Very few notices of it are found in the interval. We learn only that the Crotoniats viewed with favour the establishment of the new colony of Thurium, and concluded a treaty of alliance with it (Diod. xii. 11); and that during the Athenian expedition to Sicily they endeavoured to preserve a strict neutrality, furnishing the Athenian fleet with provisions, but refusing to allow the passage of the land forces through their territory. (Diod. xiii. 3; Thuc. vii. 35.) In B. C. 389, when the elder Dionysius carried his arms across the Sicilian Strait, and proceeded to attack Caulonia, the Crotoniats put themselves at the head of the Greek cities which opposed the Sicilian despot, but the confederate forces were totally defeated by Dionysius at the river Helleporus; and the latter, following up his advantage, made himself master of Caulonia, Hipponium, and Scylletium, the last of which he wrested from the dominion of Crotona. (Diod. xiv. 103—107; Strab. vi. p. 261.) No mention is found in Diodorus of his having made any attack on Crotona itself, but Livy tells us that he surprised the citadel, and by this means made himself master of the city (Liv. xxiv. 3); of which, according to Dionysius, he retained possession for not less than 12 years. (Dionys. Exc. xix.) After the fall of the tyrant, Crotona appears to have recovered its independence; but it suffered severely from the growing power of the Lucanians and Bruttians, who pressed upon it from without, as well as from domestic dissensions. It was at one time actually besieged by the Bruttians, and compelled to apply for aid to the Syracusans, who sent an armament to its succour under Heracleides and Sosistratus; but those generals seem to have carried on intrigues with the different parties in Crotona, which gave rise to revolutions in the city; and after the Crotoniats had rid themselves of their Bruttian foes by a treaty, they were engaged in a war with their own exiles. (Diod. xix. 3, 10.) The conduct of this was entrusted to a general named Menedemus, who defeated the exiles, but appears to have soon after established himself in the possession of despotic power. (Id. xix. 10, xxi. 4.) In B. C. 299, Agathocles made himself master of Crotona, in which he established a garrison. (Id. xxi. 4. Exc. H. p. 490.) How long he retained possession of it we know not; but it is clear that all these successive revolutions must have greatly impaired the prosperity of Cro-

tona, to which, according to Livy (xxiv. 3), the final blow was given during the war of Pyrrhus. The circumstances of this are very imperfectly known to us; but it appears that the Rhegians made themselves masters of the city by treachery, put the Roman garrison to the sword, and destroyed great part of the city. (Zonar. viii. 6. p. 127.) It subsequently passed into the power of Pyrrhus, but was surprised and taken by the Roman consul Cornelius Rufinus during the absence of that monarch in Sicily, B. C. 277. (Id. p. 123; Frontin. *Strat.* iii. 6. § 4.) So reduced was the city after all these disasters, that little more than half the extent comprised within the walls continued to be inhabited. (Liv. xxiv. 3.)

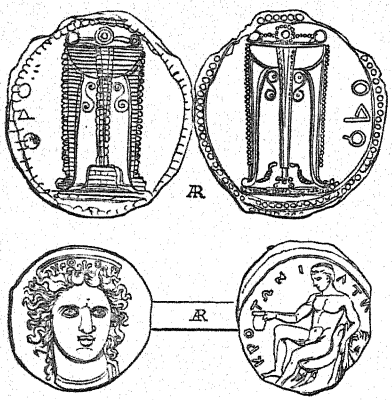
In the Second Punic War the Bruttians, with the assistance of the Carthaginian general Hanno, succeeded in making themselves masters of Crotona, with the exception of the citadel, which held out until the defenders were induced by Hanno to surrender upon terms; the aristocratic party, who had occupied it, being persuaded to migrate to Locri, and a body of Bruttians introduced into the city to fill up the vacancy of its inhabitants. (Liv. xxiv. 2, 3.) The fortifications of Crotona, its port, and the strength of its citadel, still rendered it a place of some importance in a military point of view, and during the last years of the war it was the principal stronghold which remained in the hands of Hannibal, who established his chief magazines there, and fixed his head-quarters for three successive winters in its immediate neighbourhood. (Liv. xxix. 36, xxx. 19; Appian. *Annib.* 57.) The ravages of this war appear to have completed the decay of Crotona; so that a few years afterwards, in B. C. 194, a colony of Roman citizens was sent thither to recruit its exhausted population. (Liv. xxxiv. 45.) From this period Crotona sank into the condition of an obscure provincial town, and is not again mentioned in history until after the fall of the Roman Empire. Its port, however, appears to have been always in some degree frequented as a place of passage to Greece (Cic. *ad Att.* ix. 19); and an inscription still gives it the title of a colony in Imperial times (Mommsen, *Inscr. R. Neap.* 73), though neither Pliny nor Ptolemy acknowledges it as such. The name of Crotona again appears in the wars of Belisarius and Narses against the Goths (Procop. *B. G.* iii. 28, iv. 26); it was one of the few cities which at that time still retained some consideration in this part of Italy, and continued under the sovereignty of the Byzantine Emperors till it passed with the rest of the modern Calabria into the hands of the Normans. The modern city of *Cotrone* is but a poor place, though possessing about 5000 inhabitants, and a well-fortified citadel. This fortress undoubtedly occupies the same situation as the ancient arx, on a rock projecting into the sea (Liv. xxiv. 3), and affording in consequence some degree of shelter to the port. But the importance of the latter, though frequently mentioned as one of the sources of the prosperity of Crotona, must not be overrated. Polybius expressly tells us that it was no good harbour, but only a θερινὸς ὅρμος, or station where ships could ride in summer (Pol. x. 1), and that its value arose from the absence of all harbours along this part of the Italian coast. The ancient city spread itself out in the plain to the W. and N. of the citadel; in the days of its prosperity it extended far across the river Aesarus, which in consequence flowed through the middle of the city; but as early as the Second Punic War, the town had shrunk so much that the Aesarus formed its northern limit, and flowed on the outside of its walls. (Liv. xxiv. 3.) It is now about a mile to the N. of the modern town.

We have scarcely any topographical information concerning the ancient city, and there are no ruins of it remaining. Many fragments of masonry and ancient edifices are said to have been still in existence till about the middle of last century, when they were employed in the construction of a mole for the protection of the port. Livy tells us that the walls of Crotona in the days of its greatness enclosed an extent of 12 miles in circumference; and though its population was not equal to that of Sybaris, it was still able to send into the field an army of 100,000 men. Even in the time of Dionysius of Syracuse, when it had already declined much from its former prosperity, Crotona was still able to furnish a fleet of 60 ships of war. (Diod. xiv. 100.) But in the Second Punic War the whole number of citizens of all ages had dwindled to less than 20,000, so that they were no longer able to defend the whole extent of their walls. (Liv. xxiii. 30.)

Crotona was celebrated in ancient times for the healthiness of its situation. An old legend represented Archias, the founder of Syracuse, as having chosen wealth for his city, while Myscellus preferred health (Strab. vi. p. 269; Steph. B. *v.* Συράκουσαν): according to another tale, Myscellus, when he first visited Italy, preferred the situation of Sybaris, but was commanded by the oracle to adhere to the spot first indicated to him. (Strab. vi. p. 262.) To the favourable position of the city in this respect was ascribed the superiority of its citizens in athletic exercises, which was so remarkable that on one occasion they bore away the seven first prizes in the footrace at the Olympic games. (Strab. *l. c.*; Cic. *de Inv.* ii. 1.) Among their athletes Milo was the most celebrated for his gigantic strength and power of body. (*Biogr. Dict.* art. *Milo.*) To the same cause was attributed the remarkable personal beauty for which their youths and maidens were distinguished. (Cic. *l. c.*) The system of training which produced these results was probably closely connected with the medical school for which Crotona was pre-eminent in the days of Herodotus, the physicians of Crotona being regarded at that time as unquestionably the first in Greece (Herod. iii. 131), and at a later period the school of Crotona still maintained its reputation by the side of those of Cos and Cnidus (Grote's *Greece*, vol. iv. p. 539). Among the most eminent of the physicians of Crotona we may notice Alcmaeon, to whom the first introduction of anatomy was ascribed, and Democedes, who was for some time physician at the court of Darius, king of Persia. (Herod. iii. 129—138.) The great influence exercised by Pythagoras during his residence at Crotona naturally raised up a numerous school of his disciples, many of whom perished in the political revolution that put an end to their power in that city, while the rest were dispersed and driven into exile: a long list of Pythagorean philosophers, natives of Crotona, is preserved to us by Iamblichus (*Vit. Pyth.* 167); but the only two names of real eminence among them are those of Alcmaeon, already mentioned, and Philolaus, whom however Iamblichus represents as belonging to Tarentum. (Diog. Laert. viii. 5, 7.)

The territory of Crotona in the days of its prosperity was extensive, stretching from sea to sea: on the N. it was bounded by the river Hylias (Thuc. vii. 35), while to the S. it probably extended to the

confines of the Locrians, the intermediate towns of Scylletium and Caulonia being its colonies and dependencies. The immediate neighbourhood of the city, though less fertile than that of Sybaris and Thurii, was well adapted for the growth of corn, and the luxuriant pastures of the valley of the Neaethus are celebrated by Theocritus, and retain their richness to the present day. [NEAETHUS.] The same poet, who has laid the scene of one of his Idylls in the neighbourhood of Crotona, speaks with praise of the banks of the Aesarus, which are now dreary and barren: as well as of the pastures and shady woods of two mountains called Physcus and Latymnum. These last must have been situated in the neighbourhood of Crotona, but cannot be identified with any certainty. (Theocr. iv. 17—19, 23—25; and Schol. *ad loc.*; Swinburne's *Travels*, vol. i. p. 313.)



Six miles distant from the city of Crotona was the celebrated temple of the Lacinian Juno, on the promontory of the same name. (Liv. xxiv. 3; Strab. vi. p. 261; Scyl. p. 5. § 13; Dionys. Per. 371; and Eustath. *ad loc.*) Livy calls it "nobile templum, ipsa urbe nobilius:" indeed, there was no other temple of equal fame or sanctity in the whole of Magna Graecia. The period of its foundation is wholly unknown. Virgil alludes to it as already in existence at the time of the voyage of Aeneas, and Dionysius tells us that a bronze cup was still preserved there, which had been dedicated by that hero. (Virg. *Aen.* iii. 552; Dionys. i. 52.) Some legends ascribed its foundation to Hercules, others to Lacinius or Lacinus, who was said to have been dwelling there when it was visited by Hercules, and from whom the promontory derived its name: others, again, spoke of the headland and sacred grove as having been presented by Thetis to Hera herself. (Diod. iv. 24; Tzetz. *ad Lycophr.* 857, 1006; Serv. *ad Aen.* iii. 552.) These legends may be considered as indicating that the temple did not owe its foundation to the Greek colonists of Crotona, but that there previously existed a sacred edifice, or at least a consecrated locality (*τέμενος*), on the spot, probably of Pelasgic origin. The temple of Hera became the scene of a great annual assembly of all the Italian Greeks, at which a procession took place in honour of the goddess, to whom splendid offerings were made; and this festival became a favourite occasion for the Greeks of the neighbouring cities to display their magnificence. (Pseud. Arist. *de Mirab.* 96; Athen. xii. p. 541.) The interior of the temple was adorned with paintings, executed by order of the Crotoniats at the public cost, among which the most celebrated was that of Helen by Zeuxis, for the execution of which that artist was allowed to select five of the most beautiful virgins of the city as his models. (Cic. *de Inv.* ii. 1; Plin. xxxv. 9. s. 36.) Besides abundance of occasional offerings of the most costly description, the temple derived great wealth from its permanent revenues, especially its cattle, out of the produce of which a column of solid gold was formed, and set up in the sanctuary. (Liv. xxiv. 3.) Immediately adjoining the temple itself was an extensive grove, or rather forest, of tall pine-trees, enclosing within it rich pastures, on which the cattle belonging to the temple were allowed to feed, unprotected and uninjured. (Ibid.)

The immense mass of treasures that had thus accumulated in the temple is said to have excited the cupidity of Hannibal, during the time that he was established in its neighbourhood, but he was warned by the goddess herself in a dream to refrain from touching them. (Cic. *de Div.* i. 24.) It was at the same period that he dedicated there a bronze tablet, containing a detailed account of his wars in Spain and Italy, the number of his forces, &c., which was consulted, and is frequently referred to, by the historian Polybius. (Pol. iii. 33, 56.) But though this celebrated sanctuary had been spared both by Pyrrhus and Hannibal, it was profaned by the Roman censor Q. Fulvius Flaccus, who, in B.C. 173, stripped it of half its roof, which was composed of marble slabs instead of tiles, for the purpose of adorning a temple of Fortuna Equestris, which he was erecting at Rome. The outrage was, indeed, severely censured by the senate, who caused the slabs to be carried back to Lacinium, but in the decayed condition of the province, it was found impossible to replace them. (Liv. xlii. 3; Val. Max. i. 1. § 20.) The decay of the temple may probably be dated as commencing from this period, and must have resulted from the general decline of the neighbouring cities and country. But Appian tells us that it was still wealthy, and replete with offerings, as late as B. C. 36, when it was plundered by Sex. Pompeius. (App. *B. C.* v. 133.) Hence Strabo speaks of it as having in his time lost its wealth, though the temple itself was still in existence. Pliny mentions the Lacinian Promontory, but without noticing the temple. It appears, however, from extant remains, as well as from an inscription, "Herae Laciniae," found in the ruins, that it still continued to subsist as a sacred edifice down to a late period. (Dionys. i. 52; Strab. vi. p. 261; Mommsen, *I. R. N.* 72.)

The ruins of this celebrated temple are but inconsiderable; one column alone is standing, of the Doric order, closely resembling those of Metapontum: it is based on a foundation of large stones cut into facets: but some admixture of brickwork shows that the building must have been repaired in Roman times. A second column was standing till near the middle of the last century; and considerable remains of the pavement, and the wall which formed the peribolus of the temple, were carried off to be used in the construction of the mole and the bishop's palace at *Cotrone*. Riedesel, who visited these ruins in 1767, and upon whose authority many modern writers have described the building as of enormous extent, appears to have been misled by some masses of masonry (of reticulated work, and therefore certainly of Roman construction), more than 100 yards distant from the column, and which could never have formed any part of the temple. These fragments are generally known by the absurd appellation of the School of Pythagoras. The position of the temple on a bold projecting rock (as described by Lucan. ii. 434), must have been very striking, commanding a noble view in all directions, and forming a landmark to voyagers, who were in the habit of striking across the bay direct from the Iapygian Promontory to that of Lacinium (Virg. *Aen.* iii. 552). The single column that forms its solitary remnant, still serves the same purpose. (Swinburne's *Travels*, vol. i. pp. 321—323; Craven, *Southern Tour*, p. 238.)

The coins of Crotona are very numerous: the more ancient ones are of the class called *incuse*, having the one side convex, the other concave: a mode of coinage peculiar to the cities of Magna Graecia. The type of all these earlier coins is a tripod, as on the one annexed, in allusion to the oracle of Delphi, in pursuance of which the city was

founded; later coins have the head of the Lacinian Juno, and on the reverse the figure of Hercules. (See the second of those figured below.) [E. H. B.]

COINS OF CROTON.

CRUNI (Κροῦνοι), a town in Moesia, on the river Ziras, was, at a later time, called Dionysupolis or Matiopolis. (Strab. p. 319; Scymn. *Fragm.* 4; Anonym. *Peripl.* 13; Steph. Byz. *s. v.* Διονυσουπόλις; Plin. iv. 18; Arrian, *Peripl.* p. 24; Hierocl. p. 637; Itin. Ant. p. 228; Geogr. Rav. iv. 6; Constant. Porphyr. *de Them.* ii. 1.) [L. S.]

CRUPTO'RICIS VILLA, a place in the country of the Frisians, where 400 Roman soldiers made away with themselves, that they might not fall into the hands of the Frisians. (Tac. *Ann.* iv. 73.) It is identified with a place called *Hem Ryck.* [L. S.]

CRUSI'NIE, a place in Gallia, according to the Table, on a route from Cabillio, that is Cabillonum (*Châlons-sur-Saône*), to Vesontio (*Besançon*). It lies between Vesontio and Ponte Dubris of the Table, that is Pons Dubis, which is *Ponthoux*, on the *Doubs*. The place is therefore between *Ponthoux* and *Besançon;* but such obscure places cannot be easily determined by distances. Walckenaer and others place Crusinie at *Orchamps* near the *Doubs*, where there are said to be Roman remains. D'Anville places it near *Crissei*, being determined, as he often is, by mere resemblance of name. [G. L.]

CRUSIS (Κρουσίς, Thuc. ii. 79; Steph. B.; Κρουσαίη, Herod. vii. 123: *Eth.* Κρουσαῖος, Dionys. i. 49). The Crossaea, Crusaea, or Crusis, was sometimes considered as a part of Mygdonia, but is distinguished from it by Herodotus (*l. c.*), who describes it as comprehending all the maritime country on the Thermaic gulf from Potidaea to the bay of Therma, where Mygdonia commenced. The cities of this district were Lipaxus, Combreia, Lisae, Gigonus, Campsa, Smila, and Aeneia. Livy (xliv. 10) mentions an Antigoneia [ANTIGONEIA], which was perhaps one of the towns on that coast noticed by Herodotus, which had been repaired by one of the Antigoni. Thucydides (ii. 79) speaks of the peltasts of this district: this kind of troops, between heavy and light-armed, furnished with a short spear and light shield, appear to have taken their rise among the Chalcidic Greeks, and were equipped in a manner half Greek half Thracian. (Grote, *Hist. of Greece*, vol. vi. p. 258.) [E. B. J.]

CRUSTUME'RIUM, CRUSTUME'RIA, or CRUSTU'MIUM (Κρουστομέριον and Κρουστομερία, Dionys., Steph. B.: *Eth.* Κρουστομερῖνος, *Id.*; in Latin almost always Crustuminus, though Varro, *L. L.* v. 81, has Crustumerinus), an ancient city of Latium, on the borders of the Sabine country, between Fidenae and Eretum. It is reckoned by Plutarch (*Rom.* 17) a Sabine city, and would certainly appear to have been in later times regarded as such. But Dionysius expressly calls it a colony of Alba, founded at the same time with Fidenae and Nomentum (Dionys. ii 36, 53); and its name also appears in the list of Alban colonies given by Diodorus (ap. Euseb. *Arm.* p. 185; *Orig. G. Rom.* 17). Other writers represent it as still more ancient. Cassius Hemina ascribed its foundation to the Siculi: and, in accordance with this Virgil includes it among the "five great cities" that were the first to take up arms against Aeneas, all of which he certainly meant to designate as Latin towns. (Virg. *Aen.* vii. 631; Serv. *ad loc.*) Pliny also mentions Crustumerium among the cities *of Latium*, of which no vestiges remained in his time. (Plin. iii. 5. s. 9.) Silius Italicus calls it "priscum Crustumium," though he says it was less ancient than Antemnae. (Sil. Ital. viii. 367.)

Its name first occurs in Roman history among the cities which took up arms against Romulus, to avenge the rape of their women at the Consualia; on this occasion Crustumerium combined with Antemnae and Caenina; but instead of uniting their arms they are said to have opposed Romulus singly, and been successively defeated and conquered. Crustumerium shared the same fate as its confederates: it was taken by Romulus, who removed a part of its inhabitants to Rome, and sent a Roman colony to supply their place. (Liv. i. 9—11; Dionys. ii. 36; Plut. *Rom.* 17.) But notwithstanding this tale of a Roman colony, we find Crustumerium next appearing as an independent city in the reign of Tarquinius Priscus; it was one of the cities conquered by that monarch from the Prisci Latini. (Liv. i. 38; Dionys. iii. 49.) On this occasion Dionysius tells us that it received a fresh accession of Roman colonists; but this did not secure its allegiance, and it was captured for the third time, in the first years of the Roman republic, B.C. 499. (Liv. ii. 19.) From this time it appears to have continued in a state of dependency, if not subjection, to Rome; and its territory in consequence suffered repeatedly from the incursions and depredations of the Sabines, to whose attacks it was immediately exposed. (Liv. ii. 64; Dionys. vi. 34, x. 26.) Its name again occurs in B.C. 447, when the army, which was led by the Decemvirs against the Sabines, deserted their standards, and retreated of their own accord to Crustumerium in the Roman territory. (Dionys. xi. 23; Liv. iii. 42.) It would seem probable that this was the event subsequently known as the "Crustumerina secessio" (Varr. *L. L.* v. 81); but that expression is distinctly applied by Varro to the *first* secession (B.C. 493), when the plebeians occupied the Mons Sacer. It would seem, therefore, that he followed some authorities different from the received annals; for it is scarcely possible to reconcile the two, by including the Mons Sacer in the Crustumine territory. [SACER MONS.]

From this time the name of the *city* of Crustumerium never again appears in history, and is found only in Pliny's list of the extinct cities of Latium (iii. 5. s. 9); but its territory (ager Crustuminus) is repeatedly alluded to; and there can be no doubt that it was included in, and gave name to, the

Roman tribe which bore the name of Crustumina, and which was placed for the most part among the Sabines. (Liv. xlii. 34; Cic. *pro Balb.* 25, *pro Planc.* 16.) The period at which this was constituted, cannot be fixed with certainty; but it must be placed *after* B. C. 499, when Crustumerium appears for the last time as an independent town, and *before* B. C. 393. (Mommsen, *Römische Tribus*, pp. 9, 10.) The territory of Crustumerium was noted for its fertility: the strip of plain on the left bank of the Tiber consisted of fat rich fields, which seem to have produced abundance of corn, so that even at a very early period the Crustumerians are represented as sending supplies from thence to Rome. (Liv. i. 11; Dionys. ii. 53; Cic. *pro Flacc.* 29.) Virgil also speaks of this district as producing abundance of pears, the fruit of which, according to Servius, was distinguished for being red only on one side, a peculiarity which they still retain. (Virg. *Georg.* ii. 88; Serv. *ad loc.*; Gell, *Top. of Rome*, p. 191.)

The precise site of Crustumerium has not been determined, but that of its territory is fixed with unusual clearness. It adjoined the Via Salaria and the Tiber, which latter river divided it from the Veientines, beginning from a point 13 miles above Rome, till it met the territory of Fidenae. On the N. it probably adjoined that of Eretum. (Plin. iii. 5. s. 9. § 53; Varr. *R. R.* i. 14; Liv. iii. 42.) The situation of the city must therefore be sought within these limits; but no ruins have been traced to mark the exact spot. It doubtless occupied the summit of one of the hills overlooking the Tiber; and a place called *Marcigliana Vecchia*, indicated by Cluverius, about 9 miles from Rome, and 3½ beyond Fidenae, is on the whole the most probable. (Cluver. *Ital.* p. 658; Nibby, *Dintorni di Roma*, vol. i. p. 526; Abeken, *Mittel Italien*, p. 79.) [E. H. B.]

CRUSTU'MIUS, a river of Umbria, flowing into the Adriatic Sea between Ariminum and Pisaurum. It is noticed by Pliny as in the vicinity of Ariminum, but in a manner that would have rather led to the supposition that it was on the N. side of that city. There can, however, be no doubt that it is the same river of which the name is corrupted in the Tabula into "Rustunum," and which is there placed S. of Ariminum. It may therefore be pretty safely identified with the *Conca*, which enters the sea at *La Cattolica*, and is described as a mountain stream, liable to sudden and violent inundations when swollen by the melted snows. Hence the epithet given it by Lucan, of "Crustumium rapax" (Luc. ii. 406; Plin. iii. 15 s. 20; Tab. Peut.). Vibius Sequester (p. 8) asserts that there was a town of the same name at its mouth, but this is probably a mistake. [E. H. B.]

CRYA (Κρύα: *Eth.* Κρυεύς), a city of Lycia, according to Stephanus (*s. v.*). He quotes the first book of the *Epitome* of Artemidorus, and the following passage:—"and there are also other islands of the Cryeis, Carysis and Alina." Pliny (v. 31), who may have had the same or some like authority, says "Cryeon tres," by which he means that there were three islands off or near to Crya; but he does not name them. Pliny (v. 28) places Crya in Caria, and he mentions it after Daedala, under the name of "Crya fugitivorum." According to his description it is on the gulf of Glaucus. The Stadiasmus places it, under the name Κρούα, 160 stadia from Telmissus to the west. Mela (i. 16) speaks merely of a promontorium Crya. In Ptolemy the name is written Carya, and it is assigned to Lycia. [G. L.]

CRYASSUS (Κρυασσός: *Eth.* Κρυασσεύς) a city of Caria, according to Stephanus (*s. v.*). It does not appear what his authority is; but Leake (*Asia Minor*, p. 225) assumes that it is Plutarch (*de Virt. Mul.*). Some critics further assume that Crya and Cryassus are the same place. The names, however, are distinct enough; and if there is only one place meant, we have two names. There is in the modern town of *Ródos* an inscription, in which both Chalce [CHALCE] and Cryassus are mentioned; and the inscription contains the feminine ethnic form Κρυασσίς, and so far confirms Stephanus. (Leake, *Asia Minor*, p. 224, note.) If the old story is true (Polyaen. *Strat.* viii. 64), Cryassus was a Carian city which some Melians seized, and killed the natives. [G. L.]

CRYPTUS PORTUS (Κρυπτὸς λιμήν), at the straits of the Persian gulf (Ptol. vi. 7), by some supposed to be represented by the modern *Sohar*. Mr. Forster maintains it to be identical with the Amithoscuta of Pliny, and finds it at *Muscat* in *Omán*. (*Arabia*, vol. ii. pp. 231—233.) "Its name, 'the hidden harbour,' is clearly descriptive, and it is descriptive exclusively of *Muscat:* for this port is represented, by the latest authorities, as so shut out from the sea by the rocks which encompass this noble harbour, that the first sight of the entrance is obtained only on the actual approach of the vessel in front of the basin before the town." Thus, Mr. Fraser says, "the entrance is so little conspicuous, that a stranger unacquainted with the black rocks that surround it, would scarcely detect it, on arriving from sea." [G. W.]

CTENUS PORTUS (Κτενοῦς λιμήν, Strab. vii. pp. 308. 312), the port which from the N. side, meeting the SYMBOLON PORTUS on the S., made up the smaller or Heracleotic Chersonesus as forming part of the greater or Tauric Chersonesus. It is identified with the harbour of *Sevastopol*, which is described as one of the finest in the world, and as resembling that of Malta. It is divided into three coves. A full account of it will be found in Clarke (*Trav.* vol. ii. p. 199; Jones, *Trav.* vol. ii. p. 253; comp. *Journ. Geog. Soc.* vol. i. p. 110). [E. B. J.]

CTESIPHON (Κτησιφών: *Eth.* Κτησιφώντιος), a large city in the southern part of Assyria, on the left or eastern bank of the Tigris, the origin of which is uncertain. It is first mentioned by Polybius (v. 45), in his narrative of the war between Antiochus the Great and Molo. Ammianus (xxiii. 6) attributes its foundation to a Parthian ruler named Vardanes or Varanes, but history has not recorded who he was or at what period he lived. It is certain, however, that it was not a place of great consequence till the Parthian empire was firmly established. It rose on the decay of Seleuceia, as that city had upon the fall of the earlier capital, Babylon; and Ammianus may be right in attributing to the Parthian Pacorus, the son of Orodes, the magnificence for which it became celebrated. Strabo (*Epit.* xi. 32) describes Ctesiphon as the winter residence of the Parthian kings, who lived there at that season owing to the mildness of the climate; while they passed their summer in Hyrcania, or at Ecbatana, the ancient and more illustrious royal seat. It long remained a place of considerable importance, especially at the time of the restoration of the Persian empire under the early Sassanian princes. Tacitus (*Ann.* vi. 42) calls it "sedes imperii." Its population must have been very large, as from it alone Severus carried off 100,000 prisoners. (Herodian, iii. 30; Dion Cass.

lxxv. 9; Spartian. *Sever.* c. 16; Zosim. i. 8.) It was still a strong place at the time of Julian's invasion (Amm. Marc. xxiv. 6; Greg. Naz. *Orat. in Julian.* 2), and in the time of Gallienus,—for, though Odenathus was able to ravage the whole of the adjoining country as far as Emisa, the walls of Ctesiphon were sufficiently strong to protect those who fled within them. (Zosim. i. 39.) From the fact that Pliny (vi. 30) states that Ctesiphon was in Chalonitis and that Polybius (v. 44) speaks of Καλωνίτις, it has been conjectured by some geographers that Ctesiphon was on the site of the primeval city Chalneh (*Genes.* x. 10); but there is no reason to suppose that Chalonitis extended so far to the west, and we have no certain evidence that it derived its name from Chalneh. (Hieronym. *Quaest. in Genes.* and *Comment. Amos.* vi. 2.) In more modern times the site of Ctesiphon has been identified with a place called by the Arabs *Al Madain* (the two cities). (Abulfeda, *Geogr.* and Ibn-al-Vardi's *Descript. of Irák*, Niebuhr, vol. ii. p. 305.) At present there are in the neighbourhood some ruins popularly called *Ták Kesra*, or the Arch of Chosroes, which have been noticed by many travellers, and have been supposed to be remains of the palace of one of the Sassanian princes at this place. (Niebuhr, *l. c.*; Ives, *Travels*, ii. p. 112; Della Valle, i. lett. 18.) [V.]

CTI'MENE (Κτιμένη), a town in Thessaly, on the borders of Dolopia and Phthia, near the lake Xynias. (Apoll. Rhod. i. 67.) The town called Cymene in the present text of Livy (xxxii. 13) is probably a corruption of Ctimene. Stephanus B. mentions a tradition, that Ctimene had been given by Peleus to Phoenix (*s. v.* Κτιμένη). (Leake, *Northern Greece*, vol. iv. p. 517.)

CUA'RIUS, or CURA'LIUS. 1. A river of Thessaly. [CIERIUM.]

2. A river of Boeotia. [See p. 412, b.]

CUBALLUM, a place which the consul Cn. Manlius came to in his march into Galatia from the river Alander. [ALANDER.] He passed through the Axylos or woodless country before he reached "Cuballum Gallograeciae castellum." (Liv. xxxviii. 18.) From Cuballum or Cuballus he reached the river Sangarius, and crossing it came to Gordium. Livy says that Manlius marched from Cuballum to the Sangarius "continentibus itineribus;" but that expression does not tell us the number of marches. Leake says that "it is evident that the consul was not marching in any regular line during these days;" and he thinks it "not at all improbable that he may have advanced as far southward as the Caballucome, placed in the Table at 23 M. P. from Laodiceia, and at 32 from Sabatra; and consequently that the Caballucome of the Table may be the same as the Cuballum of Livy" (*Asia Minor*, p. 89). Any opinion of so eminent a geographer is entitled to consideration; but an examination of the narrative of Livy and of the position of Caballucome will show that Cuballum cannot possibly be the place where the Table places Caballucome. [G. L.]

CUBI. [BITURIGES CUBI.]

CUCULUM (Κούκουλον, Strab. v. p. 238), a town of Central Italy, mentioned only by Strabo, who tells us that it was *near* the Via Valeria, but not *on* it, and seems to place it *after* Carseoli and Alba, in following the course of that road. There can be little doubt that it has been correctly fixed by Holstenius (*Not. ad Cluv.* p. 155), at a place still called *Cucullo*, a small town on the ridge of the Apennines, that separates the basin of the lake Fucinus from the valley of Corfinium and Sulmo, and about 5 miles from the pass of the *Forca Carrosa*, where the Via Valeria traverses the ridge in question. It would be thus on the very confines of the Marsi and Peligni, but it is not known to which people it belonged. (Romanelli, vol. iii. pp. 139, 140; but see Kramer, *Der Fuciner See*, p. 61, note.) [E. H. B.]

CUCU'SUS (ἡ Κουκουσσός, Eustath. *ad Dion. Per.* 694), COCU'SUS, or COCU'SUM, a place in Cataonia several times mentioned in the Antonine Itin.; and probably the Octacuscus of the Table. The Itin. places it 62 M. P. from Comana of Cappadocia. It was the place of banishment of Chrysostomus, A. D. 404. It seems to be *Cocsou* or *Gogsyn*, as it is named in some modern maps. [CATAONIA, p. 569.] [G. L.]

CUICUL (*Itin. Ant.* p. 29; *Notit. Afr.*: CULCHUL, *Tab. Peut.*; Κούλκουα κολωνία, Ptol. iv. 3. § 29: *Jimmilah*, Ru.), a city of Numidia Caesariensis (aft. Sitifensis), on the right bank of the river Ampsaga, 25 M. P. north-east of Sitifis, on the high road to Constantina. [P. S.]

CU'LARO, afterwards GRATIANO'POLIS (*Grenoble*), a town in Gallia, on the Isara (*Isère*), a branch of the *Rhone*. It is placed in the Table, under the corrupted name of Culabone, on a road from the Alpis Cottia (*Mont Genèvre*) to Vienna (*Vienne*). It has been a matter of dispute whether Cularo was in the territory of the Allobroges, but there is little doubt that it was. There is a letter from Plancus to Cicero (*ad Fam.* x. 23), which is dated "Cularone ex finibus Allobrogum." The common reading is "Civarone," or "Ciurone;" but there is also a reading "Cuiarone," which in fact is the same, the only difference being in the position of the "i." There seems no doubt that this name represents "Cularone." A modern French writer, who admits that Plancus wrote his letter from Cularo, maintains that "ex finibus" means "near the frontiers of the Allobroges," a translation quite inconsistent with Latin usage. The Geographer of Ravenna writes the name "Curaro," instead of "Cularo;" and "Curaro" only differs from "Cuiaro," one of the readings in Cicero's text, in a single letter, "i," which may easily be confounded with "r."

It appears from two inscriptions found on one of the old gates of *Grenoble*,—one of which has only been demolished within the memory of man,—that Cularo retained its name to A. D. 288. Nothing is known of Cularo for a long time after this letter of Plancus. Three hundred and thirty-two years later M. Aurelius Val. Maximianus restored the walls of Cularo, and gave his surname Herculeus to that gate of the city which was previously called Viennensis, and the name Jovia to the gate which was previously called Romana. This is proved by the two inscriptions, which have been correctly published in the work of Champollion de Figeac, *Antiquités de Grenoble*. It is said that 83 inscriptions have been found at *Grenoble* at different times. The restoration of the walls of Cularo, already mentioned, was made about A. D. 288. In A. D. 379, the emperor Gratianus, being in Gaul, enlarged Cularo, and gave to it his own name Gratianopolis, which it preserves in the corrupted form of *Grenoble*. It seems likely that Gratianus made it a bishop's see; at least we know that there was a bishop of Gratianopolis in A. D. 381. Civitas Gratianopolis appears in the Notitia of the provinces of Gallia among the cities of the division of Gallia called Viennensis; and yet the old name Cularo was

sometimes still used, for in the Notitia of the Empire it is called Calaro, which means Cularo.

It has been supposed by some geographers that Cularo was on an eminence on the right bank of the *Isère*, but *Grenoble* is on the left bank of the river. There is, however, no foundation for this opinion, which seems to have been adopted by those who suppose that the Isara was the limit of the territory of the Allobroges, and that if Cularo was on the left bank it would not be within this territory. (D'Anville, *Notice*, &c.; Walckenaer, *Géog.* &c., vol. i. p. 263.) [G. L.]

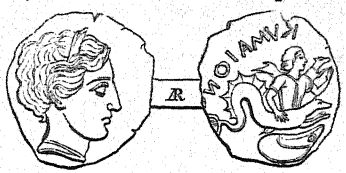
CULCHUL. [CUICUL.]

CUMAE (Κύμη, Strab., Thuc., &c.; Κοῦμαι, Ptol.: *Eth.* Κυμαῖος, Cumanus: *Cuma*), a city on the coast of Campania, about six miles N. of Cape Misenum. It was one of the most ancient as well as celebrated of the Greek colonies in Italy, and Strabo expressly tells us that it was the earliest of all the Greek settlements either in that country or Sicily (Strab. v. p. 243), a statement which there is no reason for rejecting, although we may safely refuse to receive as historical the date assigned it by the later Greek chronologers, who would carry it back as far as 1050 B. C. (Hieronym. *Chron.* p. 100; Euseb. ed. Scal. p. 135.) Velleius Paterculus (i. 4), who mentions its foundation next to that of Magnesia, and *before* the Aeolic and Ionic migrations, must have adopted a similar view, though he does not venture to fix the year. The statements of a mythical character connected with its foundation, which represent the fleet of the colonists as guided by a dove, or by the nocturnal sound of brass cymbals, in themselves point to a very early period, which would leave room for such fabulous embellishments. (Vell. Pat. *l. c.*, Niebuhr, vol. iii. p. 177.) There is some discrepancy in regard to the people by whom it was founded, but there is little doubt that the statement of Strabo may be relied on, who describes it as a joint colony of the Chalcidians in Euboea, and the Cymaeans of Aeolis: the two founders being Hippocles of Cyme, and Megasthenes of Chalcis, and it being agreed that the new settlement should bear the name of one of its parent cities, while it ranked as a colony of the other. (Strab. v. p. 243.) Hence we always find Cumae termed a Chalcidic, or Euboean city, though its name, as well as local traditions, preserved the recollection of its connection with the Asiatic Cyme. (Thuc. vi. 3; Liv. viii. 22; Plin. iii. 5. s. 9; Virg. *Aen.* vi. 2; Ovid, *Met.* xiv. 155; Stat. *Silv.* iv. 3. 24, 118.) Velleius however, as well as Dionysius, drops all mention of the Cymaeans among the original colonists, and speaks of Cumae as founded by the Chalcidians, under Hippocles and Megasthenes, while Dionysius calls it a Greek city founded by the *Eretrians* and Chalcidians. Those writers indeed who adopted the very early date assigned to its settlement by the Greek chronologers, which placed it *before* the Aeolic migration, were compelled to exclude all co-operation on the part of the Asiatic Cyme: and it was probably in order to overcome this difficulty that Scymnus Chius represents it as colonised *first* by the Chalcidians, and *afterwards* by the Aeolians. (Vell. Pat. i. 5; Dionys. vii. 3; Scymn. Ch. 236—239.) According to Livy (viii. 22) the original settlement was made in the island of Aenaria, but the new comers found themselves so much disturbed by earthquakes and volcanic eruptions, that they removed from thence to the mainland. Strabo (v. p. 247) also notices the establishment of a colony of Eretrians and Chalcidians in Aenaria, but without indicating its date.

Whatever may have been the real epoch of the foundation of Cumae, it is certain that it rapidly rose to great wealth and prosperity. The extraordinary fertility of the surrounding country, as well as the excellence of the neighbouring ports, gave it immense advantages, and the native population of the interior seems to have been too scanty or too feeble to offer any obstacle to the progress of the rising city. The period of its greatest prosperity was probably from 700—500 B. C.: at this time it was incontestably the first city in this part of Italy, and had extended its dominion over a great part of the province subsequently known as Campania. The fertile tract of plain called the Phlegraean fields was included in its territory, as well as the vine-growing hills that separate this plain from the Bay of Naples, on which Cumae possessed the two excellent ports of Misenum and Dicaearchia. (Dionys. vii. 3.) A little more distant it had planted the flourishing colony of Neapolis, which was doubtless at this time still dependent upon its parent city: and the statement which calls Abella and Nola Chalcidic towns (Justin, xx. 1) evidently indicates that Cumae had not only extended its influence over the interior, but had sought to strengthen it by the establishment of regular colonies. The great extent of its walls still attested in the Augustan age its former power: and all accounts represent it as almost rivalling the Achaean colonies of Crotona and Sybaris in wealth and population. The government, like that of most of the Greek cities in Italy, was aristocratical, and continued so until the overthrow of its liberties by Aristodemus. (Dionys. vii. 4.) The decline of Cumae was probably owing in the first instance to the increasing power of the Etruscans, and especially to the maritime superiority established by that people in the Tyrrhenian Sea. But the Etruscan conquest of Campania soon brought them into hostile collision by land also: and the first event in the history of Cumae that has been transmitted to us, is that of the successful opposition which it was able to offer to a vast host of invaders, consisting (it is said) of Etruscans, Umbrians, and Daunians (?). Exaggerated as are the numbers of these enemies, who are said to have brought into the field 500,000 foot, and 28,000 horse, there seems no reason to doubt the historical fact of the invasion and its repulse. (Dionys. vii. 3, 4.) According to Dionysius, it took place about 20 years before the usurpation of Aristodemus, who first rose to distinction upon this occasion, and was subsequently appointed to command the auxiliary force sent by the Cumaeans to assist the Aricians against Aruns, the son of Porsena. (Liv. ii. 14; Dionys. v. 36, vii. 5, 6.) His success in this expedition paved the way to his assumption of supreme power, which he attained by the same arts as many other despots, by flattering the passions of the multitude, and making use of the democratic party to overthrow the oligarchy, after which he proceeded to surround himself with a guard of hired partisans, and disarm the rest of the people. Dionysius has left us a circumstantial account of the rise, government, and fall of Aristodemus (vii. 3—11; Diod. vii. Exc. Vales. p. 547), which, notwithstanding the scepticism of Niebuhr (vol. i. p. 554, vol. iii. p. 178), may probably be received as historical, at least in its main outlines. According to that author his usurpation may be dated in B. C. 505, and he appears to have retained the sovereign power for above 20 years, when he was expelled by the descendants of those whom he had put to death or

driven into exile. It was during this period that Tarquinius Superbus, the exiled king of Rome, took refuge at Cumae, where he shortly after ended his days, B. C. 496. (Liv. ii. 21; Dionys. vi. 21.) Aristodemus was still ruler of the city when the Roman republic sent an embassy to beg for supplies of corn in time of a great famine (B. C. 492), but the ships, which had been already loaded with grain, were seized by the tyrant and confiscated, as an alleged equivalent for the property of Tarquin. (Liv. ii. 34; Dionys. vii. 2, 12.)

A despotism such as that of Aristodemus is represented, and the civil dissensions that must have attended its overthrow as well as its establishment, could not but weaken the power and impair the prosperity of Cumae, and render her less able to cope with the increasing power of the Etruscans. Hence, the next time her name is mentioned in history, we find her invoking the aid of Hieron, the then powerful despot of Syracuse, against the combined fleets of the Tyrrhenians and the Carthaginians, who had attacked her by sea, and threatened her very existence. The victory of Hieron on that occasion (B. C. 474) not only delivered Cumae from immediate danger, but appears to have given a severe blow to the maritime power of the Etruscans. (Diod. xi. 51; Pind. *Pyth.* i. 136—146, and Schol. *ad loc.*) Nor do we hear of the latter any further molesting Cumae by land; and that city appears to have enjoyed an interval of repose, which, so far as we can judge, would seem to have been a period of considerable prosperity: but a more formidable danger now threatened it from the growing power of the Samnites, who, in B. C. 423, made themselves masters of Capua, and only three years afterwards, after defeating the Cumaeans in the field, laid siege to their city, and after repeated attacks succeeded in carrying it by assault. No mercy was shown by the conquerors: the unfortunate city was given up to pillage, many of its citizens put to the sword, and the rest sold into slavery, except such as were able to make their escape to Neapolis: while their wives and daughters were forced to cohabit with the Campanian conquerors, who established a colony in the city. (Liv. iv. 44; Diod. xii. 76; Strab. v. p. 243.) The date of this event is given by Livy as B. C. 420; and the archonship of Aristion, to which it is assigned by Diodorus, would give the same date (B. C. 421—420), but the Roman consulship, to which the latter refers it, is that of B. C. 428: the former date is probably the true one.



From this period Cumae ceased to be a Greek city, though still retaining many traces of Hellenic rites and customs, which subsisted down to the Augustan age: but a fatal blow had been given to its prosperity, and it sank henceforth into the condition of a second-rate Campanian town. Having shared in the general defection of the Campanians from Rome and in their subsequent defeat, it was in B. C. 338 admitted to the Roman franchise, though at first without the right of suffrage (Liv. viii. 14): at what time it obtained the full franchise we know not, but it seems at a later period to have not only enjoyed the fullest municipal privileges, but to have been regarded by the Romans with especial favour, on account of its unvarying fidelity to the republic. (Liv. xxiii. 31; Vell. Pat. i. 4; Cic. *de leg. Agr.* ii. 31, *ad Att.* x. 13.) In the Second Punic War Hannibal made an attempt upon the city, but was repulsed from its walls by Sempronius Gracchus, and obliged to content himself with laying waste its territory (Liv. xxiii. 36, 37, xxiv. 13.) From this time we hear but little of Cumae, but the circumstance that, in B. C. 180, the citizens requested and obtained permission to use the Latin language in their public documents, shows the continually decreasing influence of the Greek element in the city. (Liv. xl. 42.) We may probably infer from the expressions of Velleius (i. 4) that it continued faithful to the Romans during the Social War. In the latter ages of the Republic its neighbourhood began to be frequented by the Roman nobles as a place of retirement and luxury; but these established their villas rather at Baiae and Misenum than at Cumae itself, the situation of which is far less beautiful or agreeable. Both these sites were, however, included in a municipal sense in the territory of Cuma (in Cuemano), and hence we find Cicero applying the name of Cumanum to his villa, which was in full view of Puteoli (*Acad.* ii. 25), and must therefore have been situated on the Bay of Baiae, or at least on the E. side of the ridge which separates it from Cumae. The same thing is probably true of the villas of Catulus, Pompeius, and Varro, mentioned by him. (Cic. *Acad.* i. 1, ii. 25; *ad Fam.* xvi. 10; *ad Att.* iv. 10.) At an earlier period Sulla retired to the neighbourhood of Cumae after his abdication, and spent the last years of his life there. (Appian, *B. C.* 104.) The increasing popularity of Baiae, Bauli, and Misenum, under the Roman Empire, though it must have added to the local importance of Cumae, which always continued to be the municipal capital of the surrounding district (Orell. *Inscr.* 2263), was unfavourable to the growth of the city itself, which appears to have declined, and is spoken of by Juvenal as deserted (*vacuae Cumae, Sat.* iii. 2) in comparison with the flourishing towns around it. Statius also calls it the quiet Cumae (*quieta Cyme*, Silv. iv. 3. 65). But the expression of the satirist must not be taken too strictly: the great extent of the ancient walls, noticed by Velleius (i. 4), would naturally give it a deserted appearance; but we know that Cumae had received a colony of veterans under Augustus, which appears to have been renewed by Claudius (*Lib. Colon.* p. 232), and though Pliny does not give it the name of a colony, it bears that title in several inscriptions of Imperial date (Orell. *Inscr.* 1857, 2263, 2533). We learn from various other sources that it continued to exist down to the close of the Roman Empire (Plin. iii. 5. s. 9; Ptol. iii. 1; § 6; *Itin. Ant.* pp. 122, 123; *Tab. Peut.*), and during the wars of Belisarius and Narses with the Goths, it re-appears as a place of importance. At this time, however, the city appears to have shrunk, so as to be confined to the ancient citadel or arx (still called the *Rocca di Cuma*), an isolated and precipitous rock, very difficult of access, and which on that account was regarded as a very strong fortress. It was chosen by the Gothic kings as the depository of their regalia and other valuables, and was the last place in Italy that held out against Narses. (Procop. *B. G.* i. 14, iii. 6, iv. 34; Agath. i. 8—11, 20.) This citadel continued to exist till the 13th century, when having become a stronghold of robbers and banditti, it was taken and destroyed; and the site has remained desolate ever since.

Under the Roman Empire Cumae was noted for a manufacture of a particular kind of red earthenware. (Mart. xiv. 114.) Its territory also produced excellent flax, which was especially adapted for the manufacture of nets. (Plin. xix. 1. s. 2; Grat. Falisc. *Cyneg.* 35.) Of the fertility of the adjoining plain,

or the wines of Mt. Gaurus, it is unnecessary to speak, but the latter was in the time of the Romans probably dependent on Puteoli.

Inseparably connected with the name of Cumae is that of the Sibyl who, according to the general tradition of antiquity, had her abode there. There is little doubt that the legends connected with her were brought by the Greeks from Cyme in Asia Minor, and were transferred from Gergis or Gergithes in the Troad to the Italian Cumae. (Grote's *Greece*, vol. iii. p. 472; Klausen, *Aeneas und die Penaten*, vol. i. pp. 209, 210.) Similar peculiarities in the nature of the soil and localities seem to have contributed to this: it was doubtless also owing to the striking physical characters of the adjoining region that the myths connected with the entrance to Hades became permanently localized about Lake Avernus: and the idea of placing the Cimmerians of the Odyssey in the same neighbourhood was probably an afterthought in later times. It seems likely, indeed, that the Cumaeans were one of the main channels by which the Trojan and Greek legends were transferred to this part of Italy, and the names of Aeneas and Ulysses inseparably associated with the coasts of the Tyrrhenian Sea. The cave of the Sibyl was still supposed to exist in the historical period; the cavern shown under that name was a vast subterranean chamber or grotto, hewn out of the eastern side of the rock on which stood the citadel. ("Excisum Euboïcae latus ingens rupis in antrum," Virg. *Aen.* vi. 42; Pseud. Arist. *Mirab.* 95; Lycophr. 1278—1280; Ovid, *Met.* xiv. 104.) Justin Martyr, who visited it about the middle of the second century, describes it as like a great hall or basilica, artificially excavated, containing three reservoirs of water, and with an inner chamber or recess, from which the prophetess used to deliver her oracles. (Just. Mart. *Paraen.* 37.) Agathias, in relating the siege of Cumae by Narses, also mentions the existence of this great cavern, of which that general availed himself to undermine the walls of the citadel, and by this means caused them to fall in, together with the roof of the cavern: and thus destroyed the abode of the Sibyl, though without effecting the capture of the fortress. (Agath. *B. G.* i. 10.) On the summit of the arx was a temple of Apollo, whose worship here seems to have been intimately connected with that of the Sibyl, though legends gave it a still more ancient origin, and ascribed the foundation of the temple to Daedalus. (Virg. *Aen.* vi. 14—19, and Serv. *ad loc.*; Sil. Ital. xii. 85—102; Juv. iii. 25.) Some obscure ruins on the summit of the hill are supposed to have formed part of this ancient edifice: and the remains of a cavern on the E. face of the cliff are believed to have belonged to that of the Sibyl. The true situation of this was first pointed out by Cluverius: earlier commentators and topographers had confounded the cave of the Sibyl herself with the entrance to the infernal regions near the Lake Avernus, and hence the name of *Grotta della Sibilla* is still popularly given to an artificial excavation on the banks of that lake, which has the appearance of an imperfect tunnel, and is in all probability a work of Roman times. (Cluver. *Ital.* pp. 1107—1113; Romanelli, vol. iii. p. 517.)

The existing remains of Cumae are inconsiderable: the plain around the rock of the citadel, in which the ancient city spread itself out in the days of its greatness, is now covered with a royal forest: some remains of an amphitheatre however still exist, and numerous other masses of masonry, most of them of Roman construction. To the same period belongs a picturesque archway in a massive and lofty wall of brick, called the *Arco Felice*, which stands on the road to *Pozzuoli*, and is supposed by some to be one of the gates of the ancient city, but the nature of its construction renders this almost impossible. Between this and the foot of the rock are the remains of a small temple, popularly known as the *Tempio dei Giganti*. This is all that remains of Cumae above ground, but excavations at different periods have brought to light numerous architectural fragments, vases and statues, many of them of the best period of art, and it is probable that few sites would better reward more systematic researches. (Romanelli, vol. iii. pp. 501, 502; Eustace's *Classical Tour*, vol. ii. pp. 427—434; Iorio, *Guida di Pozzuoli*, pp. 102—125; Bull. dell Inst. 1842, pp. 6—10.) [E. H. B.]

COIN OF CUMAE.

CUMERUS, a promontory of Picenum, on the coast of the Adriatic, still called *Monte Comero*. (Plin. iii. 13. s. 18.) It is formed by a considerable mountain mass, rising close to the sea-shore, and nearly detached from the mountains of the interior, extending about 10 miles in length. At its northern extremity stood the city of Ancona and the smaller town of Numana (*Umana*) at its southern end. [E.H.B.]

CUNARUS MONS. [APENNINUS.]

CUNAXA (Κούναξα, Plut. *Artax.* c. 8), the scene of the battle between Cyrus the Younger and the forces of his brother Artaxerxes, in which the former was overthrown and slain. Xenophon (*Anab.* i. 8) describes the battle fully, but does not mention the name of the place where it was fought. Plutarch, in his life of Artaxerxes, has alone preserved it, and states that it was 500 stadia from Babylon. There has been much discussion as to the exact position of the field of battle. Rennell (*Illustr. of the Retreat of the Ten Thousand*, p. 93) has adopted the distance from Babylon as given by Plutarch, as that which on the whole appears to accord best with the previous narrative of Xenophon. [V.]

CU'NEI. [CONII.]

CUNETIO, in Britain, mentioned in the fourteenth Itinerary, as being 15 miles from Spinae (*Speen*). Some locality on the *Kennet*. [R. G. L.]

CU'NEUS (Κούνεος), i. e. the *Wedge*, a name applied, from its shape, to that part of the Spanish peninsula which forms its SW. angle, and the S. part of Lusitania, from the mouth of the Anas to the SACRUM PR. (*C. S. Vincent*; Artemidor. *ap. Strab* iii. p. 137). Whether the name was also applied specifically to the headland just named, is not quite clear from Strabo; but Mela (iii. 1) assigns it to the S. headland of the district (*C. S. Maria*). Respecting the people, see CONII. [P. S.]

CU'NICI. [BALEARES.]

CUNICULA'RIAE INSULAE is the name given by Pliny to some small islands lying in the strait which separates Corsica from Sardinia, now known as the *Straits of Bonifacio*. They are probably the

three small islets now called *Isola dei Razzoli, dei Budelli*, and *di Sta. Maria*, which are those that lie most directly in the strait itself. Between these and the N. extremity of Sardinia, is the more considerable island called *Isola della Maddalena*, which is probably the PHINTON of Pliny and Ptolemy. The former mentions another island called Fossae, and Ptolemy one called Ilva, close to Phinton. There are, in fact, two other islands—one called *I. di Caprera*, on the E. of La Maddalena, and the *I. dei Sparagi*, on the W.—to which these names may be applied, but they cannot be really identified. Perhaps Pliny means to apply the name of Cunicullariae to the whole group. (Plin. iii. 6. s. 13; Ptol. iii. 3. § 8.) [E. H. B.]

CUNISTORGIS. [CONII.]

CUPPAE (Κούπους), a town in Upper Moesia, with a garrison of Dalmatian horsemen. (Itin. Ant. p. 217; Geogr. Rav. iv. 7; Procop. *De Aedif.* iv. 6; p. 287.) [L. S.]

CUPRA (Κούπρα: *Eth.* Cuprensis), the name of two cities or towns in Picenum, called for the sake of distinction Cupra Maritima and Cupra Montana.

1. CUPRA MARITIMA (Κούπρα μαριτίμα, Ptol.) was situated on the sea coast, between the Castellum Firmanum and Castrum Truentinum. (Strab. v. p. 241; Mela, ii. 4. § 6; Plin. iii. 13. s. 18; Ptol. iii. 1. § 21.) Strabo does not describe it as a town, but speaks only of the temple of Cupra (τὸ τῆς Κύπρας ἱερόν), which he says was founded by the Tyrrhenians (Etruscans), and that Cupra was the Tyrrhenian name of Juno. But it is clear that a town had grown up around the temple; for it is mentioned as such by all the other geographers, and appears to have become the more considerable place of the two, so that it was often called Cupra without any distinctive epithet. (Cupra urbs, Mel. *l. c.*; Cupra oppidum, Plin. *l. c.*) The temple of Cupra is also mentioned by Silius Italicus (viii. 433), and an inscription records its restoration by Hadrian. The discovery of this fixes the site of the temple and the town of Cupra Maritima, at a place called *le Grotte a Mare*, about 3 miles N. of *S. Benedetto*, and 8 miles from the mouth of the Truentus or *Tronto*. (Cluver. *Ital.* p. 734; Gruter. *Inscr.* p. 1016, 2; Colucci, *Cupra Maritima*, p. 130.)

2. CUPRA MONTANA (Κούπρα μοντάνα, Ptol. iii. 1. § 52; Cuprenses cognomine Montani, Plin. iii. 13. s. 18) is mentioned both by Pliny and Ptolemy, among the towns of the interior of Picenum, and was certainly distinct from the preceding. It is considered by local topographers to have occupied the site of the modern *Ripatransone*, a town on a hill, only 8 miles inland from the site of the maritime Cupra. (Cluver. *Ital.* p. 741; Abeken, *Mittel Italien*, p. 120.) [E. H. B.]

CURA'LIUS. [CUARIUS.]

CURES (Κύρης, Strab. Κύρεις, Dionys.: *Eth.* Κυρίτης, Quiris (pl. Quirites), but also Curensis, Plin.: *Correse*), an ancient city of the Sabines, situated to the left of the Via Salaria, about 3 miles from the left bank of the Tiber, and 24 miles from Rome. It is celebrated in the early history of Rome as the birthplace of Numa, as well as the city of Tatius, from whence the Sabines proceeded, who under that monarch waged war against Romulus, and ultimately established themselves at Rome. (Liv. i. 13; Dionys. ii. 36, 46, 48; Plut. *Rom.* 19.) Hence the general opinion of ancient authors derives the name of Quirites, by which the Roman people was known in later times, from that of Cures. (Strab. v. p. 228; Liv. i. 13; Fest. v. *Quirites.*) Virgil therefore, for distinction's sake, terms the inhabitants of Cures "prisci Quirites" (*Aen.* vii. 710), and Columella still more distinctly, "veteres illi Sabini Quirites" (*de R. R.* i. pref.). It is, however, far more probable that the two names had no *immediate* connection; but that both were derived from the Sabine word Curis or Quiris, which signified a spear (Fest. pp. 49, 254, ed. Müll.; Serv. *ad Aen.* i. 292; Ovid, *Fast.* ii. 477), and that the Roman name of Quirites was merely equivalent to "spearmen" or "warriors." A legend related by Dionysius (ii. 48), which connects the foundation of Cures with the worship of the Sabine god Quirinus, evidently points to the same derivation. It is even probable that the prominent part assigned to Cures in the legendary history of Tatius, which led some writers to assume that it must have been the metropolis or chief city of the Sabines (Dionys. ii. 36), had no other foundation than in the false etymologies which connected it with the name of Quirites. It is certain at least, that both Virgil and Ovid speak of it as a small town (parvi Cures, Virg. *Aen.* vi. 812; Ovid, *Fast.* ii. 135), and its name never appears in any of the subsequent wars of the Romans with the Sabines. The circumstance that Numa was, according to the received history, a native of Cures, may be thought to lend some countenance to the tradition of its early importance, though on the other hand it is not improbable that the two traditions were adapted to each other. (Liv. i. 18; Plut. *Num.* 3; Virg. *Aen.* vi. 812.) Strabo's statement, that it had once been a flourishing and powerful city, is apparently only an inference which he draws from its having in ancient times given two kings to Rome. (Strab. v. p. 228.) Whatever truth there may be in the statements of its ancient greatness, it must have early fallen into comparative insignificance; for though numerous references to it are found in the Latin poets, no mention of its name again occurs in Roman history, and Strabo tells us that it was in his time sunk to a mere village. It had however, previous to that, received a body of Roman colonists, first in the time of Sulla, and again in that of Caesar (*Lib. Colon.* p. 253; Zumpt, *de Colon.* p. 305), and seems to have considerably revived under the Roman empire. Pliny notices the Curenses as one of the municipal towns of the Sabines; and numerous inscriptions of Imperial date speak of its magistrates, its municipal senate (ordo), &c., whence we may infer that it continued to be a tolerably flourishing town as late as the 4th century. (Plin. iii. 12. s. 17; Orelli, *Inscr.* 107; Nibby, *Dintorni*, vol. i. pp. 532, 533.) In these inscriptions it is uniformly termed "Cures Sabini," an epithet probably indicating the claim set up by the people to be the metropolis of the Sabines. In like manner, after the establishment of Christianity, the bishops assumed the title of "Curium Sabinorum," and sometimes even that of "Episcopus Sabinensis." The final decay of the city probably dates from the time of the Lombards, who repeatedly ravaged this part of Italy: we learn from an epistle of Pope Gregory I. that in A. D. 593 the site was already desolate. (Nibby, *l. c.*)

The true situation of Cures was first pointed out by Holstenius, and the actual remains of the city discovered by Chaupy. The site, which is of considerable extent, is occupied in part by two small villages or hamlets: the one still bearing the name of *Correse;* the other, about a mile to the W., is

called *Arci*, and evidently marks the site of the ancient citadel (Arx). Considerable fragments of masonry, as well as architectural ornaments, portions of columns, &c., and several inscriptions, have been found scattered over the surface of this space: but all these remains are of Roman date; no traces are found of the ancient walls, and it seems probable indeed that Cures, like many other Sabine cities, was not fortified. About 2 miles distant from *Arci*, at a place called *Torri*, are the substructions of a temple, of a very massive construction, and probably belonging to a much more remote epoch. (Chaupy, *Maison d'Horace*, vol. iii. pp. 70—84; Nibby, *l. c.* pp. 531—538; Holsten. *Not. ad Cluv.* p. 106) At the foot of the hill occupied by the ruins of Cures flows a small river called the *Correse*, which rises in the mountains above *Nerola*, and falls into the Tiber about 3 miles below *Arci*. [E. H. B.]

CURE'TES, CURE'TIS. [AETOLIA, p. 64.]

CU'RGIA (Κούργια, Ptol. ii. 4. § 15) or CURIGA (*Itin. Ant.* p. 432; Geogr. Rav. iv. 44: *La Calera*), a city of the Celtici, in Hispania Baetica, near the Mons Marianus (*Sierra Morena*), on the high road from the mouth of the Anas to Emerita Augusta. It appears to be the same place as the TURIGA, previously Ucultuniacum, of Pliny (iii. 3; compare Caro, *Ant.* iii. 70; Ukert, vol. ii. pt. 1, p. 382). [P. S.]

CU'RIA (*Chur*), a town in Rhaetia prima, on the Rhine. (Itin. Ant. pp. 277, 278; Paul. Diac. *Hist. Longob.* vi. 21.) [L. S.]

CURIA, in Britain, mentioned by Ptolemy as a town of the Ottadeni. Probably *Currie-on-Gore*. [R.G.L.]

CURIA'NUM (Κουριανὸν ἄκρον), is placed by Ptolemy (ii. 7) on the coast of Aquitania, between the mouth of the *Adour* and of the *Garonne*. There seems no place that corresponds to it except the *Pointe d'Arcachon*, on the north side of the *Bassin d'Arcachon*. Some geographers fix it at the *Pointe de Grave*, near the *Tour de Cordouan*, the point which is on the south side of the entrance of the *Gironde*. [G. L.]

CU'RIAS (Κουρίας, Ptol. v. 14. § 2; Strab. xiv. p. 683; Steph. B.; Κυριακόν, *Stadiasm.* §§ 286, 300: *Capo Gavata* or *delle Gatte*), the most S. point of Cyprus, forming a low and rounded excrescence, which resembles a peninsula rather than a promontory. The stags from Cilicia and Syria swam over to this fertile spot to enjoy the rich pastures. (Aelian. *Nat. An.* v. 56, xi. 7; Maxim. Tyr. *Diss.* xii. 3; Engel, *Kypros*, vol. i. p. 117.) [E. B. J.]

CURICTA (Plin. iii. 21. s. 25; Κουρίκτα, Ptol. ii. 16. § 13; Κυρικτική, Strab. ii. p. 123, ad fin., vii. p. 315), an island off the coast of Illyricum, now called *Karek*, or *Veglia*, a little south of the Absyrtides. According to Ptolemy it contained two towns, Fulvinium (Φουλφίνιον) and Curicum (Κούρικον). "*Veglia* has excellent harbours; and the valleys, if cultivated, might be productive as of old, when the island was rich in timber and pasture land, and produced abundance of grain, oil, and wine. The Illyrian snails, mentioned by Pliny (ix. 56), are very numerous in *Veglia*. It was during a long period an independent state, until ceded to Venice in the fifteenth century." (Wilkinson, *Dalmatia and Montenegro*, vol. i. p. 50.)

CURIGA. [CURGIA.]

CURIOSOLITAE, a people of Celtica who are mentioned by Caesar several times (*B. G.* ii. 34, iii. 7, 11, vii. 75). The name only occurs in the accusative form, and as there are variations in the MSS., the nominative is not quite certain. They are mentioned (*B. G.* ii. 34) with the Veneti, Unelli, Osismi, and others that Caesar calls "maritimae civitates," and border on the ocean. In another place (*B. G.* vii. 75) he describes the position of the Curiosolitae on the ocean in the same terms, and includes them among the Armoric states, a name equivalent to "maritimae." The name occurs in Pliny (iv. 18) in the form Cariosvelites; and he mentions them with the Unelli, Diablindi, and Rhedones. The Curiosolitae are not mentioned by Ptolemy. No city of these people is mentioned, and the Itins. give no roads in this part of *Bretagne*. Accordingly we can only conjecture their position, which is determined with some probability to be the diocese of *St. Malo*, the only place that remains for them after fixing the position of the other Armoric nations. The name seems to be preserved in *Corseult*, a village between *Dinan* and *Lamballe*, where there are the remains of an old Roman town. We may conclude that, after the fashion of Gallic names, *Corseult* represents the capital of the Curiosolitae. D'Anville supposes that on the coast they extended west to the neighbourhood of *St. Brieuc*, where a place called *Finiac* denotes the boundary of an ancient territory, as the name Fines or *Fins* denotes in other parts of Gallia. The neighbours of the Curiosolitae on the east were the Rhedones, and on the south the Veneti. On the west were the Osismi or Osismii, who occupied the extremity of the peninsula of *Bretagne*. But Walckenaer places, between the Osismi and the Curiosolitae, the Biducasii of Ptolemy, in the diocese of *St. Biduë* or *St. Brieuc*; whom he distinguishes from the Viducasses. [VIDUCASSES.] (D'Anville, *Notice*, &c.; Walckenaer, *Géog.* vol. i. p. 381.) [G. L.]

CU'RIUM. [AETOLIA, p. 66, b.]

CU'RIUM (Κούριον, Ptol. v. 14. § 2; Steph. B.; Hierocl.; Curias, Plin. v. 13: *Eth.* Κουριεύς: *Piscopia*), a city of Cyprus, situated to the W. of the river Lycus, 16 M. P. from Amathus. (*Peut. Tab.*) It was said to have been founded by the Argives. (Herod. v. 113; Strab. xiv. p. 683.) Stesenor, its sovereign, betrayed the cause of his country during the war against the Persians. (Herod. *l. c.*) Near the town was a Cape (Φρούριον, Ptol. v. 14. § 2: *Capo Bianco*), from which sacrilegious offenders who had dared to touch the altar of Apollo were thrown into the sea. (Strab. *l. c.*) The ruins of a town supposed to represent this have been found near *Piscopia*, one of the most fertile spots in the island. (Pococke, *Trav.* vol. ii. p. 329; Engel, *Kypros*, vol. i. p. 118.) [E. B. J.]

CURMILIACA, in Gallia, is placed by the Antonine Itin. on a road between Samarobriva (*Amiens*) and Caesaromagus (*Beauvais*). This old road is the *Chaussée de Brunehaut*. D'Anville gives sufficient reasons for supposing that a place called *Cormeilles* may represent Curmiliaca. [G. L.]

CURTA (Κούρτα), a town in Pannonia, the site of which is unknown. (Ptol. ii. 16. § 4, who places it in Lower Pannonia, while the Itin. Ant. p. 262, assigns it to Upper Pannonia.) [L. S.]

CU'RUBIS (Κουραβὶς ἡ Κούροβις, Ptol. iv. 3. § 8; *Itin. Ant.* pp. 56, 57, 493; *Tab. Peut.*: *Kurbah*), a city on the E. coast of Zeugitana, in Africa Proper, between Clypea and Neapolis, 16 M. P. north of the latter. According to Pliny (v. 3) it was a free city, but an inscription found on the spot designates it a colony, COL. FULVIA. CURUBIS. (Shaw, *Travels &c.*, p. 90.) [P. S.]

CUSA (Κούσα), a river on the W. coast of Mauretania Tingitana, S. of Atlas Minor and N. of the river Asama. (Ptol. iv. 1. § 2.) [P. S.]

CUSAE (Χοῦσαι, Aelian, *H. An.* x. 27; Κάσσος or Ἀκούασα, Hierocles, p. 730), the modern *Kusieh*, was a town in the Lycopolite nome of the Thebaid. In the Notitia Imperii it is noted as the head-quarters of the Legio II. Constantia Thebaeorum. The goddess Aphrodite Ourania was held in especial reverence at Cusae under the symbol of a white cow. (Aelian, *l. c.*) At a later period it was an episcopal city. There appears to have been another town of this name in the Hermopolite nome of the Heptanomis. [W. B. D.]

CUSH, the Scripture name for Arabia, usually rendered by the LXX. Αἰθιοπία, as e. g. *Numb.* xii. 1; *Isaiah*, xi. 11; *Habak.* iii. 7, &c. [G. W.]

CU'SIBI. [Oretani.]

CUTATISIUM (Κουτατίσιον, Procop. *B. G.* iv. 13, 14), a small town in Colchis, on the river Phasis, now *Kchitais* or *Kutais*. It was identified with the mythical Cytae or Cytaea, said to have been the birthplace of Medea (Steph. B. *s. v.*; Plin. iv. 12. s. 26), whence the adjectives Cytaeaeus and Cytaeus, used in reference to Medea and Colchis (Propert. i. 24; Val. Flacc. vi. 693). Scylax, on the other hand, states that Mala, on the same river, was entitled to that honour. [V.]

CUTI'LIAE (Κοτυλία), a town of the Sabines, between Reate and Interocrea, situated in the immediate neighbourhood of a small lake, which bore the name of Cutiliae Lacus (Plin. iii. 12. s. 17), or Lacus Cutiliensis (Varr. *L. L.* v. 71; Macrob. *Sat.* i. 7). This was in fact a mere pool,—according to Dionysius it was only 400 feet in diameter, but of great depth; and it derived great celebrity from the circumstance of its having a floating island on its surface. This phenomenon, which is the subject of great exaggeration with many ancient writers, is well described by Dionysius, who tells us that "the island is about 50 feet in diameter, and it rises to the height of about a foot above the water: it is not fixed, and floats about in different directions, as the wind drives it, sometimes one way, sometimes another. There grow on it a kind of rushes, and a few bushes of small size." (Dionys. i. 15; Plin. ii. 95; Senec. *Nat. Qu.* iii. 25; Sotion. *de Mir. Font.* 37; Macrob. *l. c.*) It is evident that this marvel arose from the incrustations of carbonate of lime formed by the waters of the lake, fragments of which might from time to time be detached from the overhanging crust thus formed on the banks: the same phenomenon occurs, though on a smaller scale, at the Aquae Albulae near Tibur. (Gell, *Top. of Rome*, p. 41.) According to Dionysius the lake was consecrated to Victory, meaning probably the Sabine goddess Vacuna, and was regarded as so sacred that no one was allowed to approach its banks, except on certain festivals. The Cutilian Lake still exists under the name of *Pozzo di Ratignano* or *Latignano*, though apparently reduced in size by the continual incrustation of its banks; but the floating island has disappeared. The lake is situated in the level valley of the *Velino*, at the foot of the hill on which stands the modern village of *Paterno*. In its immediate neighbourhood are numerous other springs, some hot and some cold, and varying in their mineral qualities, but mostly of a sulphureous character. These are the Aquae Cutiliae (τὰ ἐν Κωτιλίαις ψυχρὰ ὕδατα, Strab. v. p. 228), mentioned by Strabo and other writers, and which appear to have been much resorted to by the Romans for their medical properties. (Cels. *de Med.* iv. 5.) Among other instances we learn that Vespasian was in the habit of visiting them every year; and it was while residing here for the purpose of using them, that his death took place, A. D. 79. (Suet. *Vesp.* 24; Dion Cass. lxvi. 17.) There still exist some fine ruins of Roman baths, at a short distance from the lake; and the basin of one of the springs is surrounded with marble steps. (K. Craven, *Abruzzi*, vol. i. pp. 231—235; Chaupy, *Maison d'Horace*, vol. iii. pp. 102, 103.)

It is probable that there grew up something of a town around the mineral springs of Cutilia, and hence we find the name of Cutiliae, as that of a town or village, both in the Itineraries, and even in Livy, where he is describing the route of Hannibal from Amiternum to Rome. (Liv. xxvi. 11; Itin. Ant. p. 107. The Tab. Peut., however, marks the spot as the Aquae Cutiliae.) But there was never, in the Roman times at least, a municipal town of the name, and the lake and springs of Cutilia were included in the territory of Reate. (Plin. iii 12. s. 17; Suet. *Vesp.* 24.) Dionysius indeed asserts that there was in early times "a considerable city" (πόλις ἐπιφανής), to which he gives the name of Cotylia, and the foundation of which he ascribes to the Aborigines (i. 15. 19); but if there ever was a city of the name, all trace of it must have disappeared at a very early period.

The Itinerary places Cutiliae 8 M. P. from Reate, and 6 from Interocrea; which are just about the true distances: the Tabula gives 9 for the one and 7 for the other. Varro terms the Cutilian Lake the "Umbilicus Italiae," because it was exactly in the centre of the peninsula. It is in fact just about half way between the two seas. (Varr. *ap. Plin.* iii. 12. s. 17; D'Anville, *Anal. Géogr. de l'Italie*, p. 165.) This circumstance has led some writers to confound it with the Amsanctus of Virgil, which he places "Italiae in medio" (*Aen.* vii. 563); but the position of the latter in the region of the Hirpini is clearly established. [Amsancti Vallis.] [E.H.B.]

CUTINA, a town of the Vestini, mentioned only by Livy (viii. 29). [Cingilia.]

CYANE (Κυάνη), a fountain and river in the neighbourhood of Syracuse, flowing into the Anapus. According to a legend preserved by several ancient writers, it was the spot where Pluto descended to the infernal regions with Proserpine, after he had carried her off near Enna. According to Ovid, the tutelary nymph of the fountain, Cyane, who is represented as the bride of Anapus, in vain endeavoured to oppose Pluto, and was in consequence herself changed into a fountain. (Ovid, *Met.* v. 409—437, 465; Claudian, *de Rapt. Proserp.* iii. 246; Diod. v. 4; Cic. *Verr.* iv. 48.) The extreme beauty and clearness of its waters (from the deep blue colour of which its name was obviously derived) would naturally lead to the worship of its tutelary nymph; and we accordingly find that there was a shrine or temple of Cyane in the immediate neighbourhood of the fountain, where an annual festival was held, the institution of which was ascribed to Hercules. (Diod. iv. 23, v. 4, xiv. 72; Ael. *V. H.* ii. 33.) The source of the Cyane, now called *La Pisma*, is situated in low marshy ground, at the foot of the limestone hills due W. from the great harbour of Syracuse, from which it is distant about two miles. It is a beautiful circular basin, of about 50 feet in diameter, and 20 or 30 deep: its pellucid blue waters well up with a strong spring, and form at once a considerable river, which flows with a deep and tranquil current

for near a mile and a half, when it joins the Anapus immediately below the Olympeium. It is remarkable at the present day as the only place in Europe that produces the true Egyptian papyrus (Cyperus papyrus): it is not improbable that this plant was introduced from Egypt by the Syracusan kings, in the days of their intimate relations with the Ptolemies. (Leake, *Notes on Syracuse*, p. 252; D'Orville, *Sicula*, p. 190; Hoare's *Class. Tour*, vol. ii. p. 163.) On the height above the fountain are some vestiges of an ancient building, which may probably mark the site of the temple of the nymph Cyane (*τὸ τῆς Κυάνης ἱερόν*, Diod. xiv. 72): it was from thence that, in B. C. 396, Dionysius attacked the Carthaginian camp under Himilco; and it therefore probably stood upon elevated ground. [E. H. B.]

CYA'NEAE (Plin. v. 27). Leake (*Asia Minor*, p. 188) says that this Lycian town was discovered west of Andriaca [ANDRIACA] by Mr. Cockerell. The place, which is at the head of Port Tristomo, was determined by an inscription. Leake observes "that in our copies of Pliny it is "written Cyane; in Hierocles and the Notitiae Episcopatuum it is Cyaneae." But the name is written Cyaneae in Harduin's Pliny.

It is said in Spratt and Forbes (*Lycia*, vol. ii. p. 271):—"On the high table land between port *Tristomo* and the inland valley of *Kassabar*, we found three ancient sites, which, from the inscriptions copied at each, appeared to be severally—or perhaps collectively—styled Cyaneae." At one of these places, called *Tousa*, a sarcophagus contained the feminine ethnic name Κυανειτις, if it is copied right. A pedestal found at another place, called *Yarvoo*, contains a Greek inscription of the Roman period, with the usual formula, Κυανειτων ἡ Βουλη και ὁ Δημος. And at a third place, named *Ghiouristan*, a Greek inscription contained the form Κυανειτων: and it is added,—"the words Κυανειτων γερουσια occur in the inscription on a sarcophagus at the same locality." (Spratt and Forbes, *Lycia*, vol. ii. p. 271.)

It is singular that three distinct sites seem to have had the name Cyaneae, for the plural form appears to be the genuine name of the place. *Yarvoo*, which seems to be the chief place, is due north of the head of the port *Tristomo: Ghiouristan* is due north of *Yarvoo*, and about 3 miles distant, according to the map in Spratt and Forbes's work. *Tousa* is about WNW. of *Yarvoo*, and further distant than *Ghiouristan*. *Yarvoo* (Plan in Spratt and Forbes) is on a high platform, with a steep descent on two sides. The walls are in a good state of preservation, and from 5 to 15 feet high. There is a theatre 165 feet in diameter, many plain rock tombs, groups of sarcophagi, and confused heaps of ruins. The remains are of the Roman and middle age construction; and some of a doubtful age. There were none of the earlier Lycian tombs and inscriptions. At *Tousa* a Lycian inscription was found. The city was "small, and surrounded by a rudely constructed Hellenic wall, very perfect in some parts, combining the polygonal and cyclopean styles in its construction." (Spratt and Forbes, *Lycia*, vol. i. p. 111.) It is added:—"it appeared to be a city ranking in importance with Phellus and Candyba, but in a better state of preservation." *Tousa* is nearly 5 hours from the sea. At *Ghiouristan* there are three Lycian rock tombs, one of which has a Lycian and Greek inscription. There are many tombs and sarcophagi here.

This is another example of the discovery of Lycian towns of which no historical record has been preserved except the names. It is not easy to conjecture why all these places had the same name. But it is very possible that one of them, *Yarvoo*, was the chief place under the name of Cyaneae; and that the other two, which belonged to Cyaneae, might have other names, and yet be considered as dependent on the chief place, and might be comprehended under the same name [G. L.]

CYA'NEAE INSULAE. [BOSPORUS, p. 424.]

CYA'NEUS (Κυάνεος, Ptol. v. 10. § 2; Plin. vi. 3. 4), a river of Colchis, a little to the south of Dioscurias. According to Pliny, it must have been a river of some size; and he designates both it and the Hippus, which fell into the Euxine near it, as "vasti amnes." It has been conjectured that it is the same river which Scylax (p. 32) called the Gyenus (or, according to Gail's reading, Tyenus). Ritter (*Erdk.* vol. ii. p. 915) speaks of a castle called *Gonieh* in the neighbourhood, which perhaps confirms the original form of the word Gyenus. [V.]

CYATHUS. [ACHELOUS.]

CYBELEIA (Κυβέλεια, Steph. *s. v.*) or CYBE'LLIA (Strab. p. 645), a city of Ionia. Strabo, after saying that the mountain Mimas is between Erythrae and the Hypocremnus [CLAZOMENAE], adds, "then a village Cybellia, and the promontory Melaena." This is all that is known. [G. L.]

CYBISTRA (*τὰ Κύβιστρα*: *Eth.* Κυβιστρεύς, coin). Strabo (p. 537), after mentioning Tyana, says "that not far from it are Castabala and Cybistra, forts which are still nearer to the mountain," by which he means Taurus. Cybistra and Castabala were in that division of Cappadocia which was called Cilicia. Leake (*Asia Minor*, p. 62) says that Strabo places Cybistra 300 stadia from Mazaca [CAESAREIA]: but the obscure text seems to mean (p. 539) that it is 300 stadia from Tyana to Cybistra. Strabo makes it six days' journey from Mazaca to the Pylae Ciliciae, through Tyana, which is about half way; then he makes it 300 stadia, or about two days' journey, from Tyana to Cybistra, which leaves about a day's journey from Cybistra to the Pylae; and this is consistent with the passage already cited. Leake further observes, "We learn also from the Table that Cybistra was on the road from Tyana to Mazaca, and sixty-four Roman miles from the former." He thinks that these data are sufficient to fix the site of Cybistra at *Karahissar*, where are considerable remains of an ancient city. *Karahissar* is about 30 miles SSW. of Mazaca (*Kaisariyeh*). But Hamilton (*Researches*, vol. ii. p. 293), who visited *Karahissar*, says that it contains no vestiges of antiquity; and besides this, it is plain that, if Strabo's description is right, *Karahissar* is a long way from Cybistra. Hamilton adds, in a note, that it is stated on German authority that "Cybistra is at a place called *Pasmakitchi*, on the road from Caesareia to the Cilician pass;" but no more precise indication is given. Ptolemy (v. 7) places Cybistra in Cataonia, but he mentions Cyzistra as one of the towns of the Cilicia of Cappadocia, and Mazaca as another. It appears, then, that his Cyzistra corresponds to Strabo's Cybistra, which certainly is not in Cataonia.

When M. Cicero was proconsul of Cilicia, he led his troops southwards towards the Taurus through that part of Cappadocia which borders on Cilicia, and he encamped "on the verge of Cappadocia, not far from Taurus, at a town Cybistra, in order to defend Cilicia, and at the same time hold Cappadocia" (*ad Fam.* xv. 2, 4). Cicero stayed five days

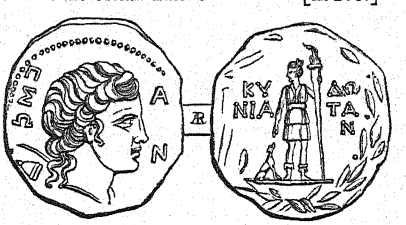
at Cybistra, and on hearing that the Parthians were a long way off that entrance into Cappadocia, and were hanging on the borders of Cilicia, he immediately marched into Cilicia through the Pylae of the Taurus, and came to Tarsus (*ad Att.* v. 20). This is quite consistent with Strabo, and shows that Leake has misplaced Cybistra. The exact site remains to be determined, unless the German authority has indicated it.

Whether Cyzistra is really a different place from Cybistra, as some geographers assume, may be doubted. [G. L.]

CY'CLADES (Κυκλάδες), a group of islands in the Aegaean Sea, lying to the south of Attica and Euboea, and so called because they lay in a circle (ἐν κύκλῳ) around Delos, the smallest but the most important of them. According to Strabo (x. p. 485) they were originally only twelve in number; namely, Ceos, Cythnos, Seriphos, Melos, Siphnos, Cimolos, Paros, Naxos, Syros, Myconos, Tenos, Andros. To these Artemidorus added Prepesinthos, Oliaros, and Cyaros, thus making them fifteen. (Strab. *l. c.*) Scylax differs from all other writers in making two groups of Cyclades, a northern and a southern. In the northern he places Ceos, Helena, Cythnos, Seriphos, Siphnos, Paros, Naxos, Delos, Rhene, Scyros (an error probably of the transcriber, for Syros), Myconos, Tenos, Andros. (Scylax, p. 22.) In the southern group he specifies Melos, Cimolos, Oliaros, Sicinos, Thera, Anaphe, Astypalaea. (Ibid. p. 18.) Most authorities, however, make the Cyclades consist of the twelve islands mentioned by Strabo, with the exception that they substitute Rhene or Rheneia for Melos, which is certainly more correct, since Melos scarcely lay within the circle. Accordingly the twelve, taking them in a circle from the NW. are; Ceos, Cythnos, Seriphos, Siphnos, Paros, Naxos, Delos, Rheneia, Myconos, Syros, Tenos, Andros. Mela (ii. 7), probably only through inadvertence, omits Ceos, and names Sicinos instead of Cythnos. Pliny (iv. 12. s. 22) follows Artemidorus in including Prepesinthos, Oliaros and Cyaros.

According to Thucydides (i. 4) the Cyclades were originally inhabited by Carians, who were expelled by Minos. (Comp. Herod. i. 171.) They were afterwards colonized by Ionians and Dorians, principally by the former. The history of each is given under its own name.

CYCLO'BORUS. [ATTICA, p. 323, a.]



CYDATHENAEUM. [ATHENAE, p. 302, b.]

CYDNUS. [CILICIA.]

CYDO'NIA (Κυδωνία, Κυδωνίς, Ptol. iv. 17. § 8: *Eth.* and *Adj.* Κυδωνιάτης, Κύδων, Κυδώνιος, Κυδωναῖος, Κυδωνίς, Κυδωνιακός, Cydon, Cydoneus, Cydoniatae, Cydonites, Cydonius: *Khaniá*), one of the most ancient and important cities of Crete. (Strab. x. p. 476.) Homer (*Od.* iii. 292, xix. 176) speaks of the Cydonians who dwelt about the river Iardanus, whom Strabo (p. 475) considers to be indigenous, but nowhere mentions a city Cydonia. The traditions, though differing among themselves, prove that it existed in very ancient times. (Diod. v. 78; Paus. viii. 53. § 2; Schol. *ad Theocrit.* vii. 12; Schol. *ad Apollon. Rhod.* iv. 1492; Flor. iii. 7. § 4.) Herodotus (iii. 44, 59) assigns its foundation to the Samians who established themselves there, and during their 5 years' residence in it built the temple of Dictynna, as well as those which still existed when the historian wrote. The city, however, as is plain from the legends, existed before the time of Polycrates, though adorned by the Samians. In the Peloponnesian War it was engaged in hostilities with the Gortynians, who were assisted by an Athenian squadron. (Thuc. ii. 35.) Cydonia, as Arnold (*l. c.*) remarks, would especially hate and be hated by the Athenians, as a considerable portion of its citizens were Aeginetan colonists. (Herod. iii. 59.) At a later period it formed an alliance with the Cnossians. (Polyb. iv. 55. § 4, xxxiii. 15. § 4.) After the termination of the Sacred War, Phalaecus, the Phocian general, attacked Cydonia, and was killed with most of his troops during the siege. (Diod. xvi. 61.) At one time she carried on hostilities single-handed against both Cnossus and Gortyna. (Liv. xxxvii. 40.) The first engagement between the Cretans, under Lasthenes and Panares, and the Roman legions, under Metellus, was fought in the Cydonian district. The Romans were victorious. Metellus was saluted imperator, and laid siege to Cydonia. (Appian, *Cret.* vi. 2; Liv. *Epit.* xcviii.)

Strabo (p. 479) describes Cydonia as situated on the sea and looking towards Laconia, at a distance of 800 stadia from both Cnossus and Gortyna. Scylax (*Geog. Graec. Min.* vol. i. p. 18) mentions Cydonia as having a harbour which could be closed (λιμὴν κλειστός); the port of *Khaniá* exactly answers to this description. This identity of physical features with the notices of several ancient writers (Ptol. *l. c.*; Plin. iv. 12. s. 20), coupled with the circumstance that maritime symbols are found on autonomous coins of Cydonia, has led Mr. Pashley (*Trav.* vol. i. p. 15) to fix the site in or near the modern *Khaniá*.

The quince-tree derived its name from the Cretan Cydonia, in the district of which city it was indigenous, and was thence transported into other countries. (Plin. xv. 11.) The fruit was called κοδύμαλον in the ancient Cretan dialect. [E. B. J.]

COIN OF CYDONIA.

CY'DRARA (Κύδραρα: *Eth.* Κυδραραῖος). Steph. B. (*s. v.* Κύδραρα) refers to the seventh book of Herodotus for the name of this place, and adds,—τὸ ἐθνικὸν Κυδραραῖος ὡς Μεγαραῖος. But this form Μεγαραῖος is doubtful. (See the note in Meinecke's ed. of Stephanus.) [CARURA.] [G. L.]

CYINDA. [ANAZARBUS.]

CYIZA (Κύιζα, Ptol. vi. 8. § 8; Marcian. p. 23; Arrian, *Hist. Indic.* c. 27), a small port on the coast of Carmania, in the country of the Icthyophagi, to which the fleet of Nearchus came, but at which they were not able to land owing to the heavy sea, which was running on the shore. It does not appear that the place can be identified with any existing town, unless the name has been preserved in *Khudar*, which is spoken of by Otter (*Travels*, vol. ii. p. 409; comp. Vincent, *Voy. of Nearchus.* vol. i. p. 257). [V.]

CYLIPENUS SINUS (Plin. iv. 27), the gulf near which the AESTUI were found; now the *Gulf of Riga*. [E. B. J.]

CYLLANDUS (Κύλλανδος: *Eth.* Κυλλανδεύς)

a city of Caria, mentioned by Hecataeus in his *Asia*. (Steph. B. *s. v.*) [G. L.]

CYLLE'NE (Κυλλήνη). 1. A lofty mountain in the north-eastern corner of Arcadia, upon the borders of Achaia. It was celebrated as the birthplace of Hermes, and as such is frequently mentioned by both the Greek and Roman poets. (Hom. *Hymn. Merc.* 2; Virg. *Aen.* viii. 138.) Hence Cyllenius occurs as a frequent epithet, and even as a name of Hermes or Mercury. (Hom. *Hymn. Merc.* 304, 318; Virg. *Aen.* iv. 252; Ov. *Met.* i. 713, ii. 720, et alibi.) In the same way we find the adjectives Cylleneus and Cyllenis applied to the lyre of Mercury, or to anything else belonging to this god. (Hor. *Epod.* xiii. 9; Ov. *Met.* v. 176, xi. 304.) There was a temple of Hermes upon the summit of the mountain, which in the time of Pausanias had fallen into ruins. The latter writer derives the name of the mountain from Cyllen, the son of Elatus. (Paus. viii. 17. § 1.)

Cyllene now bears the name of *Zýria;* its height, as determined by the officers of the French Commission, is 2374 mètres, or 7788 feet above the level of the sea. The ruins of the temple of Hermes are no longer found upon its summit. The ancients regarded it as the highest mountain in Peloponnesus; but in this they were mistaken, as one of the summits of Taygetus rises to the height of 7902 feet. According to Strabo, some made it 15, others 20 stadia in height (viii. p. 388); Apollodorus stated it to be 9 stadia, less 20 feet, in height; a measurement which evidently refers to its height above the level of the surrounding plains, and very nearly coincides with the measurement of the French Commission, who found it to be 1675 mètres above the level of the plain of Pheneos. (Eustath. *ad Hom.* p. 1951, 16; Steph. B. *s. v.* Κυλλήνη.) The summit of Cyllene was supposed to be so high above all winds and clouds, that the ashes of the victims sacrificed there to Hermes, remained undisturbed from one year's festival to another. (Geminus, *Elem. Astr.* i. 14; Olympiodor. *ap. Alex. Aphrod.* p. 6.)

Cyllene rests upon a broad, almost circular basis, and is separated from the surrounding mountains by deep ravines. Towards the north it sends out a projecting spur, called in ancient times CHELYDOREA (now *Mavrióro*), because Hermes was said to have found here the tortoise shell, which he converted into a lyre. (Paus. viii. 17. § 5.) On Cyllene white blackbirds were said to have been found. (Paus. viii. 17. § 3; Steph. B. *s. v.*) (Boblaye, *Recherches, &c.*, p. 154; Curtius, *Peloponnesos*, vol. i. pp. 17, 199.)

2. (*Eth.* Κυλλήνιος, Κυλληνεύς), the seaport town of Elis, distant 120 stadia from the latter city. (Paus. vi. 26. § 4; Strab. viii. p. 337.) Cyllene was an ancient place. It is mentioned by Homer as one of the towns of the Epeians (*Il.* xv. 518); and if we are to believe Dionysius Periegetes (347), it was the port from which the Pelasgians sailed to Italy. Pausanias, moreover, mentions it as visited at an early period by the merchants of Aegina (viii. 5. § 8), and as the port from which the exiled Messenians after the conclusion of the second Messenian war, sailed away to found a colony in Italy or Sicily (iv. 23. § 1, seq.).

Cyllene was burnt by the Corcyraeans in B. C. 435, because it had supplied ships to the Corinthians. (Thuc. i. 30.) It is again mentioned in 429, as the naval station of the Peloponnesian fleet, when Phormion commanded an Athenian squadron in the Corinthian gulf. (Thuc. ii. 84.) Its name occurs on other occasions, clearly showing that it was the principal port in this part of Peloponnesus. (Thuc. vi. 89; Diod. xix. 66, 87; Polyb. v. 3; Liv. xxvii. 32.) Strabo describes Cyllene as an inconsiderable village, having an ivory statue of Asclepius by Colotes, a contemporary of Pheidias. (Strab. viii. p. 337.) This statue is not mentioned by Pausanias, who speaks, however, of temples of Asclepius and Aphrodite (vi. 26. § 5).

Cyllene is usually identified with *Glaréntza*, situated upon one of the capes of the promontory Chelonatas. This is the position assigned to it by Leake, whose authority we have followed elsewhere [CHELONATAS]; but there are strong reasons for doubting the correctness of this opinion. There are no ancient remains at *Glaréntza;* and although this is at present the only port on this part of the coast, the outline of the latter has been so changed in the course of centuries, that little reliance can be placed upon this argument. Moreover, Cyllene is clearly distinguished from the promontory Chelonatas by the ancient writers. Strabo (viii. p. 338) says that the Peneius flows into the sea between the promontories Chelonatas and Cyllene; and that this is not an error in the text, as Leake supposes (*Morea*, vol. i. p. 7), appears from the order of the names in Ptolemy (iii. 16. §§ 5, 6), where we find the promontory Araxus, Cyllene, the mouths of the Peneius, the promontory Chelonitis. The river Peneius at present flows into the sea to the south of Chelonatas, but its ancient course was probably north of this promontory. [ELIS.] Accordingly we may perhaps place Cyllene about half way between Araxus and Chelonatas. This position not only agrees with the distance of 120 stadia from Elis mentioned by Strabo and Pausanias, but also with the distances in the Tab. Peuting., which reckons xiv. M. P. from Dyme to Cyllene, and also xiv. M. P. from Cyllene to Elis. Pliny (iv. 5. s. 6.), likewise separates the promontory Chelonatas from Cyllene. According to the present text of Pliny, the distance between them is v. M. P. (not ii. as in some editions); but instead of v. we ought probably to read xv. It appears from Pliny that the sea between the promontories of Araxus and Chelonatas was called the bay of Cyllene. (Curtius, *Peloponnesos*, vol. ii. pp. 33, 102.)

CYME (Κύμη: *Eth.* Κυμαῖος), a city of Aeolis, so called, according to a legend, from Cyme an Amazon; and the city was also called Amazoneion. There was, according to Stephanus (*s. v.* Κύμη), another Cyme, which was called Phriconitis. Herodotus, however (i. 149), enumerating Cyme among the cities of Aeolis, calls it "Cyme which is named Phriconis." Temnus and Aegae, Aeolian cities, were situated in the hill country which lies above the territory of Cyme, and of Phocaea, and of Smyrna, along which the Hermus flows. It was north of the Hermus, as appears from Strabo (p. 622), who says that, after crossing the Hermus, the distance from Larissa to Cyme was 70 stadia, and from Cyme to Myrina was 40 stadia. The author of the Life of Homer also places Cyme north of the Hermus, and he quotes some lines which show that it was on an eminence, a spur or projection of a mountain called Sardene. The coins of Cyme show that there was a stream near it called Xanthus. The site of this ancient city is generally supposed to be at a place called *Sanderli* or *Sandarlio*, on that part of the coast which is opposite to the southern extremity of

Lesbos. Whether this is the exact site or not, may be doubtful, but it is not far from it.

This is the story of the origin of Cyme. (Strab. p. 621.) The inhabitants of Phricium, a mountain above Thermopylae, landed on the spot where Cyme now is, says Strabo; they found the Pelasgi, who had suffered from the war of Troy, still in possession of Larissa. The new comers built Neon Teichos, 30 stadia from Larissa, and from this point annoyed the Pelasgi. Here Strabo's text begins to be corrupt, and it is useless to attempt to mend it; though one may guess what is meant. We learn, however, that Cyme was founded after Neon Teichos, and it was named Phriconis from the mountain in Locris. Strabo observes (p. 622) that Cyme was the largest and noblest of the Aeolian cities; and Cyme and Lesbos might be considered the parent cities of the other cities, which were about thirty in number, of which not a few had ceased to exist. Herodotus (i. 157) observes that the Aeolians and Ionians used to consult the oracle at Branchidae, and he tells a story about the Cymaeans consulting it when Pactyes the Lydian fled to them to escape punishment from the Persians. Cyme came under the Persians after the overthrow of the Lydian kingdom; and a tyrannus of Cyme, Aristagoras, was one of those who are represented by Herodotus as deliberating whether they should destroy the bridge over the Danube, and leave king Darius to perish on the north side of the river (iv. 137). When Aristagoras of Miletus stirred up the Ionians to revolt against Darius, Cyme joined the insurrection, and sent Aristagoras away without doing him any harm. But Cyme was soon recovered by the Persians (v. 38, 123). Sandoces, the governor of Cyme in the time of Xerxes, commanded fifteen ships in the great expedition against Greece (B. C. 480). He seems to have been a Greek. (Herod. vii. 194.) The remnant of the fleet of Xerxes which escaped from Salamis wintered at Cyme. (Herod. viii. 130.) The history of Cyme is very barren, notwithstanding what Strabo says of its greatness. The place is hardly more than mentioned in the history of Thucydides (iii. 31, viii. 31, 100).

After the conclusion of the war of the Romans against Antiochus, Cyme, like Colophon [COLOPHON], obtained freedom from taxation. (Polyb. xxii. 27; Liv. xxxviii. 39.) It was afterwards included in the Roman province of Asia. It was one of the cities of Asia that was damaged by the great earthquake in the time of Tiberius. (Tacit. *Ann.* ii. 47.) Pliny (v. 30) mentions Cyme in his list of Aeolian cities; and Ptolemy (v. 2). Under the Byzantine empire it was a bishop's see.

Cyme was the birthplace of the historian Ephorus; and Hesiod's father, according to the poet (*Op. et D.* 636), sailed from Cyme to settle at Ascra in Boeotia; which does not prove, as such compilers as Stephanus and Suidas suppose, that Hesiod was a native of Cyme. Strabo (p. 622) gives a reason for the alleged stupidity of the Cymaei, which is not worth the trouble of transcribing. [G.L.]

COIN OF CYME.

CYMINE. [CTIMENE.]

CYNAETHA (ἡ Κύναιθα: *Eth.* Κυναιθεύς, Κυναιθαιεύς, Polyb.; Κυναιθαεύς, Paus.: *Kalávryta*), a town in the north of Arcadia, situated upon the northern slope of the Aroanian mountains, which divided its territory from those of Cleitor and Pheneus. The inhabitants of Cynaetha were the only Arcadians who lived beyond the natural boundaries of Arcadia. Their valley sloped down towards the Corinthian gulf: and the river which flowed through it, fell into the Corinthian gulf a little to the east of Bura: this river was called in ancient times Erasinus or Buraicus, now river of *Kalávryta*. (Strab. viii. p. 371; Paus. vii. 24. § 5.) The climate and situation of Cynaetha are described by Polybius as the most disagreeable in all Arcadia. The same author observes that the character of the Cynaethians presented a striking contrast to that of the other Arcadians, being a wicked and cruel race, and so much disliked by the rest of their countrymen, that the latter would scarcely hold any intercourse with them. He attributes their depravity to their neglect of music, which had tended to humanize the other Arcadians, and to counteract the natural rudeness engendered by their climate. Accordingly, he regarded the terrible misfortune which overtook the Cynaethians in the Social war, when their city was destroyed by the Aetolians, as a righteous punishment for their wickedness. (Polyb. iv. 18—21.) Although Strabo (viii. p. 388) mentions Cynaetha as one of the Arcadian towns no longer existing in his time, it must have been restored at some period after its destruction by the Aetolians, as it was visited by Pausanias, who noticed in the agora altars of the gods and a statue of the emperor Hadrian. At the distance of two stadia from the town was a fountain of cold water, called Alyssus, because it was said to cure hydrophobia. (Paus. viii. 19.) There can be no doubt that the modern village of *Kalávryta* occupies the site of Cynaetha, although it contains scarcely any traces of the ancient city. (Leake, *Morea*, vol. ii. p. 109, vol. iii. pp. 129, 179; Boblaye, *Recherches*, &c. p. 157; Curtius, *Peloponnesos*, p. 382, seq.)

CYNAMOLGI (Κυναμολγοί, Diod. iii. 31), a barbarous tribe in the south of Aethiopia, of whom the most probable account that can be given is that they were a race of herdsmen who guarded their cattle by a breed of fierce dogs. Pliny (*N. H.* vi. 35) confounds them with the Cynocephali or race of apes with the heads of dogs. [W. B. D.]

CYNE (Κύνη: *Eth.* Κυνεύς, Κύνιος), a city of Lydia, mentioned by Hecataeus in his *Asia*. (Steph. B. *s. v.*) [G. L.]

CYNETICUM LITTUS, in Gallia Narbonensis. Festus Avienus (v. 565—570) places the "sands of the Cynetic shore" after the "Pyrenaeum jugum," which is about *Collioure*. The Cyneticum littus is the coast of Gallia Narbonensis from the mouth of the *Tech* to the mouth of the *Tet*, near which is a small place called *Canet*. This is shown clearly by the line of Avienus, which speaks of the Roschinus river cutting through the sands of this coast. This Roschinus is the Ruscino of Strabo (p. 182) and Ptolemy (ii. 10), and the Telis of Mela (ii. 5), in the ordinary texts; but Telis should probably be Tetis. [G. L.]

CYNIA LACUS. [AETOLIA, p. 64, a.]

CYNO'POLIS (Κυνῶν πόλις, Steph. B. *s. v.*;

Ptol. iv. 5. § 59: *Eth.* Κυνοπολίτης), a town in the Cynopolite nome of the Heptanomis, lat. 28° 2′ N. The dog-headed deity Anubis was here worshipped. (Strab. xvii. p. 812.) It is probably the Canum of Pliny (*N. H.* v. 11). Cynopolis is the modern *Samallus*. There was in the Delta also a town of this name, and with the same local deity. (Strab. xvii. p. 802; Plut. *de Is. et Osir.* c. 72.) [W. B. D.]

CYNOSARGES. [ATHENAE, p. 303, b.]

CYNOSCE'PHALAE (Κυνὸς κεφαλαί), the names of two ranges of hills, so called from their supposed resemblance to the heads of dogs. 1. In Thessaly, a little to the north of Scotussa, in whose territory they were situated. They are described by Polybius (xviii. 5) as rugged, broken, and of considerable height; and are memorable as the scene of two battles: one fought, in B. C. 364, between the Thebans and Alexander of Pherae, in which Pelopidas was slain; and the other, of still greater celebrity, fought in B. C. 197, in which the last Philip of Macedon was defeated by the Roman consul Flamininus. (Plut. *Pelop.* 32; Strab. ix. p. 441; Polyb. xviii. 3, seq.; Liv. xxxiii. 6, seq.; Plut. *Flamin.* 8; Leake, *Northern Greece*, vol. iv. p. 459, seq.)

2. Hills between Thebes and Thespiae. (Xen. *Hell.* v. 4. § 15, *Agesil.* ii. 22.) Near them, or on them, was a village of the same name, which is mentioned by the biographers of Pindar as the birthplace of the poet. (Steph. B. *s. v.* Κυνὸς κεφαλαί.)

CYNOSSE'MA (Κυνὸς σῆμα, or Κυνόσσημα), that is, the Dog's Tomb, a promontory on the eastern coast of the Thracian Chersonesus, near the town of Madytus; it was believed to have derived its name from the fact that Hecuba, who had been metamorphosed into a dog, was buried there. (Eurip. *Hec.* 1275; Thucyd. viii. 102; Strab. p. 595; Plin. iv. 18; Mela, ii. 2; Ov. *Met.* xiii. 569.) [L. S.]

CYNOSSE'MA (Κυνὸς σῆμα). "After Lorymа," says Strabo (p. 656), "is the Cynos-sema, and the island Syme; then Cnidus, &c." The Cynossema is a point on the SW. coast of Caria, opposite to the island of Syme, and it is now called *Cape Volpo*. (Hamilton, *Researches*, *&c.* vol. ii. p. 71.) Ptolemy does not mention Cynossema, but he has a cape Onugnathos about this part of Caria, which may be the same as Cynossema. [CARIA, p. 519.] Stephanus (*s. v.* Κυνόσσημα) gives an ethnic name Κυνοσσηματεύς. [G. L.]

CYNOSU'RA (Κυνόσουρα), *i. e.* "Dog's Tail." 1. A promontory of Attica. [MARATHON.]

2. A promontory in the west of Salamis, opposite the island of Psyttaleia. (Herod. viii. 76.)

3. A quarter of Sparta. [SPARTA.]

CYNTHUS. [DELOS.]

CYNU'RIA (ἡ Κυνουρία, Thuc. iv. 56, v. 41; ἡ Κυνουριακή, Paus. iii. 2. § 2: *Eth.* Κυνούριος, Κυνουρεύς), a district on the eastern coast of Peloponnesus, between the Argeia and Laconia, so called from the Cynurians, one of the most ancient tribes in the peninsula. Herodotus (viii. 73) regards them as Autochthones, but at the same time calls them Ionians. There can be little doubt, however, that they were Pelasgians; but in consequence of their maritime position, they were regarded as a different race from the Arcadian Pelasgians, and came to be looked upon as Ionians, which was the case with the Pelasgians dwelling upon the coast of the Corinthian gulf, in the district afterwards called Achaia. They were a semi-barbarous and predatory tribe, dwelling chiefly in the eastern slopes of Mount Parnon; but their exact boundaries cannot be defined, as they were only a tribe, and never formed a political body. At a later time they were almost confined to the Thyreatis, or district of Thyrea. (See below.) Originally they extended much further south. Upon the conquest of Peloponnesus by the Dorians, the Cynurians were subdued by the Argeians, whose territory at one time extended along the eastern coast of Peloponnesus down to Cape Malea. (Herod. i. 82.) The Cynurians were now reduced to the condition of Argive Perioeci. (Herod. viii. 73.) They continued the subjects of Argos for some time; but as Sparta rose in power, she endeavoured to increase her territory at the expense of Argos; and Cynuria, but more especially the fertile district of the Thyreatis, was a frequent subject of contention between the two states, and was in possession sometimes of the one, and sometimes of the other power. As early as the reign of Echestratus, the son of Agis, who is placed about B. C. 1000, the Spartans are said to have gained possession of Cynuria (Paus. iii. 2. § 2), but they were driven out of it subsequently, and it continued in the hands of the Argives till about B. C. 547, when the celebrated battle was fought between the 300 champions from either nation. (Herod. i. 82: for details see *Dict. of Biogr.* art. *Othryades*.) But the great victory of Cleomenes over the Argives near Tiryns, shortly before the Persian wars, was the event which secured to the Spartans undisputed possession of Cynuria for a long time. When the Aeginetans were expelled from their own island by the Athenians, at the commencement of the Peloponnesian war (B. C. 431), the Spartans allowed them to settle in the Thyreatis, which at that time contained two towns, Thyrea and Anthene or Athene, both of which were made over to the fugitives. (Thuc. ii. 27; comp. v. 41.) Here they maintained themselves till the 8th year of the Peloponnesian war, when the Athenians made a descent upon the coast of the Thyreatis, where they found the Aeginetans engaged in building a fortress upon the sea. This was forthwith abandoned by the latter, who took refuge in the upper city (ἡ ἄνω πόλις) at the distance of 10 stadia from the sea; but the Athenians followed them, took Thyrea, which they destroyed, and dragged away the inhabitants into slavery. (Thuc. iv. 56, 57.) Philip, the father of Alexander the Great, gave back the Thyreatis to the Argives, and extended their territory along the coast as far as Glympeis and Zarax. (Manso, *Sparta*, vol. iii. pt. i. p. 245; comp. Polyb. iv. 36. § 5, v. 20. § 4.) It continued to belong to the Argives in the time of Pausanias (ii. 38. § 5); but even then the ancient boundary quarrels between the Argives and Spartans still continued (Paus. vii. 11. § 1).

The THYREATIS (Θυρεᾶτις), or territory of Thyrea (Θυρέα, also Θυρέαι), which is the only district that can be safely assigned to Cynuria, is one of the most fertile plains in the Peloponnesus. It extends about 6 miles in length along the coast, south of the pass Anigraea and the mountain *Závitza*. Its breadth is narrow, as the projecting spurs of Mount Parnon are never more than 3 miles, and sometimes only about a mile from the coast. It is watered by two streams; one on its northern, and the other on its southern extremity. The former called TANUS, or TANAUS (Τάνος, Paus. ii. 38. § 7; Τάναος, Eurip. *Electr.* 413), now the river of *Luku*, rises in the summits of Mt. Parnon near *St. Peter*, and falls into the sea, at present north of *Astros*, but till recently south of the latter place. It formed the boundary

between the Argeia and Laconia in the time of Euripides, who accordingly represents (*l. c.*) it as the boundary between the two states in the heroic age. The stream, which waters the southern extremity of the plain, is smaller than the Tanos; it also rises in Mt. Parnon, and falls into the sea near *St. Andrew*. It is now sometimes called the river of *Kani*, from one of the summits of Parnon; sometimes, the river of *St. Andrew*: it appears in ancient times to have borne the name of Charadrus, which is described by Statius (*Theb.* iv. 46), as flowing in a long valley near Neris. Between these two rivers, at the narrowest part of the plain, is a salt marsh called *Mustós*, formed by some salt-springs rising at the foot of the calcareous mountains. The bay between the two rivers was called the Thyreatic gulf (ὁ Θυρεάτης κόλπος, Paus. ii. 38. § 7).

Besides Thyrea and Anthena or Athena, mentioned by Thucydides, two other place in the Thyreatis are noticed by Pausanias (ii. 38. § 5, seq.), namely, Neris (Νηρίς) and Eva (Εὔα). Pausanias entered the Thyreatis by the pass of the Anigraea; and after following the road along the coast, turned upwards into the interior, and came to Thyrea (ἰόντι ἄνω πρὸς τὴν ἤπειρον Θυρέα χωρίον ἐστίν), where he saw the sepulchres of the 300 Argive, and 300 Spartan champions. On leaving these, he came first to Anthena, next to Neris, and lastly to Eva, which he describes as the largest of the three villages, containing a sanctuary of Polemocrates, son of Machaon, who was honoured here as a god or hero of the healing art. Above these villages was the range of Mt. Parnon, where, not far from the sources of the Tanaus, the boundaries of the Lacedaemonians, Argives, and Tegeatae joined, and were marked by stone Hermae.

Neris is also mentioned by Statius (*Theb.* iv. 46), who describes it as situated in a long valley:

"Quaeque pavet longa spumantem valle Charadrum
Neris."

Eva, in the Thyreatis, is probably also meant by Stephanus B., though he calls it a city of Arcadia.

The identification of these places has given rise to much dispute, and cannot be satisfactorily determined; for although there are several ancient remains in the Thyreatis, no inscriptions have been found, containing the names of places, and none of the ruins are in such positions as at once to identify them with the ancient towns. There are two roads in the Thyreatis; one along the coast leading from the pass of the Anigraea, and the other across the mountains. Upon the coast-road we find ancient remains at three places. (1.) *Astros* is now the chief place in the district, where persons land coming from Nauplia by sea. The present town, however, is of recent date, having been built during the War of Independence, and has become of importance in consequence of the second national assembly of the Greeks having met here in 1823. It is situated on the southern side of a promontory, which projects some distance into the sea, about 10 minutes south of the mouth of the Tanus. Although the town is of modern origin, it is supposed that the place has retained its name from antiquity, and that it is the Astrum (Ἄστρον) of Ptolemy, in whose list it occurs as the frontier town of Argolis, between the Lacedaemonian Prasiae and the mouths of the Inachus. (Ptol. iii. 16. § 11.) On the land side of the promontory towards the river, are considerable remains of an ancient wall, built of large unhewn blocks of stone, the interstices between which are filled up with smaller stones, like the well known walls of Tiryns. On the other sides of the hill there are no traces of walls, nor are there any other remains of an ancient town. (2.) About half an hour S. of Astros, to the right hand of the road, there were formerly Hellenic remains, which have now entirely disappeared. (3.) Further south, at *St. Andrew*, on the coast, and immediately south of the river of *Kani*, at the very edge of the plain, are the remains of an ancient town. The foundations of the walls, about 9 feet in breadth, may still be traced, as well as the foundations of towers. Within the walls the highest point, on which the church of St. Andrew now stands, was the acropolis.

Upon the road across the mountains there are likewise remains of three ancient places. (1.) In crossing Mount *Závitza*, we find upon the descent on the southern side the ruins of a fortress, which commanded the road from the Argeia to the Thyreatis. (2.) Further on, at the foot of *Závitza*, close to the river Tanus and the monastery of *Luku*, considerable remains of ancient art have been discovered. The Museum of Athens possesses a fine Caryatid figure, and two striking bas-reliefs, brought from this place. The ancient remains at *Luku* are far more considerable than any other which have been discovered in the Thyreatis. (3.) From the monastery of *Luku* the road goes towards Mt. Parnon, over the heights which extend between the two rivers of the Thyreatis. To the left of this road are the ruins of an ancient fortress, situated upon a lofty rock, and known in the country by the name of *Helleniko*.

The great difficulty is to identify Thyrea with any of these sites. Leake and Ross suppose that the wall at *Astros* is the one commenced by the Aeginetans, in the eighth year of the Peloponnesian war, and which they were prevented from finishing by the arrival of the Athenians. They further believe that the ruins at *Luku* are those of Thyrea; though, instead of being only 10 stadia from the sea, as Thucydides states, they are more than three times that distance. Curtius, on the other hand, thinks that the remains at *St. Andrew* represent Thyrea, and that Pausanias came to this point before he turned into the interior. He observes that the wall at *Astros* belongs to a much more ancient period than the time of the Peloponnesian war, and that the remains at *Luku* do not exhibit traces of a town, and are more characteristic of a Roman villa than of an Hellenic city. But to the hypothesis of Curtius the words of Thucydides and Pausanias seem fatal,—the former describing Thyrea as the upper city at the distance of 10 stadia from the sea; and the latter, as situated in the interior of the country. Supposing *Luku* to represent Thyrea, the ruins at *St. Andrew* must be those of a city not mentioned by any ancient writer. It is evident from the route of Pausanias, that they cannot represent either Anthena, Neris, or Eva. Leake, indeed, supposes them to be those of the Lacedaemonian Brasiae or Prasiae, chiefly on the ground of the order of names in Ptolemy; but the city at *St. Andrew*, being in the plain of the Thyreatis, must clearly have belonged to the latter district; and Prasiae ought probably to be placed further south at *Tyró*. [Prasiae.]

The position of Thyrea being so uncertain, it would be useless to endeavour to fix the site of the other ancient places in the Thyreatis.

On the heights of Mt. Parnon, in the north-eastern extremity of the ancient Laconia, is a district now

called *Tzakonía*, the inhabitants of which speak a peculiar dialect, which more closely resembles the ancient Greek than any of the other dialects spoken in modern Greece. Their principal town is *Kastanitza*. Their name is evidently a corruption of Laconia; but Thiersch conjectures with some probability, that they are the descendants of the ancient Cynurians, and have retained with the tenacity of mountaineers the language of their forefathers. A full account of the Tzakonic dialect has been given by Thiersch (*Abhandlung. der Bayr. Akad.* vol. i. p. 511, seq.), an abstract of which will be found in Leake's *Peloponnesiaca* (p. 304, seq.).

(For an account of Cynuria in general see Leake, *Morea*, vol. ii. p. 482, seq., *Peloponnesiaca*, p. 294, seq.; Boblaye, *Recherches*, p. 65, seq.; Ross, *Reisen im Peloponnes*, p. 158, seq.; Curtius, *Peloponnesos*, vol. ii. p. 373, seq.)

CYNU'RIA, a district in Arcadia mentioned only upon the occasion of the foundation of Megalopolis, was situated north of Phigalice and Parrhasia. We may infer from the name that these Cynurians were the same as the Cynurians on the east coast, but we have no account of any historical connection between them. (Paus. viii. 27. § 4; Curtius, *Peloponnesos*, vol. i. p. 164.)

CYNUS (Κῦνος: *Eth.* Κύνιος, Κυναῖος), the principal sea-port of the Locri Opuntii, was situated on a cape at the northern extremity of the Opuntian gulf, opposite Aedepsus in Euboea, and at the distance of 60 stadia from Opus. (Strab. ix. p. 425; Paus. x. 1. § 2.) Livy gives an incorrect idea of the position of Cynus, when he describes it as situated on the coast, at the distance of a mile from Opus. (Liv. xxviii. 6.) Cynus was an ancient town, being mentioned in the Homeric catalogue (*Il.* ii. 531), and reported to have been the residence of Deucalion and Pyrrha; the tomb of the latter was shown there. (Strab. *l. c.*) Its site is marked by a tower, called *Paleópyrgo*, and some Hellenic remains, about a mile to the south of the village of *Livanátes* (Comp. Strab. i. p. 60, ix. p. 446, xiii. p. 615; Mela, ii. 3; Plin. iv. 7. s. 12; Ptol. iii. 15. § 10; Steph. B. *s. v.*). (Leake, *Northern Greece*, vol. ii. p. 174, seq.)

CYON (Κύον: *Eth.* Κυήτης), a city of Caria. Stephanus (*s. v.*) cites the Carica of Apollonius, and adds that it was once called Canebium. Cramer (*Asia Minor*, vol. ii. p. 216) observes that there are autonomous coins of Cyon, with the epigraph Κυ. Κυι. Κυιτων. [G. L.]

CYPAERA (Κύπαιρα, Ptol. iii. 13. § 45), or CYPHARA (Liv. xxxii. 13), for these names apparently indicate the same place, was a town of Thessaly, in the southern part of the district Thessaliotis, near the confines of Dolopia.

CYPARI'SSIA. 1. (Κυπαρισσία, Strab. viii. pp. 349, 359; Steph. B. *s. v.*; Liv. xxxii. 21; Plin. iv. 5. s. 7; Κυπαρισσήεις, Hom. *Il.* ii. 593; Κυπαρισσιαί, Paus. iv. 36. § 7; Κυπάρισσαι, Ptol. iii. 16. § 7; Κυπάρισσος, Scylax, p. 16; Mela, ii. 3; *Eth.* Κυπαρισσιεύς, Strab. viii. p. 345; Paus. *l. c.*; Stephanus alone has the form Κυπαρισσεύς), a town on the western coast of Messenia, situated a little south of the river Cyparissus, upon the bay to which it gave the name of the Cyparissian gulf. (Plin. Mela, *ll. cc.*) This gulf was 72 miles in circuit according to Pliny, and was bounded by the promontory of Ichthys on the north, and by that of Cyparissium on the south. Cyparissia was the only town of importance upon the western coast of Messenia between Pylus and Triphylia. It is mentioned in the Homeric catalogue (*Il. l. c.*), and appears to have been inhabited from the earliest to the latest times. It was beautifully situated upon the sides of one of the offshoots of the range of mountains, which run along this part of the Messenian coast. Upon the narrow summit of the rocks now occupied by a castle built in the middle ages, stood the ancient acropolis. There is no harbour upon the Messenian coast north of Pylos; but Leake remarks that the roadstead at Cyparissia seems to be the best on this part of the coast; and in ancient times the town probably possessed an artificial harbour, since traces of a mole may still be seen upon the sea-shore. This was probably constructed on the restoration of Messene by Epaminondas; for it was necessary to provide the capital of the new state with a port, and no spot was so suitable for this object as Cyparissia. Hence we find "Messene and the harbour Cyparissia" mentioned together by Scylax (p. 16). Pausanias found in the town a temple of Apollo, and one of Athena Cyparissia. The town continued to coin money down to the time of Severus. In the middle ages it was called *Arkadia*, a name which was transferred from the interior of the peninsula to this place upon the coast. It continued to bear this name till its destruction by Ibrahim in 1825, and when rebuilt it resumed its ancient name Cyparissia, by which it is now called. Some remains of ancient walls may be traced around the modern castle; and below the castle on the slope of the hill, near the church of St. George, are some fragments of columns. On the south side of the town, close to the sea-shore, a fine stream rushes out of the rock and flows into the sea; and a little above is a basin with a spring of water, near which are some stones belonging to an ancient structure. This is the ancient fountain sacred to Dionysus, which Pausanias perceived near the entrance of the city, on the road from Pylus.

Stephanus calls Cyparissia a city of Triphylia, and Strabo (viii. p. 349) also distinguishes between the Triphylian and Messenian Cyparissia, but on what authority we do not know. (Leake, *Morea*, vol. i. p. 68, seq.; Boblaye, *Recherches*, &c., p. 115; Curtius, *Peloponnesos*, vol. ii. p. 184, seq.)

COIN OF CYPARISSIA.

2. In Laconia. [ASOPUS, No. 5.]

CYPARI'SSIUM. [CYPARISSIA.]

CYPARI'SSIUS SINUS. [CYPARISSIA.]

CYPARISSUS. 1. (Κυπάρισσος: *Eth.* Κυπαρισσεύς), an ancient town of Phocis, in the vicinity of Delphi. It is mentioned in the Homeric catalogue (*Il.* ii. 519) along with Pytho (Delphi), and is described by Dicaearchus (80) as situated in the interior of Phocis. It is placed by Strabo below Lycoreia, which was situated on one of the heights of Parnassus (ix. p. 423), which position is more probable than the one assigned to it by Pausanias, who supposes Cyparissus to be the ancient name of the place afterwards called Anticyra (x. 36. § 5). Cyparissus is also mentioned by Statius (*Theb.* vii.

344) and Stephanus (*s. v.*). If we follow the authority of Strabo respecting the position of Cyparissus, its site is perhaps indicated by the walls of an Hellenic town, at the southern foot of the mountain, midway between the Schiste and Delphi. (Leake, vol. ii. p. 579.)

2. A river of Messenia. [CYPARISSIA.]

CYPASIS (Κύπασις), a commercial town in Thrace, on the east of the Hebrus, on the Bay of Melas. (Scylax, p. 27; Steph. Byz. *s. v.*) [L. S.]

CYPHANTA (τὰ Κύφαντα), a town on the eastern coast of Laconia, belonging to the Eleuthero-Lacones. It was in ruins in the time of Pausanias, but from the notice of it in other writers, it was evidently at one period a place of some importance. (Paus. iii. 24. § 2; Polyb. iv. 36; Plin. iv. 5. s. 9; Ptol. iii. 16. §§ 10, 22.) Pausanias describes it as situated 6 stadia from Zarax, and 10 stadia inland; and Ptolemy speaks separately of the port-town and city. Pausanias adds that Cyphanta contained a temple of Asclepius, called Stethaeum, and a fountain issuing from a rock, said to have been produced by a blow of the lance of Atalante. The numbers in Pausanias, however, cannot be correct. At the distance of 6 stadia from Zarax (*Hiéraka*), there is no site for a town or a harbour; and it is scarcely conceivable that, on this rocky and little-frequented coast, there would be two towns so close to one another. Moreover Pausanias says that the distance from Prasiae to Cyphanta is 200 stadia; whereas the real distance from Prasiae (*Tyro*) to Zarax (*Hiéraka*) is more than 300 stadia. In addition to this Ptolemy places Cyphanta considerably further north than Zarax; and it is not till reaching *Cyparissi* that there is any place with a harbour and a fountain. Accordingly, we may here place Cyphanta, changing with Boblaye the very improbable number in Pausanias ἑξ που στάδια, into ἑκατὸν στάδια. *Cyparissi* is as nearly as possible 100 stadia from *Hiéraka*, and 200 stadia from *Tyro*.

In his *Morea*, Leake placed Cyphanta at *Cyparissi;* but in his *Peloponnesiaca*, he supposes its site to have been further north at *Lenidhi*. If we are right in identifying Prasiae with *Tyro*, this position for Cyphanta would be at once inadmissible; but Leake, we think erroneously, places Prasiae also further north, at *St. Andrew* in the Cynuria. [CYNURIA; PRASIAE.] (Leake, *Morea*, vol. ii. p. 500, seq., *Peloponnesiaca*, p. 301; Boblaye, *Recherches*, p. 101; Curtius, *Peloponnesos*, vol. ii. p. 305.)

CYPHARA. [CYPAERA.]

CYPHUS (Κύφος: *Eth.* Κυφαῖος), a town of Perrhaebia in Thessaly, which supplied 22 ships for the Trojan war. It is placed by Strabo at the foot of Mt. Olympus. (Hom. *Il.* ii. 748; Strab. ix. p. 441; Lycophr. 897.) According to Stephanus (*s. v.*) there were two cities of the name of Cyphus, one mentioned by Homer, and the other by Lycophron; but in this he appears to have been mistaken. (Hemsterh. *ad Arist. Plut.* p. 116.)

CYPRUS (Κύπρος: *Eth.* and *Adj.* Κύπριος, Κυπριακός, Κυπριεύς, Κυπρίτης, Cyprius, Cypriacus: *Kibris*), an island lying off the coast of Phoenicia and Cilicia.

The physical features and the legends connected with this chosen seat of Aphrodite, have given rise to a multitude of names. 1. Acamantis (Ἀκαμαντίς). 2. Amathusia (Ἀμαθουσία). 3. Aspelia. 4. Colinia. 5. Cerastis (Κεραστίς). 6. Cryptos (Κρυπτός). 7. Macaria (Μακαρία). 8. Meïonis (Μηϊονίς). 9. Ophiusa (Ophiusia arva, Ov. *Met.* x. 229). 10. Spheceia (Σφηκεία).

According to ancient admeasurements the circuit of this island amounted to 3420 stadia. (Strab. xiv. p. 682.) Its greatest length from W. to E., between Cape Acamas and the islands called the Keys of Cyprus (Κλεῖδες), was reckoned at 1400 stadia. (Strab. *l. c.*; Plin. v. 35; Agathem. i. 5.) The principal or SW. part of the island has the form of an irregular parallelogram, and terminates with a long narrow peninsula, running in a NE. direction. Its shape was compared fancifully by the old writers to a fleece (Agathem. *l. c.*), or to a Gallic shield (Hygin. *Fab.* 276). The surface of the country is almost entirely occupied by the elevated range of Mt. Olympus, whose culminating points reach the height of 7000 feet. The slopes descend both on the N. and S. shores: on the former side the chain is bold and rugged; on the S. side the scenery is still bolder, presenting a deeply serrated outline with thickly wooded steeps, which are broken by masses of limestone, or furrowed by deep picturesque valleys, in which grow the narcissus, the anemone, and ranunculus.

The mountains contained copper (χαλκὸς Κύπριος, aes Cyprium), the most famous mines of which were to be found at Tamassus, Amathus, Soli, and Curion (Plin. xii. 60, xxxiv. 20), as well as the nobler metals, gold and silver. The precious stones of Cyprus were famous in antiquity. They were: the "adamas vergens in aerium colorem" (Plin. xxxvii. 15),—whether this was the diamond seems doubtful, as it has been thought that Pliny was unacquainted with the real diamond (Dana, *Mineralogy*, p. 401); —the "smaragdos" (xxxvii. 17), emerald; the "chalcosmaragdos turbida aereis venis" (xxxvii. 19), malachite (?), or more probably red jasper; "paederos" (xxxvii. 22), opal; "achates" (xxxvii. 54), agate; and asbestos (Dioscor. v. 156). The land is described as flowing with wine, oil (Strab. p. 684), and honey (Plin. xi. 14); and the fragrance of its flowers gave it the epithet of εὐώδης—the plaything (ἄθυρμα) of the goddess of Love. (Eustath. *ad Dionys. Per.* 508.)

Cyprus lies between Asia and Africa, and the flora and fauna of the island partake of the characteristics of both continents. A list of the plants, birds, quadrupeds, and fishes, found in Cyprus, is given in Walpole (*Turkey and Greece*, vol. i. p. 253, foll.). The Ferula Graeca—or νάρθηκα, as it is now called, with a slight alteration from the ancient name—is one of the most important plants of the island in respect to its economical uses. The stalks furnish the poor Cyprian with a great part of his household furniture; and the pith is used instead of tinder for conveying fire from one place to another, as taught by Prometheus of old. (Aesch. *Prom.* 109.)

The level tracts were in the neighbourhood of Salamis and Citium, the former was watered by the river Pediaeus, and the latter by the Tretus; but, as these streams are occasionally dry, marshes have in consequence been formed. Strabo (xiv. p. 682) begins his description of the island with Cape Acamas (Ἄκαμας), at the W. extremity of the island, which he describes as a thickly wooded headland, divided into two summits rising towards the N. (Comp. Ptol. v. 14 § 1; Plin. v. 31; *Stadiasm.* §§ 282, 292, 293.) The modern name, after the celebrated metropolitan of Cyprus, is *Haghios Epiphanios*, which is shortened into *St. Pifano*. The next point, in a S. direction, is Drepanon (Δρέπανον, Ptol.

v. 14. § 1: *Trepano*). Then the roadstead and harbour of Paphos (Πάφος). The cape which closes the bay of *Baffo* to the W. is the Zephyrium Promontorium (Ζεφύριον, Ptol. v. 14. § 1; Ζεφυρία ἄκρα, Strab. p. 683). To the S. is another headland, Arsinoë (Ἀρσινόη), followed by Phrurium (Φρούριον, Ptol. v. 14. § 1: *Capo Blanco*). At a little distance further inland was Hierocepia (Ἱεροκηπία, Strab. p. 684). Then follow Palaepaphos (Παλαίπαφος: *Kukla* or *Konuklia*), Boosura (Βοόσουρα: *Bisur*), Treta (Τρήτα: *Tera*), and Curium (Κούριον) with a port built by the Argives Near this was the point of Curias (Κουρίας: *Capo delle Gatte*), at a little distance from which are some salt marshes which receive an arm of the river Lycus (Λύκος, Ptol. v. 14. § 2). Amathus (Ἀμαθοῦς: *Old Limasol*), which next followed, was a Phoenician colony. Beyond was the little town of Palaea (Πάλαια, Strab. p. 683), at the foot of a mountain shaped like a breast (μαστοειδές), Olympus (Ὀλυμπος: *Monte Sta. Croce*). Citium (Κίτιον) was a large town with a harbour that could be closed; to the W. of it was the little river Tetius (Τέτιος, Ptol. v. 14. § 2: *Tesis*), and to the E. the promontory Dades (Δάδες, Ptol. *l. c.*: *Kiti*). A rugged line of coast follows for several miles along a bay which lies between this headland and that of Throni (Θρόνοι: *Pila*). Above Pedalium (Πηδάλιον: *Capo della Grega*), the next point on the E. coast, rose a hill with a temple consecrated to Aphrodite. The harbour Leucolla (Λεύκολλα: *Porta Arnio dia e Lucola*). Ammochostus (Ἀμμόχωστος, Ptol. v. 14. § 3; *Stadiasm.* § 287), near the river Pediaeus (Πεδιαῖος), a name which has been transmitted by corruption to the Venetian *Famagosta*. Further N. was Salamis (Σαλαμίς), Elaea (Ἐλαία, Ptol. *l. c.*: *Chaulu-bernau*), Urania (Οὐρανίης πέδον ἔδρης, Nonn. *Dionys.* xiii. 450), Carpasia (Καρπασία), and the promontory called Dinaretum, with the islands called the Keys of Cyprus (αἱ Κλεῖδες). The iron-bound shore to the NE. was called the shore of the Greeks (Ἀχαιῶν ἀκτή: *Jalousa*), from the story that Teucer and his colonists had landed here. (Strab. p. 682.) On this coast, 70 stadia from Salamis, was Aphrodisium (Ἀφροδίσιον, Ptol. v. 14. § 4; Strab. p. 682), Macaria (Μακαρία, Ptol. *l. c.*), Cerynia (Κερύνεια), and Lapethus (Λάπηθος: *Lapitho* or *Lapta*). Cape Crommyon (Κρομμύων ἄκρα) was the most N. point of the island; near this were the towns of Cerbia (Κερβεία) and Soli (Σόλοι). The promontory of Callinusa (Καλλίνουσα) completes the circuit of the island. In the interior were the towns of Aepeia (Αἰπεῖα), Limenia (Λιμενία), Tamassus (Ταμασσός), Tremithus (Τρεμιθοῦς), Leucosia (Λευκωσία), Chytrus (Χύτρος), and Marium (Μάριον). An account of these places will be found under their several heads: most of the towns have now disappeared.

Cyprus seems to have been colonized by the Phoenicians at a very early period, and if we may trust the Syrian annals consulted by the historian Menander (Joseph. *Ant.* viii. 5. § 3, *c. Apion.* 1. 18; comp. Virg. *Aen.* 1, 643), was subject to the Syrians, even in the time of Solomon. We do not know the dates of the establishment of the Greek cities in this island; but there can be no doubt but that they were later than this period, and that a considerable portion of the soil and trade of Cyprus passed from the Phoenicians to the Greeks. Under Amasis the island became subject to the Aegyptian throne (Herod. ii. 182); he probably sent over African colonists. (Comp. Herod. vii. 90.) On the invasion of Aegypt by Cambyses Cyprus surrendered to the Persians, and furnished a squadron for the expedition. (Herod. iii. 19.) It continued to form a part of the Persian empire, and was with Phoenicia and Palestine the fifth satrapy in the arrangement made by Dareius (Herod. iii. 91.) During the Ionian revolt the whole island, except Amathus, threw off the Persian yoke. The Cyprians were attacked by the Persians by land and sea, and after varying success, were defeated, and their leader Onesilus slain. After this the island was again subject to Dareius (Herod. v. 104—116), and in the expedition of Xerxes furnished 150 ships. (Herod. vii. 90.) After the overthrow of the Persians at Salamis, a Grecian fleet was despatched to Cyprus and reduced the greater part of it. (Thuc. i. 94.) The Athenians sent out another expedition against it, but in consequence of a plague and the death of Cimon, the attempt was relinquished. (Thuc. i. 112.) The brilliant period of its history belongs to the times of Evagoras, king of Salamis, when Hellenic customs and civilization received a new impulse. He was succeeded by his son Nicocles; another Evagoras, son of Nicocles, was joined with Phocion, to recover Cyprus for the king of Persia, from whom it had revolted. (Diod. xvi. 42, 46.) Cyprus again became a tributary to the Persians, and remained such till the battle of Issus, when the several states declared for Alexander, and joined the Macedonian fleet with 120 ships at the siege of Tyre. (Arrian. ii. 20.) They were afterwards ordered to cruise off the Peloponnesus with 100 ships along with the Phoenicians. (Arrian. iii. 6.) When the empire of Alexander was broken up, Cyprus fell with Aegypt to the lot of Ptolemy. Demetrius invaded the island with a powerful fleet and army, defeated Ptolemy's brother Menelaus, and shut him up in Salamis, which he besieged both by sea and land. Ptolemy hastened to his relief with 140 ships; and after a sea-fight — one of the most memorable in ancient history, B. C. 306, — the whole island fell into the hands of Demetrius. (Diod. xx. 47—53; Plut. *Demetr.* 15—18; Polyaen. iv. 7. § 7; Justin. xv. 2.) In B. C. 295, Ptolemy recovered the island, and it became from this time an integral portion of the Aegyptian monarchy. (Plut. *Demetr.* 35, 38.) It formed the brightest jewel in the Alexandrian diadem; the timber of Olympus was used for the navy of Aegypt, and its metallic and other riches contributed to the revenue. Independently of its importance as a military position, the Ptolemies had a personal interest in securing it as a place of refuge for themselves or their treasures, in case of invasion or internal revolutions. Under the Lagid dynasty, the government of the island was committed to some one belonging to the highest class of the Alexandrian court, called the "kinsmen of the king." This viceroy had full powers, as it would appear from the inscriptions in which he is entitled στρατηγὸς καὶ ναύαρχος καὶ ἀρχιερεὺς ὁ κατὰ τὴν νῆσον. Ptolemy Philadelphus founded the Cyprian cities which bore the name of his wife — Arsinoë. On the decline and fall of Aegypt, Cyprus with Cyrenaica was the only foreign possession remaining to the crown. Polycrates, an Argive, about B. C. 217, was governor of Cyprus, and secured, by his faithfulness and integrity, the island for Ptolemy Epiphanes, the infant son and successor of Philopator. On the division of the monarchy between the brothers Ptolemy Philometor and Euergetes, Euergetes, in contravention of the arrangement

was anxious to take Cyprus to his share. In B. C. 154, Euergetes went to Rome, to seek assistance from the senate. Five legates, but no Roman army, were despatched to aid him; but Philometor, anticipating him, had already occupied Cyprus with a large force, so that when his brother landed at the head of his mercenary troops, he was soon defeated and shut up in Lapethus, where he was compelled to surrender, on condition that he should content himself with the kingdom of Cyrene. The Romans did not again interfere to disturb the arrangement thus concluded. During the dissensions of the brothers, Demetrius Soter, king of Syria, had endeavoured to make himself master of Cyprus, but unsuccessfully. On the accession of Ptolemy Lathyrus to the throne of Aegypt, his younger brother, Ptolemy Alexander, went to Cyprus. Afterwards, when by the intrigues of Cleopatra, the queen-mother, Alexander became king of Aegypt, Lathyrus retired to Cyprus, and held it as an independent kingdom for the 18 years during which Cleopatra and Alexander reigned in Aegypt, B. C. 107—89. When Lathyrus was recalled by the Alexandrians to Aegypt, Alexander, his brother, in the hope of becoming master of Cyprus, invaded the island; but was defeated in a naval action by Chaereas, and fell in the battle. While Ptolemy Auletes occupied the throne of Aegypt, another Ptolemy, a younger brother, was king of Cyprus. This prince had obtained from the Roman people the complimentary title of their friend. (Cic. *pro Sest.* 26; Schol. Bob. p. 301, ed. Orell.) On the pretence that he had abetted the pirates (Schol. Bob. *l. c.*), he was commanded to descend from the throne. In B. C. 58, Clodius, who had a personal enmity against the king (Appian. *B. C.* ii. 23; Dion Cass. xxxviii. 30), proposed to deprive him of his kingdom, and confiscate his large treasures to the service of the state. A "rogation" was brought forward by the tribune, that Cato should be appointed to carry into execution this act of frightful injustice. Cato accepted this disgraceful commission; but half ashamed of the transaction, despatched a friend from Rhodes to deliver the decree, and to hold out to the injured king the promise of an honourable compensation in the priesthood of the Paphian Aphrodite. Ptolemy preferred to submit to a voluntary death. (Plut. *Cat. Min.* 34, 39.) Cyprus became a Roman province, and the fatal treasures amassed by the king, were poured into the coffers of the state. (Pat. Vell. ii. 45.) The island was annexed to Cilicia (Cic. *ad Fam.* i. 7; *ad Att.* vi. 2), but had a quaestor of its own (*ad Fam.* xiii. 48), and its own courts for the administration of justice (*ad Att.* v. 21). In B. C. 47, it was given by Caesar to Arsinoë and Ptolemy, the sister and brother of Cleopatra. (Dion Cass. xlii. 95.) M. Antonius afterwards presented it to the children of Cleopatra. (Dion Cass. xlix. 32, 41; comp. Strab. p. 685.) After the battle of Actium, at the division of the provinces between the emperor and the senate, B. C. 27, it was made an imperial province. (Dion Cass. liii. 12.) In B. C. 22, it was given up to the senate (Dion Cass. liv. 4), and was from that time governed by propraetors, with the title of Proconsul, with a "legatus" and a "quaestor." (Marquardt, *Becker's Röm. Alt.* vol. iii. pt. 1. p. 172; Orell. *Inscr.* 3102.) The proconsul resided at Paphos. (*Act. Apost.* xiii. 6, 7.) From the narrative in the Acts of the Apostles (xii. 4—12), it would seem that a considerable part of the population was of Jewish extraction; and in the fatal insurrection during the reign of Hadrian, they are said to have massacred 240,000 of the Grecian inhabitants, and obtained temporary possession of the island. (Milman, *Hist. of Jews*, vol. iii. p. 112.) Under the Byzantine emperors it was governed by a "Consularis," and the capital was transferred from Paphos to Salamis or Constantia (Hierocl.). In A. D. 648, Moawiyah, the general of Othman, invaded the island, which capitulated, the Saracen general agreeing to share the revenues with the Greek emperor. In A. D. 803—806, it fell into the hands of Harun el Rashid, but was afterwards restored to the empire by the conquests of Nicephorus II. Isaac Angelus lost the island where Alexis Commenus had made himself independent; but was deprived of his conquest by Richard Coeur de Lion, A. D. 1191, who ceded it to the Templars, but afterwards resumed the sovereignty, and in A. D. 1192, gave it to King Guido of Jerusalem. Cyprus was never again united to the Byzantine empire.

Cyprus, lying in that sea which was the extreme nurse of the Grecian race, never developed the nobler features of Hellenic culture and civilization. The oriental character entirely predominated; the worship had but little connection with the graceful anthropomorphism of Hellas, but was rather a deification of the generative powers of nature as common to the Phoenicians, mixed up with orgiastic rites from Phrygia. The goddess, who was evidently the same as the Semitic Astarte, was worshipped under the form of a rude conical stone. (Tac. *Hist.* ii. 3.) The exuberance of nature served to stifle every higher feeling in sensual enjoyment. (Comp. Athen. vi. p. 257, xii. p. 516.) A description of the constitution was given in the lost work of Aristotle on the Polities, and Theophrastus had composed a treatise upon the same subject. (Suid. *s. v.* Τιάρα.) That such men should have thought it worth their while to investigate this matter shows that it possessed considerable interest; as far as the scanty notices that have come down go, it appears to have been governed by petty princes of an oriental character. (Comp. Herod. vii. 90.) For coins of Cyprus, see Eckhel, vol. iii. p. 84; H. P. Borrell, *Notice sur quelq. Méd. gr. des Rois de Chypre.* Paris, 1836; Meursius, *Creta, Cyprus*, &c., Amst. 1675; D'Anville *Mém. de l'Acad. des Inscr.* vol. xxxii. p 548; Mariti, *Viaggi*, vol. i.; Von Hammer, *Topogr. Ansicht. aus der Levante;* Turner's *Levant;* vol. ii. pp. 40, 528; Engel, *Kypros;* Ross, *Reisen nach Kos, Halikarnassos, Rhodos, und der Inseln Cypern*, Halle, 1852; Luynes, *Numismatique et Inscriptions Cypriotes*, Paris, 1852. [E. B. J.]

CYPSELA (Κύψελα), a town on the river Hebrus in Thrace, which was once an important place on the via Egnatia. It is the same as the modern *Ipsala*, or *Chapsylar*, near *Kesham*. (Strab. pp. 322, 329; Ptol. iii. 11. § 13; Steph. Byz. *s. v.*; Ann. Comn. vii. p. 204; Liv. xxxi. 16, xxxviii. 40, 41; Mela, ii. 2; Plin. iv. 18.) [L. S.]

CYPSELA (Κύψελα: *Eth.* Κυψελῖνος), a fortress in the district of Parrhasia in Arcadia, which was occupied and fortified by the Mantineians in the Peloponnesian war, in order to annoy the Lacedaemonian district Sciritis. (Thuc. v. 33.) Kiepert, in his map, identifies Cypsela with Basilis, since the latter is said to have been founded by Cypselus: the only objection to this conjecture is the distance of Cypsela from the district Sciritis. [BASILIS.]

CYPTA'SIA (Κυπτασία), a place on the coast of Asia Minor (Ptol. v. 4), apparently the same

which the Table places 7 miles from Sinope on the road to Amisus, under the name of Cloptasa. Hamilton (*Researches*, *&c.* vol. i. p. 306) supposes that it may be a place on the coast now called *Chobanlar*. [G. L.]

CYRA [CYRESCHATA].

CYRAUNIS. [CERCINA.]

CYRBE (Κύρβη: *Eth.* Κυρβαῖος), a city of Pamphylia, mentioned by Hecataeus in his *Asia*. (Steph. B. *s. v.*) [G. L.]

CYRENAEI. [CYRENAICA.]

CYRENA'ICA (ἡ Κυρηναίη χώρη, Herod. iv. 199; ἡ Κυρηναία, Strab. xvii. p 837; ἡ Κυρηναϊκὴ ἐπαρχία, Ptol. iv. 4; Cyrenaïca Provincia, Cyrenaïca Africa, and Cyrenaïca simply, Mela, i. 8. § 1; Plin. v. 5, &c.: *Adj.* Κυρηναϊκός, especially with reference to the philosophic sect founded by Aristippus, ἡ Κυρηναϊκὴ φιλοσοφία, Strab. xvii. p. 837; Diog. Laërt. ii. 85; Κυρηναῖος, Cyrenaïcus, Cyrenaeus, Cyrenensis), a district, and, under the Romans, a province of N. Africa, also called, from the time of the Ptolemies, PENTAPOLIS (Πεντάπολις, Ptol.; Agathem. ii. 5), PENTAPOLIS LIBYAE (Πεντάπολις Λιβύης, Joseph. vii. 38; Sext. Ruf. 13), and PENTAPOLITANA REGIO (Plin. *l. c.*).* The former name was derived from CYRENE, the capital of the district; and the latter from its five chief cities, namely, CYRENE, BARCA, TEUCHEIRA (aft. Arsinoë), HESPERIDES (aft. Berenice), and APOLLONIA, which was at first the port of Cyrene. The names may, however, be distinguished from one another; Cyrenaica denoting the whole district or province in its widest sense, and Pentapolis being a collective name for the five cities with their respective territories.

In its widest sense the term includes the whole of the country which was subject to Cyrene, when that city was most flourishing, from the borders of Carthage on the W. to those of Egypt on the E. On both sides, as was natural from the character of the intervening deserts, the boundaries varied. On the E. they seem never to have been perfectly defined, being placed at the CHERSONESUS MAGNA (*Ras-et-Tin*), or at the CATABATHMUS MAJOR (*Marsa Sollom* or *Akabet et Kebira*, the present boundary of *Tripoli* and *Egypt*), according as MARMARICA was included in Cyrenaica or not. On the W. the boundary was fixed, after long disputes, at the bottom of the Great Syrtis. [ARAE PHILAENORUM.] On the S. the nominal limits of the country reached as far as the oasis of PHAZANIA (*Fezzan*). (Scylax, p. 45; Strab. xvii. p. 838; *Stadiasm.* p. 451; Sall. *Jug.* 19; Mela, Plin. *ll. cc.*). On the N. the shore was washed by that part of the Mediterranean which was called the Libyan Sea (LIBYCUM MARE), and on the W. by the Greater Syrtis.

But the district actually occupied by the Greek colonists comprised only the table land, known as the plateau of Barca, with the subjacent coast. It may be considered as beginning at the N. limit of the sandy shores of the Great Syrtis at BOREUM PR. (*Ras Teyonas*, S. of *Ben-Ghazi*), between which and the Chersonesus Magna the country projects into the Mediterranean in the form of a segment of a circle, whose chord is above 150 miles long, and its arc above 200, lying directly opposite to the Peloponnesus, at the distance of about 200 miles.

From its position, formation, climate, and soil, this region is perhaps one of the most delightful on the surface of the globe. Its centre is occupied by a moderately elevated table-land, whose edge runs parallel to the coast, to which it sinks down in a succession of terraces, clothed with verdure, intersected by mountain streams running through ravines filled with the richest vegetation, well watered by frequent rains, exposed to the cool sea-breezes from the N., and sheltered by the mass of the mountain from the sands and hot winds of the *Sahara*. The various terraces enjoyed a great diversity of climates, and produced a corresponding variety of flowers, vegetables, and fruits, and the successive harvests, at the different elevations, lasted for eight months out of the twelve. (Herod. iv. 198, 199; Diod. iii. 50; Arrian. *Ind.* 43; Eustath. *ad Dion. Perieg.* 312.) The table land extends some 70 or 80 miles in breadth between the *Sahara* and the coast, but it is only on its N. and NW. slopes that it enjoys the physical advantages now described, and on account of which it is called to this day *Jebel Akdar* — i. e. the *Green Mountain*. Among its products are enumerated corn, oil, wine, all kinds of fruits, especially dates, figs, and almonds (Scyl. p. 46; Diod. iii. 49; Plin. xiii. 4. s. 9, xvii. 30. § 4; Synes. *Epist.* 133, 147); cucumbers (Plin. xx. 1. s. 3), truffles (μίσυ, Ath. ii. p. 62; Plin. xix. 3. s. 12); cabbage (Ath. i. p. 27, iii. p. 100), box (Theophr. *Hist. Plant.* iii. 15), saffron (Ath. xv. p. 682; Plin. xxi. 6. s. 17; Synes. *Epist.* 133), flowers from which exquisite perfumes were extracted (Theophr. *H. P.* vi. 6; Ath. xv. p. 689; Plin. xxi. 4. s. 10); and a very rare plant, for which the country was especially celebrated, namely, *Silphium*, or *laserpitium*, the plant which produced the gum resin, called *laser* (ὀπὸς Κυρηναῖος), which was in the highest esteem among the ancient physicians (Herod. iv. 169; Dioscor. iii. 84; Theophr. *H. P.* vi. 3; Arrian. *Anab.* iii. 28; Strab. ii. p. 131; Plin. ix. 3. s. 15, xix. 3. s. 1, xxii. 23; Plaut. *Rud.* iii. 2. 16; Eckhel, *Doctr. Num. Vet.* vol. iv. p. 119; Mionnet, *Descr. de Med.* vol. vi. pp. 373, foll.: the plant, which had already become scarce in the time of the Romans, is now found in abundance: Della Cella, *Viaggio da Tripoli*, &c.; Pacho, *Voyage dans la Marmarique*, &c., p. 250). The district was also famous for its honey (Synes. *Epist.* 147); its horses, large studs of which were kept at Cyrene and at Barca (Pind. *Pyth.* iv. 2; Ath. iii. p. 100; Dionys. Perieg. 213; Synes. *Epist.* 40; Diod. xvii. 49; Strab. xvii. p. 837; Steph. B. p. 155), and its ostriches (Synes. *Epist.* 133). As some check upon all these advantages, the country was terribly subject to the annual ravages of locusts (Plin. xi. 29. s. 35; Liv. Epit. lx.; Jul. Obseq. 90; Oros. v. 11; Synes. *Epist.* 58); and the great abundance of natural gifts disposed the inhabitants to luxury.

The native Libyan tribes, who are mentioned as inhabiting the country in the earliest known times, were the AUSCHISAE on the W., the ASBYSTAE in the centre, and the GILIGAMMAE on the E.; but in the time of Herodotus these peoples had already been driven into the interior by the Greek settlers; and, during the whole period of ancient history, Cyrenaica is essentially a part of the Hellenic world. (A few other tribes are mentioned by Ptolemy, iv. 4. s. 10.) The first Greek settlement, of which we

* It is also called "Libya about Cyrene" (Dion Cass. liii. 12, Κρήτη τε μετὰ Λιβύης τῆς περὶ Κυρήνην; *Act. Apost.* ii. 10, τὰ μέρη τῆς Λιβύης τῆς κατὰ Κυρήνην).

have any clear account, was effected by BATTUS (*Dict. of Biog. s. v.*), who led a colony from the island of Thera, and first established himself on the island of Platea at the E. extremity of the district, and afterwards built CYRENE (B. C. 631). The dynasty, which he there founded, governed the country during 8 reigns, though with comparatively little power over some of the other Greek cities. Of these the earliest were TEUCHEIRA and HESPERIDES, then BARCA, a colony from Cyrene; and these, with Cyrene itself and its port APOLLONIA, formed the original Lybian Pentapolis. The comparative independence of Barca, and the injury inflicted on the country by the Persian invasion under Cambyses, diminished the power of the later kings of Cyrene, and at last the dynasty was overthrown, and a republic established about the middle of the 5th century B. C. [CYRENE]. When Alexander invaded Egypt the Cyrenaeans made an alliance with him (Diod. xvii. 49; Curt. iv. 7). The country was made subject to Egypt by Ptolemy the son of Lagus, B. C. 321. (Diod. xviii. 19—21, xx. 40; Justin. xiii. 6.) It appears to have flourished under the Ptolemies, who pursued their usual policy of raising new cities at the expense of the ancient ones, or restoring the latter under new names. Thus Hesperides became Berenice, Teucheira was called Arsinoë, Barca was entirely eclipsed by its port which was raised into a city under the name of Ptolemaïs, and Cyrene began to decay in consequence of the favours conferred upon its port Apollonia. After these changes, the term Pentapolis, which became the common name of the country, refers to the five cities of Cyrene, Apollonia, Ptolemaïs, Arsinoë, and Berenice. The last king of the Egyptian dynasty, Apion, an illegitimate son of Ptolemy Physcon (on whose death in B. C. 117, he had obtained the government), left the country to the Romans by his testament, in the year B. C. 95, according to Livy, though Appian gives a later date, apparently through a confusion with the time of its erection into a Roman province. (Liv. Epit. lxx.; Appian. *B. C.* i. 111, *Mithr.* 121; Justin. xxxix. 5; Eutrop. vi. 11; Sext. Ruf. 13.) At first the Romans granted the cities their freedom, and bestowed upon them the former royal domain, only exacting a tribute (Cic. *de Leg. Agr.* ii. 19); but quarrels soon broke out between the different states; and, after Lucullus had made, by order of Sulla, a vain attempt, real or affected, to reconcile them (Plut. *Lucull.* 2; Joseph. *Antiq.* xiv. 7. § 2), the Romans applied their usual last remedy, and reduced the country to a province, under the name of Cyrenaica (probably in B. C. 75), which was united with Crete, on the conquest of that island by Q. Metellus Creticus, B. C. 67 [CRETA]. In the division of the provinces under Augustus, the united province, under the name of Creta-Cyrene, Creta et Cyrene, or Creta simply, was constituted a senatorial province, under the government of a propraetor, with the title of proconsul, who had a legatus, and one if not two quaestors. (Orelli, *Inscr.* Nos. 3658, 3659; Böckh, *Corp. Inscr. Graec.* Nos. 2588, 3532, 3548; Gruter, p. 415, no. 5, p. 471, no. 6; Eckhel, vol. iv. p. 126; Tac. *Ann.* iii. 38, 70; Strab. xvii. p. 840, Senec. *Controv.* iv. 27; Suet. *Vesp.* 2; Marquardt, *Becker's Röm. Alterth.* vol. iii. pt. 1, p. 223.) Under Constantine, Crete and Cyrenaica were made separate provinces; the latter was called Libya Superior, and was placed under the government of a praeses. (Böcking, *Notit. Dign.* vol. i. p. 137; Marquardt, *l. c.*) It should be observed that, under the Romans, the E. boundary of the province, which divided it from MARMARICA, was formed by an imaginary line drawn southwards from AXYLIS, a town somewhat to the W. of the Chersonesus Magna.

The decline of the country in prosperity may be dated chiefly from the reign of Trajan, when the Jews, large numbers of whom had settled there under the Ptolemies (Joseph. *Ant. Jud.* xiv. 7, *c. Apion.* ii. 4; *Act. Apost.* ii. 10), rose in insurrection, massacred 220,000 Romans and Cyrenaeans, and were put down with great difficulty and much slaughter. (Dion Cass. lxviii. 32.) The loss of population during these bloody conflicts, and the increasing weakness of the whole empire, left the province an easy prey to the Libyan barbarians, whose attacks were aided by the ravages of locusts, plagues, and earthquakes. The sufferings of the Pentapolis from these causes at the beginning of the 5th century are pathetically described by Synesius, the bishop of Ptolemaïs, in an extant oration, and in various passages of his letters (*Catastasis &c.; Epist.* 57, 78, 125; *de Regno*, p. 2), and at a later period by Procopius (*Aedif.* vi. 2). In A. D. 616, the Persian Chosroes overthrew the remains of the Greek colonies so utterly, as to leave only the gleanings of the harvest of destruction to the Arab conquerors, who finally overran the country in A. D. 647. (Gibbon, vol. viii. p. 227, vol. ix. p. 444, foll., ed. Milman.)

For the purposes of descriptive geography, the Cyrenaic coast must be divided into two parts at the promontory called BOREUM (*Ras Tezyonas*), S. of which, along the E. shore of the Syrtis Major, were numerous small and unimportant places, whose positions are very difficult to determine (Ptol. iv. 4. § 3; SYRTES). N. of this promontory lay HESPERIDES (aft. Berenice: *Benghazi*), upon the little stream called LATHON, the only river in the country, which took its rise in the sand-hills called HERCULIS ARENAE, and near it the little lake called Triton, or Lacus Hesperidum, which some of the ancients confounded with that at the bottom of the Lesser Syrtis. [TRITON.] Following the curve of the coast to the NE., we come to TEUCHEIRA (aft. Arsinoë, *Taukra*), then to PTOLEMAIS (*Tolmeïta*), originally the port of Barca, but under the Ptolemies the chief of the Five Cities: BARCA itself lay about 12 miles inland: the next important position on the coast is the promontory and village of PHYCUS (*Ras Sem* or *Ras-al-Razat*), the N.-most headland of the part of the African coast E. of the Lesser Syrtis; then APOLLONIA (*Marsa Sousa*), the former port of CYRENE, which lies inland, about 8 miles from the coast, SE. of Phycus and SW. of Apollonia. Further to the E. was the port called NAUSTATHMUS (*Marsa-al-Halal*, or *Al Natroun*), then the promontory ZEPHYRIUM, then DARNIS (*Derna*), AXYLIS, and the CHERSONESUS MAGNA (*Ras-at-Tyn*), where the coast formed a bay (*G. of Bomba*), in which lay the island of PLATEA (*Bomba*), the first landing-place of the colonists from Thera. Another little island off the shore near Pr. Zephyrium was called Laea or the Island of Aphrodite (Λαιὰ ἢ Ἀφροδίτης νῆσος, Ptol. iv. 4. § 15: *Al Hiera*). Ptolemy (§§ 11—13) mentions a large number of places in the interior, most of them mere villages, and none apparently of any consequence, except Barca and Cyrene. Of the hills which run parallel to the coast, those along the E. shore of the Syrtis Major were called HERCULIS ARENAE (Ἡρακλέους Ὀῖνες), SW. of which were the VELPI M. (τὰ Οὔελπα ὄρη), and

considerably to the E., on the S. frontier, the BAECOLICUS M. (τὸ Βαικολικὸν ὄρος: Ptol. *l. c.* § 8). The oasis of AUGILA was reckoned as belonging to Cyrenaica. (Della Cella, *Viaggio da Tripoli di Barberia alle Frontieri Occidentali dell' Egitto*, Genoa, 1819; Beechey, *Expedition to explore the N. coast of Africa, from Tripoli E.-ward, &c.*, London, 1828, 4to.; Pacho, *Relation d'un Voyage dans la Marmarique, la Cyrénaique, &c.* Paris, 1827—1829, 4to.; Barth, *Wanderungen durch das Punische und Kyrenaïsche Küstenland*, c. 8, Berlin, 1849: and for the coins, Eckhel, vol. iv. pp. 117, &c.) [P. S.]

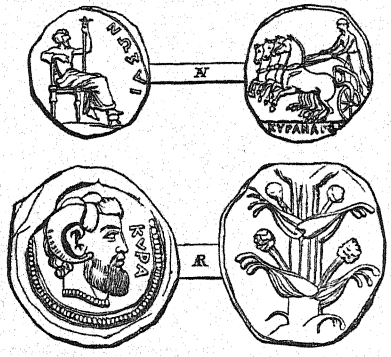
CYRE'NE or CYRENAE (ἡ Κυρήνη. *Eth.* and *Adj.* as those of CYRENAICA: *Ghrennah*, very large Ru.), the chief city of CYRENAICA, and the most important Hellenic colony in Africa, was founded in B. C. 631 by Battus and a body of Dorian colonists from the island of Thera. (The date is variously stated, but the evidence preponderates greatly in favour of that now given: Clinton, *F. H.* vol. i. *s. a.*: for the details of the enterprise, and of the subsequent history of the house of Battus, see *Dict. of Biog. s. v. Battus*, and Grote, *Hist. of Greece*, vol. iv. p. 39, seq.) The colonists, sailing to the then almost unknown shores of Libya, in obedience to the Delphic oracle, took possession first of the island of Platea, in the *Gulf of Bomba*, which they seem to have mistaken for the mainland. Hence, after two years of suffering, and after again consulting the oracle, they removed to the opposite shore, and resided in the well-wooded district of Aziris for six years, at the end of which time some of the native Libyans persuaded them to leave it for a better locality, and conducted them through the region of Irasa, to the actual site of Cyrene. Though Irasa was deemed so delectable a region that the Libyan guides were said to have led the Greeks through it in the night lest they should settle there, the spot at which their journey ended is scarcely inferior for beauty and fertility to any on the surface of the globe. In the very middle of that "projecting bosom of the African coast" (as Grote well calls it), which has been described under CYRENAICA, on the edge of the upper of two of the terraces, by which the table-land sinks down to the Mediterranean, in a spot backed by the mountains on the S. and in full view of the sea towards the N., and thus sheltered from the fiery blasts of the desert, while open to the cool sea breezes, at the distance of 10 miles from the shore, and at the height of about 1800 feet, an inexhaustible spring bursts forth amidst luxuriant vegetation, and pours its waters down to the Mediterranean through a most beautiful ravine. Over this spring which they consecrated to Apollo, the great deity of their race (hence Ἀπόλλωνος κρήνη, Callim. *in Apoll.* 88), the colonists built their new city, and called it Cyrene from Cyre the name of the fountain. At a later period an elegant mythology connected the fountain with the god, and related how Cyrene, a Thessalian nymph, beloved of Apollo, was carried by him to Africa, in a chariot drawn by swans. (Müller, *Dorians*, Bk. ii. c. 3. § 7.)

The site of Cyrene was in the territory of the Libyans named ASBYSTAE; and with them the Greek settlers seem from the first to have been on terms of friendship very similar to those which subsisted between the Carthaginians and their Libyan neighbours. The Greeks had the immense advantage of commanding the abundant springs and fertile meadows to which the Libyans were compelled to resort when the supplies of the less favoured regions further inland began to fail. A close connection soon grew up between the natives and the Greek settlers; and not only did the former imitate the customs of the latter (Herod. iv. 170); but the two races coalesced to a much greater extent than was usual in such cases. It is very important to remember this fact, that the population of Cyrene had a very large admixture of Libyan blood by the marriages of the early settlers with Libyan wives (Herod. iv. 186—189; Grote, vol. iv. p. 53). The remark applies even to the royal family; and, if we were to believe Herodotus, the very name of *Battus*, which was borne by the founder, and by his successors alternately with the Greek name Arcesilaüs, was Libyan, signifying *king*; and we have another example in that of *Alazir*, king of Barca. For the rest, the Libyans seem to have formed a body of subject and tributary Perioeci (Herod. iv. 161). They were altogether excluded from political power, which, in strict conformity with the constitution of the other states of Spartan origin, was in the hands exclusively of the descendants from the original settlers, or rather of those of them who had already been among the ruling class in the mother state of Thera.

The dynasty of the Battiadae lasted during the greater part of two centuries, from B. C. 630 to somewhere between 460 and 430; and comprised eight kings bearing the names of Battus and Arcesilaüs alternately; and a Delphic oracle was quoted to Herodotus as having defined both the names and numbers. (Herod. iv. 163.) Of Battus I., B. C. 630—590, it need only be said that his memory was held in the highest honour, not only as the founder of the city, but also for the benefits he conferred upon it during his long reign. He was worshipped as a hero by his subjects, who showed his grave, apart from those of the succeeding kings, where the Agora was joined by the road (σκυρωτὴ ὁδός), which he made for the procession to the temple of Apollo. (Pind. *Pyth.* v.; Callim. *Hymn. in Apoll.* 77; Paus. iii. 14, x. 15; Catull. vii. 6; Diod. *Excerpt. de Virt. et Vit.* p. 232.) Nothing of importance is recorded in the reign of his son, Arcesilaüs I., about B. C. 590—574; but that of his successor, Battus II. (about B. C. 574—554), surnamed the Prosperous, marks the most important period of the monarchy; nothing less, in fact, than a new colonization. An invitation was issued to all Greeks, without distinction of race, to come and settle at Cyrene, on the promise of an allotment of lands. It seems probable that the city of Apollonia, the port of Cyrene, owed its foundation to this accession of immigrants, who arrived by sea direct, and not, like the first colonists, by the circuitous land route from the *Gulf of Bomba*. (Grote, p. 55.) The lands promised to the new settlers had of course to be taken from the natives, whose general position also was naturally altered for the worse by the growing power of the city. The Libyans, therefore, revolted, and transferred their allegiance to Apries, king of Egypt, who sent an army to their aid; but the Egyptians were met by the Cyrenaeans in Irasa, and were almost entirely cut to pieces. This conflict is memorable as the first hostile meeting of Greeks with Egyptians, and also as the proximate cause of the overthrow of Apries. Under Amasis, however, a close alliance was formed between Egypt and Cyrene, and the Egyptian king took his wife Ladice from the house of Battus. (Herod. ii. 180—181.) The misfortunes of the monarchy began in the reign of Arcesilaüs II., the

son of Battus II., about B. C. 554—544, whose tyranny caused the secession of his brothers, the foundation of Barca, and the revolt of a large number of the Libyan Perioeci, in a conflict with whom no less than 7000 hoplites were slain; and the king was soon afterwards strangled by his brother Learchus. To this loss of prestige, his successor, Battus III. added the disqualification of lameness. The Cyrenaeans, under the advice of the Delphic oracle, called in the aid of Demonax, a Mantineian, who drew up for them a new constitution; by which the encroachments of the royal house on the people were more than recovered, and the king was reduced to political insignificance, retaining, however, the landed domain as his private property, and also his sacerdotal functions. The political power, in which, it would seem, none but the descendants of the original colonists had any share, was now extended to the whole Greek population, who were divided by Demonax into three tribes: — (1.) The Theraeans, to whom were still attached the Libyan Perioeci: (2) Greeks from Peloponnesus and Crete: (3) Greeks from the other islands of the Aegean: and a senate was also constituted, of which the king appears to have been president. (Herod. iv. 161, 165.) In other respects the constitution seems to have resembled that of Sparta, which was, through Thera, the original metropolis of Cyrene. We read of Ephors, who punished with *atimia* litigious people and impostors, and of a body of 300 armed police, similar to the Hippeis at Sparta (Heracleid. Pont. 4; Hesych. *s. v.* Τριακάτιοι; Eustath. *ad Hom. Od.* p. 303; Grote, pp. 59, 60; Müller, *Dor.* Bk. iii. c. 4. § 5, c. 7 § 1. c. 9. § 13.) After the time of Battus III., his son Arcesilaüs III. and his mother Pheretime attempted to overturn the new constitution, and to re-establish despotism. Their first efforts led to their defeat and exile; but Arcesilaüs returned at the head of a new body of emigrants, chiefly from Ionia, took Cyrene, and executed cruel vengeance upon his opponents. Whether from a desire to confirm his position, or simply from dread of the Persian power, he sent to Memphis to make his submission to Cambyses, and to offer him an annual tribute, as well as a present; the 500 minae which formed the latter were deemed by Cambyses so inadequate, that he flung them contemptuously to his soldiers. After these things, according to the motive assigned by Herodotus (iv. 163, 164), Arcesilaüs became sensible that he had disobeyed the Delphic oracle, which, in sanctioning his return, had enjoined moderation in the hour of success; and, to avoid the divine wrath, he retired from Cyrene to Barca, which was governed by his father-in-law, Alazir. His murder there, and the vengeance taken on the Barcaeans by his mother Pheretime, by the aid of a Persian army, sent by Aryandes, the satrap of Egypt, are related under BARCA. Though the Persians ravaged a great part of the country, and extended their conquests beyond Barca as far as Hesperides, and though they were even inclined to attack Cyrene on their way back to Egypt, they left the city unmolested (Herod. iv. 203, 204). The effect of these events on the constitution of Cyrene is thus described by Grote (vol. iv. p. 66): "The victory of the third Arcesilaüs, and the restoration of the Battiads broke up the equitable constitution established by Demonax. His triple classification into tribes must have been completely remodelled, though we do not know how; for the number of new colonists whom Arcesilaüs introduced must have necessitated a fresh distribution of land, and it is extremely doubtful whether the relation of the Theraean class of citizens with their Perioeci, as established by Demonax, still continued to subsist. It is necessary to notice this fact, because the arrangements of Demonax are spoken of by some authors as if they formed the permanent constitution of Cyrene; whereas they cannot have outlived the restoration of the Battiads, nor can they even have been revived after that dynasty was finally expelled, since the number of new citizens and the large change of property, introduced by Arcesilaüs III., would render them inapplicable to the subsequent city." Meanwhile "another Battus and another Arcesilaüs have to intervene before the glass of this worthless dynasty is run out." Of Battus IV., surnamed the Handsome, nothing needs to be said; but Arcesilaüs IV. has obtained a place, by the merits of the Libyan breed of horses rather than by his own, in the poetry of Pindar, who, while celebrating the king's victories in the chariot race (B. C. 460), at the same time expostulates with him for that tyranny which soon destroyed his dynasty. (Pind. *Pyth.* iv. v.) It seems to have been the policy of this prince to destroy the nobles of the state, and to support himself by a mercenary army. How he came to his end is unknown; but after his death a republic was established at Cyrene, and his son Battus fled to Hesperides, where he was murdered, and his head was thrown into the sea; a significant symbol of the utter extinction of the dynasty. This was probably about B. C. 450.

Of the condition of the new republic we have very little information. As to its basis, we are only told that the number of the tribes and phratriae was increased (Aristot. *Polit.* vi. 4); and, as to its working, that the constant increase of the democratic element led to violent party contests (ibid.), in the course of which various tyrants obtained power in the state, among whom are named Ariston and Nicocrates. (Diod. Sic. xiv. 34; Plut. *de Virt. Mul.*; Polyaen. *Strat.* viii. 38.) The Cyrenaeans concluded a treaty with Alexander the Great (Diod. xvii. 49; Curt. iv. 7), after whose death the whole country became a dependency of Egypt, and subsequently a province of the Roman empire. [CYRENAICA.] The favours bestowed on APOLLONIA, its port, under the Ptolemies, greatly diminished the importance of Cyrene, which gradually sank under the calamities which it shared with the whole country. Under the Romans it was a colony, with the surname of FLAVIA. (Euseb. *Chron.*; Eckhel, vol. iv. pp. 127, foll.)



At the height of its prosperity Cyrene possessed an extensive commerce with Greece and Egypt, especially in *silphium*: with Carthage, its relations were always on a footing of great distrust, and its commerce on the W. frontier was conducted entirely by smuggling. At what period its dominion over the Libyan tribes was extended so far as to meet that of Carthage at the bottom of the Greater Syrtis is disputed [ARAE PHILAENORUM]; some referring it to the republican age, others to the period of the Ptolemies. (Grote, vol. iv. p. 48, holds the latter opinion.)

Cyrene holds a distinguished place in the records of Hellenic intellect. As early as the time of Herodotus it was celebrated for its physicians (Herod. iii. 131); it gave its name to a philosophic sect founded by one of its sons, Aristippus; another, Carneades, was the founder of the Third or New Academy at Athens; and it was also the birthplace

of the poet Callimachus, who boasted a descent from the royal house of Battus, as did the eloquent rhetorician Synesius, who afterwards became bishop of Apollonia.

The ruins of Cyrene, though terribly defaced, are very extensive, and contain remains of streets, aqueducts, temples, theatres, and tombs, with inscriptions, fragments of sculpture, and traces of paintings. In the face of the terrace, on which the city stands, is a vast subterraneous necropolis; and the road connecting Cyrene with its port, Apollonia, still exists. The remains do not, however, enable us to make out the topography of the city with sufficient exactness. We learn from Herodotus (iv. 164) and Diodorus (xix. 79) that the Acropolis was surrounded with water. The ruins are fully described by Della Cella (pp. 138, foll.), Pacho (pp. 191, foll.), and Barth (p. 421, foll.).

The coins of Cyrene are numerous. In the second of the two specimens here annexed the obverse represents the head of Zeus Ammon and the reverse the *silphium*, which formed the chief article in the export trade of Cyrene. [P. S.]

COINS OF CYRENE.

CYRE'NE (Κυρήνη), is one of several unknown towns, which Stephanus (*s. v.*) assigns to Massalia If these notices of his are true (see Ἀλωνίς, Ἀζανία), Massalia had dependencies, of which there remains no record except the names. [G. L.]

CYRESCHATA (Κυρεσχατα, Ptol. vi. 12. § 5; Amm. Marc. xxiii. 6; τὰ Κύρα, Strab. xi. 517; Cyropolis and Cyreschata, Steph. B.; Cyropolis, Arrian, *Anab.* iv. 3; Curt. vii. 6), a town of considerable importance, situated on the Jaxartes (now *Sihon*) in Sogdiana. According to Arrian, the river ran through the middle of it. Its foundation was traditionally attributed to Cyrus, and it derived its name from being supposed to be on the extreme limits of that conqueror's empire. It sustained a memorable siege, which is fully narrated by Arrian and Curtius, when Alexander the Great invaded Sogdiana, and was evidently from their accounts a place of considerable strength. There can be no doubt that the different names of Cyra, Cyropolis and Cyreschata represent one and the same town. Wilson (*Ariana*, p. 165) has not been able to identify any ruins with the site of this city. Berkelius in his notes to Steph. Byz has attempted to show that the name Cyreschata is a corruption of Kyreserta, on the analogy of Tigranocerta and Vologesocerta; but the derivation which Strabo (*l. c.*) has given, seems to us the most probable. [V.]

CYRE'TIAE (Χυρετίαι, Ptol. iii. 13. § 44: *Eth.* Κυρετιεύς, Κυρετιαῖος, *Inscr.*, Cyretiensis), a town of Perrhaebia in Thessaly, frequently mentioned in the Roman wars in Greece. It was plundered by the Aetolians, B. C. 200 (Liv. xxxi. 41), was taken by Antiochus, B. C. 191, but recovered by M. Baebius and Philip in the same year (xxxvi. 10, 13), and was occupied by Perseus in B. C. 171 (xlii. 53). It was situated upon a small tributary of the Titaresius at the modern village of *Dheminiko*. Its acropolis occupied the hill, on which now stands the church of St. George, where Leake found several inscriptions, among which is a public letter in Greek, addressed to the Tagi (magistrates) and city of the Cyretienses by T. Quinctius Flamininus, when he commanded the Roman armies in Greece. (Leake, *Northern Greece*, vol. iv. p. 304.)

CYRI CAMPUS (τὸ Κύρου πεδίον), a plain in Phrygia, the position of which is not well described by Strabo (p. 629). Leake places it in the upper valley of the Hermus, north of the Catacecaumene. See also Hamilton (*London Geog. Journ.* vol. viii. p. 143). The place is uncertain. [G. L.]

CYRI CASTRA (τὸ Κύρου στρατόπεδον). Strabo (p. 539) seems to mean that Mazaca [CAESAREIA] is 6 days' journey from the Cilician Pylae and the Camp of Cyrus, as the passage stands in Casaubon's text. Xenophon (*Anab.* i. 2. § 20) says that Cyrus halted at Dana for three days before he crossed from Cappadocia into Cilicia. Arrian (*Anab.* ii. 4. § 3) says that Alexander, advancing towards the Cilician Pylae from the north, "came to the encampment of the Cyrus who was with Xenophon;" and he seems to mean Dana. Curtius (iii. 4) says that, on his road to Cilicia, Alexander came to the country which is called Castra Cyri; and he adds that Cyrus had encamped there when he was marching against Croesus, which is a singular blunder. He further says, that the Castra were 50 stadia from the Cilician Pylae; but that is not true, if Dana is Tyana. As Xenophon mentions no halting-place between Dana and the Pylae, Arrian, who has no authority except Xenophon's text, calls Dana the Camp of Cyrus. Xenophon does not state the distance between Dana and the Pylae. The passage in Strabo is evidently corrupt. [G. L.]

CYRNUS (Κύρνος), a town in Euboea, in the territory of Carystus. (Herod. ix. 105.)

CYRO'POLIS (Κυρόπολις, Ptol. vi. 2. § 2. viii. 21. § 8; Amm. Marc. xxiii. 6), a town in Media Atropatene, between the rivers Cyrus and Amardus. Salmasius (*in Solin.* p. 840) has denied the separate existence of this town, and contends that it is the same as Cyreschata on the Jaxartes, asserting that the authority of Ammianus is of no weight, as he generally follows Ptolemy. There seems, however, no great force in this argument, and, if there were any district in which we might naturally expect to find a city called after Cyrus, it would surely be that with which he was immediately connected during his whole life. [V.]

CYRRHE'STICA (Κυβῤῥηστική, Ptol. v. 15; Polyb. v. 10; Dion. Cass. xlix. 20: the readings Κυβῤῥιστική and Κυριστική are errors of the transcribers; Cic. *ad Att.* v. 18; Plin. v. 23; Tac. *Ann.* ii. 57: *Eth.* Κυβῤῥησταί), a district of Syria which appears to have owed its name to the Macedonian occupation of the country. It lay between the plain of Antioch, and was bounded on the E. by the Euphrates, and on the W. by Amanus and Commagene; to the S. it extended as far as

the desert. This fertile, well-watered, and thickly peopled district (Strab. xvi. p. 751) occupied the right bank of the Euphrates, where the river inclines rather eastward of S. It was the scene of the campaign in which Ventidius defeated the Parthian Pacores and avenged the manes of Crassus and the Roman army which had fallen at Carrhae. Constantine united it with COMMAGENE under the name of EUPHRATENSIS. The chief towns of CYRRHESTICA were HIERAPOLIS, ZEUGMA, EUROPUS, BIRTHA, BEROEA, BATNAE, and CYRRHUS. (Ritter, *Erdkunde*, vol. x. p. 928.) [E. B. J.]

CYRRHUS. 1. (Κύρρος, Thuc. ii. 100; Κύριος, Ptol. iii. 13. § 39), a town in Macedonia. Sitalces penetrated into Macedonia to the left of Cyrrhus and Pella. (Thuc. *l. c.*) Hence it would seem that Cyrrhus was at no great distance from the latter city. It is probably the same place as the Scurio of the Jerusalem Itinerary, and the present *Vistritza*. (Tafel, *Via Egnat. Part. Occid.* p. 51.) In Leake's map a *Paleókastro*, a little to the right of the road between Pella and Edessa, occupies the site of Cyrrhus. (Comp. Leake, *North. Greece*, vol. iii. p. 269.)

2. A town of Syria situated on the slopes of the Taurus, 80 M. P. to the NE. of Antioch (*Peut. Tab.*), and 44 M. P. to the NW. of Beroea (*Anton. Itin.*). Though of no great importance, except as connected with the worship of the deity whom Strabo (xvi. p. 751) calls Athena Cyrrhestica, it was the quarters of the tenth legion (Tac. *Ann.* ii. 57). Procopius (*de Aed.* ii. 11), who with the ecclesiastical and Byzantine writers writes the name Κύρος (an error which gave rise to the fable of its having been founded by Cyrus for the Jews on their return from the Captivity), mentions that it was rebuilt by Justinian. The ruins near the village of *Corus*, which correspond very nearly with the distance given in the Itinerary, represent the ancient Cyrrhus. (Chesney, *Exped. Euphrat.*, vol. i. p. 422; Ritter, *Erdkunde*, vol. x. pp. 928, 1035, 1049, 1052). [E. B. J.]

CYRTA. [ARAURIS.]

CYRTII (Κύρτιοι, Strab. xi. p. 523), a robber tribe of Media Atropatene, who lived along the shore of the Caspian Sea, adjoining the Mardi. Strabo (xv. p. 727) mentions another tribe of similar habits in the southern part of Persis. [V.]

CYRTO'NES (Κύρτωνες: *Eth.* Κυρτώνιος), anciently called CYRTONE (Κυρτώνη), a city of Boeotia, east of the lake Copais, and 20 stadia from Hyettus, situated upon a lofty mountain, after crossing which the traveller arrived at Corsia. Cyrtones contained a grove and temple of Apollo, in which were statues of Apollo and Artemis, and a fountain of cold water, at the source of which was a chapel of the nymphs. Forchhammer places Cyrtones on the hill of the church of St. Athanasius between the villages of *Paula* and *Luki*, and the Metókhi of *Dendra*. Here is celebrated every spring a great festival, which Forchhammer regards as the remains of the ancient festival of Apollo and Artemis. (Paus. ix. 24. § 4; Steph. B. *s. v.*; Forchhammer, *Hellenika*, p. 197.)

CYRUS (Κῦρος). 1. A large river, which flowed into the Caspian in a course nearly SE. There is some difference among ancient writers whence it rose, and what was its actual course. Thus Mela (iii. 5) and Pliny (vi. 10) state that it rises in the Montes Coraxici, and flowed to the Caspian through Albania, Iberia, and Hyrcania. Plutarch (*Pomp.* 34) places its source in the mountains of Iberia. Strabo (xi. pp. 491, 500) seems to consider it as the greatest of the rivers of Albania; and Dion Cassius (xxxvi. 36) and Ptolemy (v. 12) as dividing Armenia and Albania. In other places Ptolemy and Strabo speak as though they considered it the boundary between Armenia and Iberia (Ptol. v. 12; Strab. i. p. 61, xi. p. 491). Modern maps demonstrate that Pliny and Mela were the more correct in attributing its source to the Coraxici Montes, or main chain of the Caucasus, as its course is almost wholly SE. from those mountains to the sea. It has preserved its ancient name little, if at all, changed into *Kúr*. In its course it received several other streams and two rivers; the one called the Cambyses (*Yori* or *Gori*), and the other the Araxes (*Eraskh* or *Aras*), a river hardly inferior to itself in size. [CAMBYSES; ARAXES.] It fell into the Caspian by many mouths, the traditional number being said to be twelve; some of them, as indeed Strabo remarks, being much blocked up by sand and mud. (Ptol. v. 13; Appian, *Mithr.* c. 103; Strab. xi. pp. 491 and 501: Agathem. ii. 10, 14.) It may be observed that Mela (iii. 5) gives to the Cyrus and Cambyses separate outlets into the Caspian, and that both Ptolemy and Strabo imagined that the Araxes flowed independently into the sea. It is quite possible that formerly the Araxes may have had a separate mouth. At present, however, it flows into the *Kur*, at no great distance from the sea, as Pliny and Plutarch believed. The name Cyrus is no doubt of Persian origin.

2. A river of Media Atropatene, mentioned only by Ptolemy (vi. 2. § 1) and Ammianus (xxiii. 6), who determine its situation by placing it between the mouth of the Araxes (*Arás* or *Kúr*) and the Amardus (*Sefíd Rúd*). Modern maps indicate several small rivers which flow into the Caspian, agreeably with this determination; yet we think it may be doubted whether these ancient geographers were not in error, and attributed to the small stream what was true of the Cyrus of Armenia. (See below.) The passage in Mela (iii. 5), which has been claimed for the Median river, belongs, in our opinion, to the Armenian.

3. A river of Persia, described by Strabo (xv. p. 729) as flowing through that part of the province which was called Κοίλη Πέρσις near Pasargadae. It was one of the tributaries of the Araxes (*Bendamir*), which flowed into the Salt Lake, now called *Bakhtegan*. Strabo (xv. p. 729) states, if the present text be right (and that it is so is rendered probable by the consent of all the MSS.), that Cyrus derived his name from this river, his earlier appellation having been Agradates. Casaubon, in his edition, changed one word in the text, and deduced the contrary and perhaps more probable meaning, that the river was called after the king, and not the king after the river. The Arabian geographers, Ibn Haukal (p. 98) and Al Edrisi (p. 124), recognise the name *Kur* or *Kur-áb* as that of a river which falls into Lake *Bakhtegan*. If the modern maps are correct, it would seem certain that the larger river Araxes is that now called the *Bendamir Kúm-Firúz* or *Kur-áb*, while the smaller one, which was the proper Cyrus, is called the Pulwan. (De Bode, *Luristan*, vol. i. p. 75; Fergusson, *Nineveh Restored*, p. 90.) It has been supposed by some geographers that the Κόρος of Ptolemy (vi. 8. § 4) is the same river; but it is much more likely that Ptolemy was correct in placing it in Carmania.

CYSA (Κύσα, Arrian, *Indic.* a. 26), a small village on the coast of Gedrosia, at which the fleet of Nearchus arrived. Its position is uncertain. [V.]

CYSSUS. [CASYSTES.]

CYTAE, CYTAEA. [CUTATESIUM.]

CYTHE'RA (τὰ Κύθηρα, also ἡ Κυθήρα at a later time: *Eth.* Κυθήριος: *Cerigo*), an island lying off the south-eastern extremity of Laconia. Its northern promontory, Platanistus, was distant 40 stadia from Onugnathos, from whence persons usually crossed over to the island. (Paus. iii. 23. § 1; Strab. viii. p. 363.) Pliny says that it was 5 miles from Malea; but he ought to have said Onugnathos, since the island is much further from Malea than this distance. (Plin. iv. 12. s. 19.) Cythera is of an irregular oval shape, about 20 miles in length from N. to S., and about 10 miles in breadth in its widest part. Its area is about 112 square miles. It is very rocky and contains only a few valleys; and being the most southerly continuation of the mountains of the Peloponnesus, it forms, together with Crete, the southern boundary of the Mediterranean sea. After passing this island, the ancient Phoenician and Grecian mariners entered upon an unknown sea, not so rich in islands and harbours, with different currents and winds. If we could obtain an account of the early Phoenician voyagers, there is no doubt, as Curtius remarks, that we should find that the stormy Cape Malea and the island of Cythera long formed the extreme point of their voyages, beyond which they did not venture into the unknown western seas. The Phoenicians had an ancient settlement in the island, which was the head-quarters of their purple fishery off the Laconian coast. Hence the island is said to have derived its name from Cytherus, the son of Phoenix, and also to have been called Porphyrūsa or Porphyris. (Aristot. *ap. Steph. B. s. v.* Κύθηρα; Eustath. *ad Dionys. Per.* 498, *ad Il.* p. 304, 36; Plin. iv. 12. s. 19.) It was from Cythera that the worship of the Syrian goddess Aphrodite was introduced into Greece; and consequently in the Grecian legends this island is said to have been the spot which received the goddess after her birth from the foam of the sea. Hence, in the Greek and Latin poets Cythera is constantly represented as one of the favourite residences of Aphrodite, and Cytheraea is one of the most frequent epithets applied to her. (Hesiod. *Theogn.* 195; Herod. i. 105; Virg. *Aen.* i. 680, et alibi.)

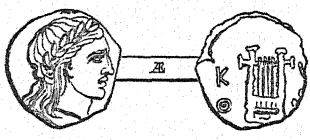
On the conquest of Peloponnesus by the Dorians, Cythera, together with the whole eastern coast of Laconia, was dependent upon Argos (Herod. i. 82). It afterwards became subject to the Spartans, who attached great importance to the island, since it afforded a landing-place for their merchant-vessels from Egypt and Africa, and the possession of it protected the coasts of Laconia from the attacks of privateers. Accordingly, they sent over annually to Cythera a magistrate called Cytherodices, with a garrison of Spartans. (Thuc. iv. 53.) The Lacedaemonian Chilon, who is reckoned among the Seven Sages, considered the proximity of Cythera so dangerous to Sparta, that he wished it sunk in the sea; and Demaratus, king of Sparta, advised Xerxes to seize this island, and from it to prosecute the war against Laconia. (Herod. viii. 235.) The fears of Chilon were realized in the Peloponnesian war, when Nicias conquered the island, B. C. 424, and from thence made frequent descents upon the Laconian coast. (Thuc. iv. 54.)

Thucydides, in his account of the conquest of Cythera by Nicias, mentions three places; Scandeia, and two towns called Cythera, one on the coast and the other inland. Nicias sailed against the island with 60 triremes. Ten of them took Scandeia upon the coast (ἡ ἐπὶ θαλάσσῃ πόλις, Σκάνδεια καλουμένη); the remainder proceeded to the side opposite Cape Malea, where, after landing, the troops first captured the maritime city of the Cytherians (ἡ ἐπὶ θαλάσσῃ πόλις τῶν Κυθηρίων), and afterwards the upper city (ἡ ἄνω πόλις). According to this account, we should be led to place Scandeia upon the coast of the Sicilian sea, where *Kapsáli*, the modern town of *Cerigo*, now stands; and the maritime city, at *Avlémona*, on the eastern coast opposite Cape Malea. This is, however, directly opposed to the statement of Pausanias (*l. c.*), who connects Scandeia and Cythera as the maritime and inland cities respectively, separated from one another by a distance of only 10 stadia. Of this contradiction there is no satisfactory explanation. It seems, however, pretty certain that the sheltered creek of *Avlémona* was the principal harbour of the island, and is probably the same as the one called Phoenicus (Φοινικοῦς) by Xenophon (*Hell.* iv. 8. § 7), a name obviously derived from the Phoenician colony. About three miles above the port of *Avlémona* are the ruins of an ancient town, called *Paleópoli*, which is evidently the site of the upper city mentioned by Thucydides. Here stood the ancient temple of Aphrodite, which was seen by Pausanias.

In B. C. 393, Cythera came again into the possession of the Athenians, being taken by Conon in the year after the battle of Cnidus. (Xen. *l. c.*) It was given by Augustus to Eurycles to hold as his private property. (Strab. viii. p. 363.) Its chief productions in antiquity were wine and honey. (Heraclid. Pont. *s. v.* Κυθηρίων.) The island appears to have been always subject to foreign powers, and consequently there are no coins of it extant. It is now one of the seven Ionian islands under the protection of Great Britain. Its modern name *Tzerígo*, in Italian *Cerigo*, is remarked by Leake as almost the only instance of a Slavonic name in the Greek islands. (Leake, *Northern Greece*, vol. iii. p. 69, seq.; Curtius, *Peloponnesos*, vol. ii. p. 298, seq.)

CYTHE'RIUS (Κυθήριος, Strab. viii. p. 356; Κύθηρος, Paus. vi. 22. § 6), a small river in Pisatis in Elis, flowing by Heracleia, and falling into the Alpheius on its right bank: identified by Leake, with the river of *Strefi;* by Boblaye, with the river of *Landsoï*. (Leake, *Morea*, vol. ii. p. 192; Boblaye, *Recherches*, p. 129.)

CYTHE'RUM. [CYTORUS.]



CYTHE'RUS. [ATTICA, p. 332, b.]

CYTHNUS (Κύθνος: *Eth.* Κύθνιος: *Thermia*), an island in the Aegaean sea, one of the Cyclades, lying between Ceos and Seriphos. (Strab. x. p. 485; Dicaearch. p. 462, ed. Fuhr.; Scylax, p. 22, ed. Hudson; Plin. iv. 12. s. 20; Mela, ii. 7; Ptol. iii. 15. § 28.) It was colonised by the Dryopes, whence it was also called Dryopis. (Herod. viii. 46; Steph. B. *s. v.*) Its name rarely occurs in antiquity. The Cythnians sent a trireme and a penteconter to the battle of Salamis. (Herod. *l. c.*) After the Peloponnesian war they became the subject allies of Athens, together with the other islanders in the Aegaean; but they never acquired power or wealth. (Comp. Dem. Περὶ Συντάξεως, p. 176.) The only native of the island mentioned by the ancient writers, was Cydias the painter; and its chief celebrity in

antiquity was owing to its excellent cheeses. (Steph. B. *s. v.*; Eustath. *ad Dionys. Per.* 525; Athen. xii. p. 516; Plin. xiii. 24. s. 27.) Its political constitution, however, had not escaped the attention of Aristotle. (Harpocrat. *s. v.* Κόθνιοι.) In the war between Philip and the Romans in B. C. 200, Cythnus was occupied by a Macedonian garrison. Attalus and the Rhodians laid siege to the city; but being unable to take it immediately, they quitted the island at the end of a few days, as the capture of the place was hardly worth the trouble. (Liv. xxxi. 15, 45.) After the death of Nero, Cythnus is mentioned as the place where a false Nero made his appearance, and gathered around him many adherents. (Tac. *Hist.* ii. 8, 9.)

Cythnus contained a town of the same name, situated about the middle of the western coast of the island, upon the summit and sides of a hill at least 600 feet in height. Its harbour was formed by a small rock lying in front of the town. The ruins of the ancient town are now called *Hebraeokastron*. The circuit of the walls may still be traced, though the greater part of them has disappeared. Within this circuit Ross noticed two large rectangular substructions, divided by a passage a few feet in width; they were probably the foundations of two temples or other public buildings. From the above-mentioned passage a flight of steps appears to have been cut out of the rock, leading down to the sea. Near these steps on the descent to the sea are three chambers cut out of the rock; standing alongside of one another; they were probably a sanctuary, as there is nothing to indicate that they were sepulchres.

The modern name of the island, *Thermia*, is derived from some hot springs on its north-eastern side, which are now much frequented from various parts of Greece, for the cure of diseases. They are not mentioned by ancient writers, but appear to have been used in antiquity, as some ancient remains are found near them. (Tournefort, *Voyage*, vol. i. p. 251, transl.; Ross, *Reisen auf den Griech. Inseln*, vol. i. p. 105; Fiedler, *Reise durch Griechenland*, vol. ii. p. 95.)

COIN OF CYTHNUS.

CYTI'NIUM (Κυτίνιον; Κυτείνιον, Ptol.), one of the four towns of Doris, more frequently mentioned in history than the other towns of the Tetrapolis. This appears to have been owing to its situation, which rendered it a place of great military importance. Its site corresponds to *Gravià*, which "stands exactly at the northern entrance of the pass leading from the valley of Doris to the plain of Amphissa, in the middle of the isthmus included between the Maliac and Crissaean gulfs. The defile is formed by the ravines of two torrents flowing in opposite directions; namely, that of *Gravià*, which joins the *Apostoliá*, near the union of the latter with the Cephissus, and that of another stream which crosses the plain of Amphissa into the Crissaean bay." The position of the town, thus commanding this defile, illustrates the intended expedition of Demosthenes from Naupactus in B. C. 426. This commander proposed, if he had been successful over the Aetolians, to have marched through the Locri Ozolae, leaving Parnassus on the right, to Cytinium in Doris, and from thence to have descended into Phocis, whose inhabitants were to have joined him in invading Boeotia. (Thuc. iii. 95.) When Eurylochus, the Spartan, shortly after the failure of the expedition of Demosthenes, was about to march from Delphi against Naupactus, he deposited at Cytinium the hostages he had received from the Locrians. (Thuc. iii. 101, 102.) In B. C. 338, Cytinium was seized by Philip, from whence he marched upon Amphissa (Philochor. *ap. Dionys.* p. 742). (Comp. Scylax, p. 24; Strab. ix. p. 427, x. p. 476; Plin. iv. 7. s. 13; Steph. B. *s.v.* Κύτινα; Ptol. iii. 15. § 15; Leake, *Northern Greece*, vol. ii. p. 92, seq.)

CYTO'NIUM. [CERTONIUM.]

CYTO'RUS and CYTO'RUM (Κύτωρος: *Eth.* Κυτωριεύς, *fem.* Κυτωριάς: there is also Κυτωρίτης, Steph. *s. v.*). It appears that the name was also Cydorus. (Steph. *s. v.* ed. Meinecke, note.) Its mythical founder was Cytorus, the son of Phrixus, according to Ephorus. (Strab. p. 544.) Strabo and Ptolemy name the place Cytorum; and Scylax, Cytoris. It was between Amastris and Cape Carambis; and according to Strabo once a trading place of the Sinopeis. The name Cytorus occurs in the Iliad (ii. 853) together with Sesamus. [AMASTRIS.] There are said to be remains of Cytorus at a place called *Kidras* or *Kidros*, which is the ancient name. The mountains at the back of Cytorus were covered with box trees.

"Et juvat undantem buxo spectare Cytorum."

(Virg. *Geog.* ii. 437.) Apollonius (*Arg.* ii. 944) whom Virgil may have imitated, calls it "wooded Cytorus." The box forests extended from Amastris to Cytorus. Pliny (vi. 2) mentions "Mons Cytorus," which he places 63 M. P. east of Tium, and Tium is near the mouth of the Billaeus.

Leake (*Asia Minor*, p. 307) has pointed out a singular blunder in the Table. The places that are marked on the Table between Amasia and Sinope are — Cromen, Cythero, e Egilan, Carambas, Stefano, Syrtas, which "are evidently intended for Cromna, Cytorum, Aegiali, Carambis, Stefane, Syrias; the sum of the distances 149 M.P. is tolerably correct." He supposes that the author was misled by the similarity of the name of Amastris, written Mastrum in the Table, with that of Amasia; but this supposition does not seem to explain the origin of the blunder satisfactorily. The places that the Table gives between Mastrum (Amastris) and Sinope, are unknown. Forbiger (*Geog.* vol. ii. p. 436) takes all these names on the Table between Amasia and Sinope to be genuine names; and so he has Cromen, Cytherum, &c., as places on the road from Amasia to Sinope: but this is certainly not so. There is a place on the Table, named Thomia, between Stefane and Syrtas, which Leake does not mention. But whatever difficulty there may be about this one name, the blunder in the Table is manifest. [G. L.]

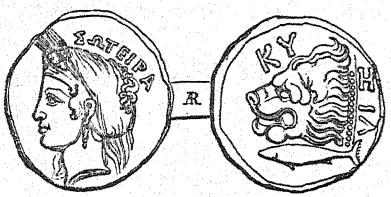
CY'ZICUS (ἡ Κύζικος: *Eth.* Κυζικηνός) and CYZICUM (Plin. v. 32; Mela, i. 19), a city on the Propontis in Mysia, on the neck of a peninsula as Mela says. The peninsula, which projects into the Propontis or sea of Marmora on the south coast, is joined to the mainland by a sandy isthmus. Crossing this isthmus from the mainland, a traveller finds on his left the miserable town of *Erdek*, the ancient

Artace. [ARTACE.] The site of Cyzicus is near the isthmus on the east side, in 40° 22′ 30″ N. lat. (Hamilton, *Researches*, &c. vol. ii. p. 103.) The Turks call the ruins of Cyzicus *Bal Kiz*, the second part of which seems to be a part of the ancient name; and *Bal* is probably a Turkish corruption of the Greek Παλαία. (Leake, *Asia Minor*, p. 271.) There is a place called *Aidinjik* near the isthmus, on the mainland side, where there are many marble fragments which have been brought from the neighbouring site of Cyzicus.

Strabo (p. 575) says that Cyzicus is an island in the Propontis, which is joined to the mainland by two bridges, and very fertile: it is about 500 stadia in circuit, and contains a city of the same name close to the bridges, and two closed harbours, and shiphouses (νεώσοικοι) above 200: one part of the city is on level ground, and the other is close to a hill, which they call Bear Hill (Ἄρκτων ὄρος): there is another hill that lies above the city, a single height called Dindymon, which contains a temple of Dindymene the mother of the gods, which was founded by the Argonauts. Stephanus (*s. v.* Κύζικος) says that the town was also called Ἄρκτων νῆσος. The junction of the island with the main is attributed to Alexander by Pliny (v. 32), who does not say how the junction was made. Apollonius Rhodius, who wrote after Alexander's time, still calls it an island (*Argon.* i. 936), but he also speaks of an isthmus. He names one of the ports Chytus; the other was named Panormus, as the Scholiast tells us. It is said that there are no signs of the bridges. The isthmus is above a mile long, and less than half a mile broad. It seems probable that moles were pushed out some distance, and then the opposite shores were connected by bridges. The whole passage is now a sandy flat. Hamilton (*Researches*, &c. vol. ii. p. 98) says, "we crossed the sandy isthmus which connects Cyzicus with the mainland; near the south end, many large blocks of stone, dug up in clearing a neighbouring vineyard, had been collected into a heap." "The east side of the isthmus is now an extensive marsh, covered with reeds, and probably marks the site of the principal port of Cyzicus, separated from the sea-shore by a low ridge of sand hills thrown up by the united efforts of the winds and waves. Near the northern extremity, a long ditch runs from E. to W. full of water, with a wall of great strength, fortified by towers along its northern bank; its opening towards the sea is choked up by drifted sand, but it seems to be the entrance through which the galleys of Cyzicus were admitted to her capacious port." (Hamilton.)

The ruins of Cyzicus are among cherry orchards and vineyards. There is a heap of ruins covered with brushwood, where there are many subterraneous passages, some of which may be explored to the length of more than a hundred feet. These passages are connected with each other, and appear to be the substructions of some large buildings. Cyzicus in Strabo's time had many large public buildings (Strab. p. 575), and it maintained three architects to look after them and the machinery (ὄργανα). It possessed three store-houses, one for arms, one for the machinery or engines, and one for corn. "The masonry of these substructions is chiefly Hellenic, but in some places the walls are only cased with blocks of stone: in the roof of one of the vaults is a small square opening, regularly formed with a keystone, all belonging to the original construction." (Hamilton.) If these substructions are not those of the public granary, they may belong, as Hamilton suggests, to the great temple described by Aristides in his oration on Cyzicus (vol. i. p. 237, ed. Jebb); but the extravagant bombast of this wordy rhetorician diminishes our confidence in what he says. The Agora, he says, contained a most magnificent temple, and he speaks of the parts below ground being worthy of admiration. Xiphilinus (Dion Cass. vol. ii. p. 1173, ed. Reimarus) says that the great temple of Cyzicus was destroyed by an earthquake in the time of Antoninus Pius: but this must be a mistake, and he means to speak of the great earthquake that destroyed Smyrna and other cities in the time of Marcus, the successor of Pius. Aristides wrote a letter on the calamity of the city of Smyrna, addressed to Aurelius and Commodus. This temple is described by Xiphilinus as of extraordinary dimensions: the columns were fifty cubits high, and of one stone. The Cyziceni used the white marble of Proconnesus for building. (Strab. p. 588.) "About a mile NE. by N. from these substructions are the remains of an amphitheatre, built in a wooded valley to the north of the plain, where are the principal ruins of the city. Many of the pilasters and massive buttresses have yielded to the influence of time, but seven or eight are still standing on the west side of the valley, by which the circular form of the building may be distinctly traced." (Hamilton.) A small stream flows through the middle of the arena; which circumstance, and the character of the masonry at the upper end of the building, led Hamilton to suppose that the place was also used as a Naumachia. On a wooded hill to the east of the city, situated above the ruins, and near the apex of the city walls, there are "only blocks of marble and broken columns built into the walls of the cottages." The site of the theatre, which faces the SW., is almost overgrown with luxuriant vegetation. It is very large, and appears to be of Greek construction, but it is in a very ruined state. Some parts of the substructions can be traced, but there is not a block of marble to be seen, nor a single seat remaining in its place. There are vestiges of the city walls in various parts, but it does not appear easy to trace their whole extent. Hamilton in one place speaks of "heaps of ruins, long walls, and indistinct foundations, but so overgrown with vegetation that it was impossible to make them out." He only found one inscription, a Greek one, of the Roman period. "On the whole," says Hamilton, "I must say that the loose and rubbly character of the buildings of Cyzicus little accords with the celebrity of its architects; and although some appear to have been cased with marble, none of them give an idea of the solid grandeur of the genuine Greek style." It seems likely that the larger blocks of marble have been carried away, though there is no large modern town near Cyzicus; but the materials of many ancient towns near the sea have doubtless been carried off to remote places. There are quarries of fine marble on the hills about Cyzicus, and near *Aidinjik* on the mainland; but granite was much used in the buildings of Cyzicus, and it is of a kind which is rapidly decomposed. The consequence is, that a rich vegetation has grown up, which itself destroys buildings and buries them. The sea sand also that has been blown up on both sides of the isthmus may have covered the basements at least of many buildings. It seems likely, then, that excavations would bring to light many remains of a rich city, of which Strabo says, that in his time "it rivals the first cities of Asia in magnitude,

beauty, and its excellent institutions, both civil and military, and it appears to be embellished in like fashion with the city of the Rhodii, the Massaliotae, and the Carthaginians of old" (p. 575).



The origin of this town seems unknown. A people called Doliones or Dolieis (Steph. *s. v.* Δολίονες) once lived about Cyzicus, but Strabo says that it was difficult to fix their limits. Conon (*Narrat.* 41, apud Phot.) has a story of Cyzicus being settled by Pelasgi from Thessaly, who were driven from Thessaly by Aeolians. Their king and leader was Cyzicus, a son of Apollo, who gave his name to the peninsula which he occupied; for it may be observed that it seems somewhat doubtful, if we look at all the authorities, whether Cyzicus was considered by the Greeks to have been originally an island or a peninsula. If it was originally a peninsula, we must suppose that a canal was cut across it, and afterwards was bridged. This king Cyzicus was killed by Jason on the voyage to Colchis, and after the death of Cyzicus, perhaps some time after according to the legend, Tyrrheni seized the place, who were driven out by Milesians. Cyzicus was reckoned among the settlements of Miletus by Anaximenes of Lampsacus, and also Artace on the same island or peninsula. (Strabo, p. 635.) Cyzicus is not mentioned in the Iliad.

The Cyziceni are said to have surrendered to the Persians after the conquest of Miletus. (Herod. vi. 33.) The place afterwards became a dependency on Athens; for it revolted from the Athenians, who recovered it after the battle of Cynossema (B. C. 411), —at which time it was unwalled, as Thucydides observes (viii. 107). These scanty notices of Cyzicus, and the fact of its having no fortifications near the close of the Peloponnesian War, seem to show that it was still an inconsiderable city. The Athenians, on getting the place again, laid a contribution on the people. The next year (B. C. 410) the Cyziceni had the same ill luck. Mindarus the Spartan admiral was there with his ships, and Pharnabazus the Persian with his troops. Alcibiades defeated Mindarus, and the Cyziceni, being deserted by the Peloponnesians and Pharnabazus, again received the Athenians, and again had to part with their money. We learn from the notice of this affair in Xenophon (*Hell.* i. 1. § 16) that Cyzicus had a port at this time. After the defeat of the Athenians at Aegospotami, Cyzicus seems to have come again under the Lacedaemonians; but as the peace of Antalcidas (B. C. 387) gave all the cities in Asia to the Persian king, Cyzicus was among them.

Cyzicus appears to have obtained its independence after the time of Alexander, but the notices of it are very scanty. Attalus I. of Pergamum, the father of Eumenes, married a woman of Cyzicus, named Apollonias, who was distinguished for her good sense (Polyb. xxiii. 18); and we read of the Cyziceni sending twenty ships to join the fleet of Athenaeus, the brother of Attalus II., King of Pergamum. (Polyb. xxxiii. 11.) We know nothing of the fortunate circumstances which gave this town the wealth that it had, when Mithridates attempted to take it B. C. 74. It is probable that it had become one of the outlets for the products of the interior of the Asiatic peninsula, and it is said to have been well administered. The Cyziceni sustained a great loss in a fight with Mithridates at Chalcedon, and soon after the king attacked Cyzicus. He posted his troops on the mainland opposite to the city, at the foot of the mountain range of Adrasteia; and with his ships he blockaded the narrow passage that separated the city from the main. The strength of the walls, which had been built in the interval since the Peloponnesian war, and the abundant stores of the citizens enabled them to hold out against the enemy. The Roman commander L. Lucullus was in the neighbourhood off Cyzicus, and he cut off the supplies of Mithridates, whose army suffered from famine, and was at last obliged to abandon the siege with great loss. (Plut. *Lucull.* c. 9, &c.; Appian, *Mithridat.* c. 72, &c.; Strab. p. 575: Cic. *pro Arch* c. 9.) The Romans rewarded Cyzicus by making it a Libera Civitas, as it was in Strabo's time, who observes that it had a considerable territory, part of it an ancient possession and part the gift of the Romans. He adds that they possessed on the Troad the parts beyond the Aesepus about Zeleia; and also the plain of Adrasteia, which was that part of the mainland that was opposite to Cyzicus. They had also part of the tract on the Lake Dascylitis, and a large tract bordering on the Doliones and Mygdones, as far as the Lake Miletopolitis and the Apolloniatis. Strabo (p. 587) speaks of a place at the common boundary of the territory of Priapus and Cyzicus, from which it appears that the possessions of these two towns bordered on one another, on the coast at least, in the time of Strabo. Indeed Priapus, according to some authorities, was a colony of Cyzicus. It appears that the greatest prosperity of Cyzicus dates from the time of the defeat of Mithridates. It possessed a large tract on the south side of the Propontis, and there were no other large cities on this side of the Propontis in the Roman period, except Nicomedia and Nicaea. The produce of the basin of the Rhyndacus would come down to Cyzicus. Tacitus (*Ann.* iv. 36) says that Tiberius (A. D. 25) deprived Cyzicus of its privilege of a free city (Dion Cass. liv. 7, 23; Sueton. *Tib.* c. 37) for not paying due religious respect to the memory of Augustus, and for ill treating some Roman citizens. This shows that Strabo must have written what he says of Cyzicus being Libera before the revocation. The effect of the revocation of this privilege would be to place Cyzicus altogether and immediately under the authority of the Roman governor of Asia. Cyzicus, however, continued to be a flourishing place under the empire, though it suffered from the great earthquake which has been already mentioned. In the time of Caracalla it received the title of Metropolis. It also became a bishop's see under the later empire.

Cyzicus produced some writers, a list of whom is given in a note on Thucydides (viii. 107) by Wasse. (Cramer, *Asia Minor*, i. 47, note.) It had also some works of art, among which Cicero (*Verr.* ii. 4. c. 60) mentions paintings of Ajax and Medea, which the dictator Caesar afterwards bought. (Plin. viii. 38.) At some period in their history the Cyziceni conquered Proconnesus, and carried off from there a statue of the Meter Dindymene. It was a chryselephantine statue; but the covering of the face, instead of being plates of ivory, was made of the teeth of the hippopotamus. (Paus. viii. 46. § 4.) Cyzicus also produced a kind of unguent or perfume that was in repute, made from a plant which Pliny calls "Cyzicena amaracus" (Plin. xiii.; Paus. iv. 36. § 5); but Apollonius, quoted by Athenaeus (xv. p. 688), speaks of it as made from an Iris. It was also noted for its mint, which produced the gold coins or stateres called Cyziceni (Κυζικηνοί), which had a wide circulation. The Cyzicenus had on one side a female head, and

on the other a lion's head. (Hesychius, *s. v.* Κυζικηνοί; Suidas, *s. v.* Κυζικηνοὶ στατῆρες.) The head is supposed to be that of Cybele. The value of the coin was 28 Attic drachmae. (Dem. *in Phorm.* p. 914.) The autonomous coins of Cyzicus are said to be rare, but there is a complete series of imperial coins. It does not appear where the Cyziceni got their gold from, but it is not improbable that it was once found on the island or on the neighbouring mainland. Pliny (xxxvi. 15) says that there was in his time a temple at Cyzicus, in which the architect had placed a golden thread along all the joinings of the polished stone. The contrast between the gold and the white marble would probably produce a good effect. The passage of Pliny contains something more about Cyzicus, and the story of the "fugitivus lapis," which was once the anchor of the Argonautae. The stone often ran away from the Prytaneum, till at last they wisely secured it with lead. [G. L.]

COIN OF CYZICUS.

CYZISTRA. [Cybistra.]

D.

DAAE. [Dahae.]

DABANAS (Δαβανάς), one of Justinian's fortresses, situated between Dara and Amida (Procop. *de Aed.* ii. 4), which some of the maps confound with Darana (Ammian. xxiii. 3. § 7), which lies much further S. at the sources of the river Belias. The site has not been identified. (Ritter, *Erdkunde*, vol. x. p. 1124, vol. xi. pp. 82, 381.) [E. B. J.]

DABASAE (Δαβάσαι, Ptol. vii. 2. § 18), a people of the district called by the ancients "India intra Gangem," to the east of *Nipál*. There is some doubt about the orthography of their name, which is sometimes written Labasae. They are probably connected with the range of mountains called τὰ Δάμασσα ὄρη (Ptol. vii. 2. § 18), and which are most likely represented by the eastern spur of the *Nipál Himalayas*. [V.]

DABERATH (Δαβιράθ, LXX.; Δαβειρά, Euseb.), a border city of the tribe of Zebulon (*Josh.* xix. 12), apparently identical with the Levitical city Dabareh (Δεββά, LXX.; *Josh.* xxi. 28), and with Debir in 1 *Chron.* vi. 58, though in these passages it is reckoned to the tribe of Issachar, as is also Daberath in 1 *Chron.* vi. 72 (Δεβερί, LXX.). Its site is marked by the small Moslem village of *Debûriah*, which is situated at the NW. base of Mount Tabor, on a ledge of rocks, thus answering to the description given by Eusebius and St. Jerome of the situation of Dabeira, as a town of the Jews on Mount Tabor, in the district of Diocaesareia. (Onomast. *s. v.*; Reland, *Palaest.* p. 733.) Dr. Robinson further identifies with it the Dabaritta of Josephus in the great plain (*Bib. Res.* vol. iii. p. 210), but this is very questionable. [G. W.]

DABRONA, a river in Ireland, mentioned by Ptolemy as being the first river after the Southern Promontory (*Cape Clear*) — probably the *Black*water, in respect to name as well as locality; since *dubh* = *black*. [R. G. L.]

DACHARE'NI (Δαχαρηνοί), an inland tribe of Arabia Felix, according to Ptolemy (vi. 7) identified with the Nabathaeans by Eustathius (*ad Dionys. Per.* 954). Forster conjectures that they are identical with the tribe of the *Dwy Dhaker*, part of the great Harb nation, found by Burckhardt near the *Owf* and *Zebeyde* tribes, between *Rábegh* and *Mekka*, and also in the vicinity of *Medina*. (*Arabia*, vol. ii. p. 141.) [G. W.]

DACHINABADES (Δαχιναβάδης, Peripl. *Ind.* p. 29), a district of "India intra Gangem," on the NW. coast of the peninsula of Hindostan, a little to the S. of Barygaza or *Beroach*. It is stated by the author of the Periplus that it was so called because Dakhan, in the native tongue, signified south. Dakhinabades, according to this view, would be a purely Indian word, and would mean "city of the south." Dakhan, however, in which we recognise the well-known modern name Deccan, is not properly the south: it is derived from the Sanscrit Dakshina, meaning the country on the right hand, and was so named by the Hindu conquerors, who entered India from the NW. The district of Dakhinabades contained two emporia, Plithana and Tagara. [V.]

DA'CIA (Δακία: *Eth.* and *Adj.* Δάκος, Dacus, Dacicus). This country, the last of the Roman conquests in Europe, can only be considered as a geographical expression denoting the land of the Daci or Getae (ἡ τῶν Γετῶν γῆ, Strab. vii. p. 295), till its incorporation with the empire by Trajan, when it received certain definite limits.

The Getae (Γέται, sing. Γέτης, Steph. B.) were in antiquity enumerated among the Thracian group of nations; and this opinion has been confirmed by the most competent among modern inquirers. (Schafarik, *Slav. Alt.* vol. i. p. 31.) It need hardly be added, that the theory which regarded the Getae and the "long-haired" Goths of Scandinavia as equivalent names, though supported by Procopius, Jerome, Vopiscus, and Spartian, but, above all, by Jornandes (*De Reb. Get.*), is entirely devoid of foundation. The seat of this people as they first appear in history must be placed to the N. of Mt. Haemus, and S. of the Ister. If we may trust Herodotus (iv. 92, foll. v. 3), the Getae were superior to the other Thracian barbarians. Our knowledge of the later Dacians partly confirms this statement, however much Grecian imagination might colour his sketch, or have originated the fables connected with their indigenous deity Zalmolxis or Zamolxis. Thucydides (ii. 96) describes them as living in the same district as that which they occupied when conquered by Dareius, and they were among the tribes who followed Sitalces to the field. In the expedition of Philip against Scythia (Justin. ix. 2), the Triballi, who had not long before been driven out of their ancient seats in the interior by the irruption of the Kelts, occupied the steppe between the Danube and the Balkan. It would seem that the Getae had been forced across the river by the Triballi, as Alexander, in the campaign of B. C. 335, found the Getae ranged upon the opposite side of the Ister to the number of upwards of 10,000 foot and 4000 horsemen. Under favour of night, Alexander crossed over the river unmolested, defeated the Getae, and took their town. (Arrian, *Anab.* i. 2; Strab. p. 301.) In B. C. 292, Lysimachus, in the aggressive warfare which he waged against the Getae, penetrated into

the heart of their country: in the plains of Bessarabia (ἡ τῶν Γετῶν ἐρημία, Strab. p. 305) his retreat was cut off, and he, with all his army, had to surrender. Lysimachus, however, was set free, and the generosity of Dromichaetes, the native king, found a place among all the collectors of anecdotes. (Strab. p. 302; Plut. *Demetr.* 39, 52; Polyaen. vii. 5; comp. Paus. i. 9. § 5.) It is probable that the Dacian prince obtained a large treasure, either from the plunder of the camp, or the ransom of his prisoners, as on two separate occasions, once in 1545, and again rather more than twenty years since, many thousand gold coins were found near *Thorda*, some of them bearing the name of Lysimachus, and others with the epigraph ΚΟΣΩΝ. (Paget, *Hungary and Transylvania*, vol. ii. p. 105.)

When the Gauls occupied Eastern Europe, the Getae were involved in war with that people. (Justin. xxvi. § 3.) They were defeated, and were sold in great numbers for slaves to the Athenians, who had formerly obtained their supplies from Phrygia and Caria, as is shown by Aristophanes and the elder comedians; while, after this period, the names of Davus (Dacus and Davus are convertible forms) and Geta appear as the names of slaves in the writers of the New Comedy and their Roman imitator Terence. (Strab. p. 304; *Mém. de l'Acad. des Inscr.* vol. xxv. pp. 34, foll.; Niebuhr, *Klein. Schrift.* pp. 352—398; Schafarik, *Slav. Alt.* vol. i. p. 469.)

It is not known why and when the Getae changed their name to that of Daci. The ancients are unanimous in considering them as identical (Plin. iv. 12; Paus. i. 12. § 4; Dion Cass. li. 67; Appian, *Praef.* c. 4; Justin. xxxii. 3. § 16), though Strabo (p. 304; comp. Senec. *Nat. Quaest.* 1) distinguishes them by saying that the Getae occupied the district towards Pontus and the E., the Daci that towards Germania and the sources of the Ister. Curio, the first Roman general who advanced in these regions as far N. as the Danube, was afraid to attack Dacia. (Flor. iii. 4. § 6.) According to some, Julius Caesar, in the extensive schemes of conquest they assign to him, had meditated the invasion of Dacia. (Suet. *Jul.* 44.) The native prince Boerebistas, a contemporary of Augustus, and a man of great capacities, ventured to cross the Ister, and, by ravaging Thrace, and exterminating the people of the Boii and the Taurisci, had increased the power of the Getae to such extent as even to cause terror to the Romans. (Strab. pp. 298, 303.) In B. C. 10, Augustus sent Lentulus to attack their king Cotiso. The Romans appear to have marched up the valley of the *Maros*, but the expedition had no practical results. (Flor. iv. 12. § 19; Strab. p. 304; Dion Cass. liv. 36; Hor. *Carm.* iii. 8, 18; Suet. *Oct.* 21.) Ovid, in his exile, has given a picture of the Getae, with all their repulsive features, set off by the horrors of the inclement climate. The poet, however, learnt their language (*Trist.* v. 12, 58, *ex Pont.* iii. 24), and composed a song of triumph for Augustus in the rude tongue of his barbarian neighbours (*ex Pont.* iv. 13, 23). The only specimens of this ancient language are in the names of men and places, and in particular words scattered through the writers of Greece and Rome, or preserved by lexicographers, such as Hesychius and Suidas. Adelung (*Mithridat.* vol. ii. p. 344) has collected many of these words and terminations of words, such as the local ending in *dava*, which frequently occurs among Dacian towns. From this period the Dacians were engaged in frequent wars with the Romans. Fortune inclined to neither side, till at last they obtained, under their king Decebalus, so decided an advantage over the weakness of Domitian as to reduce that emperor to accept a peace, accompanied by the most disgraceful conditions, and, among others, the payment of a yearly tribute to Dacia. A full account of these two campaigns of Domitian is given in the *Dict. of Biog.* art. *Decebalus.* When Trajan assumed the imperial purple, he prepared to restore to its brightness the tarnished honour of the empire, and himself headed the expedition against Dacia. In A. D. 101, Trajan left Rome, and passing through Pannonia, and crossing the *Theiss*, followed the course of the *Maros* into Transylvania. His first great battle was on the *Crossfield* near *Thorda.* The Moldo-Wallachian peasant still calls the battle field by the name "*Prat de Trajan*" (Pratum Trajani); a remarkable instance of the tenacity of a people's recollections. For other curious examples of the honour in which the modern inhabitants hold the memory of the conqueror of Decebalus, see *Revue des deux Mondes*, vol. xxi. p. 110. Decebalus broke the humiliating conditions to which he had been subjected; but Dacia was doomed to become a Roman province, and in A. D. 104 Trajan, who had assumed the title of Dacicus, set out on his second campaign. The emperor, who was now better acquainted with the geography of the country, chose a nearer route, and one by which he might at once reach the capital of the enemy. On this occasion he crossed the Danube below the Iron Gate, where his famous bridge was afterwards built, and sending one part of his army along the Aluta, he himself followed the valley which now leads from *Orsova* by *Mehadia* and *Karansebes* over the Iron Gate pass — the deep mountain gorge which, standing at the entrance of Transylvania, has been alternately contested by Dacian, Roman, Christian, and Moslem. Taking this route, he marched direct upon the capital Sarmizegethusa.

The Dacians, unable any longer to defend their capital, set fire to it, and fled to the mountains. Decebalus, finding it impossible to escape his pursuers, stabbed himself, and many of his followers committed suicide, to avoid subjection to the Romans. Dion Cassius (lxviii. 6—14) has given the history of this famous war; but the Column of Trajan at Rome, upon which the chief events of the two campaigns are minutely figured, forms the best commentary on this final victory of Rome, which Caninius the poet (Plin. *Ep.* viii. 4. § 1) had proposed to narrate in verse as an eternal monument to the illustrious Trajan. (Paget, *Hungary and Transylvania*, vol. ii. p. 107; Fabretti, *de Column. Traj.*; Mannert, *Res Traj. ad Danub. gestae;* Engel, *Comm. de Exped. Traj. ad Danub.;* Franke, *Zur Geschich. Trajans*, pp. 66—141.)

Dacia now became a Roman province, and received its definite political boundary; on the W. it was bounded by the Tysia, which divided it from the Iazyges Metanastae; on the N. by the Mons Carpatus; to the E. its limits were the Hierasus, up to its confluence with the Ister; while on the S. it was separated from Moesia by the Danube. (Ptol. iii. 8. § 4.) The whole circumference was calculated by Eutropius (viii. 2) at 1000 M. P., but this is below the mark, as it contained what is now the *Banat of Temesvár*, *Hungary* E. of the *Theiss*, the whole of *Transylvania*, the *Bukowina*, the S. point of *Galicia*, *Moldavia* W. of the *Pruth*, and the whole of *Wallachia.*

After the subjugation of the country, Trajan turned his attention to securing his new province. The bridge over the Danube which was to afford a communication with the S. provinces, had been commenced probably about A. D. 103. Dion Cassius, governor of Pannonia under Alexander Severus, wrote an account of Trajan's bridge; but this part of his work has been lost, though an abridgment is given in the epitome of Xiphilinus. According to this writer, it was built by Apollodorus, the architect of the Forum Trajanum and of the Column at Rome, and consisted of 20 piers; each pier was 150 Roman feet high, 60 feet thick, and they were 170 feet distant from each other. At either end it was protected by towers, and the whole work was built of hewn stone. (Dion Cass. lxviii. 13.) The latter circumstance seems to be an exaggeration, and the account of the situation, depth of water, nature of the soil, and other particulars, contains many errors. A comparison of the other two ancient authorities—the large copper coin of Trajan with the bridge on the reverse, and the column, where part of the bridge is represented in the background—shows that the upper part of the bridge was of wood, while the piers are undoubtedly of stone. About A. D. 120 Hadrian destroyed the bridge, as it is said, to prevent the barbarians crossing over into the Thracian provinces. (Dion Cass. *l. c.*) The remains of this bridge are to be found a little below the miserable village of *Scala Gladova*. All that is now left is a solid shapeless mass of masonry on each bank, about 20 feet high; and between that and the river there is on each side a broken wall, with a level on the top of the banks, apparently forming the pier from which the first arches sprang. On both sides the banks are of a considerable height above the water. In the bed of the river, and in a direct line between these ruins, the surveyors—as will be seen by the accompanying plan, in which the upper line indicates the common height of the water, the lower that to which it sometimes falls, when the tops of

REMAINS OF TRAJAN'S BRIDGE.

several of the pillars become visible—have traced the remains of 13 pillars. Not far from the middle, a kind of island has been formed which occupies the space of 4 pillars, and on the N. bank there is a second space, apparently filled up by deposits, which leaves room for one other pillar; thus making, in addition to those on the banks, the number 20. The distance between the pillars on either bank is about 3,900 English feet. The pillar on the N. bank is not built of hewn stone, but of a mass of shapeless materials joined together with Roman cement. It may have been encased in hewn stone which is now destroyed. On the Wallachian side are the remains of a tower, surrounded by a deep and circular fosse. (Paget, vol. ii. p. 57.)

Besides this great work Trajan constructed roads (the great agents for civilization): these were three in number, and were connected with the Via Trajana, which ran along the S. side of the Danube, partly cut in the rock and partly supported on wooden beams. The road which lay most to the W. quitted Viminacium,—or, more properly, the fortress on the opposite side of the river, *Uj-Palanka*,—and took a NE. direction up to Tiviscum (*Temesvar*). On this road the Peutingerian Table gives the following stations:—Arcidava, Centum Puteae, Bersovia, Azizis, Caput Bubali, Tiviscum. The middle road, quitting *Orsova*, followed the valley of the *Czerna*, closely hemmed in by its wooded hills, to *Mehadia;* and, pursuing the same course as the modern road, proceeded along the banks of the *Temes*, then crossed the narrow gorge where the Romans are said to have had literally an iron gate, which gave its name to the place. Its direction then turned towards the E., along the vale—or rather plain—of *Hátzeg*, over *Hunyad* and the level before *Várhely*, and the hill of *Deva*, and there fell into the beautiful valley of the *Maros*,—taking the route which, should Transylvania ever attain to a higher civilisation, will form the future great commercial road to unite the wine-growing districts of its well-watered volcanic slopes with the stream of the Danube. Still proceeding in a NE. direction along the *Maros*, it passed *Karlsburg*, *Thorda*, *Maros Vasarheli*. and so on to the frontier of Moldavia. Again, taking the guidance of the Peutingerian Table, the following stations lie on this road:—Tierna, Ad Mediam (*Mehadia*,—with the baths of Hercules, which were known to the Romans as early as the times of Hadrian, and were in high repute for their medicinal virtues), Praetorium, Ad Pannonios, Gaganae, Masclianae, Tiviscum, Agnavae, Pons Augusti, Sarmizegethusa, Ad Aquas, Germizera, Blandiana, Apula, Brucla, Salinae, Patavissa, Napoca, Optatiana, Langiana, Cersie, Parolissum.

The third road, which lay towards the E., left the neighbourhood of *Scala Gladova*,—probably crossing Trajan's Bridge,—passed along the valley of the Aluta (*Alt*), and, mounting the *Rothenthurm* pass, descended upon *Karlsburg*, where it fell in with the other road. The following are the stations up to Apula,—the mining capital of the Romans in Dacia, the seat of the Collegium Aurariorum, and the residence of the procurator or chief officer of the gold mines:—Drubetis, Amutria, Pelendova, Castra Nova, Romula, Acidava, Rusidava, Pons Aluti, Burridava, Castra Trajana, Arutela, Praetorium, Pons Vetus Stenarum, Cedonie, Acidava, Apula.

Ptolemy (iii. 8) has added the names of the following places which are not to be found on the great Roman roads, between the Tysia and the Aluta, in the direction from N. to S.:—Rucconium (Ῥουκκόνιον), Docidava (Δοκιδαύα), Ulpianum (Οὐλπιανόν), Ziridava (Ζιρίδαυα), Zurobara (Ζουρόβαρα), Lizizis (Λιζιζίς), Zeugma (Ζεῦγμα), Acmonia (Ἀκμωνία), Phrateria (Φρατερία). Then E. of the Aluta, in the direction from S to N.:—Arcinna (Ἀρκιν(ν)α), Pinum (Πινόν), Sornum (Σόρνον), Tiasum (Τίασον), Nentidava (Νεντίδαυα), Pirum (Πιρούμ), Hydata (Ὕδατα), Tiriscum (Τίρισκον), Marcodava (Μαρκόδαυα), Comidava (Κομίδαυα), Rhamidava (Ῥαμίδαυα), Zusidava (Ζουσίδαυα), Paloda (Πάλοδα), Angustia (Ἀγγουστία), Praetoria Augusta (Πραιτωρία Αὐγούστα), Sandava (Σάνδαυα), Utidava (Οὐτίδαυα), Petrodava (Πετρόδαυα), Carsidava (Καρσίδαυα), Patridava (Πατρίδαυα), Triphulum (Τρίφυλον), Arcobadara (Ἀρκοβάδαρα).

The rivers of Dacia which flowed into the Danube in the direction from W. to. E., were as follows:—Tisianus or Tysia, with its E. affluents Gerasus or Grissia, and Marisus; Tibiscus, springing from the Carpathians; Gifil; Alutas; and Hierasus which has been identified with the Πόρας or Πορετός of Herodotus (iv. 48).

Dacia was made a consular province (Capitolin. *Pertin.* 2, 3) under a "legatus," and divided into districts, as in 129 there appears "Dacia Inferior" under Hadrian, and in an inscription, the age of which is not known, "Dacia Apulensis" (Orelli, *Inscr.* n. 3888). Notwithstanding the resolution of Hadrian to contract the limits of the empire, and the steps he actually took for that purpose, the Romans seem to have remained masters of Dacia till the time of Aurelian (A. D. 270—275); when they finally retired across the Danube, and left Dacia to the Goths. The Roman colonists were placed on the S. of the river, in a district lying between Upper and Lower Moesia, which bore the name of DACIA AURELIANI (Vopisc. *Aurel.* 39; Ruf. *Brev.* 8; Eutrop. ix. 15), and which was afterwards divided into two parts:—DACIA RIPENSIS, on the Danube, with the capital RATIARIA; and DACIA MEDITERRANEI, with the capital SERDICA. (Marquardt, *Handbuch der Röm. Alt.* p. 108.) An intercourse of commerce and language was gradually established between the opposite banks of the river; and Dacia, though serving a Gothic master, proved the firmest barrier against the barbarians of the north. In spite of the strong lines which the Visigoths were preparing to construct between the Pruth, Danube, and the mountains, they gave way before the destructive inroads of the Huns, about A. D. 376. (Amm. Marc. xxxi. 3; Jornand. *de Reb. Get.* c. 24; Schafarik, *Slav. Alt.* vol. i. p. 324.) After the death of Attila in A. D. 453, the old country of Dacia, from the Carpathian mountains to the Euxine, became the seat of a new power which was erected by Ardaric, king of the Gepidae. When the kingdom of the Gepidae was destroyed by the Lombards and Avars in A. D. 566, these districts were occupied without resistance by a new colony of Scythians. The Dacian empire of the "Chagans" lasted for upwards of 230 years, till it fell before the might and prowess of the great Charlemagne. The Wallachians—or "Rumunyi," as they call themselves—are not to be confounded with the *Vlakhi* (Βλάχοι), which is a much older and wider-spread name, belonging to the Kelts. (Schafarik, *Slav. Alt.* vol. i. p. 235.) Both of the Wallachian stocks on either side of the Danube were of the same descent, and consisted of a mixture of Slaves, Getae, and Romans, who from the seventh to the tenth century sheltered themselves in the mountains of Dacia, Macedonia, Thessaly, and Albania; and when the times became more peaceable, spread themselves over the neighbouring plains. (Schafarik, *Slav. Alt.* vol. ii. p. 205; Fessler, *Geschich. der Ungern*, vol. i. p. 71.)

The Magyars had made themselves masters of Dacia before the tenth century: its later history falls without the province of this work. It is interesting to observe that Bethlén Gabor, the Protestant hero of Transylvania in the Thirty Years' War, had intended to have founded the ancient Dacian empire in favour of himself, but abandoned it in consequence, as it seems, of his being childless.

The dress, features, and whole appearance of the modern Wallacks, correspond entirely with the Dacians of Trajan's Column. They have the same arched nose, deeply-sunken eye, and long hair, the same sheepskin cap, the same shirt, bound round the waist and descending to the knee, and the same long loose trousers which the Roman chain is so often seen encircling at the ankles. It is more difficult to decide the claims of the Wallack to Roman descent; but an admixture of Roman and Dacian blood—the conquerors and the conquered—may reasonably be inferred. Though the duration of the Roman empire only lasted for about 170 years in this country, yet in none has it left more lasting impression of its domination, especially in the language. That which is spoken by all the people of this nation is soft, abounding in vowels, and deriving most of its words from the Latin, mixed up with many forms of Slavish origin.

It is uncertain what coinage the Dacians used during their independence: they were probably tetradrachms, of rude workmanship, copied after the money of Philip of Macedon, great numbers of which have been found in Transylvania. Coins of the imperial period, from the time of Philip to that of Gallienus, are extant: the type constantly found is a woman, generally standing,—the symbol of Dacia,—with the epigraph PROVINCIA DACIA. (Eckhel, vol. ii. p. 4.)

(Sulzer, *Gesch. Daciens;* Ersch and Gruber, *Encyclopädie, s. v. Dacia;* Wilkinson, *Wallachia and Moldavia;* Paget, *Hungary and Transylvania;* Neigebauer, *Dacien aus den Ueberresten des Klass. Alterthums.*) [E. B. J.]

DACIBY'ZA (Δακίβυζα), a place in Bithynia, on the road from Chalcedon to Nicomedia. The modern *Gebse* or *Givyza*, near the north coast of the bay of Astacus, seems to preserve the ancient name. It is mentioned by several of the historians of the Lower Empire. (Leake, *Asia Minor*, p. 9.) [G.L.]

DADASTANA (Gen. ae; Δαδάστανα, Ptol. v. 1), an inland town of Bithynia, according to Ptolemy. The Table places it on a road from Nicaea to Juliopolis, and 29 M. P. from Juliopolis. It appears to have been near the borders of Bithynia, as Ammianus says (xxv. 10) the emperor Jovianus on his return from the East came from Ancyra to Dadastana, where he died suddenly. [G. L.]

DADES (Δάδες, Ptol. v. 14. § 2), a promontory on the S. coast of Cyprus, W. of Thronoi, which D'Anville has identified with *Kiti.* (Engel, *Kypros*, vol. i. p. 99.) [E. B. J.]

DADICAE. [DARADRAE.]

DAE'DALA (τὰ Δαίδαλα: *Eth.* Δαιδαλεύς), a city of the Rhodia, that is, the Peraea in Caria, or a small place, as Stephanus B. says (*s. v.*), on the authority of Strabo; and also a mountain tract in Lycia.

The eastern limit of the Rhodian Peraea was the town of Daedala, and after Daedala, which belongs to the Rhodii, is a mountain of the same name, Daedala, where commences the line of the Lycian coast: near the mountain, that is, on the coast, is Telmissus, a town of Lycia, and the promontory Telmissis. (Strab. pp. 664, 665.) The Daedala is that part of the mountain country of Lycia which lies between the *Dalamon Tchy* and the middle course of the Xanthus; and the high land comes down to the coast at the head of the gulf of Glaucus or *Makri.* (*Map*, &c. by Hoskyn, *London Geog. Journal*, vol. xii.) In Mr. Hoskyn's map just referred to, the ruins of Daedala are placed near the head of the gulf of Glaucus, on the west side of a small river named *Inigi Chai*, which seems to be the river Ninus, of which Alexander in his Lyciaca (Steph. B. *s. v.* Δαίδαλα) tells the legend, that Daedalus was going through a marsh on the Ninus, or through the Ninus river, when he was bitten by a water snake, and died and was buried there, and there the city Daedala was built. The valley through which the Ninus flows is picturesque, and well-cultivated.

"On the mountain on the W. side of the valley is an ancient site, probably Daedala: here are numerous tombs hewn in the rocks in the usual Lycian style; some are well-finished. The acropolis stood on a detached hill; on its summits are remains of a well, and a large cistern. We did not find any inscriptions." (Hoskyn.) But though no inscriptions were found, there is hardly any doubt that the place is Daedala. Pliny (v. 31) mentions two islands off this coast belonging to the Daedaleis. There is an island off the coast east of the mouth of the *Inigi Chai*, and another west of the mouth of the river; and these may be the islands which Pliny means. The islands of the Cryeis, three according to Pliny, lie opposite to Crya, on the west side of the gulf of *Makri*. Livy (xxxvii. 22) mentions Daedala as a "parvum castellum." Ptolemy (v. 2) places Daedala, and indeed the whole of the west side of the gulf of Glaucus, in Lycia.

The reader may refer to Hoskyn's map and the *Geog. Journal* (vol. xii) as to the site of Caunus also, which passage the writer of the article CAUNUS overlooked. [G. L.]

DAE'DALA (Δαιδάλα, Ptol. vii. 1. § 49), a town or district of "India intra Gangem," E. of the Indus, and between that river and the M. Vindios (*Vindhya Mts.*), the territory of the Caspiraeans. Curtius would seem to place it on the W. of the Indus (viii. 10. § 19), and the same view is taken by Justin, if his *Montes Daedali* refer to this place (xii. 7). Stephanus simply notices the existence of a place of this name in India. [V.]

DAE'MONUM INSULAE (Δαιμόνων νῆσοι), islands off the coast of Arabia, and in the Arabian Gulf (*Red Sea*) (Ptol. vi. § 15), apparently lying off *Yambo*. [G. W.]

DAESIDIA'TAE, DESIDA'TAE (Δαισιδιᾶται), one of the many Pannonian tribes. (Strab. vii. p. 314.) Pliny (iii. 26) and Velleius Paterculus (ii. 115), indeed, mention them among the Illyrian tribes, but this probably arises from the fact that the Romans regarded the Pannonians generally as Illyrians. [L. S.]

DAETICHAE (Δαιτῖχαι, Ptol. vii. 1. § 51), a tribe of "India intra Gangem," to the N. of the Ganges, and apparently seated among the spurs of the Himalaya mountains. They may have occupied the western portion of *Nipál*. [V.]

DAGASEIRA (Δαγάσειρα, Arrian, *Ind.* c. 29), a small place, perhaps a headland, visited by the fleet of Nearchus. It was in the country of the Icthyophagi. Forbiger thinks that it is represented by *Cape Iask*, but this would seem to be more to the westward at Carpella. If the word be of Arabian origin, its original form may have been *Dah-jezireh*, the island of Dah. The whole district was anciently called Gedrosia. (Vincent, *Voyage of Nearchus*, vol. i. p. 274.) [V.]

DAHAE (Δάαι, Steph. B. *s. v.*; Δάοι, Herod. i. 52; Dahae, Plin. vi. 19), a numerous nomad tribe who wandered over the steppes to the E. of the Caspian. Strabo (xi. p. 511) has grouped them with the SACAE and MASSAGETAE as the great Scythian tribes of Inner Asia to the N. of Bactriana. These Dahae were subdivided into PARNI (Πάρνοι, p. 508) or APARNI (Ἀπαρνοι, p. 511), who were found near Hyrcania; XANTHII (Ξάνθιοι), and PISSURI (Πίσσουροι). Alexander met them on the banks of the river Oxus, and subdued them. (Curt. viii. 3; Justin. xii. 6. § 18.)

As might be expected, they occupied no definite position, but moved as necessity might require; they appear in Arrian (*Anab.* iii. 28) on the Jaxartes, and were in later times found in this neighbourhood. They were hardy warriors ("indomiti Dahae," Virg. *Aen.* viii. 728), who served Dareius as cavalry (Arrian, iii. 11), Alexander (Arrian, v. 12) and Antiochus (Polyb. v. 79; Liv. xxxv. 48, xxxvii. 38, 40) as mounted archers. They were also useful as foot-troops. (Amm. Marc. xxii. 8. § 21; Suid. *s. v.* Ἀγαθός.)

It is most questionable whether any connection between the Dahae and the Thracian Daci can be traced (comp. Strab. vii. p. 304); but Ritter (*Erdkunde*, vol. vii. pp. 668, foll.) has noticed the curious coincidence of the successive arrival of Daci, Getae, and Scythian tribes to the W. of the Caspian, upon the banks of the Ister; while in a previous age the Jaxartes and Oxus were occupied by Dahae, Yueti (*Getae*), and Massagetae to the E. of the Caspian. The writers of Greece and Rome know nothing of the Dahae but their name, position, and warlike virtues. It would appear that the annals of the Chinese give more special information upon the interesting subject of these and other Germanic or red and fair-haired races in Central Asia — one of the most important discoveries of modern times. (Ritter, *l. c.*: comp. Humboldt. *Asie Centrale*, vol. ii. p. 63.) [E. B. J.]

DAI. [DAHAE.]

DAIX (Δάϊξ). In the geography of Ptolemy (vi. 14; comp. Menand. *Hist.* p. 301, ed. Bonn), this river, which he describes as flowing into the Caspian, is the second river from the Rha (*Volga*) towards the Jaxartes, the Rhymnus intervening; but there must be some mistake (comp. Rennell, *Geog. Herod.* vol. i. p. 180), as there can be no doubt that the Daix is represented by the *Jaik* or *Ural* (Humboldt, *Asie Centrale*, vol. ii. p. 186), which forms part of the E. limit of Europe, rising in the *Ural* mountains, and falling into the Caspian, after a course of about 900 English miles. This river is the W. boundary to the vast steppes over which the hordes of the *Kirghiz-Kazaks* roam. (Levchine, *Hordes et Steppes des Kirghiz-Kazaks*, p. 3.) [E. B. J.]

DALANDA (Δάλανδα, Ptol. v 7. § 2). Ritter (*Erdkunde*, vol. x. p. 844) has conjectured that the site of this place in the Lesser Armenia may be identified with the remarkable castle of *Derendah*, situated at the *Tokhmah Sú* upon a rock of nummulitic limestone, forming cliffs which rise 300 feet above the river's bed. This rock has extensive ruins on the platform, with hewn cisterns for preserving the rain water. These ruins, however, do not date beyond the epoch of the Turks, nor are any to be perceived which belong to a more ancient period, though it has been assumed, from its remarkable position, that it must have been one of the many Roman or rather Byzantine fortresses which existed in Armenia Minor. (St. Martin, *Mém. sur l'Armenie*, vol. i. p. 189; *Journ. Geog. Soc.* vol. x. p. 318.) [E. B. J.]

DALDIS (ἡ Δάλδις: *Eth.* Δαλδιανός), a town which Ptolemy places on the borders of Phrygia and Lydia (v. 2); and Suidas (*s. v.* Ἀρτεμίδωρος), in Lydia. It was the birthplace of Artemidorus, the author of the Oneirocritica. There are coins of the imperial period with the epigraph Δαλδιανων. The site is unknown. [G. L.]

DALION. [DIAGON.]

DALLUNTUM, a town of Dalmatia, which the Antonine Itinerary places on the road from Narona to Epidaurus, 29 M. P. from the former. It appears

in the Peutinger Table under the name of DRUNTUM. [E. B. J.]

DALMANU'THA (Δαλμανουθά). The name occurs only in St. Mark's Gospel (viii. 10), where the parallel passage in St. Matthew (xv. 39) has Μαγδαλά, which enables us to identify the district of Dalmanutha with the plain of Gennesareth, to the S. of which Magdala was situated. Lightfoot (*Chorog. Dec.* cap. v. § 2) offers several suggestions as to the origin of the name, but none of them satisfactory. [G. W.]

DALMA'TIA (Δαλματία, Δαλματική, Dalmatia, Delmatia; *Eth.* and *adj.* Δαλμάτης, Δαλματεύς, Dalmata, Dalmatensis, Dalmaticus). The Dalmatians formed a portion of that great aggregate of tribes which inhabited the broken and indented coast E. of the Adriatic from the Celti Taurisci as far S. as the Epirots and Macedonians. These tribes, which comprehended, besides the Dalmatians, the Veneti, Pannonians, Dardani, Autariatae and others, belonged to the Illyrian group; and the territory which with varying limits was occupied by them bore the common name of Illyricum [ILLYRICUM]. Strabo (vii. p. 315) asserted that it was a peculiarity of the Dalmatians, to divide their lands afresh (χώρας ἀναδασμός) every eighth year; and that they were not in the habit of using coined money among themselves.

The inland parts of this district are diversified by undulating grounds, hills, and high mountains; many of the latter have the same rugged appearance as those of the coast. The geological character of the whole of this country is referred to the secondary formation.

Sterility is the general character of the hilly parts of Dalmatia, and it is singular that the N. sides are usually less barren than the S. slopes. The soil, though not rich, is good; Strabo (p. 315) indeed describes it as 'sterile, unsuited to agriculture, and barely affording a subsistence to the inhabitants." He adds (p. 317), and this may account for its impoverished condition, "The country which, with the exception of a few rugged spots, abounds every where with the olive and vine, has always been neglected, and its worth has been unknown in consequence of the wildness and predatory habits of the inhabitants."

The coast was well furnished with harbours as well on the mainland as in the neighbouring islands, while the opposite coast of Italy is without ports. In antiquity Dalmatia produced a great quantity of gold ("aurifera terra," Mart. x. 78; Stat. *Silv.* i. 2. 53), and if Pliny (xxxiii. 4) may be believed, as much as 50 pounds of gold were procured daily from the mines in the time of Nero. There is some difficulty in these statements, because, as far as present information goes, Dalmatia can boast of neither gold nor silver. Gold has, however, been found at *Serajero* in *Bosnia*; and as there can be little doubt but that the Dalmatia of the Romans included much of *Bosnia*, the statements of the ancients must be referred to this district. (Neigebauer, *Die Südslaven*, p. 211; comp. Fortis, *Viaggio in Dalmazia*, p. 113; Wilkinson, *Dalmatia*, vol. i. p. 219.)

In the reign of Gentius, last king of Illyria, a separation took place among his subjects. They obeyed Pleuratus as long as he lived, but after his death, on the accession of Gentius, the Dalmatae revolted, B. C. 180, having assumed that name from the city of Delminium (or Dalminium) which they chose as the capital of their new state. (Polyb. xxxii. 18.) The territory of the Dalmatae was at first comprehended between the Naro (*Narenta*) and the Tilurus or Nestus (*Cettina*), and contained at one period twenty cities; it then extended to the Titius (*La Kerka*), and the whole country received the name of Dalmatia, under a republican form of government, which lasted till the inhabitants either delivered themselves up to Rome, or were conquered by her armies.

In consequence of a quarrel between them and the Lissans and Daorsi, who were allies of Rome, a consular army was sent against them. The consul, C. Marcius Figulus, entered Dalmatia, B. C. 156, and its strongly fortified capital Delminium having been taken, the Dalmatians were obliged to sue for peace; and their liberty was only allowed them on condition of their paying tribute to Rome. (Polyb. xxxii. 24; Appian. *Illyr.* 11; Liv. *Epit.* xlvii.; Flor. iv. 12.) In the following year they were subdued by P. Cornelius Scipio Nasica Corculum (Liv. *l. c.*). Delminium, their capital, it would appear, suffered to such an extent (Strab. p. 315) that the seat of government was transferred to Salona. In B. C. 119, L. Caecilius Metellus, who was consul, declared war against the Dalmatians, though they had been guilty of no offence. They offered no opposition to him, and after wintering at Salona he returned to Rome, and gained the undeserved honour of a triumph and the surname Dalmaticus. (Liv. *Epit.* lxii.; Appian. *Illyr.* 11.)

Appian (*Illyr.* 13) has told the story of the 4th Dalmatian war. The Liburnians, who were attacked by their restless neighbours, appealed to Rome for aid. Troops were sent to enforce the demand which had previously been made, that the Dalmatians should evacuate Promona. In B. C. 48, Gabinius lost more than 2000 men in an engagement with the natives, and then fell back upon Salona. It was reserved for Vatinius to wipe off the disgrace which the Roman arms had sustained. He was saluted as "imperator" by his soldiers, and received the honours of a "supplicatio" from the senate in B. C. 45. The death of J. Caesar emboldened the Dalmatians. Fortune favoured them. Vatinius took refuge in Epidamnus, and the war against M. Antonius and Octavianus prevented Brutus, to whom the province had been decreed, from punishing their defection. In B. C. 34, Octavianus led a formidable army into Dalmatia, where Agrippa had the command, and penetrated as far as Setonia, where he was wounded in the knee. The country submitted to him, hostages were taken, the standards captured from Gabinius restored, and a promise was given that the owing tribute should be paid. (Dion Cass. xlix. 38; Liv. *Epit.* cxxxii.; Appian. *Illyr.* 24—27; Vell. ii. 90; Flor. iv. 12; Suet. *Oct.* 20.)

Dalmatia became an imperial province, and its limits were pushed as far N. as the *Save*. In B. C. 16, and again in 11, the Dalmatians showed an inclination to throw off the yoke, and some years afterwards joined the revolted Pannonians, when Rome anticipated such danger, that Suetonius (*Tib.* 16) considered that no [illegible] formidable enemy had appeared since the Punic [illegible] Tiberius, who was appointed to the command of the Roman army, displayed considerable military talent in the Dalmatian campaign against Bato, the champion of his country's liberties, a man of great bravery and capacity. In A. D. 9, he had reduced the country entirely to subjection, and in A. D. 12 received the honour of a triumph for this and his German victory. (Dion Cass. lv. 29—32, lvi. 11—17; Vell. ii. 110—115; Zonar. x. 37.) Henceforward Dalmatia and Illyricum, though geographically they were distinguished (Tac. *Ann.* ii. 53), became politically convertible terms.

The name Illyricum is however more properly applied to the long and narrow tract of country which lies between the Save and the Adriatic, and Dalmatia after its final incorporation into the Roman province must be referred to the article under that head [ILLYRICUM]. Dalmatia was the native country of Diocletian, and its capital Salona (*Spalatro*) will always be famous as having been the place to which that emperor retired. At the division of the empire between Arcadius and Honorius, the important and warlike praefecture of Illyricum was divided between the West and the East; Dalmatia with Noricum and Pannonia fell to the lot of the former. About A.D. 461, Dalmatia was exposed to the inroads of the Suevi, but the intrepid Marcellinus maintained the power of the Romans against the barbarians, and occupied the province in an independent position with the title of patrician of the West. (Procop. *Bell. Vandal.* i. 6.) Theodoric, the great emperor of the Ostro-Goths, supported by Zeno, emperor of the East, wrested it from Odoacer; and it is said that an iron mine in Dalmatia furnished the victors with one of the chief requisites of war. (Cassiod. *Var.* iii. ep. 25.) In A.D. 535, it was conquered for the Lower Empire by the imperial armies, regained by the Ostro-Goths, and again recovered by Belisarius.

Under Justinian the limits of Dalmatia were advanced to the E. over Pannonia; and it was divided into maritime and inland Dalmatia: the former extending from Istria through Liburnia, Dalmatia, and N. Albania, with the adjacent islands; and the latter lying to the E. of the range of mountains known under the name of Albius, Bebius, Ardius, or the modern *Prolog* range, and Scardus. It was, however, with difficulty preserved for the Byzantine empire, and was subjected to the inroads of the Gepidae, and then of the Lombards. The great Heraclius, in pursuance of his statesmanlike plan of establishing a permanent barrier in Europe against the encroachments of the Avars and Slaves, induced the Serbs or W. Slaves, who occupied the country about the Carpathians, to abandon their ancient seats and move down into the provinces between the Danube and the Adriatic. Though independent, these people, when they had made their footing in Dalmatia, for a long period considered themselves as owing a degree of territorial allegiance to the Lower Empire. (Const. Porph. *de Adm. Imp.* 31—36.)

The modern history of Dalmatia commences with these relations established by Heraclius and the W. Slaves, who entered the country under the various names of Servians, Croatians, Narentins, Zachlumians, Terbunians, Diocleans, and Decatrians. (Schafarik, *Slav. Alt.* vol. ii. p. 237.)

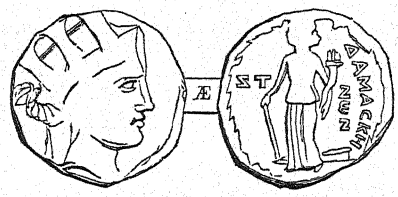
The following is a list of Dalmatian towns, the chief of which are mentioned elsewhere.

On the coast:—Sicum, Praetorium, Tragurium, Salona, Col. Julia Martia, Epetium, Oneum, Iranonia, Piguntia, Laureata, Dalluntum, Rhausium, Epidaurus, Rhizus, Cattarus, Butua, Ascrivium, Olcinium, Nymphaeum, Lissus.

In the interior, in the direction from NW. to SE.:—Pelva, Dalminium, Aequum, Promona, Ratanea, Andetrium, Selovia, Seretium, Sinotium, Tilurium, Ad Matricem, Staneclum, Dioclea, Narona, Glinditiones, Salluntum, Varo, Grabaea, Nalata, Birziminium, Sinna, Medion, Scodra, Picaria, Sphentzanium, Doracium. (Sir Gardner Wilkinson, *Dalmatia and Montenegro*, 2 vols. 1848; Kohl, *Reisen in Istrien, Dalmatien, u. Montenegro*, 2 vols. 1850; Neigebauer, *Die Sudslaven u. deren Länder*, 1851; Cusani, *Dalmazia*, 2 vols. 1846; Pannonius, *Illyrien u. Dalmatien*, 2 vols. 1816.) [E. B. J.]

DALMI'NIUM, DELMI'NIUM (Δαλμίνιον, Strab. vii. p. 315; Δελμίνιον, Ptol. ii. 16. § 11; Δάλμιον, Steph. B.; Eustath. *ad Dion. Perieg.* 95), the ancient capital of Dalmatia, from which the Dalmatians, after their separation from the other Illyrians, derived their name. (Appian, *Ill.* 11.) Though strongly fortified, it was taken by C. Figulus the consul, in B.C. 156, and was set on fire by means of a contrivance very much resembling the Greek fire of the middle ages. (Appian, *l. c.*) In B.C. 135, P. Scipio Nasica destroyed the walls and public buildings. (Strab. *l. c.*) After this, except in the notice of Ptolemy (*l. c.*), no more is heard of the city. The district in the neighbourhood was in later times called Dalen (Δαλέν, Const. Porph. *de Adm. Imp.* c. 30), and is the present plain of *Dumno* or *Davno* in the *Herzegóvina*, to the E. of *Livno*. (Schafarik, *Slav. Alt.* vol. ii. p. 267; Neigebauer, *Die Sudslaven*, p. 21.) [E. B. J.]

DA'MALIS (Δάμαλις), seems to be the point near Chrysopolis [CHRYSOPOLIS] named Bus or Bous (Βοῦς) by Polybius (iv. 43). Here, according to the legend, Io landed when she crossed the strait. It was also called Damalis, or the heifer, and Arrian, quoted by Eustathius (*ad Dionys. Per.* 140) has a story about it. [G. L.]



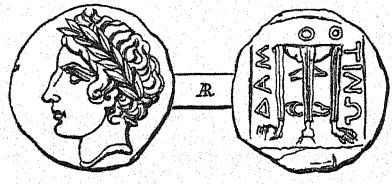
DAMASCUS (Δαμασκός; *Eth.* Δαμασκηνός: the territory ἡ Δαμασκηνή), the capital city of Syria, both in ancient and modern times, though its pre-eminence was disputed during the classical period by Antioch. It is an exceedingly ancient city, being mentioned first in the history of Abraham's pursuit of the defeated kings (*Gen.* xiv. 15); and his steward Eliezer was a native of Damascus (xv. 2). Josephus ascribes its foundation to Uz, a grandson of Shem (*Ant.* i. 6. § 3). During the period of the Hebrew monarchy it was the "head" or capital of Syria (*Isaiah*, vii. 8), and the Syrian king is called the king of Damascus (2 *Chron.* xxiv. 23). But during the struggles between these neighbouring kingdoms it occasionally fell into the hands of the Israelites. Thus "David put garrisons in Syria of Damascus, and the Syrians became servants to David" (2 *Sam.* viii. 6; 1 *Chron.* xviii. 6), after he had defeated Hadarezer, king of Zobah, to whom the "Syrians of Damascus" had allied themselves. The fact that Tadmor in the wilderness [PALMYRA] was built by Solomon (2 *Chron.* viii. 4), which further gives countenance to the very ancient and consistent tradition of his connection with Baalbek [HELIOPOLIS], proves that David's son and successor retained possession of southern Syria; but Damascus was during this time subject to Rezon, a vassal of Hadarezer. (1 *Kings*, xi. 23—25.) Subsequently to the division of the Hebrew kingdom, cir. B.C. 900, we find "a Hebrew quarter" in Damascus ceded by treaty to Ahab by Benhadad (1 *Kings*, xx 34), and the city was at length recovered to Israel by Jeroboam, son of Joash, king of Israel (cir. B.C. 822). (2 *Kings*, xiv. 28.) The alliance of Syria with Israel against Judah led Ahaz to call in the aid of Tiglathpileser, king of Assyria, who, in consequence, "went up against Damascus and took it, and carried the people of it captive to Kir" (cir. B.C. 740), according to the prophecy of Amos, delivered about fifty years before the event. (2 *Kings*, xvi. 9; *Amos*, i. 5.) From this time it followed the fortunes of the Assyrian empire, but does not appear at

any time to have had much importance in a military view. Besides which, its political and commercial importance after the time of Alexander the Great was eclipsed by Antioch and other cities founded by the Seleucidae; which may further account for the scanty notices of it that occur in classical authors. Strabo describes it as πόλις ἀξιόλογος, σχεδόν τι καὶ ἐπιφανεστάτη τῶν ταύτῃ κατὰ τὰ Περσικά (xvi. p. 756). Pliny says that according to some it was reckoned as one of the cities of the Decapolis (v. 18). He only further mentions it for its alabaster (xxxvi. 18). It is, however, strange that so renowned a city, the subject of such extravagant eulogy in the poems and romances of the Orientals, should be almost unnoticed in the classical poets; the "ventosa Damascus" of Lucan — certainly not a well-chosen epithet — being the sum of their tribute to this most remarkable and beautiful city (iii. 215).

In the annals of the church it is noted for the conversion and first preaching of the apostle St. Paul, which synchronised with the occupation of the city by the ethnarch of Aretas, the king apparently of Arabia or Petra. (2 *Cor.* xi. 32.) As the event is not chronicled by any historian, the circumstances under which this petty king had come into possession of so important a place are very doubtful; but it is certain that it was subject to the Roman rule until the reign of Heraclius, when it was taken by the Saracens in the 13th year of the Hejira (A. D. 634), from which time, as if to compensate for its temporary eclipse, it has been the delight and glory of the East, and celebrated by the Arabian poets as the terrestrial Paradise.

Damascus, now called *Es-Sham*, is situated at the distance of two days' journey, or about 60 miles from the coast of the Mediterranean, not far from the eastern base of the range of Antilibanus, and at the western extremity of the great desert of *El-Hauran* (Auranitis), which extends westward to the Euphrates, and southward to the Arabian peninsula. It presents the peculiar phenomenon of a city in the midst of gardens, watered by numerous streams. It is surrounded by a wall, which is however in a state of ruinous decay, and scarcely defines the limits between the city and its suburbs. In 1843, the population of Damascus was stated at 111,552, of which number about 12,000 were Christians, and 5000 Jews. It is governed by a pasha, whose rule extends from the Euphrates to the Jordan, and from the vicinity of Aleppo to the confines of Arabia.

The "Abana and Pharpar, rivers of Damascus," are of Scripture celebrity (2 *Kings*, v. 12), and both Strabo and Pliny mention the Chrysorroa, to which the latter ascribes the fertility of the soil ("Damascum ex epoto riguis amne Chrysoroa fertilem"); and Strabo remarks that "its waters are almost entirely consumed in irrigation, for that it waters a large extent of deep soil" (*ll. cc.*). There are, in fact, as the writer ascertained, two copious sources in the eastern roots of Antilibanus, the *Barada* and the *Phege*. Of these, the *Barada* is far the most copious, and being divided into numerous rivulets on emerging from the mountains above the city, waters its innumerable gardens. The water, however, is not good for drinking, and the inhabitants of the villages along its course in the *Wady Barada* are subject to goitre. Even the poor of Damascus do not ordinarily drink this water. This is probably the Abana of Scripture. The Pharpar is represented by the *Phege*, a smaller stream of delicious water, whose source was explored by Pocock. It emerges from the mountain range through the same valley as the *Barada*, and is conducted by aqueducts and pipes to all parts of the city for the purpose of supplying the inhabitants with drinking water. The scanty surplus of the two streams forms a small lake below the city, called *Bahr-el-Merj*. [G. W.]



COIN OF DAMASCUS.

DAMA'SIA (Δαμασία), a fortified town in Vindelicia, which Strabo (iv. p. 206) regards as the acropolis of the Licattii. The place now generally identified with it is *Hohenembs*, in the upper valley of the Rhine, though some believe it to be the more ancient name of *Augusta Vindelicorum*. [L.S.]

DAMASSI MONTES (τὰ Δάμασσα ὄρη, Ptol. vii. 2. § 18), an eastern spur of the Himalaya Mountains in *Nipál*, in the district of "India intra Gangem." [V.]

DAMA'STIUM (Δαμάστιον), a town in Epeirus, which Strabo mentions as possessing silver mines (vii. p. 326). The name of this town occurs in no other ancient writer; but there are several coins extant, bearing the epigraph Δαμαστινων, which were probably struck at this place. (Eckhel, vol. ii. p. 164.)

COIN OF DAMASTIUM.

DA'MNII, in Scotland, mentioned by Ptolemy as lying to the north-east of the Selgovae. The difficulties that attend the fixation of the exact locality of this people may best be collected from the text as given in full: — "Partly, along the northern side, under the promontory of the same name, dwell the Novantae, amongst whom are these cities — Loucopibia and Rerigonium" (according to another and probably a better reading, Rerigonium). "South of these, the Selgovae, amongst whom are these towns — Carbantorigum, Uxelum, Corda, Trimontium. To the eastward of these, but more to the north, are the Damnii, amongst whom are these towns — Colania, Vanduaria, Coria, Alauna, Lindum, Victoria. The Gadeni more northern, the Ottadini more southern, amongst whom are these towns — Curia, Bremenium. Next to the Damnonii, towards the *east*, but more northern, and to the east of the promontory Epidium, are the Epidii," &c.

More than one text of Ptolemy, as well, perhaps, as the context itself, justifies us in connecting the Gadeni and Ottadini with the Selgovae rather than with the Damnii; *i. e.*, in making the first named of those two populations the one to which the Gadeni and Ottadini lie north and south. But this will not

meet the difficulty. The change of form from Damnii to Damnonii introduces another complication. The *variae lectiones* throw no light on this. The variation is even repeated in two inscriptions found in the neighbourhood of *Carvoran* (a station on the Vallum and the Magna of the *Notitia*), one of which is CIVITAS DUMNI, and the other CIVITAS DUMNONI. The historian of the Roman Wall sees in this only a transplantation of the Dumnonii of Devonshire, and draws attention to the policy by which one tribe already subdued is made to become instrumental in the subjugation of others. He overlooks the Damnii of Ptolemy. Thirdly, the geographical boundaries are indistinct. Of the twenty-one names contained in the above-given extract, no more than eight can claim to be identified in a manner sufficiently satisfactory to serve as the basis for further criticism. These are, Novantae, Loucopibra, Retigonium (Mel. Rerigonium), Selgovae, Bremenium, Gadeni, Ottadini, and the Epidian Promontory. These = *Wigtonshire*, *Glen Luce*, *Stranraer*, the shore of the *Solway*, *High Rochester*, *Berwickshire*, *Northumberland*, and the *Mull of Cantyre* respectively. Now, no part of the northern shore of the Solway Frith lies south of the southernmost points of *Wigton* (Novantae). Neither can any population lie (at one and the same time) *east* of *Kircudbright* (Selgovae), and *west* of the Epidii (*Argyle*). By carrying the Selgovae as far as *Dumfries*, these difficulties are increased. *Peebles*, *Selkirk*, *Lanark*, *Edinburgh*, *Linlithgow*, *Renfrew*, and *Stirling* give us the nearest approximation to the area of the Damnii or Damnonii of North Britain. [See DUMNONII.] [R. G. L.]

DA'MNIUM. [DAMNONIUM.]

DAMNO'NIUM, in South Britain. Damnium is the form of the word in Marcianus Heracleota. In Ptolemy it is Damnonium, so that the variations noticed under DAMNII are here repeated. Each author gives *Ocris* as a synonym for the headland (Δαμνόνιον, τὸ καὶ Ὄκρινον ἄκρον, Ptol., and Δάμνιον ἄκρον τὸ καὶ Ὄκριον καλούμενον, Marcian. Heracl.), of which the modern name is the *Lizard* (in Cornwall). [DUMNONII.] [R. G. L.]

DA'MPOLIS or DIA'MPOLIS (Διάμπολις: *Iamboli*), a Greek town in the interior of Thrace, to the east of Irenopolis, on the river Tonsus. (Ann. Comn. x. p. 274.) It is probably the same place as the Diopolis of Hierocles (p. 635), and the Diospolis of Malala (ii. p. 167). [L. S.]

DAN. [PALAESTINA.]

DAN, a town of Palestine, founded by a colony of the tribe of Dan during the period of the *Judges* (xviii. cir. B. C. 1406), and assumed as the northern limit of the Holy Land, as Beersheba was the southern. (*Judges*, xx. 1; *Sam.* iii. 20, &c.) Its more ancient name was Laish, and it apparently belonged to Sidon (*Judges*, xx. 7); but in *Joshua* (xix. 47) Lesham. It became infamous as one of the chief seats of Jeroboam's idolatry (1 *Kings*, xii. 29), and its position exposed it first to the invaders of Judaea from the north. (1 *Kings*, xv. 20; *Jerem.* iv. 15, viii. 16.)

Its position is plainly marked by *Tell-el-Kady* (*Kadi* being the Arabic equivalent for the Hebrew appellative *Dan*, both signifying *Judge*), a ruined site in the *Ard-el-Huleh*, near the south-western base of Mount Hermon. It is placed by Eusebius and St. Jerome 4 miles from Paneas [PANEAS], on the road to Tyre, but is scarcely more than half an hour, or two miles. It has sometimes been confounded with it. (Reland, pp. 919, 921.) One of the main sources of the Jordan rises at the foot of the hill upon which the city was built, and the copious stream which flows from it is still called *Nahr-el-Dan*. The town has been supposed to have lent its name to the Jordan. (Reland, p. 271.) [PALAESTINA.] [G. W.]

DANA. [TYANA.]

DANA or DAGANA (Δάνα or Δάγανα, Ptol. vii. 4. § 5), a town in the ancient Taprobane or Ceylon. Forbiger has conjectured that it is represented by the modern *Tangala* or *Tangalle*. [V.]

DANABA (Δάναβα, Ptol. v. 15. § 24), a small town placed by Ptolemy in Palmyrene, a subdivision of his larger district of Coele-Syria. It is mentioned under the name of Danabe in the war between the emperor Julian and the Persians. (Zosim. iii. 27. 7.) [V.]

DANAI. [ARGOS, p. 202, b.; HELLAS.]

DA'NALA (Δάναλα), a place in Galatia, in the territory of the Trocmi, where Cn. Pompeius and L. Lucullus met, when Pompeius came to continue the campaign against Mithridates, and Lucullus surrendered the command to him. The site is unknown. Plutarch (*Lucull.* c. 36) merely says that the two Romans met in a village of Galatia. (See the note in Groskurd's Strabo, vol. ii. p. 512.) [G. L.]

DANAPRIS. [BORYSTHENES.]

DANASTRIS. [TYRAS.]

DANDACA (Δανδάκη, Ptol. iii. 6. § 2; Amm. Marc. xxii. 8. § 36), a town of the Tauric Chersonese, of which all that is known is, that it was situated on the W. coast, near Eupatorium. [E. B. J.]

DANDAGUDA (Plin. vi. 20. s. 23), a town placed by Pliny in the neighbourhood of the Prom. Calingon, perhaps the modern *Calingapatam*. [V.]

DANU'BIUS (Δανούβιος: the *Danube*), on coins and inscriptions frequently called DANUVIUS, the greatest river in south-eastern Europe. Its sources are at *Donaueschingen*, on the Mons Abnoba, and, after a long course through Vindelicia, Noricum, Pannonia, and Dacia, it divides itself near Noviodunum into three main branches, so as to form a delta, and empties its waters into the Euxine. The Danube at first forms the southern frontier of Germania Magna; further east it is the boundary between Pannonia and Dacia, and between Dacia and Moesia. Among its many tributaries, we may mention the Dravus, Savus, Pathissus, and Margus, as the principal ones. This river was known even to the earliest Greeks, under the name of ISTER (Ἴστρος), though they knew only the part near its mouth, and entertained very erroneous notions respecting its course (Hesiod, *Theog.* 338; Pind. *Ol.* iii. 25; Aeschyl. *ap. Schol. ad Apollon. Rhod.* iv. 284), which did not become fully known until the time of the Roman empire. The Romans, and especially their poets, sometimes adopted the Greek name ISTRUS or HISTER (Tibull. iv. 1. 146), until in later times the two names Ister and Danubius were used indiscriminately; though it was still very common to apply the former to the lower part of the river, and the latter to the upper part, from its sources to Vindobona or Sirmium. Stephanus B., who himself calls the river Danubis or Danusis, states that its ancient name was Matoas. It is said, moreover, that Danubius was its Thracian, and Ister its Celtic name (Lydus, *De Mag.* iii. 32; Jornand. *De Reb. Get.* 12), but there can be no doubt that DAN is the same word which is found in Rhodanus, Eridanus, Tanais, Don, and others, and signifies

"water." According to Adelung, Dan-ubius means "the upper water," and (Dan)-ister "the lower water." The earlier writers entertained very vague and contradictory notions about the sources of this mighty river; thus Pindar makes it flow from the country of the Hyperboreans, Aeschylus from the Rhipaean mountains, Herodotus (ii. 33) from the country of the Celts in the extreme west (somewhere about the Pyrenees), and Scymnus of Chios (*Fragm.* 31) likewise from the country of the Celts. Afterwards a notion arose that one branch of the Danube flowed into the Adriatic. But these and similar ideas, which were combated by some of the ancients themselves, were rectified during the conquests of the Romans in the north and east of Europe. We have already stated that there are three main branches by which the Danube empties itself into the sea; though Strabo appears to assume four, for out of the seven he mentions, he calls three the lesser ones. Other writers, however, mention only six, five, four, three, or even two mouths. The names of these mouths, so far as they are known to us, are:—(1) the southernmost, called Peuce or the sacrum ostium (τὸ ἱερὸν στόμα, Strab. vii. p. 305; Ptol. iii. 10. § 2); (2) Naracustoma (Νεράκιον or τὸ Νάρακον, Ptol. iii. 10. § 5; Arrian, *Peripl.* p. 23); (3) Calonstoma (τὸ καλὸν στόμα); (4) Pseudostoma (Ψευδόστομον, Ptol. iii. 10. § 6); (5) Boreonstoma (Βόρειον στόμα, Ptol. *l. c.*); (6) Thiagola (Θιαγόλα, Ptol. iii. 10. § 4, or τὸ ψιλὸν στόμα). Respecting these mouths, three of which were navigable in antiquity (P. Mela, ii. 1, 8), see Kruse, *De Istrâ Ostiis*, Vratislav. 1820. At present it is impossible accurately to identify the statements of the ancients about them, as the Danube has undergone very great changes at its mouth. See Katancsich, *De Istro*, Budae, 1798, 4to.: Rennell, *Comparative Geogr. of West. Asia*, vol. ii. p. 374. [L. S.]

DANUM, in Britain, mentioned in the eighth Itinerary as being the second station on the road from York to Lincoln. Name for name, and place for place, *Danum* = *Don*-caster. Danum was the station of the Praefectus Equitum Crispianorum of the *Notitia*. Roman remains are found at *Doncaster*. [R. G. L.]

DAORSI, DAORIZI (Δαόριζοι, Strab. vii. p. 315), a people of Illyricum, who lived on the banks of the Naro. (Strab. *l. c.*) They were allied with the Romans (comp. Liv. xlv. 26), and a quarrel between them and the Dalmatians gave a colourable pretext to the republic for its invasion of Dalmatia in B. C. 156. (Polyb. xxxii. 24.) Pliny (iii. 26) describes their territory as being parcelled out into seventeen small divisions, which he calls "decuriae." They must have possessed some importance, as a coin has been found with the epigraph of this people, of the same workmanship and type as those of Gentius, king of Illyricum. (Eckhel, vol. i. p. 155; Rasche, vol. ii. pt. 1. p. 51.) [E. B. J.]

DAPHNE (Δάφνη), a celebrated grove and sanctuary of Apollo, near Antioch in Syria. [ANTIOCHEIA.] Both locally and historically it was so closely connected with the Syrian metropolis, that we can hardly consider the one without the other. We have seen that Antioch was frequently called A. ἐπὶ Δάφνῃ and ἡ πρὸς Δάφνην, and conversely we find Daphne entitled Δ. ἡ πρὸς Ἀντιόχειαν. (Joseph. *B. J.* i. 12. § 5.) Though really distant a few miles from Antioch, it was called one of its suburbs (προάστειον, Dion Cass. li. 7: "Amoenum illud et ambitiosum Antiochiae suburbanum," Amm. Marc. xix. 12, 19). If Antioch has been compared to *Paris* [see p. 143], Daphne may be called its *Versailles*.

It was situated to the west, or rather to the south-west, of Antioch, at a distance of about 5 miles, or 40 stadia, and on higher ground than the metropolis itself (ὑπέρκειται τεττεράκοντα σταδίους ἡ Δάφνη, Strab. xvi. p. 750; comp. the Jerusalem Itinerary, Wesseling, p. 581). The place was naturally of extreme beauty, with perennial fountains, and abundant wood. (Liban. *Antioch.* p. 356.) Here a sanctuary was established, with the privileges of asylum (2 *Macc.* iv. 33; Polyaen. viii. 50), which became famous throughout the heathen world, and remained for centuries a place of pilgrimage, and the scene of an almost perpetual festival of vice. The zeal with which Gibbon has described it, in his twenty-third chapter, is well known.

Daphne, like Antioch, owed its origin to Seleucus Nicator; and, as in the case of his metropolis [see pp. 142, 143], so he associated the religious suburb with mythological traditions, which were intended to glorify his family. The fame of Apollo was connected with his own. The fable of the river Peneus was appropriated; and the tree was even shown into which the nymph Daphne was transformed.* One of the fountains received the name of the Castalian spring, and the chief honours of the new sanctuary were borrowed from Delphi. In the midst of a rich and deep grove of bay trees and cypresses (Procop. *B. Pers.* ii. 14), with baths, gardens, and colonnades on every side, Seleucus built the temple of Apollo and Diana. The statue of the god was colossal: its material was partly marble, and partly wood; the artist was Bryaxis the Athenian, whose works were long celebrated at Rhodes and elsewhere. (Clem. Alex. *Protr.* § 47.) It is described at length by Libanius (*Monod. de Daphnaeo Templo*, iii. 334), who states that the god was represented with a harp, and as if in the act of singing (ἐῴκει ᾄδοντι μέλος). With the worship of Apollo Antiochus Epiphanes associated that of Jupiter in the sanctuary of Daphne. This monarch erected here, in honour of that divinity (with whom he was singularly fond of identifying himself), a colossal statue of ivory and gold, resembling that of Phidias at Olympia. Games also were established in his honour, as may be seen by extant coins of Antioch. (See Müller's *Antiq. Antiochenae*, p. 64, note 12.) The games of Daphne are described in Athenaeus. (Ibid. note 13.) What has been said may be enough to give the reader some notion of this celebrated place in the time of the Seleucidae, and in its relation to the Oriental Greeks before the Roman occupation of Syria. It ought to be added, that the road between Antioch and Daphne, which passed through the intermediate suburb of Heracleia, was bordered by gardens, fountains, and splendid buildings, suitable to the gay processions that thronged from the city gate to the scene of consecrated pleasure.

The celebrity of Daphne continued unimpaired for a long period under the Romans, from Pompey to Constantine. It seems to have been Pompey who enlarged the dimensions of the sacred enclosure to the circumference of 80 stadia, or 10 miles, mentioned by Strabo (*l. c.*; see Eutrop. vi. 14). Some of the aqueducts erected for the use of Antioch by the Roman emperors were connected with the springs

* Whence Antioch is called by Ausonius (*Clar. Urb.* ii.) Phoebeae lauri domus.

of Daphne. (Malala, pp. 243, 278.) The reign of Trajan was remarkable in the annals of the place for the restoration of the buildings destroyed by an earthquake. That of Commodus was still more memorable on account of the establishment (or rather the re-establishment) of periodical Olympian games at Antioch; for the stadium of Daphne was the scene of the festive contests. This was the time of that corruption of manners (the "*Daphnici mores*" of Marcus Antoninus) under which Roman soldiers and Roman emperors suffered so seriously in the Syrian metropolis.

The decay of Daphne must be dated from the reign of Julian, when the struggle between Heathenism and Christianity was decided in favour of the latter. Constantine erected a statue of Helena within the ancient sanctuary of Apollo and Jupiter, and the great church at Antioch was roofed with cypress-wood from Daphne; which, about the reign of Zeno, fell into the condition of an ordinary Syrian town.

It is needless to pursue the history further. Among modern travellers, Pococke and Richter have fixed the site of Daphne at *Beit-el-Maa*, the distance of which from *Antakia* agrees with the ancient measurement, and where some poor remains are found near a number of abundant fountains. Forbiger (*Alte Geographie*, vol. ii. p. 657) thinks with Kinneir that the true position is at *Babyla;* but, though the apparent connection of this name with that of the martyr Babylas gives some ground for this opinion, the distance from Antioch is too great; and the former view is probably correct. No detailed account of the remains has been given. Poujoulat says (*Corr. d'Orient.* viii. 38), "A côté de la plus profonde fontaine de *Beit-el-moié*, on remarque des débris massifs appartenant à un édifice des âges reculés: si j'étais antiquaire et savant, je pourrais peut-être prouver que ces restes sont ceux du Temple d'Apollon." [J. S. H.]

DAPHNON, the name of a town and a river seated upon the eastern shore of the Red Sea, in lat. 11° N.

1. The town (Δάφνων μίκρος, Arrian, *Peripl. Mar. Erythr.* p. 7; Strab. xvi. 774) was situated between the promontory Aromata in the Regio Cinnamomifera (*Cape Guardafui*) and the promontory of Uephas at the mouth of the Red Sea (*Straits of Bab-el-Mandeb*).

2. The river (Δάφνων μέγας, sometimes denominated Ἀκάνναι, Ptol. iv. 1. § 101) lay a little eastward of the town Daphnon, and formed its harbour. The Promontory of Uephas sheltered this port from the east wind, and broke the force of the current at the entrance of the Straits. [W. B. D.]

DAPHNUS (Δαφνοῦς: *Eth.* Δαφνούντιος or Δαφνούσιος). Stephanus (*s. v.*) mentions several places of this name; but he does not mention Daphnus in the territory of Clazomenae. [CLAZOMENAE.] He mentions a lake called Daphnusis near the Bithynian Olympus. [G. L.]

DAPHNUS (Δαφνοῦς: *Eth.* Δαφνούντιος, Δαφνούσιος), a city on the Euboean sea, originally belonging to Phocis, which thus extended from the Corinthian gulf to the Euboean sea. Its narrow territory separated the Locri Epicnemidii from the Locri Opuntii; but it was afterwards assigned to the Opuntii. The town was in ruins in the time of Strabo, who fixes its site by describing it as distant 20 stadia from Cynus and 120 from Elateia, and as having a harbour. (Strab. ix. pp. 416, 424, 426; Plin. iv. 7. s. 12; Steph. B. *s. v.*; Leake, *Northern Greece*, vol. ii pp. 176.)

DARA (Δάρα, Ptol. vi. 8. § 4). 1. A small river of Carmania, at no great distance from the frontier of Persis. There can be little doubt that it is the same as the Dora of Marcian (*Peripl.* p. 21) and the Daras of Pliny (vi. 25. s. 28). Dr. Vincent conjectures (*Voyage of Nearchus*, vol. i. p. 372) that it is the same as the *Dara-bin* or *Derra-bin* of modern charts.

2. A city in Parthia. [APAVARCTICENE.]

3. A city in Mesopotamia. [DARAS.] [V.]

DA'RADAE, the name of Ethiopian tribes in two different parts of Africa; one about the central part, in *Darfour* (Δαράδων ἔθνος, Ptol. iv. 7. § 35), the other in the W., on the river DARADUS, also called Aethiopes Daratitae. (Polyb. *ap* Plin. v. 1; Agathem. ii. 5.) [P. S.]

DARADAX (Δαραδαξ), a Syrian river, mentioned only by Xenophon (*Anab.* i. 4. § 10). It has been identified with the *Far*, a small tributary of the Euphrates. At the source of the river was a palace of Belesis, then satrap of Syria, with a large and beautiful park, which were destroyed by Cyrus the Younger. (*Anab. l. c.*) [G.W.]

DARADUS, DARAS, or DARAT (Δάραδος ἢ Δάρας, Ptol. iv. 6. § 6), a river of Africa, falling into the Atlantic on the W. coast, near the Portus Magnus, and containing crocodiles (Plin. v. 1); probably the *Gambia* or *Dio d'Ouro*. [P. S.]

DARAE, a Gaetulian tribe in the W. of Africa, on a mountain stream called Dara, on the S. steppes of M. Atlas, adjacent to the Pharusii. (Plin. v. 1; Oros. i. 2; Leo Afr. p. 602.) [P. S.]

DARADRAE (Δαράδραι, Ptol. vii. 1. § 42), a mountain tribe who lived in the upper Indus. Forbiger conjectures that they are the same people whom Strabo (xv. p. 706) calls Derdae, and Pliny Dardae (vi. 19), and perhaps as the Dadicae of Herodotus (iii. 91, vii. 66). It is possible, however, that these latter people lived still further to the N., perhaps in Sogdiana, though their association with the Gandarii (Sanscrit Gandhāras) points to a more southern locality. [V.]

DARANTASIA, a place in Gallia Narbonensis. The name occurs only in the Itins. and the Notitia of the provinces of Gallia. The Antonine Itin. places it on the road from Mediolanum in Italy over the Alpis Graia to Vienna (*Vienne*) on the *Rhone;* and the Table places it on the road from Vercellae in Italy over the Alpis Graia, also to Vienna. Both agree in making the distance from Bergintrum [BERGINTRUM] to Darantasia 14 M. P. Darantasia is *Moutiers en Tarentaise*, a place situated at an angle of the *Isère*, and the chief town of the *Tarentaise*. *Moutiers* is a corruption of Monasterium. The old name of the place, Darantasia, has been extended to the whole country called *Tarentaise*, which is included in the Duchy of *Savoy*. (See Walckenaer, *Géog.*, vol. iii. pp. 26, 27, on the routes here referred to.) [G. L.]

DARAPSA. [BACTRIANA, p. 365, a.]

DARAS (Δάρας, Procop. *Bell. Pers.* i. 10, ii. 13, *de Aedif.* ii. 1—3, iii. 5), a town of Mesopotamia, about 98 stadia from Nisibis, which plays an important part in the wars of the Lower Empire between the Greeks of Constantinople and the Sassanian princes. According to Procopius, it was raised from a village to a city by the emperor Anastasius, who gave it his own name, and called it Anastasiopolis, A. D. 507. (Malala, xvi. p. 115, who calls it Δορᾶς.) It was built on the eastern frontier of the Roman empire towards Assyria, with the object of overawing

and keeping some check upon the incursions of the Persians, and appears to have fulfilled the object for which it was erected for nearly 70 years, from the reign of Cabades (*Kobád*) to that of Chosroes I. (*Anushirwán*). Procopius gives a full account (*Bell. Pers.* ii. 13) of the way in which Daras was fortified, which, as Gibbon has remarked (*Decline and Fall*, ch. 40), may be considered as representing the military architecture of the age. But besides its strong fortifications, which enabled it to resist more than one attack from the Persians, Daras was exceedingly well supplied with provisions, &c. for the troops engaged in its defence. Procopius gives an account of a marvellous fountain of water, whose source, on a neighbouring height, was in such a position that the supply could not be cut off by an enemy, while, at the same time, it was distributed through the town to the inhabitants by various channels, no one knowing whither it went on reaching the outer walls (*Bell. Goth.* iv. 7).

Procopius also mentions a series of combats which took place under the walls of Daras between the Romans under Belisarius and the Persians (*Bell. Pers.* i. 13), by which the Romans maintained the town, owing to the admirable military dispositions of Belisarius. Daras fell at last into the hands of the Persians during the reign of Justin II., A. D. 574, after a memorable siege of six months by Chosroes II. (Theophyl. *Hist. Maur.* iii. 9, 10.) The campaign of Marcian took place in the eighth year of Justin, and the result of the fall of Daras was the disgrace of the general (Theophyl. *l. c.*; Theophan. *ap. Phot.* Cod. 64; Evagr. v. 8—10), a truce with the Persians, and the appointment of Tiberius as an associate in the empire. Hormisdas IV. (Hormuzd IV.), who succeeded Chosroes, is said by Theophanes to have been the general who took Daras, and subsequently concluded the above-mentioned peace. (Theophan. *l. c.*) D'Anville (*L'Euphrate et Tigre*, p. 53) has tried, but we think in vain, to find any town or ruins which may mark the site of Daras. [V.]

DARDAE. [DARADRAE.]

DA'RDANI (Δάρδανοι), a tribe in the south-west of Moesia, and extending also over a part of Illyricum. (Strab. vii. p. 316; Ptol. iii. 9. § 2; Caes. *Bell. Civ.* iii. 4; Liv. xl. 57; Plin. iii. 29; Cic. *p. Sest.* 43.) According to Strabo, they were a very wild and filthy race, living in caves under dunghills, but very fond of music. [L. S.]

DARDA'NIA (Δαρδανία) or DARDANICE, a territory in Mysia, the limits of which are not very clearly defined. Strabo (p. 565) interprets Homer as placing Dardania above Ilium, on the Paroreia of Troja; and (p. 596) in another place, after describing the positions of Abydus, Dardanus, and the places on the coast of the Hellespont as far as Sigeium, he says, "above them lies the Trojan plain, which extends eastward many stadia, as far as Ida. The Paroreia (mountain tract) is narrow: it extends on one side south as far as the parts about Scepsis, and north to the Lycians about Zeleia." Again, when he is describing the places about the promontory of Lectum, and the river Satnioeis, he says that all these places are adjacent to Dardania and Scepsis, being a kind of second and lower Dardania (p. 606). There is really no historical province Dardania, and all that Strabo says of it is derived from his interpretation of the Iliad. The Dardani and Dardanii are mentioned in the Iliad (ii. 819, xv. 425). Aeneas, in the Iliad, is the commander of the Dardani.

Dardanus, a son of Jupiter, settled in Dardania long before Ilium was built in the plain. He was the ancestor of Priamus; and there were five generations from Dardanus to Priamus. (*Il.* xx. 215, &c.) Dardanus was a wanderer into Asia; and the legend seems to represent a tradition of the Dardani coming from Europe and seizing a part of Mysia. Dardanus found the country occupied by Teucri, who had a king Teucer. According to the authority of Cephalon (Steph. B. *s.vv.* Ἀρίσβη and Δάρδανος), Dardanus came from Samothrace and married a daughter of Teucer. Cephalon and Hellanicus could not agree about the woman's name.

Strabo mentions a promontory Dardanis or Dardanium, about 70 stadia south of Abydus: it appears to be the *Kephiz Burnu* of the Turks, and the *Punta dei Barbieri* of the Europeans (Strab. pp. 587, 595); and probably that which Pliny calls Trapeza. There was a tradition that the descendants of Aeneas maintained themselves in part of the inland territory of Dardania, after the war of Troy. Xenophon (*Hell.* iii. 1. § 10) speaks of one Zenis a Dardaneus, who had a principality in Mysia, and Scepsis and Gergitha were two of his strong places; but the territory that he had was not the old Dardania. Xenophon calls it the Aeolis of Pharnabazus. [G. L.]

DARDA'NIA (Δαρδανία), a district in the south-western part of Moesia, which received its name from its inhabitants, the Dardani. (Ptol. iii. 9. § 6.) That district, now forming the southernmost portion of Servia, became a part of the praefecture of eastern Illyricum in the reign of Constantine. (Hierocl. p. 655; Notit. Imp.) [L. S.]

DA'RDANUS, DA'RDANUM (ἡ Δάρδανος, τὸ Δάρδανον: *Eth.* Δαρδανεύς), a city of the Troad, originally named Teucris. According to the legend told by Mnaseas (Steph. B. *s. v.* Δάρδανος), Dardanus built or settled Dardanus, and named the country Dardania, which was called Teucris before. [DARDANIA.] This old story of Dardanus being the founder of the city, is reported by various other authorities. (Apollod. iii. 12. § 1; Diod. iv. 75; Conon. *apud Phot. Narr.* 21.) It seems that the city was sometimes called Dardania as well as the country. Pliny (v. 30) names it Dardanium. It was situated on the Hellespont, about a mile south of the promontory Dardanis or Dardanium (Map of the Plain of Troy, by Capt. Graves and T. A. B. Spratt, Esq., *London Geog. Journal*, vol. xii.), and 70 stadia from Abydus. Between Abydus and Dardanus, says Strabo (p. 595), is the Rhodius. There are two streams marked in the map: one nearer Dardanus, which enters the Hellespont close to the promontory of Dardanis; and another near *Sultania*, a little north of which is the site of Abydus. Dr. Forchhammer, in the map referred to, which contains his determination of the ancient sites, makes the stream at *Sultania* to be the ancient Rhodius; and this appears to be right, according to Strabo, who says that it enters the sea opposite to Cynossema in the Chersonesus. Strabo adds, however, some say that the Rhodius flows into the Aesepus; but of course the Rhodius must then be a different river from the stream that enters the sea between Abydus and Dardanus (pp. 598, 603). Homer mentions the Rhodius (*Il.* xii. 20).

Strabo observes that the Dardanus of his time, the town on the coast, was not the old town of Dardanus, or Dardania, which appears from the Iliad to have been at the foot of Ida. It was an older town than Ilium, and did not exist in Strabo's time. The later

town was an Aeolian settlement, and it is mentioned among the towns on the Hellespont, which Daurises the Persian took after the burning of Sardis. (Herod. v. 117.) In another place (vi. 43), Herodotus observes that Dardanus bordered on the territory of Abydus; which might also be safely inferred from the passage in the fifth book. It is mentioned by Scylax in his Periplus of the Troad. In the battle between the Athenians and Peloponnesians in the twenty-first year of the Peloponnesian War (B. C. 411), the line of the 68 ships of the Peloponnesians extended from Abydus to Dardanus (Thuc. viii. 104); a statement that can hardly be correct, for the ships that were outside of the promontory of Dardanis would be completely separated from the rest. Strabo (p. 595) says that Dardanus was so weak a place, that the kings, by whom he means Alexander's successors, some of them several times removed all the people to Abydus, and others moved them back again to their old place. On this spot L. Cornelius Sulla and Mithridates met, after Sulla had crossed over from Europe, and here they came to terms about putting an end to the war, B. C. 84. (Strab. p. 595; Plut. *Sulla*, c. 24.) It was at that time a free city, having been declared such by the Romans after the peace with king Antiochus, B. C. 190, in honour of the Trojan descent of the people. (Liv. xxxvii. 9, 37, xxxviii. 39.)

There are many imperial coins of Dardanus; and "the name of the river Rhodius appears on a medal of Domna. Sestini, *Mon. Vet.* p. 76." (Cramer, *Asia Minor*, vol. i. p. 82.) This seems to show that the stream which flows into the Hellespont near the cape Dardanis, is the Rhodius, and not the river nearer Abydus; but it is not decisive. The modern name *Dardanelles* is generally supposed to be derived from the name of Dardanus. [G. L.]

DAREIUM. [APAVARCTICENE.]

DARENTIACA, as D'Anville writes the name, but Daventia, as Walckenaer writes it, a place in Gallia Narbonensis, which the Jerusalem Itin. puts between Augusta (*Aoust*) and Civitas Vocontiorum (*Die*). The site is unknown. It is fixed by some writers near a place called *Saillans*. [G. L.]

DARGAMA'NES (Δαργαμάνης, Ptol. vi. 11. § 2, 18. § 2), according to Ptolemy, a river which flowed through Bactriana and fell into the Oxus, crossing on its way the country of the Paropamisidae. Ammianus states that the Orgomanenes (evidently this river) and the Ochus unite, and then fall into the Oxus (xxiii. 6). Wilson (*Ariana*, p. 160) thinks its modern representative is either the *Dchas* or the *Gori* river. Ptolemy speaks of another tributary of the Oxus, which he calls Dargoedus (Δάργοιδος, vi. 11. § 2), and which appears to have flowed in nearly the same direction as the Dargamenes. Wilson (*Ariana*, p. 162) seems to think this stream is the Gori or river of *Kunduz*. Perhaps, after all, the Dargamenes and Dargoedus are one and the same river. [V.]

DARIDNA (Δάριδνα: *Eth.* Δαριδναῖος), a village of Paphlagonia, mentioned by Alexander Polyhistor in his work on Paphlagonia. (Steph. B. *s. v.*) [G. L.]

DARIORIGUM (Δαριόριγον), the capital of the Veneti, one of the Armoric nations of Gallia (Ptol. ii. 8). The Table has the same place on the road from Juliomagus (*Angers*) to Gesocribate (*Brest*), but under the name Dartoritum. Dariorigum is supposed to be the modern town of *Vannes*, in the department of *Morbihan*. It seems that Dariorigum according to the fashion of many other Gallic towns, took the name of the people under the Empire, and the name Veneti is the origin of *Vannes*. The Bretons still call the place *Wenet* or *Guenet*. [G. L.]

DARNII, in Ireland, mentioned by Ptolemy as lying to the south of Rhobogdii (or the population about *Fair Head*), coinciding with the southern part of Antrim and the northern part of Down. [R. G. L.]

DARNIS (Δάρνις; erroneously written in Ptolemy Δάρδανις; Ζαρινή, Stadiasm. p. 444: *Derna*), a city of Cyrenaica, on the coast, near the E. extremity of the country, is only mentioned by comparatively late writers, and, though a bishop's see, appears never to have been an important place. (*Itin. Ant.* pp. 68, 70; Amm. Marc. xxii. 16; Pacho, p. 96; Baith, p. 480.) [P. S.]

DARRAE (Δαρραί). Two tribes of this name are mentioned in the Arabian peninsula, one in the *Hedjaz* by Ptolemy (vi. 7), the other in modern *Omân* by Pliny (vi. 28). Mr. Forster says "that two tribes of different origin, but similar appellations, anciently existed, as the places which they inhabited, and which still respectively preserve their names, actually exist in both situations; the one a Joktanite race, inhabitants of *Darrha*, in *Omân*; the other an Ishmaelite people, inhabitants of *Khedheyre*, near *Yembo*, and in whose name we discover, under the disguise of a familiar contraction (Kedarrhae, Darrhae), a branch of the renowned people of Kedar." (*Arabia*, vol. i. p. 54; comp. p. 79.) Of the latter he further writes: "The town of *Khedheyre*, upon the same coast (of *Hedjaz*), north-west of the *Lobh* mountain, taken in conjunction with the tribe of *Khadhera*, carries the existing traces of Kedar to the northern frontier of the *Hedjaz*; the ascertained site of the Darrae, Cedrei, or Kedranitae, of Ptolemy, Pliny, and Stephanus of Byzantium after Uranius" (vol. i. p. 261). Of the former, in *Omân*, he says, "the name of Hadoram reappears, apparently, in the Dora and Darrae of Pliny, or the modern tribe and town of Darrha" (vol. i. p. 139), to the west of *Ras-el-Had*. [G. W.]

DARSA, a place in Asia Minor, to which the Roman consul Cn. Manlius (Liv. xxxviii. 15) came after leaving Cormasa. [CORMASA.] The site of Cormasa is unknown. Livy remarks that Darsa was the next city to Cormasa, but he says nothing of the distance; and the place is not mentioned in the fragments of Polybius (xxii. 19). [G. L.]

DARVENUM (Δαρούενον, Δαρούερνον), a town in Britain, mentioned by Ptolemy (ii. 3. § 27) as one of the three towns of the Cantii, Londinium and Rutupiae (*London* and *Richborough*) being the other two. [R. G. L.]

DASCU'SA (Δασκούσα, Ptol. v. 7. § 2, the common reading is Δασκούτα), a fortress in lesser Armenia, upon the river Euphrates, 75 M. P. from Zimara (Plin. v. 20), and 45 M.P. to the N. of Ciaca (*Peut. Tab.* comp. *Anton. Itin.*) It was garrisoned by the "Ala Aureliana" (*Not. Imp.* cxxvii.) and has been identified with the ferry and lead mines of *Kebóán Ma'dén*, the points where the *Karâ Su* is joined by the *Murâd Châï* at about 270 miles from its source. (Ritter, *Erdkunde*, vol. x. pp. 800, 823, 831, 858; *Journ. Geog. Soc.* vol. vi. p. 203; Chesney, *Exped. Euphrat.* vol. i. p. 41, vol. iii. 271.) [E.B.J.]

DASCYLI'TIS. [DASCYLIUM.]

DASCY'LIUM (Δασκύλιον, Δασκυλεῖον, Dascylus: *Eth.* Δασκυλίτης). Stephanus B. (*s. v.*) mentions several Asiatic cities called Dascylium. The only place of any historical note is the town near the

Propontis. Herodotus (iii. 120) mentions Mitrobates, a Persian, as governor of the nome in Dascylium; and again (iii. 126), he calls the same man the governor of Dascylium (*τὸν ἐκ Δασκυλείου ὕπαρχον*). But in vi. 33, he speaks of the Cyziceni submitting to Oebares, son of Megabazus, "the governor in Dascylium." Agesilaus, in one of his campaigns, marched to Phrygia, and came near Dascylium. (Xen. *Hell.* iii. 1. § 13.) Xenophon, who speaks of the Phrygia of Pharnabazus, seems to place Dascylium in Phrygia (*Hell.* iv. 1. § 15); but his narrative is confused, and nothing can be learned from it as to the position of Dascylium. He says that Pharnabazus had his palace here, and there were many large villages about it, which abounded with supplies; and there were hunting grounds, both in enclosed parks and in the open country, very fine. A river flowed round the place, and it was full of fish. There was also plenty of birds. The governor spent his winter here; from which fact and the context we seem to learn that it was in the low country. Alexander, after the battle of the Granicus, sent Parmeno to take Dascylium (Arrian, *Anab.* i. 17. § 2); but there is nothing in Arrian which shows its position. The town does not seem to have been a large place, but it gave name to a Persian satrapy (*τὴν Δασκυλίτιν σατραπείαν*, Thucyd. i. 129), the extent of which cannot be defined.

Strabo (p. 575) says that, above the lake Dascylitis, there are two large lakes, the Apolloniatis and the Miletopolitis; and on the Dascylitis is the town of Dascylium. We must therefore look for Dascylium and its lake between the shores of the Propontis and the lakes Apolloniatis [APOLLONIAE, p. 161, b.] and Miletopolitis. Strabo also says that the Doliones are a people about Cyzicus, from the river Aesepus to the Rhyndacus and the lake Dascylitis; from which we might perhaps conclude that the Dascylitis is east of the Rhyndacus; and another passage (p. 582) seems to lead to the same conclusion. In Strabo's time the territory of the Cyziceni extended to the Miletopolitis and the Apolloniatis; they had also one part of the Dascylitis, and the Byzantines had the other. From this also we infer that it was east of the Rhyndacus. Mela (i. 19), in express words, places Dascylos, as he calls it, east of the Rhyndacus. Pliny (v. 32) says that it is on the coast. Hecataeus, quoted by Strabo (p. 550), says that a river Odrysses flows from the west out of the Dascylitis, through the plains of Mygdonia, into the Rhyndacus. But this description applies to a lake west of the Rhyndacus. Strabo further says (p. 588) that the lake Dascylitis was also called Aphnitis; and he again mentions the Aphnitis (p. 59), but without identifying it with the Dascylitis. Stephanus (*s. v.* *Ἄφνειον*) says that the lake near Cyzicus is Aphnitis, and that it was formerly called Artynia. There is no lake nearer to Cyzicus than the lake of *Maniyas*, west of the Rhyndacus, which is the ancient Miletopolitis. The Rhyndacus flows through the Apolloniatis.

Leake, in his map of Asia Minor, marks a lake Dascylitis north of the Apolloniatis, and consequently between it and the shore of the Propontis, and east of the course of the Rhyndacus after it has flowed from the Apolloniatis. Some authorities speak of a lake in this part called *Diaskilli*, or some name like it; but this seems to require further confirmation. This town Dascylium must have existed to a late time, for a bishop of Dascylia is mentioned. (Plin. v. 32, ed. Harduin.)

What we can learn about Dascylium is very unsatisfactory. There is a river marked in the newest maps, which rises near *Broussa*, and flows westward towards the Rhyndacus, but its junction with the Rhyndacus is not marked. It is called the *Lufer Su*, or *Nifer*. Cramer (*Asia Minor*, vol. i. p. 172) conjectures that this may be the Odrysses of Hecataeus, though it does not run in the direction described in Strabo's text; and that it is also the river described by Xenophon. [G. L.]

DA'SEAE (*Δασέαι*: *Eth.* *Δασεάτης*), a town of Arcadia in the district Parrhasia, on the road from Megalopolis to Phigalea, 7 stadia from Macareae, and 29 stadia from Megalopolis. It was in ruins in the time of Pausanias, as its inhabitants had been removed to Megalopolis upon the foundation of the latter. Its name was apparently derived from the thick woods, the remains of which still cover the heights of *Deli Hassani*, near which Daseae must have stood. (Paus. viii. 3. § 3, viii. 27. § 4, viii. 36. § 9; Curtius, *Peloponnesos*, vol. i. p. 294.)

DASMENDA (*Δασμένδα*), a hill-fort in Cappadocia. [CAPPADOCIA, p. 507, b.] [G. L.]

DASSARE'TAE, DASSARE'TII (*Δασσαρήτιοι*, Strab. vii. p. 318; Ptol. iii. 13. § 32; *Δασσαρῆται* Steph. B. Appian, *Illyr.* i; Mela, ii. 3. § 11; Plin. iii. 23. s. 26), an Illyrian people whose position can be well ascertained, from their having occupied the great valley which contained the lake of Lychnitis and the plains of *Koritzá*. The W. part of Dassaretia was a contrast to the E., consisting entirely of lofty and rugged mountains, intersected by branches of the river Apsus. If *Berát* be the site of Antipatria, it will follow that the Dassaretae possessed all the lower mountainous country lying between *Koritzá* and *Berát*, beyond which latter the frontiers of the Dassaretae met those of the Taulantii Bylliones and Chaonians of Epirus; on the N. they bordered on the Eordeti and Penestae and partly on the Taulantii, while to the E. the crest of the great central ridge very naturally formed the line of demarcation between them and the Pelagones, Brygi, and Orestae, or in other words, between Illyria and Macedonia. It follows from these boundaries that Dassaretia was not less than 60 miles in length and as much in breadth,—an extent such as might be expected from the statement in Polybius (v. 108) who in addition to the towns on the lake of Lychnitis represents the Phoebatae, Pissantini, Calicoeni, and Pirustae all as tribes of Dassaretia. (Leake, *Trav. in North Greece*, vol. iii. pp. 325, foll.) The Phoebatae chiefly inhabited the valley of the *Uzúmi*, and the Pissantini that of the *Devól*. The Pirustae would seem to have been on the N. frontier of Dassaretia, as they joined the Taulantii and some other more northerly Illyrians to assist the Romans in the reduction of Gentius. (Liv. xlv. 26). They probably occupied an intermediate tract between the Pissantini on the lower part of the *Devól* and the S. extremity of the lake Lychnitis, in which case there is only the plain of *Korytzá* to the left of the Eordaicus for the situation of the Calicoeni. The operations of the consul Sulpicius against Philip in the campaign of B. C. 200, illustrate the ancient geography of this district. The Roman general marched from Apollonia of Illyria through Dassaretia into Lyncestis. The open country supplied him with such abundance of grain that he was enabled to save his own stock while he passed through the plain of Dassaretia, and induced him afterwards to send back his foragers thither, though he was encamped in an equally fertile plain,

of which however he had not military possession. (Liv. xxxi. 33.) On peace being made after the battle of Cynoscephalae, Lychnidus, which was the principal town of the Dassaretae, was given up to Pleuratus (Liv. xxxiii. 34) the son of Scardilaïdas, the Illyrian prince, who in the Social War had struggled unsuccessfully with Philip for the possession of Dassaretia (Polyb. v. 108.) The Dassaretae had several towns besides LYCHNIDUS. GERUNIUM and ANTIPATRIA were in Phoebatis both on the *Uzúmi;* to the E. of these on the *Devól* may be placed ORGESSUS, which was a town of the Pissantini; and somewhat nearer to the camp of Sulpicius, CORRAGUM, CODRION, and ILIUM seem to have been in the valley of the *Uzúmi* above *Berât* on the slopes of *Tomór*. Besides these CREONIUM and GERUS are enumerated, with four towns on the lake Lychnitis, viz. ENCHELARIAE, CERAX, SATION, and BOII (Polyb. *l. c.*). These four towns were, it has been inferred, on its W. shore, as the Itineraries which followed the E. side of the lake from the bridge of the Drilo to Lychnidus, make no mention of these places. [E. B. J.]

DASTARCUM. [CARMALAS.]

DATII (Δάτιοι), a people of Aquitania in Gallia, mentioned by Ptolemy (ii. 7), who names their capital Tasta (Τάστα). These names occur nowhere else. Ptolemy places the Datii south of the Gabali, and more north than the Auscii. Thus their position is indicated in a general way. Walckenaer has made an ingenious conjecture as to the position of the Datii. The Ruteni were south of the Gabali, and in the northern part of their territory, which bordered on the Gabali, is a river named *Daze*, in the department of *Aveyron;* and not far from this river *Daze*, to the south, is a place named *Testet*. Walckenaer concludes from this resemblance of names that the Datii occupied a tract between the river *Lot* and *Aveyron*, which was once called *St. Albin*. Resemblance of name alone is not sufficient evidence of ancient sites, but here we have no other evidence; and the position of the modern names corresponds well enough with the possible position of the Datii as indicated by Ptolemy. The conjecture of Walckenaer is confirmed by the fact, if it is true, which he mentions, that the names *Daze* and *Testet* occur in no other part of France. (Walckenaer, *Géog.*, &c., vol. ii. p. 247.) [G. L.]

DATUM. [NEAPOLIS.]

DAULIS (Δαυλίς: at a later time Δαυλία, Strab. ix. p. 423, and Δαύλιον, Polyb. iv. 25: *Eth.* Δαύλιος, Herod. viii. 35; Δαυλιεύς, Aesch. *Choëph.* 674: *Dhavlia*), a very ancient town of Phocis, near the frontiers of Boeotia, and on the road from Orchomenus and Chaeroneia to Delphi. It is said to have derived its name from the woody character of the district, since δαύλος was used by the inhabitants instead of δάσος, while others sought for the origin of the name in the mythical nymph Daulis, a daughter of Cephissus. (Strab. ix. p. 423; Paus. x. 4. § 7.) Daulis is mentioned by Homer as a Phocian town along with Crissa and Panopeus. (*Il.* ii. 520.) It is celebrated in mythology as the residence of the Thracian king, Tereus, who married Procne, the daughter of Pandion, king of Athens, and as the scene of those horrible deeds in consequence of which Procne was changed into a swallow, and her sister Philomele into a nightingale. Hence the latter was called by the poets the Daulian bird. (Thuc. ii. 29; Paus. *l. c.*) The woody district round the town is still a favourite haunt of the nightingale.

Daulis was destroyed by the Persians in the invasion of Xerxes. (Herod. viii. 35.) It was destroyed a second time by Philip, at the end of the Sacred War (Paus. x 3. § 1); but it was subsequently rebuilt, and is mentioned in later times as a town almost impregnable in consequence of its situation upon a lofty hill ("Daulis, quia in tumulo excelso sita est, nec scalis nec operibus capi poterat," Liv. xxxii. 18). Pausanias relates (x. 4. § 7) that the inhabitants of Daulis were few in number, but surpassed all the other Phocians in stature and strength. The only building in the town mentioned by him was a temple of Athena; but in the neighbourhood he speaks of a district called Tronis, in which was the chapel of a hero called the Archegetes.

The name of Daulis is still preserved in that of the modern village of *Dhavlia*, situated in a narrow valley, through which flows a branch of the Cephissus, called *Platanià*. The walls of the acropolis may be traced on the summit of the height rising opposite the modern village, and connected with the foot of Parnassus by a narrow isthmus. Within the enclosure is an ancient church of St. Theodore. Here an inscription has been found in which mention is made of the worship of Athena Polias and of Serapis. Before the door of the church in the modern village is another ancient inscription, of considerable length, recording an arbitration made at Chaeroneia in the reign of Hadrian, concerning certain property in Daulis. It is given by Leake, and in Böckh's collection (No. 1732). In this inscription we read of "a road leading to the Archagetes," which is evidently the chapel of the hero spoken of by Pausanias. One of the plots of land in the inscription is called Platanus, from which probably comes the name of the river *Platanià*.

On one of the heights above *Dhavlia* lies the monastery of Jerusalem. The road leading to it from the village, and from it to the upper heights of Parnassus, is no doubt the same as the road from Daulis to Parnassus correctly described by Pausanias as longer than the one from Delphi, but less difficult. (Dodwell, *Tour through Greece*, vol. i. p. 204; Leake, *Northern Greece*, vol. ii. p. 97, seq.; Ulrichs, *Reisen in Griechenland*, p. 148.)

DAUNIA. [APULIA.]

DAVIANUM. "Mutatio Davianum" is placed in the Jerusalem Itin. on the road from Valentia (*Valence*) in Gallia Narbonensis to Vapincum (*Gap*). The distance from "Mansio Monte Seleuci" to Davianum, which is on the road from Mons Seleucus to Vapincum, is 8 M. P. D'Anville identifies Davianum with a place *Veine*. Mons Seleucus is certainly *Saléon*, and the position of Davianum may be ascertained tolerably well. Walckenaer places it at *La Beaumette*, *Dèves et le bois de Dèves*, near the *Bastie Monsaléon*. [G. L.]

DAXIMONI'TIS (Δαξιμωνῖτις), a country in Pontus, in the valley of the river Iris. (Strab. p. 547.) Hamilton (*Researches*, *&c.* vol. i. p. 358), speaking of the valley of *Tourkhal*, says: "Here the Iris changes its course from west to north, agreeing with Strabo's description of that river near Gazioura, where it leaves the plain of Daximonitis." *Tourkhal* is west of *Tocat*, and a little further north. [G. L.]

DEA VOCONTIORUM, a city of the Vocontii, who were in Gallia Narbonensis, on the east side of the *Rhone*. Dea is only mentioned in the Itins., which place it between Lucus (*Luc*) and Augusta (*Aoust*), and 12 M. P. from Lucus. The modern

site is *Die*, in the department of *Drôme*. In the Notitia of the provinces of Gallia, it is called Civitas Deensium. If an inscription which is cited, "Col. Dea Avg. Voc," is genuine, the place was made a colonia. Stephanus (*s. v.* Δία) mentions a city, Dia, in Italy, close to the Alps, which may, possibly, be Dea; but if so, "Italy" is a mistake, and we should read "Gallia" instead. [G. L.]

DEBAE or DEBEDAE (Δέβαι), an Arab tribe on the coast of the Red Sea, a little to the north of *Mekka*. Diodorus Siculus (iii. 44) describes their country as situated at the foot of the Chabinus Mons (ὄρος Χαβῖνον), and permeated by a river so rich in gold dust that the deposit at its mouth glittered with the precious metal; but the inhabitants were utterly ignorant of the art of working it. He describes them as "occupied wholly with the rearing of camels, which animal they used for all purposes, pacific and belligerent; living on their milk and flesh, and using them for the transport of themselves and their merchandise." He mentions a remarkable fact, if true, that "their hospitality was restricted to the Boeotians and Peloponnesians," and assigns a still more remarkable reason, viz., "that, according to ancestral traditions, Hercules had been on terms of intimacy with this nation." Such is the report of Diodorus, copied almost literally from Agatharcides (Hudson, vol. i. p. 59), whose account is abridged by Strabo (xvi. p. 777). Mr. Forster takes this last statement (which he misunderstands of a "descent from one common stock") to intimate, "under the thin veil of classical fiction, the important historical fact, of the existence of an open trade between the Greeks and Arabs from very remote times, and of all the facilities implied by commercial intercommunity" (vol. i. p. 38). He finds this tribe in "the *Zebeyde* of Burckhardt; the rectified anagram changing *Zebeyde* into *Zedeybe*, and the idiomatic interchange of the *d* and *z* restoring the classical name, as written by Agatharcides, *Debedae*." "The relative geographical positions place the identity beyond question, and the sameness of manners, habits, and occupations will complete the conclusive proof that the Dedebae and the *Zebeyde* are one and the same people" (p. 73). He imagines them to be the same as the Cinaedocolpitae of Ptolemy, and the auriferous river to be the Baetius of that geographer. [Baetius.] [G. W.]

DECA'POLIS (Δεκαπόλις), a district of Palestine, so named from the ten cities contained within its limits. They are variously given by different writers, as in Pliny's time — "in quo non omnes eadem observant." According to him, most authorities gave Damascus, Philadelphia, Rhaphana, Scythopolis, Gadara, Hippos, Dios, Pella, Galasa (? Gerasa), Canatha (v. 18). In this view the district comprehended the southern part of Syria, part of Peraea, as well as the neighbourhood of *Bîsan*, on the west of the Jordan. But in St. Matthew (iv. 25) "Decapolis" is distinguished from "beyond Jordan;" which would show that the districts were not conterminous. Josephus calls Scythopolis "the greatest city of Decapolis" (*B. J.* iii. 8. § 7), but does not name the others. Eusebius describes it as the part of Peraea "that lies about Hippos, Pella, and Gadara." (*Onomast. s. v.*) [G. W.]

DECELEIA. [Attica, p. 330, a.]

DECEM PAGI, in Gallia, is placed by the Antonine Itin. and the Table on the road from Divodurum (*Metz*) to Argentoratum (*Strassburg*). Between Divodurum and Decem Pagi was Ad Duodecimum, a place 12 Gallic leagues from Divodurum according to the Table; and from Ad Duodecimum to Decem Pagi was also 12 Gallic leagues, according to the Table. A place called *Dieuze*, on the *Seille*, in the department of *Meurthe*, seems to represent Decem Pagi. Julian marched from Augustodunum through Decem Pagi to attack the Alamanni (Amm. Mar. xvi. 2). The place was within the territory of the Mediomatrici. [G. L.]

DECE'TIA (*Décise*), an island in the Ligeris (*Loire*), within the territory of the Aedui. In the seventh year of the Gallic War (B.C. 52) Caesar summoned the senate of the Aedui to Decetia. (*B. G.* vii. 33). The name occurs in the Itins. In the Antonine Itin. it is placed on the road from Augustodunum (*Autun*) to Paris, and 16, or, according to another reading, 15, Gallic leagues from Nevirnum (*Nevers* on the Loire). In one place in the Antonine Itin. the name is written Deccidae; and in the Table it is Degena, a corrupted form. The modern site is *Décise*, in the department of *Nièvre*. [G. L.]

DECIA'NA. [Indigetes.]

DECIA'TES, DECIA'TAE (Δεκιᾶται). Ptolemy (ii. 10) has the form Δεκεάτιοι. The Deciates were in Gallia Narbonensis, west of the Var, and their neighbours on the west were the Oxybii (Plin. iii. 5). Ptolemy makes Antipolis (*Antibes*) the chief town of the Deciates; but if this was so in Ptolemy's time, it was not so at an earlier date, for Antipolis was a Greek settlement. Antipolis, however, may have been founded in the country of the Deciates, who occupied the tract along the coast between the town and the Var, and were consequently the nearest people of Transalpine Gaul to Italy. Polybius (xxxiii. 7; Strab. p. 202), who calls the Deciates a Ligurian people, tells how the Ligurians besieged Antipolis and Nicaea, and the Massaliots sent for help to Rome. The Romans sent some commissioners, who landed at Aegitna in the territory of the Oxybii; but the Oxybii, who had heard that they came to give them orders to desist from the siege, wounded one of the commissioners. Upon this the Romans sent the consul Q. Opimius with an army, who defeated the Oxybii and Deciates, and gave part of their country to the Massaliots (B.C. 154). According to Florus (ii. 3), the Deciates were again in arms with the Salyes (B.C. 125), but were defeated by the consul M. Fulvius Flaccus.

The Deciates, as it appears, were also included by Livy among the Transalpine Ligures, as we may infer from the epitome of the 47th book. Stephanus (*s. v.* Δεκίητον) mentions a town of Italy called Decietum, on the authority of the geographer Artemidorus; and he gives the ethnic name Decietae. Whatever error there may be in this extract, it is plain that Stephanus means the Deciates. Mela (ii. 5) mentions an "oppidum Deciatum;" and it is not Antipolis, for he speaks of Antipolis as a separate place. The situation of this town, if there was such a place, is unknown. [G. L.]

DECIUM. [Vascones.]

DE'CUMA, a town of Hispania Baetica, near the river Baetis, and apparently on its left bank, near its junction with the Singulis. (Plin. iii. 1. s. 3.) It is supposed to be the same place as the Detumo, of which we have some coins (Mionnet, *Suppl.* vol. i. p. 114; Sestini, p. 88); and Harduin takes it for the Δητοῦνδα of Ptolemy (ii. 4. § 11). [P. S.]

DECUMA'TES AGRI. [Agri Decumates.]

DE'DMASA (Δέδμασα: *Eth.* Δεδμασεύς). [Medmasa.]

DEIRE (Δειρή, Strab. xvi. pp. 769, 773; Ptol. iv. 7. § 9; Steph. B. *s. v.*; Berenice Epidires, Plin. vi. 29. s. 33), or the "Neck," so called from its position on a headland of the same name, was a town situated on the African shore of the Straits of *Bab-el-Mandeb*, at their narrowest part. The space between Deire and the opposite foreland of Poseidonium on the Arabian shores was about 60 stadia (8½ miles) in width. Deire stood in lat. 11° 3′ N. It was also called Isidis Portus from a temple of that goddess which overlooked the harbour, and Deire-Berenices from the favourite sister of Ptolemy Philadelphus, who enlarged and granted fresh privileges to the town. (Agathem. p. 8.) [W. B. D.]

DEITA'NIA, a district in the SE. of Spain, mentioned only by Livy, who places it SW. of CONTESTANIA. (Fr. xci.) [P. S.]

DELGOVI'TIA, a station in Britain, mentioned in the first Itinerary as being the second station eastward after leaving *York*. Probably *Market Weight-on.* [R. G. L.]

DELEMNA, a place in Cappadocia. The Jerusalem Itin. places Mutatio Delemna 10 M. P. from Ancyra, on the road to the Cappadocian frontier. The next station in this Itin. to Delemna is Corbeus, 11 M. P. [CORBEUS.] [G. L.]

DE'LIUM (Δήλιον: *Eth.* Δηλιεύς), a small place with a celebrated temple of Apollo, situated upon the sea-coast in the territory of Tanagra in Boeotia, and at the distance of about a mile from the territory of Oropus. This temple, which took its name from the island of Delos, is described by Livy (xxxv. 51) as overhanging the sea, and distant five miles from Tanagra, at the spot where the passage to the nearest parts of Euboea is less than four miles. Strabo (ix. p. 403) speaks of Delium as a temple of Apollo and a small town (πολίχνιον) of the Tanagraei, distant 40 stadia from Aulis. It was here that the Athenians suffered a signal defeat from the Boeotians in the eighth year of the Peloponnesian War, B. C. 424. Hippocrates, the Athenian commander, had seized the temple at Delium, which he converted into a fortress by some temporary works, and after leaving there a garrison, was on his march homewards, and had already reached the territory of Oropus at the distance of 10 stadia from Delium, when he met the Boeotian army advancing to cut off his retreat. In the battle which ensued the Athenians were defeated with great loss; and on the seventeenth day after the battle the Boeotians retook the temple. (Thuc. iv. 90.) Socrates fought at this battle among the hoplites, and, according to one account, saved the life of Xenophon (Strab. ix. p. 403; Diog. Laërt. ii. 22), while, according to another, his own retreat was protected by Alcibiades, who was serving in the cavalry (Plut. *Alc.* 7). A detachment of the Roman army was likewise defeated at Delium by the troops of Antiochus, B. C. 192. (Liv. xxxv. 51.) (Comp. Strab. viii. p. 368; Paus. ix. 20. § 1; Ptol. iii. 15. § 20; Liv. xxxi. 45.)

The modern village of *Dhilissi*, which has taken its name from Delium, is at some little distance from the sea. It is clear, however, from the testimony of Livy already referred to, that the temple of Apollo was upon the coast; and hence the modern village of *Dhilissi* may, as Leake suggests, be the site of the πολίχνιον, a small town of Delium. A few Hellenic fragments have been found at the village. (Leake, *Northern Greece*, vol. ii. p. 449, seq.)

DELMI'NIUM. [DALMINIUM.]

DELOS or DELUS (Δῆλος: *Eth.* and *Adj.* Δήλιος, Δήλια, Δηλιάς, Δηλιακός), the smallest of the islands called the Cyclades in the Aegaean sea, lying in the strait between Rheneia and Myconus. It appears in the earliest times as one of the holiest spots in Hellas. According to the most generally received tradition, it was called out of the deep by the trident of Poseidon, but was a floating island, until Zeus fastened it by adamantine chains to the bottom of the sea, that it might be a secure resting-place to Leto, for the birth of Apollo and Artemis. (Pind. *ap. Strab.* x. p. 485; Callim. *Hymn. in Del.* passim; Virg. *Aen.* iii. 76; Plin. iv. 12. s. 22; *Dict. of Ant.* art. *Leto.*) As the birthplace of Apollo, it became one of the chief seats of his worship, and the god is said to have obtained exclusive possession of the island by giving Calaureia to Poseidon in exchange for it. (Strab. viii. p. 373.) In the same way the Delphians related that Apollo gave Calaureia to Poseidon in order to obtain possession of Delphi. (Paus. x. 5. § 6.) Delos was called by various other names by the poets and mythographers. Pliny (*l. c.*) mentions the names of Asteria, Ortygia, Lagia, Chlamydia, Cynthus, Pyrpile; and Stephanus B. those of Asteria, Pelasgia, and Chlamydia. Its name of Asteria is alluded to by Poseidon, who speaks of Delos as the "unshaken prodigy of the earth, which mortals call Delos, but the gods in Olympus the far-famed *star* (ἄστρον) of the dark earth." (Pind. *Frag.* 57, 58, ed. Bergk.) Callimachus also says that it was called Asteria, when Leto found refuge upon it. (*Ibid.* 40.) It received the name of Ortygia because according to one version of the legend Leto was changed by Zeus into a quail (ὄρτυξ), in order to escape from Hera, and in this form arrived at the floating island. (Serv. *ad Virg. Aen.* iii. 72; Strabo also mentions the name Ortygia, x. p. 486.) The name of Delos was supposed by the ancient writers to have been given to the island from its becoming clear or plain (δῆλος) after floating about in the sea. (Aristot. ap. Plin. iv. 12. s. 22; Serv. *ad Virg. Aen. l. c.*) In consequence of its having been fastened by Zeus to the bottom of the sea, it was supposed to be immovable even by earthquakes, to which the surrounding islands were frequently subject. Hence Pindar, in the passage already quoted, calls Delos "the unshaken prodigy of the earth" (χθόνος ἀκίνητον τέρας). Down to the time of Pliny (*l. c.*) it was only twice shaken by earthquakes, and on each occasion the phenomenon was regarded with alarm by the whole of Greece. The first occurred just before the Persian invasion (Herod. vi. 98), and the second shortly before the Peloponnesian War (Thuc. ii. 8). It is a curious circumstance that Herodotus speaks of the former earthquake, and Thucydides of the latter as the only one which had ever taken place; and accordingly some commentators suppose that Thucydides actually refers to the same earthquake as the one mentioned by Herodotus. (See Arnold, *ad Thuc. l. c.*)

Respecting the origin of the worship of Apollo at Delos, we have no trustworthy information. K. O. Müller supposes that it was introduced by the Dorians on their voyage to Crete (Müller, *Dor.* vol. i. p. 238); but this is only an hypothesis, unsupported by evidence. In the earliest historical times the island was inhabited by Ionians, and is represented as the centre of a great periodical festival in honour of Apollo, celebrated by all the Ionic cities on the mainland as well as in the islands. In this character it is represented in the Homeric hymn to Apollo, which cannot probably be later than 600 B. C. (Hom.

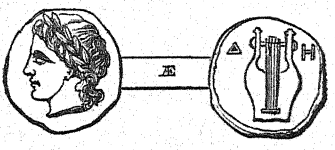
Hymn. in Apoll. 146, seq.; Grote, *Hist of Greece*, vol. iii. p. 222.) The festival was conducted with great splendour; and, as at Delphi, there were musical, as well as gymnastic contests. Like the Olympic and other great festivals of Hellas, it doubtless grew out of one of a more limited character; and we are expressly informed that Delos was originally the centre of an Amphictyony, to which the Cyclades and the neighbouring islands belonged. (Thuc. iii. 104: Strab. x. p. 485; comp. Böckh, *Inscr.* vol. i. p. 252, seq.) The Athenians took part in this festival at an early period, as is evident from the mention of the Deliastae in one of Solon's laws (Athen. vi. p. 234) It was related at a later period that the Athenians instituted the festival to commemorate the safe return of Theseus from Crete, and that the vessel in which the sacred embassy sailed to the festival was the identical one which had carried Theseus and his companions. (Plut. *Thes.* 21; Plat. *Phaed.* sub init.) The two Ionic despots, Peisistratus of Athens and Polycrates of Samos, both took a warm interest in the festival: Peisistratus purified the island by removing all the tombs which were within view of the temple; and Polycrates dedicated the neighbouring island of Rheneia to the Delian Apollo, by fastening it with a chain to Delos. But owing to various causes, among which undoubtedly was the conquest of the Ionic cities in Asia Minor by the Persians, the festival had fallen into decay at the commencement of the Peloponnesian War. In the sixth year of this war, B. C. 426, the Athenians purified Delos. They removed all the tombs from the island, and declared it to be unlawful henceforth for any living being to be born or die within it, and that every pregnant woman should be carried over to the island of Rheneia in order to be delivered. (Thuc. *l. c.*; Strab. x. p. 486.) On this occasion the Athenians restored the ancient festival under the name of the Delia, of which an account is given elsewhere. (*Dict. of Ant.* art. *Delia.*)

The sanctity of Delos was respected by Datis and Artaphernes, who would not anchor here, but passed on to Rheneia. They also sent a herald to recall the Delians, who had fled to Tenos, and they burnt upon the altar of the god 300 talents of frankincense. (Herod. vi. 97.) On the formation of the confederacy in B. C. 477, for the purpose of carrying on the war against Persia, Delos was chosen as the common treasury (Thuc. i. 96); but subsequently the transference of the treasury to Athens, and the altered character of the confederacy, reduced the island to a condition of absolute political dependence upon Athens. The purification of Delos by the Athenians in B. C. 426 has been already mentioned; but four years afterwards (B. C. 422) the Athenians thinking the removal of the Delians themselves essential to the complete purification of the island, banished all the inhabitants, who obtained a settlement at Atramyttium (Adramyttium), which was given to them by the satrap Pharnaces. (Thuc. v. 1; Paus. iv. 27. § 9.) Here, some years afterwards (B. C. 411), several of them were murdered by Arsaces, a general of Tissaphernes (Thuc. viii. 108).

After the fall of Corinth (B. C. 146) Delos became the centre of an extensive commerce. The sanctity of the spot and its consequent security, its festival which was a kind of fair, the excellence of its harbour, and its convenient situation on the highway from Italy and Greece to Asia, made it a favourite resort of merchants. (Strab. x. p. 486.) So extensive was the commerce carried on at Delos, that 10,000 slaves are said to have changed hands here in one day. (Strab. xiv. p. 668.) Delos was celebrated for its bronze, and before the invention of the Corinthian bronze the *aes Deliacum* had the greatest reputation in antiquity, and the vessels made of it were in very great request. (Plin. xxxiv. 2. s. 4; "vasa Deliaca," Cic. *pro Rosc. Am.* 46, *Verr.* ii. 34; *Dict. of Ant.* p. 25, b., 2nd ed.) The Romans confirmed the Athenians in the possession of the island; but in the Mithridatic War the generals of Mithridates inflicted upon it a devastation, from which it never recovered. In the time of Strabo it still belonged to the Athenians. (Polyb. xxx. 18; Strab. *l. c.*; Appian, *Mithr.* 28; Paus. iii. 23. §§ 3, 4.) Pausanias describes it as almost deserted in his time (viii. 33. § 2, comp. ix. 34. § 6).

Delos is little more than a rock, being only 5 miles in circumference, according to Pliny (*l. c.*). The town is described by Strabo (x. p. 485) as lying in a plain at the foot of Mount Cynthus, and the only buildings which he specifies in the island are the ἱερὸν of Apollo, and the temple of Leto. The town was situated on the western side of the island. Mount Cynthus, from which Apollo and Leto are so often called, is a bare granite rock not more than 400 or 500 feet high. It was probably the acropolis of the ancient town, and seems to have been surrounded by a wall. On its sides are many architectural fragments of white marble, and on its summit are the foundations and remains of a large building of the Ionic order. In antiquity two flights of steps led up to the summit of the mountain; the one on the northern, and the other on the western side. On the western side is an ancient gate, of which "the roof is formed of two stones rudely shaped, and resting against each other at an angle so obtuse that the rise is only 4 feet 2 inches, above a breadth of 16 feet 2 inches." (Leake.)

The ancient writers speak of a little river INOPUS (Ἴνωπός) in the island. They compare its rising and falling with the same phaenomena of the Nile, and some even suppose there was a connection between it and the Aegyptian river. (Strab. vi. p. 271, x. p. 485; Callim. *Hymn. in Del.* 206, 263, *in Dian.* 171; Paus. ii. 5. § 3; Plin. ii. 103. s. 106.) We also find mention of a lake or tank, called λίμνη τροχοειδής by Herodotus (ii. 170) and Theognis (7), τροχοέσσα by Callimachus (*in Del.* 261), containing the water necessary for the service of the temple of Apollo. Its name, as well as the epithet περιηγής given it by Callimachus (*in Apoll.* 59), sufficiently proves that it was oval or circular; and there can be no doubt that it is the oval basin, 100 yards in length, situated in the northern half of the island, and a little inland east of the ancient harbour, which Tournefort and the earlier writers absurdly supposed to be a Naumachia. This lake is frequently mentioned by other ancient writers; and near it Leto is said to have brought forth her divine children. (Aesch. *Eum.* 9; Eurip. *Ion*, 169, *Iphig. Taur.* 1103.) Others again represent the birthplace of Apollo and Artemis as near the Inopus (Hom. *in Apoll.* 18; Callim. *in Del.* 206); and as the exact spot was pointed out in later times, the Inopus would appear to have been situated in the northern part of the island, near the oval basin mentioned above. Leake, however, identifies the Inopus with the small brook which flows down from Mount Cynthus and joins the sea at the port of *Furni*, since it is the only running stream in the island, and that only in winter. Leto is said to have grasped a palm-tree



when she bore her children; and the palm, which does not grow in Greece Proper, was held in especial reverence in Delos. (Comp. Paus. viii. 48. § 3; Hom. *Od.* vi. 162; Aelian, *V. H.* v. 4; Hygin. *Fab.* 140.) The identical palm-tree of Leto was shown by the Delii in the time of Cicero (*de Leg.* i. 1).

Delos is now a heap of ruins. Whole shiploads of columns and other architectural remains were carried off, centuries ago, to Venice and Constantinople. Of the great temple of Apollo, of the stoa of Philip, of the theatre, and of numerous other buildings, there is scarcely the capital of a column or an architrave left uninjured. Not a single palm-tree is now found in the island, and the only inhabitants are a few shepherds, taking care of some flocks of sheep and goats brought over from Myconus. The chief buildings of Delos lay between the oval basin and the harbour on the western side of the island. The ruins of the great temple of Apollo and of the stoa of Philip III. of Macedon may here be distinctly traced. (Böckh, *Inscr.* n. 2274.) There are still remains of the colossal statue of Apollo dedicated by the Naxians, and in front of the basis we read Ναξίοι Ἀπόλλωνι. This statue was thrown down in antiquity. A brazen palm-tree, which had been dedicated by Nicias, according to Plutarch (*Nic.* 3), or by the Naxians themselves, according to Semus (Athen. xi. p. 502), having been blown down by the wind, carried with it the colossal statue. "The theatre stood at the western foot of Mount Cynthus, facing Rheneia, and not far from the stoa of Philip. Its extremities were supported by walls of white marble of the finest masonry, but of a singular form, having had two projections adjacent to the orchestra, by which means the lower seats were in this part prolonged beyond the semicircle, and thus afforded additional accommodation to spectators in the situation most desirable. The diameter, including only the projections, is 187 feet. The marble seats have all been carried away, but many of the stones which formed their substruction remain. Immediately below the theatre, on the shore, are the ruins of a stoa, the columns of which were of granite. In a small valley which leads to the summit of Mount Cynthus, leaving the theatre on the left, many ruins of ancient houses are observable; and above them, in a level at the foot of the peak, there is a wall of white marble, which appears to have been the cell of a temple. Here lies an altar, which is inscribed with a dedication to Isis by one of her priests, Ctesippus, son of Ctesippus of Chius. Like many others, remaining both in this island and in Rheneia, it is adorned with bulls' heads and festoons. Another fragment of an inscription mentions Sarapis; and as both these were nearly in the same place where Spon and Wheler found another in which Isis, Anubis, Harpocrates, and the Dioscuri were all named, it is very probable that the remains of white marble belonged to a temple of Isis. Among them is a portion of a large shaft pierced through the middle, 4 feet 5 inches in diameter; and there is another of the same kind, 5 feet 8 inches in diameter, half-way up the peak of Cynthus." (Leake.) After describing Mount Cynthus, of which we have already spoken, Leake continues:—"Ruins of private houses surround Mount Cynthus on every side. On the heights above the Trochoëssa, which form the north-western promontory of the island, are many other similar ruins of ancient houses, neatly constructed with mortar. On the summit of the same hill, near the remains of a large house, are some shafts of white marble, a foot and a half in diameter, half polygonal and half plain. As this quarter was entirely separated from the town on Mount Cynthus by the valley containing the sacred buildings, there is great probability that it was the new Athenae Hadrianae, which was built at the expense of the emperor Hadrian, in a position called Olympieum (Phlegon, *ap. Steph. B. s. v.* Ὀλυμπίειον), perhaps from a temple of Jupiter Olympius to which the shafts just mentioned may have belonged." In the northern part of the island are the remains of the stadium and the gymnasium.

The strait, which separates Delos and Rheneia, is 4 stadia, or about half a mile, in width. (Strab. x. p. 486.) In this strait are two rocks, called *Rematiári*, of which one is probably the ancient island of Hecate (Ἑκάτης νῆσος, Harpocrat. and Suid. *s. v.*; Semus, *ap. Athen.* xiv. p. 645.)

RHENEIA or RHENAIA (Ῥήνεια, Ῥηναῖα, both forms occur in writers and inscriptions) is much larger than Delos, being about 10 miles in circumference. The northern and southern halves are divided by a narrow isthmus. The southern half, which lies opposite Delos, was the burial-place of the latter, as has been already explained, and is now covered with remains of sepulchres. There are also ruins of many private houses, like those at Delos. (Thuc. i. 13, iii. 104; Herod. vi. 97; Strab. x. p. 486; Diod. xii. 58.)

Both Delos and Rheneia are now called *Dhiles*. (Besides the earlier works of Spon, Wheler, Thevenot, and Tournefort, see Leake, *Northern Greece*, vol. iii. p. 95, seq.; Ross, *Reisen auf den Griech. Inseln*, vol. i. p. 30, seq., vol. ii. p. 167, seq.; Brönsted, *Reisen*, vol. i. p. 59; Fiedler, *Reisen durch Griechenland*, vol. ii. p. 269, seq.; *Expéd. Scientif.* vol. iii. p. 3, seq.; Sallier, *Hist. de l'Isle de Delos*, in *Mém. de l'Acad. des Inscr.* vol. iii. p. 376; Dorville, *Miscell. Observ.* vol. vii. p. 1, seq.; Schwenck, *Deliacorum Part. I.*, Francof. 1825; Schläger, *Pauca quaedam de Rebus Deli*, Mitav. 1840.)

COIN OF DELOS.

DELPHI (Δελφοί: *Eth.* Δελφός, *fem.* Δελφίς, Δελφή; Adj. Δελφικός: *Kastrí*), a town in Phocis, and one of the most celebrated places in the Hellenic world in consequence of its oracle of Apollo.

I. SITUATION.

The situation of Delphi is one of the most striking and sublime in all Greece. It lies in the narrow vale of the Pleistus, which is shut in on one side by Mount Parnassus, and on the other by Mount Cirphis. At the foot of Parnassus is a lofty wall of rocks, called Phaedriades in antiquity, and rising 2000 feet above the level of the sea. This rocky barrier faces the south, and from its extremity two lower ridges descend towards the Pleistus. The rocky ground between these two ridges also slopes down towards the river, and in about the middle of the semicircular recess thus formed lay the town of Delphi, occupying the central area of a great natural theatre, to which its site is compared by the ancient writers. (Οἱ Δελφοὶ, πετρῶδες

χωρίον, θεατροειδὲς, κατὰ κορυφὴν ἔχων τὸ μαντεῖον καὶ τὴν πόλιν, Strab. ix. p. 418; media saxi rupes in formam theatri recessit, Justin, xxiv. 6.) The northern barrier of the Phaedriades is cleft towards the middle into two stupendous cliffs, between which issues the far-famed Castalian spring, which flows down the hill into the Pleistus. The ancient town lay on both sides of the stream, but the greater part of it on the left or western bank, on which stands the modern village of *Kastri*. Above the town was the sanctuary of the god, immediately under the Phaedriades.

Delphi was, so to speak, shut in on all sides from the rest of the world, and could not have been seen by any of the numerous pilgrims who visited it, till they had crossed one of its rocky barriers, when all its glories burst suddenly upon their view. On its northern side were the Phaedriades; on its eastern and western sides, the two lower ridges projecting from the Phaedriades towards the Pleistus; while on the other side of the river towards the south rose the range of Mt. Cirphis. Three roads led to Delphi; one from Boeotia, — the celebrated *Schiste*, — which passed through the eastern of two ridges mentioned above; and two others from the west, crossing the only two openings in the western ridge. Of these two the more northerly led from Amphissa, and the more southerly from Crissa, the modern *Chrysó*, which was the one taken by the pilgrims coming from Cirrha. Traces of the ancient carriage-road from Crissa to Delphi may still be seen. Delphi was fortified by nature, on the north, east, and west, by the Phaedriades and the two projecting ridges: it was only undefended on the south. On this side it was first fortified by a line of walls by Philomelus, who also erected two fortresses to command its two approaches from the west. The circuit of the city was only 16 stadia, or a little more than two miles. (Strab. *l. c.*) A topographical description of the city is given below.

The Delphian valley, or that part of the vale of the Pleistus lying at the foot of the town, is mentioned in the Homeric Hymn to Apollo (284), under the name of κοίλη βῆσσα; and is called by Pindar κοιλόπεδον νάπος (*Pyth.* v. 50), and Ἀπολλωνία νάπα (*Pyth.* vi. 10), and by Strabo also νάπη (Strab. *l. c.*).

II. History.

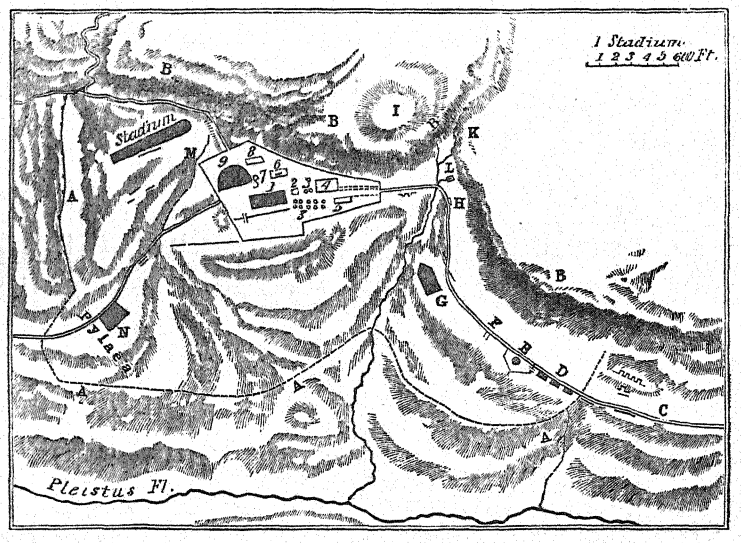
The town of Delphi owes its origin as well as its importance to the oracle of Apollo. According to some traditions, it had belonged to other divinities before it passed into the hands of Apollo. In Aeschylus it is represented as held in succession by Gaia, Themis, and the Titanian Phoebe, the last of whom gave it to Phoebus, when he came from Delos. (*Eum.* 1, seq.) Pausanias says that it was originally the joint oracle of Poseidon and Ge; that Ge gave her share to Themis, and Themis to Apollo; and that the latter obtained from Poseidon the other half by giving him in exchange the island of Calaureia. (Paus. x. 5. § 6, seq.) The proper name of the oracle was Pytho (Πύθω); and in Homer that of Delphi, which was subsequently the name of the town, does not occur. In the Iliad the temple of Phoebus Apollo at the rocky Pytho is already filled with treasures (*Il.* ix. 405); and in the catalogue of the ships the inhabitants of Pytho are mentioned in the same line with those of Cyparissus (*Il.* ix. 405). In the Odyssey Agamemnon consults the oracle at Pytho (*Od.* viii. 80). It thus appears in the most ancient times as a sacred spot; but the legend of its foundation is first related in the Homeric Hymn to Apollo. In this poem Apollo, seeking for a spot where he may found an oracle, comes at last to Crissa under Mount Parnassus. He is charmed with the solitude and sublimity of the place, and forthwith commences the erection of a temple, which is finished under the superintendence of the two brothers Trophonius and Agamedes. He then slays the huge serpent which infested the place; and from the monster *rotting* (from πύθειν) in the ground, the temple was called Pytho, and the god the Pythian:—

ἐξ οὗ νῦν Πυθὼ κικλήσεται· οἱ δὲ ἄνακτα
Πύθιον καλέουσιν ἐπώνυμον, οὔνεκα κεῖθι
αὐτοῦ πῦσε πέλωρ μένος ὀξέος ἠελίοιο.
(*Hymn. in Apoll.* 372.)

The temple now wanted priests; and the god, beholding a Cretan ship sailing from Cnossus, metamorphosed himself into a dolphin, and brought the vessel into the Crissaean gulf. Here the Cretans landed, and, conducted by the god, founded the town of Crissa, and became the priests of the temple. He taught them to worship him under the name of Apollo Delphinius, because he had met them in the form of a dolphin (Δελφίς). Müller (*Dorians*, vol. i. p. 238), and many other writers, suppose that this temple was really founded by colonists from Crete, and that the very name Crissa points to a Cretan origin. We, however, are disposed to think that in this, as in so many other cases, the legend has sprung out of an attempt to explain the names; and that it was simply the names of Crissa and Delphi which suggested the story of the Cretan colonists and of the metamorphosis of the god into the dolphin. It is useless to speculate as to what is the real origin of the names of Crissa and Pytho. Many writers derive the latter from πυθέσθαι, "to inquire," in spite of the difference of the quantity (Πῡθώ, πῠθέσθαι); but the similarity of sound between the two words is probably only accidental. Whatever may be thought of the origin of the places, the historical fact worthy of notice is, that Crissa had at first the superintendence of the sanctuary of Pytho, and continued to claim jurisdiction over it even after the Amphictyonic Council held its spring meeting at the temple, and began to regard itself as the guardian of the place. A town gradually sprung up round the sanctuary, the inhabitants of which claimed to administer the affairs of the temple independently of the Crissaeans. Meantime Cirrha, which was originally the sea-port of Crissa, increased at the expense of the latter; and thus Crissa declined in importance, as Cirrha and Delphi augmented. It is probable that Crissa had already sunk into insignificance before the Sacred War in B. C. 595, which ended in the destruction of Cirrha by the order of the Amphictyonic Council, and in the dedication of the Cirrhaean plain to the town. An account of this war is given elsewhere [Crissa]; and it is only necessary to repeat here, that the spoils of Cirrha were employed by the Amphictyons in founding the Pythian games, which were henceforwards celebrated under the superintendence of the council every four years, — in the former half of every third Olympiad. The first celebration of the Pythian games took place in B. C. 586. The horse races and foot races were celebrated in the maritime plain near the site of Cirrha. The hippodrome continued to be in this

spot down to the latest times (Paus. x. 37. § 4); but the stadium, which was still in the maritime plain in the time of Pindar (*Pyth.* xi. 20, 23), was subsequently removed to the city, where the musical and poetical matches seem to have been always held.

From the time of the destruction of Cirrha, Delphi was indisputably an independent state, whatever may have been its political condition before that time. From this time it appears as the town of Delphi, governed by its own magistrates. The name of Delphi first occurs in one of the most recent of the Homeric hymns (xxvii. 14.), and in a fragment of Heraclitus. (Plut. *de Pyth. Orac.*, c. 21, p. 404.) The population of Delphi came from Lycoreia (Λυκώρεια), a town situated upon one of the heights of Parnassus above the sanctuary. This town is said to have been founded by Deucalion, and from it the Delphian nobles, at all events, derived their origin. Hence, Plutarch tells us that the five chief-priests of the god, called Ὅσιοι, were chosen by lot from a number of families who derived their descent from Deucalion. (Strab. ix. pp. 418, 423; Schol. *ad Apoll. Rhod.* ii. 711; Paus. x. 6. § 2; Plut. *Quaest. Graec.* 9, p. 380.) The remains of Lycoreia are found at the village of *Lidkura*. Müller conjectures, with much probability, that the inhabitants of Lycoreia were Dorians, who had spread from the Dorian Tetrapolis over the heights of Parnassus. At all events, we know that a Doric dialect was spoken at Delphi; and the oracle always showed a leaning towards the Greeks of the Doric race. Moreover, that the Delphians were of a different race from the Phocians is clear from the antipathy which always existed between the two peoples.



The government of Delphi appears at first to have been in the exclusive possession of a few noble families. They had the entire management of the oracle, and from them were chosen the five Ὅσιοι, or chief-priests of the god, as is mentioned above. These are the persons whom Euripides describes as "sitting near the tripod, the Delphian nobles, chosen by lot" (*οἱ πλησίον θάσσουσι τρίποδος . . . . Δελφῶν ἀριστῆς, οὓς ἐκλήρωσεν πάλος, Ion*, 415). They are also called by the poet "the lords and princes of the Delphians," and formed a criminal court, which sentenced by the Pythian decision all offenders against the temple to be hurled from a precipice. (Κοιρανοὶ Πυθικοί, 1219; Δελφῶν ἄνακτες, 1222; Πυθία ψῆφος, 1250; from Müller, *Dorians*, vol. i. p. 240.) From the noble families the chief magistrates were chosen, among whom in early times a king (Plut. *Quaest. Graec.* 12. p. 383), and afterwards a prytanis, was supreme (Paus. x. 2. § 2). We also find in inscriptions mention of archons who gave their names to the year, of a senate (Βουλή), and in later times of an agora. (Böckh, *Inscr.* No. 1687—1724; Müller, *Dor.* vol. i. p. 192.) The constitution of Delphi and its general condition offered a striking contrast with what we find in other Grecian states. Owing not only its prosperity, but even its very existence, to its oracle, the government was of a theocratic nature. The god possessed large domains, which were cultivated by the slaves of the temple, who are frequently mentioned in inscriptions. (Müller, vol. i. p. 283.) In addition to this, the Delphian citizens received numerous presents from the monarchs and wealthy men who consulted the oracle, while at the same time the numerous sacrifices offered by strangers were sufficient for their support. (Comp. Athen. iv. p. 173.) Hence they became a lazy, ignorant, and sensual people; and their early degeneracy is implied in the tradition of Aesop's death.

An account of the Delphic oracle, of the mode in which it was consulted, and of its influence in Greece, is given in the *Dict. of Ant.* (art. *Oraculum*). It only remains here to trace its history. In the eighth century before the Christian era its reputation was established, not only throughout Hellas, but even among the surrounding nations, which sometimes sent solemn embassies to ask the advice of the god. This wide extension of the influence of the oracle was owing to the fact that almost all Greek colonies were founded with the sanction, and frequently by the express command, of the Pythian Apollo; and thus the colonists carried with them a natural reverence for the patron god of their enterprise. Gyges, the founder of the last Lydian dynasty, who reigned B. C. 716—678, presented valuable gifts to the god (Herod. i. 13, 14); and Croesus, the last monarch of this race, was one of the greatest benefactors which the god ever had. His numerous and costly presents are specified at length by Herodotus (i. 50. seq.). The colonies in Magna Graecia also spread among the inhabitants of Italy a reverence for the Delphic oracle. The Etruscan town of Aylla (Caere) had at Delphi a thesaurus belonging to their state; and the last king of Rome sent to consult the oracle.

In B. C. 548 the temple was destroyed by fire (Paus. x. 5. § 13), when many of its votive offerings perished or were greatly injured (Herod. i. 50). The Amphictyons determined that the temple should be rebuilt on a scale of magnificence commensurate with the sanctity of the spot. They decreed that one-fourth of the expense should be borne by the Delphians themselves, and that the remainder should be collected from the other parts of the Hellenic world. The sum required for the building was 300 talents, or 115,000*l.* sterling; and when it was at length collected, the family of the Alcmaeonidae, then exiles from Athens, took the contract for the execution of the work. They employed as architect Spintharus, the Corinthian, and gained great reputation for their liberality in using Parian marble for the front of the temple in place of the coarse stone prescribed in the contract. (Herod. ii. 180, v. 62; Paus. *l. c.*)

In B. C. 480 Xerxes sent a detachment of his army to plunder the temple. The Delphians in alarm sought safety on the heights of Mt. Parnassus, but were forbidden by the god to remove the treasures from his temple. Only sixty Delphians remained behind, but they were encouraged by divine portents; and when the Persians, who came from Phocis by the road Schisté, began to climb the rugged path leading up to the shrine, and had already reached the temple of Athena Pronaea, on a sudden thunder was heard to roll, the war-shout sounded from the temple of Athena, and two huge crags rolled down from the mountains, and crushed many to death. Seized with a sudden panic the Persians turned and fled, pursued by two warriors of superhuman size, whom the Delphians affirmed were the two heroes Phylacus and Autonous, whose sanctuaries were near the spot. Herodotus, when he visited Delphi, saw in the sacred enclosure of Athena Pronaea the identical crags which had crushed the Persians; and Ulrichs noticed near the spot large blocks of stone which have rolled down from the summit. (Herod. viii. 35—39;

Diod. xi. 14; Ulrichs, p. 46.) In B. C. 357 the Phocians, who had been sentenced by the Amphictyonic Council to pay a heavy fine on the pretext of their having cultivated a portion of the Cirrhaean plain, were persuaded by Philomelus to complete the sacrilege with which they had been branded by seizing the temple of Delphi itself. The enterprise was successful, and Delphi with all its treasures passed into the hands of the Phocians. Hence arose the celebrated Sacred War, which will be found related in all histories of Greece. The Phocians at first abstained from touching the riches of the temple; but being hard pressed by the Thebans and Locrians, they soon converted the treasures into money for the purpose of paying their troops. When the war was at length brought to a conclusion by Philip of Macedon, and the temple restored to the custody of the Amphictyons (B. C. 346), its more valuable treasures had disappeared, though it still contained numerous works of art. The Phocians were sentenced to replace, by yearly payments, these treasures, estimated at the sum of 10,000 talents, or nearly two millions and a half sterling. The Phocians, however, were far too poor ever to be able to restore to the shrine any considerable portion of its former wealth. In B. C. 279 the report of its riches tempted the cupidity of Brennus and the Gauls; but they probably were ignorant of the loss it had sustained in the Sacred War. They advanced to the attack by the same road which the Persians had taken, but were repulsed in like manner by almost the same supernatural agency. While the thunder rolled and an earthquake rent the rocks, huge masses of stone rolled down from the mountains and crushed the foe. (Justin, xxiv. 6—8; Paus. x. 23.) The temple was plundered by Sulla, when he robbed those of Olympia and Epidaurus. (Dion Cass. vol. i. p. 49, ed. Reimar.; Diod. *Exc.* p. 614, ed. Wess.) Strabo describes the temple as very poor in his time (ix. p. 420). It was again rifled by Nero, who carried off 500 brazen statues (Paus. x. 7. § 1). This emperor, angry with the god, deprived the temple of the Cirrhaean territory, which he distributed among his soldiers, and abolished the oracle. (Dion Cass. lxiii. 14.) But Hadrian, who did so much for the restoration of the Grecian cities and temples, did not neglect Delphi; and under his reign and that of the Antonines it appeared probably in a state of greater splendour than had been the case from the time of the Sacred War. In this condition it was seen and described by Pausanias; and we learn from Plutarch that the Pythia still continued to give answers (*de Pyth. Orac.* c. 24). Coins of Delphi are found down to the time of Caracalla. Constantine carried off several of its works of art to adorn his new capital. (Sozom. *H. E.* ii. 15.) The oracle was consulted by Julian, but was finally silenced by Theodosius.

III. Topography.

In describing Delphi we shall follow the steps of Pausanias. He entered Delphi on its eastern side, having come by the road called Schisté. On the side of the road before the town was the ancient cemetery, of which there are still numerous remains: many of the graves are cut out of the face of the rock. Upon entering the town Pausanias saw four temples in succession: the first was in ruins; the

second was empty; in the third were a few statues of Roman emperors; and the fourth was the temple of Athena Pronoea. (Paus. x. 8. § 7.) The last is described by Demosthenes as a very large and beautiful temple; and here sacrifices were offered before consulting the oracle of Apollo. This goddess is also called Pronaea from her dwelling in front of the temple of Apollo, that is, upon the road leading to the main entrance of the latter. (Dem. *c. Aristog.* i. p. 780; Aeschin. *c. Ctesiph.* p. 69; Aristid. *Or. in Minerv.* p. 26; Herod. i. 92, viii. 37; Diod. xi. 14; Aeschyl. *Eum.* 21, Παλλὰς Προναία δ' ἐν λόγοις πρεσβεύεται.) The site of the four temples is marked by an extensive platform resting upon polygonal walls, on which lie fragments of pillars, triglyphs, and other remains of temples, which give to the place the name of *Marmariá*.

A little above the temple of Athena Pronoea Pausanias saw the sanctuary of Phylacus, a native hero, who along with his comrade Autonous assisted the Delphians, both when the Persians and the Gauls made an attempt upon the temple. The masses of stone still lying upon this spot have been already mentioned. A short distance further was the Gymnasium to the left of the road, the site of which is now occupied by the monastery of the *Panaghía*, surrounded by olives and mulberry trees. In the church of the monastery two ancient inscriptions have been found (Böckh, *Inscr.* 1687, 1723), as well as triglyphs and other architectural remains. Pausanias says, that on turning to the left from the Gymnasium the distance down to the river Pleistus appeared to him to be only three stadia, but it is considerably more. The Pleistus is now called *Xeropótamos*, because it is dry in the summer months.

"In ascending from the gymnasium to the temple of Apollo, the water of Castalia was on the right of the road." (Paus. x. 8. § 9.) The far-famed fountain of Castalia issues from the fissure between the two lofty cliffs with peaked summits, of which we have already briefly spoken in describing the site of Delphi. The spring rises close to the eastern of the two cliffs, now called *Flembúko*. In antiquity it bore the name of HYAMPEIA (Ὑάμπεια), as appears from the statement of Herodotus, that the sanctuary of Autonous was near the Castalia at the foot of the Hypampeian summit. (Herod. viii. 39.) From this height criminals were hurled, who had been guilty of any act of impiety towards the Delphian sanctuary. (Schol. *ad Lucian. Phal.* i. 6; Schol. *ad Aristoph. Vesp.* 1444; del. *Var. Hist.* xi. 5; Eurip. *Ion*, 1222, 1266.) After the murder of Aesop, who was hurled from the Hyampeia, the Delphians, out of respect to his memory, transferred the place of punishment to the peak NAUPLIA (Ναυπλία, Plut. *de Ser. Num. Vind.* c. 12; comp. Herod. ii. 134). This has been usually supposed to be the western of the two summits, now named *Rodhini*; but there is no authority for this statement, and Ulrichs transfers the name to the steep rocks on the western side of the town, from which many Turkish prisoners were hurled in the war of independence.

The celebrity of the two peaks through which the Castalia flows led the poets and later writers to speak of two summits of Parnassus, although one, namely that of Lycoreia, towers above all others. Some writers even seem to have supposed that the two peaks of the Castalia were actually the summits of Parnassus itself, although the latter rises in reality several thousand feet above them:—

"Mons ibi verticibus petit arduus castra duobus,
Nomine Parnassus, superatque cacumine nubes."

(Ov. *Met.* i. 316; comp. Lucan, v. 71; Stat. *Theb.* vii. 346; Lucian. *Contempl.* 5; Nonn. *Dionys.* xiii. p. 358.) The two peaks were sacred to Dionysus. Above them was the Corycian cave, of which we shall speak below, which also belonged to Dionysus and his attendants, the Corycian nymphs: hence the name of Corycian was sometimes given to the two summits themselves:—

σὲ δ' ὑπὲρ διλόφου πέτρας
στέροψ ὄπωπε Λιγυὸς, ἔνθα Κωρύκιαι Νύμφαι
στείχουσι Βακχίδες,
Κασταλίας τε νᾶμα. (Soph. *Antig.* 1126.)

σέβω δὲ νύμφας, ἔνθα Κωρυκὶς πέτρα
κοίλη, φίλορνις, δαιμόνων ἀναστροφή·
Βρόμιος δ' ἔχει τὸν χῶρον. (Aesch. *Eum.* 22.)

πόθι Νύσας ἄρα τᾶς θηροτρόφου θυρσοφορεῖς
Θιάσους, ὦ Διόνυσ', ἢ κορυφαῖς Κωρυκίαις;
(Eurip. *Bacch.* 556.)

The semicircular range of rocks, to which the two summits belonged, bore the general name of PHAEDRIADES (Φαιδριάδες), as was remarked above. Diodorus gives this name to the western rocks, where Philomelus gained a victory over the Locrians (xvi. 28); and the eastern rock Hyampeia, from which Aesop is said to have been precipitated, is included by Suidas among the Phaedriades (Suid. *s. vv.* Αἴσωπος, Φαιδρίας). They faced nearly due south, and thus received the rays of the sun during the most brilliant part of the day. It was apparently owing to this circumstance that they were called Phaedriades, or "Resplendent." Receiving the full rays of the sun, they reflected them upon the temple and works of art below; and hence Ion represents himself as "serving the livelong day beneath the sun's bright wing" (παναμέριος ἅμ' ἀελίου πτέρυγι δοῦ λατρεύων, Eurip. *Ion*, 122; from Mure, *Tour in Greece*, vol. i. p. 188). In the inaccessible rocks of the Phaedriades innumerable birds build their nests; and eagles, vultures, and other birds of prey constantly hover over the valley below. The same was the case in ancient times; and accordingly, in Euripides, Ion, when about to discharge his daily service in the temple, carries with him a bow and arrows in order to keep off these intruders. (Eurip. *Ion*, 154, seq.)

The fissure between the two summits is the bed of a torrent, which forms in seasons of rain a fine cascade of about 200 feet in height. "At the lower extremity of the dry torrent bed, just where it emerges from between the cliffs, issue the waters of the Castalian spring, oozing at first in scarce perceptible streamlets from among the loose stones, but swelling into a considerable brook within not many yards of their first appearance above ground." (Mure.) It flows through a hollow dell down to the Pleistus, passing by the monastery of the *Panaghiá* on its left or eastern side.

The Castalia was the holy water of the Delphian temple. All persons who came to consult the oracle, or who wished to pray to the god before engaging in any of the matches of the Pythian games, or who visited Delphi for any religious object whatsoever, were obliged to purify themselves at this sacred fountain. (Heliod. *Aeth.* ii. 26; l'ind. *Pyth.* iv. 290, v. 39; Plut. *Arist.* 20.) Even the servants of the temple used the water for the same purpose. (Eurip. *Ion*, 94.) The bathing of the hair seems to have

been the chief form of the purification, and hence this is attributed by the poets to Apollo himself:—

ἔτι δὲ Κασταλίας ὕδωρ
ἐπιμένει με κόμας ἐμὰς
δεῦσαι. (Eurip. *Phoen.* 222.)

"Qui rore puro Castaliae lavit
Crines solutos"

(Hor. *Carm.* iii. 4. 61; comp. Ov. *Met.* i. 371; Stat. *Theb.* i. 698). There can be no doubt that those who visited Delphi for the purpose of being purified from murder bathed their whole body in the Castalian spring. There are still remains of a bath cut out of the rock, which received the waters of the spring, and to which steps led down. It is called by Ulrichs the "Bath of the Pythian Pilgrims." Preceding writers had given it the name of the "Bath of the Pythia," an appellation which has arisen from the erroneous statement of a Scholiast (*ad Eurip. Phoen.* 230). The aged women, who were elected to the office of Pythia from the Delphian families, appear never to have bathed in the fountain, or at all events only upon their consecration to their prophetic office, since they lived in the temple without coming in contact with any profane objects, and consequently needed no further purification. In the *Ion* of Euripides the Pythia is in the adytum before sun-rise, and in the *Eumenides* of Aeschylus there is no mention of the bath of the Pythia before she ascends the tripod.

In later times the Castalian spring was said to impart to those who drank of it poetic inspiration; but this is an invention of the Roman poets, who appear to have attributed to it this power from Apollo being the protector of the Muses: —

"Mihi flavus Apollo
Pocula Castalia plena ministret aqua."

(Ov. *Am.* i. 15. 35; comp. Stat. *Silv.* v. 5, init.; Martial, xii. 3. 11.)

The Castalia is now called the fountain of St. John, from a small chapel of St. John which stands close to its source.

Near the spring there is at present a plane tree, which is the only one in *Kastrí* and the immediate neighbourhood. It is conjectured by Ulrichs to be the very tree celebrated in antiquity as the one which Agamemnon was said to have planted at Delphi (Theophr. *Hist. Plant.* iv. 13. s. 14), since it seems scarcely possible to assign any limits to the life of plane trees in Greece, especially when they grow by the side of perennial streams.

The road from the Castalian spring led to the principal entrance into the Pythian sanctuary. The sanctuary, which contained several other buildings besides the temple, was called τὸ ἱερὸν, τὸ τέμενος and Πύθω in a narrower sense. It was enclosed by a wall, named ὁ ἱερὸς περίβολος. Pausanias entered the sacred enclosure by the principal gate, which faced the east, and quitted it by a western door near the theatre. He remarks that there were numerous means of exit, which was unusual in Grecian sanctuaries. He describes the sanctuary as occupying the highest part of the city, and the peribolus as of great size (x. 8. § 9). It appears to have been nearly in the form of a triangle, of which the basis lying towards the south is marked by the ruins called *Hellenicó*. The peasants gave the ruins this name, because they regarded them as the wall of a fortress; and the modern name of *Kastrí* has arisen out of the belief that a fortress once existed here. Ulrichs also discovered a portion of the northern corner half-way between the church of Nicolaus and the fountain *Kerná*. From the nature of the ground, which is a steep declivity, the buildings in the sacred enclosure must have stood upon terraces; and it was probably upon the walls of these terraces that many of the inscriptions were cut which we now find at Delphi.

The most remarkable objects in the sacred enclosure lay between the principal or eastern entrance and the temple. Both Pausanias and the strangers in Plutarch's Dialogue on the Pythian Oracle went from the Castalia to the temple by the same way; and, consequently, the objects which they both agree in describing must be placed between the principal entrance and the temple.

Upon entering the enclosure from the eastern gate the first objects seen were statues of athletes and other dedicatory offerings, of which Pausanias has given us a long account (x. 9, seq.). Their number was very great. Even in Pliny's time they were not less than 3000. (Plin. xxxiv. 7. § 7.) Nero alone, as we have already seen, carried off 500 bronze statues. (Paus. x. 7. § 1.) Many of them could be seen, rising above the peribolus, by persons ascending the eastern road to the sanctuary. (Justin, xxiv. 7; Polyaen. vii. 35. § 2.)

Pausanias and Plutarch next mention the Stone of the Sibyl, which was a rock rising above the ground, and was so called because it was the seat occupied by the first Sibyl. (Paus. x. 12. § 1; Plut. *de Pyth. Or.* 9; Clem. Alex. *Strom.* i. p. 304.)

Near the Stone were the Thesauri (θησαυροί), or treasuries, which did not stand on a single platform as at Olympia, but were built separately about the Stone as far as the great altar. They were small buildings, partly above and partly below the ground, in which were kept the more valuable offerings, and such as could not be exposed without injury to the air. The most celebrated of all the treasuries was that of the Corinthians, said to have been built by Cypselus, in which were preserved, among other things, the gold and silver offerings of Gyges. (Paus. x. 13. § 5; Herod. i. 14, iv. 162; Plut. *Sept. Sap. Conviv.* 21, *de Pyth. Or.* 12.) The Stoa, built by the Athenians, also served the purpose of a treasury. (Paus. x. 11. § 6.) It stood apparently east of the Stone of the Sibyl.

Near the Stoa of the Athenians was the Bouleuterion (βουλευτήριον) or Senate-House of the Delphians. (Plut. *de Pyth. Or.* 9; Clem. Alex. *Strom.* i. p. 304.)

In front of the temple, and under the open heaven, stood the great altar of Apollo, where the daily sacrifices were offered. It is probably the same as the altar mentioned by Herodotus (ii. 135) as a dedicatory offering of the Chians. It is called by Pausanias βωμὸς ὁ μέγας (x. 14. § 7), by Euripides βωμός (*Ion*, 1275, 1306, 1314), βωμοί (422), and βωμὸς Θεοῦ (1280). The court in which it stood is called by Euripides θυμέλη (114) and θυμέλαι (46). Near the altar stood a brazen wolf, dedicated by the Delphians themselves. (Paus. x. 14. § 7.)

We now come to the temple itself. It appears from the existing fragments of columns that the exterior was of the Doric order, and the interior of the Ionic. It would seem to have been a hexastyle temple, and smaller by one-seventh than the temple of Zeus at Olympia. Still it was reckoned one of

the largest in Greece (Philostr. *Vit. Apoll.* vii. 11), and vied in beauty with the temples of Athens (Eurip. *Ion*, 184; Pind. *Pyth.* vii. 9). It has been already related that it was erected by the Alcmaeonidae, under the superintendence of the Corinthian architect Spintharus, after it had been burnt down in B. C. 548, and that the front was built of Parian marble, while the remainder was of ordinary stone. The tympana of the pediments of the two porticoes were filled with sculptures, the one with statues of Artemis, Leto, Apollo, the Muses, and the setting sun, and the other with those of Dionysus and the Thyiades, both of them the works of Athenian artists. (Paus. x. 19. § 4.) Euripides has described five of the metopes, probably those on the eastern front. The subjects were, Hercules and Iolaus slaying the Lernaean hydra, Bellerophon killing the Chimaera, Zeus killing Mimas, Pallas killing Enceladus, and Bacchus another of the giants. (Eurip. *Ion*, 190—218.) As in the Parthenon, there were gilded shields upon the architraves of the two fronts beneath the metopes: those in the eastern front were dedicated by the Athenians from the spoils of the Persians at Marathon, and those on the western front by the Aetolians from the spoils of the Gauls. (Paus. x. 19. § 4.)

The interior of the temple consisted of three divisions, the Pronaus (*πρόναος*), the Cella (*ναός, σηκός*), and the Adytum, where the oracles were delivered (*ἄδυτον, μαντεῖον, χρηστήριον*).

In the Pronaus stood a brazen statue of Homer (Paus. x. 24. § 2), and also, in the time of Herodotus, the large silver crater presented by Croesus (Herod. i. 51). On the walls of the Pronaus were inscribed, by order of the Amphictyons, in golden letters, the celebrated sayings of the Seven Wise Men, such as "Know thyself," "Nothing too much." (Plut. *de Garrul.* 17; Paus. x. 24. § 1; Plin. vii. 33.) Here also was set up in wood the fifth letter of the Greek alphabet, which, according to tradition, was dedicated in common by the Seven Wise Men. It was a simple E, which in the ancient Greek writing also represented the diphthong *εἰ*. There were various interpretations of its meaning, of which Plutarch has given an account in his treatise upon the subject.

The Cella was supported by Ionic columns, as appears from existing fragments. In it Pausanias saw an altar of Poseidon, to whom the oracle belonged in the most ancient times, statues of two Moerae or Fates, together with statues of Zeus and Apollo as leaders of the Fates, the hearth upon which the priest of Apollo slew Neoptolemus, the son of Achilles, and the iron chair of Pindar, on which he is said to have sung his hymns to Apollo. (Paus. x. 24. § 4, seq.)

On the hearth burnt a perpetual fire, and near it was the Omphalos, or Navel-Stone, which was supposed to mark the middle point of the earth. (Aeschyl. *Choëph.* 1034, seq.; *Φοιβήϊος γᾶς μεσόμφαλος ἑστία*, Eurip. *Ion*, 461.) According to tradition, two eagles, which had been sent by Zeus, one from the east, and the other from the west, met at this point, and thus determined it to be the centre of the earth. (Pind. *Pyth.* iv. 131, vi. 3; Strab. ix. p. 419.) The Omphalos was a white stone, adorned with stripes of various kinds, and upon it were the representations of the two eagles (*ὀμφαλός . . . ταινιωμένος*, Strab. *l. c.*; *στέμμασ γ' ἐνδυτὸς*, Eurip. *Ion*, 224; Paus. x. 16. § 3). It is frequently represented in vase-paintings, in which Orestes is exhibited sitting upon it, exactly as described by Aeschylus. (*Eum.* 40; comp. Müller, *Aeschl. Eum.* § 27.) The site of the Omphalos is not mentioned by Pausanias. It was clearly in the interior of the temple, for in Aeschylus the Pythia, in going through the temple to the Adytum, perceives Orestes seated upon the Omphalos (*Eum. l. c.*). It probably stood, along with the sacred hearth, as nearly as possible in the centre of the Cella. The sacred hearth was usually in the centre of the house or the temple. Thus, the altar in the middle of the palace at Mycenae is called by Clytaemnestra *μεσόμφαλος ἑστία*. (Aesch. *Agam.* 1056.)

The temple was hypaethral, that is, there was an opening in the roof of the Cella. This follows from the narrative of Justin, who relates that, when the temple was attacked by the Gauls, the priests saw the god descend into the sanctuary through the open part of the roof ("per culminis aperta fastigia," Justin, xxiv. 8). In fact, all temples which had in the interior an altar on which sacrifices were offered, or a hearth on which fire was kept burning, were obliged to have some opening for carrying off the smoke.

The Adytum, in which the oracles were delivered, was a subterraneous chamber, which no one was allowed to enter except the priests, or those to whom special permission was given. That the Adytum was under-ground appears from the expressions by which it is frequently designated in the ancient writers, and which refer not only to natural caves and grottoes, but to chambers built under-ground. (*ζάθεά τ' ἄντρα δράκοντος*, Eurip. *Phoen.* 232; *ἄντρον*, Strab. ix. p. 419; *τὸ τοῦ κληθέντος Πύθωνος σπήλαιον*, Athen. xv. p. 701, c.; "specus," Liv. i. 56; "Castalium antrum," Ov. *Met.* iii. 14; "caverna," Lucan, v. 135, 162.) It is described as situated in the inmost part of the temple, and is frequently called *μυχός*. (Paus. x. 24. § 5; *μυχός*, Aesch. *Eum.* 39.) No account of it is given by Pausanias, who simply says that "few are admitted into the inmost part of the temple, and that in it there is a second statue of Apollo, made of gold." (Paus. *l. c.*) Ulrichs conjectures that the entrance into the Adytum may have been either on the western side of the Cella, opposite the great door of the temple; or on the northern side, where an excavation might be made in the rock in the direction of the fountain Cassotis, which flowed into the Adytum.

Stephanus B. says (*s. v.* Δελφοί) that the Adytum was built of five stones, by the celebrated Trophonius and Agamedes, who appear in the Homeric Hymn to Apollo as the original architects of the temple. And it is natural to conclude that the Adytum and the polygonal substruction of the temple escaped the fire which destroyed the building in the 58th Olympiad.

In the inmost part of the Adytum stood a tripod over a deep chasm in the earth, whence proceeded an intoxicating vapour, which was supposed to inspire the priestess with the gift of prophecy. (Strab. *l. c.*) This opening is described by various names in the ancient writers. (*χάσμα*, Diod. xvi. 26; *γῆς στόμα*, Stobaeus, *Ecl.* i. 42; *Πυθικὸν στόμιον*, Lucian, *Ner.* 10, Dion Cass. lxiii. 14; "hiatus," Lucan, v. 82; "terrae foramen," xxiv. 6.) According to Plutarch this vapour arose from a fountain (*de Def. Or.* 50, *de Pyth. Or.* 17), which is said by Pausanias to have been the fountain Cassotis, that disappeared beneath the ground in the Adytum (x. 24. § 7). Pausanias also relates that the oracle

was discovered in consequence of some shepherds, who had driven their flocks to the spot, becoming inspired by the vapour and uttering prophecies (x. 5. § 7). The Pythia sat upon the tripod when she gave the oracles of Apollo, and the object of it was to prevent her falling into the chasm. (Diod. xvi. 26.) Between the three legs of the tripod hung a circular vessel, called λέβης and *cortina*, in which were preserved the bones and teeth of the Pythian serpent. (Dionys. Per. 441, and Eustath. *ad loc.*; Serv. *ad Virg. Aen.* iii. 360, vi. 317.) For a further description of this tripod, see *Dict. of Ant.* art. *Tripos*. No vapour is now found issuing from any part of the Delphian rocks.

Upon leaving the temple, we again follow Pausanias in his account of the remaining objects, which lay north of the temple within the peribolus. Pausanias, upon going out of the temple, turned to the left, where he noticed a peribolus enclosing the tomb of Neoptolemus, the son of Achilles, to whom the Delphians offered sacrifices every year. (Paus. x. 24. § 6; Strab. ix. p. 421.) He was said to have been murdered in the temple, near the sacred hearth; but the manner of his death was differently related. Above the ruins of the temple, and a little to the east, Ulrichs noticed the remains of an ancient wall, which he supposed to be a part of the peribolus of the tomb of Neoptolemus.

Still higher up above the tomb, was the stone which Cronus was said to have swallowed instead of his son Zeus, and afterwards to have vomited up. (Paus. *l. c.*) Upon leaving the stone, and returning as it were to the temple, Pausanias came to the fountain Cassotis (Κασσοτίς), the access to which was through a small wall built near it (x. 24. § 7). Ulrichs identifies Cassotis with the fountain near the church of St. Nicolaus, before which are some remains of an ancient polygonal wall. Pausanias further says, as we have already seen, that the Cassotis flowed into the Adytum. Accordingly, we find that the fountain of St. Nicolaus lies immediately above the ruins of the temple; and lower down the hill we now find some water springing out of the ground at the present *Hellenicó*, which water is probably the same that once flowed into the Adytum, but has now made an exit for itself below, in consequence of being buried by the ruins of the temple. All previous travellers had identified the Cassotis with the fountain *Kerná*, which flows between the ruins of the theatre and the Stadium; but, in addition to other objections that might be urged, it is impossible to believe that the peribolus of the temple extended so far.

The name Cassotis occurs only in Pausanias, but the fountain itself is mentioned in other ancient writers. It is mentioned in the Homeric Hymn as a beautifully flowing fountain, where Apollo slew the serpent (*in Apoll.* 300); and Euripides alludes to it as watering the sacred grove surrounding this temple (*Ion*, 112). This sacred grove, which is frequently mentioned by the ancient writers, consisted of laurel-trees and myrtles, but one laurel-tree in particular was called pre-eminently the Pythian laurel, and branches of it were used for sacred purposes within the temple.

Above the Cassotis was the LESCHE (Λέσχη) of the Delphians (Paus. x. 25. § 1), part of the stone floor of which was discovered by Ulrichs in the outbuildings of a house above the fountain of St. Nicolaus. Leschae were public buildings, in which persons might meet together and converse, since private houses were generally too small for such a purpose. The Delphian Lesche was adorned with two large paintings by Polygnotus, dedicatory offerings of the Cnidians; the painting on the right hand represented the capture of Troy and the departure of the Greeks, and that on the left the descent of Ulysses into Hades. A long description of these pictures is given by Pausanias (x. 25—31; comp. Plut. *de Def. Or.* 6, 47; Plin. xxxv. 9. s. 35). The figure of Cassandra was particularly admired. (Lucian, *Imag.* 7.)

The site of the theatre is marked by a high wall, a little to the west of the Cassotis. This wall, which is covered by several inscriptions, was the southern wall of the theatre, which, as usual with Grecian theatres, was built in a semicircular form upon the slope of the hill. The inner part of the theatre is almost entirely covered, and only a small portion of the upper seats is visible. It appears from an inscription that the theatre lay within the Pythian sanctuary (Böckh, *Inscr.* No. 1710), and according to Pausanias it adjoined the wall of the enclosure (x. 32. § 1). Accordingly, the ruins of the theatre determine the extent of the enclosure to the north-west. In the theatre the musical contests of the Pythian games were carried on, from the earliest to the latest times. (Plut. *de Def. Or.* 8.)

Ascending from the Peribolus (*ἐπαναβάντι δὲ ἐκ τοῦ περιβόλου*, Paus. x. 32. § 1), Pausanias came to a statue of Dionysus, and then to the Stadium, situated in the highest part of the city. It was built of Parnassian stone, but was adorned with Pentelic marble by Herodes Atticus. (Paus. *l. c.*; Philostr. *Vit. Sophist.* ii. p. 550.) There are still considerable remains of the Stadium, now called *Lákkoma*, and its whole length may be distinctly traced. Many of the seats remain, composed of the native rock; but the Pentelic marble with which it was decorated by Herodes Atticus is no longer found. It has been already mentioned that the Stadium was originally in the maritime plain, where it continued to be in the time of Pindar (*Pyth.* xi. 20, 73); and we do not know when it was removed to the city.

It has been shown above that the large fountain *Kerna* near the Stadium was not the Castalia. There can be little doubt that the ancient name of *Kerná* was DELPHUSA (Δελφοῦσα), which we learn from Stephanus B. was the fountain of the place (*s. v.* Δελφοί). The Castalia, from its position, could supply only the lower and eastern part of the city; and that the Pylaea, in the western part of the city, was well provided with water is expressly stated by Plutarch (*de Pyth. Or.* 29). It is not improbable that Κερνᾶ, the modern name of the fountain, is only a corruption of the ancient *κρήνη*.

Pylaea (Πυλαία) was a suburb of Delphi, on the road to Crissa. It derived its name from the meeting of the Amphictyonic Council in this place, the council, as is well known, being called Pylaea. In the time of Plutarch, Pylaea was provided with "temples, synedria, and fountains." The synedria appear to have been built in later times for the use of the Amphictyons; and the two ancient walls supporting the artificial platform, upon which the chapel of St. Elias stands, are probably the remains of such a building. (Plut. *de Pyth. Or.* 29; Dion Chrysost. *Or.* lxxvii. p. 414.) A little above the chapel of St. Elias, in the direction of the Stadium, there are some ancient sepulchres cut out of the rock.

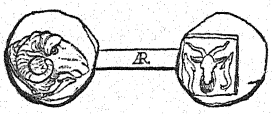
It was upon approaching the suburb of Pylaea that Eumenes was attacked by the conspirators, for the

buildings mentioned by Livy are evidently those of Pylaea ("escendentibus ad templum a Cirrha, priusquam perveniretur ad frequentia aedificiis loca," Liv. xlii. 15).

Above Delphi was the celebrated cave called CORYCIUM (τὸ Κωρύκιον ἄντρον), distant, according to Leake, about 7 miles from the city, to the north-eastward, and about the same distance to the north-west of *Arákhova*. The usual way from *Kastrí* to the heights of Parnassus leads past the Stadium, and then turns more to the west than the ancient path, which ascended the mountain immediately above the city. The ancient way was an astonishing work. It was a zigzag path, consisting of more than a thousand steps cut out of the hard rock, and forming an uninterrupted flight of steps to the highlands above. There are still considerable remains of it, but it is now seldom used, as the modern path is easier. It takes about two hours to reach the highlands of Parnassus, which are divided by hills and mountain-summits into a number of larger and smaller valleys and ravines, partly covered with forests of pine and fir, and partly cultivated as arable and pasture land. This district extends about 16 miles in a westerly direction from the foot of the highest summit. It formed the most valuable part of the territory of Delphi. Leake describes it as "a country of pasture, interspersed with firs, and peopled with shepherds and their flocks," and remarks that he "occasionally passed fields of wheat, barley, and oats all yet green, though it was the 27th of July, and the harvest in the plains of Boeotia had been completed a month before."

The Corycian cave is situated in the mountain on the northern side of the valley. It is thus described by Leake:—"We ascended more than half-way to its summit, when a small triangular entrance presented itself, conducting into the great chamber of the cavern, which is upwards of 200 feet in length, and about 40 high in the middle. Drops of water from the roof had formed large calcareous crystallizations rising at the bottom, and others were suspended from every part of the roof and sides. The inner part of this great hall is rugged and irregular; but after climbing over some rocks, we arrived at another small opening leading into a second chamber, the length of which is near 100 feet, and has a direction nearly at a right angle with the outer cavern. In this inner apartment there is again a narrow opening, but inaccessible without a ladder; at the foot of the ascent to it is a small natural opening." Pausanias says (x. 32. § 2) that there were 60 stadia from Delphi to a brazen statue, from whence it was easier to ascend to the cavern on foot than on a horse and mule; and, accordingly, Leake supposes the statue to have stood at the foot of the mountain, since the distance from thence to Delphi is nearly that mentioned by Pausanias. The latter writer remarks that this cave is larger than any of the other celebrated caverns which he had seen, and that a person can proceed a very long way through it even without a torch. He adds that it was sacred to Pan and the Nymphs, which is also attested by other ancient writers, and is confirmed by an inscription found in the cave. (Strab. ix. p. 417; Aesch. *Eum.* 22; Böckh, *Inscr.* No. 1728; Raikes, in Walpole's *Collection*, vol. i. p. 314.) Pan and the Nymphs were regarded as the companions of Dionysus, whose orgies were celebrated upon these heights. [See above, p. 764, b.] When the Persians were marching upon Delphi, the inhabitants took refuge in this cave (Herod. viii. 36), and it has been used for the same purpose by the inhabitants of *Arákhova* in recent times.

According to Ulrichs, the Corycian cave is now called Σαρανταύλι by the peasants, from its being supposed to contain 40 chambers (from *σαράντα, τεσσαράκοντα αὐλαί*).



Pausanias says, that "from the Corycian cave it is difficult even for a well-girt man to reach the summits of Parnassus; that they were above the clouds; and that upon them the Thyiades perform their frantic rites in honour of Dionysus and Apollo" (x. 32. § 7). The way from the Corycian cave to the highest summit of Parnassus turns to the north-east. The summit which the traveller at last reaches, but which is only the second in height, is called *Gerontóbrachos* (ὁ Γεροντόβραχος). On its northern and eastern sides lay great masses of snow, which never melt. Opposite to it, towards the east, there rises in a conical form the highest summit of Parnassus, upwards of 8000 feet in height, called *Lykéri* by the peasants, who consider it the highest point of the world, from which the Polis (i. e. Constantinople) may be seen.

Parnassus, with its many summits and highlands, is called by the inhabitants *Liákura* (Λιάκουρα), a word which is usually supposed to be a corruption of Λυκώρεια, the ancient name of the highest summit of Parnassus. But Ulrichs considers *Liákura* an Albanian word, observing that ancient Greek words, the roots of which have retained their meaning, are never changed so much in the modern Greek language, and that Λυκέρι, the name of the highest summit, is the representative of the old word Λυκώρειον, since modern Greek words ending in ι are shortened forms of the termination —ιον or —ειον. Stephanus B. (*s. v.* Λυκώρεια) mentions a Lycoreium, which appears to have been a sanctuary of the Lycorian Zeus, whose altar was on the highest summit of Parnassus, where Deucalion is said to have landed after the Deluge. (Lucian, *Tim.* 3; Schol. *ad Pind. Ol.* ix. 70; Apollod. i. 7 § 2.)

IV. MODERN AUTHORITIES.

The antiquities of Athens for a long time engrossed the attention of travellers; and so little was known of Delphi, that when Spon visited Greece in 1676 he first looked for the ruins of the city at *Sálona*, the ancient Amphissa. He afterwards discovered the site of Delphi, but erroneously supposed the temple to have stood upon the same site as the church of St. Elias; he rightly identified the Castalian fountain and the position of the gymnasium. A more accurate account of the ruins of Delphi was given by Chandler (A. D. 1765), who determined more correctly the site of the temple, and published several inscriptions which he found there. Clark, Dodwell, and Gell did not add much new information; but Leake has given us an account of the place, distinguished by his usual sagacity and learning, which is far superior to any previous description. (*Northern Greece*, vol. ii. p. 551.) Still even his accurate account has been superseded by the fuller description of Ulrichs, who passed several weeks at Delphi in 1838, and published the results of his investigations under the title of *Reisen und Forschungen in Griechenland*, Bremen, 1840. To this valuable work we are indebted for

a considerable part of the preceding article. The modern works relating to the temple of Delphi are enumerated in the *Dict. of Ant.* art. *Oraculum.* The inscriptions discovered by K. O. Müller at Delphi are published and illustrated by Curtius, *Anecdota Delphica*, Berol. 1843.

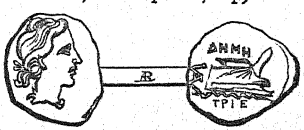
COIN OF DELPHI.

DELPHI'NIUM. [CHIOS, p. 610, b.]

DELPHI'NIUM (Δελφίνιον), the port-town of Oropus. [OROPUS.]

DELTA. The appellation of Delta, or the triangular land, was given to various regions by the Greeks, and implies a space of land bounded by two or more diverging branches of a river, and resembling, in the general form of its area, the fourth letter of the Greek alphabet. These were the Deltas of the Indus, the Ister, the Rhone, the Padus or Eridanus: but the name was originally and specially conferred upon that triangular region which lies between the Heptanomis, or Middle Egypt, and the Mediterranean sea. Among the Greeks this tract of alluvial soil bore various designations. (τὸ Δέλτα; the Lower Country, ἡ κάτω χώρα, Ptol. iv. 5. § 55; τρίγωνος χθὼν Νειλῶτις, Aesch. *Prom.* 814; Strab. xvi. p. 791; Herod. ii. 6, seq.; Diod. i. 34, seq.; Plin. v. 9. s. 9.) [AEGYPTUS.] [W. B. D.]

DELUS. [DELOS.]



DEME'TAE. [DIMETAE.]

DEME'TRIAS (Δημητριάς), a town of Assyria, stated by Strabo to have been in the neighbourhood of Arbela (xvi. p. 738; Steph. B. *s. v.*). Isidore of Charax mentions another place of this name in Arachosia. [V.]

DEME'TRIAS (Δημητριάς: *Eth.* Δημητριεύς), a city of Magnesia in Thessaly, situated at the head of the Pagasaean gulf, was founded about B. C. 290 by Demetrius Poliorcetes, who removed thither the inhabitants of Nelia, Pagasae, Ormenium, Rhizus, Sepias, Olizon, Boebe and Iolcos, all of which were afterwards included in the territory of Demetrias. (Strab. ix. p. 436.) It soon became an important place, and the favourite residence of the Macedonian kings. It was favourably situated for commanding the interior of Thessaly, as well as the neighbouring seas; and such was the importance of its position that it was called by the last Philip of Macedon one of the three fetters of Greece, the other two being Chalcis and Corinth. (Pol. xvii. 11; Liv. xxxii. 37.) Leake remarks that it may have been recommended to the kings of Macedonia as a residence "not more for its convenience as a military and naval station in the centre of Greece, than for many natural advantages, in some of which it seems to have been very preferable to Pella. The surrounding seas and fertile districts of Thessaly supplied an abundance of the necessaries and luxuries of life: in summer the position is cool and salubrious, in winter mild, even when the interior of Thessaly is involved in snow or fog. The cape on which the town stood commands a beautiful view of the gulf, which appears like an extensive lake surrounded by rich and varied scenery; the neighbouring woods supply an abundance of delightful retreats, embellished by prospects of the Aegaean sea and its islands, while Mount Pelion might at once have afforded a park, an icehouse and a preserve of game for the chase."

After the battle of Cynoscephalae, B. C. 196, Demetrias was taken away from Philip, and garrisoned by the Romans. (Pol. xviii. 28; Liv. xxxiii. 31.) In B. C. 192, it was surprised by the Aetolians; and the news of its defection from the Romans determined Antiochus to defer no longer his departure to Greece. (Liv. xxxv. 34, 43.) After the return of Antiochus to Asia in B. C. 191, Demetrias surrendered to Philip, who was allowed by the Romans to retain possession of the place. (Liv. xxxvi. 33.) It continued in the hands of Philip and his successor till the overthrow of the Macedonian monarchy at the battle of Pydna, B. C. 169. (Liv. xliv. 13.) Demetrias is mentioned by Hierocles in the sixth century (p. 642, ed. Wesseling).

The ancient town is described by Leake as occupying "the southern or maritime face of a height, now called *Goritza*, which projects from the coast of Magnesia, between 2 and 3 miles to the southward of the middle of *Volo*. Though little more than foundations remains, the inclosure of the city, which was less than 2 miles in circumference, is traceable in almost every part. On three sides the walls followed the crest of a declivity which falls steeply to the east and west, as well as towards the sea. To the north the summit of the hill, together with an oblong space below it, formed a small citadel, of which the foundations still subsist. A level space in the middle elevation of the height was conveniently placed for the central part of the city. The acropolis contained a large cistern cut in the rock, which is now partly filled with earth . . . . Many of the ancient streets of the town are traceable in the level which lies midway to the sea, and even the foundations of private houses: the space between one street and the next parallel to it, is little more than 15 feet. About the centre of the town is a hollow, now called the lagúmi or mine, where a long rectangular excavation in the rock, 2 feet wide, 7 deep, and covered with flat stones, shows by marks of the action of water in the interior of the channel that it was part of an aqueduct, probably for the purpose of conducting some source in the height upon which stood the citadel, into the middle of the city." (Leake, *Northern Greece*, vol. iv. p. 375, seq.)

COIN OF DEMETRIAS.

DEMONNE'SI or DEMONE'SI (Δημόννησοι: *Eth.* Δημοννήσιος). Hesychius (*s. v.* Δημοννήσιος χάλκος) says that there are two islands near Byzantium, which are called by the common name Demonnesi, but have severally the names Chalcitis and Pityusa. These belong to the Prince's Isles. [CHALCITIS.] Stephanus (*s. v.* Δημόνησος) describes Demonesus as an island near Chalcedon, where cyanum and chrysocolla were found. In another place (*s. v.* Χαλκῖτις), where Stephanus is citing Artemidorus, the islands Pityodes, Chalcitis, and Prote are mentioned. It is sometimes assumed that the Demonesus of Stephanus is the same as his Chalcitis; but he does not say so, nor does his description of the two agree. Pliny (v. 32) places

Demonesus opposite to Nicomedia; and he also mentions Chalcitis and Pityodes. Pityodes seems to be the modern island of *Prinkipo*, east of Chalcitis. It is hardly worth while to attempt to reconcile the authorities. The simplest explanation is to follow Hesychius, who says that Chalcitis and Pityodes were the Demonesi. Prote retains its name. There are at least eight islands in the group of the Prince's Isles, besides some rocks. [G. L.]

DENDRO'BOSA (Δενδρώβοσα, Arrian, *Ind.* c. 27), a place on the coast of Gedrosia, in the district of the Icthyophagi, visited by Nearchus's fleet. Dr. Vincent thinks that it is the Δεράνη Βίλλα of Ptolemy (vi. 8. § 9), and the Derenobilla (Δερενόβιλλα) of Marcian (p. 23), and that it is, perhaps, represented by the modern *Daram*. (*Voy. of Nearch.* vol. i. p. 252.) [V.]

DENTHELE'TAE (Δενθηλῆται, Strab. vii. p. 318; Δανθαλῆται, Steph. B.; Denseletae, Cic. *in Pis.* 34; Plin. iv. 11), a Thracian people who occupied a district called, after them, Dentheletica (Δανθηλητική, Ptol. iii. 11. § 8), which seems to have bordered on that occupied by the Maedi towards the SE., near the sources of the Strymon. Philip, son of Demetrius, in his fruitless expedition to the summit of Mount Haemus after rejoining his camp in Maedica, made an incursion into the country of the Dentheletae, for the sake of provision. (Liv. xl. 22.) (Comp. Polyb. xxiv. 6; Dion Cass. li. 23; Leake, *Northern Greece*, vol. iii. p. 474.) [E. B. J.]

DENTHELIA'TIS. [MESSENIA.]

DEOBRI'GA (Δεόβριγα). 1. (*Brinnos* or *Miranda de Ebro*), a town of the Autrigones in Hispania Tarraconensis, on the high road from Asturica to Caesaraugusta. (*Itin. Ant.* p. 454; Ptol. ii. 6. § 53.)

2. A town of the Vettones in Lusitania, only mentioned by Ptolemy; its site is unknown. (Ptol. ii. 5. § 9.) [P. S.]

DEOBRIGULA (Δεοβριγούλα: *Burgos ?*), a town of the MURBOGI or Turmodogi in Hispania Tarraconensis, on the high road from Asturica to Caesaraugusta, 15 M. P. from Segisamo, and 21 M. P. from Tritium. (*Itin. Ant.* pp. 449, 454; Ptol. ii. 6. § 52.) Its exact position is disputed. Cortes places it at *Urbiel*, Lapie at *Tardajoz*, and Mentelle at *Burgos*. (*Geog. Comp. Esp. Mod.* p. 336.) [P. S.]

DEO'RUM. [FORTUNATAE.]

DERAE (Δέραι), a place in Messenia, where a battle was fought between the Messenians and Lacedaemonians in the second Messenian War. (Paus. iv. 15. § 4.)

DERANEBILLA. [DENDROBOSA.]

DERANGAE. [DRANGAE.]

DERBE (Δέρβη: *Eth.* Δερβήτης), a fortified place in Isauria, and a port, according to Stephanus (*s. v.*); but the port (λιμήν) is manifestly a mistake, and it has been proposed by the French translators of Strabo to write λίμνη for it. Stephanus also speaks of the form Derbeia as probably in use; and of the form Derme, according to Capito; and some, he says, called it Delbia (Δελβεία), which in the language of the Lycaonians means "juniper." The last remark rather contradicts the first part of the description, which places Derbe in Isauria; and we know from the Acts of the Apostles (xiv. 6—21) that Derbe was in Lycaonia. St. Paul went from Iconinm to Lystra, and from Lystra to Derbe. Both Lystra and Derbe were in Lycaonia.

Strabo (p. 569) places Derbe "on the sides" of Isauria, and almost in Cappadocia. It was the residence of Antipater, a great robber. He was defeated and killed by Amyntas, who seized Derbe and the rest of Antipater's possessions. Cicero, in a letter to Q. Philippus, proconsul (B. C. 54), speaks of the hospitable relations between himself and Amyntas, and he adds that they were exceedingly intimate. Philippus, who was at this time proconsul of Asia, was displeased with Antipater for some reason. He had the sons of Antipater in his power, and Cicero writes to him on their behalf. It does not appear when Cicero made this respectable acquaintance. It could not be when he was proconsul of Cilicia (B. C. 51), if the letter to Philippus is assigned to the true time; but the date of the letter seems doubtful, and one does not see at what time Cicero could have become acquainted with Antipater, except during his Cilician proconsulship.

The position of Derbe is not certain. Strabo (p. 534), when he says that the eleventh praefecture of Cappadocia [CAPPADOCIA, p. 507, b.] was extended as far as Derbe, may intend to include Derbe in it, though he says elsewhere, as we have seen, that Derbe is in Lycaonia. After Strabo's time, Derbe formed, with Laranda and the adjacent parts of Taurus, a district called Antiochana, which was between Lycaonia and Tyanitis. (Ptol. v. 6.) Leake (*Asia Minor*, p. 101) concludes that "Derbe stood in the great Lycaonian plain, not far from the Cilician Taurus, on the Cappadocian side of Laranda; a situation precisely agreeing with that of the ruins called the 1001 churches of Mount Kara-dagh." It was certainly further than Lystra from Iconium, as St. Paul's travels show. Hamilton (*Researches*, &c. vol. ii. p. 313) thinks that Derbe may have been at a place now called *Divlé*, a name which resembles the form Delbia. *Divlé* is some distance south of the lake of *Ak Ghieul*, but near enough to be described with reference to the lake; which makes it almost certain that the passage of Stephanus may be safely corrected. The position of Lystra also, if it is rightly fixed at *Bir Bin Kilisseh*, where there are ruins, corresponds with that of Iconium (*Konieh*) and *Divlé*. [G. L.]

DERBICCAE or DERBICES (Δερβίκκαι, Ptol. vi. 10. § 2; Aelian, *V. H.* iv. 1; Steph. B. *s. v.*; Δέρβικες, Strab. xi. pp. 508, 514, 520; Diod. ii. 2; Δερβέκιοι, Dionys. Per. 734, 738; Derbices, Mela, iii. 5. § 4), a tribe, apparently of Scythian origin, settled in Margiana, on the left bank of the Oxus, between it, the Caspian sea, and Hyrcania. They seem to have borne various names, slightly changed from one to the other,—as Ctesias, on the authority of Stephanus, appears to have added to those quoted above, those of Derbii and Derbissi. Strabo (*l. c.*) gives a curious account of their manners, which are clearly those of Scythians. "They worship," says he, "the earth; they neither sacrifice nor slay any female; but they put to death those among them who have exceeded their seventieth year, and the next of kin has the right to eat his flesh. They strangle and then bury old women. If any one dies before his seventieth year, he is not eaten, but buried." Aelian mentions the same anecdote, and implies that the persons slain are first offered in sacrifice and then eaten in solemn feast (*V. H.* iv. 1). Strabo (xi. p. 517) had already shown that the manners of the people along the shores of the Caspian were exceedingly barbarous. [V.]

DERIS (Δερίς), a small town in the S. of Thrace, on the bay of Melas. (Scyl. p. 27.) [L. S.]

DERIS or DERRHIS (Δέρις, Strab. xvii. p. 799; Δέρρις, Ptol. iv. 5. § 7; Δέρρον or Δέρρα, Stadiasm. p. 436), a promontory on the coast of Marmarica in N. Africa, between the harbours of Leucaspis and Phoenicus, named from a black rock in the shape of a hide. Pacho takes it for the headland now called *El Heyf*. (*Voyage dans la Marmarique*, &c. p. 18.) [P. S.]

DERRHIS (Δέρρις, Ptol. iii. 13. § 12; Strab. vii. p. 330; Steph. B. *s. v.* Τορώνη; Mela, ii. 3. § 1: *C. Dhrépano*), the promontory of Sithonia that closes the gulf of Torone to SE. (Leake, *Northern Greece*, vol. iii. p. 119.) [E. B. J.]

DE'RRHIUM (Δέρριον), a place in Laconia on Mt. Taygetus, containing a statue of Artemis Derrhiatis in the open air, and near it a fountain called Anonus. (Paus. iii. 20. § 7.) The site of the place is uncertain. Stephanus B. calls it DERA (*s. v.* Δέρα), and gives as Ethnic names Δεραῖος and Δερεάτης.

DERTO'NA (Δέρθων, Strab. v. p. 217; Δερτῶνα, Ptol. iii. 1. § 35: *Tortona*), an important city of Liguria, situated in the interior of that province, at the northern foot of the Apennines, and on the high road leading from Genua to Placentia. The Itineraries place it 51 miles from the latter city, and 71 from Genua, but this last distance is greatly overstated. (*Itin. Ant.* pp. 288, 294.) Strabo speaks of it as one of the most considerable towns in this part of Italy, and we learn from Pliny that it was a Roman colony. Velleius mentions it among those founded under the republic, though its date was uncertain; but it appears to have been recolonised under Augustus, from whence we find it bearing in inscriptions the title of "Julia Dertona." (Vell. Pat. i. 15; Plin. iii. 5. s. 7; Orell. *Inscr.* 74.) Decimus Brutus encamped here on his march in pursuit of Antonius, after the battle of Mutina (Cic. *ad Fam.* xi. 10), and it was one of the places where a body of troops was usually stationed during the later ages of the empire. (Not. Dign. ii. p. 121.) Ptolemy erroneously places Dertona among the Taurini; its true position is clearly marked by Strabo and the Itineraries, as well as by the modern town of *Tortona*, which retains the ancient name. Many ancient tombs were extant here in the time of Cluverius, and a remarkable sarcophagus is still preserved in the cathedral. (Cluver. *Ital.* p. 81; Millin, *Voy. en Piémont*, vol. ii. p. 281.) [E. H. B.]

DERTO'SA (Δερτῶσα or Δερτῶσσα, Strab. iii pp. 159, 160; Ptol. ii. 4. § 64; Colonia Julia Augusta Dertosa, coins: *Eth.* Dertosani, Plin. iii. 3. s. 4: *Tortosa*), a city of the Ilercaones in Hispania Tarraconensis, on the left bank of the Iberus (*Ebro*), not far above the delta of the river, which was here crossed by the high road from Tarraco to Carthago Nova. (*Itin. Ant.* p. 399; Mela, ii. 6; Suet. *Galb.* 10.) Though only mentioned by Pliny as one of the cities *civium Romanorum*, it is proved to have been a colony by the assertion of Strabo and the epigraphs of its coins, all of which belong to the early empire, and bear the heads of Julius Caesar, Augustus, and Tiberius. (Florez, *Med. de Esp.* vol. i. p. 376; Mionnet, vol. i. pp. 40, 44, *Suppl.* i. p. 81; Sestini, p. 138; Eckhel, vol. i. p. 47.) [P. S.]

DERUSIACI. [PERSIS.]

DERVE'NTIO, in Britain, mentioned in the first Itinerary as being seven miles from *York*, in the direction of Delgovitia (*Market Weighton*). Some place it on the *Derwent*. [R. G. L.]

DESSOBRI'GA, a town of the MURBOGI, or Turmodigi, in Hispania Tarraconensis, 15 M. P. W. of Segisamo, on the high road from Asturica to Caesaraugusta. (*Itin. Ant.* p. 449.) [P. S.]

DESUDABA, a place in Maedica of Macedonia, 75 M. P. from Almana, on the Axius, where the mercenaries of the Gauls who had been summoned by Perseus in the memorable campaign of B. C. 168, took up their position. (Liv. xliv. 26.) Leake (*Northern Greece*, vol. iii. p. 472) has placed it at or near *Kumánovo*, on one of the confluents of the Upper Axius. [E. B. J.]

DESUVIATES, a people of Gallia Narbonensis, known only from a few words of Pliny (iii. 4), who says, "regio Anatiliorum, et intus Desuviatium Cavarumque." The Anatilii are supposed to have been at the mouth of the Rhone, and probably they occupied part at least of the isle of *Camargue*. The position of the Cavares, north of the *Durance* [CAVARES], is known; and there remains no place for the Desuviates except the small district south of the *Durance*, between the *Durance* and the *Rhone*. If this is so, the Desuviates were surrounded on the east and south by the Salyes. [G. L.]

DE'TUMO. [DECUMA].

DETUNDA. [DECUMA].

DEUCALEDONICUS OCEANUS (Δουκαλεδόνιος Ὠκεανός), the name given by Ptolemy to the ocean on the north of the Britannic Islands. "The table" of the British Isles "is bounded on the north by that" ocean "which is called Hyperborean or Deucaledonian" (viii. 3. § 2). The word occurs again in Marcianus Heracleota, whose text, for these parts at least, is but an abridgment of Ptolemy's. In another part of his work, this latter calls it "Deucaledonian or Sarmatic." [DICALEDONAE; PICTI.] [R. G. L.]

DEURIOPUS (Δευρίοπος, Strab. v. pp. 326, 327; Δουρίοπος, Steph. B.), a subdivison of Paeonia in Macedonia, the limits of which cannot be ascertained, but which, with Pelagonia and Lyncestis, comprehends the country watered by the Erigon and its branches. Bryanium, and Stymbara, an important place on the frontier of regal Macedonia, belonged to Deuriopus. (Liv. xxxix. 54; Leake, *Northern Greece*, vol. iii. p. 306.) [E. B. J.]

DEVA (Δηούα, Ptol. ii. 6. § 8), or DEVA'LES (Mela, iii. 1), a small river on the N. coast of Hispania Tarraconensis, probably identical with the stream now called *Deva*, near *S. Sebastian*. (Ukert, vol. ii. pt. 1. p. 300.) [P. S.]

DEVA. 1. The name of the river *Dee*, in Cheshire. Just, however, as DERVENTIO, though really the name of the *Derwent*, denotes a town on that river rather than the river itself, Deva means a town on the Deva rather than Deva (*Dee*) the river. The exact figure of speech by which this change is brought about is uncertain. Perhaps the fuller form may have been Ad Devam or Ad Derventionem. Nothing, however, is more certain than that the name in both the cases before us (as well as in certain others) is originally and primarily the name of the *river* rather than the *station*. Another form is Deuna, given by Ptolemy as a city of the Cornabii, Viroconium and the station of the Twentieth Legion (or the Victorious) being the other two. As the Cornabii lay between the Ordovices of *North Wales* and the Coritani of *Leicester* and *Lincolnshire*, these correspond more or less with the present counties of *Derby*, *Stafford*, and *Cheshire*. In the second Itinerary we find the station Deva Leug. xx. victrix, in which (as far at least as the name of the station goes) we probably have the better reading. The com-

plication hereby engendered consists in the distinction suggested by Ptolemy between Deuna and Deva, it being assumed that the latter is the station of the Twentieth Legion; a complication which, though not very important, still requires unravelling. Possibly there were two stations on the *Dee* (Ad Devam). Possibly there was a change of station between the time of Ptolemy and the author of the Itinerary.

The Roman remains at Chester are important, numerous, and well described. (See Ormerod's *History of Cheshire*, vol. i. p. 295.) The Roman streets may be traced by the existence of pavements under the present existing street, some feet below the surface of the soil. The walls, too, of Chester follow their old Roman outline, and probably stand, for the greater part of their circuit, on Roman foundations. A postern on the bank of the *Dee*, called the Shipgate, consisting of a circular arch, is supposed to be Roman. Altars, coins, baths, with hypocausts and figures, have also been found. The earliest inscription is one bearing the name of Commodus, not the emperor so called, but "Cejonius Commodus qui et Aelius Verus appellatus est" (Spartian, *Hadrian*), who was adopted by Hadrian. One of the statues, supposed to represent either Atys or Mithras, bears a Phrygian bonnet on the head, a short vest on the body, and a declining torch in the hand. Others are given to Minerva, to Aesculapius, and to other more truly Roman deities. Sepulchral vases, too, have been found.

2. A river in Britain, mentioned by Ptolemy as being the third from the promontory of the Novantae (*Wigton*), in a southern direction, —the Abravannus and the Tena aestuary being the first and second. The *Dee* in *Galloway*. [R. G. L.]

DEVANA (Δηούανα), in North Britain, mentioned by Ptolemy (ii. 3. § 19) as the chief town of the Texali (Taezali), a people of *Aberdeenshire*, situated on the Aberdeenshire *Dee*. (See DEVA = *Chester*.) [R. G. L.]

DEVELTUS, DEVELTON, DIBALTUM, DEBELLION (Δεούελτος), a town in the east of Thrace, to the west of Apollonia (Ptol. iii. 11. § 11; Hierel. p. 635; Theophan. p. 422; Plin. iv. 18; Amm. Marc. xxxi. 8, who calls it *Debelcum*; Geogr. Rav. iv. 6). According to Zonaras (ii. p. 155), the place afterwards received the name *Zagora*, which it still bears. [L. S.]

DIA (Δία), a small island which lies 40 stadia (*Stadiasm.*) from the Heracleium of Cnossus in Crete (Strab. x. p. 484; Plin. iv. 20); the modern *Standia*. (Map of Crete, *Mus. Class. Antiq.* vol. ii. p. 308.) [E. B. J.]

DIA (Δῖα: *Eth.* Διεύς), "a town of Bithynia on the Pontus." (Steph. B. *s. v.* Δῖα.) Marcian (*Peripl.* p. 70) places it 60 stadia east of the mouth of the Hypius, which river is between the Sangarius and Heraclea. The name in Marcian, Δίας πόλις, may be a mistake for Diospolis, which Ptolemy has (v. 1). It seems probable that the Dia of Stephanus and this Diospolis are the same. There are some very rare coins with the epigraph Διας, which Sestini assigns to this place. [G. L.]

DIA. [BOSPORUS, p. 422, a.]

DIABE'TAE (Διαβῆται: *Eth.* Διαβαταῖος). Stephanus B. (*s. v.*) speaks of the Diabetae as islands about Syme, which is an island off the Carian coast. Pliny also names the Diabetae (v. 31). There are two or three small islands called *Siskle* off the south part of Syme; and there are also other small islands near it. [G. L.]

DIABLINTES. Caesar (*B. G.* iii. 9) mentions the Diablintes among the allies of the Veneti and other Armoric states whom Caesar attacked. The Diablintes are mentioned between the Morini and Menapii, from which, if we did not know their true position, we might be led to a false conclusion. The true form of the name in Caesar is doubtful. Schneider, in his edition of the Gallic War, has adopted the form Diablintres, and there is good MSS. authority for it. The Diablintes are the Diablindi, whom Pliny (iv. 18) places in Gallia Lugdunensis; and probably the Aulerci Diaulitae of Ptolemy (ii. 8). We may infer their position in some degree from Pliny's enumeration, "Cariosvelites [CURIOSOLITAE], Diablindi, Rhedones." The capital of the Diablintes, according to Ptolemy, was Noeodunum, probably the Nudium of the Table. The Notitia of the Gallic provinces, which belongs to the commencement of the fifth century, mentions Civitas Diablintum among the cities of Lugdunensis Tertia. A document of the seventh century speaks of "condita Diablintica" as situated "in Pago Cenomannico" (*Le Mans*), and thus we obtain the position of the Diablintes, and an explanation of the fact of the name Aulerci being given in Ptolemy both to the Diablintes and Cenomanni [AULERCI; CENOMANNI]. Another document of the seventh century speaks of "oppidum Diablintes juxta ripam Araenae fluvioli;" and the Arena is recognised as the *Aron*, a branch of the *Mayenne*. A small place called *Jubleins*, where Roman remains have been found, not far from the town of *Mayenne* to the S.E., is probably the site of the "Civitas Diablintum" and Noeodunum [NOEODUNUM]. The territory of the Diablintes seems to have been small, and it may have been included in that of the Cenomanni, or the diocese of *Mans*. (D'Anville, *Notice*, &c.; Walckenaer, *Géog.*, &c. vol. i. p. 387.) [G. L.]

DIACOPE'NE (Διακοπηνή), a district in Pontus. Strabo (p. 561), after speaking of the plain Chiliocomon [AMASIA], says, "there is the Diacopene, and the Pimolisene, a country fertile all the way to the Halys; these are the northern parts of the country of the Amaseis." [G. L.]

DIA'CRIA. [ATTICA.]

DIAGON (Διάγων), a river separating Arcadia and Elis, and falling into the Alpheius on its left bank, nearly opposite the mouth of the Erymanthus. (Paus. vi. 21. § 4.) It is conjectured by Leake to be the same as the Dalion (Δαλίων) of Strabo (viii. p. 344), who mentions it along with the Acheron. (Leake, *Morea*, vol. ii. p. 89.)

DIA'NA, an island off the coast of Spain, mentioned in the Maritime Itinerary (*Itin. Ant.* p. 510), where, however, the text is confused. If the name be genuine, it may be identified with the small island off the Pr. Dianium, which Strabo mentions, but without naming it. (Strab. iii. p. 159.) [P. S.]

DIA'NA VETERANO'RUM, a town of Numidia, on the high road from Theveste to Sitifi, by Lambese, 33 M. P. from the latter place, is identified with *Izana* or *Zanah* by inscriptions on a triumphal arch in honour of Severus at that place. (*Itin. Ant.* pp. 34, 35; *Tab. Peut.*; Shaw, *Travels*, &c. p. 136). [P. S.]

DIA'NION (Geog. Rav.), a place in Dalmatia, which is set down in the Peutinger Table as "ad Dianam," where a temple of Diana once stood, succeeded in later times by the Church of St. George. It is now the promontory of *Marglian*, just below the mountain of the same name. (Wilkinson, *Dalmatia and Montenegro*, vol. i. p. 143.) [E. B. J.]

DIA'NIUM (Διάνιον), or ARTEMI'SIUM (Ἀρτεμίσιον), a lofty promontory on the E. coast of Hispania Tarraconensis, named from a temple of Artemis which stood upon it, and having in its neighbourhood a town of the same name. Strabo tells us that between the river Sucro (*Jucar*) and Carthago Nova (*Cartagena*), and not far from the river, there were three small towns, founded by the Massaliots: of these the most celebrated was Hemeroscopeion (τὸ Ἡμεροσκοπεῖον), having upon the adjacent promontory a most esteemed temple of the Ephesian Artemis, which Sertorius used as his naval head-quarters; for its site is a natural stronghold, and fit for a pirates' station, and visible to a great distance out at sea. It is called Dianium or Artemisium, and has near it excellent iron mines and the islets of Planesia and Plumbaria: and above it lies a lake of the sea 400 stadia in circuit. (Strab. iii. p. 159; comp. Cic. *in Verr.* ii. 1, v. 36, Steph. B. *s.v.* Ἡμεροσκοπεῖον, and Avien. *Or. Marit.* 476).

Pliny mentions the people of Dianium (Dianenses) among the *civitates stipendiariae* of the conventus of New Carthage (Plin. iii. 3. s. 4); and coins of the town are extant (Sestini, p. 154). It would seem, from these accounts, that the Massilians first chose the lofty promontory as a watch-station (ἡμεροσκοπεῖον), whence it derived its first name; that it became better known by the name of the temple of Artemis which they built upon it; and that this latter name was transferred to a town which grew up beside the temple. In the time of Avienus neither town nor temple existed; but the name is now preserved by the town of *Denia* (also called *Artemus*), lying a little to the NW. of the triple promontory (called *C. S. Martin*) which is the chief headland on the E. coast of Spain. The lake, of which Strabo speaks, is supposed by some to be that of *Albufera de Valencia*, N. of the river *Jucar*. (Ukert, vol. ii. pt. 1, p. 404.) On account of the iron mines mentioned by Strabo, Mela calls the promontory FERRARIA (ii. 6. 7). [P. S.]

DIA'NIUM (Ἀρτεμίσιον: *Giannuti*), a small island off the coast of Etruria, immediately opposite to the Mons Argentarius or promontory of Cosa. It is distant 7 geog. miles from the nearest point of the mainland, and 8 from the neighbouring island of Igilium. Pliny calls it "Dianium quam Artemisiam Graeci dixere:" it is evidently the same which is called Artemita by Stephanus (Ἀρτεμίτα, νῆσος Τυρρηνική, Steph. *s. v.*), but it is probable this should be Ἀρτεμίσιον. The modern name of *Giannuti* is a corruption of the Latin Dianium. (Plin iii. 6. s. 12; Mela, ii. 7. § 19.) [E. H. B.]

DIBIO (*Eth.* Dibionensis: *Dijon*) appears to have been in the territory of the Lingones, a people of Gallia Celtica; for the diocese of *Dijon* was a part of the diocese of *Langres*, and was only separated from it in 1721. Dibio is only known as a town of the Roman period from two inscriptions found at the place, which speak of the workers in iron there, "Fabri ferrarii Dibionenses," or "Dibione consistentes." The place is described by Gregorius of Tours in the sixth century. Many Roman remains have been found there. *Dijon* is in the departement *de la Côte d'Or*. (D'Anville, *Notice*, &c.; Walckenaer, *Géog.* &c. vol. i. p. 418, and *Voyage de Millin*, &c. vol. i. p. 265, to which he refers.) [G. L.]

DICAEA (Δικαία), a Greek port town on the coast of Thrace on lake Bistonis, in the country of the Bistones The place appears to have decayed at an early period. Some identify it with the modern *Curnu*, and others with *Bauron*. (Herod. vii. 109; Scylax, p. 27; Strab. vii. p. 331; Steph. Byz. *s. v.*; Plin. iv. 18.) [L. S.]

DICAEA'RCHIA. [PUTEOLI.]

DICALEDONAE, in Britain, mentioned by Ammianus Marcellinus (xxvii. 8) as one of the divisions of the Picts; the Vecturiones forming the other. There can be but little doubt that in this word we have the root *Caledon-* (in *Caledonia*), with a prefix. As little can it be doubted that the same is the case with the Deu-caledonius Oceanus (*q. v.*). The meaning of the prefix is another question. See PICTI. [R. G. L.]

DICTAMNUM (Δίκταμνον, Ptol. iii. 17. § 8), a town of Crete, which Pomponius Mela (ii. 7. § 12), who calls it DICTYNNA, describes as being one of the best known in Crete. It was situated to the N.E. of Mt. Dictynnaeus, and S.E. of the promontory Psacum, with a temple to the goddess Dictynna. (Dicaearch. 13; *Stadiasm.*; Scylax.) Mr. Pashley (*Trav.* vol. ii. p. 29) identifies the site with a place called *Kantsillières*, about 3 miles from the extremity of Cape *Spádha*. Pococke (*Trav.* vol. ii. pt. i. pp. 244—245) has described the ruins, and speaks of cisterns and columns existing in his time; and in this, his statement agrees with that of the MS. of the 16th century which has been translated (*Mus. Class. Antiq.* vol. ii. p. 299), and fixes the site at a place called *St. Zorzo di Magnes*, 12 miles W. of *Canea* and 6 from *Cape Spádha*, on a conspicuous elevation of a lofty mountain. (Höck, *Kreta*, vol. ii. p. 158.) [E. B. J.]

DICTE (Δίκτη, Strab. x. p. 478; Diod. v. 70: Steph. B.; Δίκτον, Arat. *Phaen.* 33; Δίκταιον ὄρος, *Etym. M. s. v.*; Dictaeus M., Plin. iv. 12: *Juktas*), the well-known Cretan mountain where, according to story, Zeus rested from his labours on earth and in heaven. Here the "lying Cretan" dared to show the tomb of the "Father of gods and men," which remained an object of veneration or curiosity from an early period to the age of Constantine. (Cic. *de N. D.* iii. 21; Diod. iii. 61; Lucian, *de Sacrif.* 10, vol. i. p. 634, *de Jov. Tragoed.* 45, vol. ii. p. 693, ed. Hemst.; Origen. *c. Cels.* ii. 143, p. 475, ed. Par.) The stony slopes of the mountain rose to the SE. of Cnossus, ou the E. side. Mr. Pashley found considerable remains of ancient walls at about 100 paces from the summit. The fragments offered good specimens of the polygonal construction. (*Trav.* vol. i. p. 220.) These, no doubt, are the remains of that ancient city described by the Venetian writer (*Descrizione dell' Isola di Candia*) as lying on the E. or opposite side of the mountain to Lyctus, of which Ariosto (*Orland. Fur.* xx. 15) makes mention: —

> "Fra cento alme città ch' erano in Creta,
> Dictea più ricca, e più piacevol era."

On the lower slopes was the fountain, on the wonders of which the Venetian writer gives a glowing description (*Mus. Class. Antiq.* vol. ii. p. 270), and which must, therefore, have existed at an earlier date than that recorded by the inscription as given by Mr. Pashley (*Trav.* vol. i. p. 211.) [E. B. J.]

DICTE. [SCEPSIS.]

DI'CTIS, in Britain, mentioned in the Notitia as the station of the *Praefectus Numeri Nerviorum Dictensium*. Generally, though perhaps on insufficient grounds, identified with *Ambleside* in *Westmoreland*. [R. G. L.]

DICTYNNAEUM. [CADISTUS.]

DICTYNNAEUM PR. [CADISTUS.]

DIDU'RI (Δίδουροι, Ptol. v. 39. § 12), a nomad tribe in the interior of Sarmatia Asiatica, who were found W. of the Alondae. [E. B. J.]

DI'DYMA, DIDYMI. [BRANCHIDAE.]

DIDYMA TEICHE (τὰ Δίδυμα τείχη). This place is mentioned by Polybius (v. 77). Attalus took Didyma Teiche after Carseae. [CARSEAE.] Various guesses have been made about this place, but nothing is known. This may be the Didymon Teichos of Stephanus; and it is not decisive against this supposition that Stephanus places it in Caria, for he is often wrong in such matters. [G. L.]

DIDYME INSULA. [AEOLIAE INS.]

DI'DYMI (Δίδυμοι), a town of Hermionis on the road to Asine, contained in the time of Pausanias temples of Apollo, Poseidon, and Demeter, possessing upright statues of those divinities. It is still called *Didyma*, a village situated in a valley 2 miles in diameter. On the north-eastern side of the valley rises a lofty mountain with two summits nearly equal in height, from which the name of Didymi is doubtless derived. The valley, like many in Arcadia, is so entirely surrounded by mountains, that it has no outlet for its running waters, except through the mountains themselves. Mr. Hawkins found at the village a curious natural cavity in the earth, so regular as to appear artificial, and an ancient well with a flight of steps down to the water. (Paus. ii. 36. § 3; Gell, *Itinerary of Morea*, p. 199; Boblaye, *Recherches*, &c. p. 62; Leake, *Peloponnesiaca*, p. 289; Curtius, *Peloponnesos*, vol. i. p. 464.)

DIDYMON TEICHOS (Δίδυμον τεῖχος: *Eth.* Διδυμοτειχῖται), a city of Caria. (Steph. B. *s. v.*) The place does not appear to be mentioned by any other authority. [G. L.]

DIDYMOTEICHOS (Διδυμότειχος), a Thracian town opposite to Plotinopolis, situated not far from the point where the Eurus empties itself into the Hebrus, on an island of the former. It is now called *Demotica*. (Nicet. *Chr.* p. 404.) [L. S.]

DIGBA (Plin. vi. 27. s. 31), a small town of Mesopotamia, on the Tigris, near the junction of that river with the Euphrates. Forbiger thinks it must be the same as the Διδιγούα or Διδονγούα of Ptolemy (v. 20. § 4). In the *Cod. Pulat.* of Ptolemy it is written Διγούα, which is almost the same word as Digba. It was below Apameia. [V.]

DIGE'NTIA (*Licenza*), a small river in the country of the Sabines, falling into the Anio about 9 miles above Tibur, and a mile beyond Varia (*Vico Varo*). Its name is not mentioned by any of the geographers, and is known to us only from Horace (*Ep.* i. 18. 104), whose Sabine farm was on its banks. This circumstance gives it an unusual degree of interest, and it will be convenient to bring together here all the notices found in the poet of the valley of the Digentia and its neighbourhood. The modern localities were first investigated with care and accuracy by the Abbé Chaupy in his *Découverte de la Maison d'Horace*, vol. iii. Rome, 1769, but Holstenius had previously pointed out the identity of the Digentia with the *Licenza*, and that this must therefore have been the site of Horace's Sabine villa, which had been erroneously placed by Cluverius and other earlier topographers on the slope of the mountains towards the Tiber. (Cluver. *Ital.* p. 671; Holsten. *Adnot.* p. 106.)

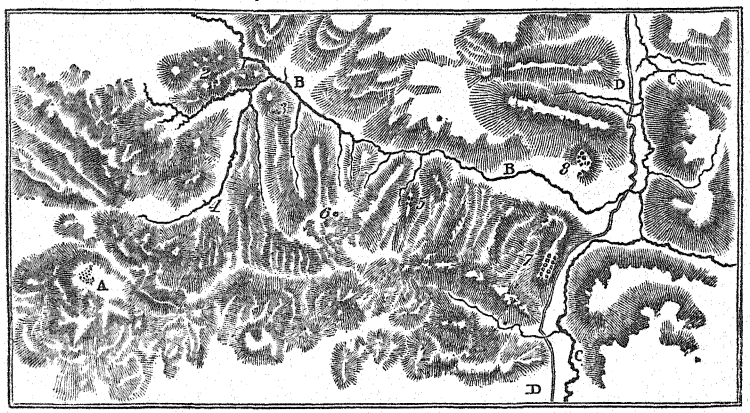
1. The Digentia, according to Horace, was a stream of very cold and clear water (gelidus Digentia rivus, *l. c.*), deriving its principal supply of water from a fine fountain in the immediate neighbourhood of the poet's villa. It flowed by a village called MANDELA, in a very bleak situation (rugosus frigore pagus, *ib.* 105), the inhabitants of which were supplied with water from its stream. The *Licenza* joins the Anio immediately below a projecting rocky hill, now crowned by the convent of *S. Cosimato;* but on its left bank, about a mile from its confluence, stands the village of *Bardella*, the name of which is an obvious corruption of Mandela. But in addition to this, Chaupy discovered in the church of *S. Cosimato* an inscription of late Roman date, in which occur the words "in prediis suis masse Mandelane." (Chaupy, p. 249; Orell. *Inscr.* 104.)

2. The villa of Horace, with the hamlet or group of five houses attached to it, was itself in the territory of, and dependent upon, the town of Varia (habitatum quinque focis et Quinque bonos solitum Variam dimittere patres, *Ep.* i. 14. 3): the position of this at *Vicovaro* on the Valerian Way, 8 miles from Tivoli, is established beyond doubt. [VARIA.]

3. In one of his Epistles, evidently written from his villa, the poet concludes (i. 10. 49):

"Haec tibi dictabam post fanum putre Vacunae,"

and his commentator Acron tells us, on the authority of Varro, that this Vacuna was a Sabine goddess, equivalent to the Roman Victoria. It is a curious confirmation of this, that an inscription preserved at the village of *Rocca Giovane*, on the S. bank of the *Licenza*, 3 miles from *Vicovaro*, records the restoration of *a temple of Victory, which had fallen into ruin from its antiquity*, by the emperor Vespasian, whose Sabine origin would naturally lead him to pay attention to the objects of Sabine worship. (Imp. Caesar Vespasianus Aug. P. M. Trib. Pot. Cens. *Aedem Victoriae vetustate dilapsam* sua impensa restituit, Chaupy, p. 170: Orell. *Inscr.* 1868.) The identity of this Aedes Victoriae with the "fanum putre Vacunae" of Horace can scarcely admit of a doubt. The exact site of the temple, according to Chaupy, was about a mile beyond *Rocca Giovane*, at a considerable elevation above the valley; here there still remain some fragments of Roman masonry, which may have formed part of the building, and it was here that the inscription above given was actually discovered. (Chaupy, p. 169.)



4. All these circumstances combine to fix the site of Horace's farm between the modern village of Rocca Giovane and that of *Licenza*, which rises on a hill, a little further up the valley; and the remains of a villa, consisting of a mosaic pavement and some portions of brick walls, have actually been discovered in a vineyard a short distance above the mill which now exists on the river *Licenza*. There seems every reason to believe that these are in reality the vestiges of the poet's villa, which appears, from various indications in his works, to have been on the S. side of the valley.

5. The fountain alluded to by Horace as in the neighbourhood of his villa (*Ep.* i. 16) is readily recognised in the source now called *Fonte Bello*, from which the *Licenza* derives a considerable part of its supply. It has been commonly supposed that this was identical with the Fons Bandusiae, celebrated by Horace in a well-known ode (*Carm.* iii. 13), or at least that that fountain was also situated in the same neighbourhood; but there is no authority for this, and Chaupy has given proofs which may be considered conclusive that the real Bandusia was in the neighbourhood of Venusia, and not of the Sabine farm. [BANDUSIAE FONS.]

The general aspect of the valley of the *Licenza* corresponds perfectly with the description of it given by Horace (*Ep.* i. 16. 1—14), and all travellers who have visited it concur in praising its beauty and pleasantness. Until very lately it was a secluded spot, rarely visited by strangers, though within an easy ride of *Tivoli*, and the simple manners and rustic virtues of its inhabitants are said still to resemble those of the ancient Sabines.

Two other names remain to be mentioned, which there is reason to connect with the Sabine farm of Horace: the Mons Lucretilis, whose pleasant shades could allure Faunus from Lycaeus (*Carm.* i. 17), may be safely identified with the lofty *Monte Gennaro*, which forms the head of the valley of *Licenza*, and separates it from the Roman Campagna. [Lucretilis Mons.] The sloping Ustica (Ustica cubans, *ib.*), on the other hand, cannot be fixed with accuracy: it was probably one of the lower slopes or underfalls of the same mountain mass, in the immediate neighbourhood of the valley.

The modern localities of the valley of the *Licenza* have been described in great detail by Chaupy (*Maison d'Horace*, vol. iii. pp. 150—362), and more recently by Dennis in Milman's *Life of Horace*, pp. 97—110, and Nibby (*Dintorni di Roma*, vol. ii. p. 245, vol. iii. pp. 713—721). [E. H. B.]

MAP OF THE ENVIRONS OF DIGENTIA.

A. Lucretilis Mons (*Monte Gennaro*).
B. River Digentia (*Licenza*).
C. River Anio (*Teverone*).
D. Via Valeria.
1. Modern Village of *Licenza*.
2. Modern Village of *Civitella*.
3. Remains of the Villa of Horace.
4. *Fonte Bello*.
5. Village of *Rocca Giovane*.
6. Site of the Temple of Vacuna.
7. Varia (*Vicovaro*).
8. Village of *Bardella* (Mandela).

DILIS, a place in Gallia on the coast between Massilia (*Marseille*) and Fossae Marianae (*Foz-les-Martigues*). The Maritime Itin. (Wess. p. 507) places Incarus (*Carry*) next to Massilia, then "Dilis positio," 8 M. P. from Incarus, and then Fossae 12 M. P. further. The edition of Wesseling makes it 20 from Dilis to Fossae; but three MSS. have 12. Walckenaer (*Géog.*, &c. vol. iii. p. 122) supposes that the number 20 is derived from some Itinerary which omitted Dilis, and gave only the distance from Incarus to Fossae; which seems likely. The modern site may be *Carro*. [G. L.]

DILUNTUM. [Dalluntum.]

DIMALLUM (Δίμαλος, Διμάλη, Διμάλλη, Polyb. iii. 18, vii. 9), an important fortress in Illyricum, taken by the Romans under L. Aemilius Paulus, in their war with Demetrius of Pharos; and which seems to have been in the neighbourhood of the Parthini, if not included within their territory. (Liv. xxix. 12; Polyb. *l. c.*) [E. B. J.]

DIMASTUS. [Myconus.]

DIME'TAE or DEME'TAE (Δημῆται), a people in Britain, mentioned by Ptolemy (ii. 3. § 23) as lying west of the Silures, and having, as towns, Luentinum and Maridunum (Caer-*marthen*). This gives them *Pembrokeshire* and *Carmarthen* as certain portions of the area, and, probably, some parts of the neighbouring counties. *Divet*, as the Welsh name of a district, is the root *Dimet*, in its modern form. [R. G. L.]

DINARETUM. [Cleides.]

DINDYME'NE. [Dindymum.]

DI'NDYMUM. [Cyzicus.]

DI'NDYMUM (τὸ Δίνδυμον). Strabo (p. 567) speaks of a mountain Dindymum which rises above Pessinus in Galatia; and from this mountain the goddess called Dindymene has her name. He adds that the river Sangarius flows near it. In Ptolemy the name is incorrectly written Didyma. Strabo says in another place (p. 626), "the Hermus is close to Mysia, flowing from a mountain sacred to Dindymene, and through the Catacecaumene into the territory of Sardis." Perhaps he may have followed Herodotus as to the source of the Hermus, who says (i. 80) that the Hermus flows from a mountain sacred to the mother Dindymene, as our texts stand. This passage has been sometimes misunderstood, and the name Dindymene has been given to the mountain. Stephanus (*s. v.* Δίνδυμα) describes the Dindyma as "mountains of the Troad, whence Rhea is called Dindymene;" but there is a mistake here, for neither the mountain of Galatia, nor Dindymum near Cyzicus, is within the limits of the Troad. In some maps Mount Dindymum is placed near Pessinus, and Mount Dindymene at the source of the Hermus; but there is no Mount Dindymene. The mountain tract in which the Hermus rises is the *Morad Dagh*, which is the Dindymum of Herodotus. The Rhyndacus also rises in this mountain region, and the chief branch of the Maeander It is possible that a

range of mountains may extend from the *Morad Dagh* east to the neighbourhood of Pessinus. Strabo could hardly be ignorant that there is a considerable distance between the source of the Hermus and the mountain that overhangs Pessinus. Hamilton describes the Dindymum, in which is the source of the Hermus, as rising to a great height, and forming "the watershed between the Hermus and the Rhyndacus, extending from Morad Dagh to Ak Dagh near Simaul." He adds that these mountains "join the range of Demirji, being a part of the great central axis of Asia Minor, which may be said to extend from SE. by E. to NW. by W., from the Taurus by Sultan Dagh to Mount Ida, forming the great watershed between the rivers which fall into the Mediterranean and the Archipelago, and those which fall into the Sea of Marmora and the Black Sea." (*Researches*, &c. vol. i. p. 105.) As to the Dindymum of Pessinus, see PESSINUS. [G. L.]

DINIA (*Digne*), a town in Gallia Narbonensis. Pliny (iii. 4) says that the Avantici and Bodiontici were added by the emperor Galba to the list (formula) of the people of Narbonensis, and he mentions Dinia as their capital, or he may mean the capital of the Bodiontici only, though he has ill expressed himself, if that is his meaning. The name of Dinia does not occur in the Itins.; but as *Digne*, now in the department of the *Basses Alpes*, became the chief place of a diocese, its identity with Dinia is easily made out. In the Notitia of the provinces of Galba, "Civitas Diniensium" occurs. Ptolemy (ii. 10. § 19) makes Dinia (Δινία) the chief place of the Sentii, which is either an error, or some change had been made between the time of Pliny and Ptolemy, and the Avantici and Bodiontici were included in the territory of the Sentii. [G. L.]

DINIAE, a place in Phrygia, through which the Roman consul Cn. Manlius marched in his Galatian expedition. (Liv. xxxviii. 15.) He came to the plain of Metropolis [METROPOLITANUS CAMPUS], and on the following day to Diniae. From Diniae he marched to Synnada; but there is no indication of the length of the march from Diniae to Synnada. Hamilton observes that Strabo (p. 663), in a passage where "he describes the great line of communication between Ephesus and Mazaca, places Metropolis (clearly the same as that alluded to by Livy) between Apamea and Chelidonii, probably the same place as the Diniae of the historian." (*Researches*, &c. vol. ii. p. 179.) Hamilton concludes that the plain of *Sitzhanli* represents the Metropolitanus Campus; "both from the narrative of Livy and its being on the great line of traffic." This seems a very probable conclusion. He also thinks that *Afiom Kara Hissar* is the representative of Synnada; and if he is right in these conclusions, the position of Diniae is fixed within certain limits, though the maps do not show any name that corresponds to it.

It is generally agreed that the words καὶ Χελιδονίων in Strabo (p. 663) are corrupt; but it is doubtful if Livy's Diniae is concealed under it. Cramer (*Asia Minor*, vol. ii. p. 30) and Groskurd (*Transl. Strabo*, vol. iii. p. 63) have some remarks on this reading. Palmerius proposed καὶ Φιλομηλίου, against which Cramer's objection is insufficient. [G. L.]

DINOGETIA, DINIGUTTIA, DIRIGOTHIA (Δινογέτεια), a town on the Danube in Moesia, nearly opposite the point where the Hierasus (*Pruth*) empties itself into the Danube. (Ptol. iii. 10. §§ 2, 11; It. Ant. 225; Notit. Imp.) [L. S.]

DIOCAESAREIA (Διοκαισάρεια: *Eth.* Διοκαισαρεύς). 1. A place in Cappadocia near Nazianzus. According to Gregorius of Nazianzus, it was a small place. It is mentioned by Ptolemy (v. 6); and by Pliny (vi. 3), who gives no information about it. Ainsworth, on his road from *Ak Serai* to *Kara Hissar*, came to a place called *Kaisar Koi*, and he observes "that by its name and position it might be identified with Diocaesarea." (*London Geog. Journal*, vol. x. p. 302.) Some geographers take Nazianzus and Diocaesareia to be the same place.

2. A town of Cilicia Trachea, mentioned by Ptolemy (v. 8) and the ecclesiastical authorities. Leake (*Asia Minor*, p. 117) supposes that it may have been between Claudiopolis (*Mout*) and Seleuceia (*Selefke*). [G. L.]

DIOCAESAREIA. [SEPPHORIS.]

DIOCLEA (Δοκλέα, Ptol. ii. 16. § 12: *Eth.* Docleatae, Plin. iii. 28), a place in Dalmatia, where Diocletian was born, and from which he took his name. (Aurel. Vict. *Epit.* 54; comp. Eutrop. ix. 19.) It was really called Doclea, but the rising soldier changed the barbaric Docles into the Grecian Diocles, which, after his assumption of the purple, was Latinised into Diocletianus. The surrounding district bore the same name. (Const. Porph. *de Adm. Imp.* c. xxxv.) The town continued to be a place of considerable importance till the Turkish invasion. The ruins of it are found at the delta formed by the union of the rivers *Zetta* and *Moraça* in *Montenegro*. (Schafarik, *Slav. Alt.* vol. ii. pp. 239, 249, 272—275.) [E. B. J.]

DIOCLEIA (Διοκλεία), as the name is said to be written in one MS. of Ptolemy, though the common reading is Docela; but in one at least of the old Latin editions of Ptolemy, it is Dioclia (v. 2). Diocleia is a town of Phrygia Magna, mentioned by Hierocles. There are no means of fixing its position except what Ptolemy offers. It has been conjectured that the place is represented by some ruins at the passage of the *Pursek*, between *Kutahiyah* and *In-oghi*; but this is only a guess. [G. L.]

DIOCLETIANO'POLIS (Διοκλητιανούπολις, Procop. *Aed.* iv. 3), a town in Thrace, which the Antonine Itinerary places between Edessa and Thessalonica. Hierocles mentions another place of this name near Philippopolis. The site of neither of these has as yet been made out. [E. B. J.]

DIODO'RI INSULA (Διοδώρου νῆσος), an island situated in the narrow straits of the Red Sea, which is stated by Arrian, in his Periplus of the Red Sea (pp. 2, 14, ap. Hudson), to be 60 stadia in width at its mouth. The channel between it and the mainland was fordable. Its modern name is *Perim*. The straits and island are thus described by Commander Moresby (*Sailing Directions for the Red Sea*, pp. 1, 2): "The straits of *Bab-el-Mandeb* are 14½ miles wide at the entrance, between *Bab-el-Mandeb Cape* and the opposite point or volcanic peak, called *Jibbel Seajarn*. Near the former cape is *Perim Island*, which divides the two straits at the entrance, the larger being about 11 miles wide. *Perim* is a large rocky island, about 4½ miles long by 2 broad, rising 230 feet above the level of the sea, and without fresh water or inhabitants. The narrowest part of the little strait is nearly one and a half mile wide." [G. W.]

DIODO'RUM, a town in Gallia, placed by the Antonine Itin. on the road from Rotomagus (*Rouen*) to Lutetia (*Paris*). It lies between Durocasses (*Dreux*) and Paris, 22 Gallic leagues from *Dreux*, and 15 from *Paris*. The place was on a stream, as we may

infer from the termination *dur;* the first part of the name may be another form of Divo, as in Divodurum. Some geographers make the place *Davron.* D'Anville fixes on *Jouare* near *Pontchartrain.* [G. L.]

DIOLINDUM, a place in Gallia. The Table gives a road from Burdigala (*Bordeaux*) through Aginnum to Diolindum. Aginnum is *Agen;* and the next station is Excisum, 13 Gallic leagues from *Agen.* Diolindum is 21 Gallic leagues from Excisum. Diolindum is a doubtful position; but *La Linde* on the *Dordogne,* proposed by D'Anville, seems to be a probable site. [G. L.]

DIOMEDEAE INSULAE (*αἱ Διομήδειαι νῆσοι*), a group of small islands off the coast of Apulia, now called ISOLE DI TREMITI: they are distant about 15 miles from the nearest point of the coast, and 18 from the mouth of the river Frento (*Fortore*). Their ancient name was derived from the legend which represented them as the scene of the transformation of the companions of Diomed into birds; a species of large sea-fowl by which they were inhabited (called by Pliny Cataractes — apparently a kind of diver) were supposed to be the descendants of these Greek sailors, and were said to display a marked partiality for all visitors of Hellenic extraction. (Strab. vi. p. 284; Lycophr. *Alex.* 594—609; Pseud-Arist. *de Mirab.* § 79; Anton. Lib. 37; Steph. B. *s. v.*; Ovid, *Met.* xiv. 482—509; Plin. x. 44. s. 61; Ael. *H. A.* i. 1; Dionys. Per. 483.) Ancient authors differ considerably in regard to their number. Stephanus, Lycophron, and the mythographers, as well as Aelian and Dionysius, mention only one island, which they call *Διομήδεια νῆσος*; Strabo says there are two, one of which is inhabited, the other not; Pliny (iii. 26. s. 30) calls the larger island "Diomedia insula," and adds that there is another of the same name, but called by some Teutria; Ptolemy (iii. 1. § 80) says there are five, but without giving their names. The real number is three islands, besides some mere rocks; they are now called *S. Domenico, S. Nicola* and *Caprara:* these three lie close together, while the small island of *Pianosa* (distant 11 geog. miles to the NE.) is not now reckoned to belong to the group, but may perhaps be the Teutria of Pliny. The island of *S. Domenico* is much the largest of the three, and is evidently the Diomedia Insula of the ancients, where a shrine of that hero and his tomb were shown, together with a grove of plane trees, said to be the first introduced into Italy. (Plin. xii. 3.) But the same island was also known by the name of TRIMERUS, probably its vernacular or native name, from whence comes the modern appellation of *Tremiti,* now applied to the whole group. We learn from Tacitus that Augustus selected it for the place of exile of his daughter Julia. (Tac. *Ann.* iv. 71.) The name is already written "Tremetis" by the Geographer of Ravenna in the 9th century. (Anon. Ravenn. v. 25, ed. Gronov.) [E. H. B.]

DIONY'SIA. [CRAMBUSA.]

DIONYSIADES (*Διονυσιάδες*, Diod. v. 75), small islands which lie off the coast of Crete to the NE. The position is fixed by the Coast-describer at 120 stadia from Sammonium (*Stadiasm.*) The Peutinger Table places at the E. of the N. extremity of Crete, an island with the unfinished name of Dion. . . . This must be one of this group of islands, which now are called *Dhionysiádhes.* See the map in Pashley's *Travels.* (Höck, *Kreta,* vol. i. pp. 428, 439.) [E. B. J.]

DIONYSO'POLIS (*Διονύσου πόλις*: *Eth.* *Διονυσοπολείτης*), a city of Phrygia. The Ethnic name occurs on medals, and in a letter of M. Cicero to his brother Quintus (*ad Q. Fr.* i. 2), in which he speaks of the people of Dionysopolis being very hostile to Quintus, which must have been for something that Quintus did during his praetorship of Asia. Pliny (v. 29) places the Dionysopolitae in the conventus of Apamea, which is all that we know of their position. We may infer from the coin that the place was on the Maeander, or near it. Stephanus (*s. v.*) says that it was founded by Attalus and Eumenes. Stephanus mentions another Dionysopolis in Pontus, originally called Cruni, and he quotes two verses of Scymnus about it. [G. L.]

COIN OF DIONYSOPOLIS IN PHRYGIA.

DIONYSOPOLIS INDIAE. [NAGARA.]

DIONYSOPOLIS MOESIAE. [CRUNI.]

DIO'POLIS. [CABIRA.]

DIOSCO'RIDIS INSULA (*Διοσκορίδους νῆσος*, Ptol. viii. 22. § 17; Arrian, *Peripl. Mar. Erythr.* p. 16; Steph. B. *s. v.* *Διοσκουριάς*), an island of the Indian Ocean, of considerable importance as an emporium in ancient times. It lay between the Syagrus Promontorium (*Cape Fartash*) in Arabia, and Aromata Promontorium (*Cape Guardafui*), on the opposite coast of Africa, somewhat nearer to the former, according to Arrian, which is very far from the truth, if the Dioscoridis be rightly identified with *Socotorra,* which is 200 miles distant from the Arabian coast, and 110 from the NE. promontory of Africa. It is described by Arrian as very extensive, but desert and exceedingly moist, abounding in rivers tenanted by crocodiles, many vipers, and huge lizards, whose flesh was edible, and their grease when melted was used as a substitute for oil. It produced neither vines nor corn. It had but few inhabitants, who occupied the north side of the island towards the Arabian peninsula. It was a mixed population, composed of Arabs, Indians, and Greeks, attracted thither by commercial enterprise. The island produced various species of tortoises, particularly a kind distinguished for the size and thickness and hardness of its shell, from which were made boxes, writing tablets, and other utensils, which were the chief exports of the island. It produced also the vegetable dye called Indicum, or dragon's blood. It was subject to the king of the frankincense country in Arabia, by whom it was garrisoned, and farmed out for mercantile purposes. Thus far Arrian. Pliny's notice is very brief. He calls it a celebrated island in the Azanian sea, so named from Azania or Barbaria, now *Ajan,* south of *Somauli* on the African mainland, and states its distance from the Syagrus Promontorium to be 280 miles (vi. 28. s. 32). It is still tributary to the Arabians. [G. W.]

DIOSCU'RIAS (*Διοσκωρίας*, Steph. B.; Ptol. v. 10; Isid. *Orig.* xvi.; *Διοσκουρίς*, Scyl. p. 22), one of the numerous colonies of Miletus, at the E. extremity of the Eux'ne (Arrian, *Peripl.* pp. 10, 18) on the mouth of the river Anthemus, to the N. of Colchis (Plin. vi. 5). It was situated 100 M.P. (Plin. *l. c.*)

or 790 stadia to the NW. of the Phasis, and 2260 stadia from Trapezus (Arrian, *l. c.*). The wild tribes of the interior, whose barbarous idiom was unintelligible to one another, made this their great trading place. The Greeks were so astonished at the multiplicity of languages which they encountered, and the want of skilful interpreters was so strongly felt, that some asserted that 70 different tongues were spoken in the market of Dioscurias. (Strab. xi. p. 497.) Timosthenes, the historian, had exaggerated the amount to 300, but Pliny (*l.c.*), who quotes him, contents himself by saying that the traders required 130 interpreters. (Comp. Gibbon, vol. iv. p. 102.) In B. C. 66, when Mithridates was compelled to plunge into the heart of Colchis from the pursuit of Pompeius, he crossed the Phasis and took up his winter quarters at Dioscurias, where he collected additional troops and a small fleet. (Appian, *Mithr.* 101.) Upon or near the spot to which the twin sons of Leda gave their name (Mela, i. 19. § 5; comp. Amm. Marc. xxii. 8. § 24) the Romans built SEBASTOPOLIS (Steph. B.; Procop. *B.G.* iv. 4), which was deserted in the time of Pliny (*l. c.*) but was afterwards garrisoned by Justinian (Procop. *Aed.* iii. 7). The SOTERIOPOLIS (Const. Porph. *de Adm. Imp.* c. 42) of later times has been identified with it. The position of this place must be looked for near the roadstead of *Iskuria*. Chardin (*Trav.* pt. i. pp. 77, 108) described the coast as uninhabited except by the Mengrelians, who come to traffic on the same spot as their Colchian ancestors, and set up their tents or booths of boughs. For a curious coin of Dioscurias, which, from the antiquity of its workmanship, is inferred to be older than the age of Mithridates, see Rasche, vol. ii. pt. i. p. 318. [E. B. J.]

DIOS HIERON (Διὸς Ἱερόν: *Eth.* Διοσιερίτης), a small place in Ionia between Lebedus and Colophon. Stephanus B. (*s. v.*) cites Phlegon as his authority for the Ethnic name. The position which Stephanus assigns to the place, seems to agree with the narrative in Thucydides (viii. 29), where it is mentioned. Arundell (*Discoveries*, &c. vol. i. p. 36) says that the name of the river Cayster occurs on the medals of Dios Hieron, from which he concludes that it was not very far from the river. It is possible that there was another town of the name in Lydia and on the Cayster. Pliny (v. 29) makes the Dioshieritae belong to the conventus of Ephesus; and Ptolemy (v. 2) places it high up the valley of the Cayster, if we can trust his numbers. The epigraph on the coins is Διοσιερειτων. [G. L.]

DIO'SPOLIS MAGNA. [THEBAE.]

DIO'SPOLIS PARVA. There were two cities in Egypt bearing the appellation of the Lesser Town of Ammon-Zeus. 1. In the Thebaid, lat. 26° 3′ N. (Διόσπολις ἡ μικρά, Strab. xviii. p. 814; Ptol. iv. 5. § 67; Diospolis, It. Antonin. p. 159; Jovis Oppidum, Plin. v. 9. s. 10.), the chief town of the Nomos Diospolites. The Lesser Diopolis was seated on the left bank of the Nile, opposite to Chenoboscium, and nearly midway between Abydus and Tentyra. Pococke (*Travels*, vol. i. p. 140), D'Anville (*Mémoire sur l'Egypte*, p. 186), and Champollion (*l'Egypte*, vol. i. 238) identify this town with the modern village of *How* or *Hú*. Immediately below Diospolis began the canal or ancient branch of the Nile,—the *Bahr-Jusuf*, or River of Joseph, which flows between the Nile and the Libyan hills to the entrance of the Arsinoite Nome (*el-Fyoum*).

2. The modern *Lydda* (Strab. xviii. p. 802) was seated in the marshes of the Delta, east of the Phatnitic arm of the Nile. It was an inconsiderable place, and is mentioned only by Strabo. [W. B. D.]

DIO'SPOLIS (Διόσπολις). 1. In Bithynia. [DIA.] 2. In Lydia. (Steph. B. *s. v.*) [G. L.]

DIO'SPOLIS (Διόσπολις), the classical name of LYDDA, a city of the tribe of Benjamin, situated in the great plain of Sharon, which is probably identical with the Sarona of the Acts (ix. 35), with which Lydda is joined. Built by Shamed, the descendant of Benjamin (1 *Chron.* viii. 12), it was recovered by that tribe after the captivity (*Nehem.* xi. 35), and is noted in the New Testament history for the healing of Eneas by St. Peter. (*Acts*, ix. 32—35.) It was taken and destroyed by the proconsul Cestius Gallus on his march to Jerusalem, cir. A. D. 65. (Joseph. *B. J.* ii. 19. s. 1.) St. Jerome mentions the fact of the change of name ("Lyddam versam in Diospolin," *Epit. Paulae*), and it is assumed by him and Eusebius as an important geographical terminus in the Onomasticon. In the Christian annals of the middle ages it is renowned as the burial place of the head of St. George, and the town is designated by his name in the Chronicles of the Crusades, and joined with Ramleh, from which it is not more than two miles distant on the north. It has retained its ancient name throughout, unchanged, among the natives, and is now known only as *Lydd*. It is a considerable village, situated in the midst of palm trees, and still shows large traces of the Crusaders' cathedral of St. George. It has been an episcopal see from very early times, and a synod of the bishops of Palestine was held there A. D. 415, in which the heresiarch Pelagius contrived, by misrepresentation, to procure his acquittal from the charge of heresy. (Williams, *Holy City*, vol. i. p. 263, foll.; see Robinson, *Bib. Res.* vol. iii. pp. 49—55.) [G. W.]

DIPAEA (Δίπαια: *Eth.* Διπαιεύς), a town of Arcadia in the district Maenalia, through whose territory the river Helisson flowed. Its inhabitants removed to Megalopolis on the foundation of the latter city. It is frequently mentioned on account of a battle fought in its neighbourhood between the Lacedaemonians and all the Arcadians except the Mantineians, sometime between B. C. 479 and 464. (Paus. iii. 11. § 7, viii. 8. § 6, 27. § 3, 30. §. 1, 45. § 2; Herod. ix. 35.) Leake supposes that the ruins near *Davia* represent Dipaea; but since Pausanias does not mention Dipaea in his description of Maenalia, although he notices every insignificant place, Ross remarks that it is improbable that Pausanias should have passed over Dipaea, if these ruins really belong to the latter, since they are still very considerable. Ross regards them as the remains of Maenalus. (Leake, *Morea*, vol. ii. p. 52; Ross, *Reisen im Peloponnes*, vol. i. p. 118.)

DIPOENA. [ARCADIA, p. 193, No. 12.]

DIRCE. [THEBAE.]

DIRPHE, DIRPHYS, or DIRPHOSSUS. [EUBOEA.]

DISCELADOS (Mela, ii. 7. § 13), an island lying off the coast of Illyricum; it fell to the Neretschanian branch of the Servian Slaves, and is now called *Mlit*, or, in Italian, *Meleda*. (Schafarik, *Slav. Alt.* vol. ii. p. 267.) [E. B. J.]

DITATTIUM (Διττάτιον) is one of the cities of the Sequani, in Gallia, which Ptolemy mentions (ii. 9); and he places it before Vesontio (*Besançon*). There is nothing to show the site, except Ptolemy's position, which is useless. D'Anville thinks that

Ditattium may be a place called *Cité*, where there are some remains, not far from *Passavant*. Some geographers place Ditattium at *Dole* on the *Doubs*; others again identify Ditattium with the ruins on the hill of *Vieux Seurre*, about a league SW. of *Seurre*. All this is mere guess, and a sample of trifling; for there is nothing at all to determine the question. [G. L.]

DITTANI. [CELTIBERIA].

DIUM. 1. (Δῖον; *Eth.* Διεύς, Steph. B.; Scyl. p. 26; Strab. vii. p. 330), a city which, though not large (πόλισμα, Thuc. iv. 78), was considered as one of the leading towns of Macedonia, and the great bulwark of its maritime frontier to the S. Brasidas was conducted to this place, which is described as being in the territories of Perdiccas, by his Perrhaebian guides, over the pass of Mt. Olympus. It suffered considerably during the Social War from an incursion of the Aetolians, under their strategus Scopas, who razed the walls, and almost demolished the city itself (Polyb. iv. 28); an outrage which Philip and the Macedonians afterwards amply avenged by their attack on the Aetolian capital (Polyb. v. 9). In the war against Perseus Dium had, it appears, completely recovered from that disaster; for in B. C. 169 it was occupied by Perseus, who unaccountably abandoned his strong position on the approach of the consul. Q. Marcius Philippus, however, remained there only a short time; and Perseus returned to Dium, after having repaired the damage which the walls of the city had received from the Romans. (Liv. xliv. 7.) At a later period it became a Roman colony. (Plin. iv. 10; Ptol. iii 13. § 15.) Leake (*Northern Greece*, vol. iii. pp. 408, foll.) has discovered the site near *Malathria*, in a position which agrees with the statements of the Itineraries (*Itin. Anton.*; *Peut. Tab.*), and Pausanias (ix. 30. § 8). In the space between the village and the sources of the BAPHYRUS he found some remains of a stadium and theatre; the stone-work which formed the seats and superstructure of these monuments no longer exists, except two or three squared masses outside the theatre. The original form and dimensions are sufficiently preserved to show that the stadium was equal in length to the other buildings of that kind in Greece, and that the theatre was about 250 feet in diameter. Below the theatre, on the edge of the water, are the foundations of a large building, and a detached stone which seems to have belonged to a flight of steps. Some foundations of the walls of the city can be just seen, and one sepulchral "stele" was found. Dium, though situated in a most unhealthy spot, was noted for its splendid buildings and the multitude of its statues. (Liv. *l. c.*) Without the town was the temple of Zeus Olympius from which Dium received its name, and here were celebrated the public games called Olympia instituted by Archelaus. (Diod. xvii. 16; Steph. B. *s. v.* Δῖον.) The theatre and stadium served doubtlessly for that celebration. Alexander placed here the group of 25 chieftains who fell at the battle of Granicus,—the work of Lysippus. (Arrian, *Anab.* i. 16.) Q. Metellus, after his victory over the Pseudo-Philip, transferred this "chef d'oeuvre" ("turma statuarum equestrium," Vell. i. 11) to Rome. Coins of the "Colonia" of Dium are extant, usually with the type of a standing Pallas. (Eckhel, vol. ii. p. 70.)

2. A city in the peninsula of Acte (Herod. vii. 32; Thuc. iv. 109; Strab. vii. p. 331), which Scylax, coasting from Torone, put before Thyssus and Cleonae. The statements of Herodotus and Thucydides differ from that of the Periplus, as they tend to place Dium on the N. coast. But as they all agree in showing that it was the nearest town to the isthmus,—in which Strabo concurs,—it is very possible that Dium was neither on the N. nor S. shore of the peninsula, but on the W.; perhaps the promontory of *Platy*, in the Gulf of *Erisso*. (Leake, *Northern Greece*, vol. iii. p. 151.) [E. B. J.]

DIUM (Δῖον ἄκρον, Ptol. iii. 17. § 7), a promontory of Crete on the N. coast, where the island has its greatest breadth. Pliny (iv. 20) speaks of an inland town of this name (comp. Euseb. *Praep. Ev.* v. 31), which probably, however, was situated in the neighbourhood of this headland, which is now called *Kávo Stravró* (Höck, *Kreta*, vol. i. pp. 394, 398). [E. B. J.]

DIUM (Δῖον), a town in the NW. of Euboea near the promontory Cenaeum, from which Canae in Aeolis is said to have been a colony. Dium is mentioned by Homer. (Hom. *Il.* ii. 538; Strab. x. p. 446; Plin. iv. 12; Ptol. iii. 15. § 25.)

DIUR (Διούρ), the name given by Ptolemy (iv. 1 § 12) to one of the branch chains of the Atlas system of mountains, in Mauretania Tingitana; it appears to be the range which runs NW. from about the sources of the river Malva to the Straits. Ptolemy (iv. 1. § 3) mentions a river of the same name, having its mouth close to Mons Solis, probably the *Wad-el-Gored*. [P. S.]

DIVA (Δίουα: the *Dee*), a river in North Britain, mentioned by Ptolemy as falling into the Germanic Ocean, between the promontory of the Texalae (*Kinnaird Head*) and the aestuary of the Tava (Τοῦαι). [R.G.L.]

DIVITIA (*Deutz*), a fort opposite to Colonia Agrippina (*Cologne*), which was erected for the purpose of protecting the bridge across the Rhine, and was occupied by a permanent garrison (*milites Divitienses*; Amm. Marc. xxvi. 7, xxvii. 1.) In the middle ages it was called *Duizia*, whence the modern name *Deutz*. [L. S.]

DIVODU'RUM (Διονόδουρον: *Metz*), was the capital of the Mediomatrici, a people of Gallia, whose territory in Caesar's time extended to the Rhine (*B. G.* iv. 10). It is the only town of the Mediomatrici which Ptolemy mentions (ii. 9. § 12); and it occurs with this name in the Antonine Itin. on the road from Treviri (*Trier*, *Trèves*) to Argentoratum (*Strassburg*). It occurs in the Table in the form Divo Durimedio Matricorum, where the error is easily corrected. As is usual with Gallic towns, it took the name of the people, and it is called Mediomatrice by Ammianus Marcellinus (xvii. 1). The modern name *Metz* is from Mettis, a corrupted form which came into use in the fifth century. In the Notitia of the provinces of Gallia, we find "Civitas Mediomatricorum Mettis" mentioned after Treviri, the metropolis of Belgica Prima.

Metz, in France in the department of *Moselle*, is situated at the junction of the *Moselle* and the *Seille*, from which circumstance the town probably takes its name, for the first part of the word Divodurum means "two." In A. D. 70 the soldiers of Vitellius, who had been received by the people of Divodurum in a friendly manner, suddenly through fear or some other cause fell on the unresisting inhabitants and killed 4000 of them. (Tacit. *Hist.* i. 63.) Divodurum was an important place on account of its position. Julian after his victory over the Alamanni at *Strassburg* sent his booty to Divodurum for safe keeping. *Metz* was ruined by the Huns in the fifth

century. It afterwards became the capital of Austrasia, or of the kingdom of *Metz*, as it was sometimes called.

The Roman buildings at *Metz* have disappeared; but the arrondissement of *Metz* contains many Roman remains. At or about *Sablon*, 1½ mile S. of *Metz*, were an amphitheatre, a naumachia, and baths. This indeed appears to have been the site of the old Roman town. The amphitheatre is said to have been as large as that of *Nimes*. The ruins of these edifices furnished a large part of the materials for the citadel and fortifications, which were added to the town in the 17th century. The aqueduct that supplied *Metz* with water, extended from the mills of the village of *Gorze* on the west side of the *Moselle* to *Metz*, a distance of more than 6 French leagues. It brought the water to the city across the river. There still remain of this great work 5 arches on the left bank of the *Moselle*, and 17 in the village of *Jouy* on the right bank. The piles or foundations in the river have been destroyed by the water. The masonry of the aqueduct is very good, and covered with a cement which is very well preserved wherever the aqueduct exists. It is estimated that it supplied every minute a volume of water equal to 1050 cubic feet. The arch under which the road to *Nancy* passes at *Jouy* is 64 feet high, or as high as one of our great viaducts. These arches supported two parallel canals. The two canals together were 11½ feet wide. Such was one of the Roman works in a town, the history of which is unknown. (*Guide du Voyageur*, &c., par Richard et E. Hocquart.) [G. L]

DI'VONA, afterwards CADURCI (*Cahors*). In Ptolemy (ii. 7. § 11) the name is written Δουήονα or Δούικονα. In the Table the name is miswritten Bibona. In the Notitia of the Gallic provinces it appears under the name of Civitas Cadurcorum. The name Divona is in Ausonius (*Clarae Urbes Burdig.* v. 32), who gives the etymology of the name as he understood it: —

" Divona Celtarum lingua, Fons addite Divis."

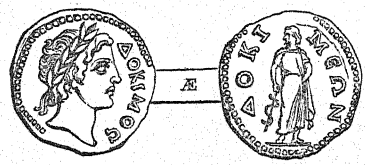
He means to say that *Di* or *Div* means " God," and *von* or *on*, " water " or " fountain." It is said that it is the fountain at *Cahors* called " Des Chartreux" which gave the place the name Divona. It was the capital of the Cadurci, and there are four roads in the Table and the Itin., from Vesunna (*Périgueux*), Agin̄num (*Agen*), Tolosa (*Toulouse*), and Segodunum (*Rhodez*), which meet at Divona, or *Cahors*, in the department of *Lot*. De Valois affirms that there is in *Cahors* a place still called *Las Cadurcas*, and it is further said that the ruins are those of a temple of Diana. The Roman aqueduct at *Cahors* was a great work. It was about 19 miles in length, and had a very winding course through valleys and along mountain sides. It crossed the valley of *Larroque-des-arcs* by a bridge of three tiers of arches, the elevation of which is estimated to have been nearly 180 feet. On the sides of two ranges of hills there are still some remains of this magnificent work, the dimensions of which must have equalled, or even surpassed, those of the *Pont-du-Gard*. It is said that it continued in pretty good preservation to the end of the 14th century. The aqueduct is generally cut in the rock on the sides of the hills along which it is carried. The channel for the water was constructed of masonry lined with cement and covered with tiles, so that no water could filter through. It was a work worthy of the grandeur of the Romans. Part of the wall of the baths remains, and a portion of a doorway. Some beautiful mosaic work has been discovered on the site of the baths. The theatre was of a semicircular form. A plan of this theatre and an elevation were published in *L'Annuaire de Lot* for 1840. The fountain *Des Chartreux*, so called because it was in the inclosure of a convent of this religious society, the ancient Divona, is an abundant source. A large marble altar has been found at *Cahors*, with an inscription which records that it was set up by the Civitas Cadurcorum, in honour of M. Lucterius Leo, the son of Lucterius Senecianus, who had discharged all the high offices in his native place, and was priest at the Ara Augusti, at the confluence of the Arar and the Rhodanus. One Lucterius, a Cadurcan, stirred up the revolt against Caesar in B. C. 52 (*B. G.* vii. 5, &c., viii. 44), and this man may have been one of the family. At least he had the name, with a Roman praenomen. The authority for the remains of Divona is in the work entitled " Coup d'oeil sur les monuments historiques du Lot, par M. le Baron Chaudruc de Crazannes." from whose work there are large extracts in the " Guide du Voyageur, par Richard et E. Hocquart." [G. L.]

DOANAS (ὁ Δοάνας, Ptol. vii. 2. § 7), a river in India extra Gangem, which there is some reason to suppose is represented by the present *Iraxaddy* or river of Ava. It discharged its waters into what Ptolemy calls the Sinus Magnus. It appears, from Berghaus's map, that the modern *Salven* bears the name of *Djaoen* near its embouchure, from which it might be inferred that this is the representative of the anciene Doanas. It seems, however, more likely that the *Salven* is the Dorias of Ptolemy (vii. 2. §§ 7, 11). The two rivers flowed in parallel lines from N. to S., and it is clear that the ancients had no accurate account of them. The Doanas appears to have been about a degree to the W. of the Dorias; and the two streams must have really entered the sea in the Sinus Sabaracus or Gulf of *Martaban*. Mannert and Reichard have both supposed that they were rivers of the Chersonesus Aurea. [V.]

DOBE'RUS (Δόβηρος, Steph. B.; Δήβορος, Διάβορος, Δούβηρος), a Paeonian town or district, which Sitalces reached after crossing Cercine, and where many troops and additional volunteers reached him, making up his full total. (Thuc. ii. 98, 100.) Hierocles names Diaboros next to Idomene among the towns of the Consular Macedonia under the Byzantine empire; this, coupled with the statement of Ptolemy (iii. 13. 8. § 28) that it belonged to the Aestraei, would seem to show that Doberus was near the modern *Doghirán*.

The DOBERES (Δόβηρες, Doberi, Plin. iv. 10) are described by Herodotus (vii. 113) as inhabiting, with the Paeoplae, the country to the N. of Mt. Pangaeum,—these being precisely the tribes whom he had before associated with the inhabitants of the Lake Prasias (v. 16). Their position must, therefore, be sought to the E. of the Strymon: they shared Mt. Pangaeum with the Paeonians and Pierians, and dwelt probably on the N. side, where, in the time of the Roman empire, there was a " mutatio," or place for changing horses, on the Via Egnatia, called DOMEROS, between Amphipolis and Philippi, 13 M. P. from the former and 19 M. P. from the latter. (*Itin. Hierosol.*; comp. Tafel, *de Via Egnat.* p. 10.) (Leake, *Northern Greece*, vol. iii. pp. 212, 444, 467.) [E. B. J.]

DOBU'NI (Δουβουνοί), a people in Britain, men-



tioned by Ptolemy twice: first (ii. 3. § 25), as being conterminous to the east with the Silures, and as having Corineum (*Cirencester*) for their city; next (ii. 3. § 28), as lying to the north of the Belgae, one of whose towns was the *Hot Springs* (Ὕδατα θερμά) = *Bath* This places them in *Gloucestershire*. The Boduni of Dion Cassius are generally, and reasonably, believed to be the Dobuni, under another form (lx. 20). [R. G. L.]

DOCIDAVA (Δοκίδανα, Ptol. iii. 8. § 6), a town of Dacia, which some have identified with *Debrezin*, and others with *Thorotzsko*. (Comp. Sulzer, *Geschichte Daciens*, vol. i. pp. 179, 192.) [E. B. J.]

DOCI'MIA or DOCIMEIUM (Δοκίμια, Δοκίμειον: *Eth.* Δοκιμεύς). Stephanus (*s. v.*) observes that Docimeus is the correct Ethnic form, but Docimenus (Δοκιμηνός) was the form in use. It was a city of Phrygia, where there were marble quarries. (Comp. Steph. B. *s. v.* Σύνναδα.) Strabo (p. 577) places Docimia somewhere about Synnada: he calls it a village, and says that "there is there a quarry of Synnadic stone, as the Romans call it, but the people of the country call it Docimites and Docimaea; the quarry at first yielded only small pieces of the stone, but owing to the present expenditure of the Romans large columns of one piece are taken out, which in variety come near the Alabastrites, so that, though the transport to the sea of such weights is troublesome, still both columns and slabs are brought to Rome of wondrous size and beauty." (Comp. Strabo, p. 437.) The word Docimaea (Δοκιμαίαν) in this passage of Strabo appears to be corrupt. It should be either Δοκιμαῖον or Δοκιμέα.

Leake (*Asia Minor*, p. 54) supposes that the extensive quarries on the road from *Khoorukan* to *Bulwudún* are those of Docimia. He interprets Strabo as saying that Synnada was only 60 stadia from Docimia; but Strabo says that the plain of Synnada is about 60 stadia long, and beyond it is Docimia. We may, however, infer that he supposed Docimia to be not far from the limit of the plain. The Table makes it 32 M. P. between Synnada and Docimia, and Docimia is on the road from Synnada to Dorylaeum; but the number is certainly erroneous. The position of Synnada is not certain, and if it were, it would not absolutely determine the position of Docimia; but Docimia was probably at the spot where Leake fixes it, NE. of *Afiom Kara Hissar*. East of *Afiom Kara Hissar*, at a place called *Surmeneh*, Hamilton (*Researches*, &c. vol. ii. App. No. 375) copied part of an inscription, the remainder of which was buried under ground. The part which he copied contains the name Δοκιμεων. At *Eski Kara Hissar*, which may be the ancient Beudos [BEUDUS], Hamilton saw "numerous blocks of marble and columns, some in the rough, and others beautifully worked." He also says: "In an open space near the mosque was a most exquisitely finished marble bath, intended perhaps to have adorned a Roman villa; and in the walls of the mosque and cemetery were some richly carved friezes and cornices, finished in the most elaborate style of the Ionic and Corinthian orders I had ever beheld." (Vol. i. p. 461.) He observes that they could not have been designed for any building near the spot, but were probably worked near the quarries for the purpose of easier transport, as it is done at Carrara in Italy. Though we do not know the exact site of Docimia, it seems certain that the site is ascertained pretty nearly.

There are coins with the epigraphs Δημος or Ιερα Συνκλητος Δοκιμεων Μακεδονων, whence it appears that it had received a Macedonian colony, if the coins are genuine. [G. L.]

COIN OF DOCIMIA.

DOCLEA. [DIOCLEA.]

DODECASCHOENUS (Δωδεκάσχοινος), a district between Egypt and Aethiopia, which derived its name from its comprising xii σχοῖνοι or 120 stadia = 18 geographical miles of land. (Ptol. iv. 5. § 74; Herod. ii. 29.) The northern frontier of this region was at Philae, and the southern at Pselcis (*Dakkeh*), the furthest point at which any monumental vestiges of Macedonian or Roman dominion have been found. Under the later emperors, indeed, the province of Dodecaschoenus extended to Hiera-Sycaminos, in lat. 22° N. In the Roman era Dodecaschoenus was attached to the prefecture of Upper Egypt. The principal cities of Dodecaschoenus have been enumerated under AEGYPTUS. [W. B. D.]

DODON. [DODONA.]

DODO'NA (Δωδώνη; sometimes Δωδών, Soph. *Trach.* 172: *Eth.* Δωδωναῖος), a town in Epeirus, celebrated for its oracle of Zeus, the most ancient in Hellas. It was one of the seats of the Pelasgians, and the Dodonaean Zeus was a Pelasgic divinity. The oracle at Dodona enjoyed most celebrity in the earlier times. In consequence of its distance from the leading Grecian states, it was subsequently supplanted to a great extent by that at Delphi; but it continued to enjoy a high reputation, and was regarded in later times as one of the three greatest oracles, the other two being those of Delphi and of Zeus Ammon in Libya. (Strab. xvi. p. 762; Cic. *de Div.* i. 1, 43; Corn. Nep. *Lys.* 3.)

The antiquity of Dodona is attested by several passages of Homer, which it is necessary to quote as they have given rise to considerable discussion:

(1) Γουνεὺς δ' ἐκ Κύφου ἦγε δύω καὶ εἴκοσι νῆας·
τῷ δ' Ἐνιῆνες ἕπυντο, μενεπτόλεμοί τε Περαιβοί,
οἵ περὶ Δωδώνην δυσχείμερον οἰκί' ἔθεντο
οἵ τ' ἀμφ' Ἰμερτὸν Τιταρήσιον ἔργ' ἐνέμοντο.
(*Il.* ii. 748.)

(2) Ζεῦ ἄνα, Δωδωναῖε, Πελασγικέ, τηλόθι ναίων,
Δωδώνης μεδέων δυσχειμέρου· ἀμφὶ δὲ Σελλοί
σοὶ ναίουσ' ὑποφῆται ἀνιπτόποδες χαμεῦναι.
(*Il.* xvi. 233.)

(3) Τὸν δ' ἐς Δοδώνην φάτο βήμεναι, ὄφρα θεοῖο
ἐκ δρυὸς ὑψικόμοιο Διὸς βουλὴν ἐπακούσαι,
ὅππως νοστήσει Ἰθάκης ἐς πίονα δῆμον.
(*Od.* xiv. 327, xix. 296.)

The ancient critics believed that there were two places of the name of Dodona, one in Thessaly, in the district of Perrhaebia near Mount Olympus, and the other in Epeirus in the district of Thesprotia; that the Enienes mentioned (No. 1) along with the Perrhaebi of the river Titaresius came from the Thessalian town; and that the Dodona, which Ulysses visited in order to consult the oracular oak of Zeus, after leaving the king of the Thesproti, was the place in Epeirus (No. 3). With respect to the second passage above quoted there was a difference of opinion; some sup-

posing that Achilles prayed to Zeus in the Thessalian Dodona as the patron god of his native country; but others maintaining that the mention of Selli, whose name elsewhere occurs in connection with the Thesprotian Dodona, points to the place in Epeirus. (Strab. vii. p. 327, ix. p. 441; Steph. B. *s. v.* Δωδώνη.) There can be no doubt, that the first-quoted passage in Homer refers to a Dodona in Thessaly; but as there is no evidence of the existence of an oracle at this place, it is probable that the prayer of Achilles was directed to the god in Epeirus, whose oracle had already acquired great celebrity, as we see from the passage in the Odyssey. The Thessalian Dodona is said to have been also called Bodona; and from this place the Thesprotian Dodona is said to have received a colony and its name. (Steph. B. *s. v.* Δωδώνη.)

The Selli, whom Homer describes as the interpreters of Zeus, "men of unwashed feet, who slept on the ground," appear to have been a tribe. They are called by Pindar the Helli; and the surrounding country, named after them Hellopia (Ἑλλοπίη), is described by Hesiod as a fertile land with rich pastures, wherein Dodona was situated. (Strab. vii. p. 328; Schol. *ad Soph. Trach.* 1167.) Aristotle places the most ancient Hellas "in the parts about Dodona and the Achelous," adding that the Achelous has frequently changed its course,—a necessary addition, since the Achelous does not flow near Dodona. He likewise states that the flood of Deucalion took place in this district, which "was inhabited at that time by the Selli, and by the people then called Graeci, but now Hellenes." (Aristot. *Meteor.* i. 14.) We do not know the authority which Aristotle had for this statement, which is in opposition to the commonly received opinion of the Greeks, who connected Deucalion, Hellen, and the Hellenes, with the district in Thessaly between Mounts Othrys and Oeta. (Grote, *Hist. of Greece*, vol. ii. p. 355.)

It is impossible to penetrate any further back into the origin of the oracle; and we may safely dismiss the tales related by Herodotus of its Egyptian origin, and of its connection with the temple of Thebes in Egypt, and of Zeus Ammon in Libya. (Herod. ii. 54, seq.) The god at Dodona was said to dwell in the stem of an oak (φηγός, the oak bearing an esculent acorn, not the Latin fagus, our beech), in the hollow of which his statue was probably placed in the most ancient times, and which was at first his only temple (ναΐον δ' ἐν πυθμένι φηγοῦ, Hes. *ap Soph. Trach.* 1167; Δωδώνην φηγόν τε, Πελασγῶν ἕδρανον, ἧκεν, Hes. *ap. Strab.* vii. p. 327; comp. Müller, *Archäol.* § 52, 2). The god revealed his will from the branches of the tree, probably by the rustling of the wind, which sounds the priests had to interpret. Hence we frequently read of the speaking oak or oaks of Dodona. (Hom. *Od.* xiv. 327, xix. 296; αἱ προσήγοροι δρύες, Aesch. *Prom.* 832; πολυγλώσσου δρυός, Soph. *Trach.* 1168.) In the time of Herodotus and Sophocles the oracles were interpreted by three (Sophocles says two) aged women, called Πελείαδες or Πέλειαι, because pigeons were said to have brought the command to found the oracle:—

> ὡς τὴν παλαιὰν φηγὸν αὐδῆσαί ποτε
> Δωδῶνι διοσσῶν ἐκ πελειάδων ἕρη.

(Soph. *Trach.* 171.) Herodotus (ii. 55) mentions the name of three priestesses. (Comp. Strab. vii. *Fragm.* 2; Paus. x. 12. § 10.) These female priestesses were probably introduced instead of the Selli at the time when the worship of Dione was connected with that of Zeus at Dodona; and the Boeotians were the only people who continued to receive the oracles from male priests. (Strab. ix. p. 402.)

As Delphi grew in importance, Dodona was chiefly consulted by the neighbouring tribes, the Aetolians, Acarnanians, and Epeirots (Paus. viii. 21. § 2); but, as we have already remarked, it continued to enjoy great celebrity even down to the later times. Croesus sent to inquire of the oracle (Herod. i. 46); Pindar composed a Paean in honour of the Dodonaean god, since there was a close connection between Thebes and Dodona (Pind. *Fragm.* p. 571, ed. Böckh; Strab. ix. p. 402); Aeschylus and Sophocles speak of the oracle in terms of the highest reverence (Aesch. *Prom.* 829, seq.; Soph. *Trach.* 1164, seq.); and Cicero relates that the Spartans, in important matters, were accustomed to ask the advice of the oracles either of Delphi, or Dodona, or Zeus Ammon (Cic. *de Div.* i. 43). The Athenians also seem not unfrequently to have consulted the oracle, which they did probably through their suspicion of the Pythia at Delphi in the Peloponnesian War. Thus, they are said to have been commanded by the Dodonaean god to found a colony in Sicily (Paus. viii. 11. § 12); Demosthenes quotes several oracles from Dodona (*de Fals. Leg.* p. 436, *in Mid.* p. 531, ed. Reiske); and Xenophon recommends the Athenians to send to Dodona for advice (*de Vect.* 6. § 2). Under the Molossian kings, who gradually extended their dominion over the whole of Epeirus, Dodona probably rose again in importance. The coins of the Molossian kings frequently bear the heads of Zeus and Dione, or of Zeus alone, within a garland of oak.

In B. C. 219, Dodona received a blow from which it never recovered. In that year the Aetolians under Dorimachus, who were at war with Philip, king of Macedonia, ravaged Aetolia, and razed to the ground the temple of the god. (Polyb. iv. 67.) Strabo, in describing the ruined condition of the towns of Epeirus in his time, says that the oracle also had almost failed (vii. p. 327); but it subsequently recovered, and Pausanias mentions the temple and sacred oak-tree as objects worthy of the traveller's notice. (Paus. i. 17. § 6.) He elsewhere speaks of the oak of Dodona as the oldest tree in all Hellas, next to the λύγος of Hera in Samos. (Paus. viii. 23. § 5.) The town continued to exist long afterwards. The names of several bishops of Dodona occur in the Acts of the Councils: according to Leake, the latest was in the year 516. Dodona is mentioned by Hierocles in the sixth century (p. 651, ed. Wessel.).

Of the temple of Dodona we have no description notwithstanding the celebrity of the oracle. Indeed the building itself is first mentioned by Polybius, in his account of its destruction by the Aetolians in B. C. 219. He says that when Dorimachus "arrived at the ἱερόν near Dodona, he burnt the Stoae or Colonnades, destroyed many of the dedicatory offerings, and razed the sacred house to its foundations." (Παραγενόμενος δὲ πρὸς τὸ περὶ Δωδώνην ἱερὸν, τάς τε στοὰς ἐνέπρησε, καὶ πολλὰ τῶν ἀναθημάτων διέφθειρε, κατέσκαψε δὲ καὶ τὴν ἱερὰν οἰκίαν, Pol. iv. 67.) From the words περὶ Δωδώνην we may conclude that the ἱερὸν was not within the walls of Dodona. It appears to have occupied a considerable space, and to have contained several other buildings besides the sacred house or temple proper of the god. It was stated by a writer of the name of Demon that the temple was surrounded with tripods bearing

caldrons, and that these were placed so closely together, that when one was struck the noise vibrated through all. (Steph. B. *s. v.* Δωδώνη; Schol. *ad Hom. Il.* xvi. 233.) It appears that the greater part of these had been contributed by the Boeotians, who were accustomed to send presents of tripods every year. (Strab. x. p. 402.) Among the remarkable objects at Dodona were two pillars, on one of which was a brazen caldron, and on the other a statue of a boy holding in his hand a brazen whip, dedicated by the Corcyraeans: when the wind blew, the whip struck the caldron, and produced a loud noise. As Dodona was in an exposed situation, this constantly happened, and hence arose the proverb of the Dodonaean caldron and the Corcyraean whip. (Polemon, *ap.* Steph. B. *s. v.* Δωδώνη; Suid. *s. v.* Δωδωναῖον χαλκεῖον; Strab. vii. p. 329.) This appears to have been one of the means of consulting the god; and hence Gregory Nazianzen, in describing the silence of the oracle in his time, says, οὐκέτι λέβης μαντεύεται (*Or.* iv. p. 127, c.). Respecting the way in which the oracles were given, there are different accounts; and they probably differed at different times. The most ancient mode was by means of sounds from the trees, of which we have already spoken. Servius relates that at the foot of the sacred oak there gushed forth a fountain, the noise of whose waters was prophetic and was interpreted by the priestesses (*ad Virg. Aen.* iii. 466). On some occasions the will of the god appears to have been ascertained by means of lots. (Cic. *de Div.* i. 34.)

The site of Dodona cannot be fixed with certainty. No remains of the temple have been discovered; and no inscriptions have been found to determine its locality. It is the only place of great celebrity in Greece, of which the situation is not exactly known. Leake, who has examined the subject with his usual acuteness and learning, comes to the conclusion, with great probability, that the fertile valley of *Ioánnina* is the territory of Dodona, and that the ruins upon the hill of *Kastritza* at the southern end of the lake of *Ioánnina* are those of the ancient city. Leake remarks that it can hardly be doubted by any person who has seen the country around *Ioánnina*, and has examined the extensive remains at *Kastritza*, that the city which stood in that centrical and commanding position was the capital of the district during a long succession of ages. "The town not only covered all the summit, but had a secondary inclosure or fortified suburb on the southern side of the hill, so as to make the whole circumference between two and three miles. Of the suburb the remains consist chiefly of detached fragments, and of remains of buildings strewn upon the land, which is here cultivated. But the entire circuit of the town walls is traceable on the heights, as well as those of the acropolis on the summit. These, in some places, are extant to the height of 8 or 10 feet. The masonry is of the second order, or composed of trapezoidal or polyhedral masses, which are exactly fitted to one another without cement, and form a casing for an interior mass of rough stones and mortar.... A monastery, which stands in the middle of the Hellenic inclosure, bears the same name as the hill, but although built in great part of ancient materials, it does not preserve a single inscribed or sculptured marble, nor could I find any such relics on any part of the ancient site." (Leake.)

Our space allows us to mention only briefly the chief arguments of Leake in favour of placing Dodona at *Kastritza*. It was the opinion of the ancient writers that Dodona first belonged to Thesprotia, and afterwards to Molossis. Stephanus B. calls it a town of Molossis, and Strabo (vii. p. 328) places it in the same district, but observes that it was called a Thesprotian town by the tragic poets and by Pindar. But even Aeschylus, through calling the oracle that of the Thesprotian Zeus, places Dodona on the Molossian plain (*Prom.* 829):—

> ἐπεὶ γὰρ ἦλθες πρὸς Μολοσσὰ δάπεδα,
> τὴν αἰπύνωτόν τ' ἀμφὶ Δωδώνην, ἵνα
> μαντεῖα δῶκός τ' ἐστὶ Θεσπρωτοῦ Διός.

Hence it would appear that the territory of Dodona bordered on the inland frontiers of Thesprotia and Molossis, and must in that case correspond to the district of *Ioánnina*. Pindar describes Epeirus as beginning at Dodona, and extending from thence to the Ionian sea (*Nem.* iv. 81); from which it follows that Dodona was on the eastern frontier of Epeirus. That it was near the lofty mountains of Pindus, on the eastern frontier, may be inferred from the manner in which Aeschylus speaks of the Dodonaean mountains (*Supp.* 258), and from the epithet of αἰπύνωτος attached to the place by the same poet (*Prom.* 830), and from that of δυσχείμερος given to it by Homer. (*Il.* xvi. 234.) The account of the destruction of Dodona by the Aetolians also shows that it was on the eastern frontier of Epeirus. Polybius says (*l. c.*) that the Aetolians marched "into the upper parts of Epeirus)" (εἰς τοὺς ἄνω τόπους τῆς Ἠπείρου), which words appear to be equivalent to Upper Epeirus, or the parts most distant from the sea towards the central range of mountains.

Hesiod, in a passage already referred to (ap. Schol. *ad Soph. Trach.* 1167; comp. Strab. vii. p. 328), describes Dodona as situated upon an extremity in the district called Hellopia, "a country of cornfields and meadows, abounding in sheep and oxen, and inhabited by numerous shepherds and keepers of cattle;"—a description accurately applicable to the valley of *Ioánnina*, which contains meadows and numerous flocks and herds. Several ancient writers state that the temple of Dodona stood at the foot of a high mountain called TOMARUS or TMARUS (Τόμαρος, Τμάρος), from which the priests of the god are said to have been called Tomūri (Τομοῦροι, Strab. vii. p. 328; Callim. *Hymn. in Cer.* 52; Steph. B. *s. v.* Τόμαρος, Hesych. *s. v.* Τμάριος; Eustath. *ad Od.* xiv. 327, p. 1760, R., *ad Od.* xvi. 403, p. 1806, R.). Theopompus relates that there were a hundred fountains at the foot of Mt. Tomarus. (Plin. iv. 1.) Leake identifies Tomarus with the commanding ridge of *Mitzikéli*, at the foot of which are numerous sources from which the lake of *Ioánnina* derives its chief supply. He further observes that the name Tomarus, though no longer attached to this mountain, is not quite obsolete, being still preserved in that of the *Tomarokhória*, or villages situated on a part of the southern extremity of *Dhrysko*, which is a continuation of *Mitzikéli*.

The chief objection to placing Dodona near *Ioánnina* is the silence of the ancient writers as to a lake at Dodona. But this negative evidence is not sufficient to outweigh the reasons in favour of this site, more especially when we consider that the only detailed description which we possess of the locality is in a fragment of Hesiod, who may have mentioned the lake in the lines immediately following, which are now lost. Moreover, Apollodorus stated that there were marshes round the temple (*ap.* Strab. vii.

p. 328). The lake of *Ioánnina* was known in antiquity by the name of PAMBOTIS (Παμβῶτις λίμνη), which was placed in Molossis. (Eustath. *in Hom. Od.* iii. 189.)

We have already seen that the temple of Dodona was probably outside the city. Leake supposes that the former stood on the peninsula now occupied by the citadel of *Ioánnina*, but there are no remains of the temple on this spot. (Leake, *Northern Greece*, vol. iv. p. 168, foll.; respecting the oracle, see Cordes, *De Oraculo Dodonaeo*, Groningen, 1826; Lassaulx, *Das Pelasgische Orakel des Zeus zu Dodona*, Würzburg, 1840; Arneth, *Ueber das Taubenorakel von Dodona*, Wien, 1840; Preller, in Pauly's *Real-Enclopädie*, art. *Dodona;* Hermann, *Lehrbuch der gottesdienstlichen Alterth. der Griechen*, § 39.)

DOEANTEIUS CAMPUS. Stephanus B. (*s. v.* Δοίαντος πεδίον) places it in Phrygia: the name came from Doeas. The situation of the plain is unknown.

Apollonius Rhodius (ii. 370, &c. 989, &c.) places a Δοιάντιον πεδίον at the mouth of the Thermodon in Pontus, where the Amazons dwelled. [G. L.]

DO'LICHE (Δολίχη), a town in Perrhaebia in Thessaly, situated at the foot of Mount Olympus. Doliche, with the two neighbouring towns of Azorus and Pythium, formed a tripolis. Leake identifies it with the small village of *Dúklista*, "where in a ruined church are two fragments of Doric columns 2 feet 8 inches in diameter, and in the burying-ground a sepulchral stone, together with some squared blocks." (Polyb. xxviii. 11; Liv. xlii. 53, xliv. 2; Ptol. iii. 13. § 42; Leake, *Northern Greece*, vol. iii. p. 344.)

DOLICHE, DOLICHISTE (Δολίχη, Δολιχίστη: *Eth.* Δολιχεύς, Δολιχίστης). Stephanus B. (*s. v.*) describes Doliche as an island close to the Lycian coast, on the authority of Callimachus; and he adds that Alexander, in his *Periplus* of Lycia, calls it Dolichiste. It is mentioned by Pliny (v. 31) and Ptolemy (v. 3). Pliny places it opposite to Chimaera; and both Pliny and Ptolemy name it Dolichiste. Doliche or Dolichiste, a long island, as the name implies, is now called *Kakava*. It lies near the southern coast of Lycia, west of the ruins of Myra, and in front of the spacious bay also named *Kakava*. The island is a "narrow ridge of rock, incapable of yielding a constant supply of water; each house had therefore a tank hollowed in the rock, and lined with stucco." (Beaufort, *Karamania*, p. 21.) Leake (*Asia Minor*, p. 127) speaks of the "ruins of a large city, with a noble theatre, at *Kákava*, in a fine harbour formed by a range of rocky islands." But this theatre appears, from what Leake says, to be on the coast of the mainland; and Beaufort observes that "the whole of these islands and bays may be included under the general Greek name *Kakava*." The island of Doliche is now uninhabited. [G. L.]

DOLI'ONIS (Δολιονίς: *Eth.* Δολίονες). Stephanus B. (*s. v.* Δολίονες) describes the Doliones as the "inhabitants of Cyzicus," and he adds that Hecataeus called them Dolieis: they were also called Dolionii.

The Doliones (Strab. p. 575) are a people about Cyzicus who extended from the river Aesepus to the Rhyndacus and the lake Dascylitis. [DASCYLIUM.] The names Dolionis and Doliones are connected with the earliest traditions about Cyzicus; and in Strabo's time the Cyziceni had the Dolionis. Strabo (p. 564) found it hard to fix the limits of the Bithynians, the Mysians, the Phrygians, as well as of the Doliones, those about Cyzicus; and we cannot do more than he did. Apollonius Rhodius (*Arg.* i. 947) doubtless followed an old tradition when he described the Doliones as occupying the isthmus, by which he means the isthmus of Cyzicus, and the plain, which is probably the plain on the mainland; and here, he says, reigned Cyzicus, a son of Aeneas. [G. L.]

DOLOME'NE (Δολομηνή, Strab. xvi. p. 736), one of the districts in the plain country of Assyria, adjoining the capital Ninus (Nineveh). [V.]

DOLONCAE, DOLONCI (Δόλογκοι), a Thracian tribe, which seems to have belonged to the race of the Bithynians. (Plin. iv. 18; Solin. 10; Steph. B. *s. v.*; Eustath. *ad Dionys. Per.* 323.) [L. S.]

DO'LOPES, DOLO'PIA. [THESSALIA.]

DOMANITIS, or, as it is sometimes written, DOMANETIS. [PAPHLAGONIA.] [G. L.]

DOMERUS. [DOBERUS.]

DOMETI'OPOLIS (Δομετιούπολις: *Eth.* Δομετιοπολίτης), is described by Stephanus (*s. v.*) as a city of Isauria. Ptolemy (v. 8) makes Dometiopolis a city of Cilicia Trachea. The site is unknown. [G. L.]

DO'NACON (Δονακών), a village in the territory of Thespiae in Boeotia, where the river Narcissus rises. It is mentioned by Pausanias after noticing the river Olmius, and before describing Creusis and Thisbe. Leake places Donacon near a hamlet called *Tatezá*, at a spot "where there is a copious fountain surrounded by a modern enclosure, of which the materials are ancient squared blocks: in the cornfields above are many remains of former habitations." (Paus. ix. 31. § 7; Leake, *Northern Greece*, vol. ii. p. 501.)

DONU'SA or DONY'SA (Δόνυσα; whence come the corrupt forms Δονουσία, Steph. B. *s.v.*; Eustath. *ad Dionys. Per.* 530; Dionysia, Mel. ii. 7), a small island near Naxos, said by Stephanus to have been the island to which Dionysus carried Ariadne from Naxos, when pursued by her father Minos. This tale, however, appears to have arisen from confounding Donusa, the name of the island, with Dionysus, the name of the god. Stephanus also states, though we know not on what authority, that the island belonged to Rhodes. Virgil (*Aen.* iii. 125) gives to Donusa the epithet of "viridis," which Servius explains by the colour of its marble; but this statement is probably only invented to explain the epithet. Donusa was used as a place of banishment under the Roman empire. (Tac. *Ann.* iv. 30.)

DORA (τὰ Δῶρα), a maritime town of Palestine, locally situated in the half tribe of Manasseh, on this side Jordan, but left in possession of the old Canaanitish inhabitants. (*Judges*, i. 27.) Scylax (p. 42), who calls it DORUS, says that it was a city of the Sidonians. It is frequently mentioned by Josephus, whose notices enable us to identify it with the modern village of *Tantura*. It was a city of Phoenicia, near Mount Carmel. (Joseph. *Vit.* § 8; *c. Apion.* ii. 9.) It was a strong fortress when Tryphon held it against Antiochus Pius (*Ant.* xiii. 7. § 2). Caesarea is placed by him between Dora and Joppa, both which maritime towns are described as having bad harbours, owing to their exposure to the south-west wind, which rolled in heavy breakers upon the sandy coast, and forced the merchants to anchor in the open sea (xv. 9. 6). St. Jerome describes it as anciently a most powerful city, but a ruin in his time (*Epitaph. Paulae*), situated 9 miles from Caesarea, on the road to Ptolemais. (*Onomast. s. v.*; Reland, *Palaest.* pp. 738—741.)

"There are extensive ruins here, but they possess nothing of interest." (Irby and Mangles, *Travels*, p. 190.) [G. W.]

DORA FLUMEN. [DARGOMENES.]

DORA'CIUM (Δωράκιον), a town of Illyricum, which Hierocles calls the metropolis of the "Provincia Praevalitana,"—a title which rightly belongs to Scodra. Wesseling has supposed that it might represent DOCLEA or DIOCLEA. [E. B. J.]

DORES. [DORIS.]

DORGAMENES FLUMEN. [DARA.]

DO'RIAS. [DOANAS.]

DORIEIUM (Δορίειον: *Eth.* Δοριεύς). Steph. B. (*s. v.*) mentions it as a city of Phrygia. He has also Darieium (*s. v.* Δαρίειον), a city of Phrygia: and it is supposed that this may be the same place. Pliny (v. 27) has also a Doron, or Dorio, as it is said to be written in the MSS., in Cilicia Tracheia. [G. L.]

DORIS (ἡ Δωρίς: *Eth.* Δωριεύς, pl. Δωριῆς, Δωριεῖς; Dores, Dorienses), a small mountainous district in Greece, bounded by Aetolia, southern Thessaly, the Ozolian Locrians, and Phocis. It lies between Mounts Oeta and Parnassus, and consists of the valley of the river Pindus (Πίνδος), a tributary of the Cephissus, into which it flows not far from the sources of the latter. The Pindus is now called the *Apostoliá*. (Strab. ix. p. 427; Leake, *Northern Greece*, vol. ii. pp. 72, 92.) This valley is open towards Phocis; but it lies higher than the valley of the Cephissus, rising above the towns of Drymaea, Tithronium, and Amphicaea, which are the last towns in Phocis. Doris is described by Herodotus (viii. 31) as lying between Malis and Phocis, and being only 30 stadia in breadth, which agrees nearly with the extent of the valley of the *Apostoliá* in its widest part. In this valley there were four towns forming the Doric tetrapolis, namely, ERINEUS, BOIUM, CYTINIUM, and PINDUS. (Strab. x. p. 427.) Erineus, as the most important, appears to have been also called Dorium. (Aesch. *de Fals. Leg.* p. 286.) The Dorians, however, did not confine themselves within these narrow limits, but occupied other places along Mount Oeta. Thus Strabo describes the Dorians of the tetrapolis as the larger part of the nation (ix. p. 417); and the Scholiast on Pindar (*Pyth.* i. 121) speaks of six Doric towns, Erineus, Cytinium, Boium, Lilaeum, Carphaea, and Dryope. Lilaeum is Lilaea, which seems to have been a Doric town in the time of the Persian invasion, since it is not mentioned among the Phocian towns destroyed by Xerxes; Carphaea is probably Scarphea near Thermopylae; and by Dryope is probably meant the country once inhabited by the Dryopes. The Dorians would appear at one time to have extended across Mt. Oeta to the sea-coast, both from the preceding account and from the statement of Scylax, who speaks (p. 24) of Δωριῆς μεσόγειοι. Among the Doric towns Hecataeus mentioned Amphanae, called Amphanaea by Theopompus. (Steph. B. *s. v.* Ἀμφαναί.) Livy (xxvii. 7) places in Doris Tritonon and Drymiae, which are evidently the Phocian towns elsewhere called Tithronium and Drymaea.

There was an important mountain pass leading across Parnassus from Doris to Amphissa in the country of the Ozolian Locrians: at the head of this pass stood the Dorian town of Cytinium. [CYTINIUM.]

Doris is said to have been originally called Dryopis from its earlier inhabitants the Dryopes, who were expelled from the country by Heracles and the Malians. (Herod. i. 56, viii. 31, 43.) [DRYOPES.] It derived its name from the Dorians, who migrated from this district to the conquest of Peloponnesus. Hence the country is called the Metropolis of the Peloponnesian Dorians (Herod. viii. 31); and the Lacedaemonians, as the chief state of Doric origin, on more than one occasion sent assistance to the metropolis when attacked by the Phocians and their other neighbours. (Thuc. i. 107, iii. 92.) The Dorians were supposed to have derived their name from Dorus, the son of Hellen. According to one tradition, Dorus settled at once in the country subsequently known as Doris (Strab. viii. p. 383; Conon, c. 27); but other traditions represent them as more widely spread in earlier times. Herodotus relates (i. 56) "that in the time of king Deucalion they inhabited the district Phthiotis; that in the time of Dorus, the son of Hellen, they inhabited the country called Histiaeotis at the foot of Ossa and Olympus; that, expelled from Histiaeotis by the Cadmeians, they dwelt on Mount Pindus, and were called the Macednian nation; and that from thence they migrated to Dryopis; and having passed from Dryopis into the Peloponnesus, were called the Doric race." For this statement Herodotus could have had no other authority than tradition, and there is therefore no reason for accepting it as an historical relation of facts, as many modern scholars have done. In Apollodorus (i. 7. § 3) Dorus is represented as occupying the country over against Peloponnesus on the opposite side of the Corinthian gulf, and calling the inhabitants after himself Dorians. By this description is evidently meant the whole country along the northern shore of the Corinthian gulf, comprising Aetolia, Phocis, and the land of the Ozolian Locrians. This statement, as Mr. Grote justly remarks, is at least more suitable to the facts attested by historical evidence than the legends given in Herodotus. It is impossible to believe that the inhabitants of such an insignificant district as Doris Proper conquered the greater part of Peloponnesus; and the common tale that the Dorians crossed over from Naupactus to the conquest is in accordance with the legend of their being the inhabitants of the northern shore of the gulf.

An account of the conquest of Peloponnesus by the Dorians, which is said to have taken place under the guidance of the Heracleidae, is related elsewhere. (*Dict. of Biogr.* art. *Heracleidae.*) In the historical period the whole of the eastern and southern parts of Peloponnesus were in the possession of Dorians. Beginning with the isthmus of Corinth, there was first Megara, whose territory extended north of the isthmus from sea to sea; next came Corinth, and to its west Sicyon; south of these two cities were Phlius and Cleonae: the Argolic peninsula was divided between Argos, Epidaurus, Troezen, and Hermione,—the last of which, however, was inhabited by Dryopes, and not by Dorians. In the Saronic gulf Aegina was peopled by Dorians. South of the Argive territory was Laconia, and to its west Messenia, both ruled by Dorians: the river Neda, which separated Messenia from Triphylia, included under Elis in its widest sense, was the boundary of the Dorian states on the western side of the peninsula. The districts just mentioned are represented in the Homeric poems as the seats of the great Achaean monarchies, and there is no allusion in these poems to any Doric population in Peloponnesus. In fact the name of the Dorians occurs only once in Homer, and then as one of the many tribes of Crete. (*Od.* xix. 177.) The silence of Homer is to us a con-

vincing proof that the Dorian conquest of Peloponnesus must have taken place subsequent to the time of the poet, and consequently must be assigned to a much later date than the one usually attributed to it.

From the Peloponnesus the Dorians spread over various parts of the Aegaean and its connected seas. Doric colonies were founded in mythical times in the islands of Crete, Melos, Thera, Rhodes, and Cos. About the same time they founded upon the coast of Caria the towns of Cnidus and Halicarnassus: these two towns, together with Cos and the three Rhodian towns of Lindus, Ialysus, and Camirus, formed a confederation usually called the Doric Hexapolis. The members of this hexapolis were accustomed to celebrate a festival, with games, on the Triopian promontory near Cnidus, in honour of the Triopian Apollo; the prizes in those games were brazen tripods, which the victors had to dedicate in the temple of Apollo; and Halicarnassus was struck out of the league, because one of her citizens carried the tripod to his own house instead of leaving it in the temple. The hexapolis thus became a pentapolis. (Herod. i. 144.)

The Doric colonies founded in historical times are enumerated under the names of the countries which founded them. Corinth, the chief commercial city of the Dorians, colonised Corcyra, and planted several colonies on the western coast of Greece, of which Ambracia, Anactorium, Leucas, and Apollonia were the most important. Epidamnus, further north, was also a Doric colony, being founded by the Corcyraeans. In Sicily we find several powerful Doric cities:—Syracuse, founded by Corinth; the Hyblaean Megara, by Megara; Gela, by Rhodians and Cretans; Zancle, subsequently peopled by Messenians, and hence called Messene; Agrigentum, founded by Gela; and Selinus, by the Hyblaean Megara. In southern Italy there was the great Doric city of Tarentum, founded by the Lacedaemonians. In the eastern seas there were also several Doric cities:—Potidaea, in the peninsula of Chalcidice, founded by Corinth; and Selymbria, Chalcedon, and Byzantium, all three founded by Megara.

The history of Doris Proper is of no importance. In the invasion of Xerxes it submitted to the Persians, and consequently its towns were spared. (Herod. viii. 31.) Subsequently, as we have already seen, they were assisted by the Lacedaemonians, when attacked by the more powerful Phocians and neighbouring tribes. (Thuc. i. 107, iii. 92.) Their towns suffered much in the Phocian, Aetolian, and Macedonian wars, so that it was a wonder to Strabo that any trace of them was left in the Roman times. (Strab. ix. p. 427.) The towns continued to be mentioned by Pliny (iv. 7. s. 13; comp. Müller, *Dorians*, book i. c. 2; Leake, *Northern Greece*, vol. ii. p. 90, seq.).

DORIS. Pliny (v. 28) says, "Caria mediae Doridi circumfunditur ad mare utroque latere ambiens," by which he means that Doris is surrounded by Caria on all sides, except where it is bordered by the sea. He makes Doris begin at Cnidus. In the bay of Doris he places Leucopolis, Hamaxitus, &c. An attempt has been made elsewhere to ascertain which of two bays Pliny calls Doridis Sinus. [CERAMEICUS.] This Doris of Pliny is the country occupied by the Dorians, which Thucydides (ii. 9) indicates, not by the name of the country, but of the people: "Dorians, neighbours of the Carians." Ptolemy (v. 2) makes Doris a division of his Asia, and places in it Halicarnassus, Ceramus, and Cnidus. The term Doris, applied to a part of Asia, does not appear to occur in other writers. [G. L.]

DORISCUS (Δορίσκος), a coast town of Thrace, in a plain west of the river Hebrus, which is hence called the plain of Doriscus (Δορίσκος πεδίον). During the expedition of Darius the place was taken and fortified by the Persians; and in this plain Xerxes reviewed his forces before commencing his march against Greece. In the time of Livy it appears to have been only a fort—*castellum* (Herod. v. 98; vii. 25, 59, 105; Steph. B. *s. v.*; Liv. xxxi. 16; Plin. iv. 18; Pomp. Mel. ii. 2). The neighbourhood of Doriscus is now called the plain of *Romigik*. [L. S.]

DO'RIUM (Δώριον), a town of Messenia, celebrated in Homer as the place where the bard Thamyris was smitten with blindness, because he boasted that he could surpass the Muses in singing. (Hom. *Il.* ii. 599.) Strabo says that some persons said Dorium was a mountain, and others a plain; but there was no trace of the place in his time, although some identified it with a place called Oluris (Ὄλουρις) or Olura (Ὄλουρα), in the district of Messenia named Aulon. (Strab. viii. p. 350.) Pausanias, however, places the ruins of Dorium on the road from Andania to Cyparissia. After leaving Andania, he first came to Polichne; and after crossing the rivers Electra and Coeus, he reached the fountain of Achaia and the ruins of Dorium. (Paus. iv. 33. § 7.) The plain of *Sulimá* appears to be the district of the Homeric Dorium. (Leake, *Morea*, vol. i. p. 484; Curtius, *Peloponnesos*, vol. ii. p. 154.)

DORO'STOLUM. [DUROSTORUM.]

DO'RTICUM (Δορτικόν), a town of Moesia, situated to the northwest of the mouth of the river Timaeus. It is identified with the modern *Decz*, near Blasca. (Ptol. iii. 9. § 4; Procop. *De Aedif.* iv. 6; Itin. Ant 219; Geogr. Rav. iv. 7, where it is erroneously called *Clorticum*.) [L. S.]

DORUS. [DORA.]

DORYLAEUM (Δορύλαιον: *Eth.* Δορυλαεύς, Dorylensis), a town in Phrygia. Steph. B. (*s. v.*) names it Dorylaeium (Δορυλάειον), and observes that Demosthenes calls it Dorylaeum. Strabo (p. 576) also calls it Dorylaeum. Meineke (ed. Steph. B. *s. v.* Δορυλάειον) has a note on the orthography of the word and the passage of Eustathius (*ad Dionys. Perieg.* 815). But it is doubtful if he is right in correcting the text of Eustathius, which, as it stands, makes also a form Δορύλλειον, and so it stands in some editions of Ptolemy (v. 2), who mentions it as a city of Phrygia Magna in his division of Asia. Meineke conjectures the Demosthenes whom Stephanus cites to be the Bithynian, and that he used the form Dorylaeum to suit his metre. The Latin form in Pliny (v. 29) is Dorylaeum, Dorylaum, or Doryleum; doubtful which. The coins, which are only of the imperial period, have the epigraph Δορυλαέων. Dorylaeum is *Eski-shehr* (Leake, *Asia Minor*, p. 18), which "is traversed by a small stream, which at the foot of the hills joins the *Pursek*, or ancient Thymbres: this river rises to the south of *Kutáya*, passes by that city, and joins the Sangarius, a four hours to the north-east of *Eski-shehr*." The hot baths of *Eski-shehr* are mentioned by Athenaeus, and the water is described as being very pleasant to drink (ii. p. 43). There were ancient roads from Dorylaeum to Philadelphia, to Apameia Cibotus, to Laodiceia Combusta and Iconium, to Germa, and to Pessinus: "a coincidence which (their remote extremities being nearly certain) will not apply to any point but *Eski-shehr*, or some

place in its immediate neighbourhood." (Leake.) Dorylaeum is in an extensive plain. The remains of antiquity do not appear to be of any note.

The origin of Dorylaeum is not known. The name occurs in the wars of Lysimachus and Antigonus (Diod. xx. 108), whence we may conclude that the place is older than the time of Alexander. Lysimachus made an entrenched camp at Dorylaeum, "which place had abundance of corn and other supplies, and a river flowing by it." The Dorylenses were among those who joined in the prosecution against L. Flaccus, who was praetor of the province of Asia (B.C. 62), and who was accused of maladministration. Cicero, who defended him, calls these Dorylenses "pastores" (*pro Flacc.* c. 17), from which we may collect that there was sheep feeding about Dorylaeum then as there is now. The roads from Dorylaeum and its position show that it must always have been an important town during the Roman occupation of Asia; and it was a flourishing place under the Greek empire. [G. L.]

DO'SARON (Δωσάρων), a river of India which discharges itself into the Sinus Gangeticus at 141° long., and 17° 4′ lat. (Ptol. vi. 1); and has been identified with the *Maha-Nadi*. (Comp. Gosselin, *Géographie des Anciens*, vol. iii. pp. 215, 216, 255, 312.) [E. B. J.]

DOTHAN (Δοθαείμ), a town of Palestine, mentioned in the history of Joseph (*Gen.* xxxvii. 17) and of Elisha (2 *Kings*, vi. 13). From the former notice it appears to have been on the high road between Gilead and Egypt. It is mentioned in the book of Judith in connection with Bethulia, over against Esdraelon, toward the open country (iv. 6); and it is clear, from vii. 4, that it must have been in the mountains bordering the plain of Esdraelon on the south. Consistently with this, Eusebius places it 12 miles to the north of Samaria (*Sebaste*) (*Onomast. s. v.*), where a village of the name *Dotán* still exists, a little to the east of the *Nablús* road, south-west of *Jenin*. (Schultz, in Williams, *Holy City*, vol. ii. p. 469.) [G. W.]

DO'TIUM, town. [DOTIUS CAMPUS.]

DO'TIUS CAMPUS (τὸ Δώτιον πεδίον), the name of a plain in Pelasgiotis in Thessaly, situated south of Ossa, along the western side of the lake Boebeis. It is mentioned as the earliest seat of the Aenianes. (Strab. i. p. 61, ix. p. 442; Plut. *Quaest. Graec.* 13.) Hesiod speaks of "twin hills in the Dotian plain opposite to the vine-bearing Amyrus," said to have been the dwelling-place of Coronis, mother of Aesculapius by Apollo, who put her to death because she had favoured Ischys, son of Eilatus. (Hesiod, *ap. Strab.* ix. p. 442, xiv. p. 647; comp. Hom. *Hymn.* xv.; Callim. *Hymn. in Cer.* 25.) Leake identifies this double hill of Hesiod with a very remarkable height, rising like an island out of a plain, about four miles in circumference, and having two summits connected by a ridge: between them is a village called *Petra*, from which the hill derives its name. The north-eastern summit of the hill is surrounded by foundations of Hellenic walls of remote antiquity. We learn from Pindar that the town on this hill was called LACEREIA (Λακέρεια, Pind. *Pyth.* iii. 59), to which, however, other writers give the name of Dotium (Steph. B. *s. v.* Δώτιον; Plin. iv. 9. s. 16). (Leake, *Northern Greece*, vol. iv. pp. 420, 447, 451.)

DOURUS, in Ireland, mentioned by Ptolemy as falling into the Western Ocean between the Senus (*Shannon*) and the Iernus (*Kenmare*). This makes it, in all probability, the river which falls into *Dingle Bay*. [R. G. L.]

DRABESCUS (Δραβῆσκος, Thucy. i. 100, iv. 102; Strab. vii. p. 331; Steph. B.), a place where the Athenian colonists of Amphipolis were defeated by the Thracian Edom. In the Peutinger Table (Daravescus) it is marked 12 M. P. to the NW. of Philippi, a situation which corresponds with the plain of *Dhráma*. The plain of Drabescus is concealed from Amphipolis by the meeting of the lower heights of Pangaeum with those which enclose the plain to the NE. Through this strait the *'Anghista* makes its way to the lake; and thus there is a marked separation between the Strymonic plain and that which contains Drabescus and Philippi. (Leake, *Northern Greece*, vol. iii. p. 183.) [E.B.J.]

DRACO (Δράκων), a small river which enters the southern side of the bay of Astacus, in the Propontis. It runs from the high land north of the lake Ascania, near Nicaea, and enters the sea at the promontory of *Dil*, and near Helenopolis (*Ersek*). The Draco is a rapid river, with a winding course, which by its alluvium has formed the *Dil*. (Procop. *de Aedif.* v. 2.) Leake observes (*Asia Minor*, p. 10):—"In riding from the *Dil* to *Kizderwéut* (on the road to Nicaea, *Iznik*), I remarked that we traversed the river about twenty times, without being aware that Procopius has made precisely the same remark with regard to the Draco." [G. L.]

DRACO MONS. [TMOLUS.]

DRAHO'NUS, a small river, now the *Drone* or *Traun*, which flows into the Mosella (*Mosel*) at *Neumagen*, the ancient Neomagus. *Neumagen* is in the circle of *Trier*. The Drahonus is mentioned by Ausonius:—

"Praetereo exilem Lesuram tenuemque Drahonum." (*Id.* x. *Mosella*, v. 365.) [G. L.]

DRANGIA'NA (Δραγγιανή, Strab. xi. p. 516, xv. p. 723; Ptol. vi. 19. § 1; Δράγγη, Strab. xi. p. 514; Δραγγινή, Diod. xvii. 81, xviii. 3; Drangiana, Amm. Marc. xxiii. 6), a district at the eastern end of the modern kingdom of Persia, and comprehending part of the present *Sejestan* or *Seistan*. It was bounded on the N. by Aria, on the E. by Arachosia, on the S. by Gedrosia, and on the W. by Carmania. Its inhabitants were called DRANGAE (Δράγγαι, Arrian, *Anab.* iii. 28; Strab. xv. pp. 721, 723, 724; Plin. vi. 23. s. 25), or ZARANGAE (Plin. *l. c.*; Ζαραγγοι, Arrian, vi. 17; Ζαραγγαῖοι, Arrian, iii. 25; also called Σαράγγαι, Herod. iii. 93, 117, vii. 67; Δαράνδαι, Ptol. vi. 9. § 3). The name is derived by M. Burnouf (*Comment. sur le Jaçna*, p. xcviii.) from *Zarayo*, a Zend word meaning sea, and might therefore signify those who dwelt on or near the sea or lake now *Zarah*, which undoubtedly retains its Zend name. (Comp. Wilson, *Ariana*, p. 152, 153.) Herodotus describes the Sarangae in the army of Xerxes as conspicuous for the dress they wore, dyed garments, boots which reached half up their legs and bows and Median darts.

Drangiana was conquered by Alexander (Arrian iii. 28; Diod. xvii. 78), and united with the adjacent provinces under one satrap. At first Menon is mentioned as satrap of Arachosia (and therefore probably of Drangiana, as the two provinces were conquered in succession, Arrian, iii. 28); then, on the distribution of Alexander's empire among his generals, it fell to the lot of Stasanor of Solus, together with Aria. (Diod. xviii. 3; Justin, xiii. 4.) Lastly, it was given by Antipater to Stasander of Cyprus, with Aria, Stasanor having been removed

to the satrapy of Bactria and Sogdiana. (Diod. xviii. 39.) The district was mountainous towards the eastern or Arachosian side, but to the W. was one great sandy plain, analogous to the adjoining country of Carmania or *Kirman*. Its chief, indeed only, rivers were the Erymandrus or Etymandrus, Erymanthus (now *Elmend*), and Pharnocotis (now *Ferrah-Rud*). It has one lake of some size on the northern border, adjoining Aria, and named, from it, Aria Lacus (*Zarah*). [ARIA LACUS.] Besides the Drangae, some other tribes appear to have dwelt in Drangiana: as, the Ariaspae, who occupied a town called Ariaspe, on the southern end of the land towards Gedrosia; the Euergetae (probably a section of the last-named tribe), who possessed a territory called Tatacene and Batrii. The population appears to have mainly belonged to the same race as their neighbours, the people of Ariana, Arachosia, and Gedrosia. The capital of Drangiana was Prophthasia (perhaps the modern *Furrah;* Wilson, *Ariana*, p. 154). The actual capital of *Seistan* is *Dushak*, probably the *Zarang* of the early Mohammedan writers, which was evidently by its name connected with Drangiana. In the Persian cuneiform inscription at Behistun the country is called *Zasaka*. (Rawlinson, *Mem.* p. 1.) [V.]

DRAU'DACUM, a fortress belonging to the Penestae, which was taken by Perseus in the campaign of B. C. 169. (Liv. xliii. 19.) It has been identified with *Dardás* near *Elbasán*. [E. B. J.]

DRAVUS, DRAVIS (Δράβος, Δάρος: *Drau*), one of the chief tributaries of the Danube. Its sources are in the Norican Alps, on the Rhaetian frontier near the town of Aguntum (*Inichen*). It then flows through Noricum and Pannonia, and after receiving the waters of its northern tributary, the Murius, it empties itself into the Danube below Carpis. It is possible therefore that the river Carpis mentioned by Herodotus (iv. 49) as a tributary of the Danube, is no other than the Dravus. Strabo (vii. p. 314) represents the Dravus as flowing into the Noarus, a river altogether unknown, and then as emptying itself with this Noarus into the Ister. (Comp. Plin. iii. 28; Flor. iv. 12; Jornand. *De Regn. Succ.* 39; Paul. Diac. ii. 13; Ptol. ii. 16. § 2.) The current is very rapid, whence Pliny calls it *violentior*. [L. S.]

DREPANE, DREPANUM. [HELENOPOLIS.]

DRE'PANUM, a promontory of Achaia. [ACHAIA, p. 13, a.]

DRE'PANUM or DRE'PANA (τὸ Δρέπανον, Ptol., Diod. xxiii. 9, but τὰ Δρέπανα, Pol.; Steph. B.; Dionys.; Diod. xxiv, &c., and this seems the best authenticated form: *Eth.* Drepanitanus: *Trapani*), a city of Sicily, with a promontory and port of the same name, at the NW. extremity of the island, immediately opposite to the Aegates. The city did not exist until a comparatively late period, but the port and promontory are mentioned in very early times: the latter evidently derived its name from the resemblance of its form to that of a sickle (δρεπάνη), whence late mythographers described it as the spot where the sickle of Cronus or Saturn was buried. (Serv. *ad Aen.* iii. 707; Tzetz. *ad Lycophr.* 869.) The port was only a few miles from the foot of Mt. Eryx, and hence it is mentioned in connection with the Trojan legends that were attached to this part of Sicily. Virgil makes it the scene of the death of Anchises, and of the funeral games celebrated by Aeneas in his honour. (Virg. *Aen.* iii. 707, v. 24, &c.; Dionys. i. 52; Serv. *ad Aen. ll. cc.*) But with this exception we find no mention of the name previous to the First Punic War: it probably served as a port to the neighbouring city of Eryx, and was a dependency of that place [ERYX]; but in the earlier part of the war just named (about B. C. 260) the Carthaginian general Hamilcar proceeded to fortify the promontory of Drepanum, and founded a town there, to which he transferred a great part of the inhabitants of Eryx. (Diod. xxiii. 9, Exc. H. p. 503; Zonar. viii. 11.) Hence the statement of Florus (ii. 2) and Aurelius Victor (*de Viris Illustr.* 39), both of whom mention Drepanum among the cities of Sicily taken by the dictator Atilius Calatinus at an earlier period of the war, must be erroneous. The result proved the wisdom of the choice; from the goodness of its harbour, and its proximity to Africa, Drepana became a place of great importance, and continued throughout the remainder of the war to be one of the chief strongholds of the Carthaginians. In B. C. 250, indeed, Drepana and Lilybaeum were the only two points in the island of which that people retained possession; and hence the utmost importance was attached by them to their maintenance. (Pol. i. 41; Zonar. viii. 16.) During the long protracted siege of Lilybaeum by the Romans, it was at Drepana that Adherbal established himself with the Carthaginian fleet, to watch the operations of the besiegers, and it was off this port that he totally defeated the Roman consul P. Claudius, and destroyed almost his whole fleet, B. C. 249. (Pol. i. 46, 49—51; Diod. xxiv. 1, Exc. H. p. 507.) Not long after this, when Hamilcar Barca made himself master of the city of Eryx, he removed all the remaining inhabitants from thence to Drepana, which he fortified as strongly as possible, and of which he retained possession till the end of the war. It was, however, in B. C. 242 besieged by the Roman consul Lutatius Catulus; and it was the attempt of the Carthaginians under Hanno to effect its relief, as well as that of the army under Hamilcar, that brought on their fatal defeat off the islands of the Aegates, B. C. 241. (Pol. i. 59, 60: Diod. xxiv. 8, 11, Exc. H. p. 509; Zonar. viii. 17; Liv. xxviii. 41.)

From this time the name of Drepana appears no more in history, but it seems to have continued to be a flourishing commercial town, though apparently eclipsed by the superior prosperity of the neighbouring Lilybaeum, which throughout the Roman period was the most considerable city in this part of Sicily. Cicero and Pliny both mention it as a municipal town; and the Itineraries and Tabula prove that it still retained its name and consideration in the fourth century of the Christian era. (Cic. *Verr.* iv. 17; Plin. iii. 8. s. 14; Ptol. iii. 4. § 4; *Itin. Ant.* pp. 91, 97; *Tab. Peut.*) The modern city of *Trapani* has succeeded to the ancient importance of Lilybaeum, and is now the most populous and flourishing city in the west of Sicily, as well as a strong fortress. Great part of its wealth is derived from the manufacture and export of coral, of which there are extensive fisheries on the coast: these are alluded to by Pliny as already existing in his time (xxxii. 2. s. 11). Some vestiges of the ancient mole are the only remains of antiquity which it presents; but the site is undoubtedly the same with that of the ancient city, upon a low sandy peninsula, which has been artificially converted into an island by the ditch of the modern fortifications. (Smyth's *Sicily*, pp. 237—241; Parthey, *Wanderungen durch Sicilien*, p. 75, &c.) Immediately off the harbour of *Trapani* is a small island called *Colombara*, which appears to have been known in ancient times also as Colum-

baria Insula. It is mentioned by Zonaras (viii. 161) under the name of Πελειὰς νῆσος. [E. H. B.]

DRE'PANUM (τὸ Δρέπανον ἄκρον, Ptol. iv. 5. § 14), a promontory on the eastern coast of Egypt forming one boundary of the Bay of Heroöpolis or N.W. branch of the Red Sea. There is, however, some difference in the statement of the ancient geographers with regard to its position. Ptolemy describes it, as above, in about lat. 28° N.; if so, Drepanum was exactly opposite to the S. extremity of the Rocky Arabia, whereas Pliny (*N. H.* vi. 29. § 34) brings it nearly six degrees further to S., between Myos-Hormos and Berenice, or lat. 22°N. Drepanum, like other similarly named headlands, derived its appellation from its semicircular form,—a reaping-hook. It was a projection of the limestone and hornblende hill-barrier of the Delta and Heptanomis to the E. The seaward termination of the modern mountain *El-Garîb* probably represents this ancient foreland. [W. B. D.]

DRE'PANUM (τὸ Δρέπανον ἄκρον), a promontory on the NW. coast of Crete, which Ptolemy (iii. 17. § 7) describes as following the headlands Corycus Psacum and Cyamum. There has been some difficulty in fixing the position, as there is no other ancient authority than this intimation of Ptolemy. Höck (*Kreta*, vol. i. p. 385) has placed it at the modern *Akrotéri*, but is in error, as there can be no doubt but that it is represented by the headland of *Dhrépano* further to the W. (Pashley, *Trav.* vol. i. p. 45.) [E. B. J.]

DREPSA. [Bactriana, p. 365, a.]

DRE'SIA (Δρεσία: *Eth.* Δρεσιεύς), called a city of Phrygia by Steph. B. (*s. v.*), who quotes the third book of the *Bassarica* of Dionysius, Βούδειαν Δρεσίην τε καὶ οἱ μηλώδεα γαῖαν. Nonnus, in his *Dionysiaca*, mentions it with the Obrimus, a branch of the Maeander. [Maeander.] [G. L.]

DRICCA, a river of Dacia which Jornandes (*de Reb. Get.* 34) places near the Tysia (comp. Geog. Rav.), but which, in the absence of further information, it is difficult to identify. [E. B. J.]

DRILAE (Δρίλαι), "a village in Pontus, not far from Trapezus, as Xenophon says in the fifth book of the *Anabasis*." (Steph. B. *s. v.*) Xenophon (*Anab.* v. 2. § 14), with his men, made an incursion into the country of the Drilae, which was mountainous and difficult of access. The Drilae were, he says, the most warlike people on the Pontus. They are mentioned by Arrian in his *Periplus* (p. 11), where the name is written Drillae. In the MSS. of Stephanus it is Drylae (Δρύλαι); but this is probably a copyist's error. [G. L.]

DRILO (Δρίλων, Ptol. ii. 16. § 5; Plin. iii. 22; Theophrast. *H. P.* ix. 7; Nicand. *Fluv.* 607: *Drin*), a river of Illyricum which was navigable as far as the territory of the Dardanii. (Strab. vii. p. 316.) Vibius Sequester (*Flum.* 9; comp. Anna Comn. p. 371), who gives it the name of Drinius, is right in stating that its sources are to be found in the Lake Lychnitis. The Black *Drin* is the outlet for Lake *Okridha*, and is joined by the White *Drin* at *Scheitan Köpru*; the united waters discharge themselves into the sea at Lissus (*Lesch*). (Leake, *Northern Greece*, vol. i. p. 77, vol. iii. p. 477.) [E. B. J.]

DRINUS (Δρεῖνος: *Drina*), a tributary of the Savus (*Sau*), has its sources on mount Scordus, whence it flows in a northern direction, forming the frontier between Illyricum and Moesia, and falls into the Dravus a little to the west of Sirmium. (Ptol. ii. 17. § 7.) [L. S.]

DRIUM. [Garganus.]

DROMISCUS, an island which Pliny (ii. 89) mentions with Perne as having been joined to Miletus, by the alluvium of the Maeander, we may suppose. The name does not appear to occur elsewhere. [G. L.]

DROMOS ACHILLIS. [Achilleos Dromos.]

DRO'PICI. [Persis.]

DRUBE'TIS (Δρουφηγίς, Ptol. iii. 8. § 10), the first station (*Peut. Tab.*) on the Roman road which ran from Egeta in a NW. direction to Apala in Dacia. It has been identified with *Drivicza*. (Katanchsich, *Orb. Ant.* vol. i. p. 379.) [E. B. J.]

DRUE'NTIA (ὁ Δρουεντίας, ὁ Δρουέντιος: *Durance*). Ausonius (*Id.* x. *Mosella*, v. 479) makes the name feminine. Silius Italicus (iii. 478) makes it masculine:—

"Turbidus hic truncis saxisque Druentia laetum
Ductoris vexavit iter; namque Alpibus ortus,
Avulsas ornos et adesi fragmina montis
Cum sonitu volvens, fertur latrantibus undis," &c.

Strabo (p. 203) says of the Druentia: "Above, in certain hollow places, a great lake is formed, and there are two springs not far from one another, from one of which flows the Druentias, a torrent river, which has a rapid descent to the Rhodanus; and the Durias runs in the opposite direction, for it joins the Padus, flowing down through the country of the Salassi into Celtica south of the Alps." Strabo is mistaken about this Durias or Doria Minor (*La Doria Riparia*), for it is the other Doria which flows through the country of the Salassi. Two streams rise on *Mont Genèvre* near one another; one is the *Durance*, and the other is the *Dorin*. The *Durance* is joined by a larger stream called *La Claire*. The river flows from *Briançon*, with a general southern course, past *Embrun* and *Sisteron*, as far as the junction of the *Verdon*. It then forms a curve, and runs W. by N. past *Cavaillon* (Cabellio), and joins the *Rhone* a little below *Avignon*. The lower part of the course is full of small islands. It is a rapid river, and subject to inundations. Though not navigable, it is used for floating timber down. Silius Italicus has well described this turbulent river. It has been inferred from an expression in the Notitia Imp., where a "Praefectus Classis Barcariorum Ebruduni Sapaudiae" is mentioned, and from an inscription in Gruter (pp. 413, 414), where "Patronus Nautarum Druenticorum et Utriclariorum" is mentioned, that the river was navigated in the time of the later empire. But the navigation could not be more than a boat navigation, and for a short distance. As to the Utricularii, see Cabellio.

Livy (xxi. 31) mentions the Druentia, and Pliny (iii. 4) as a rapid river. [G. L.]

DRUNA (*Drome*), a river of Gallia Narbonensis, which joins the *Rhone* on the left bank below *Valence*, and gives name to the department of *Drome*. Ausonius (*Id.* x. *Mosella*, v. 479) mentions the Druna:—

"Te Druna, te sparsis incerta Druentia ripis
Alpinique colent fluvii." [G. L.]

DRUSIPARA, DRUZIPARA, DRUZIPERA (Δρουσίπαρα, Δριζίπαρος), a town in Thrace, situated somewhere on the river Melas, but its exact site is unknown. (Ptol. iii. 11. § 13; It. Ant. 230; Geogr. Rav. iv. 6; Suid. *s. v.* Δριζίπαρος). [L. S.]

DRYAENA (Δρύαινα: *Eth.* Δρυαινίτης). Steph. B. (*s. v.*) mentions it as a city of Cilicia, afterwards called Chrysopolis; and in another place (*s. v.*

Χρυσόπολις) he quotes the *Polyhistor* as his authority. [G. L.]

DRYMAEA (Δρυμαία, Paus.; Δρύμος, Herod.; Δρυμία, Steph. B.; Drymiae, Liv.), a frontier town of Phocis, on the side of Doris, whence it is included in the limits of Doris by Livy. It was one of the Phocian towns destroyed by the army of Xerxes. Pausanias describes it as 80 stadia from Amphicleia: but this number appears to be an error of the copyists, since in the same passage he says that Amphicleia was only 15 stadia from Tithronium, and Tithronium 15 stadia from Drymaea, which would make Drymaea only 35 stadia from Amphicleia. He also speaks of an ancient temple of Demeter at Drymaea, containing an upright statue of the goddess in stone, in whose honour the annual festival of the Thesmophoria was celebrated. Its more ancient name is said to have been Nauboleis (Ναυβολεῖς), which was derived from Naubolus, an ancient Phocian hero, father of Iphitus. (Hom. *Il.* ii. 518.) According to Leake the site of Drymaea is indicated by some ruins, situated midway between *Kamâres* and *Glínista*, and occupying a rocky point of the mountain on the edge of the plain. "Some of the towers remain nearly entire. The masonry is generally of the third order, but contains some pieces of the polygonal kind; the space enclosed is a triangle, of which none of the sides is more than 250 yards. At the summit is a circular acropolis of about two acres, preserving the remains of an opening into the town" (Herod. viii. 33; Paus. x. 3. § 2, x. 33. § 11; Liv. xxviii. 7; Plin. iv. 3. s. 4; Steph. B. *s. v.*; Leake, *Northern Greece*, vol. ii. pp. 73, 87.)

DRYMUS. 1. In Phocis. [DRYMAEA.]

2. In Attica. [ATTICA, p. 329, b.]

3. A spot in Euboea, at the foot of Mt. Telethrius, near Oreus. (Strab. x. p. 445.)

DRYMUSSA. [CLAZOMENAE.]

DRYNAE'METUM (ὁ Δρυναίμετος), a place in that part of Asia called Galatia, which the Galli occupied. Strabo (p. 567) says that the council of the twelve tetrarchs, consisting of 300 men, used to meet at Drynaemetum. The first part of the word may be Gallic, and the second seems to contain the same element as the names Nemetocenna, or Nemetacum, Nemausus, and Nemossus in Gallia. [G.L.]

DRY'OPES (Δρύοπες), one of the aboriginal tribes of Greece. Their earliest abode is said to have been on Mount Oeta and its adjacent valleys, in the district called after them, Dryopis (Δρυοπίς.) The Dorians settled in that part of their country which lay between Oeta and Parnassus, and which was afterwards called Doris [DORIS]; but Dryopis originally extended as far north as the river Spercheius. The name of Dryopis was still applied to the latter district in the time of Strabo, who calls it a tetrapolis, like Doris. (Herod. i. 56, viii. 31; Strab. ix. p. 434.) Heracles, in conjunction with the Malians, is said to have driven the Dryopes out of their country, and to have given it to the Dorians; whereupon the expelled Dryopes settled at Hermione and Asine in the Argolic peninsula, at Styrus and Carystus in Euboea, and in the island of Cythnus. These are the five chief places in which we find the Dryopes in historical times. (Herod. viii. 43, 46, 73; Diod. iv. 57; Aristot. *ap. Strab.* viii. p. 373; Paus. iv. 34. § 9, seq., v. 1. § 2.) Dicaearchus (v. 30, p. 459, ed. Fuhr) gives the name of Dryopis to the country around Ambracia, from which we might conclude that the Dryopes extended at one time from the Ambraciot gulf to Mount Oeta and the Spercheius. (Müller, *Dorians*, book i. c. 2; Grote, *Hist. of Greece*, vol. ii. p. 384.)

DRYS (Δρῦς), a town in Thrace of uncertain site (Scyl. p. 27; Steph. B. *s. v.*; Suid. *s. v.*) [L. S.]

DUBIS (Δοῦβις: *Doubs*), a branch of the Arar (*Saône*), a river of Gallia. This river is called Dubis by Ptolemy (ii. 10. § 2) and Strabo (p. 186); but in Caesar (*B. G.* i. 38) it is Alduasdubis, according to many MSS. Some MSS. have *Abd* or *Add* in the first syllable instead of *Ald.* (Schneider's Caesar, *B. G.* p. 80.) The name has been altered to Dubis by most editors of Caesar, contrary to the MSS., in order to make the orthography fit that of Strabo and Ptolemy. Caesar describes the Alduasdubis as nearly surrounding Vesontio (*Besançon*). A French writer, mentioned by D'Anville, supposes that Alduasdubis is compounded of the names of two rivers, one of which he names *Alde*, and he says that it joins the *Doubs* below *Montbéliard.* D'Anville found in his maps a stream near *Porentrui* named *Hallen* or *Allen.* There is nothing strange in the name Alduasdubis being shortened into Dubis.

Strabo (p. 186) says that the Arar (*Saône*) rises in the Alps, and also the Dubis, a navigable river, which joins the Arar. He extends the name Alps, as it appears, to the Jura; for the *Doubs* rises in the highest parts of the Jura. It first flows NE.; but near Mont Terrible it suddenly turns west, and has a very irregular course to *Porentrui*; it then has a general SW. course past *Besançon* and *Dole* to its junction with the *Saône.* The whole course of the *Doubs* is above 200 miles; and it is now navigated a considerable distance above *Besançon.*

Strabo seems to have known the position of the Dubis, and yet he makes a mistake twice about this river (p. 192), in making the Dubis one of the boundaries of the Segusiani, and also of the Aedui. He should have written Ligeris in both cases instead of Dubis. [G. L.]

DUBRIS, in Britain, mentioned both in the Itinerary and the Notitia, in the latter as the station of the "Praepositus Militum Tungricanorum." Name for name, and place for place, Dubris = *Dover.*

The Octagon Tower attached to the old church is built chiefly of Roman bricks. How far, however, the materials may be older than the building is uncertain. The tower itself is considered to have been a lighthouse. [R. G. L.]

DULGIBINI (Δουλγούμνιοι), a German tribe which, according to Tacitus (*Germ.* 34.) inhabited the country south or south-west of the Angrivarii, whereas according to Ptolemy (ii. 11. § 17) they dwelt further east on the right bank of the *Weser.* This discrepancy is no doubt the consequence of the migrations among the Germans; and both statements may be correct in regard to the different periods described by the two authorities. [L. S.]

DULI'CHIUM. [ECHINADES.]

DULO'POLIS (Δουλόπολις, Δόυλων πόλις, Hesych.), a city of Crete, which was mentioned by Sosicrates in the first book of his work on Crete (Suid. *s. v.*), and was said to have contained a thousand male citizens (Steph. B. *s. v.*). Unfortunately, none of these authorities give any hint which might serve to determine the situation of this city, which, from the singularity of its name, gives rise to tempting conjectures. (Höck, *Kreta*, vol. i. p. 433, vol. iii. p. 34; Pashley, *Trav.* vol. ii. p. 82.) [E. B. J.]

DULO'POLIS. [BUBASSUS.]

DUMNA, an island off North Britain, mentioned

by Ptolemy, as lying north of the Promontory Orcas and south of the Orcades. [ORCADES.] [R. G. L.]

DUMNISSUS, a place in Gallia, on the road from Bingium (*Bingen*) to Augusta Trevirorum (*Trier*). The Table gives 16 Gallic leagues from Bingium to Dumnissus, and 8 from Dumnissus to Belginum. Ausonius, in his poem on the Mosella (v. 1, &c.), mentions Dumnissus. After crossing the Nava (*Nahe*), which joins the Rhine at *Bingen*, he speaks of passing through forests without tracks, where there was no sign of human cultivation; and he adds, —

"Praetereo arentem sitientibus undique terris
Dumnissum, riguasque perenni fonte Tabernas."

The route of Ausonius from *Bingen* was through the *Hundsrück;* but the site of Dumnissus is unknown. It is placed by some geographers at *Denzen*, near *Kirschberg*. Belginum is supposed to be *Belch*, which in fact is the same name. [G. L.]

DUNIUM, in Britain, mentioned by Ptolemy (ii. 3. § 29) as a town of the Durotriges. [R. G. L.]

DUNUM. 1. In Ireland, mentioned by Ptolemy (ii. 2. § 10) as a town of that island.

2. D. SINUS (Δούνου κόλπος), a bay in Britain, mentioned by Ptolemy (ii. 3. § 6). Name for name, and place for place, *Dun*-s-ley Bay, near Whitby, in Yorkshire. [R. G. L.]

DUODECIMUM, AD. 1. Tacitus (*Ann.* iii. 45), in his account of the revolt of Sacrovir, says that the Roman commander Silius marched upon Augustodunum after ravaging the lands of the Sequani, and he met Sacrovir "ad Duodecimum lapidem," which seems to mean 12 M. P. from *Autun*, in an open country. Perhaps Tacitus does not mean to speak of Ad Duodecimum as a place. D'Anville concludes that the march of Silius was from Cabillonum (*Challon*) on the *Saône*, which is likely enough. Cabillonum was on a road from Lugdunum to Augustodunum, and the Antonine Itin. places Cabillonum 33 M. P. from Augustodunum. The site of Sacrovir's defeat cannot be very far from the spot where the Roman proconsul C. Julius Caesar defeated the Helvetii, B. C. 58.

2. DUODECIMUM, AD. [DECEM PAGI.]

3. The Table places a Duodecimum 18 from Noviomagus (*Nymegen*), on the road to Leyden. D'Anville supposes that the 18 is an error, and should be 12, and that the 12 are 12 M. P. Some take the 18 to be M. P., and so the distance would be 12 Gallic leagues. D'Anville merely led by a name, and probably deceived by it, fixes on *Doodenwerd*, on the right bank of the *Waal*, as the place. [G. L.]

DURA. 1 (τὰ Δούρα, Polyb. v. 52; Amm. Marc. xx. 5, 6), a fortified castle in Assyria, on the left bank of the Tigris. It still bears the name of *Dúr* or *Dura*. (Lynch, *R. G. I.* vol. ix. p. 447; Layard, *Nineveh and Babylon*, p. 469.)

2. (Δοῦρα, Isid. Char. p. 4; Zosim. iii. 14; Amm. Marc. xxiii. 5), a place in the N. of Mesopotamia, at no great distance from Circesium and the Euphrates, at which, according to Zosimus, the military monument to Gordian was erected. Ammianus differs from him in this, stating that Gordian's tomb was at Zaitha, a few miles distant. Eutropius and Rufus Festus state that the monument was 20 M. P. from Circesium. Zosimus is therefore, in all probability, correct. Isidorus states that Dura was built by the Macedonians, and was called EUROPUS as well as DURA NICANORIS. It may be doubted whether the passage in Polybius (v. 48) does not refer to the Assyrian town of this name. The same remark applies to the reference in Stephanus, who simply refers to the 5th book of Polybius, in which both places are mentioned. [V.]

DURA'NIUS (*Dordogne*), a large river of Gallia, which joins the Garumna (*Garonne*), on the right bank below *Bordeaux*. Ausonius (*Mosella*, v. 464) says of the Duranius, —

"Concedes gelido Durani de monte volutus
Amnis."

The *Dordogne* rises in *Mont Dor*, which seems to have given the river its name. *Mont Dor* is in the department of *Puy de Dome*, and its summit is said to be the highest point of the mountains of central France. The name Duranius appears in the middle ages in various forms; and Dordonia, one of them, is the origin of the name *Dordogne*. [G. L.]

DURDUS (τὸ Δοῦρδον ὄρος), named by Ptolemy as one of the chief mountain ranges of Mauretania Tingitana, appears to be that part of the main chain of Atlas from which the river Malva takes its rise. Its name evidently contains the same root as Dyrin, the native name of the ATLAS. [P. S.]

DURE'TIE. The Table places Duretie 29 Gallic leagues from Portu Namnetum (*Nantes*), on the road to Gesocribate (*Brest*). The next station after Duretie is Dartoritum, which Ptolemy calls Dariorigum. [DARIORIGUM.] The distances in the Table cannot be trusted; and if they can, we must be sure about the direction of the Roman road between *Nantes* and *Vannes* before we can determine the position of Duretie. Some geographers place it at *Roche Bernard*, near the head of the aestuary of the *Vilaine*. D'Anville proposes to alter Duretie to Durerie, and he thinks that the second part of the word contains the word Herius, the name which Ptolemy gives to the *Vilaine*. The first part of the word Duretie is probably the common Celtic name *Dur*. [G. L.]

DU'RIA (Δουρίας, Strab.: *Dora*), the name of two rivers of Cisalpine Gaul, both of them rising in the Alps, and flowing into the Padus. (Plin. iii. 16. s. 20.) They are commonly called by writers on ancient geography the Duria Major and Duria Minor, but we have no ancient authority for these appellations. Pliny calls them simply "Durias duas;" and Strabo mentions only one river of the name. This is evidently nothing more than the Celtic *Dwr* or *Dur*, water; which sufficiently accounts for its double employment. The two streams are now known as the *Dora Baltea* and *Dora Riparia:* the former name is apparently of very early origin, as the geographer of Ravenna in the ninth century calls it "Duria Bantica." (*Geogr. Rav.* iv. 36.)

1. The *Dora Baltea*, which is much the larger of the two streams, has its sources in the Pennine and Graian Alps (*Great* and *Little St. Bernard*), and flows through the great valley of the Salassi (*Val d'Aosta*), receiving on its course numerous tributaries from the glaciers of the Pennine Alps, so that it is one of the most important of the feeders or tributaries of the Padus. It flowed under the walls of Augusta Praetoria (*Aosta*) and Eporedia (*Ivrea*), and joined the Padus about 22 miles from the latter city, and the same distance below Augusta Taurinorum. Strabo, who correctly describes this river as flowing through the country of the Salassians, and turned to much account by that people for their gold-washings [SALASSI], has evidently confounded it with the other river of the same name, where he

speaks of it as having its source close to that of the Druentia (*Durance*). (Strab. iv. pp. 203, 205.)

2. The Duria Minor or *Dora Ripuria* rises in the Cottian Alps (the *Mont Genèvre*), almost in the same spot with the Druentia; it flows by *Susa* (Segusio), and falls into the *Po* at *Turin* (Augusta Taurinorum). The geographer of Ravenna calls it simply Duria, without any distinctive epithet. Though inferior to the preceding river, it is a large stream, having its source among the high Alps, and being fed by numerous torrents from perpetual snows and glaciers, so that at the point of its junction with the *Po* it is little inferior to that river. [E. H. B.]

DURIUS (ὁ Δούριος or Δουρίας, Strab. iii. pp.153, foll., 162; Δόριος, Appian, *Hisp.* 72, 90; Δωρίας, Ptol. ii. 5. §§ 2, foll., Marc. Heracl. p. 43; Δώριος, Dion Cass. xxxvii. 52; Duria, Claudian. *Laud. Seren.* 72: *Duero*), one of the chief rivers of Hispania, rises in M. Idubeda (*Sierra de Urbion*), among the Pelendones, flows W. through the Celtiberi and Vaccaei, and past the cities of Numantia and Seguntia, and falls into the sea between Cale and Langobriga. Its lower course divided Lusitania on the S. from Hispania Tarraconensis on the N. Its whole length was estimated at 1370 stadia, of which 800 stadia, from its mouth upwards, were navigable for large vessels. (Strab. *ll. cc.*; Mela, iii. 1. §§ 7, 8; Plin. iv. 20. s. 34). Its deposits contained gold (Sil. Ital. i. 234). Its chief tributaries were, on the right or N. side, the AREVA, the PISORACA (*Pisuerga*), and the ASTURA (*Esla*); and on the left, the CUDA (Coa). [P. S.]

DURNOMAGUS. [BURUNCUS.]

DURNOVARIA, in Britain, mentioned in the 12th and 15th Itineraries, and generally admitted to be, place for place, and (to a certain extent) name for name, the modern *Dor*chester (in the county of *Dorset*, as opposed to the Oxfordshire *Dor*chester). The root *d-r* is a *common* rather than a *proper* name, as is suggested by the fact of its re-occurrence. [DUROBRIVAE.] Definite remains of the old Roman wall have been noticed by Dr. Stukely as still standing "twelve foot thick, made of ragstones, laid side by side and obliquely, then covered over with very strong mortar." Roman coins, which are often found here, are called *Dorn*-pennies. Remains of Roman camps, and probable remains of a Roman amphitheatre, attest the importance of the ancient Durnovaria. [R. G. L.]

DUROBRIVAE, in Kent, mentioned in the second Itinerary as being the second station from London in the direction of *Richborough* (Rutupae), and by general consent fixed at *Rochester*. The prefix *dur*, being one which will reappear, may conveniently be noticed here. It is the Keltic *dwr*=*water*; so that the local names wherein it occurs are the Keltic analogues to the English terms *Water*-ford, Bridge-*water*, &c. Camden has pointed out the following corruptions of the form Durobrivae, viz.: *Durobrovae*, *Durobrevis*, and Civitas *Roibi*, from which comes the Saxon *Hrofe*-ceaster=*Rochester*. In the foundation charter of the cathedral, Rochester is expressly called *Durobrovae*. The Rochester river (*dwr*) is the Medway.

In the third and fourth Itineraries we also find Durobrivae (in all cases, twenty-seven Roman miles from London). This, along with the satisfactory character of the evidence in favour of Rochester, makes the present notice a convenient place for the investigation of *Duro*-levum and *Duro*-vernum. *Durolevum* is the next stage to Rochester in the second Itinerary, and here *Durovernum* is twenty-eight miles from *Durobrivae*. But in the next two Itineraries the distance is only twenty-five. This (as Horsely remarks) makes it necessary to consider Durolevum as lying somewhat out of the direct road.

Now at *Len*-ham (on the river *Len*) we have Roman remains, and so we have at Charing (also on the *Len*). One of these was probably the Roman Duro-*levum*, or (considering the name of the river, along with the likelihood of that of the station being the same, the chances of confusion between *v* and *u*, and, lastly, the fact of the names *Deva* and *Deuna* (q. v.) being actually confused) Duro-*lenum*; a reading already suggested by previous investigators. The present writer, then, fixes *Durolevum* (*-lenum*) on the *Len*, assuming the likelihood of an improved reading, and laying great stress on the name. At the same time, he adds that Newington, Sittingbourne, Milton, and Faversham (all on a different line of road) have found supporters.

Durovernum is generally identified with Canterbury. It is mentioned in the same Itineraries with the other two stations. The river (*dwr*) here is the Stour. Ptolemy's form is Darvenum (Δαρούενον).

At Rochester remains of the ancient Durobrivae are sufficiently abundant; e.g. coins of Vespasian, Trajan, Hadrian, Antoninus Pius, M. Aurelius Antoninus, Constantius, and Constantine, fibulae, and pottery.

At Canterbury the evidence is of the same kind; coins being numerous, and there being also traces of the two great Roman roads which led to *Dover* (Dubris) and *Lymne* (Lemanis). [R. G. L.]

DUROBRIVAE, in Britain, to the north of the Thames, and different from the Durobrivae last mentioned. It appears in the fifth Itinerary; and, as the form is Durobriv*as*, we are thus enabled to give the true termination to the word, here and elsewhere, and become justified in dealing with it as a feminine plural in *-ae*. In the Itinerary wherein it appears its place is the seventh on the road from Londinium to Luguvallium (*London* and *Carlisle*). Not one, however, of the six stations that precede it is identified in an absolutely satisfactory manner; although with some of them opinion is nearly unanimous. On the other hand, however, Durobrivae has, as the first station beyond it, Causennae, and, as the second, Lindum,—Causennae being *almost* certainly *Ancaster*, and Lindum being as unequivocal a locality as any in Britain, =*Lincoln*. Hence, Durobrivae was two stations from *Lincoln*, in the direction of London. The station immediately on the other side was Durolipons, a station which will be dealt with in the present notice, rather than under its own. The fifth Itinerary runs:—

"Itera Londinio Luguvallio ad vallum M. P. ccccxliii.: sic,—

	M. P.
Caesaromago - - -	xxviii.
Colonia - - -	xxiiii.
Villa Faustini - - -	xxxv.
Icianos - - - -	xviii.
Camborico - - -	xxxv.
Duroliponte - - -	xxv.
Durobrivas - - -	xxxv.
Causennis - - -	xxx.
Lindo - - - -	xxvi."

&c.

Against Causennae=*Ancaster* the objections are so slight as to make the identification one of the second degree of certainty, at least. Again, the traces of a Roman road, running nearly due north and south of Ancaster (i. e. without any wide compass or

deviation), are numerous; and where they occur they are remarkable for the linear character of their direction. This makes any spot 30 Roman miles south of *Ancaster* likely to have been Durobrivae.

The boundary of the counties of *Hunts* and *Northampton*, at the spot where the river *Nene* (which divides them) flows between *Chesterton*, on the *Huntingdonshire*, and *Castor*, on the *Northamptonshire*, side of the river, suits this measurement,—nearly, though not exactly. There is, however, considerable evidence of other kinds in favour of one (or both) of these two places. The names originate in the word *castra*. The village (probably the crossing of the river) is found in Camden and certain old maps as Dorn-*ford;* and Dor-*man-ceaster* is said to have been the Saxon name of it. Roman remains, too, are numerous.

Whether the Huntingdon or the Northamptonshire village was the true *Durobrivae*, is uncertain and unimportant. It may have been both, or neither,—the term Durobrivae applying to the passage (ford, ferry, or bridge) interjacent, rather than to the two *castra* which defended it.

The present difference in the names is *not* unimportant. The distinction between the Danish and Anglo-Saxon nomenclature, in the case of geographical terms, has of late years commanded the attention of investigators; and it is well known, not only that certain words and forms are Danish, as opposed to Saxon (and *vice versâ*), but that the distribution of such words and forms as local names is remarkably regular. Thus, where one Danish form appears, others do so also; and, although there is no part of the island where Saxon forms are excluded, there are vast tracts where there is nothing Danish.

The Danish equivalent to the Saxon *-tun* is *-by;* so that *New-by* = *New-ton.*

The Danish equivalent to the Saxon *sh* is *sk;* so that *Sk*ip-ton and *Fisk*er-ton=*Sh*ipton and Fi*sh*toft.

The Danish *C* = the Anglo-Saxon *ch*, — *C*arlby, as opposed to *Ch*arlton.

The Danish *kirk* = the Anglo-Saxon *church*, — the Danish form generally being initial, the Saxon final; as *Kirk*-by, Dun-*church.*

Lastly (though the list could easily be enlarged), in the districts where the Saxon forms prevail, the metamorphosis of the Roman term *castra* is *-chester* or *-cester* (God-man-*chester*, *Chester*-ton, Ciren-*cester*, &c.); whereas, where the Danish forms prevail, it is *-caster* (Tad-*caster*, An-*caster*, *Caster*-ton, &c.). There is no exception to this rule of distribution. Now, what takes place in the very spot under consideration? Even this,—that whilst *Lincolnshire* (on the borders of which *Castor* stands) is the most Danish of all the counties of England,— whilst *Northamptonshire* (to which it belongs) is largely Danish, — whilst *Caster*-ton, An-*caster*, &c., are the northern transformations of *castra*,—whilst every other Danish shibboleth (*sk, carl-, -by,* &c.) is rife and common as we advance towards *York*,—the moment we cross the *Nene*, and get into *Huntingdonshire*, *Beds*, and *Cambridgeshire*, the forms are *Chester*, in respect to the particular term *castra*, and exclusively Saxon in all others. No trace of Danish occupancy can be found in *Hunts;* so truly does the *Nene* seem to have been a boundary, and so abrupt was the transition from the Danes who said *castor*, to the Saxons who spoke of the *chester* (*ceastre*). More than this. At some time between the evacuation of the isle by the Romans and the Norman Conquest, the northern and southern defences — for such the castra of *Chester*-ton and *Castor* (details of the *Durobrivae*) were — may have constituted the opposed and hostile parts of a bilingual town; and the analogue between the present Germano-Danish frontier in Sleswick-Holstein may thus have been exhibited in England.

Just as the straight character of the remains of the Roman roads, now existing, between *Lincoln* and *Castor* induced us to draw our line as directly north and south as possible, the physical condition of the country south of *Castor* forbids us to assume any notable deviations either east or west. On the east lie the fenny tracts of *Whittlesea*, *Holme*, and *Ramsey;* and on the west the Oxford-clay tracts of *Hunts*, — tracts which probably were some of the last parts of the island to become occupied. This places Durolipons at God-man-*chester*. "Durolipons," writes Horseley, "has been generally settled at *Godmanchester* or *Huntingdon*. The situation on the north side of the river, and on a gentle descent, favours the opinion of *Huntingdon*,—the name, that of *Godmanchester;* but I believe there has been no Itinerary station at either one or the other." The reasoning of Horseley is more unsatisfactory here than in any other part of his work. He lays no stress whatever on the termination *-chester*. Identifying *Cambridge* with Durolipons, he writes that the "name intimates a bridge over a river, to which the name *Cambridge* is not unsuitable." But he never adds that between *Godmanchester* and *Huntingdon* there is the river *Ouse* and the necessity of a bridge. He continues: "Durobrivae" (which he strenuously urges to have been either *Castor* or *Chesterton*) "is the station next to Durolipons. The distance here is very exact. From Durobrivae to Durolipons, in the Itinerary, is 35 miles, and therefore the number of computed English miles should be nearly 26. For it is 5 miles from *Castor* on the *Nene* to *Stilton*, and 21 from *Stilton* to *Cambridge*, &c." Instead of this "21 miles," the real distance is 28. Hence, the numbers of Horseley, instead of coinciding, disagree. It should, however, be added that they do not come out clear for *Godmanchester*, which is no more than 18 English miles from the *Nene*. Nevertheless, *Godmanchester*, as the equivalent to Durolipons, involves the fewest difficulties. [R. G. L.]

DUROCASSES (*Dreux*). This name appears in the Antonine Itin. in the form Durocasis, and in the Table in the form Durocasio, on a road from Mediolanum Aulercorum, the capital of the Aulerci Eburovices, in Gallia, to Durocasses. Mediolanum is *Evreux*. The Itin. makes 17 Gallic leagues between Mediolanum and Durocasses, or 25½ M. P. *Dreux* is in the department of *Eure et Loir*, on the *Blaise*, a branch of the *Eure*. The place may have been within the territory of the Carnutes. If we compare the form of the word with Baiocasses, Viducasses, Velocasses, it seems probable that Durocasses is properly the name of a tribe. The name Durocasses was shortened to Drocae, and then to *Dreux*. [G. L.]

DUROCATALAUNUM. [Catalauni.]

DUROCOBRIVAE, in Britain, mentioned in the second Itinerary as being 12 miles from Verulamium (*St. Albans*), in the direction of Deva (*Chester*). Probably *Dunstable*. [R. G. L.]

DUROCORNOVIUM, in Britain, mentioned in the 13th Itinerary. The locality of *Duro-cornovium* is that of *Ciren-chester*, or the ancient *Corin*-eum. [Corineum.] It is 14 miles distant from Glevum (*Glo*-cester), and the military road between the two

places is traced at the present time. Where this crosses the *Fosse*-road, *Cirencester* stands, abundant in Roman remains of all kinds.

Name for name, as well as *place for place*, *Durocornovium* = *Corineum*, i. e. *Duro-corn*-ovium is *Corin*-eum in a compound form. The root lies in the name of the present river *Churn*; so that *Corin*-eum is simply the *Churn*, and *Duro-corn*-ovium is the *Churn*-water. The fact of the Roman towns being synonymous with the rivers on which they stood has already been noticed. [DEVA; DERVENTIO.] [R. G. L.]

DUROCORTORUM (*Reims*), is mentioned by Caesar (*B. G.* vi. 44) as a town of the Remi, the first Belgic people north of the Matrona (*Marne*). It afterwards took the name of the people, Remi, from which comes the modern name *Reims*. Strabo (p. 194), who writes the name Duricortora (Δουρικόρτορα), calls it the metropolis of the Remi, and says that it "receives the Roman governors;" which Walckenaer interprets to mean that it was the residence of the Roman governors of Gallia Lugdunensis. The importance of the position is shown by the great number of Roman roads which ran from Durocortorum to all points of the compass. Ptolemy (ii. 9), who mentions it as the principal town of the Remi, has the form Δουροκόττορον; and Stephanus B. (*s. v.*) has Δοροκόττορος, with an Ethnic name Δοροκοττόριος. It is probable that the genuine name is given by Caesar and by Strabo; for *Dur* is a common element in Gallic names, both at the beginning and at the end; and the word *Cort* appears also in the names Corterate and Cortoriacum. Coins of Durocortorum are given by Mionnet.

In a fragment of an oration of Fronto (*C. Frontonis Reliquiae*, ed. Niebuhr, p. 271) there are the words "et illae vestrae Athenae Durocorthoro," from which it is inferred that there was a school at Durocortorum, where rhetoric, a favourite study of the Galli, was cultivated. In Ammianus (xv. 11) the place is called Remi, and enumerated among the chief cities of Belgica Secunda. It was made the Metropolis of Belgica Secunda, and became an archiepiscopal see. The beautiful cathedral, in which the French kings were crowned, is said to have been built originally on the site of a Roman temple. Reims is on a stream, as the name implies, the *Vêle*, a branch of the *Aisne*.

Reims contained many edifices of the Roman period, out of the materials of which it is probable that the great churches have been constructed. There is still a triumphal arch, commonly called "L'Arc de triomphe de la porte de Mars," of uncertain date. It consists of three arches with eight Corinthian columns. The central and largest arch is about 37 feet high; the whole is ornamented with bas-reliefs. The rubbish has been cleared away from the arch, and it has undergone some restorations, which do not appear to have improved it. There was another triumphal arch erected by Flavius Constantinus, but it has been destroyed. About 400 paces from the triumphal arch of the gate of Mars is the *Mont-d'Arène*, the form of which shows it to have been an amphitheatre; but there is no evidence that it was ever constructed of stone. It is conjectured that the enclosure was of wood. The cathedral contains a piece of Roman sculpture commonly called the tomb of Jovinus, who attained to the honour of the Roman consulship. The reliefs are said to be in a good style. There are some traces of ancient Thermae at *Reims* in three houses in the *Rue du Cloitre*. Bergier, who wrote on the Roman roads, traced seven which branched out from Reims. The authority for the antiquities of Reims is the *Description Historique et Statistique de la Ville de Reims*, par J. B. F. Gérusez. [G. L.]

DUROLEVUM. [DUROBRIVAE, in *Kent*.]

DUROLIPONS. [DUROBRIVAE, north of the *Thames*.]

DUROLITUM, in Britain, mentioned in the ninth Itinerary as being 15 miles from *London*, in the direction of *Norwich*. Another reading makes the distance 17 miles. The line of this road is probably indicated by the syllable *Strat-* in *Strat*-ford (east of London). *Leyt*-on or *Leyt*-on-stone = Durolit-um. [R. G. L.]

DURO'NIA, a city of Samnium, mentioned only by Livy (x. 39), who tells us that it was taken by the Roman consul L. Papirius in B. C. 293; and from the amount of booty taken, and number of persons put to the sword, it would seem to have been a considerable town. Its site is supposed by Italian topographers to be occupied by a place called *Civita Vecchia*, 10 miles N. of *Bojano* (Bovianum), and 3 from *Molise*, beneath which flows a small stream, said to be still called the *Durone*, a tributary of the *Trigno* or Trinium. (Galanti, *Descr. delle Due Sicil.* lib. ix. c. 4; Romanelli, vol. ii. p. 472.) This locality was certainly that of an ancient city, but the evidence to connect it with Duronia is far from satisfactory. [E. H. B.]

DURO'NUM, a town in North Gallia. The Antonine Itin. and the Table place Duronum between Bagacum (*Bavay*) and Verbinum (*Vervins*). The distance from Bagacum to Duronum is 12 Gallic leagues in the Itin., and 11 in the Table. Both authorities make it 10 from Duronum to Verbinum. The term Duronum indicates a place on a stream, and the place which corresponds to the position in the Itins. is *Estreung la Chaussée*, or *Estrun Cauchie*, as D'Anville writes it. The word *Estrun* is a corruption of Strata, one of the later Roman names for a road; and *Cauchie* or *Chaussée* is a corruption of the late Latin form "Calceia." Before reaching Vervins, there is a place at the passage of the river *Oise* named *Estrée-au-pont*, a clear indication of the direction of the old road. Nothing is known of Duronum; but these remarks of D'Anville are useful in showing what are the indications of ancient roads in France. (D'Anville, *Notice*, &c.) [G. L.]

DURO'STORUM, DURO'STOLUM (Δουρόστορον, Δουρόστολον or -ος), a place of Lower Moesia, on the southern bank of the Danube. It was an important town and fortress, in which, according to Ptolemy (iii. 10. § 10), the *legio prima Italica* was stationed, while according to others, it was the headquarter of the *legio XI. Claudia*. Durostorum is also celabrated as the birthplace of Aëtius. (Jornand. *Get.* 43; comp. 115; Amm. Marc. xxvii. 4; Procop. *De Aed.* iv. 7; Hierocl. p. 636; Theophyl. i. 8, vi. 6; Itin. Ant. 223; Geogr. Rav. iv. 7.) [L. S.]

DUROTRIGES, in Britain, mentioned by Ptolemy as lying south and west of the Belgae, = *Dor*-setshire. [R. G. L.]

DUROVERNUM. [DUROBRIVAE, in *Kent*.]

DURVUS MONS. The *St. Immerthal* and the *Münsterthal*, in the canton of *Bern* in Switzerland, are separated by a rocky barrier of the Jura, in which is the cleft through which the road leads from *Biel* to *Bâle* and *Porentruy*. It is supposed by some writers to have been a natural cleft in which the Romans formed their road, as a Roman inscription

on the rock shows; but the reading of it is said to be doubtful. The place is called the *Pierre Pertuse* or Pertuis (Pertusa). According to D'Anville (*Notice*, &c.), the inscription contains the words VIA DVCTA PER MONTEM DVRVVM; and he adds that the mountain keeps its name *Durvau*. According to the inscription, a IIVIR COL. HELVET. superintended the work; the colonia is probably Aventicum (*Avenche*). [G. L.]

DYARDANES, a large river of India, mentioned only by Curtius (viii. 9. § 9). Forbiger conjectures, happily, that it is the same as the *Brahmaputra*, as no other river but it and the Ganges is likely to have nourished crocodiles and dolphins. Strabo (xv. p. 719) gives a similar description of a river called the Oedanes (Οἰδάνης), which Groskurd and others, without much reason, have supposed to be the same as the Iomanes of Pliny. [V.]

DYMAE, DYME (Δύμη), a town in the south of Thrace, on the western bank of the river Hebrus, and not far from its mouth. (Ptol. iii. 11. § 13; *Itin. Ant.* 333; Geogr. Rav. iv. 6; *Itin. Hier.* 602, where it is called *Demae*.) It is identified with the modern *Feredsjik*. [L. S.]

DYME (Δύμη, Dymae, Liv. xxvii. 31: Eth. Δυμαῖος, also Δύμιος, Steph. B. *s. v.*, Dymaeus, Cic. *ad Att.* xvi. 1; the territory ἡ Δυμαία, Pol. v. 17: nr. *Karavostási*), a town of Achaia, and the most westerly of the 12 Achaean cities, from which circumstance it is said to have derived its name. (Herod. i. 145; Pol. ii. 41; Strab. viii. p. 387.) It was situated near the coast, according to Strabo 60 stadia from the promontory Araxus, and according to Pausanias 30 stadia from the river Larisus, which separated its territory from Elis. It is further said by Strabo (viii. p. 337) to have been formed out of an union of 8 villages, one of which was called Teuthea (Τευθέα); and it is probable, that some of the different names, by which the city is said to have been called, were originally the names of the separate villages. Thus, its more ancient name is stated by Pausanias to have been Paleia (Πάλεια), and by Strabo to have been Stratus (Στρατός). The poet Antimachus gave it the epithet Cauconis, which was derived by some from the iron Caucon in the neighbourhood, and by others from the Caucones, who were supposed to have originally inhabited this district. (Strab. pp. 337, 341, 342, 388; Paus. vii. 17. § 5, seq.) After the death of Alexander the Great, Dyme fell into the hands of Cassander, but his troops were driven out of the city by Aristodemus, the general of Antigonus, B. C. 314. (Diod. xix. 66.) This city had the honour, along with Patrae, of reviving the Achaean League in 280; and about this time or shortly afterwards its population received an accession from some of the inhabitants of Olenus, who abandoned their town. (Pol. ii. 41.) [OLENUS.] In the Social War (B. C. 220, seq.), the territory of Dyme, from its proximity to Elis, was frequently laid waste by the Eleans. (Pol. iv. 59, 60, v. 17.) It is mentioned by Livy in the history of the war between Philip and the Romans, and Pausanias says that, in consequence of its being the only one of the Achaean cities which espoused the cause of the Macedonian king, it was plundered by the Romans (Paus. *l. c.*). From this blow it never recovered; and it is said to have been without inhabitants when Pompey settled here a large number of Cilician pirates. In the civil wars which followed, some of these new inhabitants were expelled from their lands, and resumed in consequence their old occupation. (Strab. pp. 387, 665; Appian, *Mithr.* 96; Plut. *Pomp.* 28; Cic. *ad Att.* xvi. 1, "Dymaeos agro pulsos mare infestum habere, nil mirum.") Both Strabo (p. 665) and Pliny (iv. 6) call Dyme a colony; but this statement appears to be a mistake, since we know that Dyme was one of the towns placed under the authority of Patrae, when it was made a Roman colony by Augustus (Paus. *l. c.*); and we are expressly told that no other Achaean town except Patrae was allowed the privilege of self-government. The remains of Dyme are to be seen near the modern village of *Karavostási*. (Leake, *Morea*, vol. ii. p. 160.)

In the territory of Dyme, near the promontory Araxus, there was a fortress, called TEICHOS (Τεῖχος), which was said to have been built by Hercules, when he made war upon the Eleans. It was only a stadium and a half in circumference, but its walls were 30 cubits high. It was taken by the Eleans under Euripides in the Social War, B. C. 220, but it was recovered by Philip and restored to the Dymaeans in the following year. Its site is perhaps occupied by the castle of *Kallogriá*. (Pol. iv. 59, 88; Leake, vol. ii. p. 164.) There were also two other places in the territory of Dyme, between the city and the frontiers of Elis, named HECATOMBAEON (Ἑκατόμβαιον) and LANGON (Λάγγων), the latter of which, however, appears properly to have belonged to the Eleans. Near Hecatombaeon Aratus and the Achaeans were defeated by Cleomenes, who followed up his victory by gaining possession of Langon, B. C. 224. (Pol. ii. 51; Plut. *Cleom.* 14.)

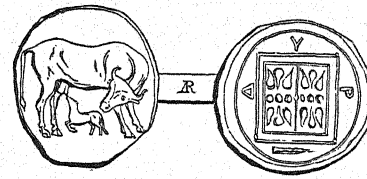
DY'NDASUM (Δίνδασον; *Eth.* Δυνδασεύς), a place in Caria, about which Stephanus (*s. v.*) quotes the second book of Alexander on Caria, in which passage Dyndasa is mentioned with Calynda. [G. L.]

DYRAS (Δύρας : *Gurgo*), a river in Malis, which in the time of Herodotus flowed between the Spercheius and the Melas into the Maliac gulf. At present, the *Gurgo* (the Dyras) and the *Mavranéria* (the Melas) unite their streams and fall into the Spercheius. (Herod. vii. 198; Strab. ix. p. 428; Leake, *Northern Greece*, vol. ii. pp. 11, 26.)

DYRIS, DYRIN. [ATLAS].

DYRRHA'CHIUM (Δυρράχιον, Steph. B.; Ptol. iii. 13. § 3, viii. 12. § 3: *Eth.* Δυρράχιος, Δυρραχηνός, Dyrrachinus), a city on the coast of Illyricum in the Ionic gulf, which was known in Grecian history as EPIDAMNUS (Ἐπίδαμνος, Strab. vii. p. 316).

It is doubtful under what circumstances the name was changed to that of DYRRHACHIUM, under which it usually appears in the Latin writers. Some have affirmed that the Romans, considering the word Epidamnus to be of ill omen, called it Dyrrhachium from the ruggedness of its situation. (Plin. iii. 23; Pomp. Mela, ii. 3. § 12.) The latter word is, however, of Greek and not of Latin origin, and is used by the poet Euphorion of Chalcis. (Steph. B. *s. v.*) Strabo (p. 316) applied the name to the high and craggy peninsula upon which the town was built, as does also the poet Alexander. (Steph. B. *s. v.*) And as Dyrrhachium did not exactly occupy the site of ancient Epidamnus (Paus. vi. 10. § 2), it probably usurped the place of the earlier name from its natural features.



Epidamnus was founded on the isthmus of an outlying peninsula on the sea-coast of the Illyrian Taulantii, about 627 B.C., as is said (Euseb. *Chron.*), by the Corcyraeans, yet with some aid, and a portion of the settlers, from Corinth; the leader of the colony, Phaleus, belonging to the family of the Heraclidae,

according to the usual practice, was taken from the mother-city Corinth. (Thuc. i. 24—26.) Hence the Corinthians acquired a right to interfere, which afterwards led to important practical consequences. Owing to its favourable position upon the Adriatic, and fertile territory, it soon acquired considerable wealth, and was thickly peopled.

The government was a close oligarchy; a single magistrate, similar to the "Cosmopolis" at Opus, was at the head of the administration. The chiefs of the tribes formed a kind of council, while the artisans and tradesmen in the town were looked upon as slaves belonging to the public. In process of time, probably a little before the Peloponnesian War, intestine dissensions broke up this oligarchy. The original "archon" remained, but the "phylarchs" were replaced by a senate chosen on democratical principles. (Arist. *Pol.* ii. 4. § 13, iii. 11. § 1, iv. 33. § 8, v. 1. § 6, v. 3. § 4; Müller, *Dor.* vol. ii. p. 160, trans.; Grote, *Greece*, vol. iii. p. 546.) The government was liberal in the admission of resident aliens; but all individual dealing with the neighbouring Illyrians was forbidden, and the traffic was carried on by means of an authorised selling agent, or "Poletes." (Plut. *Quaest. Graec.* c. 29, p. 297; Aelian, *V. H.* xiii. 16.) The trade was not however confined to the inland tribes, but extended across from sea to sea, even before the construction of the Egnatian Way, and an Inscription (Boeckh, *Corp. Inscr.* No. 2056) proclaims the gratitude of Odessus in the Euxine sea towards a citizen of Epidamnus.

The dispute respecting this city between Corinth and Corcyra was occasioned by a contest between the oligarchical exiles, who had been driven out by an internal sedition, and the Epidamnian democracy, in which the Corinthians supported the former. The history of this struggle has been fully given by Thucydides (*l. c.*), in consequence of its intimate connection with the origin of the Peloponnesian War, but we are left in ignorance of its final issue. Nor is anything known of its further history till 312 B.C., when, by the assistance of the Corcyraeans, Glaucias, king of the Illyrians, made himself master of Epidamnus. (Diod. xix. 70, 78.) Some years afterwards it was surprised by a party of Illyrian pirates; the inhabitants, on recovering from their first alarm, fell upon their assailants, and succeeded in driving them from the walls. (Polyb. ii. 9.) Not long after, the Illyrians returned with a powerful fleet, and laid siege to the town; but fortunately for the city, the arrival of the Roman consul compelled the enemy to make a hasty retreat. Epidamnus from this time placed itself under the protection of the Romans, to whose cause it appears to have constantly adhered, both in the Illyrian and Macedonian wars. (Polyb. ii. 11; Liv. xxix. 12, xliv. 30.)

At a later period, Dyrrhachium, as it was then called, and a free state (Cic. *ad Fam.* xiv. 1), became the scene of the contest between Caesar and Pompeius. The latter moved from Thessalonica, and threw himself before Dyrrhachium; the Pompeians entrenched themselves on the right bank of the Apsus, so effectually that Caesar was obliged to take up his position on the left, and resolved to pass the winter under canvass. This led to a series of remarkable operations, the result of which was that the great captain, in spite of the consummate ability he displayed in the face of considerable superiority in numbers and position, was compelled to leave Dyrrhachium to Pompeius, and try the fortune of war upon a second field. (Caesar, *B. C.* iii. 42—76; Appian, *B. C.* ii. 61; Dion Cass. xli. 49; Lucan, vi. 29—63.) Dyrrhachium sided with M. Antonius during the last civil wars of the Republic, and was afterwards presented by Augustus to his soldiers (Dion Cass. ii. 4), when the Illyrian peasants learned the rudiments of municipal law from the veterans of the empire. The inhabitants, whose patron deity was Venus (Catull. *Carm.* xxxiv. 11), were, if we may believe Plautus (*Menaechm.* act ii. sc. i. 30—40), a vicious and debauched race. The city itself, under the Lower Roman Empire, became the capital of the new province, Epirus Nova (Marquardt, *Handbuch der Rom. Alt.* p. 115), and is mentioned by the Byzantine historians as being still a considerable place in their time (Cedren. p. 703; Niceph. Callist. xvii. 3). Gibbon (*Decline and Fall*, vol. v. pp. 345—349; comp. Le Beau, *Bas Empire*, vol. xv. pp. 133—145) has told the story of the memorable siege, battle, and capture of Dyrrhachium, when the Norman Robert Guiscard defeated the Greeks and their emperor Alexius, A.D. 1081—1082. The modern *Durazzo* represents this place; the surrounding country is described as being highly attractive, though unhealthy. (*Albanien, Rumelien, und die Oesterreichisch Montenegrische Gränze*, Jos. Müller, Prag. 1844, p. 62.) There are a great number of autonomous coins belonging to this city, none however under the name of Epidamnus, but always with the *epigraph* ΔΥΡ, or more rarely ΔΥΡΑ,— the *type*, as on the coins of Corcyra, a cow suckling a calf; on the reverse, the gardens of Alcinous. (Eckhel, vol. ii. p. 155.) [E. B. J.]

COIN OF DYRRHACHIUM.

DYRTA (τὰ Δύρτα, Arrian, iv. 30), a small town in the country of the Assacani, in the western *Panjab*, visited by Alexander the Great. [V.]

DYSO'RUM (Δύσωρον), a mountain, the situation of which depends upon that of the lake Prasias and the extent that should be assigned to the Macedonia of Herodotus (v. 17), in his description of the embassy sent by Megabazus to Amyntas I., king of Macedonia. By Macedonia, Herodotus probably meant the kingdom of his own time, or at least that of Amyntas, who had already made great advances to the Strymon. Prasias will then be the same as the lake Cercinitis, and Dysorum that part of the mountain range towards *Sokhó* which separates the Strymonic plain from those that extend to Thessalonica and the Axius. (Leake, *Northern Greece*, vol. iii. p. 210, iv. p. 581.) [E. B. J.]

DYSPO'NTIUM (Δυσπόντιον: *Eth.* Δυσποντιεύς), an ancient town, in the territory of Pisa, said to have been founded by a son of Oenomaus, is described by Strabo as situated in the plain on the road from Elis to Olympia. It lay north of the Alpheius, not far from the sea, and probably near the modern *Skaphidi*. Being destroyed by the Eleians in their war with the Pisatae [ELIS], its inhabitants removed to Apollonia and Epidamnus. (Strab. viii. p. 357; Paus. vi. 22. § 4; Steph. B. *s. v.*; Curtius, *Peloponnesos*, vol. ii. p. 73.)

DYSTUS (Δύστος: *Eth.* Δύστιος: *Dhysta*), a town in Euboea in the vicinity of Eretria, mentioned by Theopompus. It still bears the name of *Dhysta*, which village is situated a little to the northward of *Porto Búfalo*. (Steph. B. *s. v.*; Leake, *Northern Greece*, vol. ii. pp. 436, 439.)

E.

EBAL MONS (ὄρος Γαιβάλ), a mountain of Palestine, always associated in the sacred narrative with the neighbouring Gerizim, from which it is separated by a narrow valley, in which is situated the town of *Nablouse* [NEAPOLIS], the ancient Shechem; Ebal being on the north of the valley, Gerizim on the south, which may account for a phenomenon remarked by some travellers, and thus described by Maundrell (p. 61):—"Tho' neither of the mountains has much to boast of as to their pleasantness, yet, as one passes between them, Gerizim seems to discover a somewhat more verdant, fruitful aspect than Ebal. The reason of which may be, because fronting towards the north, it is sheltered from the heat of the sun by its own shade: whereas Ebal, looking southward, and receiving the sun that comes directly upon it, must by consequence be rendered more scorched and unfruitful." It was from Mount Ebal that Moses commanded the blessings to be pronounced by the children of Israel, as the curses were from Mount Gerizim (*Deut.* xi. 29); and upon this mountain, according to the Hebrew text of the Pentateuch, they were to set up plaistered stones inscribed with the Decalogue, and to erect an altar and offer sacrifices (*Deut.* xxvii. 4, 5; comp. *Josh.* viii. 30, 31). The remarkable variation of the Samaritan Pentateuch, which assigns Gerizim to this use, is a matter of history and philology, which cannot be here discussed. It is remarkable that the identity of the two mountains in the vicinity of *Nablouse* with the Ebal and Gerizim of Scripture was called in question by Eusebius and S. Jerome, who assign to these Scripture names a position E. of Jericho and in the vicinity of Gilgal (*Onomast. s. v. Gabal*), in accordance, as the latter thinks, with the sacred narrative (*Comment. in Deut.*). Independently, however, of the fact that no mountains or hills are found in the Valley of the Jordan, between Jericho and the river, it may be observed that the objection to the received sites is based on a misunderstanding of the text; and although the transition in the history (*Joshua*, viii. 30) from the valley of the Jordan to the heart of Mount Ephraim is sudden and abrupt, yet the history of Jotham (*Judges*, ix.) unmistakeably places Gerizim in the immediate vicinity of Shechem, of the identity of which with *Nablouse* [NEAPOLIS], there can be no doubt. The question is fully discussed by Reland, with his usual learning and acumen. (*Dissert. Miscell.* pars i. p. 121, &c.) [G. W.]

EBELLI'NUM. [ILERGETES.]

EBLANA. in Ireland, mentioned by Ptolemy as lying between the outlets of the rivers Bubinda (*Boyne*) and Oboca, = *Dublin*. [R. G. L.]

EBORA (Ἔβουρα: *Evora*, Ru.), an important inland city of Lusitania, on the high road from Augusta Emerita (*Mecida*) to Olisipo (*Lisbon*). It was a municipium, with the old Latin franchise and the surname of Liberalitas Julia. (*Itin. Ant.* pp. 418, 426; Plin. iv. 21. s. 35; Ptol. ii. 5. § 8; Coins ap. Florez, *Med.* vol. i. pp. 380, foll.; Mionnet, vol. i. p. 2, *Suppl.* vol. i. p. 3; Sestini, p. 6; Eckhel, vol. i. p. 11; Inscr. ap. Gruter, p. 225. No. 3, p. 489. No. 9.) Among the fine ruins of the city, the most remarkable are those of an aqueduct and a temple of Diana. (Florez, *Esp. S.* vol. xiv. p. 100 Murphy, *Travels in Portugal*, p. 302). [P. S.]

EBORACUM (Ἐβόρακον), the chief Roman town in Britain. The first author who mentions Eboracum is Ptolemy (ii. 3. § 16), with whom it is a city of the Brigantes, and the station of the Sixth (the Victorious) Legion. It is by no means certain, however, that the words Λεγίων ϛ νικεφόριος may not be the gloss of some later writer. That, place for place, the station of the legion was Eboracum, is shown by the context of the notice. For Eboracum and Camunlodunum, the latitudes and longitudes are given, but not for the locality of the Sixth Legion; these being the same with the former of those two places:—

Ἐβόρακον	κ.	νζ.	γ.
Λεγίων ϛ νικεφόριος	.	.	.
Καμουνλόδουνον	ιη.	δ.	ηζ.

That Eboracum is *York* has never been doubted. The Anglo-Saxon *Eoforwic*, and the Norse *Jordvik*, connect the ancient and modern forms, name for name. Place for place, too, the frequent notices of Eboracum (generally written Eburacum) in the Notitia, give us similar evidence. Lastly, a single inscription, which will be noticed in the sequel, with the name EBVRACVM, has been found within the area of the present city.

The early importance of English and Saxon *York* has drawn a considerable amount of attention to its history and antiquities; nevertheless, the Roman remains found within its precincts are by no means of first-rate importance. They fall short of, rather than exceed, the expectations suggested by the historical prominence of the town. On the other hand, they have engaged the attention of able local archaeologists. First comes the consideration of the actual site of the Roman town, as determined by its line of wall. Of this, satisfactory remains have been discovered, in the shape of foundations; as have also Roman bricks, transferred to several more recent structures. Remains, too, of one of the gates have been found,—probably the Praetorian; though of this the evidence is only circumstantial. It fronts the north, the part most exposed to hostile inroads. Its locality is that part of the modern city wall which adjoins Bootham Bar. Here we find two walls extending from 20 to 30 feet inwards, parallel to each other, and at right angles with the rampart-wall, and near them some rudely-sculptured grit-stones, which seem to have formed part of a pediment or frieze. On one is seen a quadriga; the carving being but rude and indifferent, and there being no inscriptions to throw a light over its meaning. Foundations, too, of more than one mural tower can be traced.

The remains which have been discovered form the walls of three sides of the ancient Eboracum only. For the fourth, the traces have still to be detected. From what, however, has been found, Mr. Wellbeloved considers that "we are warranted in concluding that the Roman city was of a rectangular form, of about 650 yards by 550, enclosed by a wall and rampart-mound of earth on the inner side of the wall, and perhaps a fosse without." This area is not only inconsiderable as compared with that of

the present city, but as compared with the *whole* extent of the ancient one, since the preceding measurements apply only to the parts within the walls; the suburbs being considerable, and the Roman remains (as opposed to the intra-mural part of the town) being abundant. The chief streets of these suburbs followed the chief roads, of which the most important was that which led to Calcaria (*Tadcaster*). Next to this was the one towards Isurium (*Aldborough*). The others, in the direction of Mancunium (*Manchester*) and Praetorium (*Patrington*), are less rich in relics. In other words, the streets of the suburbs of the ancient Eboracum seem to have been prolonged in the north and south rather than in the east and west directions. The river *Fosse*, however much it may be more or less a natural channel — a water-course rather than a cutting — retains its Roman name. Of private dwellings, baths (with the hypocausts), pavements (tesselated), the remains are numerous. So they are in respect to temples, altars, and votive tablets. From these some of the most remarkable inscriptions are —

5.

M . VEREC . DIOGENES liiiilVIR COL
EBVRIDÆIDMQ MORTCIVESBITVRIX
CVBVS HAEC SIBI VIVVS FECIT

In the last of these inscriptions the combination liiiilVIR gives us the title *Sevir*, a title applied to certain municipal, colonial, or military officers of unascertained value. It is this inscription, too, where we find the name EBVR (= *Eburacum*), the term *col* (= *colonia*) attached to it.

The first of them is interesting from another fact; viz. the foreign character of the god Serapis, whose name it bears. Besides this piece of evidence to the introduction of exotic superstitions into Roman Britain, a so-called Mithraic slab has been found at York, i. e. a carved figure of a man, with a cap and chlamys, stabbing a bull. The dress, act, and attitude, along with certain characteristics in the other figure of the group, appear to justify this interpretation.

Tombs, sepulchral inscriptions, urns, Samian ware in considerable quantities, form the remainder of the non-metallic Roman antiquities of York; to which may be added a few articles in glass. Fibulae, armillae, and coins, represent the metallurgy. Of these latter those of Geta are the most numerous. It has been remarked, too, that, although throughout Britain generally, of the coins of the two usurpers, those of Carausius are the more common, in the neighbourhood of York they are less abundant than those of his successor Allectus.

The evidence that Severus died at York is from his life in Spartianus (c. 19), whose statement is repeated by Aurelius Victor (*de Caes.* 20), Eutropius (viii. 19), and other later authorities. Victor (*l. c.*) calls Eboracum a municipium; but in an ancient inscription it is styled a colonia. The emperor Constantius also died at Eboracum, as we learn from Eutropius (x. 1). The other accredited facts, such as the residence of Papinian, and the birth of Constantine the Great, at York, rest on no classical evidence at all. The supposed funeral mounds of Severus, near York, are natural, rather than artificial, formations. (Philipp's *Yorkshire*; Wellbeloved's *York*.) [R. G. L.]

EBREDUNUM, EBURODUNUM (*Yverdun*). This is the Castrum Ebredunense of the Notitia of the Gallic provinces, at the southern end of the lake of *Neuchâtel*, in the canton of *Vaud* in Switzerland. It is situated where the river Orbe enters the lake, and it is supposed to be the place which is mentioned in the Notitia of the empire: "in provincia Gallia Ripensi, praefectus classis Barcariorum Ebruduni Sapaudiae;" for the fleet, whatever it may have been, could not have been kept at Ebrodunum on the Durance. [G. L.]

EBRODU'NUM (Ἐβρόδουνον: *Embrun*). There is some variation in the writing of the first part of the name. It is Epebrodunum in Strabo's text, but Casaubon corrected it. Strabo (p. 179) says that "from Tarasco to the borders of the Vocontii and the beginning of the ascent of the Alps, through the Druentia and Caballio, is 63 miles; and from thence to the other boundaries of the Vocontii, to the kingdom of Cottius, to the village of Ebrodunum, 99." Ebrodunum was in the country of the Caturiges, and just on the borders of the Vocontii, as it appears.

The position of Ebrodunum is easily determined by the Itins. and the name. Ptolemy (iii. 1) mentions Eborodunum as the city of the Caturiges, and no other. In the Jerusalem Itin. Ebrodunum is called Mansio, like Caturiges (*Chorges*), which was also in the territory of the Caturiges. [CATURIGES.] There are Roman remains at *Chorges*, and none are mentioned at Embrun, though it appears that the cathedral of Embrun is built on the site of a Roman temple, or that some of the materials of a temple were used for it. [G. L.]

EBUDA, EBUDAE INSULAE. [HEBUDES.]

EBU'RA or E'BORA. 1. (Ἔβουρα, Ἔβορα, *S. Lucar de Barrameda*), a city and fortress of the Turduli, in Hispania Baetica, at the mouth of the river Baetis (*Guadalquivir*), on its left bank. (Strab. iii. p. 140; Mela, iii. 1, *Castellum Ebora in litore*; Ptol. ii. 4. § 11; *Itin. Ant.* p. 426; Steph. B. *s. v.*; Inscr. ap. Gruter, p. 489.)

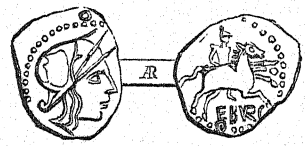
2. EBURA CEREALIS, an inland city of Hispania Baetica, probably in the neighbourhood of *Santa*

Cruz. (Plin. iii. 1. s. 3; Inscr. ap. Muratori, p. 461; Florez, *Esp. S.* vol. xii. p. 390; Ukert, vol. ii. pt. i. p. 370.)

3. (Ἐβόρα), an inland city of the Edetani, in Hispania Tarraconensis, SE. of Caesaraugusta, only mentioned by Ptolemy (ii. 6. § 63). (Brietius, *Tab. Parall.* vol. i. p. 268; Ukert, vol. ii. pt. i. p. 417.)

4. Mela (iii. 1) mentions an Ebora as a port of the Celtici, at the NW. extremity of the peninsula, which Ukert takes to be *Barre* on the Tambre. (Ukert, vol. ii. pt. i. p. 438.) [P. S.]

EBURI (*Eboli*), a town of the Lucanians, mentioned only by Pliny (iii. 11. s. 15), who expressly ascribes it to that people; though, from its situation N. of the Silarus, it would seem to have naturally belonged to Campania, or the Picentini. The ruins of the ancient town are visible on a hill called the *Monte d'Oro*, between the modern city of *Eboli* and the right bank of the Silarus, over which are the ruins of a fine Roman bridge. An inscription found there, with the words "Patr. Mun. Ebur.," i. e. Patrono Municipii Eburini, both proves the ruins in question to be those of Eburi, and attests its municipal rank. (Romanelli, vol. iii. p. 614; Mommsen, *I. R. N.* 189.) [E. H. B.]



EBUROBRICA (in the Antonine Itin.), EBUROBRIGA (in the Table), was on a road between Autesiodurum (*Auxerre*) and Augustobona (*Troyes*). There is the usual difficulty about the distances, but it is not great. It is agreed that the place is *St. Florentin*, on the small river *Armance*, which flows into the *Armançon*, a branch of the *Yonne*. The termination *brica*, *briga*, or *briva* is all one, and always indicates the passage of a river. D'Anville observes that between *St. Florentin* and *Auxerre* the passage of the *Sérain* is at a place called *Pontigny*, in which case we have a Roman name indicating the same fact that the Celtic term "briva" or "briga" indicates. [G. L.]

EBUROBRI'TIUM (*Ebora de Alcobaza*), a town of Lusitania. (Plin. iv. 21. s. 35; Florez, *Esp. S.* vol. xiv. p. 176.) [P. S.]

EBUROMAGUS. [Hebromagus.]

EBURO'NES (Ἐβούρωνες, Strab. p. 194), a nation in that division of Gallia which Caesar names the Belgae. He says that the Condrusi, Eburones, Caeraesi, and Paemani were called by the one name of Germani (*B. G.* ii. 4). When the Usipetes and Tenchtheri, who were Germans, crossed the Rhine from Germania (B. C. 55), they first fell on the Menapii, and then advanced into the territories of the Eburones and Condrusi, who were in some kind of political dependence on the Treviri. (*B. G.* iv. 6.) The position of the Eburones was this. On the Rhine the Eburones bordered on the Menapii, who were north of them, and the chief part of the territory of the Eburones was between the Mosa (*Maas*) and the *Rhine*. (*B. G.* vi. 5; v. 24.) South of the Eburones, and between them and the Treviri, were the Segni and Condrusi (*B. G.* vi. 32); and the Condrusi were in the country of *Liège*. [Condrusi.] The Eburones must have occupied *Limburg* and a part of the Prussian Rhine province. In B. C. 54, Caesar quartered a legion and a half during the winter in the country of the Eburones, under the command of his legati, Q. Titurius Sabinus and L. Aurunculeius Cotta. The Eburones, headed by their two kings, Ambiorix and Cativolcus, attacked the Roman camp; and after treacherously inducing the Romans to leave their stronghold on the promise of a safe passage, they massacred nearly all of them. (*B. G.* v. 26—37.) In the following year Caesar entered the country of the Eburones, and Ambiorix fled before him. Cativolcus poisoned himself. The country of the Eburones was difficult for the Romans, being woody and swampy in parts; and Caesar invited the neighbouring people to come and plunder the Eburones, in order to save his own men, and, also, with the aid of great numbers, to exterminate the nation. (*B. G.* vi. 34). While Caesar was ravaging the country of the Eburones, he left Q. Cicero with a legion to protect the baggage and stores, at a place called Aduatuca, which he tells us in this passage had been the fatal quarters of Sabinus and Cotta, though he had not mentioned the name of the place before (v. 24). He places Aduatuca about the middle of the territory of the Eburones; and there is good reason for supposing that the place is *Tongern*. [Aduatica.] Caesar burnt every village and building that he could find in the territory of the Eburones, drove off all the cattle, and his men and beasts consumed all the corn that the badness of the autumnal season did not destroy. He left those who had hid themselves, if there were any, with the hope that they would all die of hunger in the winter. And so it seems to have been, for we hear no more of the Eburones. Their country was soon occupied by another German tribe, the Tungri.

The annexed coin is usually assigned to the Eburones; but as the nation was extirpated by Caesar, it could have had no coins. The coin may perhaps belong to the Eburovices, or to Eburodunum. [G. L.]

COIN OF THE EBURONES.

EBUROVI'CES, a Gallic tribe, a branch of the Aulerci. [Aulerci.] They are mentioned by Caesar (*B. G.* iii. 17) with the Lexovii. Pliny (xv. 18) speaks of the Aulerci, "qui cognominantur Eburovices, et qui Cenomani." Ptolemy (ii. 8) makes the Αὐλέρκοι Ἐβουρασικοί extend from the Ligeris to the Sequana, which is not true. Their chief place was Mediolanum (*Evreux*). Their limits correspond to those of the diocese of *Evreux*, and they are north of the Carnutes. [G. L.]

EBUSUS. [Pityusae.]

ECBA'TANA (τὰ Ἐκβάτανα: the genuine orthography appears to be Ἀγβάτανα, as it is now written in Herodotus, and as we learn from Steph. B. it was written by Ctesias: Ἀποβάτανα, Isid. *Char.* p. 6, ed. Hudson: Ecbatana-ae, Hieron. *Chron. Euseb.*; Lucil. *Satyr.* vii.), a celebrated ancient city of Media. Its foundation was popularly attributed, like those of many other very ancient places, to Semiramis, who is said to have made a great road to it from Assyria, by Mt. Zarcaeus or Zagros, to have built a palace there, and to have plentifully supplied the district in which it was situated with water, by means of an enormous tunnel or aqueduct. (Diod. ii. 13.) According to the same author (*l. c.*), the city of Semiramis was seated in a place at the distance of twelve stadia from the Orontes (*Mt. Elwend*), and would therefore correspond pretty nearly with the position of the present *Hamadân*. Herodotus tells a different story: according to him, the city was of later origin, and was built by the com-

mand of Deioces, who had been elected king by the people, after they had renounced their former independence. Herodotus describes with considerable minuteness the peculiar character of this structure,—which had seven concentric walls, each inner one being higher than the next outer one by the battlements only. The nature of the ground, which was a conical hill, favoured this mode of building. These battlements were painted with a series of different colours: the outermost was white, the second black, the third purple, the fourth blue, the fifth bright red, and sixth and seventh, respectively, gilt with silver and gold. It has been conjectured that this story of the seven coloured walls is a fable of Sabaean origin, the colours mentioned by Herodotus being precisely the same as those used by the Orientals to denote the seven great heavenly bodies, or the seven climates in which they are supposed to revolve. (Rawlinson, *J. R. Geogr. Soc.* vol. x. p. 128.) Herodotus adds, what is clearly improbable, that the size of the outer wall equalled in circumference that of the city of Athens. He probably obtained his information from the Medes he met with at Babylon. Diodorus, on the other hand, states that Arbaces, on the destruction of Nineveh, transferred the seat of empire to Ecbatana (ii. 24—28), so that, according to him, it must have been already a great city. Xenophon, at the foot of the Carduchian hills, heard that there were two principal roads from Assyria; one to the S. into Babylonia and Media, and the other to the E. to Susa and Ecbatana. It would seem pretty certain, that the former is the road by *Kermanshâh* to *Hamadân*; the latter, that by *Rowandiz* and *Keli Shin* into *Azerbaijan*, and thence through the valleys of *Kurdistân* (*Mah-Sabadan*) and *Laristân* to Susa. He mentions that the great king passed his summer and spring respectively at Susa and Ecbatana (*Anab.* iii. 5. § 15), and, in another place, that the Persian monarch spent generally two summer months at Ecbatana, three spring months at Susa, and the remaining seven months at Babylon (*Cyrop.* viii. 6. § 22). The same fact is noticed by Strabo (xi. p. 523). During the period of the wars of Alexander the Great we have frequent mention of Ecbatana: thus, after Arbela, Dareius flies thither, taking, most likely, the second of the routes noticed by Xenophon (Arrian, *Anab.* iii. 19. § 2). Alexander marching in pursuit of him, comes to it from Susa (iii. 19. § 4), and transports thither as to a place of peculiar security the plunder which he had taken previously at Babylon and Susa, ordering Parmenio to place them εἰς τὴν ἄκραν τὴν ἐν Ἐκβατάνοις, and to leave there a force of 6000 Macedonians under Harpalus as their guard (iii. 19. § 7). Again, when Alexander at last overtook and captured Bessus, he sends him to Ecbatana—as to the most important place in his new dominions, to be put to death by the Medes and Persians (iv. 7. § 3); and, on his return from the extreme east, Alexander sacrifices at Ecbatana and exhibits games and musical contests (vii. 14. § 1). At Ecbatana, Alexander's favourite Hephaestion died, and the conqueror is said to have destroyed the famous temple of Aesculapius there, in sorrow for him; an anecdote, however, which Arrian does not believe (vii. 14. § 5). In Polybius we have a curious description of the grandeur of this ancient town, as it had existed up to the time of Seleucus. He states that, of all the provinces of Asia, Media was the one best fitted, from natural causes, for the maintenance of a great and settled monarchy, the richness of its land being remarkable and the abundance both of its inhabitants and of its cattle. He remarks of Ecbatana itself, that it was situated in the northern part of the province, adjoining the districts which extend thence to the Palus Maeotis and the Euxine,—and that it was under the roots of Mt. Orontes (*Elwend*) in a rocky situation. He adds that there were no walls round it, but that it had a citadel of enormous strength, and, adjoining the citadel, a royal palace full of rich and beautiful workmanship,—all the wood used being cedar or cypress, but wholly covered with silver and golden plates: most of these metallic ornaments, he subsequently states, had been carried away by the soldiers of Alexander, Antigonus and Seleucus, the temple of Aena (*Anaitis*) alone preserving some of these decorations up to the time when Antiochus came there; so that a considerable sum of money was coined from them. The book of *Judith* gives a remarkable account of the building of Ecbatana "in the days of Arphaxad who reigned over the Medes in Ecbatana," from which it is evident that it was a place of great strength (i. 2—4). It has not been quite satisfactorily made out who this Arphaxad was; and some have identified him with Phraortes and some with Deioces. The former is, perhaps, the most probable conclusion, as the same book relates a few verses further his overthrow by Nebuchodonosor "in the mountains of Ragau" (v. 14), which corresponds with Herodotus's statement, that this king fell in a battle with the Assyrians (i. 102). The place is also mentioned in 2 *Maccab.* i. 3, where it is stated that Antiochus died there, on his flight from Persepolis; in *Tobit*, ii. 7, vi. 5, vii. 1, where it is evidently a place of importance; and in *Ezra*, vi. 2, under the name of Achmetha, when the decree of Cyrus for the restoration of the Jews was found "in the palace that is in the province of the Medes." Subsequently to the period of the wars of the Seleucidae, we find scarcely any mention of Ecbatana,—and it might be presumed that it had ceased to be a place of any note, or that its site had been occupied by a city of some other name: Pliny, however, alludes to it, stating that it was built (more probably, restored) by Seleucus (vi. 14. s. 17); adding, a little further on, that it was removed by Dareius to the mountains (vi. 26. s. 29), though it would seem, that his two statements can hardly apply to the same place. Curtius speaks of it as "caput Mediae," remarking that it was (at the time when he was writing) under the domination of the Parthians (v. 8. § 1); while Josephus preserves, what was probably a Jewish tradition, that Daniel built, at Ecbatana in Media, a tower of beautiful workmanship, still extant in his day, asserting that it was the custom for the kings both Persian and Parthian to be buried there, and for the custody of their tombs to be committed to a Jewish priest (*Ant. Jud.* x. 11. § 7). He states that it was in this tower that the decree of Cyrus was discovered. (*Ant. Jud.* xi. 4. § 6.) Lastly, Ammianus places it in Adiabene (or Assyria Proper),—on the confines of which province he must himself have marched, when accompanying the army of Jovian (xxiii. 6).

Various theories have been propounded as to the origin of the name of Ecbatana, none of which are, we think, satisfactory. Bochart supposed that it was derived from *Agbatha*, which, he says, means "variously coloured;" but it is more probable

that it should be derived from "Achmetha." Herodotus and Ctesias write Agbatana. There seems little doubt that the Apobatana of Isidorus refers to Ecbatana, and is perhaps only a careless mode of pronouncing the name; his words are curious. He speaks of a place called Adrogiananta or Adrapananta, a palace of those among or in the Batani (τῶν ἐν Βατάνοις), which Tigranes, the Armenian, destroyed, and then of Apobatana, "the metropolis of Media, the treasury and the temple where they perpetually sacrifice to Anaitis." If the country of the Batani corresponds, as has been supposed, with Mesobatene, the position and description of Apobatana will agree well enough with the modern *Hamadán*. (C. Masson, *J. R. As. Soc.* xii. p. 121.) The coincidence of the names of the deity worshipped there, in Polybius Aena, in Isidorus Anaitis, may be noticed; and there is little doubt that the "Nanea" whose priests slew Antiochus and his army (2 *Maccab.* i. 13) was the goddess of the same place. Plutarch (*Artax.* c. 27) mentions the same fact, and calls this Anaitis, Artemis or Diana; and Clemens Alex. referring to the same place speaks of the shrine of Anaitis, whom he calls Aphrodite or Venus.

It is worthy of remark that Mr. Masson (*l. c.*) noticed outside the walls of *Hamadán* some pure white marble columns, which he conjectured might, very possibly, have belonged to this celebrated building.

It is, however, not a little curious that, though we have such ample references to the power and importance of Ecbatana, learned men have not been, indeed, are not still, agreed as to the modern place which can best be identified with its ancient position. The reason of this may, perhaps, be, that there was certainly more than one town in antiquity which bore this name, while there is a strong probability that there were, in Media itself, two cities which, severally at least, if not at the same time, had this title. If, too, as has been suspected, the original name, of which we have the Graecised form, may have meant "treasury," or "treasure-city," this hypothesis might account for part of the confusion which has arisen on this subject. It must also be remembered, that all our accounts of Ecbatana are derived through the medium of Greek or Roman authors, who themselves record what they had heard or read, and who, in hardly any instance, if we except the case of Isidorus, themselves had visited the localities which they describe. The principal theories which have been held in modern times are those of Gibbon and Jones, who supposed that Ecbatana was to be sought at *Tabríz;* of Mr. Williams (*Life of Alexander*), who concluded that it was at *Isfahán;* of the majority of scholars and travellers, such as Rennell, Mannert, Olivier, Kinneir, Morier, and Ker Porter, who place it at *Hamadán;* and of Colonel Rawlinson, who has contended for the independent existence of two capitals of this name, the one that of the lower and champaign country (known anciently as Media Magna), which he places at *Hamadán*, the other that of the mountain district of Atropatene, which he places at *Takht-i-Soleiman* in the province of *Azerbáijan*, in N. lat. 36° 25′ W., long. 47° 10 (*J. R. Geog. Soc.* vol. x. pt. 1). Of these four views the two first may be safely rejected; but the last is so new and important, that it is necessary to state the main features of it, though it would be obviously impossible to do more in this place than to give a concise outline of Colonel Rawlinson's investigations. It is important to remember the ancient division of Media into two provinces, Upper Media or Atropatene [ATROPATENE], and Lower or Southern Media or Media Magna (Strab. xi. pp. 523, 524, 526, 529); for there is good reason for supposing that, in the early history, contemporary with Cyrus (as subsequently in Roman times), Media was restricted to the northern and mountainous district. It was, in fact, a small province nearly surrounded by high ranges of hills, bearing the same relation to the Media of Alexander's aera which the small province of Persis did to Persia, in the wide sense of that word. It is on this distinction that much of the corroborative evidence, which Colonel Rawlinson has adduced in favour of his theory, rests: his belief being, that the city of Deioces was the capital of Atropatene, and that many things true of it, and it alone, were in after-times transplanted into the accounts of the Ecbatana of Media Magna (the present *Hamadán*). Colonel Rawlinson is almost the only traveller who has had the advantage of studying all the localities, which he attempts to illustrate, on the spot, and with equal knowledge, too, of the ancient and modern authorities to whom he refers.

In his attempt to identify the ruins of *Takht-i-Soleimán* with those of the earliest capital of Media, Col. Rawlinson commences with the latest authorities, the Oriental writers, proceeding from them through the period of the Byzantine historians to that of the Greek and Roman empires, and thence, upwards, to the darkest times of early Median history. He shows that the ruins themselves are not later than Tímúr's invasion in A. D. 1389; that they probably derive their present name from a local ruler of *Kurdistán*, Soleimán Shah Abúh, who lived in the early part of the thirteenth century A. D.; that, previous to the Móghels, the city was universally known as *Shíz* in all Oriental authors, and that *Shíz* is the same place as the Byzantine Canzaca. This is his first important identification, and it depends on the careful examination of the march of the Roman general Narses against the Persian emperor Bahrán, who was defeated by him and driven across the Oxus. (Theophylact. v. 5—10.) Canzaca is described by Theophanes, in the campaigns of Heraclius, as "that city of the East which contained the fire-temple and the treasuries of Croesus king of Lydia." (*Chronogr.* ed. Goar. p. 258: see also Cedren, *Hist.* p. 338; Tzetz. *Chil.* iii. 66; and Procopius, *Bell. Pers.* ii. c. 24); its name is derived from Kandzag, the Armenian modification of the Greek Gaza, mentioned by Strabo as the capital of Atropatene (xi. p. 523; Ptol. vi. 18. § 4). The notice of the great fire-temple (of which ample accounts exist in the Oriental authorities which Col. Rawlinson cites), and the Byzantine legend of the treasuries of Croesus (in manifest reference to Cyrus; compare Herod. i. 153), are so many links in the chain which connect Shíz, Canzaca, and Ecbatana together. Colonel Rawlinson proceeds next to demonstrate that Canzaca was well known even earlier, as it is mentioned by Ammianus, under the form Gazaca, as one of the largest Median cities (xxiii. c. 6), and he then quotes a remarkable passage from Moses of Chorene, who (writing probably about A. D. 445) states that Tiridates, who received the satrapy of Atropatene in reward for his fidelity to the Romans in A. D. 297, when he visited his newly acquired province of Azerbáíján "repaired the fortifications of that place, which was named the second

Ecbatana, or seven-walled city" (ii. c. 84; compare also Steph. Byz. *s. v.* Gazaca, who quotes Quadratus, an author of the second century, for the name of what he calls "the largest city in Media," and Arrian, who terms it "a large village"). During the æra of the Parthian empire, and its conflicts with the Roman power, Col. Rawlinson proves, as we think, satisfactorily, that the names Phraata, Praaspa, Vera, Gaza, and Gazaca are used indifferently for one and the same city. (Compare, for this portion of the history, Plut. *Anton.*; Dion Cass. xlix. 25—31; Appian, *Hist. Parth.* pp. 77, 80, ed. Schweigh.; Florus, iv. 10; and for the names of Gaza and Vera, and the distinction between them, Strab. xi. p. 523.) The next point is to compare the distances mentioned in ancient authors. Now Strabo states that Gazaca was 2400 stadia from the Araxes (xi. p. 523), a distance equivalent to about 280 English miles; while Pliny, in stating that Ecbatana, the capital of Media founded by Seleucus, was 750 miles from Seleuceia and 20 from the Caspian gates, has evidently confounded Ecbatana with Europus (now *Verámin*) (vi. 14. s. 17). The former measure Col. Rawlinson shows is perfectly consistent with the position of *Takht-i-Soleimán*. Colonel Rawlinson demonstrates next, that the capital of Media Atropatene was in the most ancient periods called Ecbatana—assuming, what is certainly probable, that the dynasty founded by Arbaces was different from that which, according to Herodotus, commenced with Deioces, a century later. Arbaces, on the fall of Nineveh, conveyed the treasures he found there to Ecbatana, the seat royal of Media, and it is clear that here the Ecbatana of Media Magna is meant. (Diod. ii. 3.) To the same place belongs the story of Semiramis, also recorded by Diodorus, and previously mentioned. After five generations Artaeus ascends the throne at the same place. During his reign the Cadusians (who are constantly associated with the Atropatenians in subsequent history) revolt, under the leadership of Parsodes. Colonel Rawlinson happily suggests that this is no other than the Deioces of Herodotus, Parsodes or Phrazal being an affiliative epithet from his father Phraortes. (Diod. *l. c.*; Herod. i. 95—130.) When we examine the narrative of Herodotus, it is clear that he is speaking of some place in Atropatene or Northern Media. Thus he states that "the pastures where they kept the royal cattle were at the foot of the mountains north of Agbatana, towards the Euxine sea. In this quarter, toward the Sapires, Media is an elevated country, filled with mountains and covered with forests, while the other parts of the province are open and champaign." (Herod. i. c. 110.) Colonel Rawlinson then shows that the existing state of *Takht-i-Soleimán* bears testimony to the accurate information which Herodotus had obtained. It is clear from his account that the Agbatana of Deioces was believed to be an embattled conical hill, on which was the citadel, and the town was round its base in the plain below. Colonel Rawlinson adds that there is no other position in Azerbáíján which corresponds with this statement, except *Takht-i-Soleimán*, and cites abundant evidence from the Zend Avesta, as compared with the Byzantine and other writers to whom we have alluded, in reference to peculiarities, too important to have been only imagined, which mark out and determine this locality. It is impossible here to state his arguments in their fulness; but we may add that from the Zend he obtains the word Var, the root of the *βάρις* of the Greeks (see Hesych. and Suidas, *s. v.*), which is constantly used to denote the Treasure Citadel of Ecbatana; of the Vera of Strabo; of the Balaroth (i. e. Vara-rúd, river of Vara) of Theophylact, whence we have Βαρισμὰν—the keeper of the Baris—the title used by the emperor Heraclius in reference to the governor of the fortress of this very place. In conclusion, Colonel Rawlinson suggests that the Ecbatana of Pliny and Josephus refers to the Treasure Citadel of Persepolis; that there are grounds for supposing a similar treasury to have existed in the strong position of the Syrian Ecbatana on Mount Carmel (Herod. iii. 62—64; Plin. v. 19. § 17); and that, if there ever was (as some have supposed) an Assyrian place of the same name (Rich, *Kurdistan*, i. p. 153), the castle of Amadiyáh—which, according to Mr. Layard (i. p. 161), retains the local name of Ek-badan—will best suit it. (See also *Journal of Education*, vol. ii. p. 305; and Thirlwall, *Hist. of Greece*, vol. vi. Append. 2., where the site of Hamadán is ably defended.) [V.]

ECCOBRIGA or ECOBROGIS, as it appears in the Antonine Itin., is placed on a road from Ancyra (*Angora*) to Tavia. Eccobriga also is mentioned in the Table, on a road from Angora to Tavium, but it is the only name in which the two Itineraries agree. The place is within the limits of Galatia, in Asia Minor, and an instance of a name with the Gallic termination *briga*. [G. L.]

ECDIPPA (Ἐκδίππα), a maritime town of Palestine, identical with the Scripture ACHZIB (*Josh.* xix. 29, Ἐχοζίβ LXX.), in the borders of Asher. Its ruins were first identified by Maundrell (A. D. 1697) near the sea-shore, about 3 hours north of *Acre*, which he thus describes: "We passed by an old town called *Zib*, situated on an ascent close by the seaside. This may probably be the old Achzib mentioned in Joshua, xix. 29 and Judges, i. 31., called afterwards Ecdippa: for St. Jerome places Achzib nine miles distant from Ptolemais towards Tyre, to which account we found the situation of *Zib* exactly agreeing. This is one of the places out of which the Ashurites could not expel the Canaanitish natives." (*Journey*, p. 53). The Itinerarium Hierosolymitanum places it 12 miles to the north of Ptolemais (*Acre*), and as many south of Alexandroschene, the modern *Iskanderúna*. [G. W.]

ECETRA (Ἐχέτρα, Dionys., Steph. B.: *Eth.* Ἐχετρανός, Ecetranus), an ancient city of the Volscians, which figures repeatedly in the wars of that people with the Romans, but subsequently disappears from history; and its situation is wholly uncertain. Its name is first mentioned by Dionysius during the reign of Tarquinius Superbus, when, according to him, the Ecetrani and Antiates were the only two Volscian states which agreed to join the league of the Latins and Hernicans under that monarch. (Dionys. iv. 49.) Niebuhr, however, conceives this statement to belong in reality to a much later period (vol. ii. p. 257). In B. C. 495, after the capture of Suessa Pometia, the "Ecetrani Volsci" are mentioned as sending ambassadors to Rome to sue for peace, which they obtained only by the cession of a part of their territory. This was immediately occupied by Roman colonists, a circumstance which the Auruncans are said to have made a pretext for declaring war upon Rome two years afterwards. (Liv. ii. 25; Dionys. vi. 32.) Again, during the great Volscian war, supposed to have been conducted by Coriolanus, Ecetra appears as an important

place, at which the general congress of the deputies from the Volscian cities assembled, and where the booty captured at Longula and Satricum was deposited for safety. (Dionys. viii. 5, 36.) During the subsequent long-continued struggle of the Aequians and Volscians against Rome, Ecetra is repeatedly mentioned: it appears to have been one of the Volscian cities nearest to the Aequians, and which subsequently afforded a point of junction for the two allied nations. In accordance with this, we find Q. Fabius Vibulanus, in the campaign of B. C. 459, after defeating the Aequians on Mount Algidus, advancing against Ecetra, the territory of which he laid waste, but without venturing to attack the city itself. (Liv. iii. 4, 10; Dionys. x. 21.) On this occasion we are expressly told that Ecetra was at this time the most important city of the Volscians, and occupied the most advantageous situation (Dionys. *l. c.*): hence the Roman armies repeatedly adopted the same tactics, that of the one consul marching by Algidus upon Ecetra, the other along the low country near the coast upon Antium. (Liv. (vi. 31.) After the Gallic War, when the Volscian power was beginning to decline, Ecetra and Antium appear to have assumed a position in some degree independent of the other cities, and, from their proximity to Rome, as well as their importance, seem to have generally borne the brunt of the war; but there is no authority for Niebuhr's assumption, that where we find the Volscians mentioned at this period we must understand it of these two cities only. (Nieb. vol. ii. p. 583.) The last occasion on which Ecetra is *directly* named by Livy is in the campaign of B. C. 378 (vi. 31): we have no account of its conquest or destruction, but its name totally disappears from this period, and is only met with again in Pliny's list of the extinct cities of Latium. (Plin. iii. 5. s. 9.)

The only clue to its position is what we may gather from the passages above cited, that it was situated on the NE. frontier of the Volscians, towards the Aequians and Mt. Algidus: and, in accordance with this, an incidental notice in Livy (iv. 61) speaks of a pitched battle with the Volscians "between Ferentinum and Ecetra." The suggestion of Abeken, that it was situated at *Monte Fortino*, and that the remains of ancient walls visible on the summit of the hill above that town (ascribed by Gell and Nibby to Artena) are those of the citadel of Ecetra, is at least highly plausible. (Abeken, *Mittel Italien*, p. 75.) The ruins are described by Gell (*Top. of Rome*, p. 110) and Nibby (*Dintorni*, vol. i. p. 263.) The site is still known as *La Civita;* and the position of this hill, forming a kind of advanced post, projecting from the great mass of the Volscian mountains, and facing both the Aequians and Mt. Algidus, precisely corresponds with the part assigned to Ecetra in the Roman history. [E. H. B.]

ECHEDAMEIA (Ἐχεδάμεια), a town of Phocis, destroyed in the Sacred War. Its site is unknown: it is enumerated by Pausanias between Medeon and Ambryssus. (Paus. x. 3. § 2.)

ECHE'LIDAE. [ATTICA, p. 325, b.]

ECHETLA (Ἐχέτλα: *Eth.* Ἐχετλαῖος, Steph. B.), a city or fortress of Sicily, on the confines of the Syracusan territory. It is first mentioned by Diodorus, who tells us that it was occupied in B. C. 309 (during the absence of Agathocles in Africa) by a body of troops in the Syracusan service, who from thence laid waste the territories of Leontini and Camarina. But it was soon after reduced, notwithstanding the strength of its position, by Xenodicus of Agrigentum, who restored it to liberty. (Diod xx. 32.) It is again mentioned by Polybius (i. 15) as a place situated on the confines of the Syracusan territory (as this existed under Hieron II.), and that of the Carthaginians: it was besieged by the Romans at the outset of the First Punic War. These are the only notices found of Echetla, and the name is not mentioned by Cicero or the Geographers. But the above data point to a situation in the interior of the island, somewhere W. of Syracuse; hence Fazello and Cluver are probably correct in identifying it with a place called *Occhiala* or *Occhula*, about 2 miles from the modern town of *Gran Michele*, and 6 miles E. of *Caltagirone*, where, according to Fazello, considerable ruins were still visible in his time. The town occupied the summit of a lofty and precipitous hill (thus agreeing with the expressions of Diodorus of the strong position of Echetla), and continued to be inhabited till 1693, when it suffered severely from an earthquake; and the inhabitants consequently migrated to the plain below, where they founded the town of *Gran Michele*. (Fazell. x. 2, pp. 446, 450; Amic. *Lex. Topog. Sic.* vol. ii. p. 150; Cluver. *Sicil.* p. 360.) [E. H. B.]

ECHIDO'RUS (Ἐχείδωρος, Scyl. p. 26; Ἐχέδωρος, Ptol. iii. 13. § 4), a small river of Macedonia, which rises in the Crestonaean territory, and after flowing through Mygdonia empties itself into a lagoon close to the Axius (Herod. vii. 124, 127). It is now called the *Gallikó:* Gallicum was the name of a place situated 16 M.P. from Thessalonica, on the Roman road to Stobi (*Peut. Tab.*). It is probable that when the ancient name of the river fell into disuse, it was replaced by that of a town which stood upon its banks, and that the road to Stobi followed the valley of the Echidorus. (Leake, *Northern Greece*, vol. iii. pp. 437, 439.) [E. B. J.]

ECHI'NADES (*αἱ* Ἔχῖναι *νῆσοι*, Hom.; *αἱ* Ἐχινάδες *νῆσοι*, Herod., Thuc., Strab.), a group of numerous islands off the coast of Acarnania, several of which have become united to the mainland by the alluvial deposits of the river. Herodotus says that half of the islands had been already united to the mainland in his time (ii. 10); and Thucydides expected that this would be the case with all of them before long, since they lay so close together as to be easily connected by the alluvium brought down by the river (ii. 102). This expectation, however, has not been fulfilled, which Pausanias attributed (viii. 24. § 11) to the Achelous bringing down less alluvium in consequence of the uncultivated condition of Aetolia; but there can be little doubt that it is owing to the increasing depth of the sea, which prevents any perceptible progress being made.

The Echinades are mentioned by Homer, who says that Meges, son of Phyleus, led 40 ships to Troy from "Dulichium and the sacred islands Echinae, which are situated beyond the sea, opposite Elis." (Hom. *Il.* ii. 625.) Phyleus was the son of Augeas, king of the Epeians in Elis, who emigrated to Dulichium because he had incurred his father's anger. In the Odyssey Dulichium is frequently mentioned along with Same, Zacynthus, and Ithaca as one of the islands subject to Ulysses, and is celebrated for its fertility. (Hom. *Od.* i. 245, ix. 24, xiv. 397, xvi. 123, 247; *Hymn. in Apoll.* 429; Πολύπυρον, *Od.* xiv. 335, xvi. 396, xix. 292.) The site of Dulichium gave rise to much dispute in antiquity. Hellanicus supposed that it was the ancient name of Cephallenia; and Andron, that it

was one of the cities of this island, which Pherecydes supposed to be Pale, an opinion supported by Pausanias. (Strab. x. p. 456; Paus. vi. 15. § 7.) But Strabo maintains that Dulichium was one of the Echinades, and identifies it with DOLICHA (ἡ Δολίχα), an island which he describes as situated opposite Oeniadae and the mouth of the Achelous, and distant 100 stadia from the promontory of Araxus in Elis (x. p. 458). Dolicha appears to be the same which now bears the synonymous appellation of *Makri*, derived from its long narrow form. (Leake, *Northern Greece*, vol. iii. p. 574.) Most modern writers have followed Strabo in connecting Dulichium with the Echinades, though it seems impossible to identify it with any particular island. It is observed by Leake that "*Petalá*, being the largest of the Echinades, and possessing the advantage of two well-sheltered harbours, seems to have the best claim to be considered the ancient Dulichium. It is, indeed, a mere rock, but being separated only by a strait of a few hundred yards from the fertile plains at the mouth of the Achelous and river of Oenia, its natural deficiencies may have been there supplied, and the epithets of 'grassy' and 'abounding in wheat,' which Homer applies to Dulichium (*Od.* xvi. 396),—

Δουλιχίου πολυπύρου, ποιήεντος,

may be referred to that part of its territory." But Leake adds, with justice, that "there is no proof in the Iliad or Odyssey that Dulichium, although at the head of an insular confederacy, was itself an island: it may very possibly, therefore, have been a city on the coast of Acarnania, opposite to the Echinades, perhaps at *Tragamésti*, or more probably at the harbour named *Pandeléimona* or *Platyá*, which is separated only by a channel of a mile or two from the Echinades."

Homer, as we have already seen, describes the Echinades as inhabited; but both Thucydides and Scylax represent them as deserted. (Thuc. ii. 102; Scylax, p. 14.) Strabo simply says that they were barren and rugged (x. p. 458). Stephanus B. names a town Apollonia situated in one of the islands (*s. v.* Ἀπολλωνία). Pliny gives us the names of nine of these islands,—Aegialia, Cotonis, Thyatira, Geoaris, Dionysia, Cyrnus, Chalcis, Pinara, Mystus (iv. 12. s. 19). Another of the Echinades was Artemita (Ἀρτεμίτα), which became united to the the mainland. (Strab. i. p. 59; Plin. iv. 1. s. 2.) Artemidorus spoke of Artemita as a peninsula near the mouth of the Achelous, and Rhianus connected it with the Oxeiae. (Steph. B. *s. v.* Ἀρτεμίτα.) The Oxeiae (*αἱ* Ὀξεῖαι) are sometimes spoken of as a separate group of islands to the west of the Echinades (comp. Plin. iv. 12. s. 19), but are included by Strabo under the general name of Echinades (x. p. 458). The Oxeiae, according to Strabo, are mentioned by Homer under the synonymous name of Thoae (Θοαί, *Od.* xv. 299).

The Echinades derived their name from the echinus or the "sea-urchin," in consequence of their sharp and prickly outlines. For the same reason they were called Oxeiae, or the "Sharp Islands," a name which some of them still retain under the slightly altered form of *Oxiés*. Leake remarks that "the Echinades are divided into two clusters, besides *Petalá*, which, being quite barren and close to the mainland, is not claimed, or at least is not occupied by the Ithacans, though anciently it was undoubtedly one of the Echinades. The northern cluster is commonly called the *Dhragonares*, from *Dhragonára*, the principal island; and the southern, the *Oxiés* or *Scrofés*. By the Venetians they were known as the islands of *Kurtzlári*, which name belongs properly to a peninsula to the left of the mouth or the Achelous, near *Oxiá*. Seventeen of the islands have names besides the four *Modhia*, two of which are mere rocks, and nine of them are cultivated. These are, beginning from the southward:—*Oxiá*, *Makrí*, *Vrómona*, *Pondikónisi*, *Karlónisi*, *Prováti*, *Lambrinó*, *Sofiá*, *Dhragonára*. *Oxiá* alone is lofty. *Makri* and *Vrómona* are the two islands next in importance." (Kruse, *Hellas*, vol. ii. pt. ii. p. 455, seq.; Leake, *Northern Greece*, vol. iii. pp. 30, seq., 50, seq.; Mure, *Tour in Greece*, vol. i. p. 104.)

ECHI'NUS (Ἔχινος: *Eth.* Ἐχιναιεύς, Polyb. ix. 41). 1. A town of Phthiotis in Thessaly, situated upon the Maliac gulf, between Lamia and Larissa Cremaste, in a fertile district. (Strab. ix. pp. 433, 435; Polyb. ix. 41; comp. Aristoph. *Lysist.* 1169.) It was said to derive its name from Echion, who sprang from the dragon's teeth. (Scymn. Ch. 602; comp. Steph. B. *s. v.*) Demosthenes says that Echinus was taken by Philip, the father of Alexander the Great, from the Thebans (Dem. *Phil.* iii. p. 120); but whether he means the Thessalian town, or the one in Acarnania of the same name, is uncertain. At a later time we find the Thessalian Echinus in the hands of the Aetolians, from whom it was taken by the last Philip, after a siege of some length. (Polyb. ix. 41, seq., xvii. 3, xviii. 21; Liv. xxxii. 33, xxxiv. 23.) Strabo mentions it as one of the Grecian cities which had been destroyed by an earthquake. (Strab. i. p. 60.) Its site is marked by the modern village of *Akhinó*, which is only a slight corruption of the ancient name. The modern village stands upon the side of a hill, the summit of which was occupied by the ancient Acropolis. Dodwell remarks that it appears, as well from its situation as its works, to have been a place of great strength. "Opposite the Acropolis, at the distance of a few hundred paces, is a hill, where there are some ruins, and foundations of large blocks, probably a temple." (Dodwell, vol. ii. p. 80; Leake, *Northern Greece*, vol. ii. p. 20.)

2. A town in Acarnania, also said to have been founded by Echion. It was mentioned by the poet Rhianus, and occurs in the list of Acarnanian towns preserved by Pliny, where it is placed between Heraclia and Actium. Leake places it at *Ai Vasili*, remarking that, "from Stephanus and the poet Rhianus, it is evident that Echinus was an Acarnanian town of some importance: the story attached to it shows that it was one of the early colonies of this coast; the ruins at *Ai Vasili* indicate a remote antiquity, and their safe position on a mountain removed from the sea, is in conformity with that which is generally found in the early foundations of the Greeks." (Steph. B. *s. v.* Ἔχινος; Plin. iv. 2; Leake, *Northern Greece*, vol. iv. p. 23, seq.)

E'CNOMUS (Ἔκνομος), a hill on the S. coast of Sicily, between Agrigentum and Gela, at the mouth of the river Himera (*Salso*). According to Diodorus (xix. 108), the tyrant Phalaris had a castle on this hill, in which he kept his celebrated brazen bull: and the spot derived its name from this circumstance. The etymology is obviously fanciful; but it seems clear that the site was inhabited at an early period, though there was no city there, for Plutarch tells us that Dion, in his advance against Syracuse (B. C. 357), was joined by the Agrigentine knights who

dwelt about Ecnomus. (Plut. *Dion.* 26.) It was subsequently occupied and fortified by the Carthaginians in their wars against Agathocles; and, in B. C. 311, witnessed a great defeat of the Syracusan tyrant by the former people. On this occasion the Carthaginians under Hamilcar had established their camp immediately adjoining Ecnomus, on the right bank of the Himera; while Agathocles occupied a hill on the opposite side of the river, where there was also a fortified post, ascribed to Phalaris, and called after him Phalarium. The details of the action, as related by Diodorus (xix. 107—110), entirely agree with this account of the position of the two armies, and with the actual nature of the ground: the localities have been fully described by D'Orville (*Sicula*, pp. 112, 113), who has clearly established the true position of Ecnomus. The hill to which the name was given is the extremity of a range of small elevation, extending between the sea and a plain about six miles in length, which stretches from thence to the river Himera. It was in this plain that the great slaughter of the troops of Agathocles took place, in their flight, after they were driven back from the Carthaginian camp. At the foot of the hill of Ecnomus, on a projecting tongue of land immediately W. of the mouth of the Himera, stands the modern town of *Licata* or *Alicata*, from which the hill above it derives the name of *Monte di Licata*. On the slope of this hill towards the sea, but above the modern town, are the ruins of an ancient city, unquestionably those of Phintias, founded by the Agrigentine despot of that name about B. C. 280; but which were regarded by Fazello and the earlier topographers as those of Gela, a mistake which threw the whole geography of this part of Sicily into confusion. (Cluver. *Sicil.* pp. 211, 214; D'Orville, *l. c.*) [GELA.] The name of Ecnomus is again mentioned by Polybius (i. 25) in the First Punic War, B. C. 256, when the Roman fleet under L. Manlius and M. Regulus touched there in order to take on board the land forces destined for the African expedition: these troops were encamped apparently on the hill, which would account for the otherwise singular omission of the name of Phintias.* [E. H. B.]

ECRON (Ἀκκάρων), one of the 5 cities of the Philistines (1 *Sam.* v. 10, 11, vi. 17), in the northern border of Judah (*Josh.* xv. 11.); but assigned to the children of Dan (xix. 43.), and accordingly ascribed to that tribe in Eusebius (*Onomast. s. v.*), where St. Jerome adds "ut ego arbitror in tribu Juda." They place it between Azotus and Jamnia to the east, and St. Jerome mentions that it was sometimes supposed to be identical with Strato's Tower, afterwards Caesareia—a manifest and inexplicable error. Its site is preserved by the modern village of *Akîr*, SSW. of Ramleh in the great plain. (Robinson, *Bib. Res.* vol. iii. pp. 22—24. [G. W.]

ECTINI. The name of this people occurs in the Trophy of the Alps, as preserved by Pliny (iii. 20). In the inscription on the arch at Segusio (*Susa*), the name Egdinii occurs, and it is supposed that the two names mean the same people. It is conjectured that they may have been in the valley of the *Tinea*, a river which flows down from near *Barcelonette* into the *Var;* and in that part which is called the *Val St. Etienne*, according to some modern authorities, where there are said to be Roman remains. This opinion of the site of the Ectini seems to rest on the resemblance of the name to that of the *Tinea*, which is not much. [G. L.]

EDEBESSUS (Ἐδεβησσός: *Eth.* Ἐδεβησσεύς, Ἐδεβήσσιος), a city of Lycia, for which Stephanus B. (*s. v.*) quotes Capito. [G. L.]

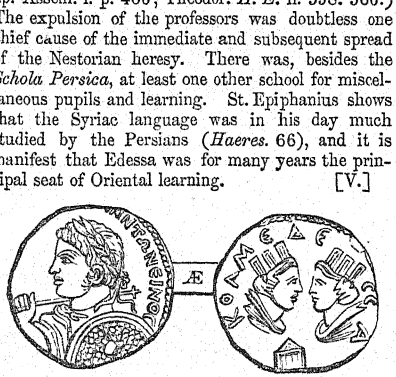
EDENA'TES, are mentioned in the inscription on the Trophy of the Alps. (Plin. iii. 20). The name of the Adanates occurs on the arch at Segusio (*Susa*), and D'Anville considers it the same as the name Edenates, but others do not. The difference is certainly not much; but the object of the two inscriptions is not the same. D'Anville conjectures that "the name of Sedena, which is that of the little town of *Seine*, in the north of Provence, in the diocese of Embrun, on the borders of that of *Digne*," may indicate the site of the Edenates. *Seine* was called Sedena in the middle ages. [G. L.]

EDESSA (Ἔδεσσα: *Eth.* Ἐδεσσαῖος, Ἐδεσσηνός), the ancient capital of Macedonia, was seated on the Egnatian way, at the entrance of a pass, which was the most important to the kingdom, as leading from the maritime provinces into Upper Macedonia, and, by another branch of the same pass, into Lyncestis and Pelagonia. (Polyb. v. 97. § 4, xxxiv. 12. § 7; Strab. vii. p. 323, x. p. 449; Ptol. iii. 13. § 39, viii. 12. § 7; *Itin. Anton.; Itin. Hierosol.; Peut. Tab.;* Hierocl.; Const. Porph. *de Them.* ii. 2.) Aegae and Edessa, though some have considered that they were different towns, are no doubt to be considered as identical, the former being probably the older form. (Comp. Niebuhr, *Lect. on Anc. Hist.* vol. ii. p. 254, trans.; Tafel, *Thessal.* p. 308, *de Viae Egnat. Parte Occid.* p. 48.) The commanding and picturesque site upon which the town was built was the original centre of the Macedonians, and the residence of the dynasty which sprang from the Temenid Perdiccas. The seat of government was afterwards transferred to the marshes of Pella, which lay in the maritime plain beneath the ridge through which the Lydias forces its way to the sea. But the old capital always remained the national hearth (ἑστία, Diod. *Excerpt.* p. 563) of the Macedonian race, and the burial-place for their kings. The body of Alexander the Great, though by the intrigues of Ptolemy it was taken to Memphis, was to have reposed at Aegae (Paus. i. 6. § 3), — the spot where his father Philip fell by the hand of Pausanias (Diod. xvi. 91, 92). The murdered Eurydice and her husband were buried here by order of Cassander, after having been removed from Amphipolis. (Diod. xix. 52; Athen. iv. p. 155.) Pyrrhus, king of Epirus, when he had taken the town, gave up the royal tombs to be rifled by his Gallic mercenaries, in hopes of finding treasure. (Plut. *Pyrrh.* 26.) After the Roman conquest, Edessa ("nobilis urbs," Liv. xlv. 30) belonged to the third region; and imperial coins, ranging from Augustus to Sabinia Tranquillina, wife of the third Gordian, have been found, with the epigraph ΕΔΕΣΣΑΙΩΝ. (Eckhel, vol. ii. p. 71; Sestini, *Mon. Vet.* p. 37.)

In the reign of Basil II., Bodena (Βοδηνά, Cedren. vol. ii. p. 705; Glycas, p. 309), — whence the modern name, — which was strongly fortified, was one

* Arnold, apparently misled by the marginal note in Schweighhäuser's Polybius (vol. i. p. 69), has given the name of "Battle of Ecnomus" to the great sea fight in which Manlius and Regulus defeated the Carthaginian fleet on their way to Africa: but it is quite clear, both from Polybius (i. 25) and from Zonaras (viii. 12), that this battle took place off Heraclea Minoa, to which point the Roman fleet had proceeded from Ecnomus.

of the Bulgarian conquests of that emperor. (Le Beau, *Bas Empire*, vol. xiv. p. 195.)



Vodhená, in the grandeur of its situation, in the magnificence of the surrounding country, and the extent of the rich prospect which it commands, is not inferior to any situation in Greece. Notwithstanding its ancient importance, the Hellenic remains are few; the site, from its natural advantages, has doubtlessly been always occupied by a town, and new constructions have caused the destruction of the more ancient. The only vestige of Hellenic fortifications that has been discovered is a piece of wall which supports one of the modern houses on the edge of the cliff; but there are many scattered remains in the town, among which are some inscriptions of the time of the Roman Empire. (Leake, *Northern Greece*, vol. iii. pp. 272—279.) [E.B.J.]

EDESSA (ἡ Ἔδεσσα: *Eth.* Ἐδεσσαῖος, Ἐδεσσηνός), a town of great importance in the northern extremity of Mesopotamia, in the province of Osrhoëne, which itself is said to have derived its name from one of the early kings of the town. (Dionys. Patr. ap. Assem. ii. p. 98; Procop. *B. P.* ii. 17.) It was situated on the river Scirtus (now *Daisan*), a small tributary of the Euphrates, and was distant about 40 miles from Zeugma (*Itin. Ant. l. c.*), and a day's journey from Batna (Procop. *B. P.* ii. 12). Accounts differ as to the date of its foundation, some placing it extremely early, and ascending to mythical times, as St. Isidore, who attributes its origin to Nembroth or Nimrod, and St. Ephrem, who says Nimrod ruled at Arach and Edessa (*Comment. in Genesim.*) It is, however, most likely that Appian is correct in stating that it was really built by Seleucus, and that it was one of the many towns built or restored about the same period of history to which European names were given by the Macedonian rulers. (*Syr.* 57.) The same statement is made by Cedrenus (i. p. 166). Its position has not been clearly noted by some ancient writers. Thus Stephanus and Strabo placed it in Syria, the latter confounding it with Hierapolis, and stating that, like it, it bore anciently the name of Bambyce (Βαμβύκη, xvi. p. 748). Pliny asserts that it was in Arabia, and was called Antiocheia-Calirrhoes, from a fountain of that name which existed in the city (v. 24. s. 21). This position is certainly wrong; but the remark is curious, as it connects the town with some notices in other authors. Thus Stephanus (*l. c.*) states that it was called Edessa from the force of its waters (διὰ τὴν τῶν ὑδάτων ῥύμην οὕτω κληθεῖσα), and from the town of the same name in Macedonia; while, in his list of the places which bore the name of Antiocheia, the 8th is designated ἡ ἐπὶ τῆς Καλιρρόης λίμνης. Ancient coins of Edessa abound between the ages of Commodus and Trajanus Decius; the majority of them reading, on the reverse, ΚΟΛ. Μ. ΕΔΕϹϹΑ or ΕΔΕϹΑ, or with the insertion of the title "Metropolis," ΚΟΛ. ΜΑΚ. ΕΔΕϹϹΑ. ΜΗΤΡ. The exact meaning of the second word ΜΑΚ. has not been satisfactorily explained; but we cannot help suspecting that it refers to the popular belief in the Macedonian origin of the city, ΚΟΛ. ΜΑΚ. being short for ΚΟΛΩΝΙΑ ΜΑΚΕΔΟΝΩΝ. The obverses present busts of the Abgari or local rulers, and of the contemporaneous Roman emperors. There exists, too, a peculiar class of autonomous Greek copper coins, all of which bear on the obverses heads of Antiochus IV., and are perfectly alike in their fabric and art. Their reverses bear respectively the names of an Antiocheia in Ptolemais, Mygdonia, and near Daphne; the fourth has been till this time undetermined. It reads ΑΝΤΙΟΧΕΩΝ ΤΩΝ ΕΠΙ ΚΑΛΛΙΡΟΗΙ. With the evidence stated above, we make no doubt that this coin belongs to the 8th Antiocheia of Stephanus, one of the names, as it appears, of Edessa, and the title whereby it may have been usually recognised during the period of Antiochus IV. There is no reasonable objection to the belief that the modern town of *Orfah* or *Urfah* represents the site of the ancient Edessa. (Tavernier, ii. 4; Pococke, ii. p. 232; Niebuhr, ii. p. 407.) In this instance the most ancient name appears to have been preserved, Isidorus speaking of Μαννούῤῥα, evidently the Orrha of Mannus, who was one of the kings of Edessa.

Little is known of the history of Edessa, subsequently to its foundation by Seleucus, till Christian times: but during the wars between the Graeco-Roman empire and the Persians, and in Ecclesiastical history, Edessa plays a very prominent part. Many notices of the events of the period may be found in the following authorities. (Procop. *B. P.* i. 17, &c., *B. G.* iv. 14, &c., *de Aedific.* ii. 7; Evagrius, *H. E.* iv. 8—26; Malala, *Chron.* 17. p. 418; Hierocl. p. 714; Dionys. Patriarch. ap. Assem. *l. c.*; Theophanes and Cedrenus.) It appears that the town suffered as much from natural causes as from the attacks of enemies. Of these, the river Scirtus was the principal cause, no less than four destructive floods being recorded in the Chronicon Edessenum (ap. Assem. p. 386) and other works. In A. D. 718 the town was nearly destroyed by an earthquake (Dionys. Patr. ap. Assem. ii. p. 259), yet the work of restoration (commenced by Justinian after one of the floods, Procop. *de Aedif.* ii. 7) must have been rapid, or the importance of the place itself very great, since it appears from the Chronicon of Bar Hebraeus, that as late as A. D. 1184 there were no less than 15 large churches which fell into the hands of the Saracens. (Assem. ii. p. 368). In A. D. 1285 it is coupled with other deserted and ruined towns, such as Beroea and Haran, by Maphrianus. (Assem. ii. p. 260.) Since then, it has never risen to its former greatness, though it is and has been a place of some importance for the inland trade between Kurdistan and Aleppo. The original government of Edessa appears to have been vested in kings or petty princes, more or less dependent on the neighbouring empires, first on the rulers of the Syro-Macedonian dynasty, and then under the Roman and Byzantine emperors. The local names of the kings were Abgarus and Mannus; titles which appear to have been preserved among them, like the names of the Pharaohs and Ptolemies in Egypt. Their names are found (as stated before) on the Greek coins of Edessa, till the time of Trajanus Decius. A series of them is given by Dionysius (ap. Assem. *l. c.*), and many of them are mentioned in the histories of the times (Procop. *Bell.* iv. 17., Eusebius, and the *Chronicon Edessenum*).

Edessa was celebrated in Christian times for its schools of theology, to which students came from great distances. Of these, the most important was the *Schola Persica*. This school appears to have been limited to Christians of the Persian nation. The professors are memorable in history for the part they took in the Nestorian controversy, under the guidance of John, Patriarch of Antioch, and Ibas, Bishop of Edessa, A. D. 449—457, against St. Cyril. It is clear from a letter of Beth Arsamensis, and from the Chronicon Edessenum, that their Nestorian

teaching was the cause of the ruin of this school. The professors were expelled by Martyrus, Bishop of Edessa, and the school itself pulled down by order of Zeno the Roman emperor, A. D. 489, and a church dedicated to St. Mary was built on its ruins. (Simeon Beth Arsamensis ap. Assem. i. p. 353; Chron. Edess. ap. Assem. i. p. 406; Theodor. *H. E.* ii. 558. 566.) The expulsion of the professors was doubtless one chief cause of the immediate and subsequent spread of the Nestorian heresy. There was, besides the *Schola Persica*, at least one other school for miscellaneous pupils and learning. St. Epiphanius shows that the Syriac language was in his day much studied by the Persians (*Haeres.* 66), and it is manifest that Edessa was for many years the principal seat of Oriental learning. [V.]

COIN OF EDESSA IN MESOPOTAMIA.

EDE'TA or LEI'RIA (Ἥδητα ἡ καὶ Λείρια, Ptol. ii. 6. § 63), the chief city of the EDETANI, one name of which is still retained by the town of *Lyria*, where there are ruins and inscriptions. (Laborde, *Itin. de Espagne*, vol. i. p. 259.) [P. S.]

EDETA'NI (Ἠδητανοί, Ptol. ii. 6. § 15; Plin. iii. 3. s. 4) or SEDETA'NI (Liv. xxiv. 20, xxviii. 24; Sil. Ital. iii. 371, foll.; Σιδητανοί, Strab. iii. p. 165), a people of Hispania Tarraconensis, E. of the Celtiberi, Bastetani, and Contestani. Their country, EDETANIA, comprised the district lying between the rivers Iberus (*Ebro*) and Sucro (*Jucar*), and bounded by the mountains of Celtiberia on the W. (Concerning the occupation of parts of their territory by the Ilercaones and the Suessetani, see the articles.) It corresponded to the N. part of *Valencia*, and the S. part of *Aragon*. It was traversed by several rivers running from NW. to SE., the chief of which was the TURIA (*Turia* or *Guadalaviar*), and in its NE. part were some tributaries of the Iberus. The Edetani possessed some very celebrated cities. In the extreme NW., on the Iberus, was CAESARAUGUSTA (*Zaragoza*); and in the SE. were SAGUNTUM (*Murviedro*), on the Pallantia (*Palancia*), the modern capital VALENTIA (*Valencia*), on the Turia, and SUCRO (*Cullera?*), on the river of the same name, their last city on this side. These three cities lay upon the high road from Tarraco to Carthago Nova, the other cities upon which were as follows, beginning from Dertosa, on the left bank of the Iberus: INTIBILI, 27 M. P. (*Itin. Ant.* p. 399: prob. *S. Mateo*); ILDUM, 24 M. P. (*Itin.* ib.: prob. *Villa de Cabanes*); SEPELACI (*Itin.* p. 400: prob. *Burriana*, near *Villa Real*); Saguntum 22 M. P., Valentia 16 M. P., Sucro 20 M. P. Between this road and the coast were: IBERA, on the right bank of the Iberus, near its mouth; ETOVISSA (Liv. xxi. 22; Ἠτύϐησα, Ptol.: prob. *Oropesa*), on the coast, NE. of Sepelaci; and, in the neighbourhood of Saguntum, Strabo mentions CHERRONESUS, OLEASTRUM, and CARTALIAS (Strab. iii. p. 159). The other principal places were: EDETA, the capital; HONOSCA (Liv. xxii. 20, where the reading is doubtful); TURBA (Liv. xxxiii. 44: prob. *Tuejar* on the *Guadalaviar*); SEGOBRIGA (*Legorbe*, inscr. and coins ap. Vaillant, *Num. Imp.* vol. i. pp. 64, 116; Florez, *Esp. S.* vol. v. p. 21, vol. viii. p. 97, *Med. de Esp.* vol. ii. pp. 573, 650; Mionnet, vol. i. p. 50, *Suppl.* vol. i. p. 102; *Num. Goth.*; Eckhel, vol. i. p. 56); there are also Roman inscriptions at *Bexis*, E. of *Segorbe*; OSSIGERDA (Ὀσσικέρδα, Ptol.: *Eth.* Ossigerdenses, Plin. iii. 3. s. 4; coins ap. Florez, *Med. de Esp.* vol ii. p. 532, vol. iii. p. 109; Mionnet, vol. i. p. 47, *Suppl.* vol. i. p. 95; Sestini, p. 177: prob. *Ossera* near *Zaragoza*); LEONICA (Λεονίκα, Plin. Ptol. *ll. cc.*: prob. *Alcaniz* in *Aragon*); DAMANIA (Δαμανία, Ptol.: *Eth.* Damanitani, Plin. *l. c.*), S. of Caesaraugusta; BELIA, a municipium (Βέλεια, Ptol.: *Eth.* Belitani, Plin. *l. c.*: prob. *Belchite*; Sestini, *Med. Isp.* p. 105): these four places had the civitas Romana and belonged to the conventus of Caesaraugusta. (Ukert, vol. ii. pt. 1. pp. 413, foll.) [P. S.]

EDOMI'TAE. [IDUMAEA.]

EDO'NES (Ἤδωνες, Strab. x. p. 470, xv. p. 687) or EDO'NI (Ἤδωνοι, Steph. B., Plin. iv. 11), a Thracian people, whose name was often used by the Greek and Latin poets to express the whole of the nation of which they formed a part. (Aesch. *Pers.* 493: Soph. *Ant.* 955; Eurip. *Hec.* 1153; Ov. *Met.* xi. 69, *Trist.* iv. 1. 42; Propert. i. 3. 5; Hor. *Carm.* ii. 7. 27.) It appears from Thucydides (ii. 99) that this Thracian clan once held possession of the right bank of the Strymon, as far as Mygdonia, but were driven from this by the Temenid princes of Macedonia. Afterwards they are found occupying, on the left bank of the Strymon, the district called EDONIS (Ἠδωνίς, Ptol. iii. 13. § 31), which extended from Lake Cercinitis as far E. as the river Nestus, between the spurs of Mt. Orbelus, and the Pieres to the S. (Comp. Herod. v. 11, vii. 110, 114; Thuc. iv. 102, 109.) Edonis was included in the first region of Macedonia, after the Roman conquest, B. C. 167. (Liv. xlv. 29.) The following are the principal towns of this important district: AMPHIPOLIS, with its harbour EÏON; MYRCINUS; PHAGRES; OESYMA; GASORUS; DOMERUS; PHILIPPI; DRABESCUS; NEAPOLIS; ACONTISMA; TRAGILUS; PERGAMUS.

A large coin of Geta, king of the Edoni, has been published by Mr. Millingen, the characters on which agree with the time when the Edoni possessed Drabescus and the Nine Ways, and had therefore the power of working some of the mines. It has been supposed that the coins of the Orescii, with the type, a satyr carrying off a nymph, belong to Edonis or its vicinity. The Satyrs were the Satrae, and refer to the worship of Dionysus in the mountains Pangaeum and Orbelus. (Herod. vii. 111.) Apollodorus (iii. 5) has handed down some traditions showing the connection between the kings of the Edoni, and the legends about Dionysus and the Satyrs. (Leake, *Northern Greece*, vol. iii. p. 213.) [E. B. J.]

EDO'NIS. [ANTANDRUS.]

EDREI (Ἐδρεΐ, LXX.; Ἀδραά, Euseb.), a town of the half tribe of Manasseh, beyond Jordan, mentioned with Ashtaroth (*Josh.* xiii. 31) as a city of the kingdom of Og in Bashan. Eusebius places it 20 miles from Bozra. (*Onomast. s. v.* Ἀσαρώθ.) The Arabian geographers mention a village under the name of *Edhra* in the *Hauran*, which has been identified with Edrei, by Dr. Robinson. (*Bib. Res.* vol. iii. Append. p. 155.) Burckhardt had supposed it to be represented by *Ed-Doad*, a village between *Daal* and *Mezuneib*, to the east of the *Hadj* road, between

Busrah and *Adjlun*. (*Travels*, p. 241.) The site of *Edhra* is not so accurately defined, but Dr. Robinson says, "it is nearer to *Busrah* than is *Deraa*, according to my information." [G. W.]

EDRŌS, an island off the coast of Britain, mentioned by Ptolemy (ii. 2. § 12) as one of the four islands eastward of Hibernia, viz.: Monaoeda, Mona, Edros (desert), Lemnos (desert). Another reading is Odros: Adros and Andros, also Edros,= *Bardsey Island* of the coast of Wales. [R. G. L.]

EDRUM (*Idro*), a town of Gallia Transpadana, situated on a considerable lake, now called the *Lago d'Idro*, formed by the river Cleusis or *Chiese*. Neither the lake nor the town is mentioned by any ancient author, but an inscription cited by Cluver (*Ital.* p. 108) proves the name and existence of the latter: it was probably not a municipal town, but a dependency of Brixia. [E. H. B.]

EETIONEIA. [ATHENAE, p. 308, a.]

EGDINII. [ECTINI.]

EGELASTA. [CELTIBERIA.]

EGESTA [SEGESTA.]

EGE'TA, AEGE'TA (Ἔγηταον Ἔτητα, Ptol. iii. 9. § 4), a town on the Danube in Moesia, near the spot where Trajan built his bridge across the river. According to the Notitia Imp. (30), its garrison consisted of a division of the thirteenth legion and a squadron of cavalry. (*Itin. Ant.* 218; Geogr. Rav. iv. 7.) [L. S.]

EGITA'NIA (*Idanha la Vieja*, W. of *Coria*, on the *Ponsul*), a city of Lusitania, only known by the inscriptions found among its extensive ruins. It was also called Igedita. (Gruter, p. 162, No. 31; Florez, *Esp. S.* vol. xiv. p. 137; Ukert, vol. ii. pt. 1. p. 397.) [P. S.]

EGNA'TIA or GNA'TIA (Ἐγνατία or Ἰγνατία: *Eth.* Γναθῖνος, Inscr.; Ignatinus, *Lib. Col.* p. 262), a considerable town of Apulia, situated on the sea-coast between Barium and Brundusium. The Itineraries place it at 27 M. P. from the former, and 29 from the latter city. (*Itin. Ant.* pp. 117, 315; *Tab. Peut.*) Both Strabo and Ptolemy mention it as a city of the Peucetians or southern Apulians: and Pliny also assigns it to the Pediculi (the same people with the Peucetians), though he elsewhere less correctly describes it as a town of the Sallentines. It must indeed have been the last city of the Peucetians towards the frontiers of Calabria. (Strab. vi. p. 282; Ptol. iii. 1. § 15; Mel. ii. 4; Plin. ii. 107. s. 111, iii. 11. s. 16.) Horace, who made it his last halting-place on his journey to Brundusium, tells us that it suffered from the want of good water*, and ridicules the pretended miracle (noticed also by Pliny) shown by the inhabitants, who asserted that incense placed on a certain altar was spontaneously consumed without the application of fire. (Hor. *Sat.* i. 5. 97—100; Plin. ii. 107. s. 111.)

No mention of it is found in history, and it seems to have derived its chief importance from its position on the high road to Brundusium, which rendered it a convenient halting-place for travellers both by land and sea. (Strab. *l. c.*) There is, however, no authority for the assertion of some Italian topographers (adopted from them by Cramer and others), that the road from hence along the coast to Barium and Canusium was named from this city the Via Egnatia, — still less that it gave name to the celebrated military road across Macedonia and Thrace, from Apollonia to the Hellespont. It appears probable, indeed, that the proper, or at least the original, name of the city was not Egnatia, but Gnatia; which form is found in Horace, as well as in some of the best MSS. of Pliny and Mela; and is further confirmed by a Greek inscription, in which the name of the people is written ΓΝΑΘΙΝΩΝ. (Tzschucke, *Not. ad Mel. l. c.*; Mommsen, *U. I. Dialekte*, p. 66.)

The period of the destruction of Egnatia is unknown, but its ruins are still visible on the sea-coast about 6 miles SE. of *Monopoli*. An old tower on the shore itself still bears the name of *Torre d'Agnazzo;* while considerable portions of the walls and other remains indicate the site of the ancient city a little more inland, extending from thence towards the modern town of *Fasana*. Numerous sepulchres have been excavated in the vicinity, and have yielded an abundant harvest of vases, terracottas, and other ancient relics, as well as a few inscriptions in the Messapian dialect. (Pratilli, *Via Appia*, iv. c. 15. p. 546; Romanelli, vol. ii. p. 146; Mommsen, *U. I. Dialekte*, p. 66.) [E.H.B.]

EGORIGIUM, a place mentioned in the Antonine Itin. and in the Table, on the road from Augusta Trevororum (*Trier*) to *Cologne*. The stations in the Table are Beda, 18 M. P.; Ausava, 18; Egorigium, 12. In the Table it is written Icorigium. The next station to Egorigium is Marcomagus (*Marmagen*), 12 M. P. Some geographers place Egorigium at *Kirchenhacher*, not far from *Stadtkill* on the *Kill*, which flows into the *Mosel*, on the left bank. [G. L.]

EGO'SA. [CASTELLANI.]

EGURRI. [ASTURES.]

EIDUMANNIA, in Britain, mentioned by Ptolemy (ii. 3. § 6) as a river between the prominence to the south of the Garrienus (*Yare*) and *Orford Ness*, and the Ἰάμισσα εἴσχυσις (*sic* in the current editions). Whatever may be the reading, this Ἰάμισσα means the *Thames*. Hence, the *Stour*, *Orwell*, *Blackwater*, or any of the Essex rivers may be the Eidumannia. The *Black*-water is the best; in which case the *du* = the Welsh *du*, Gaelic *dubh* = *black*. [R. G. L.]

EILE'SIUM (Εἰλέσιον), a town of Boeotia, of uncertain site, mentioned by Homer, the name of which, according to Strabo, indicates a marshy position. (Hom. *Il.* ii. 499; Strab. ix. p. 406; Steph. B. *s. v.*; Leake, *Northern Greece*, vol. ii. p. 469.)

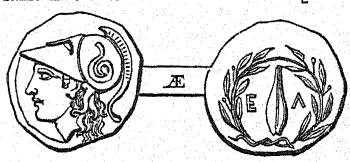
EĪON. 1. (Ἠϊών: *Eth.* Ἠιωνεύς, Steph. B.), a town and fortress situated at the mouth of the Strymon, 25 stadia from Amphipolis, of which it was the harbour. (Thuc. iv. 102.) Xerxes, on his return after the defeat at Salamis, sailed from Eïon to Asia. (Herod. viii. 118.) The Persian Boges was left in command of the town, which was captured, after a desperate resistance, by the Athenians and their confederates, under Cimon. (Herod. vii. 107; Thuc. i. 98; comp. Paus. viii. 8. § 2.) Brasidas attacked it by land and by boats on the river, but was repulsed by Thucydides, who had come from Thasos with his squadron in time to save it. (Thuc. iv. 107.) It was occupied by Cleon; and the remains of his army, after their defeat at Amphipolis, mustered again at Eïon. (Thuc. v. 10.) Extensive ruins of thick walls, constructed of small stones and mortar, among which appear many squared blocks

* This at least is the construction put by all the best commentators upon the phrase of Horace,— "Lymphis iratis exstructa:" but it is remarkable that modern topographers speak of the site as abounding in fresh water, and having one fountain in particular, still called the *Fonte d'Agnazzo*, which is one of the finest in the whole country. (Pratilli. *Via Appia*, p. 544; Romanelli, vol. ii. p. 146.)

in the Hellenic style, have been found on the left bank of the Strymon beyond the ferry. These ruins belong to the Byzantine period, and have been attributed to a town of the Lower Empire, Κομιτίσση, which the Italians have converted into *Contessa*. These remains at the ferry stand nearly, if not exactly, on the site of Eïon on the Strymon. (Leake, *Northern Greece*, vol. iii. p. 172.)

2. A town of Pieria. (Steph. B. *s. v.*; Eustath. *ap. Hom. Il.* ii. p. 287.)

3. A colony of the Mendaeans, which was betrayed to the Athenians, and retaken by the Chalcidians and Bottiaeans, B. C. 425 (Thuc. iv. 7); which Eustathius (*l. c.*) placed in the Chersonesus, but, as this is much too remote for the Chalcidians to have marched thither to recover a town, Arnold (*ap. Thuc. l. c.*) supposed there might have been a fourth Eïon, on some point of the long and winding coast which extends from the Strymon to the Axius. [E. B. J.]



EION or EIONES (Ἠιών, Diod.; Ἠιόνες, Hom., Strab.), a town in the Argolic peninsula, mentioned by Homer along with Troezen and Epidaurus. It is said to have been one of the towns founded by the Dryopes, when they were expelled from their seats in Northern Greece by Hercules. Strabo relates that the Mycenaeans expelled the inhabitants of Eiones, and made it their sea-port, but that it had entirely disappeared in his time. Its position is uncertain; but, in consequence of the preceding statement of Strabo, it is placed by Curtius in the plain of *Kandia*. (Diod. iv. 37; Hom. *Il.* ii. 561; Strab. viii. p. 373; Curtius, *Peloponnesos*, vol. ii. pp. 467, 580.)

EIRA. [IRA.]

EIRE'SIDAE or ERESIDAE. [ATTICA, p. 334.]

ELAEA (Ἐλαία: *Eth.* Ἐλαΐτης), an Aeolic city of Asia, the port of the Pergameni. (Steph. B. *s. v.*) According to the present text of Stephanus, it was also called Cidaenis (Κιδαινίς), and was founded by Menestheus; but it seems likely that there is some error in the reading Cidaenis (Meineke ad Steph. B. *s. v.*). Strabo (p. 615) places Elaea south of the river Caicus, 12 stadia from the river, and 120 stadia from Pergamum. The Caicus enters a bay, which was called Elaiticus, or the bay of Elaea. Strabo calls the bay of Elaea part of the bay of Adramyttium, but very incorrectly. He has the story, which Stephanus has taken from him, that "Elaea was a settlement made by Menestheus and the Athenians with him, who joined the war against Ilium" (p. 122); but Strabo does not explain how it could be an Aeolian city, if this story was true. It is supposed that the coins of Elaea, which bear the head and name of Menestheus, are some evidence of its Athenian origin; but it is no evidence at all. Herodotus (i. 149) does not name Elaea among the Aeolian cities. Strabo makes the bay of Elaea terminate on one side in a point called Hydra, and on the other in a promontory Harmatus; and he estimates the width between these points at 80 stadia. Thucydides (viii. 101) places Harmatus opposite to Methymna, from which, and the rest of the narrative, it is clear that he fixes Harmatus in a different place from Strabo. The exact site of Elaea seems to be uncertain. Leake, in his map, fixes it at a place marked *Kliseli*, on the road from the south to Pergamum (*Bergamah*). Scylax (p. 35), Mela (i. 18), Pliny (v. 32), and Ptolemy (v. 2), all of whom mention Elaea, do not help us to the precise place; all we learn from them is, that the Caicus flowed between Pitane and Elaea.

The name of Elaea occurs in the history of the kings of Pergamum. From Livy (xxxv. 13), it appears, as Strabo tells us, that those who would reach Pergamum from the sea, would land at Elaea. (Comp. Liv. xxxvi. 43, xxxvii. 18. 37; Polyb. xvi. 41, xxi. 8). One of the passages of Livy shows that there was a small hill (*tumulus*) near Elaea, and that the town was in a plain and walled. Elaea was damaged by an earthquake in the reign of Trajan, at the same time that Pitane suffered. [G. L.]

COIN OF ELAEA.

ELAEA, an island on the Propontis, mentioned by Pliny (v. 32); but it is not certain which of the several small islands he means. [G. L.]

ELAEA (Ἐλαία, Ptol. v. 14. § 3), a promontory on the NE. coast of Crete, which Pococke (*Trav.* vol. ii. p. 218) calls *Chaule-burnau*. (Comp. Engel, *Kypros*, vol. i. p. 89.) [E. B. J.]

ELAEA, ELAEA'TIS. [ACHERON.]

ELAEUS. 1. (Ἐλαῖος, written Ἐλαιοῦς in Marcian, *Peripl.* p. 70), was an emporium or trading place on the coast of Bithynia at the mouth of a river of the same name. Elaeus was 120 stadia west of Cales. [CALES.]

2. Placed by Pliny in the Sinus Doridis; but nothing is known of it. [CERAMEICUS.] [G. L.]

ELAEUS (Ἐλαιοῦς, Ἐλεοῦς), the southernmost town of the Thracian Chersonese, within less than one day's sail of Lemnos with a northerly wind (Herod. vi. 140), and a colony of Teos in Ionia (Scymn. 786). It was celebrated for its tomb, temple, and sacred grove of the hero Protesilaus. The temple, conspicuously placed on the sea-shore, was a scene of worship and pilgrimage, not merely for the inhabitants of Elaeus, but also for the neighbouring Greeks generally; and was enriched with ample votive offerings, and probably deposits for security — money, gold and silver saucers, bronze implements robes, and various other presents. (Herod. vii. 33, ix. 116; Strab. xiii. p. 595; Paus. i. 34. § 2, iii. 4. § 5; Plin. xvi. 99; Philostr. *Her.* ii. 1; Tzetz. *ad Lyc.* 532.)

Artayctes, the Persian commander at Sestus, stripped the sacred grove of Protesilaus of all the treasures, and profaned it by various acts of outrage, in consequence of which the Athenian commander, Xanthippus, and the citizens of Elaeus crucified Artayctes, when Sestus was taken by the Greeks. (Herod. ix. 118—120.) In B. C. 411, the Athenian squadron under Thrasyllus escaped with difficulty from Sestus to Elaeus (Thuc. viii. 102); and it was here, just before the fatal battle of Aegos-Potami, that the 180 Athenian triremes arrived in time to hear that Lysander was master of Lampsacus. (Xen. *Hell.* ii. 1. § 20.)

In B. C. 200, Elaeus surrendered voluntarily to Philip V. (Liv. xxxi. 16); but in B. C. 190 the citizens made overtures to the Romans. (Liv. xxxvii. 9.) Constantine's fleet in the Second Civil War, A. D. 323, took up its moorings at Elaeus, while that of Licinius was anchored off the tomb of Ajax, in the Troad. (Zosim. ii. 23; Le Beau, *Bas Empire*, vol. i. p. 216.)

Justinian fortified this important position (Procop. *Aed.* iv. 16), the site of which has been fixed by D'Anville (*Mém. de l'Acad. des Inscr.* vol. xxviii. p. 338) to the SE. of the promontory of *Mastusia.* [E. B. J.]

ELAEUS (Ἔλαιος), a town of Aetolia, belonging to Calydon, was strongly fortified, having received all the necessary munitions from king Attalus. It was taken by Philip V., king of Macedonia, B. C. 219. Its name indicates that it was situated in a marshy district; and it must have been on the coast to have received supplies from Attalus. We may therefore place it near *Mesolonghi.* (Polyb. v. 65; Kruse, *Hellas,* vol. ii. pt. ii. p. 262.)

ELAEUS (Ἐλαιοῦς: *Eth.* Ἐλαιούσιος). 1. A demus of Attica. [ATTICA, p. 330, b.]

2. A town in the Argeia, mentioned only by Apollodorus (ii. 5. § 2) and Stephanus B. (*s. v.*). From the statement of the former writer we may conclude that it could not have been far from Lerna, since Heracles, after he had succeeded in cutting off the immortal head of the Hydra, is said to have buried it by the side of the way leading from Lerna to Elaeus. The remains of this town have been found in the unfrequented road leading from Lerna to Hysiae. (Ross, *Reisen im Peloponnes,* p. 155, seq.; Boblaye, *Recherches,* p. 49.; Curtius, *Peloponnesos,* vol. ii. p. 372.)

3. A town in Chaonia in Epeirus, mentioned only by Ptolemy (iii. 14. § 7), but probably situated in the plain Elaeon, of which Livy speaks (xliii. 23). Leake supposes this plain to have been that between *Arghyrókastro* and *Libókhovo,* and that the town of Elaeus stood on the heights, opposite to *Arghyrókastro,* where it is said that some remains of Hellenic walls still exist. (Leake, *Northern Greece,* vol. ii. p. 75.)

ELAEUSSA. [ELEUSA.]

ELAH, a valley in the tribe of Judah, near the country of the Philistines, notorious for the conflict between David and Goliath. (1 *Sam.* xvii.) The name is omitted by the LXX. in v. 2, and translated in verse 19 (ἐν τῃ κοιλάδι τῆς δρυός). The valley lay "between Socoh and Azekah" (v. 1), the former of which is identified by the modern village of *Shuweikeh,* and thus fixes the valley of Elah to the modern "*Wady-es-Sunt.*" "It took its name Elah of old from the Terebinth (Butm.), of which the largest specimen we saw in Palestine still stands in the vicinity, just as it now takes its name *es-Sŭmt* (*Sŭnt*) from the acacias which are scattered in it." (Robinson, *Bib. Res.* vol. ii. p. 350.) No value whatever can be attached to the tradition which has marked part of the *Wady Beît Hanîna,* on the road from Jaffa to Jerusalem, as the ancient valley of Elah; a tradition, like many others in Palestine, which consults the convenience of pilgrims, rather than historical or geographical accuracy. [G.W.]

ELAIUS or ELAEUS MONS. [PHIGALEA.]

ELAPHITES INS., a group of small islands off the coast of Illyricum (Plin. iii. 26) which bore this name from their supposed resemblance to a stag, of which *Giupan* formed the head, the small *Ruda* the neck, *Mezzo* the body, and *Calamotta* the haunches, the tail being completed by the rock of *Grebini* or *Pettini.* They are well cultivated, and, producing abundance of excellent wine and oil, are considered the most valuable part of the Ragusan territory, to which they were annexed A. D. 1080 by Sylvester, king of Dalmatia. (Wilkinson, *Dalmatia and Montenegro,* vol. i. p. 267.) [E. B. J.]

ELAPHI'TIS. Pliny (v. 31) gives this name to one of the small islands about Chios. [G. L.]

ELAPHONNE'SUS (Ἐλαφόννησος), or "deer island," an island of the Propontis, with a good harbour. (Scylax, p. 35.) Strabo says (p. 588): "As you coast along from Parium to Priapus, there is old Proconnesus and the island now called Proconnesus." Pliny (v. 32) says that "Elaphonnesus is in the Propontis, in front of Cyzicus, whence the marble of Cyzicus; it was also called Nevris and Proconnesus." Now, as Proconnesus was noted for its marble quarries (Strab. p. 588), which supplied materials for the buildings of Cyzicus, it is plain that Pliny takes Elaphonnesus to be the Proconnesus of Strabo. The name Proconnesus probably means the same as Elaphonnesus (προκ).

Stephanus (*s. v.* Ἁλώνη) describes Halone as an island close to Cyzicus, which was also called Nebris and Prochone. In the passage of Stephanus the common reading is Νευρίς, as it is in Pliny's text (Nevris); but it is corrected by Harduin (Plin. v. 42, Notae) and by Meineke (ed. Steph.). Pliny places in the Propontis an island Halone, with a town; and there is an island now called *Alon,* which is separated from the north-western extremity of the peninsula of Cyzicus by a narrow channel. Some geographers assume this island to be Elaphonnesus, which is manifestly a mistake. The text of Stephanus identifies Halone with Nebris and Prochone, from which we can conclude nothing; and the passage in Strabo is such that it is possible he may mean to speak only of one island. Pliny's statement is free from all ambiguity, and probably true. [G.L.]

ELATEIA (Ἐλάτεια; *Eth.* Ἐλατεύς). 1. A city of Phocis, and the most important place in the country after Delphi, was situated "about the middle of the great fertile basin which extends near 20 miles from the narrows of the Cephissus below Amphicleia to those which are at the entrance into Boeotia." (Leake). Hence it was admirably placed for commanding the passes into Southern Greece from Mt. Oeta, and became a post of great military importance. (Strab. ix. p. 424.) Pausanias describes it as situated over against Amphicleia, at the distance of 180 stadia from the latter town, on a gently rising slope in the plain of the Cephissus (x. 34. § 1.) Elateia is not mentioned by Homer. Its inhabitants claimed to be Arcadians, deriving their name from Elatus, the son of Arcas. (Paus. *l. c.*) It was burnt, along with the other Phocian towns, by the army of Xerxes. (Herod. viii. 33.) When Philip entered Phocis in B. C. 338, with the professed object of conducting the war against Amphissa, he seized Elateia and began to restore its fortifications. The alarm occasioned at Athens by the news of this event shows that this place was then regarded as the key of Southern Greece. (Dem. *de Cor.* p. 284: Aeschin. *in Ctes.* p. 73; Diod. xvi. 84.) The subsequent history of Elateia is given in some detail by Pausanias (*l. c.*). It successfully resisted Cassander, but it was taken by Philip, the son of Demetrius. It remained faithful to Philip when the Romans invaded Greece, and was taken by assault by the Romans in B. C. 198. (Liv. xxxii. 24.) At a later time the Romans declared the town to be free, because the inhabitants had repulsed an attack which Taxiles, the general of Mithridates, had made upon the place.

Among the objects worthy of notice in Elateia, Pausanias mentions the agora, a temple of Asclepius containing a beardless statue of the god, a theatre,

and an ancient brazen statue of Athena. He also mentions a temple of Athena Cranaea, situated at the distance of 20 stadia from Elateia: the road to it was a very gentle ascent, but the temple stood upon a steep hill of small size.

Elateia is represented by the modern village of *Lefta*, where are some Hellenic remains, and where the ancient name was found in an inscription extant in the time of Meletius. Some remains of the temple of Athena Cranaea have also been discovered in the situation described by Pausanias. (Gell, *Itiner.* p. 217; Dodwell, vol. ii. p. 141; Leake, *Northern Greece*, vol. ii. p. 83.)

2. A town in Pelasgiotis in Thessaly, described by Livy, along with Gonnus, as situated in the pass leading to Tempe. ("Utraque oppida in faucibus sunt, quae Tempe adeunt: magis Gonnus," Liv. xlii. 54.) The walls of Elateia are seen on the height of *Makrikhóri*, on the right bank of the Peneius, in the middle of the *Klisúra*, or rugged gorge through which the river makes its way from the plain into the valley of *Dereli* or Gonnus, and thence to Tempe. (Leake, *Northern Greece*, vol. iii. p. 381, vol. iv. p. 298.) Elateia is called Iletia by Pliny (iv. 8. s. 15), and Iletium by Ptolemy (Ἰλέτιον, iii. 13. § 42). It is mentioned by Stephanus B. under its right name.

3. Or ELATRIA (Ἐλατρία, Strab. viii. p. 324; Steph. B. *s. v.* Ἐλάτεια), a town of the Cassopaei in Thesprotia, in Epeirus, mentioned by Strabo, along with Batiae and Pandosia, as situated in the interior. Its exact site is uncertain. It is said to have been a colony of Elis. (Strab. *l. c.*; Dem. *de Halonn.* 32; Harpocr., Steph. B. *s. v.*; Liv. xxxiv. 25; Leake, *Northern Greece*, vol. iv. p. 74, seq.)

ELATH, the Scriptural name of AELANA, under which an account of the town is given. It is there stated that "the site is now occupied by a fortress called *Akaba*," &c. Dr. Robinson, however, and other travellers regard *Akaba* as the representative of Ezion-Geber, and find the site of Elath on the sea-shore, a little to the north of *Akaba*. "At this point extensive mounds of rubbish, which mark the site of Ailah, the Elath of Scripture, were on our right. They present nothing of interest, except as indicating that a very ancient city has here utterly perished. We did not learn that they have now a name." (*Bib. Res.* vol. i. p. 241.) [G.W.]

ELATRIA. [ELATEIA, No. 3.]

ELAVER. [LIGERIS.]

ELBO (Ἔλβω, Steph B. *s. v.*: *Eth.* Ἐλβῶος), one among the numerous islands which studded the Deltaic marshes between the Phatnitic and Tanitic arms of the Nile. It was in this island that, according to Herodotus (ii. 140), the blind king Anysis took refuge during the occupation of his realm by Sabaco, the Aethiopian; and thither also Amyrtaeus fled from the Persians in B. C. 456—50 (Thuc. i. 110). From the former historian it would appear that the area of Elbo had been raised by some artificial means above the level of the surrounding waters. [W. B. D.]

ELCE'BUS, or HELCEBUS. [HELVETUS.]

ELDIMAEI or ELIMAEI. [ELYMAEI.]

ELEALEH (Ἐλεάλη), a town of the Reubenites, situated, according to Eusebius, in Gilead, and one mile distant from Heshbon, the capital of Sihon, king of the Amorites. It was in his time a very large village (κώμη μεγίστη, *Onomast. s. v.*). It is always mentioned in connection with Heshbon. (*Numb.* xxxii. 3, 37; *Is.* xv. 4, xvi. 9; *Jerem.* xlviii. 34.) It was first identified in modern times by Seetzen, in a ruined site named *El-Âl*, half an hour north-east of *Hesbán*, the old Heshbon. It was also visited by Burckhardt, who writes it *El-Aal*, and thus describes it (*Travels*, p. 365): "It stands upon the summit of a hill, and takes its name from its situation,—*Aal* meaning 'the high.' It commands the whole plain, and the view from the top of the hill is very extensive. . . . . *El Aal* was surrounded by a well-built wall, of which some parts yet remain. Among the ruins are a number of large cisterns, fragments of walls, and the foundations of houses; but nothing worth particular notice." [G. W.]

ELECTRA (Ἠλέκτρα, Ptol. iii. 17. § 4), a river on the S. coast of Crete, which Kiepert's map identifies with the *Malogniti*, the most important river in the island, flowing in a direction parallel with the coast from E. to W. Höck (*Kreta*, vol. i. p. 393) considers it to be the same as the small stream *Galigni*, further to the W. [E.B.J.]

ELECTRA (Ἠλέκτρα), a small river in Messenia, a tributary of the Pamisus, which was crossed in going from Andania to Cyparissia. (Paus. iv. 33. § 6; Leake, *Morea*, vol. i. p. 482.)

ELEGEIA (Ἐλέγεια, Steph. B.). 1. (*I'lijeh*), a city of the Greater Armenia, which Ptolemy (v. 13) places in long. 73° 20′ and lat. 42° 45′, near the sources of the Euphrates. Trajan, in his Armenian campaign, advanced upon this town, where he granted Parthamasiris an interview. (Dion Cass. lxviii. 18.) In A. D. 162 Vologeses III., king of Parthia, invaded Armenia, and cut to pieces a Roman legion, with its commander Severianus, at Elegeia. (Dion Cass. lxxi. 2.) *I'lijeh* is remarkable for two warm springs (whence its name), of the temperature of 100° Fahrenheit, and is situated on a limestone rock 3779 feet above the sea, not far from *Erz-Rûm*. (*Journ. Geog. Soc.* vol. x. pp. 359, 434; comp. Tournefort, *Voyage*, vol. ii. p. 114; Ousely, *Travels*, vol. iii. p. 471; Ritter, *Erdkunde*, vol. x. pp. 100, 116, 737, 829.)

2. A town of the Lesser Armenia, on the right bank of the Euphrates, at the first or principal curve which takes place before the river enters Mount Taurus ("apud Elegiam occurrit ei Mons Taurus," Plin. v. 20). Elegia is represented by the modern *I'z O'ghlú*; and it is there that the Euphrates — after issuing from the mountains of *Kebán Ma'den*, and having turned to the W. round the remarkable peninsula of *'Abdu-l-Wahháb*, terminated by the rocks of *Mumshár* (D'Anville's pass of *Nushár*) — receives the *Tokhmah-Sú*, and then takes an easterly bend to pass the rocky mountains of *Bhágli Khánli* and *Beg Tágh*. (*Journ. Geog. Soc.* vol. x. p. 331; Ritter, *Erdkunde*, vol. x. pp. 100, 116, 737, 829, 858.) [E. B. J.]

ELEIA (Ἐλαία, Ptol. v. 18. § 12; Eleia, Sext. Ruf. c. 27; Hileia, Amm. Marc. xviii. 10), a village to the westward of Singara, and probably within the limits of the province now called the *Sinjár*. It is only memorable as having been the scene of a night conflict between the Romans under Constantius and the Persians, in which each army claimed the victory. There is a slight difference between the account of Ammianus and Rufus, the former mentioning two battles, one at Eleia and the other at Singara; and the latter, only one. The battle is alluded to by Julian (*Orat.* 1. in Constant) and by Eutropius (x. 10). [V.]

ELEII. [ELIS.]

E'LEON (Ἐλεών, Heleon, Plin.), a town in

Boeotia, mentioned by Homer in the same line with Hyle and Peteon, is said by Strabo to have been one of the smaller places in the territory of Tanagra, and to have derived its name from its marshy situation. Its site is uncertain: Leake places it on the shore of the lake *Paralimni* [see p. 411], but Müller and Kiepert near Tanagra on the right bank of the Asopus. (Hom. *Il.* ii. 500; Strab. ix. pp. 404—406; Plin. iv. 7. s. 12; Steph. B. *s. v.*; Leake, *Northern Greece*, vol. ii. pp. 322, 468.)

ELEPHANTI'NE (Ἐλεφαντίνη νῆσος, Ptol. iv. 5. § 70; πόλις Αἰγύπτου, Steph. B. *s. v.*; Ἐλεφάντων πόλις, Joseph. *B. Jud.* v. 11; Ἐλέφαντις, id. *ib.*: *Eth.* Ἐλεφαντινίτης and Ἐλεφαντίτης; Strab. xvii. p. 817; Elephantis, Plin. *N. H.* v. 10. s. 59.) The original appellation of this island was EBO; EB being in the language of hieroglyphics the symbol of the elephant and of ivory. (Rosellini, *Mon. Stor.* 4, 204.) It was seated in lat. 24° N., just below the lesser cataract, directly opposite Syene, and near the western bank of the Nile. At this point the river becomes navigable downward to its mouths, and the traveller from Meroë and Aethiopia enters Egypt Proper. Its frontier position and its command of the river, no longer impeded by rapids, caused Elephantine to be regarded in all ages as the key of the Thebaid, and it was accordingly occupied by strong garrisons of native Egyptian troops, Persians, Macedonians, and Romans successively. (Herod. ii. 17, 29, 30; Agatharch. *de Rub. Mar.* p. 22; Mela, i. 9; Tac. *Ann.* ii. 61; Notit. Imp. Orient. c. 28.) Under the later Caesars, Diocletian, &c., it formed the southern limit of the Roman empire, and its garrison was engaged in continual wars with the Blemmyes and other barbarous tribes of Nubia. (Procop. *Bell. Pers.* i. 19.) The surrounding region is generally barren, consisting of lofty shelves of granite separated by bars of sand. But Elephantine itself, like the oases of the neighbouring Libyan desert was remarkable for its fertility and verdure. Its vines and fig-trees retained their leaves throughout the year (Theophrast. *Hist. Plant.* i. 6; Varro, *R. Rust.* i. 7): and the Arabs of the present day designate the island as *Djesiret el Sag*, the Blooming. The city of Elephantis was long the capital of a little kingdom separate from Egypt, which probably, as well as the kingdom of This or Abydos, declined as Thebes rose into importance. The names of nine of its kings are all that is known of the political history of Elephantine. Its successive possessors have left tokens of their occupation in the ruins which cover its area. Yet these are far less striking than the monuments of Philae at the opposite southern extremity of the cataracts. The most remarkable structures on the island were a temple of Kneph, built or at least completed by Amenouph II., a king of the eighteenth dynasty; another temple dedicated to Ammon; and the Nilometer, mentioned by Strabo (xvii. p. 817; comp. Plutarch, *Isis et Osir.* c. 43; Heliod. *Aethiop.* ix. 22; Euseb. *Praepar. Evang.* iii. 11); and thus described by Sir Gardner Wilkinson (*Manners and Customs*, 2nd series, i. p. 47): "The Nilometer in the island of Elephantine is a staircase between two walls descending to the Nile, on one of which is a succession of graduated scales containing one or two cubits, accompanied by inscriptions recording the rise of the river at various periods during the rule of the Caesars." The numerals in these inscriptions are Roman. [W. B. D.]

ELEPHANTO'PHAGI, ELEPHANTO'MAGI (Ἐλεφαντοφάγοι, Ἐλεφαντομάγοι, Diod. iii. 26; Strabo, xvi. p. 771; Plin. *N. H.* vi. 35, viii. 13; Solin. c. 25), one of the numerous tribes which roamed over the plains north of the Abyssinian highlands, and derived their names from their peculiar diet or occupation. The elephant eaters and hunters, who seem also to have been denominated Asachaei or Asachae (Agatharch. *de Rub. Mar.* p. 39), employed, according to Diodorus (*l. c.*), two methods of killing the elephant. The hunter singled out individuals from the herd, and ham-strung them with a sharp-pointed knife,—a feat which often terminated in the destruction of both the hunter and his prey; or, sawing nearly through the trees against which the elephants were accustomed to lean, watched for their falling with the sawn trunk, and as their unwieldy size prevented the animals from rising, destroyed the elephants at leisure. The Elephantophagi brought the hides and tusks of their game to the markets of Upper Egypt,—the hides being employed in covering bucklers, and the ivory for inlaid work in architecture, and for many of the ornaments of luxury. [W. B. D.]

E'LEPHAS, the name of a mountain and a river of Aethiopia on the western coast of the Red Sea. The promontory of Elephas (Ἐλέφας ὄρος, iv. 7. §§ 10, 26, 27; Strab. xvi. p. 774) was the eastern extremity of Mount Garbata, and situated between the headland Aromata (*Cape Guardafui*) and the entrance of the Red Sea, in lat. 11° N. The modern appellation of Elephas is Dsjibel-Fil (*Cape Felix*). The position of the river Elephas is uncertain. (Heracl. *Peripl. Mar. Eryth.* p. 7.) It was, however, near the foreland of Elephas and in the Regio Cinnamomifera. Strabo (*l. c.*) mentions a canal (διώρυξ), apparently part of the river, or an artificial direction of its current. [W.B.D.]

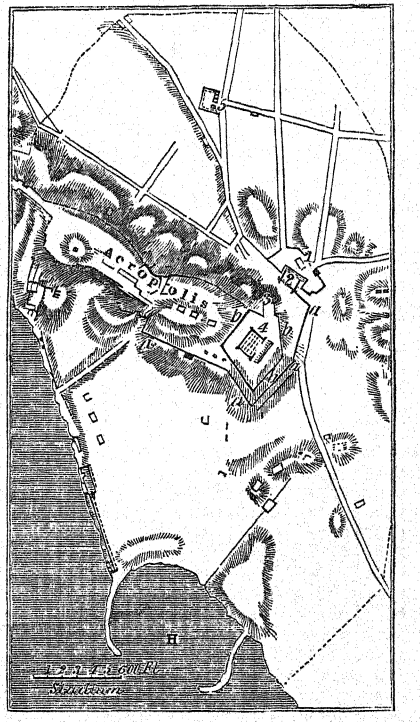
ELEUSA. 1. (Ἐλεούσα, Ἐλαούση), a small island off the coast of Caria (Strab. pp. 651, 652; *Stadiasmus*), between Rhodus and the mainland, opposite to the mountain promontory Phoenix [CARIA, p. 519, b.], 4 stadia from Phoenix, and 120 stadia from Rhodes. It was 8 stadia in circuit. (Strabo.) This seems to be the small island marked *Alessa* in the latest maps.

2. ELEUSA (Ἐλεούσα, Strab. p. 671) or ELAEUSSA (Ἐλαιοῦσσα: *Eth.* Ἐλαιούσσιος, Steph. B. *s. v.*), an island close to the shore of Cilicia, afterwards called Sebaste [CILICIA, p. 622, a.]. (Leake, *Asia Minor*, p. 213.) The name is written Eleus (Ἐλεοῦς) in the Stadiasmus.

Stephanus, after mentioning the Elaeussa of Caria, says that there are also seven other islands,—of the same name, we must infer. The writing of the word, as it has been shown, varies; but perhaps the form Ἐλαιοῦσσα is the best. [G. L.]

ELEU'SA or ELEUSSA (Ἐλεοῦσσα). 1. An island opposite cape Astypalaea, off the western coast of Attica. (Strab. ix. p. 398.)

2. An island named by Pliny, along with eight others, as lying opposite the promontory Spiraeum, which separated the territories of Corinth and Epidaurus. There are several small islands opposite this promontory, one of which is now called *Laoussa*, probably a corruption of Eleussa. (Plin. iv. 12. s. 19: Boblaye, *Recherches*, &c. p. 65.)



ELEUSIS (Ἐλευσίς, or Ἐλευσίν: *Eth.* Ἐλευσίνιος). 1. (*Lepsina*), a demus of Attica, belonging to the tribe Hippothoöntis. It owed its celebrity to its being the chief seat of the worship of Demeter and Persephone, and to the mysteries celebrated in

honour of these goddesses, which were called the Eleusinia, and continued to be regarded as the most sacred of all the Grecian mysteries down to the fall of paganism. As an account of these mysteries, and of the legends respecting their institution, is given elsewhere (*Dict. of Ant.* art. *Eleusinia*), it only remains now to speak of the topography and history of the town.

Eleusis stood upon a height at a short distance from the sea, and opposite the island of Salamis. Its situation possessed three natural advantages. It was on the road from Athens to the Isthmus; it was in a very fertile plain; and it was at the head of an extensive bay, formed on three sides by the coast of Attica, and shut in on the south by the island of Salamis. A description of the Eleusinian (also called the Thriasian) plain, and of the river Cephissus, which flowed through it, is given under ATTICA. The town itself dates from the most ancient times. It appears to have derived its name from the supposed advent (ἔλευσις) of Demeter, though some traced its name from an eponymous hero Eleusis. (Paus. i. 38. § 7.) It was one of the 12 independent states into which Attica was said to have been originally divided. (Strab. ix. p. 397.) It was related that in the reign of Eumolpus, king of Eleusis, and Erechtheus, king of Athens, there was a war between the two states, in which the Eleusinians were defeated, whereupon they agreed to acknowledge the supremacy of Athens in every thing except the celebration of the mysteries, of which they were to continue to have the management. (Thucyd. ii. 15; Paus. i. 38. § 3.) Eleusis afterwards became an Attic demus, but in consequence of its sacred character it was allowed to retain the title of πόλις (Strab. ix. p. 395; Paus. i. 38. § 7), and to coin its own money, a privilege possessed by no other town in Attica, except Athens. The history of Eleusis is part of the history of Athens. Once a year the great Eleusinian procession travelled from Athens to Eleusis, along the Sacred Way, which has been already described at length. [ATTICA, p. 327, seq.] The ancient temple of Demeter at Eleusis was burnt by the Persians in B. C. 484 (Herod. ix. p. 395); and it was not till the administration of Pericles that an attempt was made to rebuild it (see below). When the power of the Thirty was overthrown after the Peloponnesian War, they retired to Eleusis, which they had secured beforehand, but where they maintained themselves for only a short time. (Xen. *Hell.* ii. 4. §§ 8, seq., 43) Under the Romans Eleusis enjoyed great prosperity, as initiation into its mysteries became fashionable among the Roman nobles. It was destroyed by Alaric in A.D. 396, and from that time disappears from history. When Spon and Wheler visited the site in 1676, it was entirely deserted. In the following century it was again inhabited, and it is now a small village called Λεψίνα, which is only a corruption of the ancient name.

"Eleusis was built at the eastern end of a low rocky height, a mile in length, which lies parallel to the sea-shore, and is separated to the west from the falls of Mount Cerata by a narrow branch of the plain. The eastern extremity of the hill was levelled artificially for the reception of the Hierum of Demeter and the other sacred buildings. Above these are the ruins of an acropolis. ['Castellum, quod et imminet, et circumdatum est templo,' Liv. xxxi. 25.] A triangular space of about 500 yards each side, lying between the hill and the shore, was occupied by the town of Eleusis. On the eastern side the town wall is traced along the summit of an artificial embankment, carried across the marshy ground from some heights near the Hierum, on one of which stands a castle (built during the middle ages of the Byzantine empire). This wall, according to a common practice in the military architecture of the Greeks, was prolonged into the sea, so as to form a mole sheltering a harbour, which was entirely artificial, and was formed by this and two other longer moles which project about 100 yards into the sea. There are many remains of walls and buildings along the shore, as well as in other parts of the town and citadel; but they are mere foundations, the Hierum alone preserving any considerable remains." (Leake.)

Pausanias has left us only a very brief description of Eleusis (i. 38. § 6): "The Eleusinians have a temple of Triptolemus, another of Artemis Propylaea, and a third of Poseidon the Father, and a well called Callichorum, where the Eleusinian women first instituted a dance and sang in honour of the goddess. They say that the Rharian plain was the first place in which corn was sown and first produced a harvest, and that hence barley from this plain is employed for making sacrificial cakes. There the so-called threshing-floor and altar of Triptolemus are shewn. The things within the wall of the Hierum [i. e. the temple of Demeter] a dream forbade me

PLAN OF ELEUSIS.

1. Temple of Artemis Propylaea.
2. Outer Propylaeum.
3. Inner Propylaeum.
4. Temple of Demeter.
5. Well of Callichorum.

a, *a*, *a*. Outer Inclosure of the Sacred Buildings.

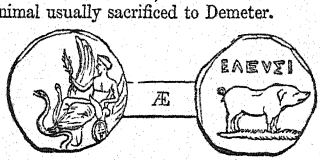
H. Harbour.



to describe." The Rharian plain is also mentioned in the Homeric Hymn to Artemis (450): it appears to have been in the neighbourhood of the city; but its site cannot be determined.

The present state of the antiquities at Eleusis is described by the Commission of the Dilettanti, of whose researches a brief account is given by Leake. Upon approaching Eleusis from Athens, the first conspicuous object is the remains of a large pavement, terminating in some heaps of ruins, which are the remains of a propylaeum, of very nearly the same plan and dimensions as that of the Acropolis of Athens. Before it, near the middle of a platform cut in the rock, are the ruins of a small temple, 40 feet long and 20 broad, which was undoubtedly the temple of Artemis Propylaea. (See plan, 1.) "The peribolus, which abutted on the Propylaeum, formed the exterior inclosure of the Hierum (plan, *a*, *a*, *a*). At a distance of 50 feet from the propylaeum was the north-eastern angle of the inner inclosure (plan, *b*, *b*, *b*), which was in shape an irregular pentagon. Its entrance was at the angle just mentioned, where the rock was cut away both horizontally and vertically to receive another propylaeum (plan, 3) much smaller than the former, and which consisted of an opening 32 feet wide between two parallel walls of 50 feet in length. Towards the inner extremity this opening was narrowed by transverse walls to a gateway of 12 feet in width, which was decorated with antae, opposed to two Ionic columns. Between the inner front of this propylaeum and the site of the great temple lay, until the year 1801, the colossal bust of Pentelic marble, crowned with a basket, which is now deposited in the public library at Cambridge. It has been supposed to be a fragment of the statue of Demeter which was adored in the temple; but, to judge from the position in which it was found, and from the unfinished appearance of the surface in those few parts where any original surface remains, the statue seems rather to have been that of a Cistophorus, serving for some architectural decoration, like the Caryatides of the Erechtheium."

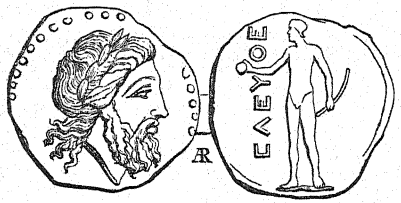
The temple of Demeter itself, sometimes called ὁ μυστικὸς σηκός, or τὸ τελεστήριον, was the largest in all Greece, and is described by Strabo as capable of containing as many persons as a theatre (ix. p. 395). The plan of the building was designed by Ictinus, the architect of the Parthenon at Athens; but it was many years before it was completed, and the names of several architects are preserved who were employed in building it. Its portico of 12 columns was not built till the time of Demetrius Phalereus, about B. C. 318, by the architect Philo. (Strab. *l. c.*; Plut. *Per.* 13; *Dict. of Biogr.* vol. iii. p. 314, a.) When finished, it was considered one of the four finest examples of Grecian architecture in marble. It faced the south-east. Its site is occupied by the centre of the modern village, in consequence of which it is difficult to obtain all the details of the building. The Commission of the Dilettanti Society supposed the cella to be 166 feet square within; and "comparing the fragments which they found with the description of Plutarch (*Per.* 13), they thought themselves warranted in concluding that the roof of the cella was covered with tiles of marble like the temples of Athens; that it was supported by 28 Doric columns, of a diameter (measured under the capital) of 3 feet 2 inches; that the columns were disposed in two double rows across the cella, one near the front, the other near the back; and that they were surmounted by ranges of smaller columns, as in the Parthenon, and as we still see exemplified in one of the existing temples at Paestum. The cella was fronted with a magnificent portico of 12 Doric columns, measuring 6½ feet at the lower diameter of the shaft, but fluted only in a narrow ring at the top and bottom. The platform at the back of the temple was 20 feet above the level of the pavement of the portico. An ascent of steps led up to this platform on the outside of the north-western angle of the temple, not far from where another flight of steps ascended from the platform to a portal adorned with two columns, which perhaps formed a small propylaeum, communicating from the Hierum to the Acropolis."

There are no remains which can be safely ascribed to the temple of Triptolemus, or to that of Poseidon. "The well Callichorum may have been that which is now seen not far from the foot of the northern side of the hill of Eleusis, within the bifurcation of two roads leading to Megara and to Eleutherae, for near it are the foundations of a wall and portico" (plan, 5). Near Eleusis was the monument of Tellus, mentioned by Herodotus (i. 30).

The town of Eleusis and its immediate neighbourhood were exposed to inundations from the river Cephissus, which, though almost dry during the greater part of the year, is sometimes swollen to such an extent as to spread itself over a large part of the plain. Demosthenes alludes to inundations at Eleusis (*c. Callicl.* p. 1279); and Hadrian raised some embankments in the plain in consequence of an inundation which occurred while he was spending the winter at Athens (Euseb. *Chron.* p. 81). In the plain about a mile to the south of Eleusis are the remains of two ancient mounds, which are probably the embankments of Hadrian. To the same emperor most likely Eleusis was indebted for a supply of good water by means of the aqueduct, the ruins of which are still seen stretching across the plain from Eleusis in a north-easterly direction. (Leake, *Demi of Attica*, p. 154, seq., from which the greater part of the preceding account is taken.) The annexed coin represents on the obverse Demeter in a chariot drawn by winged snakes, and holding in her hand a bunch of corn, and on the reverse a sow, the animal usually sacrificed to Demeter.

COIN OF ELEUSIS.

2. An ancient town of Boeotia, on the river Triton, and near the lake Copais, which, together with the neighbouring town of Athenae, was destroyed by an inundation. (Strab. ix. p. 407; Paus. ix. 24. § 2; Leake, *Northern Greece*, vol. ii. pp. 136, 293.)



ELEU'THERAE. [ATTICA, p. 329.]

ELEUTHE'RION. [ARGOS, p. 201, a.]

ELEUTHERNA (Ἐλευθέρνα, Ptol. iii. 17. § 10; Scyl.), a town of great importance in Crete, situated on the NW. slopes of Mt. Ida, at a distance of 50 stadia from the harbour of Astale (*Stadiasm.*), and 8 M. P. from Sybritia (*Peut. Tab.*). Its origin was ascribed to the legendary Curetes (Steph. B. *s. v.*), and it was here that Ametor or Amiton (comp. *Dict. of Biogr. s. v.*) first accompanied his love-

songs to the "cithara." (Athen. xiv. p. 638.) It was in alliance with Cnossus till the people of Polyrrhenium and Lampe compelled it to break off from the confederacy. (Polyb. iv. 53, 55).

Dion Cassius (xxxvi. 1) has an odd story about a knot of traitors within who gave up the city to Q. Metellus Creticus, making a breach through a strong brick tower by means of vinegar. It was existing in the time of Hierocles; and the number and beauty of its silver coins show it to have been a place of great consideration. (Eckhel, vol. ii. p. 311.) The Venetian MS. of the 16th century mentions the remains of this city as being so enormous as to strike the eye with wonder at the power and riches of a people that could afford to rear such stately monuments. (*Mus. Class. Antiq.* vol. ii. p. 292.) Mr. Pashley (*Travels*, vol. i. pp. 145, 310) discovered vestiges of antiquity on the summit of a lofty hill near a place still called *Elétherna*, about five miles S. of the great convent of *Arkádhi*, which possesses a *Metókhi* on the site. [E. B. J.]

COIN OF ELEUTHERNA.

ELEUTHEROCI'LICES. [CILICIA, p. 621, a.]

ELEUTHEROPOLIS. [BETHOGABRIS.]

ELEU'THERUS (Ἐλεύθερος), a river of Syria, in the country of Hamath (Ἀμαθῖτις χώρα), according to the author of the book of Maccabees (1 *Macc.* xii. 25—30), a little to the south of which Jonathan met and defeated the army of Demetrius. Josephus says, that M. Antonius gave to Cleopatra all the cities between Eleutherus and Egypt except Tyre and Sidon (*Ant.* xv. 4. § 1, *B. J.* i. 18, § 5), a notice sufficient of itself to disprove its identity with the modern *Kásimîyeh*, a little to the north of Tyre, and considerably south of Sidon,—a theory not more ancient than the Chronicles of the Crusades. (See the references in Robinson, *Bib. Res.* vol. iii. p. 410, note 2.) The classical geographers all place it considerably north of this river. Thus, Ptolemy makes it the northern boundary of Phoenicia, and places Orthosia (*Tortosa*) and Simyra (*Sumra*) south of it (v. 15). Strabo also mentions it in connection with Orthosia, and nearly opposite to the rocky island Aradus (xvi. pp. 1071, 1072). Pliny places it between Orthosia and Simyra (v. 20). Maundrell was the first to indicate the *Nahr-el-Kebîr* ("the great river"), north of Tripoli, as the modern representative of the Eleutherus (*Travels*, pp. 24, 25); and he is followed by Pococke (vol. ii. p. 204, &c.), and Burckhardt (*Syria*, p. 161), and other later travellers. Maundrell found *Nahr-el-Kebîr* to be six miles north of Tripoli, and the northernmost and most considerable of three streams that water the very fruitful plain of Junia. He noticed also to the north of this, only a quarter of an hour south of Tortosa, "a river, or rather a channel of a river, for it was now almost dry; though questionless here must have been anciently no inconsiderable stream; as we might infer both from the largeness of the channel, and the fragments of a stone-bridge formerly laid over it" (p. 19). This is about half an hour north of the point on the coast opposite to which *Ruad*, the ancient Aradus, is situated, and therefore accords with Strabo better than *Nahr-el-Kebîr*, which is too far south; as Maundrell also himself intimates (p. 25). [G. W.]

ELGOVAE. [SELGOVAE.]

ELGUS (Ἔλγος: *Eth.* Ἔλγιος, Ἐλγαῖος), a city of Lycia, mentioned by Xanthus in his *Lyciaca*. (Steph. B. *s.v.*) See Meineke's note *ad Steph.* [G.L.]

ELIBYRGE. [ILLIBERIS.]

ELIM (Αἰλείμ), the second station of the Israelites after their passage of the Red Sea, next to Marah (*Exod.* xv. 27), where were "twelve wells of water, and three score and ten palm-trees." This station is now commonly assigned to *Wady Ghurundel*, two and a half hours distant from *Ain Hawârah*, assumed in this hypothesis to be Marah. There are fountains in this valley; and a few small palm-trees are scattered through it (Robinson, *Bib. Res.* vol. i. pp. 99, 100.) To obviate the difficulty suggested by the long interval of eight hours between *Wady Ghurundel* and the mouth of *Wady-el-Taiyibeh*, the next station of the Israelites, Dr. Robinson suggests *Wady Useit* as the Elim of Exodus (p. 105). But, on the whole, he inclines to the first-mentioned theory, originated by Niebuhr (*Descrip. de l'Arabie*, p. 348), and adopted by Burckhardt (*Syria*, p. 473). Dr. Wilson fixes Elim at *Wady Waseit*, the *Useit* of Dr. Robinson—for which he gives the following reasons (*Lands of the Bible*, vol. i. p. 174.):—"Here we found a considerable number of palm-trees, and tolerable water. . . . As this Wady, with these requisites, is exactly intermediate between the supposed Marah, and the situation of the Israelites near the Red Sea, . . . we did not hesitate to come to the conclusion that it is the Elim of the Scriptures." Tor, at the south of the peninsula, is quite out of the question. [G. W.]

ELIMAEI. [ELIMEIA.]

ELIMBERRUM. [CLIMBERRIS.]

ELIMEIA (Ἐλίμεια, Strab. vii. p. 326; Steph. B.) or ELIMIO'TIS (Ἐλιμιῶτις, Arrian, *Anab.* i. 7. § 5), a district to the SW. of Macedonia, bordering upon Eordaea and Pieria, while it extended to the W. as far as the range of Pindus. It was watered by the Haliacmon, and may be defined as comprehending the modern districts of *Grevená*, *Venja*, and *Tjersembá*. It was occupied in early times by the Elimaei or Elimiots (Ἐλιμιῶται, Ptol. iii. 13. § 21; Strab. ix. p. 434; Steph. B.), but afterwards fell into the hands of the Macedonian princes. (Thuc. ii. 99.) Though a mountainous and barren tract, Elimeia must have been an important acquisition to the kings of Macedonia, from its situation with regard to Thessaly and Epirus, as there were several passages leading directly into those provinces from this division of the kingdom. In the war which the Lacedaemonians waged against Olynthus, Derdas was prince of this country. (Xen. *Hell.* v. 2. § 38.) It was finally included by the Romans in the fourth division of Macedonia. (Liv. xlv. 30.) There was a town called Elimeia (Ἐλίμεια, Steph. B.; Ἔλυμα, Ptol. iii. 13. § 21), where Perseus, in the second year of the war, B. C. 170, reviewed his forces. (Liv. xliii. 21.) The site of this town is probably near *Grevenó*, on the river *Grevenitikó*. (Leake, *Northern Greece*, vol. iii. pp. 305, 324, 339.) [E. B. J.]

ELINGA (Ἠλίγγα), a town of Hispania Baetica, mentioned only by Polybius (xi. 18). Ukert places it in the neighbourhood of Baecula (vol. ii. pt. 1. p. 379). [P. S.]

ELIO'CROCA (*Lorca*), a city of the Bastetani, in Hispania Tarraconensis, W. of Carthago Nova, and on the high road from that city to Castulo. (*Itin. Ant.* p. 401.) It is probably identical with ILORCI, which Pliny mentions as a *civitas stipendiaria*, belonging to the conventus of Carthago Nova. (Plin. iii. 1. s. 3; Wesseling, *ad Itin. l. c.*; Florez, *Esp. S.* vol. vii. p. 217; Mentelle, *Esp. Moel.* p. 153; Ukert, vol. ii. pt. 1, p. 406.) [P. S.]

ELIS (ἡ Ἦλις, Dor. Ἅλις, whence "Alis" in Plaut. *Capt.* Prol. 9, 26; acc. Ἦλιδα of the country, Ἦλιν of the town generally, in Lat. "Elin" and "Elidem." The word was originally written with the digamma FΑΛΙΣ, perhaps connected with "vallis," and signifying originally, a hollow. The country was also called ἡ Ἠλεία, Thuc. ii. 25, Polyb. v. 102; ἡ Ἠλείων χώρα, Polyb. iv. 77; Eliorum ager, Plin. iv. 5. s. 6. *Eth.* and *Adj.* Ἠλεῖος, Ἀλεῖος, FΑΛΕΙΩΝ on coins, Elius, Eleus, Alius, Plaut. *Capt.* Prol. 24.; Ἠλιάδης, Steph. B. *s. v.*; Ἠλειακός, Ἠλιακός).—Elis, in its widest signification, was the country on the western coast of Peloponnesus between Achaia and Messenia, extending from the promontory Araxus and the river Larissus on the north to the river Neda on the south, and bounded on the east by the Arcadian mountains and on the west by the Ionian sea. (Strab. viii. p. 336.) It included three distinct districts, ELIS PROPER or HOLLOW ELIS, the northern portion, extending from the river Araxus to the promontory Ichthys; PISATIS, the middle portion, from the promontory Ichthys to the river Alpheius; and TRIPHYLIA, the southern portion, from the Alpheius to the Neda. Elis Proper was divided into two parts, the plain of the Peneius, and the mountainous country in the interior, called ACROREIA: the name of Hollow Elis (ἡ κοίλη Ἦλις Thuc. ii. 25) appears to have been originally given to the plain of the Peneius to distinguish it from the mountainous district of the Acroreia; but since Hollow Elis was the larger and more fertile part, this name came to be given to the whole of the northern territory, to distinguish it from the dependent districts of Pisatis and Triphylia.

Those of the ancient geographers, who represented Peloponnesus as consisting of only five divisions, made Elis and Arcadia only one district. (Paus. v. 1. § 1.) In fact Elis may be looked upon as a kind of offshoot of Arcadia, since it embraces the lower slopes of the mountains of Erymanthus, Pholoë and Lycaeus, which sink down gradually towards the Ionian sea. Elis has no mountain system of its own, but only hills and plains. It contains more fertile land than any other country of Peloponnesus; the rich meadows of the plain of the Peneius were celebrated from the earliest times; and even the sandy hills, which separate the plains, are covered with vegetation, since they are exposed to the moist westerly winds. Thus the land with its green hills and fertile plains forms a striking contrast to the bare and precipitous rocks on the eastern coast. Hence Oxylus is said to have conducted the invading Dorians by the more difficult way through Arcadia, lest they should see the fertile territory of Elis, which he had designed for himself. (Paus. v. 4. § 1; Polyb. iv. 73.)

The coast of Elis is a long and almost unbroken sandy level, and would have been entirely destitute of natural harbours, if a few neighbouring rocks had not become united by alluvial deposits with the mainland. In this way three promontories have been formed,—Araxus, Chelonatas, Ichthys,—which interrupt the uniformity of the coast, and afford some protection for vessels. Of these the central and the largest is Chelonatas, running a considerable way into the sea, and forming on either side one end of a gulf. The northern gulf bears the name of Cyllene, and is bounded at its northern extremity by the promontory Araxus. The southern gulf is called the Chelonatic, and is bounded at its southern extremity by the promontory Ichthys, which also forms the commencement of the great Cyparissian gulf.

The sandy nature of the coast interrupts the natural outlet of the numerous smaller rivers, and absorbs them before they reach the sea. The sea also frequently breaks over the coast; and thus there is formed along the coast a series of lagoons, which are separated from the sea only by narrow sand-banks. Along the Cyllenian bay there are two such lagoons; and the whole Elean coast upon the Cyparissian bay is occupied by three almost continuous lagoons. This collection of stagnant water renders the coast very unhealthy in the summer months; and the vast number of gnats and other insects, which are generated in these marshes, makes it almost impossible to live near the sea. The modern harbour of *Kunupéli* has derived its name from the gnats, which abound in the neighbourhood (Κουνουπέλι from Κουνούπιον =κώνωψ); and even in antiquity the Eleans invoked Zeus and Hercules to protect them from this plague. (Ζεὺς ἀπόμυιος, Paus. v. 14. § 1; comp. Aelian, *H. An.* v. 17.) These lagoons, however, supply the inhabitants with a vast abundance of fish. In the summer months, when the fish are very numerous on the coast, a small opening is made through the narrow sand-banks; and the lagoons thus become soon filled with fish, which are easily taken. They are dried and salted on the spot, and are exported in large quantities. This fishery was probably carried on in ancient times also, since we find Apollo worshipped among the Eleans under the epithet of Opsophagos. (Polemon. p. 109. ed. Preller.)

The physical peculiarities of Elis are not favourable to its becoming an independent state. In fact no country in Greece is so little protected against hostile attacks. The broad valley of the Alpheius runs, like a highway, through the centre of Elis: the mountains, which form its eastern boundaries, are a very slight defence, since they are only the offshoots of still higher mountains; while the towns and villages on the flat coast lie entirely exposed to an enemy's fleet. But these natural obstacles to its independence were more than compensated by the sacred character attaching to the whole land in consequence of its possessing the temple of the Olympian Zeus on the banks of the Alpheius. Its territory was regarded as inviolable by the common law of Greece; and though its sanctity was not always respected, and it was ravaged more than once by an invading force, as we shall presently see, it enjoyed for several centuries exemption from the devastations of war. Thus, instead of the fortified places seen in the rest of Greece, Elis abounded in unwalled villages and country houses; and the valley of the Alpheius in particular was full of various sanctuaries and consecrated spots, which gave the whole country a sacred appearance. The prosperity of the country continued down to the time of Polybius, who notices its populousness and the fondness of its inhabitants for a country life. (Strab. viii. pp. 343, 358; Polyb. iv. 73, 74.) The prosperity of Elis was also much indebted to the expenditure of the vast number of strangers, who visited the country once in four years at the festival of the Olympian Zeus.

HOLLOW ELIS is more extensive and more fertile than the two subject districts (*αἱ περιοικίδες πόλεις*) of Pisatis and Triphylia. It consists of a fertile plain, drained by the river PENEIUS (*Πηνειός*) and its tributary the Ladon (*Λάδων*). The Peneius rises in Mount Erymanthus between two lofty summits, and flows at first between the ravine of *Berbini*, and afterwards in a north-westerly direction till it reaches a more open valley. The Ladon, called Selleeis by Homer [see EPHYRA, No. 1.], rises a little more to the south; it also flows at first through a narrow ravine, and falls into the Peneius, just where it enters the broader valley. The united stream continues its course through this valley, till at the town of Elis it emerges near its mouth into the extensive plain of *Gastúni*, which is the name now generally given to the river throughout its whole course. The river *Gastúni* now flows into the sea to the south of the promontory of Chelonatas, but there is reason for believing that the main branch at least of the Peneius originally flowed into the sea north of the Chelonatas. This appears from the order of the names in Ptolemy (iii. 16. §§ 5, 6), who enumerates the promontory Araxus, Cyllene, the mouths of the Peneius, and the promontory Chelonitis, as well as from the statement of Strabo (viii. p. 338) that the Peneius flows into the sea between Chelonatas and Cyllene. Moreover, the legend of Hercules cleansing the stables of Augeias by diverting the course of the Peneius would seem to show that even in ancient times the course of the stream had been changed either by artificial or by natural means; and there are still remains of some ancient channels near the southern end of the Cyllenian gulf.

The plain of *Gastúni* is still celebrated for its fertility, and produces flax, wheat, and cotton. In antiquity, as we learn from Pausanias (v. 5. § 2), Elis was the only part of Greece in which byssus (a species of fine flax) grew. This byssus is described by Pausanias (*l. c.*) as not inferior to that of the Hebrews in fineness, but not so yellow; and in another passage (vi. 26. § 6) he remarks that hemp and flax and byssus are sown by all the Eleians, whose lands are adapted for these crops. The vine was also cultivated with success, as is evident from the especial honour paid to Dionysus in the city of Elis, and from the festival called Thyia, in which three empty jars spontaneously filled with wine. (Paus. vi. 26. § 1.) Elis still contains a large quantity of excellent timber; and the road to Achaia along the coast passes through noble forests of oaks. The rich pastures of the Peneius were favourable to the rearing of horses and cattle. Even in the earliest legends Augeias, king of the Epeians in Elis, is represented as keeping innumerable herds of oxen; and the horses of Elis were celebrated in the Homeric poems (*Od.* iv. 634, xxi. 346). It was said that mules could not be engendered in Elis in consequence of a divine curse (Herod. iv. 30; Paus. v. 5. § 2); but this tale probably arose from the fact of the Eleian mares being sent into Arcadia, in order to be covered by the asses of the latter country, which were reckoned the best in all Greece. [ARCADIA, p. 190, a.]

PISATIS (*ἡ Πισᾶτις*) is the lower valley of the Alpheius. This river, after its long course through Arcadia, enters a fertile valley in the Pisatis, bounded on either side by green hills, and finally flows into the sea through the sandy plain on the coast between two large lagunes. North of the Alpheius, Mount PHOLOE (*Φολόη*), which is an offshoot of Erymanthus, extends across the Pisatis from east to west, and separates the waters of the Peneius and the Ladon from those of the Alpheius. (Strab. viii. p. 357.) It terminates in the promontory, running southwards far into the sea, and opposite the island of Zacynthus. This promontory was called in ancient times ICHTHYS (*Ἰχθύς*, Strab. viii. p. 343) on account of its shape: it now bears the name of *Katákolo*. It appears to be the natural boundary of the Pisatis; and accordingly we learn from Strabo that some persons placed the commencement of the Pisatis at Pheia, a town on the isthmus of Ichthys, though he himself extends the district as far as the promontory Chelonatas. (Strab. viii. p. 343.) Mount Pholoe rises abruptly on its northern side towards the Peneius, but on the southern side it opens into numerous valleys, down which torrents flow into the Alpheius.

TRIPHYLIA (*Τριφυλία*) is the smallest of the three divisions of Elis, and contains only a very small portion of level land, as the Arcadian mountains here approach almost close to the sea. Along nearly the whole of the Triphylian coast there is a series of lagoons already mentioned. At a later time the Alpheius was the northern boundary of Triphylia; but at an earlier period the territory of the Pisatis must have extended south of the Alpheius, though all its chief towns lay to the north of that river. The mountain along the southern side of the Alpheius immediately opposite Olympia was called originally OSSA (Strab. viii. p. 356), but appears to have been afterwards called PHELLON (Strab. viii. p. 344, where *Φέλλωνα* should probably be read instead of *Φολόην*). Further south are two ranges of mountains, between which the river Anigrus flows into the sea [ANIGRUS]: of these the more northerly, called in ancient times LAPITHAS (*Λαπίθας*, Paus. v. 5. § 8), and at present *Smerna*, is 2533 feet high; while the more southerly, called in ancient times, MINTHE (*Μίνθη*, Strab. viii. p. 344), and now *A'lvena* rises to the height of 4009 feet. Minthe, which is the loftiest mountain in Elis, was one of the seats of the worship of Hades; and the herb, fromw hich it derived its name, was sacred to Persephone. The river Neda divided Triphylia from Messenia.

II. HISTORY.

The most ancient inhabitants of Elis appear to have been Pelasgians, and of the same stock as the Arcadians. They were called Caucones, and their name is said to have been originally given to the whole country; but at a later time they were found only on the northern frontier near Dyme and in the mountains of Triphylia. (Strab. viii. p. 345.) The accessibility of the country both by sea and land led other tribes to settle in it even at a very early period The Phoenicians probably had factories upon the coast; and there can be no doubt that to them the Eleians were indebted for the introduction of the *byssus*, since the name is the same as the Hebrew *butz*. We also find traces of Phoenician influence in the worship of Aphrodite Urania in the city of Elis. It has even been supposed that *Elishah*, whose productions reached Tyre (*Ezek.* xxvii. 7), is the same word as the Greek Elis, though the name was used to indicate a large extent of country; but it is dangerous to draw any conclusion from a similarity of names, which may after all be only accidental.

The most ancient inhabitants of the country appear to have been Epeians (*Ἐπειοί*), who were closely

connected with the Aetolians. According to the common practice of the Greeks to derive all their tribes from eponymous ancestors, the two brothers Epeius and Aetolus, the sons of Endymion, lived in the country afterwards called Elis. Aetolus crossed over to Northern Greece, and became the ancestor of the Aetolians. (Paus. v. 1; Scymn. Ch. 475.) The name of Eleians, according to the tradition, was derived from Eleius, a son of Poseidon and Eurycyda, the daughter of Endymion. The Epeians were more widely spread than the Eleians. We find Epeians not only in Elis Proper, but also in Triphylia and in the islands of the Echinades at the mouth of the Achelous; while the Eleians were confined to Elis Proper. In Homer the name of Eleians does not occur; and though the country is called Elis, its inhabitants are always the Epeians.

Eleius was succeeded in the kingdom by his son Augeias, against whom Hercules made war, because he refused to give the hero the promised reward for cleansing his stables. [For details see *Dict. of Biogr.* vol. ii. p. 395.] The kingdom of the Epeians afterwards became divided into four states. The Epeians sailed to the Trojan War in 40 ships, led by four chiefs, of whom Polyxenus, the grandson of Augeias, was one. (Hom. *Il.* ii. 615, seq.) The Epeians and the Pylians appear in Homer as the two powerful nations on the western coast of Peloponnesus, the former extending from the Corinthian gulf southwards, and the latter from the southern point of the peninsula northwards: but the boundaries which separated the two cannot be determined. [PYLOS.] They were frequently engaged in wars with one another, of which a vivid picture is given in a well-known passage of Homer (*Il.* xi. 670, seq.; Strab. viii. pp. 336, 351). Polyxenus was the only one of the four chiefs who returned from Troy. In the time of his grandson the Dorians invaded Peloponnesus; and, according to the legend, Oxylus and his Aetolian followers obtained Elis as their share of the conquest. (*Dict. of Biogr.* art. *Heraclidae*).

Great changes now followed. In consequence of the affinity of the Epeians and Aetolians, they easily coalesced into one people, who henceforth appear under the name of Eleians, forming a powerful kingdom in the northern part of the country in the plain of the Peneius. Some modern writers suppose that an Aetolian colony was also settled at Pisa, which again comes into notice as an independent state. Pisa is represented in the earliest times as the residence of Oenomaus and Pelops, who left his name to the peninsula; but subsequently Pisa altogether disappears, and is not mentioned in the Homeric poems. It was probably absorbed in the great Pylian monarchy, and upon the overthrow of the latter was again enabled to recover its independence; but whether it was peopled by Aetolian conquerors must remain undecided. From this time Pisa appears as the head of a confederacy of eight states. About the same time a change of population took place in Triphylia, which had hitherto formed part of the dominions of the Pylian monarchy. The Minyae, who had been expelled from Laconia by the conquering Dorians, took possession of Triphylia, driving out the original inhabitants of the country, the Paroreatae and Cauconeς. (Herod. iv. 148.) Here they founded a state, consisting of six cities, and were sufficiently strong to maintain their independence against the Messenian Dorians. The name of Triphylia was sometimes derived from an eponymous Triphylus, an Arcadian chief (Polyb. iv. 77; Paus. x. 9. § 5); but the name points to the country being inhabited by three different tribes,—an explanation given by the ancients themselves. These three tribes, according to Strabo, were the Epeians, the Minyae, and the Eleians. (Strab. viii. p. 337.)

The territory of Elis was thus divided between the three independent states of Elis Proper, the Pisatis, and Triphylia. How long this state of things lasted we do not know; but even in the eighth century B. C. the Eleians had extended their dominions as far as the Neda, bringing under their rule the cities of the Pisatis and Triphylia. During the historical period we read only of Eleians and their subjects the Perioeci: the Cauconeς, Pisatans, and Triphylians entirely disappear as independent races.

The celebration of the festival of Zeus at Olympia had originally belonged to the Pisatans, in the neighbourhood of whose city Olympia was situated. Upon the conquest of Pisa, the presidency of the festival passed over to their conquerors; but the Pisatans never forgot their ancient privilege, and made many attempts to recover it. In the eighth Olympiad, B. C. 747, they succeeded in depriving the Eleians of the presidency by calling in the assistance of Pheidon, tyrant of Argos, in conjunction with whom they celebrated the festival. But almost immediately afterwards the power of Pheidon was destroyed by the Spartans, who not only restored to the Eleians the presidency, but are said even to have confirmed them in the possession of the Pisatis and Triphylia. (Paus. vi. 22. § 2; Strab. viii. p. 354, seq.; Herod. vi. 127.) In the Second Messenian War the Pisatans and Triphylians revolted from Elis and assisted the Messenians, while the Eleians sided with the Spartans. In this war the Pisatans were commanded by their king Pantaleon, who also succeeded in making himself master of Olympia by force, during the 34th Olympiad (B. C. 644), and in celebrating the games to the exclusion of the Eleians. (Paus. vi. 21. § 1, vi. 22. § 2; Strab. viii. p. 362; respecting the conflicting statements in the ancient authorities as to this period, see Grote, *Hist. of Greece*, vol. ii. p. 574.) The conquest of the Messenians by the Spartans must also have been attended by the submission of the Pisatans to their former masters. In the 48th Olympiad (B. C. 588) the Eleians, suspecting the fidelity of Damophon, the son of Pantaleon, invaded the Pisatis, but were persuaded by Damophon to return home without committing any further acts of hostility. But in the 52nd Olympiad (B. C. 572), Pyrrhus, who had succeeded his brother Damophon in the sovereignty of Pisa, invaded Elis, assisted by the Dyspontii in the Pisatis, and by the Macistii and Scilluntii in Triphylia. This attempt ended in the ruin of these towns, which were razed to the ground by the Eleians. (Paus. vi. 22. § 3, seq.) From this time Pisa disappears from history; and so complete was its destruction that the fact of its ever having existed was disputed in later times. (Strab. viii. p. 356.) After the destruction of these cities we read of no further attempt at revolt till the time of the Peloponnesian War. The Eleians now enjoyed a long period of peace and prosperity.

The Eleians remained faithful allies of Sparta in the Peloponnesian War down to the peace of Nicias, B. C. 421; but in this year a serious quarrel arose between them. It was a settled policy of the Spartans to prevent the growth of any power in Peloponnesus, which might prove formidable to themselves; and accordingly they were always ready to support the independence of the smaller states in the penin-

sula against the greater. Accordingly, when Lepreum in Triphylia revolted from the Eleians and craved the assistance of the Spartans, the latter not only recognised its independence, but sent an armed force to protect it. The Eleians in consequence renounced the alliance of Sparta, and formed a new league with Argos, Corinth, and Mantineia. (Thuc. v. 31.) The following year (B. C. 420) was the period for the celebration of the Olympic festival; and the Eleians, under the pretext that the Spartans had sent some additional troops to Lepreum after the proclamation of the Sacred Truce, fined the Spartans 2000 minae, and, upon their refusing to pay the fine, excluded them from the festival. (Thuc. v. 49, 50.) The Eleians fought with the other allies against the Spartans at the battle of Mantineia (B. C. 418); and though the victory of the Spartans broke up this league, the ill-feeling between Elis and Sparta still continued. Accordingly, when the fall of Athens gave the Spartans the undisputed supremacy of Greece, they resolved to take vengeance upon the Eleians. They required them to renounce their authority over their dependent towns, and to pay up the arrears due from them as Spartan allies for carrying on the war against Athens. Upon their refusal to comply with these demands, king Agis invaded their territory (B. C. 402). The war lasted nearly three years; and the Eleians were at length compelled to purchase peace by relinquishing their authority not only over the Triphylian towns, but also over Lasion, which was claimed by the Arcadians, and over the other towns of the hilly district of Acroreia (B. C. 400). They also had to surrender their harbour of Cyllene with their ships of war. (Xen. *Hell.* iii. 2. §§ 21—30; Diod. xiv. 34; Paus. iii. 8. § 3, seq.) By this treaty the Eleians were in reality stripped of all their political power; and the Pisatans availed themselves of their weakness to beg the Lacedaemonians to grant to them the management of the Olympic festival; but as they were now only villagers, and would probably have been unable to conduct the festival with becoming splendour, the Spartans refused their request, and left the presidency in the hands of the Eleians. (Xen. *Hell.* iii. 2. § 30.)

Soon after the battle of Leuctra (B. C. 371), by which the Spartan power had been destroyed, the Eleians attempted to regain their supremacy over the Triphylian towns; but the latter, pleading their Arcadian origin, sought to be admitted into the Arcadian confederacy, which had been recently organised by Epaminondas. The Arcadians complied with their request (B. C. 368), much to the displeasure of the Eleians, who became in consequence bitter enemies of the Arcadians. (Xen. *Hell.* vi. 5. § 2, vii. 1. § 26.) In order to recover their lost dominions the Eleians entered into alliance with the Spartans, who were equally anxious to gain possession of Messenia. In B. C. 366 hostilities commenced between the Eleians and Arcadians. The Eleians seized by force Lasion and the other towns in the Acroreia, which also formed part of the Arcadian confederacy, and of which they themselves had been deprived by the Spartans in B. C. 400, as already related. But the Arcadians not only recovered these towns almost immediately afterwards, but established a garrison on the hill of Cronion at Olympia, and advancing against the town of Elis, which was unfortified, nearly made themselves masters of the place. The democratical party in the city rose against the ruling oligarchy, and seized the acropolis; but they were overcome, and fled from the city. Thereupon, assisted by the Arcadians, they seized Pylus, a place on the Peneius, at the distance of about 9 miles from Elis, and there established themselves with a view of carrying on hostilities against the ruling party in the city. (Xen. *Hell.* vii. 4. 13—18; Diod. xv. 77.) In the following year (B. C. 365) the Arcadians again invaded Elis, and being attacked by the Eleians between their city and Cyllene, gained a victory over them. The Eleians, in distress, applied to the Spartans, who created a diversion in their favour by invading the south-western part of Arcadia. The Arcadians in Elis now returned home in order to defend their own country; whereupon the Eleians recovered Pylus, and put to death all of the democratical party whom they found there. (Xen. *Hell.* vi. 4. §§ 19—26.) In the next year (B. C. 364) the 104th celebration of the Olympic festival occurred. The Arcadians, who had now expelled the Spartans from their country, and who had meantime retained their garrison at Olympia, resolved to restore the presidency of the festival to the Pisatans, and to celebrate it in conjunction with the latter. The Eleians, however, did not tamely submit to this exclusion, and, while the games were going on, marched with an armed force into the consecrated ground. Here a battle was fought; and though the Eleians showed great bravery, they were finally driven back by the Arcadians. The Eleians subsequently took revenge by striking out of the register this Olympiad, as well as the 8th and 34th, as not entitled to be regarded as Olympiads. (Xen. *Hell.* vii. 4. §§ 28—32; Diod. xv. 78.) The Arcadians now seized the treasures in the temples at Olympia; but this act of sacrilege was received with so much reprobation by several of the Arcadian towns, and especially by Mantineia, that the Arcadian assembly not only denounced the crime, but even concluded a peace with the Eleians, and restored to them Olympia and the presidency of the festival (B. C. 362). (Xen. *Hell.* vii. 4. §§ 33, 34.)

Pausanias relates that when Philip, the father of Alexander the Great, obtained the supremacy in Greece, the Eleians, who had suffered much from civil dissensions, joined the Macedonian alliance, but at the same time would not fight against the Athenians and Thebans at the battle of Chaeroneia. After the death of Alexander the Great, they renounced the Macedonian alliance, and fought along with the other Greeks against Antipater, in the Lamian War. (Paus. v. 4. § 9.) In B. C. 312 Telesphorus, one of the generals of Antigonus, seized Elis and fortified the citadel, with the view of establishing an independent principality in the Peloponnesus; but the town was shortly afterwards recovered by Ptolemaeus, the principal general of Antigonus in Greece, who razed the new fortifications. (Diod. xix. 87.)

The Eleians subsequently formed a close alliance with their kinsmen the Aetolians, and became members of the Aetolic League, of which they were the firmest supporters in the Peloponnesus. They always steadily refused to renounce this alliance and join the Achaeans, and their country was in consequence frequently ravaged by the latter. (Polyb. iv. 5, 9, 59, seq.) The Triphylians, who exhibit throughout their entire history a rooted repugnance to the Eleian supremacy, joined the Achaeans as a matter of course. (Comp. Liv. xxxiii. 34.) The Eleians are not mentioned in the final war between the Romans and the Achaean League; but after the capture of Corinth, their country, together with the rest of Peloponnesus,

became subject to Rome. The Olympic games, however, still secured to the Eleians a measure of prosperity; and, in consequence of them, the emperor Julian exempted the whole country from the payment of taxes. (Julian, *Ep.* 35.) In A. D. 394 the festival was abolished by Theodosius, and two years afterwards the country was laid waste with fire and sword by Alaric.

In the middle ages Elis again became a country of some importance. The French knights at *Patras* invaded the valley of the Peneius, where they established themselves with hardly any resistance. Like Oxylus and his Aetolian followers, William of Champlitte took up his residence at *Andrabida*, in a fertile district on the right bank of the Peneius. Gottfried of Villehardouin built *Glarenza*, which became the most important sea-port upon the western coast of Greece; under his successors *Castro Tornese* was built as the citadel of *Glarenza*. *Gastúni* and *Santaméri* were also founded about the same period. Elis afterwards passed into the hands of the Venetians, under whom it continued to flourish, and who gave to the western province of the *Morea* the name of *Belvedere*, from the citadel of Elis. It was owing to the fertility of the plain of the Peneius that the Venetians called the province of *Belvedere* the milk-cow of the Morea. But the country has now lost all its former prosperity. *Pyrgos* is the only place of any importance; and in consequence of the malaria, the coast is becoming almost uninhabited. (Curtius, *Peloponnesos*, vol. ii. p. 16, seq.)

III. The City of Elis.

The position of the city of Elis was the best that could have been chosen for the capital of the country. Just before the Peneius emerges from the hills into the plain, the valley of the river is contracted on the south by a projecting hill of a peaked form, and nearly 500 feet in height. This hill was the acropolis of Elis, and commanded as well the narrow valley of the Peneius as the open plain beyond. It is now called *Kaloskopi*, which the Venetians translated into *Belvedere*. The ancient city lay at the foot of the hill, and extended across the river, as Strabo says that the Peneius flowed through the city (viii. p. 337); but since no remains are now found on the right or northern bank, it is probable that all the public buildings were on the left bank of the river, more especially as Pausanias does not make any allusion to the river in his description of the city. On the site of the ancient city there are two or three small villages, which bear the common name of *Palecópoli*.

Elis is mentioned as a town of the Epeii by Homer (*Il.* ii. 615); but in the earliest times the two chief towns in the country appear to have been Ephyra, the residence of Augeias, in the interior, and Buprasium on the coast. Some writers suppose that Ephyra was the more ancient name of Elis, but it appears to have been a different place, situated upon the Ladon. [Buprasium; Ephyra.] Elis first became a place of importance upon the invasion of Peloponnesus by the Dorians. Oxylus and his Aetolian followers appear to have settled on the height of *Kaloskopi* as the spot best adapted for ruling the country. From this time it was the residence of the kings, and of the aristocratical families who governed the country after the abolition of royalty. Elis was the only fortified town in the country; the rest of the inhabitants dwelt in unwalled villages, paying obedience to the ruling class at Elis.

Soon after the Persian wars the exclusive privileges of the aristocratical families in Elis were abolished, and a democratical government established. Along with this revolution a great change took place in the city of Elis. The city appears to have been originally confined to the acropolis; but the inhabitants of many separate townships, eight according to Strabo, now removed to the capital, and built round the acropolis a new city, which they left undefended by walls, relying upon the sanctity of their country. (Diod. xi. 54; Strab. viii. p. 336; Xen. *Hell.* iii. 2. § 27.) At the same time the Eleians were divided into a certain number of local tribes; or if the latter existed before, they now acquired for the first time political rights. The Hellanodicae, or presidents of the Olympic games, who had formerly been taken from the aristocratical families, were now appointed, by lot, one from each of the local tribes; and the fluctuating number of the Hellanodicae shows the increase and decrease from time to time of the Eleian territory. It is probable that each of the three districts into which Elis was divided,—Hollow Elis, Pisatis, and Triphylia,—contained four tribes. This is in accordance with the fourfold ancient division of Hollow Elis, and with the twice four townships in the Pisatis. Pausanias in his account of the number of the Hellanodicae says that there were 12 Hellanodicae in Ol. 103, which was immediately after the battle of Leuctra, when the Eleians recovered for a short time their ancient dominions, but that being shortly afterwards deprived of Triphylia by the Arcadians, the number of their tribes was reduced to eight. (Paus. v. 9. §§ 5, 6; for details see K. O. Müller, *Die Phylen von Elis und Pisa*, in *Rheinisches Museum*, for 1834, p. 167, seq.)

When Pausanias visited Elis, it was one of the most populous and splendid cities of Greece. At present nothing of it remains except some masses of tile and mortar, several wrought blocks of stone and fragments of sculpture, and a square building about 20 feet on the outside, which within is in the form of an octagon with niches. With such scanty remains it would be impossible to attempt any reconstruction of the city, and to assign to particular sites the buildings mentioned by Pausanias (vi. 23—26).

Strabo says (viii. p. 337) that the gymnasium stood on the side of the river Peneius; and it is probable that the gymnasium and agora occupied the greater part of the space between the river and the citadel. The gymnasium was a vast inclosure surrounded by a wall. It was by far the largest gymnasium in Greece, which is accounted for by the fact that all the athletae in the Olympic games were obliged to undergo a month's previous training in the gymnasium at Elis. The inclosure bore the general name of Xystus, and within it there were special places destined for the runners, and separated from one another by plane-trees. The gymnasium contained three subdivisions, called respectively Plethrium, Tetragonum, and Malco: the first so called from its dimensions, the second from its shape, and the third from the softness of the soil. In the Malco was the senate-house of the Eleians, called Lalichium from the name of its founders: it was also used for literary exhibitions.

The gymnasium had two principal entrances, one leading by the street called Siope or Silence to the baths, and the other above the cenotaph of Achilles to the agora and the Hellanodicaeum. The agora was also called the hippodrome, because it was used for the exercise of horses. It was built in the ancient

style, and, instead of being surrounded by an uninterrupted series of stoae or colonnades, its stoae were separated from one another by streets. The southern stoa, which consisted of a triple row of Doric columns, was the usual resort of the Hellanodicae during the day. Towards one end of this stoa to the left was the Hellanodicaeon, a building divided from the agora by a street, which was the official residence of the Hellanodicae, who received here instruction in their duties for ten months preceding the festival. There was another stoa in the agora called the Corcyraean stoa, because it had been built out of the tenth of some spoils taken from the Corcyraeans. It consisted of two rows of Doric columns, with a partition wall running between them: one side was open to the agora, and the other to a temple of Aphrodite Urania, in which was a statue of the goddess in gold and ivory by Pheidias. In the open part of the agora Pausanias mentions the temple of Apollo Acacesius, which was the principal temple in Elis, statues of Helios and Selene (Sun and Moon), a temple of the Graces, a temple of Silenus, and the tomb of Oxylus. On the way to the theatre was the temple of Hades, which was opened only once in the year.

The theatre must have been on the slope of the acropolis: it is described by Pausanias as lying between the agora and the Menius, which, if the name is not corrupt, must be the brook flowing down from the heights behind *Paleópoli*. Near the theatre was a temple of Dionysus, containing a statue of this god by Praxiteles.

On the acropolis was a temple of Athena, containing a statue of the goddess in gold and ivory by Pheidias. On the summit of the acropolis are the remains of a castle, in the walls of which Curtius noticed some fragments of Doric columns which probably belonged to the temple of Athena.

In the immediate neighbourhood of Elis was Petra, where the tomb of the philosopher Pyrrhon was shown. (Paus. vi. 24. § 5.)

IV. Towns in Elis.

1. In Hollow Elis. Upon the coast, proceeding southwards from the promontory of Araxus, Hyrmine, Cyllene. From the town of Elis, a road led northward to Dyme in Achaia passing by Myrtuntium (or Myrsinus) and Buprasium. East of Elis and commanding the entrance to the Acroreia or highlands of Elis was Pylos, at the junction of the Peneius and Ladon. South of Pylos on the Ladon was the Homeric Ephyra, afterwards called Oenoë. North of Pylos in the mountainous country on the borders of Achaia was Thalamae. East of Pylos and Ephyra, in the Acroreia, were Lasion, Opus, Thraustus (or Thraestus), Alium, Eupagium, Opus.

2. In Pisatis. Upon the Sacred Way leading from Elis to Olympia, Letrini and Dyspontium. Upon the coast, the town and harbour of Pheia. On the road across the mountains from Elis to Olympia, Alesiaeum, Salmone, and Heracleia; and in the same neighbourhood, Margana (or Margalae) and Amphidoli. Olympia lay on the right bank of the Alpheius, nearly in the centre of the country: it was properly not a town, but only a collection of sacred buildings. A little to the east of Olympia was Pisa, and further east Harpinna.

3. In Triphylia. Upon the road along the coast, Epitalium (the Homeric Thryon), Samicum, Pyrgi. A road led from Olympia to Lepreum, on which were Pylos and Macistus. Lepreum in the southern part of Triphylia was the chief town of the district. Between these two roads was Scillus, where Xenophon resided. On the Alpheius to the east of Olympia was Phrixa, and southwards in the interior were Aepy (afterwards called Epeium), Hypana, Typaneae. The position of Bolax and Styllagium is uncertain.

(Respecting the topography of Elis, see Leake, *Morea*, vol. i. p. 1, seq., vol. ii. p. 165, seq., *Peloponnesiaca*, passim; Boblaye, *Recherches*, &c. p. 117, seq.; and especially Curtius, *Peloponnesos*, vol. ii. p. 1, seq., from whom a considerable part of the preceding account is taken.)

COINS OF ELIS.

ELISARI (Ἐλισάριοι), a people of Arabia Felix, mentioned by Ptolemy, at the straits of the Red Sea (*Bab-el-Mandeb*), between the Cassaniti on the north, and the Homeritae on the east (vi. 7. § 7). They are doubtless identical with the *El-Asyr* tribe, a district of *Yemen*, described by Burchardt as "the most numerous and warlike tribe of those mountains, and exercising considerable influence over all their neighbours (*Notes on the Bedouins, &c.* p. 245); and Niebuhr has marked on his map of *Yemen* "a town or village still named Elasera, on the hills above Sabbia WNW." (Forster, *Arabia*, vol. i. p. 70, vol. ii. pp. 147, 148.) [G. W.]

ELISON (Ἐλίσων), a tributary of the Lupia (*Lippe*), commonly identified with the *Alme*. At its confluence with the Lupia, the Romans built the fort Aliso. (Dion Cass. liv. 33.) [L. S.]

ELLASAR (Ἐλλασάρ), mentioned only in Genesis (xiv. 1) as the country of Arioch, one of the kings associated with Chedorlaomer in his invasion of Canaan. Some have identified it with the *Elisari* of Arabia, others with Assyria, under the name El-Asur; but all is pure conjecture. [G. W.]

ELLEBRI. [Velibori.]

ELLEPORUS. [Helleporus.]

ELLOME'NUS (Ἐλλομένος), a town in Leucas, mentioned by Thucydides, is supposed by Leake to be represented by the port of *Klimindó*. (Thuc. iii. 94; Leake, *Northern Greece*, vol. iii. p. 23.)

ELO'NE (Ἠλώνη), a town of Perrhaebia in Thessaly, mentioned by Homer along with Orthe and Oloosson, afterwards called Leimone (Λειμώνη), according to Strabo. The same writer says that it was in ruins in his time, and that it lay at the foot of Mt. Olympus, not far from the river Eurotas, which the poet calls Titaresius. Leake places it at *Selos*, where there are said to be some ancient

remains. (Hom. *Il.* ii. 739, ix. p. 440; Steph. B. *s. v.* Ἠλώνη; Leake, *Northern Greece*, vol. iii. p. 345).

ELLO'PIA. [EUBOEA.]

ELORUS. [HELORUS.]

ELU'RO. [LACETANI.]

E'LUSA. [ELUSATES.]

ELUSA'TES, a people of Aquitania who were subdued B. C. 56 by P. Crassus, a legatus of Caesar (*B. G.* iii. 27). Pliny (iv. 19) enumerates them between the Ausci and the Sotiates. [AUSCI.] Their chief town, Elusa, is mentioned in the Antonine Itin. on a road from Burdigala (*Bordeaux*) to Narbo (*Narbonne*). It is called Civitas Elusa, and is placed 12 M. P. after Mutatio Scittio, which is Sotium (*Sos*). From Civitas Elusa to Civitas Auscius (*Auch*) is 30 M. P. Claudianus (*in Rufin.* i. 137) mentions Elusa —

> "Invadit muros Elusae, notissima dudum
> Tecta petens."

The modern town of *Eause*, in the department of *Gers*, is near the old site, which is called *Civitat*, a corruption of Civitas. Ammianus (xv. 11), if his text is right, places Elusa in Narbonensis, which is not correct. The Notitia of the Gallic provinces makes the Civitas Elusatium the metropolis of Novempopulana. [G. L.]

ELU'SIO, a city of Narbonensis, which the Jerusalem Itin. places on the road from Tolosa (*Toulouse*) to *Narbonne*. It is 20 M. P. from *Toulouse* to Elusio, and 33 M. P. from Elusio to Carcaso (*Carcassonne*). The position of *St. Pierre d'Elzonne* (Eglise de Montferrand) seems to be the site. [G.L.]

ELYCO'CI (Ἐλύκωκοι), a people of Gallia Narbonensis, mentioned only by Ptolemy (ii. 10), who makes Alba Augusta their capital. D'Anville, Walckenaer, and others, suppose that Ptolemy's Elycoci is a corruption of Helvii; and it may be some argument in favour of this supposition that both people had a capital Alba. [ALBA HELVIORUM.] But, on the other hand, Ptolemy places the Elycoci on the east side of the *Rhone*, and the Helvii are on the west side. [G. L.]

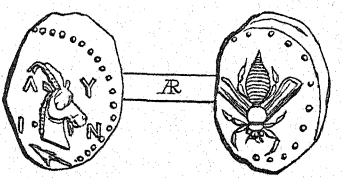
E'LYMA. [ELYMI.]

ELYMA. [ELIMEIA.]

ELYMA'IS (ἡ Ἐλυμαΐς, Strab. xvi. p. 744; Joseph. *Ant.* xii. 13; Steph. B. *s. v.*: in O. T. ELAM; Ἐλυμαία, Strab. xi. p. 524: *Eth.* Ἐλυμαῖοι, Strab. xi. pp. 522, 524: xvi. p. 739; Ptol. vi. 3. § 3; Ἐλαμῖται, *Act Apost.* ii. 9; Ἔλυμοι, Joseph. *Ant.* i. 7), a province usually considered part of the larger district of Susiana; but it is difficult to define its limits, as the classical writers speak of it, for the most part, with great indistinctness. Thus from Strabo (xi. p. 524) it might be inferred, that he considered it to extend considerably to the N. and quite up to the southern boundary of Media Magna; while, in another place, he would seem to consider it simply as one of several provinces which he enumerates to the eastward of Babylonia (xvi. p. 736). The most distinct statement which that geographer makes, is where he states that Elymais joins Susis (the province of Susiana), while the country round Mt. Zagros and Media join Elymais (xvi. p. 744). According to this view, Elymais would comprehend the rugged mountain tract formed by the southern spurs of Mt. Zagros, S. of Media and N. of Susiana. According to Stephanus, it was a part of Assyria in the direction and near the Persian province of Susis; and the sacred writers appear to indicate that it was sometimes subject to Assyria and sometimes to Babylonia (*Isaiah*, xxii. 6; *Ezek.* xxxii. 24). Pliny, on the other hand, extends Elymais to the shores of the Persian gulf (vi. 27, s. 31), — in which view he is supported by the Epitomizer of Strabo (xi. p. 148), and Ptolemy (vi. 3. § 3), — making its northern limit, towards Susiana, the river Eulaeus. According to this, Elymais would comprehend the country between the Eulaeus, the Oroatis (the boundary of Persis), and the Persian gulf. It is probable that the character of the people, who were for the most part a warlike mountain tribe, at different periods of their history possessing a widely diverse extent of territory, led ancient geographers to describe their locality with so little precision. In its widest extent, Elymais is said to have had three eparchies which were included in it, Gabiana, Massabatica, and Corbiana. (Strab. xvi. p. 745.) In other places, the Cossaei, Paraetacae, and Uxii, and the district of Sittacene and Apolloniatis, are mentioned in connection with the people or land of Elymais. (Strab. xvi. pp. 732, 736, 739, 744.) In the Bible, Elam and Media are constantly in connection, and it is not improbable that at that remote period Elam and its inhabitants occupied much of the country which in the later and classical ages was assigned to Persia. (*Isaiah*, xxi. 2; *Jer.* xxv. 25.) It is not, however, possible to draw from the notices in Holy Scripture any certain geographical inferences. It would seem that it was generally held that Susis and Elymais, though adjoining, were separate territories, though the exact limits of the former, also, are not easily to be ascertained. Indeed, Strabo (xi. p. 524, xvi. p. 744) speaks of wars between them, in which the people of Elymais were able to bring into the field as many as 13,000 cavalry. In the notice of Persian nations in Ezra, the people of Susa and Elam are separately enumerated (iv. 9); though, in Daniel, the metropolis of Susiana, is placed in Elam (viii. 2). The government of the country was from very early times under independent kings, probably robber chieftains; of these, two are mentioned by name in the Bible; Chedorlaomer, the contemporary with Abraham, in Genesis (xiv. 1), and Arioch, during the rule of Nebuchodonosor, in Judith (i. 6). Strabo bears testimony to the fact that the Elymaei alone were never subdued by the Parthian kings, but were able even to exact a yearly tribute from them (xi. p. 722). With regard to the name of this province, there can be no doubt that it is derived from the Hebrew Elam, while its population are considered to be Semitic, Elam being one of the sons of Shem (*Gen.* x. 92). Yet, from the position of the district, there was probably a large intermixture of an Indo-Germanic element. (See comparison of Elam with the Pehlvi Airjama by Müller, *Jour. Asiat.* vol. vii. p. 299.) The character of the people, as described in the Bible, is in accordance with the notices of the classical writers. Like the Persians of later times, and their neighbours the Cossaei, they seem principally to have used the bow and arrow. (*Isaiah*, xxii. 6; *Jer.* xlix. 35; Appian, *Syr.* 32; Strab. xvii. p. 744; Liv. xxxv. 48, xxxvii. 40.) There was, however, besides, a considerable settled population, who cultivated the plain-country. It has been usual to describe several towns, as Seleuceia, Soloce, Sosirate, Badaca, and Elymais, and the rivers Eulaeus, Hedyphon or Hedypnus, and Coprates, as belonging to Elymais. As, however, they belong with equal justice to the larger and better known province of

Susiana, they are so considered in the present work. [SUSIANA.]

2. A district of Media Magna, situated, according to Ptolemy (vi. 2. § 6), to the N. of the region which he calls Choromithrene. Polybius places a tribe, whom he calls Elymaei, in the mountain region to the N. of Media (v. 44). It is not clear where it was situated, and, as most of the authorities usually referred to (as Strab. xi. p. 524, xv. p. 732) apply as well to the more important Elymais of Susiana, we think it may be doubted whether there was another Elymais in the position relative to Media which Ptolemy and Polybius seem to have imagined. It is, however, possible, that some of the people of the Susianian province may, at some period, have migrated to the north, or that that province may itself have been sometimes carelessly included within the varying boundaries of the greater country, Media. [V.]



E'LYMI (Ἔλυμοι: the form Ἔλυμοι and Helymi appears to be incorrect), a people in the extreme W. of Sicily, who are reckoned among the native tribes of the island, but distinct from the Sicelians and Sicanians. (Scyl. p. 4; Thuc. vi. 2.) The general opinion of the Greeks derived them from a Trojan origin: this is distinctly stated by Thucydides (*l. c.*); and the history of their arrival and the foundation of their two cities, Eryx and Egesta, is circumstantially related by Dionysius (i. 52). In all the legends concerning them their eponymous hero Elymus is a Trojan, and appears in close connection with Aeneas and Aegestus or Acestes. (Strab. xiii. p. 608.) This notion of their Trojan descent may probably be understood, as in many other cases, as pointing to a Pelasgic extraction. A wholly different tradition was, however, preserved by Hellanicus, who represented the Elymi as having been driven from the S. of Italy by the Oenotrians, previous to the similar migration of the Siculi. (Hellan. *ap. Dionys.* i. 22.) Scylax also, though he enumerates the Elymi among the barbarian inhabitants of Sicily, seems to reckon them distinct from the Trojans. (Scyl. p. 4. § 13.) They appear to have maintained constant friendly relations with the neighbouring Phoenician settlements of Motya, Solus, and Panormus, and are mentioned at an early period as co-operating with that people in expelling the Cnidians, who had attempted to form a settlement in Sicily itself, previous to their establishment at Lipara. (Thuc. *l. c.*; Paus. x. 11. § 3.) No mention of them occurs in later times as a separate people: their two cities Eryx and Egesta had become to a great extent Hellenised, and assumed the position of independent political bodies.

The existence of a *city* of the name of Elyma rests wholly on the authority of a passage of Dionysius (i. 52), in which there is little doubt that the true reading should be Ἔρυκα, as suggested by Sylburg and Cluver. (Sylburg. *ad loc.*; Cluver, *Sicil.* p. 244.) [E. H. B.]

ELY'MIA (Ἐλυμία), a town in Arcadia, near the boundaries of Mantineia and Orchomenus, probably situated at *Levidhi*, where there are ancient remains. (Xen. *Hell.* vi. 5. § 13; Leake, *Peloponnesiaca*, p. 229.)

E'LYRUS (Ἔλυρος: *Eth.* Ἐλύριος, Steph. B.), a town of Crete, which Scylax (*Geog. Graec. Min.* vol. i. p. 265, ed. Gail) places between Cydonia and Lissus. It had a harbour, SUIA (Συία, Steph. B.), situated on the S. coast of the island, 60 stadia W. of Poecilassus. (*Stadiasm.*) Pausanias (x. 16. § 3) states that the city existed in his time in the mountains of Crete. He adds that he had seen at Delphi the bronze goat which the Elyrians had dedicated, and which was represented in the act of giving suck to Phylacis and Phylander, children of Apollo and the nymph Acacallis, whose love had been won by the youthful god at the house of Casmanor at Tarrha. It was the birthplace of Thaletas (Suid. *s. v.*), who was considered as the inventor of the Cretic rhythm, the national paeans and songs, with many of the institutions of his country. (Strab. x. p. 480.) Elyrus appears in Hierocles' list of Cretan cities, then reduced in number to twenty-one. Mr. Pashley (*Travels*, vol. ii. p. 105) discovered the site at a *Palaeókastron* near *Rhodováni*. The first object that presents itself is a building consisting of a series of arches; next, vestiges of walls, especially on the N. and NE. sides of the ancient city. The circuit of these must originally have been two miles; at a slight elevation above are other walls, as of an acropolis. Further on are some massive stones, some pieces of an entablature, and several fragments of the shafts of columns, all that now remains of an ancient temple. Traces of the wall of Suia, which still retains its ancient name, and of some public buildings, may be observed. Several tombs, resembling those of *Haghio-Kyrko*, and an aqueduct, are still remaining. (Capt. Graves, *Admiralty Chart*, in *Mus. Class. Antiq.* vol. ii. p. 298.)

The coins of this city have the type of a bee upon them. (Pellerin, *Rec. des Méd.* vol. iii. p. 68; Mionnet, *Supplément*, vol. iv. p. 319.) [E. B. J.]

COIN OF ELYRUS.

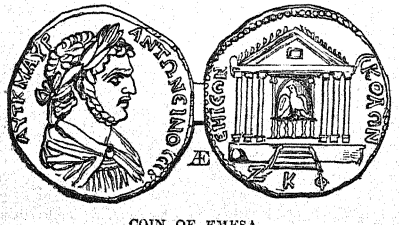
EMA'THIA (Ἡμαθίη), a district which the Homeric poems (*Il.* xiv. 226) couple with Pieria as lying between the Hellenic cities of Thessaly and Paeonia and Thrace. The name was in primitive times assigned to the original seats of the Temenid dynasty of Edessa. It comprehended that beautiful region beyond the Haliacmon and on the E. side of the Olympene ridge, which is protected on all sides by mountains and marshes, at a secure but not inconvenient distance from the sea. Emathia, which had received the gift of three magnificent positions for cities or fortresses in *Vérria*, *Niausta*, and *Vodhená*, and possessing every variety of elevation and aspect, —of mountain, wood, fertile plain, running water, and lake,—was admirably adapted to be the nursery of the monarchy of Macedonia.

It appears from Justin (vii. 1) that part of Emathia was occupied by the Briges, who were expelled from thence by the Temenidae; and Herodotus (viii. 138), in stating that the gardens of Midas, their king, were situated at the foot of Mount Bermius, seems to show that their position was round Beroea.

Emathia, in later times, had more extensive boundaries than those which Homer understood; and Ptolemy (iii. 13. § 39) advanced its limits to the right bank of the Axius. Polybius (xxiv. 8. § 4) and Livy (xl. 3), who is his transcriber in this place, assert, in contradiction to the notice in the *Iliad*, that Emathia was formerly called Paeonia, but this

may be reconciled by supposing that previously it had been inhabited by the Paeonian race.

Emathia was, after the Roman conquest, included in the third region of Macedonia, and contained the following cities: — BEROEA, CITIUM, AEGAE, EDESSA, CYRRHUS, ALMOPIA, EUROPUS, ATALANTA, GORTYNIA, and IDOMENE. (Leake, *Northern Greece*, vol. iii. pp. 442—447.) [E. B. J.]



EM'BATUM (τὸ Ἔμβατον), a place in the territory of Erythrae, mentioned by Theopompus in the eighth book of his *Hellenica*. (Steph. B. *s. v.*) It appears from Thucydides (iii. 29) that it was on the coast. [G. L.]

EMBO'LIMA (Ἐμβόλιμα, Arrian, iv. 28; Ptol. vii. 1. § 57; Ecbolima, Curt. viii. 12. § 1), a town apparently in Bactriana, though considered by Ptolemy to be within the arbitrary division of ancient India which he calls "India intra Gangem." It was, according to him, near the river Indus. It was visited by Alexander the Great after the rock Aornus, near which it stood. It must therefore have been on the west bank of the Indus, perhaps at the modern *Ambar*, or *Amb*. The narrative of Curtius cannot be reconciled with its position, nor indeed with any other place in this part of the country, as he places Embolima at sixteen marches from the Indus. It was made by Alexander a magazine for the troops of which Craterus was left in charge. (Wilson, *Ariana*, p. 191.) [V.]

EME'RITA AUGUSTA. [AUGUSTA EMERITA.]

EMESA or EMISSA (Ἔμισσα: *Eth.* Ἐμισηνοί), a city of Syria, reckoned by Ptolemy to that part of the district of Apamene, on the right or eastern bank of the Orontes (v. 15. § 19), to which Pliny assigns a desert district beyond Palmyra (v. 26). It is chiefly celebrated in ancient times for its magnificent temple of the Sun; and the appointment of its young priest Bassianus, otherwise called Elagabalus or Heliogabalus, to the imperial dignity, in his fourteenth year, by the Roman legionaries of Syria (A. D. 218; *Dict. of Biogr. s. v.* Elagabalus). It was in the neighbourhood of Emesa that Zenobia, queen of Palmyra, was defeated by the emperor Aurelian, A. D. 272. (Vopisc. *Aurel.* 25.) It was originally governed by independent chiefs, of whom the names of Sampsiceramus and Iamblichus are preserved. (Strab. xvi. p. 753.) It was made a colony with the Jus Italicum by Caracalla (Ulpian, *ap. Dig.* 50. tit. 15. s. 1), and afterwards became the capital of Phoenicia Libanesia. (Hierocl.; Malal. xii. p. 296, ed. Bonn.)

There are still extant coins of Caracalla and Elagabalus, in which it is called a colony and a metropolis. On the coins of Caracalla it is called a colony, and on those of Elagabalus a metropolis, to which dignity it was no doubt elevated by the latter emperor. The annexed coin of Caracalla represents on the reverse the temple of the Sun. (Eckhel, vol.

COIN OF EMESA.

iii. p. 311.) The present name of Emesa is *Hems*. [G. W.]

EMIMS (Ὀμμίν, Ἐμμαῖοι), the very ancient inhabitants of Moab, a gigantic race, as their name imports, dispossessed by the children of Lot [MOAB] (*Deut.* ii. 10, 11), having been then lately weakened, as would appear, by the defeat they had experienced in the valley of Kiriathaim from Chedorlaomer and the confederate kings, as recorded in *Genesis* (xiv. 5). [G. W.]

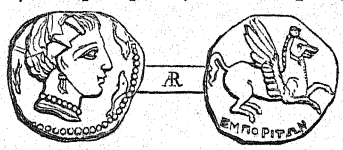
EMMA'US (Ἐμμαούς). 1. A village of Judaea mentioned by St. Luke (xxiv. 13), distant sixty furlongs from Jerusalem. This is doubtless identical with the Χώριον Ἀμμαούς of Josephus, which he says ἀπέχει τῶν Ἱεροσολύμων σταδίους ἑξήκοντα, in which Vespasian established a colony of 800 veterans. (*B. J.* vii. 6. § 6.) A tradition, originating apparently in the 14th century, which has fixed its site at the village of *El-Khubeibeh*, has no value whatever, and the distance does not coincide (Robinson, *B. R.* vol. iii. pp. 65, 66). A more ancient and consistent tradition, which still prevails among the Greeks, identifies it with the village of *Kuriyat-el-Anûb*, popularly called *Abu-Goosh*, on the road between Jerusalem and Jaffa, about 1½ hour from the former city. The authenticity of this tradition is confirmed by the existence at the present day of a native village, on the road between Jerusalem and *Kuriyat-el-Anûb*, named *Colonia* or *Kulonia*, obviously deriving its name from the military colony established in the district of Ammaus by Vespasian. It is still celebrated for its waters, as it was in the time of Julian, who attempted to stop the fountain on account of the miraculous virtues imputed to it. (Theophanes, cited by Reland, *Palaest.* p. 759.) It is often confounded with the following, as it is, indeed, by Theophanes.

2. A city of Palaestine, about eight or ten miles from the former (with which it has been often confounded), still retaining its ancient name almost unchanged, being now called *Ammwus*. In classic times it was designated Nicopolis, in commemoration, as is suggested, of the destruction of Jerusalem. (Willibald. *ap. Reland*, p. 760.) It is frequently mentioned in the book of Maccabees, and by Josephus (cited in Reland, pp. 428, 429, 758, 759), and is joined with Lydda and Thamna. The Itinerarium Hierosolymitanum places it 22 Roman miles from Jerusalem; and St. Jerome accurately states its position, "ubi incipiunt montana Judaeae consurgere" (*Comment. in Daniel.* xii.); but both he and Eusebius erroneously identify this city with the village mentioned by St. Luke. (*Epitaph. Paulae*, and *de Locis Hebraicis, ad voc.* Ἐμμαούς.) Pliny (v. 14) seems to make the same mistake, when he writes of it as a toparchy — "Fontibus irriguam Emmaum, Lyddam, Joppicam," — a characteristic certainly more descriptive of the village of St. Luke than of the city Nicopolis, whose site is still marked by a village bearing the same name, and traces of ancient ruins, on the right hand, or north, of the road from Jerusalem to *Jaffa*, in the immediate vicinity of *Latrûn*, the "Castellum boni Latronis" of the Crusades.

3. (Ἀμμαοῦς.) The name given by Josephus (*Ant.* xviii. 2. § 3, *B. J.* iv. 1. § 2) to the medicinal hot-springs of Tiberias, and which he interprets to mean "warm baths," probably identifying the name with the Hebrew Hammath; which inclines Dr. Robinson to regard the ancient town of

Hammath of the tribe of Naphthali (*Josh.* xix. 35) as represented in these hot springs. (*B. Res.* vol. iii. p. 260.) [TIBERIAS.] [G. W.]

EMO'DI MONTES (τὰ Ἡμωδὰ ὄρη, Strab. xi. p. 511, xv. pp. 698, 715; Ptol. vi. 15; τὸ Ἡμωδὸν ὄρος, Diod. ii. 35; Dionys. 748, 1146; τὰ Ἡμωδά, Ptol. vi. 16; ὁ Ἡμωδός, Strab. xv. p. 689; Arrian, *Ind.* 2; Eustath. *ad Dionys.* 748; Emodus, Plin. v. 27; Hemodes, Mela, i. 15. § 2, iii. 7. § 6; Emodon, Amm. Marc. xxiii. 6. § 64). Although the expedition of Alexander the Great opened out to the Grecian mind only that part of the chain of the *Himalayah* which is nearest the country of the five rivers of W. India, yet it is to this epoch that we must date a new era for Asiatic geography. The enterprise of the Macedonian conqueror, the campaign of Seleucus Nicator, the long residence of Megasthenes at the court of Sandracottus, and the researches made by Patrocles, the general of Seleucus, and the most veracious (ἥκιστα ψευδόλογος) of all writers concerning India (Strab. ii. p. 70), seem to have thrown great light upon the more E. portions of the peninsula. From this time there appear in the Greek, and subsequently in the Roman writers, views more or less generally accurate on the existence, direction, and continuity of a vast range of mountains extending over the entire continent from W. to E. Dicaearchus, the pupil of Aristotle, has the merit of having been the first to point this out, and it is clearly indicated in the geography of Eratosthenes. In both authors, more than 300 years before Pliny, the name of Imaus is met with under the form of Imaon. India is bordered to the N., from Ariana to the Eastern Sea, by the extremities of Taurus, to which the aboriginal inhabitants give the different names of Paropamisus, Emodon, Imaon, and others, while the Macedonians call them Caucasus. (Eratosth. *ap. Strab.* xv. p. 689; comp. ii. p. 68, xi. p. 490.) The idea of attaching to the Taurus of Asia Minor the W. extremity of the *Himalayah* range or *Hindoo-kush*, the plateau which is prolonged towards the volcano of *Demavend*, and extends along the S. shore of the Caspian, is not strictly correct. But Strabo (xi. p. 511), in a passage where he describes the chain of the Taurus on the other side of the Caspian, illustrates the continuity of the chain with great detail. In proceeding from the Hyrcanian sea to the E., the mountains that the Greeks call Taurus are always on the right hand, as far as the Indian sea. These mountains begin in Pamphylia and Cilicia, and, receiving different names, are uninterruptedly prolonged to the E. All these mountains beyond the Arii have received from the Macedonians the name of Caucasus; but among the barbarians the mountains to the N. are called Paropamisus, the Emodes and Imaon taking different names in different parts. (Comp. Groskurd, *ap. l. c.*) It is remarkable that these indigenous denominations of the great Himalayan chain were so little altered by the Greeks, that in our time, more than 2000 years after Eratosthenes, we are enabled to interpret them from the Sanscrit. The name of *Himalaya*, applied to a chain of mountains limiting India to the N., has been recognised by Haughton in the laws of Manu. It is the "abode" (*ālaya*) of "snow" (*hima*). The great epic poems of India, the *Rámáyana* and the *Mahábhárata*, speak of *Himaván* and *Himavat*—"snowy," "wintry." Imaus is derived from *Himavat* (Bohlen, *Das Alte-Indien*, vol. i. p. 11), an etymology of which Pliny was aware, who, after speaking of the Montes Emodi, adds, "quorum promontorium Imaus vocatur, incolarum linguâ nivosum significante" (vi. 17). The Montes Emodi are the "golden mountains" (*hêmâdri*)—*hêma*, "gold;" *adri*, "mountain"—either because of the supposition that there were rich mines of gold, as in the other extremity of Central Asia, in the *Altai* and *Kinchan*, or in allusion to those fires of the setting sun reflected by the snows of the Himalayah which gild its highest summits, as described in The Cloud Messenger of *Kálidása*.



As it appears, therefore, that, according to the great geographical views conceived by Eratosthenes, and elaborated in detail from better and more numerous materials by Marinus of Tyre and Ptolemy, the ancients believed that the interior of Asia was traversed by one single great chain of mountains prolonged from the E. to the W. in the parallel of Rhodes, it only remains to mark off that portion of the great central cordillera to which they applied the name of Emodus or Emodi Montes. They may generally be described as forming that portion of the great lateral branch of the Indian Caucasus, the colossal *Himalayan* range (μέγιστον ὄρος, Agathem. ii. 9), extending along *Nepaul*, and probably as far as *Bhotan*. The prolongation was occasionally indefinitely made. Thus Dionysius Periegetes (ii. 62) describes the foot of the Emodes as bathed by the foaming waves of the Eastern Ocean. Ptolemy (vi. 16) gives the name of Ottorocorras (Ὀττοροκόρρας) to the E. extremity of the chain. The Greeks probably specially applied a general denomination in the systematic geography of India. The Ottorocorras of Ptolemy is the *Uttara-Kuru* of the *Vedás* and *Mahábhárata*, the upper or hyperborean regions of Asia. (Comp. Colebrooke, *Asiat. Research.* vol. viii. p. 398.) The text of Ammianus (xxiii. 6. § 64) has Opuro-Carra, which is the same Mount *Kuru*. The same historian describes in a very picturesque manner one of those Alpine forms ("Contra Orientalem plagam in orbis speciem consertae celsorem aggerum summitates ambiunt Seras; a Septentrione nivosae solitudini cohaerent," *l. c.*) which are so often repeated in the windings of the mountains of E. Asia. The S. spurs of this chain were called BEPYRRHUS (τὸ Βήπυρρον ὄρος, Ptol. vii. 2), with the sources of the DOANAS (*Irawaddy*); DAMASSI or DAMASII MONTES (τὰ Δάμασσα ὄρη, Ptol. *l. c.*), with the sources of the DORIAS; and SEMANTHINI MONTES (τὸ Σημανθινὸν ὄρος, Ptol. *l. c.*), from which the rivers SERAS and ASPITHRA take their rise. (Humboldt, *Asie Centrale*, vol. i. pp. 140—145; Gosselin, *Géographie des Anciens*, vol. iii. pp. 173, 188, 297, 298; Ritter, *Erdkunde*, vol. ii. p. 185, vol. v. p. 449.) [E. B. J.]

EMPERE'SIUM (Ἐμπερέσιον), a promontory mentioned by Dicaearchus between Aulis and Euripus. Leake supposes Emperesium to have been the name of the peninsula of Euboea immediately south of Chalcis and the Straits. (Dicaearch. *Stat. Graec.* 90; Leake, *Northern Greece*, vol. ii. p. 264, seq.)

EMPO'RIA (τὰ Ἐμπορεῖα), was at first the name of a number of seaport towns, Phoenician and Carthaginian settlements, on the shores of the Lesser Syrtis; afterwards of the district in which those towns lay. (Polyb. i. 82. § 6, iii. 23. § 2, *Exc. Leg.* 18; Appian, *Pun.* 72; Liv. xxix. 25, xxxiv. 62: see further AFRICA, p. 68, b., and BYZACIUM.) [P. S.]

EMPO'RIAE (Liv.) or EMPO'RIUM (Ἐμπορίαι, Ptol.; Ἐμπορεῖον, Polyb., Strab.; Ἐμπόριον, Ptol.: *Ampurias*), an ancient and important city of His-

pania Tarraconensis, on the small gulf (*G. of Rosas*) which lies below the E. extremity of the Pyrenees, and at the mouth of the river Clodianus (*Fluvia*), which formed its port. Its situation made it the natural landing-place from Gaul; and as such it was colonised at an early period by the Phocaeans of Massalia. Their first city (afterwards called the Old Town) was built on a small island, whence they passed over to the mainland: and here a double city grew up,—the Greek town on the coast, and an Iberian settlement, of the tribe of the Indigetes, on the inland side of the other. Julius Caesar added a body of Roman colonists to the Greeks and Spaniards; and the place gradually coalesced into one Roman city. On coins it is styled a municipium. (Liv. xxi. 60, 61, xxvi. 19, xxviii. 42, xxxiv. 9; Polyb. iii. 76; Strab. iii. pp. 159, 160; Mela, ii. 6; Plin. iii. 3. s. 4; Ptol. ii. 5. § 20; Steph. B. *s. v.*; Scylax, p. 1; Scymn. Ch. 203; Sil. Ital. iii. 369, xv. 176; Florez, *Med. de Esp.* vol. ii. pp. 409, 645, vol. iii. p. 66; Mionnet, vol. i. pp. 40, 41, *Suppl.* vol. i. p. 82; Sestini, p. 139; Num. Goth; Eckhel, vol. i. p. 49; Ukert, vol. ii. pt. 1. p. 423.) [P. S.]

COIN OF EMPORIAE.

EMPO'RICUS SINUS (ὁ Ἐμπορικὸς κόλπος), a gulf on the W. coast of Mauretania Tingitana, between the towns of Sala (*Salee*) and Lixus (*El-Araish*). It derived its name from the mercantile settlements of the Phoenicians. Strabo says that the tides were here so great, that at high water the country was overflowed 7 stadia inland; a statement confirmed by the great swamps which now cover the district. (Strab. xvii. pp. 825, 829; Ptol. iv. 1.) [P. S.]

E'MPULUM (*Ampiglione*), a small town of Latium, a dependency of Tibur, which was taken in B. C. 355 by the Roman consuls. (Liv. vii. 18.) This is the only mention of its name, and we have no clue to its position; but the resemblance of name has induced Gell and Nibby to regard the remains of an ancient town visible at a place called *Ampiglione* (about 5 miles E. of *Tivoli*, on the road to *Siciliano*), as those of Empulum. Considerable portions of the walls remain, constructed of polygonal blocks of tufo—the only instance of the employment of that material in this style of construction; but they are not of a massive character, and are intermixed with portions of reticulated and other masonry, decidedly of the Roman period. The site was probably used in later times as that of a Roman villa. (Gell, *Top. of Rome*, pp. 199—201; Nibby, *Dintorni*, vol. ii. pp. 10, 11.) [E. H. B.]

ENCHELANES (Ἐγχελάνες), a people and town of Illyricum, situated on the W. shore of Lake Lychnitis, in Dassaretia, subdued by Philip, B. C. 216. (Polyb. v. 108. § 8.) [E. B. J.]

ENCHE'LEES (Ἐγχέλεες), an Illyrian tribe, whom the ancient geographer Hecataeus (*Fr.* 66—70, ed. Klausen) placed to the S. of the Taulantii. Scylax (*Fr.* 58) has fixed their position N. of Epidamnus and the Taulantii. This tribe are connected with the cycle of myths concerning Cadmus. (Comp. Herod. v. 61.) [E. B. J.]

ENDOR (Ἀενδώρ, LXX.; Ἔνδωρον, Joseph.; Ἠνδώρ, Ἀηνδώρ, Euseb.), a village in Palestine, infamous in the closing scenes of the life of Saul for his consultation of the sorceress, on the eve of the battle of Gilboa. (1 *Sam.* xxviii. 7, &c.) It is reckoned to the half tribe of Manasseh, on this side Jordan (*Josh.* xix. 11), and is placed by Eusebius and St. Jerome (*Onomast. s. v.*) at the distance of four miles to the south of Mount Tabor. It was a large village in their time, and still exists under the same name, on the northern declivity of Little Hermon, and near to Nain,—another mark of identification furnished by Eusebius. (Robinson, *Bib. Res.* vol. iii. p. 225.) [G. W.]

E'NEA (Ἐνέα). Strabo (p. 552) mentions three places, on the authority of Demetrius of Scepsis, in the neighbourhood of Scepsis and the Aesepus; and these places are: "Enea, a village (κώμη), and Agyria and Alazia." In another passage Strabo (p. 602), on the same authority, says: "On the right hand of the Aesepus, between Polichne and Palaescepsis, is the Nea Come and silver mines;" and again he says that "Palaescepsis is distant 50 stadia from Aeneia, and 30 from the Aesepus." It is plain that Enea, Nea, and Aeneia, are all the same place, and therefore there is some error in Strabo's text. Groskurd (*Transl. Strab.* vol. ii. pp. 480, 580, note) takes Ἐνέα to be the true name in the first of these passages; and Ἐνέα or Αἰνεία to be the true name in the second. He takes Enea to be the modern *Ene* or *Einiéh*, near the junction of two branches of the *Mendere Chai*. As to this point, see NEA and NEANDRIA. [G. L.]

ENEGLAIM (Ἐναγαλλείμ, LXX.; Ἀγαλλείμ, Euseb.), a city of Moab, mentioned only in Ezekiel (xlvii. 10); placed by Eusebius 8 miles south of Areopolis or Ar of Moab (*Onomast. s. v.*), but doubtless identical with the Eglaim of Isaiah, in the burden of Moab (xv. 8). St. Jerome (*Comment. in Ezek. l. c.*) says that it was at the northern extremity of the Dead Sea, at the mouth of the Jordan, as indeed the passage in Ezekiel implies that it was on the coast of the Dead Sea. [G. W.]

ENGANNIM (Ἠγαννά). 1. A city situated in that part of the tribe of Judah designated "the valley" or "the plain" (*Josh.* xv. 34), which bordered on the great plain of Philistia; and several of the cities mentioned in immediate connection with it, and which are still represented by villages bearing the same name, enable us to place it in the neighbourhood of the valley of Elah.

2. Another city of the same name was situated in the tribe of Issachar (*Josh.* xix. 21), and assigned to the Levites (*Josh.* xxi. 29). [G. W.]

ENGEDI (Ἀγκάδης, al. Ἐνγαδδί, al. Ἠνγαδδί, LXX.; Ἐγγαδέ, Ἐγγαδαί, Ἐγγαδί, Joseph.; Ἐγγάδδα, Ptol.: *Eth.* Ἐγγηδήνος), a city in the wilderness of Judaea (*Josh.* xv. 62), giving its name to a desert tract on the west of the Dead Sea (1 *Sam.* xxiv. 2). Its more ancient name was Hazezon-tamar, when it was inhabited by the Amorites (*Genes.* xiv. 7; 2 *Chron.* xx. 2.) It was celebrated in old times for its vineyards (*Cant.* i. 14), and Pliny reckons it second only to Jerusalem for its fertility and palm-groves (v. 17). It is misplaced by St. Jerome at the southern extremity of the Dead Sea (*Comment. in Ezek.* xlvii. 10), and stated by Josephus to be 300 stadia from Jerusalem (*Ant.* ix. 1. § 2). It gave its name to one of the fifteen toparchies of Judaea (*B. J.* v. 3). It took its name—"Fountain of the wild Goats" (still called *'Ain-Jidiy*)—from a copious

spring issuing out of the limestone rock at the base of an almost perpendicular cliff 800 or 1000 feet high, down the face of which was the only approach to the town, by a zigzag path cut in the rock. The city was situated on a small plain between the fountain and the sea, and some faint traces of buildings may still be discovered. Owing to the enormous depression of the Dead Sea, the climate of this spot, shut in on all sides but the east by rocky mountains, has a temperature much higher than that of any other part of Palestine, and its fruits consequently ripen three weeks or a month before those of the hill country. It is now inhabited only by a few Arabs, whose deformed and stunted growth bears witness to the relaxing influence of this almost tropical climate. (Reland, *Palaestina*, p. 763; Robinson, *Bib. Res.* vol. ii. p. 209, &c.) [G. W.]

ENGUIUM or ENGYUM (Ἔγγυον, Diod., Steph. B., Ἐγγύϊον, Plut.: *Eth.* Ἐγγύϊνος, Enguinus: *Gangi Vetere*), a city in the interior of Sicily, celebrated for its temple of the Magna Mater. Diodorus tells us that it was originally founded by a colony of Cretans, the survivors of the expedition of Minos, who were after the Trojan War reinforced by a fresh body of colonists from the same country under Meriones. (Diod. iv. 79.) The same tradition is related by Plutarch, who mentions that relics of Meriones and Ulysses were still shown there in confirmation of it. (Plut. *Marc.* 20.) But it is certain that it was not in historical times a Greek colony: nor is any mention of it found in history till the time of Timoleon, when the two cities of Engyum and Apollonia were subject to a tyrant named Leptines, who was expelled by Timoleon, and the cities restored to their liberty. (Diod. xvi. 72.) During the Second Punic War Engyum was one of the places that had zealously espoused the cause of the Carthaginians, and was in consequence threatened with severe punishment by Marcellus, but was spared by him at the intercession of Nicias, one of its principal citizens. (Plut. *Marc.* 20.) No further mention of it occurs in history: it appears in the time of Cicero as a municipal town, and is found also in the lists given by Pliny and Ptolemy of the cities of Sicily: but from this time all trace of it disappears. (Cic. *Verr.* iii. 43; Plin. iii. 8. s. 14; Ptol. iii. 4. § 14.) Plutarch tells us it was not a large city, but very ancient and celebrated on account of its temple, which Cicero also calls "angustissimum et religiosissimum fanum." Its reputation is sufficiently proved by the circumstance that Scipio Africanus had presented many offerings to it, including bronze armour and vases of beautiful workmanship, all of which were carried off by the rapacious Verres. (Cic. *Verr.* iv. 44, v. 72.) Cicero calls the deity to whom the temple was dedicated "Mater Magna," and distinctly identifies her with the Mater Idaea: Plutarch and Diodorus, on the contrary, mention the goddesses in the plural, *αἱ Θεαὶ Ματέρες*, like the Deae Matres of the Romans. It is probable that their worship was of Pelasgian origin, and the traditions that derived the foundation of the city from Crete evidently point to the same connection.

We have no clue to the precise situation of Engyum: but Cicero mentions it in conjunction with Aluntium, Apollonia, Capitium, and other cities of the NE. of Sicily; and the subjection of Apollonia and Engyum to the government of Leptines would seem to indicate that the two places were not very far distant from each other. Hence the suggestion of Cluverius, who places Engyum at *Gangi Vetere*, about 2 miles S. of the modern town of *Gangi*, and near the sources of the *Fiume Grande*, though a mere conjecture, is plausible enough, and has accordingly been followed by most subsequent writers. The elevated situation of this place would correspond with the strong position assigned it by Diodorus (iv. 79); and Silius Italicus (xiv. 249) also tells us it had a rocky territory. The ruins mentioned by Fazello as existing at *Gangi Vetere*, are however not ancient, but those of the old town of the name, now deserted. (Fazell. *de Reb. Sic.* x. 2; Amic. *ad loc.* p. 419; Cluver. *Sicil.* p. 367.) Ptolemy indeed seems to place Engyum in the more southern part of Sicily: but little dependence can be placed on his data for the towns of the interior. [E. H. B.]

ENI'PEUS, a river of the Macedonian Pieria, which is described by Livy (xliv. 8) as descending from a valley of Olympus, and as enclosed between high and precipitous banks, containing little water in summer, but full of quicksands and whirlpools in wintry weather. In B. C. 169, Perseus placed his army at a distance of 5 M. P. from Dium, behind the Enipeus, and occupied the line of the river. The description of the historian, and its distance from Dium, correspond to the river of *Litokhóro*, which has its origin in the highest parts of the woody steeps of Olympus, and flows in a wide bed between precipitous banks, which gradually diminish in height to the sea. (Leake, *Northern Greece*, vol. iii. pp. 406, 420.) [E. B. J.]

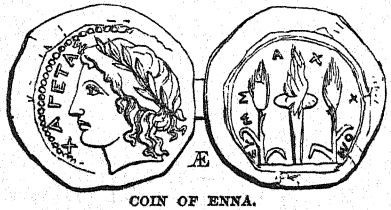
ENI'PEUS (Ἐνίπευς, sometimes Ἐνισεύς, Strab. viii. p. 356; Eustath. *ad Od.* xi. 328: *Fersaliti*), one of the principal rivers of Thessaly, rises in Mount Othrys, and after flowing through the plain of Pharsalus, flows into the Peneus. Its chief tributary was the Apidanus, which rises at the foot of the mountains of Phthia, probably at the springs of *Vrysiá*. The Apidanus is sometimes represented as the principal of the two rivers, and its name given to the united stream flowing into the Peneus. Herodotus relates that the Apidanus was the only river in Achaea, of which the waters were not drunk up by the army of Xerxes. (Strab. ix. p. 432, comp. viii. p. 356; Eurip. *Hec.* 451; Herod. vii. 196; Apoll. Rhod. i. 35.) The Enipeus is a rapid river, and is therefore called by Ovid "irrequietus Enipeus" (*Met.* i. 579), an epithet which, as Leake remarks, is more correct than Lucan's description (vi. 374):—

. . . . "it gurgite rapto
Apidanus; nunquamque *celer, nisi mixtus, Enipeus.*"

The Cuarius flowed into the Enipeus after its junction with the Apidanus. (Leake, *Northern Greece*, vol. iv. pp. 320, 330.) Respecting the river god Enipeus, see *Dict. of Biogr. and Myth. s. v.*

2. A river of Elis in the Pisatis, called Barnichius in the time of Strabo, flowed into the Alpheius at no great distance from its mouth. Near the sources of this river stood Salmone. (Strab. viii. p. 356.) [SALMONE.]

ENISPE (Ἐνίσπη), an Arcadian town mentioned by Homer, in the Catalogue of Ships, along with Rhipe and Stratia. It was impossible even in antiquity to determine the position of these towns, and Pausanias treats as absurd the opinion of those who considered them to be islands in the river Ladon. (Hom. *Il.* ii. 606; Strab. viii. p. 388; Paus. viii. 25. § 12.)



ENNA or HENNA (Ἔννα, Steph. B., Pol., Diod., &c., but in Livy, Cicero, and most Latin authors HENNA: *Eth.* Ἐνναῖος, Ennensis or Hen-

nensis: *Castro Giovanni*), an ancient and important city of Sicily, situated as nearly as possible in the centre of the island; whence Cicero calls it "mediterranea maxime" (*Verr.* iii. 83), and tells us that it was within a day's journey of the nearest point on all the three coasts. Hence the sacred grove of Proserpine, in its immediate neighbourhood, was often called the "umbilicus Siciliae." (Cic. *Verr.* iv. 48; Callim. *H. in Cer.* 15.) The peculiar situation of Enna is described by several ancient authors, and is indeed one of the most remarkable in Sicily. Placed on the level summit of a gigantic hill, so lofty as almost to deserve to be called a mountain, and surrounded on all sides with precipitous cliffs almost wholly inaccessible, except in a very few spots which are easily defended, abundantly supplied with water which gushes from the face of the rocks on all sides, and having a fine plain or table land of about 3 miles in circumference on the summit, it forms one of the most remarkable natural fortresses in the world. (Liv. xxiv. 37; Cic. *Verr.* iv. 48; Strab. vi. p. 272.) Stephanus of Byzantium tells us (*s. v.* Ἔννα), but without citing his authority, that Enna was a colony of Syracuse, founded 80 years after the settlement of the parent city (B. C. 654): but the silence of Thucydides, where he mentions the other colonies of Syracuse founded about this period (vi. 2.), tells strongly against this statement. It is improbable also that the Syracusans should have established a colony so far inland at so early a period, and it is certain that when Enna first figures in history, it appears as a Siculian and not as a Greek city. Dionysius of Syracuse seems to have fully appreciated its importance, and repeatedly attempted to make himself master of the place; at first by aiding and encouraging Aeimnestus, a citizen of Enna, to seize on the sovereign power, and afterwards, failing in his object by this means, turning against him and assisting the Ennaeans to get rid of their despot. (Diod. xiv. 14.) He did not however at this time accomplish his purpose, and it was not till a later period that, after repeated expeditions against the neighbouring Sicilian cities, Enna also was betrayed into his hands. (Id. xiv. 78.) In the time of Agathocles we find Enna for a time subject to that tyrant, but when the Agrigentines under Xenodicus began to proclaim the restoration of the other cities of Sicily to freedom, the Ennaeans were the first to join their standard, and opened their gates to Xenodicus, B. C. 309. (Id. xx. 31.) In the First Punic War Enna is repeatedly mentioned; it was taken first by the Carthaginians under Hamilcar, and subsequently recaptured by the Romans, but in both instances by treachery and not by force. (Diod. xxiii. 9. p. 503; Pol. i. 24.) In the Second Punic War, while Marcellus was engaged in the siege of Syracuse B. C. 214, Enna became the scene of a fearful massacre. The defection of several Sicilian towns from Rome had alarmed Pinarius the governor of Enna, lest the citizens of that place should follow their example; and in order to forestal the apprehended treachery, he with the Roman garrison fell upon the citizens when assembled in the theatre, and put them all to the sword without distinction, after which he gave up the city to be plundered by his soldiers. (Liv. xxiv. 37—39.) Eighty years later Enna again became conspicuous as the head-quarters of the great Servile War in Sicily (B. C. 134—132), which first broke out there under the lead of Eunus, who made himself master in the first instance of Enna, which from its central position and great natural strength became the centre of his operations, and the receptacle of the plunder of Sicily. It was the last place that held out against the proconsul Rupilius, and was at length betrayed into his hands, its impregnable strength having defied all his efforts. (Diod. xxxiv., Exc. Phot. pp. 526—529, Exc. Vales, pp. 599, 600; Flor. iii. 19. § 8; Oros. v. 9.; Strab. vi. p. 272.) Strabo tells us (*l. c.*) that it suffered severely upon this occasion (which, indeed, could scarcely be otherwise), and regards this period as the commencement of its subsequent decline. Cicero, however, notices it repeatedly in a manner which seems to imply that it was still a flourishing municipal town: it had a fertile territory, well-adapted for the growth of corn, and diligently cultivated, till it was rendered almost desolate by the exactions of Verres. (Cic. *Verr.* iii. 18, 42, 83.) From this time we hear little of Enna: Strabo speaks of it as still inhabited, though by a small population, in his time: and the name appears in Pliny among the municipal towns of Sicily, as well as in Ptolemy and the Itineraries. (Strab. *l. c.*; Plin. iii. 8. s. 14; Ptol. iii. 4. § 14; *Itin. Ant.* p. 93; *Tab. Peut.*) Its great natural advantages, as well as its central position, must have secured it in all times from complete decay, and it seems to have continued to exist throughout the middle ages. Its modern name of *Castro Giovanni* seems to be merely an Italianised form of *Castro Janni*, the name by which it is known in the native dialect of Sicily, and this is probably only a corruption of the name of Castrum Ennae or *Castro di Enna.*

The neighbourhood of Enna is celebrated in mythological story as the place from whence Proserpine was carried off by Pluto. (Ovid, *Met.* v. 385—408; Claudian, *de Rapt. Proserp.* ii.; Diod. v. 3.) The exact spot assigned by local tradition as the scene of this event was a small lake surrounded by lofty and precipitous hills, about 5 miles from Enna, the meadows on the banks of which abounded in flowers, while a cavern or grotto hard by was shown as that from which the infernal king suddenly emerged. This lake is called Pergus by Ovid (*Met.* v. 386) and Claudian (*l. c.* ii. 112), but it is remarkable that neither Cicero nor Diodorus speaks of any lake in particular as the scene of the occurrence: the former however says, that around Enna were "lacus lucique plurimi, et laetissimi flores omni tempore anni." (*Verr.* iv. 48.) Diodorus, on the contrary, describes the spot from whence Proserpine was carried off as a meadow abounding in flowers, especially odoriferous ones, to such a degree that it was impossible for hounds to follow their prey by the scent across this tract: he speaks of it as enclosed on all sides by steep cliffs, and having groves and marshes in the neighbourhood, but makes no mention of a lake (v. 3). The cavern however is alluded to by him as well as by Cicero, and would seem to point to a definite locality. At the present day there still remains a small lake in a basin-shaped hollow surrounded by great hills, and a cavern near it is still pointed out as that described by Cicero and Diodorus, but the flowers have in great measure disappeared, as well as the groves and woods which formerly surrounded the spot, and the scene is described by modern travellers as bare and desolate. (Hoare's *Classical Tour*, vol. ii. p. 252; Parthey, *Wanderungen d. Sicilien*, p. 135; Marquis of Ormonde, *Autumn in Sicily*, p. 106, who has given a view of the lake.)

The connection of this myth with Enna naturally

led to (if it did not rather arise from) the peculiar worship of the two goddesses Ceres and Proserpine in that city: and we learn from Cicero that there was a temple of Ceres of such great antiquity and sanctity that the Sicilians repaired thither with a feeling of religious awe, as if it was the goddess herself rather than her sanctuary that they were about to visit. Yet this did not preserve it from the sacrilegious hands of Verres, who carried off from thence a bronze image of the deity herself, the most ancient as well as the most venerated in Sicily. (Cic. *Verr.* iv. 48.) No remains of this temple are now visible: according to Fazello it stood on the brink of the precipice, and has been wholly carried away by the falling down of great masses of rock from the edge of the cliff. (Fazell. x. 2. p. 444; M. of Ormonde, p. 92.) Nor are there any other vestiges of antiquity still remaining at *Castro Giovanni:* they were probably destroyed by the Saracens, who erected the castle and several other of the most prominent buildings of the modern city. (Hoare, *l. c.* p. 249.) There exist coins of Enna under the Roman dominion, with the legend MUN. (Municipium) HENNA, thus confirming the authority of Cicero, all the best MSS. of which have the aspirated form of the name. (Zumpt, *ad Verr.* p. 392.) The most ancient Greek coin of the city also gives the name HENNAION (Eckhel, vol. i. p. 206): there is therefore little doubt that this form is the more correct, though Enna is the more usual. [E. H. B.]

COIN OF ENNA.

ENNEAODOS. [AMPHIPOLIS.]

E'NOPE. [GERENIA.]

ENTELLA (Ἔντελλα: *Eth.* Ἐντελλῖνος, Entellinus: *Rocca d'Entella*), a city in the interior of Sicily, situated on the left bank of the river Hypsas (*Belici*), and nearly midway between the two seas, being about 25 miles from the mouth of the Hypsas, and much about the same distance from the N. coast of the island, at the gulf of *Castellamare.* It was a very ancient city, and apparently of Sicanian origin, though the traditions concerning its foundation connected it with the Elymi and the supposed Trojan colony. According to some writers it was founded by Acestes, and named after his wife Entella (Tzetz. *ad Lycophr.* 964), a tradition to which Silius Italicus alludes ("Entella Hectoreo dilectum nomen Acestae," Sil. Ital. xiv. 205), while others ascribed its foundation to Elymus (Serv. *ad Aen.* v. 73), and Virgil represents Entellus (evidently the eponymous hero of the city) as a friend and comrade of Acestes (*Aen.* v. 387). Thucydides, however, reckons Eryx and Egesta the only two cities of the Elymi (vi. 2), and does not notice Entella at all, any more than the other places of native Sicanian or Siculian origin. The first historical mention of Entella is found in Diodorus, who tells us that in B. C. 404 the Campanian mercenaries, who had been in the service of the Carthaginians during the war, having been admitted into the city on friendly terms, turned their arms against the inhabitants, put all the male citizens to the sword, and made themselves masters of the place, of which they retained possession for many years. (Diod. xiv. 9; Ephorus, *ap. Steph. B. s. v.* Ἔντελλα.) During the subsequent wars of Dionysius with the Carthaginians, the Campanian occupants of Entella sided with their former masters, and even continued faithful to their alliance in B. C. 396, when all the cities of Sicily except five went over to that of Dionysius. (Diod. xiv. 48, 61.) It was not till B. C. 368 that the Syracusan despot was able to reduce Entella; the city appears to have still remained in the hands of the Campanians, but was now hostile to the Carthaginians, who (in B. C. 345) in consequence ravaged its territory, and blockaded the city itself. Soon after we find the latter apparently in their hands, but it was recovered by Timoleon, who restored it to liberty and independence. (Id. xv. 73, xvi. 67, 73.)

From this time we hear little more of it. The name is only incidentally mentioned during the First Punic War (Diod. xxiii. 8), but it seems to have taken no part in the struggles between Rome and Carthage. It continued, however, to be a tolerably flourishing municipal town: its territory was fertile in wine (Sil. Ital. xiv. 204) as well as corn, and Cicero praises the inhabitants for their industry in its cultivation (Cic. *Verr.* iii. 43), but, like most of the cities of Sicily, it suffered severely from the exactions of Verres. We still find its name both in Pliny (among the "populi stipendiarii," iii. 8. s. 14) and Ptolemy (iii. 4. § 15), but no further notice of it is found in ancient authors. It however continued to subsist throughout the middle ages, till the 13th century, when, having been converted into a stronghold by the Saracens, it was taken by the emperor Frederic II. and utterly destroyed, the inhabitants being removed to *Nocera* near Naples. The site, which still retained its ancient name in the days of Fazello, is described by him as a position of great natural strength, surrounded by abrupt precipices on all sides but one, but having a table land of considerable extent on its summit. According to the maps, it stands at an angle of the *Belici*, so that that river encircles it on the N. and W. The ruins remaining there in the time of Fazello seem to have been only those of the mediaeval town and its Saracenic castle. (Fazell. *de Reb. Sic.* x. p. 472; Amic. *Lex. Topogr. Sic.* vol. ii. p. 241; Cluver. *Sicil.* p. 376.)

There are extant coins of Entella, with the legend ΕΝΤΕΛΛΙΝΩΝ at full; while others struck under the Campanian occupation of the city have ΕΝΤΕΛΛΑΣ, and on the reverse ΚΑΜΠΑΝΩΝ. The one annexed is copied from the Museum Hunterionum, pl. 26. fig. 3. [E.H.B.]

COIN OF ENTELLA.

EORDAEA (Ἐορδαία, Ἐορδία: *Eth.* Ἐορδός, Ἐορδαῖος, Eordaeus, Eordensis), a subdivision of Upper Macedonia, the inhabitants of which were dispossessed, by the Temenid princes, of their original seats, which, however, still continued to bear the name of Eordia. (Thuc. ii. 99.) From the

remark of Polybius (*ap. Strab.* vii. p. 323), that the Candavian way passed through the country of the Eordaei in proceeding from that of the Lyncestae to Edessa, and from the description of the march of Perseus from Citium in Lower Macedonia through Eordaea into Elimeia, and to the Haliacmon (Liv. xlii. 53), we obtain a knowledge of the exact situation of this district.

It appears to have extended along the W. side of Mount Bermius, comprehending *O'strovo* and *Katránitza* to the N., *Sarighioli* in the middle, and to the S. the plains of *Djumá Budjá* and *Karaiánni*, as far as the ridges near *Kózani* and the *Klisura* of *Siatista*, which seem to be the natural boundaries of the province. The only Eordaean town noticed in history is PHYSCA (*Φύσκα, Φύσκας*, Ptol. iii. 13. § 36) or PHYSCUS (*Φύσκος*, Steph. B.), of which Thucydides (ii. 99) remarks that near it there still remained some of the descendants of the Eordaei, who had been expelled from all other parts of their original settlements by the Teminidae. But there is some reason to add to this name those of BEGORRA and GALADRAE as Eordaean towns. The central and otherwise advantageous position of the former of these places, leads to the conjecture that it may have been the city Eordaea (Hierocl.) of later times. As Lycophron (1342, 1444) couples Galadrae with the land of the Eordaei, and as Stephanus (*s. v.*) attributes that town to Pieria, it might best be sought for at the S. extremity of Eordaea towards the Haliacmon and the frontiers of Pieria, its territory having consisted chiefly, perhaps, of the plains of *Budjá* and *Djumá*. If Galadrae was in the S. part of the province, Begorra in the middle, Physca was probably to the N. about *Katránitza*, towards the mountains of the Bermian range, a position which was most likely to have preserved the ancient race. Ptolemy (iii. 13. § 36) classes three towns under the Eordaei of Macedonia; but, as Scampa is one of them, he has evidently confounded the Eordaei with the Eordeti of Illyria. (Leake, *Northern Greece*, vol. iii. p. 316.) [E. B. J.]

EORDAICUS (*Ἐορδαϊκὸς ποταμός*, Arrian, *Anab.* i. 5. § 5), a river of Upper Macedonia, which has been identified with the *Devól*,—the principal, or at least the longest, branch of the Apsus. This river originates in a lake in the district of *Prespa* called *Ventrólk*, and makes its way through the remarkable pass of *Tzangón*, which forms the only break in the great central range of Pindus, from its S. commencement in the mountains of Aetolia to where it is blended to the N. with the summits of Haemus and Rhodope. From thence it flows to the NW. and enters a large lake at the extremity of the plain of *Poyani*, and, on emerging, winds through a succession of narrow valleys among the great range of mountains which border on the W. of *Korytzá*, till it finally joins the *Beratinós* or ancient Apsus. (Leake, *Northern Greece*, vol. i. p. 334, vol. iii. p. 281.) [E. B. J.]

EORDETI (*Ἐόρδετοι*, Ptol. iii. 13. § 26), an Illyrian people S. of the Parthini, whose territory contained three towns, Scampa, Deboma, and Daulia. (Comp. Tafel, *de Viae Egnat. parte Occid.* p. 23; Pouqueville, vol. i. p. 382.) [E. B. J.]

EPAMANDUODURUM, or EPAMANTADURUM. This town is placed by the Antonine Itin. on a road from Vesontio (*Besançon*) to Larga (*Largitzen*). From Vesontio to Velatodurum the Itin. makes 22, and from Velatodurum to Epamanduodurum 12. In another place the distance is given 31, and Velatodurum is omitted. The Table makes it 13 to Loposagio, and thence 18 to Epomanduo, as it is written.

Epamanduodurum is *Mandeure*. A milestone that was dug up at *Mandeure*, with the name of Trajan upon it, bore the inscription "Vesont. M. P. XXXXIIX," from which we must infer that the numbers in the Itins. denote Gallic leagues.

Mandeure is in the arrondissement of *Montbéliard*, in the department of *Doubs*, in a pleasant valley. The *Doubs* flowed through the town, which was, of course, on both sides of the river; and the two parts were united by three bridges, of which the traces are said to remain, and also of the forts which protected them. The position of the place with respect to the frontier of the Rhone made it an important post. The excavations that were made at *Mandeure* in the sixteenth and seventeenth centuries brought to light a great number of Roman remains, consisting of medals, pottery, gold, silver, and bronze ornaments, statues, fragments of columns, cinerary urns, and various utensils. The remains of an aqueduct and lead pipes were discovered, of three temples, of baths, and of a theatre cut in the rock. The Roman road to *Besançon* may also be traced. It is called in the neighbourhood the *Chaussée de César*, which proves nothing as to its antiquity, for Caesar's name is used by tradition like that of other great conquerors. However, Caesar's march from Vesontio to fight Ariovistus was up the valley of the *Doubs*, and probably enough he went near Epamanduodurum. In the canton of *Montbéliard* there "are some vestiges of a Roman camp;" and, according to Schöpflin, an authority for the antiquities of Alsace and the neighbouring parts, it was in the plain about *Montbéliard* that Caesar defeated the German Ariovistus, B. C. 58; but this is impossible, if Caesar's text is rightly read. Epamanduodurum is a town unknown to history, and yet it appears to have been a considerable place. The name leads to the conclusion that it was an old Gallic town, and on a river, as the termination of the name shows, and the position of the modern site. (*Guide du Voyageur*, &c. par Richard et E. Hocquart.) [G. L.]

EPANTE'RII, a Ligurian tribe, mentioned only by Livy (xxviii. 46), from whose expressions they would appear to have been a mountain tribe, situated in the Maritime Alps above the Ingauni. They were at war with the latter people when Mago arrived in Liguria, B. C. 205. [E. H. B.]

EPEIACUM, in Britain, mentioned by Ptolemy as one of the cities of the Brigantes—*Bin*ovium (*Binchester*), *Caturhacto*nium (*Catterick* Bridge), Calatum, Isurium (*Aldborough*), Rhigodunum *Olic*ana (*Ilkly*), and Eboracum (*York*) being the others, arranged as above, and apparently in their order from north to south. In the "Monumenta Britannica" Epeiacum is identified with *Hexham*; by Maclauchlin (*Survey of Watling Street*), with *Lanchester*. Each of these views is objectionable. *Hexham* lies (see AXELLODUNUM) too far north to belong to the Brigantes, whilst *Longo*vicum is a better equivalent to *Lan*-chester. Indeed so few have denied that this latter form represents the modern *Lan*chester, that *Epeiacum* and *Longovicum* have been considered simply as synonymes for the same place — one in Ptolemy, the other in the Notitia. Objecting to this, laying considerable stress on the name, and raising exceptions to the identification of Vindomora with *Eb*chester, the present writer believes that,

name for name, as well as place for place, *Epeiacum* = *Eb*-chester. Furthermore — as *Eb*-chester stands on an eminence, the *cum* may represent the British *cwm* = *hill*. *Eb*-chester stands on the Watling Street. [R. G. L.]

EPEII. [ELIS.]

EPEIRUS or EPIRUS (Ἤπειρος: *Eth.* Ἠπειρώτης, Epirotes: Adj. Ἠπειρωτικός, Epiroticus), was the name given to the country lying between the Ionian sea and the chain of Pindus, and extending from the Acroceraunian promontory and the boundaries of Illyria and Macedonia on the north to the Ambracian gulf on the south. The word ἤπειρος signified the mainland, and was the name originally given to the whole of the western coast of Greece from the Acroceraunian promontory as far as the entrance of the Corinthian gulf, in contradistinction to Corcyra and the Cephallenian islands. In this sense the word was used not only by Homer (Strab. x. p. 451; Hom. *Il.* ii. 635, *Od.* xiv. 97), but even as late as the time of the Peloponnesian War. (Thuc. i. 5.) Epirus, in its more limited extent, is a wild and mountainous country. The mountains run in a general direction from north to south, and have in all ages been the resort of semi-civilised and robber tribes. The valleys, though frequent, are not extensive, and do not produce sufficient corn for the support of the inhabitants. The most extensive and fertile plain is that of *Joánnina*, in which the oracle of Dodona was probably situated, but even at the present day *Joánnina* receives a large quantity of its flour from Thessaly, and of its vegetables and fruit from the territory of *Arta* on the Ambracian gulf. Epirus has been in all times a pastoral and not an agricultural country. Its fine oxen and horses, its shepherds, and its breed of Molossian dogs, were celebrated in antiquity. (Pind. *Nem.* iv. 82; "quanto majores herbida tauros non habet Epirus," Ov. *Met.* viii. 282; "Eliadum palmas Epiros equarum," Virg. *Georg.* i. 57; "domus alta Molossis personuit canibus," Hor. *Sat.* ii. 6. 114; Virg. *Georg.* iii. 405.) The Epirots were not collected in towns, as was the case with the population in Greece Proper. It is expressly mentioned by Scylax (p. 28) that the Epirots dwelt in villages, which was more suitable to their mode of life; and it was probably not till the time when the Molossian kings had extended their dominion over the whole country, and had introduced among them Grecian habits and civilisation, that towns began to be built. It is in accordance with this that we find no coins older than those of Pyrrhus.

Along the coast of Epirus southward, from the Acroceraunian promontory, a lofty and rugged range of mountains extends. [CERAUNII MONTES.] Hence the Corinthians founded no colony upon the coast of Epirus at the time when they planted so many settlements upon the coast of Acarnania, and founded Apollonia and Epidamnus farther north. Of the mountains in the interior the names of hardly any are preserved with the exception of Tomarus or Tmarus above Dodona. [DODONA.] Of the rivers the most important are: the ARACHTHUS, flowing into the Ambracian gulf, and considered to form the boundary between Epirus and Hellas Proper; the CELYDNUS, flowing into the Ionian sea between Oricum and the Acroceraunian promontory, and forming probably the northern boundary of Epirus; and the THYAMIS, ACHERON, and CHARADRUS, all flowing into the Ionian sea more to the south.

Epirus was inhabited by various tribes, which were not regarded by the Greeks themselves as members of the Hellenic race. Accordingly Epirus was not a part of Hellas, which was supposed to begin at Ambracia. [HELLAS.] Some of the tribes however were closely related to the Greeks, and may be looked upon as semi-Hellenic. Thucydides, it is true, treats both the Molossians and Thesprotians as barbaric (ii. 80); but these two tribes at all events were not entirely foreign to the Greeks like the Thracians and Illyrians; and accordingly Herodotus places the Thesprotians in Hellas (ii. 56), and mentions the Molossian Alcon among the Hellenic suitors of Agarista (vi. 127). It would appear that towards the north the Epirots became blended with the Macedonians and Illyrians, and towards the south with the Hellenes.

The northern Epirots, extending from the Macedonian frontier as far as Corcyra, resembled the Macedonians in their mode of cutting the hair, in their language and dress, and in many other particulars. (Strab. vii. p. 327.) Strabo also relates (*l. c.*) that some of the tribes spoke two languages, — a fact which proves the difference of the races in the country and also their close connection.

According to Theopompus, who lived in the fourth century B. C., the number of Epirot tribes was fourteen (ap. Strab. vii. pp. 323, 324). Their names, as we gather from Strabo, were the Chaones, Thesproti, Cassopaei, Molossi, Amphilochi, Athamanes, Aethices, Tymphaei, Paranaei, Talares, Atintanes, Orestae, Pelagones, and Elimiotae. (Strab. viii. pp. 324, 326, x. p. 434.) Of these, the Orestae, Pelagones, and Elimiotae were situated east of Mt. Pindus, and were subsequently annexed to Macedonia, to which they properly belonged. In like manner, the Athamanes, Aethices, and Talares, who occupied Pindus, were united to Thessaly in the time of Strabo. The Atintanes and Paranaei, who bordered upon Illyria, were also separated from Epirus.

The three chief Epirot tribes were the Chaones, Thesproti, and Molossi. The Chaones, who were at one time the most powerful of the three, and who are said to have ruled over the whole country (Strab. vii. p. 324), inhabited in historical times the district upon the coast from the Acroceraunian country to the river Thyamis, which separated them from the Thesprotians (Thuc. i. 46). The Thesproti extended along the coast from the Thyamis beyond the Acheron to the confines of the Cassopaei, and in the interior to the boundaries of the territory of Dodona, which in ancient times was regarded as a part of Thesprotia. [DODONA.] The Cassopaei, whom some writers called a Thesprotian tribe, reached along the coast, as far as the Ambracian gulf. The Molossi, who became subsequently the rulers of Epirus, originally inhabited only a narrow strip of country, extending from the Ambracian gulf between the Cassopaei and Ambraciotae, and subsequently between the Thesprotians and Athamanes, northwards as far as the Dodonaea. (Leake, *Northern Greece*, vol. iv. pp. 178, 179.) The Molossi subsequently obtained possession of the Cassopaea and the Dodonaea, and their country reached from the river Aous on the north to the Ambracian gulf on the south.

The most ancient inhabitants of Epirus are said to have been Pelasgians. Dodona is represented as an oracle of the Pelasgians. [DODONA.] Chaonia is also called Pelasgian; and the Chaones are said, like the Selli at Dodona, to have been interpreters of the oracle of Zeus. (Steph. B. *s. v.* Χαονία.) There appears to have been an ethnical connection between

the ancient inhabitants of Epirus and some of the tribes on the opposite coast of Italy. The Chones, on the gulf of Tarentum, are apparently the same people as the Chaones; and although we find no mention of the Thesprotians in Italy, we have there a town Pandosia, and a river Acheron, as in Epirus. There are good reasons for supposing that the Italian Oenotrians, to whom the Chonians belonged, were of the same race as the Epirots. (Niebuhr, *Hist. of Rome*, vol. i. p. 57.) [OENOTRIA.] If we were to accept the statement of Aristotle that Dodona was at one time inhabited by the people then called Graeci, but now Hellenes (*Meteor.* i. 14), Epirus must be regarded as the original abode of the Hellenes; but this statement is in opposition to the commonly received opinions of the Greeks, who placed the original home of the Hellenes in Thessaly. It may be that the Pelasgians in Epirus bore the name of Graeci, and carried the name to the opposite coast of Italy; which would account for the Romans and Italians in general giving the name of Graeci to all the Hellenes, looking upon the Hellenes who subsequently founded colonies in Italy as the same people. (Niebuhr, vol. iii. p. 451.) But, however this may be, the inhabitants of Epirus exercised, at an early period, considerable influence upon Greece. Of this the wide-spread reputation of the oracle of Dodona is a proof. The Thessalians, who conquered the country named after them, are represented as a Thesprotian tribe. [THESSALIA.] According to the common tradition, Neoptolemus or Pyrrhus, son of Achilles, settled in Epirus after his return from Troy, accompanied by Helenus, son of Priam. He transmitted his dominions to his son Molossus, from whom the Molossian kings traced their descent. (*Dict. of Biogr. s. vv. Neoptolemus* and *Molossus.*)

The chief Greek settlement in Epirus was the flourishing Corinthian colony of Ambracia, upon the gulf called after it. [AMBRACIA.] At a later period, probably between the time of Thucydides and Demosthenes, some Grecian settlers must have found their way into Thesprotia, since Demosthenes mentions Pandosia, Buchetia, and Elaea, as Eleian colonies (*de Halonn.* p. 84).

The Epirot tribes were independent of one another, though one tribe sometimes exercised a kind of supremacy over a greater or a smaller number. Such a supremacy may have been exercised in ancient times by the Thesprotians, who possessed the oracle. In the Peloponnesian War the Chaonians enjoyed a higher reputation than the rest (Thuc. ii. 80), and it is probably to this period that Strabo refers when he says that the Chaonians once ruled over all Epirus (vii. p. 323). The importance of the Chaonians at this period is shown by a line of Aristophanes (*Equit.* 78, with Schol.). It must not, however, be inferred that the Chaonians possessed any firm hold over the other tribes. The power of the Molossian kings, of which we shall speak presently, rested upon a different basis.

Originally each tribe was governed by a king. In the time of the Persian wars the Molossians were governed by a king called Admetus, who was living with the simplicity of a village chief when Themistocles came to him as a suppliant. (Thuc. i. 136.) Tharyps, also called Tharypas or Arrhybas, the son or grandson of Admetus, was a minor at the beginning of the Peloponnesian War, and was educated at Athens: he is said to have been the first to introduce among his subjects Hellenic civilisation. (Thuc. ii. 80; Paus. i. 11. § 1; Justin, xvii. 3; Plut. *Pyrrh.* 1.) The kingly government always continued among the Molossians, probably in consequence of their power being very limited; for we are told that the king and people were accustomed to meet at Passaron, the ancient Molossian capital, to swear obedience to the laws. (Aristot. *Polit.* v. 11; Plut. *Pyrrh.* 5.) But among the Chaonians and Thesprotians the kingly government had been abolished before the Peloponnesian War: the chief magistrates of the Chaonians were selected from a particular family (*ἐκ τοῦ ἀρχικοῦ γένους*, Thuc. ii. 80). After the Peloponnesian War the power of the Molossians increased, till at length Alexander, the brother of Olympias, who married Philip of Macedon, extended his dominion over most of the Epirot tribes, and took the title of king of Epirus. (Diod. xvi. 72, 91; Strab. vi. p. 280.) Alexander, who died B. C. 326, was succeeded by Aeacides, and Aeacides by Alcetas, after whom the celebrated Pyrrhus became king of Epirus, and raised the kingdom to its greatest splendour. He removed the seat of government from Passaron to Ambracia, which was now for the first time annexed to the dominions of the Epirot kings. Pyrrhus was succeeded in B. C. 272 by his son, Alexander II., who was followed in succession by his two sons, Pyrrhus II. and Ptolemy. (For the history of these kings, see the *Dict. of Biogr.*) With the death of Ptolemy, between B. C. 239 and 229, the family of Pyrrhus became extinct, whereupon a republican form of government was established, which continued till the conquest of Macedonia by the Romans, B. C. 168. Having been accused of favouring Perseus, the Roman senate determined that all the towns of Epirus should be destroyed, and the inhabitants reduced to slavery. This cruel order was carried into execution by Aemilius Paulus, who, having previously placed garrisons in the 70 towns of Epirus, razed them all to the ground in one day, and carried away 150,000 inhabitants as slaves. (Polyb. *ap. Strab.* vii. p. 322; Liv. xlv. 34; Plut. *Aemil. Paul.* 29.) From the effects of this terrible blow Epirus never recovered. In the time of Strabo the country was still a scene of desolation, and the inhabitants had only ruins and villages to dwell in. (Strab. vii. p. 327.) Nicopolis, founded by Augustus in commemoration of his victory off Actium, was the chief city of Epirus under the Roman empire. Both this city and Buthrotum had the dignity of Roman colonies. Epirus formed a province under the Romans, and in the time of Ptolemy was separated from Achaia by the river Achelous. (Ptol. iii. 14.) Epirus now forms part of Albania. The Albanians are probably descendants of the ancient Illyrians, who took possession of the depopulated country under the Roman or the early Byzantine empire. On the conquest of Constantinople by the Latins in 1204, a member of the celebrated Byzantine family of Comnenus established an independent dynasty in Epirus; and the despots of Albania, as they were called, continued for two centuries only second in power to the emperors of Constantinople. The last of these rulers, George Castriot, resisted for more than 20 years the whole forces of the Ottoman empire; and it was not till his death in 1466 that Albania was annexed to the Turkish dominions.

The chief towns in Epirus were:—

1. In Chaonia. Upon the road near the coast from N. to S.: PALAESTE; CHIMAERA; PHOENICE; BUTHROTUM; CESTRIA, also called Ilium or Troja, in the district Cestrine. [CESTRINE.] West of this road, upon the coast: ONCHESMUS; CASSIOPE.

East of the road in the interior: PHANOTE; HELICRANON.

2. In Thesprotia. Upon the road leading from Cestria southwards: EUROEA (?); PANDOSIA, on the Acheron; ELATREIA or ELATEIA; CASSOPE; NICOPOLIS. West of this road, upon the coast: SYBOTA; CHEIMERIUM; TORYNE: BUCHAETIUM; ELAEA. Between this road and the coast: GITANAE; EPHYRA, afterwards called Cichyrus. In the interior: EURYMENAE (?); ISSORIA; BATIAE (?).

3. In Molossia. From N. to S.: PHOTICE; TECMON; DODONA; PASSARON; CHALCIS; PHYLACE; HORREUM.

In the annexed coin the heads on the obverse are those of Zeus and Hera: the ox on the reverse may have reference either to the excellence of the Epirot oxen, or to its being the victim sacred to Zeus. On all coins we find the name of the people in the Doric form ΑΠΕΙΡΩΤΑΝ, and not ΗΠΕΙΡΩΤΩΝ. (Eckhel, vol. ii. p. 160, foll.) (Niebuhr, *Hist. of Rome*, vol. iii. p. 450, seq.; Grote, *Hist. of Greece*, vol. iii. p. 549, seq.; Merleker, *Histor. geogr. Darstellung des Landes und der Bewohner von Epiros*, Königs. 1841; Leake, *Northern Greece*; Bowen, *Mount Athos, Thessaly, and Epirus*, 1852.)

COIN OF EPEIRUS.

EPE'IUM. [AEPY.]

EPETIUM (Ἐπέτιον: *Eth.* Ἐπετῖνος, Ptol. ii. 16. § 4; Plin. iii. 25), a town of the Issii (Polyb. xxxii. 18), in Illyricum, with a harbour (Portus Epetius, *Peut. Tab.*). Remains of this town are found near *Stobretz*. (Comp. Map in Wilkinson, *Dalmatia and Montenegro*, vol. ii.) [E. B. J.]

E'PHESUS (Ἔφεσος: *Eth.* Ἐφέσιος, Ἐφεσίτης, Ἐφεσεύς), a city in Lydia, one of the twelve Ionian cities (Herod. i. 142), on the south side of the Caystrus, and near its mouth. The port was called Panormus. The country around Ephesus was an alluvial plain, as Herodotus observes (ii. 10). The name of Ephesus does not occur in the Homeric poems, and there is no proof, says Strabo, that it was so old as the Trojan War (p. 620). According to a myth (Steph. B. *s. v.* Ἔφεσος), the place was originally called Smyrna, from Smyrna the Amazon: it was also called Samorna, and Trecheia, and Ortygia, and Ptelea. The name Ephesus was said to be from one of the Amazons. The name Ptelea appears in an inscription of the Roman period which was copied by Chishull at Ephesus. Pliny (v. 29) has also preserved this legend of the Amazonian origin of Ephesus, and a name Alope, which the place had at the time of the Trojan War; a story found in Hyginus also. Pliny also mentions the name Morges. The legend of the Amazons is connected with the goddess Artemis, the deity of Ephesus. Pausanias (vii. 2. § 6) has a legend about the temple of Ephesus being founded by Ephesus, the son of the river Caystrus, and Cresus an autochthon.

Strabo, who had been at Ephesus, gives a pretty good description of it (p. 639). As a man sailed northward through the channel that separates Samos from Mycale, he came to the sea-coast of the Ephesia, part of which belongs to the Samii. North of the Panionium was Neapolis, which once belonged to Ephesus, but in Strabo's time to the Samii, who had received it in exchange for Marathesium. Next was Pygela, a small place with a temple of Artemis Munychia, a settlement of Agamemnon, according to a legend; and next the port called Panormus, which contained a temple of Artemis Ephesia; and then the city. On this same coast, a little above the sea, there was also Ortygia, a fine grove of various kinds of trees, and particularly cypress. The stream Cenchrius flowed through it. The stream and the place were connected with a legend of Lato and the birth of Apollo and Artemis. Ortygia was the nurse who assisted Lato in her labour. Above the grove was a mountain Solmissus, where the Curetes placed themselves, and with the clashing of their arms prevented the jealous Hera, who was on the watch, from hearing the cries of Lato. There were several temples in this place, old and new: in the old temples there were ancient wooden statues; but in the later temples others (σκολιὰ ἔργα*). There was Lato holding a staff, and Ortygia standing by her with a child on each arm. The Cares and Leleges were the settlers of Ephesus, according to one story (Strabo), and these two peoples or two names are often mentioned together. But Pherecydes (Strab. p. 632) says that the Paralia of Ionia was originally occupied by Carians from Miletus to the parts about Mycale and Ephesus, and the remainder as far as Phocaea by Leleges. The natives were driven out of Ephesus by Androclus and his Ionians, who settled about the Athenaeum and the Hypelaeus, and they also occupied a part of the higher country (τῆς Παρωρείας) about the Coressus. Pausanias preserves a tradition that Androclus drove out of the country the Leleges, whom he takes to be a branch of the Carians, and the Lydians who occupied the upper city; but those who dwelt about the temple were not molested, and they came to terms with the Ionians. This tradition shows that the old temple was not in the city. The tomb of Androclus was still shown in the time of Pausanias, on the road from the temple past the Olympieium, and to the Pylae Magnetides; the figure on the tomb was an armed man (vii. 2. § 6, &c.). This place on the hill was the site of the city until Croesus' time, as Strabo says. Croesus warred against the Ionians of Ephesus (Herod. i. 26), and besieged their city, at which time during the siege (so says the text) the Ephesii dedicated their city to Artemis by fastening the city to the temple by a rope. It was seven stadia between the old city, the city that was then besieged, and the temple. This old city was the city on the Paroreia. After the time of Croesus the people came down into the plain, and lived about the "present" temple (Strabo) to the time of Alexander.

King Lysimachus built the walls of the city that existed in Strabo's time; and as the people were not willing to remove to the new city, he waited for a violent rain, which he assisted by stopping up the channels that carried off the water, and so drowned the city, and made the people glad to leave it. Lysi-

* This word σκολιὰ has never been explained. Tyrrwhitt altered it to Σκόπα. See Groskurd's note on the passage (*Trans. Strab.* vol. iii. p. 14).

machus called his new city Arsinoë after his wife, but the name did not last long. The story of the destruction of the old city, which was on very low ground, is told by Stephanus (*s. v.* Ἔφεσος) somewhat differently from Strabo. He attributes the destruction to a violent storm of rain, which swelled the river. The town was situated too low; and as the Caystrus is subject to sudden risings, it was damaged or destroyed, as modern towns sometimes have been which were planted too near a river. Thousands were drowned, and valuable property was lost. Stephanus quotes a small poem of Duris of Elaea made on the occasion, which attributes that calamity to the rain and the sudden rising of the river. Nothing is known of Duris, and we must suppose that he lived about the time of the destruction of Ephesus, or about B.C. 322. (Comp. Eustath. *ad Dionys.* v. 827, who quotes the first two lines of the epigramma of Duris.) Pausanias (i. 9. § 7) states that Lysimachus removed to his new Ephesus the people of Colophon and Lebedus, from which time the ruin of these two towns may be dated. [COLOPHON.]

The history of Ephesus, though it was one of the chief of the Ionian towns, is scanty. As it was founded by Androclus the son of Codrus, the kingly residence (βασίλειον, whatever the word means) of the Ionians was fixed there, as they say (Strab. p. 633), "and even to now those of the family are named kings (βασιλεῖς) and have certain honours, the first seat in the games, and purple as a sign of royalty, a staff instead of a sceptre, and the possession or direction of the rites of Eleusinian Demeter" (comp. Herod. i. 147). Ephesus was it seems from an early period a kind of sacred city, for Thucydides (iii. 104), when he is speaking of the ancient religious festival at Delos to which the Ionians and the surrounding islanders used to go with their wives and children, adds, "as now the Iones to the Ephesia." Strabo (p. 633) has also preserved the tradition of Ephesus having been called Smyrna, and he has a very confused story about the Smyrnaei leaving the Ephesii to found Smyrna Proper. [SMYRNA.] He quotes Callinus as evidence of the people of Ephesus having been once named Smyrnaei, and Hipponax to prove that a spot in Ephesus was named Smyrna. This spot lay between Trecheia and the Acte of Lepra; and this Lepra was the hill Prion which was above the Ephesus of Strabo's time, and contained part of the wall. He concludes that the Smyrna of old Ephesus was near the gymnasium of the later town of Ephesus, between Trecheia and Lepra. The old Athenaeum was without the limits of the later city.

The Cimmerians in an invasion of western Asia took Sardis except the acropolis (Herod. i. 15), in the reign of the Lydian king Ardys: and it seems that they got into the valley of the Caystrus and threatened Ephesus. (Callinus, Bergk, *Poetae Lyrici Graeci*, p. 303.) Callinus also speaks of a war between the Magnetes or people of Magnesia and Ephesus his native city (Strab. p. 647), which war of course was before that inroad of the Cimmerii by which Magnesia was destroyed: for there was a tradition of more than one Cimmerian invasion. Ephesus fell successively under the dominion of the Lydian and Persian kings. In B.C. 499, when the Athenians and Eretrians with the Ionians went against Sardis, they sailed to Ephesus and left their ships at Coressus. Some Ephesii were their guides up the valley of the Caystrus and over the range of Tmolus. After the Ionians had fired Sardis they retreated, but the Persians overtook them at Ephesus and defeated the confederates there. (Herod v. 102.) This is all that Herodotus says about Ephesus on this occasion. After the naval battle before Miletus, in which the Ionian confederates were defeated, some of the Chii, who had escaped to Mycale, made their way by night into the Ephesia, where the women were celebrating the Thesmophoria, and the Ephesii, who knew nothing of what had happened to the Chii, fell upon them supposing they were robbers, and killed them or made a beginning at least. (Herod. vi. 16). The Ephesii had no ships in the fight before Miletus; and we must conclude that they took no part in the revolt. When Xerxes burnt the temple at Branchidae "and the other temples" (Strab. p. 634), the temple of Ephesus was spared. Near the close of the Peloponnesian War, Thrasyllus, an Athenian commander, who was on a marauding expedition, landed at Ephesus, on which the Persian Tissaphernes summoned all the country to Ephesus to the aid of Artemis. The Athenians were defeated and made off. (Xen. *Hell.* i. 2. § 6.) Lysander, the Spartan commander, entered the port of Ephesus (B.C. 407) with a fleet, his object being to have an interview with Cyrus at Sardis. While he was repairing and fitting up his ships at Ephesus, Antiochus, the Athenian, who was stationed at Notium as commander under Alcibiades, gave Lysander the opportunity of fighting a sea-fight, in which the Athenians were defeated. (Xen. *Hell.* i. 5. § 1, &c.) After the battle of Aegos Potami the Ephesians dedicated in the temple of Artemis a statue of Lysander, and of other Spartans who were unknown to fame; but after the decline of the Spartan power and the victory of Conon at Cnidus, they set up statues of Conon and Timotheus in their temple, as the Samii also did in their Heraeum. (Pans. vi. 3. § 15.)

There is no notice of Ephesus taking any active part in war against the barbarians from the time of Croesus, who attacked this town first of all the Ionian towns, and probably with the view of getting a place on the sea. For Ephesus was the most convenient port for Sardis, being three days' journey distant (Xen. *Hell.* iii. 2. § 11), or 540 stadia (Herod. v. 54). It was the usual landing-place for those who went to Sardis, as we see in many instances. (Xen. *Anab.* ii. 2. § 6.)

The Ionian settlers at Ephesus, according to tradition, found the worship of Artemis there, or of some deity to whom they gave the name of Artemis. (Callim. *in Dian.* 238.) A temple of Artemis existed in the time of Croesus, who dedicated in the temple "the golden cows and the greater part of the pillars," as Herodotus has it (i. 92). Herodotus mentions the temple at Ephesus with that of Hera at Samos as among the great works of the Greeks (ii. 146), but the Heraeum was the larger. The original architect is named Chersiphron by Strabo, and another architect enlarged it. The architect of the first temple that the Ionians built was a contemporary of Theodorus and Rhoecus, who built the Heraeum at Samos. When Xenophon settled at Scillus, he built a temple to Artemis like the great one at Ephesus; and he placed in it a statue of cypress like that of Ephesus, except that the Ephesian Artemis was of gold. There was a stream Selinus near the temple at Ephesus, and there was a stream so called at Scillus, or Xenophon gave it the name. Xenophon was at Ephesus before he joined Agesilaus

on his march from Asia to Boeotia, and he deposited there the share that had been entrusted to him of the tenth that had been appropriated to Apollo and Artemis of the produce of the slaves which the Ten Thousand sold at Cerasus on their retreat. This fact shows that the temple at Ephesus was one of the great holy places to the Ionic Hellenes. (Xen. *Anab.* v. 3. § 4, &c.) The worship of the goddess was carried by the Phocaeans to Massalia (*Marseille*), and thence to the Massaliot settlements. (Strab. pp. 159, 160, 179, 180, 184.) Dianium or Artemisium, on the coast of Spain, was so called from having a temple of the Ephesian Artemis.

This enlarged temple of Artemis was burnt down by Herostratus, it is said on the night on which Alexander was born. The temple was rebuilt again, and probably on the same site. The name of the architect is corrupted in the text of Strabo, but it is supposed that the true reading is Dinocrates. Alexander, when he entered Asia on his Persian expedition, offered to pay all that had been expended on the new temple and all that it would still cost, if he might be allowed to place the inscription on it; by which, as the answer of the Ephesii shows, who declined his proposal, was meant his placing his name on the temple as the dedicator of it to the goddess. The Ephesii undertook the building of their own temple, to which the women contributed their ornaments, and the people gave their property, and something was raised by the sale of the old pillars. But it was 220 years before the temple was finished.

The temple was built on low marshy ground to save it from earthquakes, as Pliny says (xxxvi. 14), but Leake suggests another reason. The tall Ionic column was more appropriate for a building in a plain, and the shorter Doric column looked better on a height. Leake observes "that all the greatest and most costly of the temples of Asia, except one, are built on low and marshy spots." The Ephesii seem always to have stuck to the old site of the temple, and it is probable that they would have placed the new one there, even if their columns had been Doric instead of Ionic.

The foundations of the new temple were laid on well-rammed charcoal and wool. The length of the building was 425 feet, and the width 220. The columns were 127, "each made by a king," as Pliny says. The columns were 60 feet high, and 36 were carved, and one of them by Scopas. The epistylia or stones that rested over the intercolumniations, or on the part of the columns between the capitals and the frieze, were of immense size. It would take a book, says Pliny, to describe all the temple; and Democritus of Ephesus wrote one upon it (Athen. xii. p. 525). Leake (*Asia Minor*, p. 346) supposes that the temple had a double row of 21 columns on each side, and a triple row of 10 columns at the two ends. This will make 120 columns, for 24 columns have been counted twice. If we add 4 columns in antis at each end of the building, this will make the whole number 128, for the number 127 cannot be right. Leake has made his plan of the temple in English feet, on the same scale as the other plans of temples (p. 351); for he observes that we cannot tell whether Pliny used the Greek or the Roman foot. The English foot is somewhat longer than the Roman, and less than the Greek. For the purpose of comparison it is immaterial what foot is used. This was the largest of the Greek temples. The area of the Parthenon at Athens was not one-fourth of that of the temple of Ephesus; and the Heraeum of Samos, the great temple at Agrigentum and the Olympieium at Athens were all less than the temple of Ephesus. The area of the Olympieium was only about two-thirds of that of the Ephesian temple.

After the temple, that is, the construction of the building, was finished, says Strabo, "the Ephesians provided the abundant other ornaments by the free-will offering of the artists," that is, the native artists of Ephesus. This is the meaning that Groskurd gives to the obscure passage of Strabo (*τῇ ἐκτιμήσει τῶν δημιουργῶν*): and it is at least a probable meaning (*Transl. Strab.* vol. iii. p. 17). But the altar was almost entirely filled with the work of Praxiteles. Strabo was also shown some of the work of Thraso, a Penelope and the aged Eurycleia. The temple contained one of the great pictures of Apelles, the Alexander Ceraunophoros (Plin. xxxv. 10; Cic. *c. Verr.* ii. 4. c. 60). The priests were eunuchs, called Megalobuzi. (Comp. Xen. *Anab.* v. 3. § 8.) They were highly honoured, and the Ephesii procured from foreign places such as were worthy of the office. Virgins were also associated with them in the superintendence of the temple. It was of old an asylum, and the limits of the asylum were often varied. Alexander extended them to a stadium, and Mithridates the Great somewhat further, as far as an arrow went that he shot from the angle of the tiling of the roof (*ἀπὸ τῆς γωνίας τοῦ κεράμου*). M. Antonius extended the limits to twice the distance, and thus comprised within them part of the city; from which we learn that the temple was still out of the city, and less than 1200 Greek feet from it. But this extension of the limits was found to be very mischievous, and the ordinance of Antonius was abolished by Augustus. The extension of the limits by Antonius was exactly adapted to make one part of the city of Ephesus the rogues' quarter.

The growth of Ephesus, as a commercial city, seems to have been after the time of Alexander. It was included within the dominions of Lysimachus, whose reign lasted to B. C. 281. It afterwards was included in the dominions of the kings of Pergamum. "The city," says Strabo, "has both ship-houses, and a harbour; but the architects contracted the mouth of the harbour at the command of king Attalus, named Philadelphus. The king supposing that the entrance would become deep enough for large merchant vessels, and also the harbour, which had up to that time been made shallow by the alluvium of the Caystrus, if a mole were placed in front of the entrance, which was very wide, ordered it to be constructed. But it turned out just the opposite to what he expected; for the alluvium being thus kept in made all the harbour shallower as far as the entrance; but before this time, the floods and the reflux of the sea took off the alluvium and carried it out to sea." Strabo adds, that in his time, the time of Augustus, "the city in all other respects, owing to the favourable situation, is increasing daily, for it is the greatest place of trade of all the cities of Asia west of the Taurus." The neighbourhood of Ephesus also produced good wine.

After the mouth of the Caystrus, says Strabo, is a lake formed by the sea, named Selinusia (Groskurd, *Transl. Strab.* vol. iii. p. 19, note, gives his reasons for preferring the reading Selenusia); and close to it another lake, which communicates with the Selinusia, both of which bring in a great revenue. The kings (those of Pergamum, probably) took them

away from the goddess, though they belonged to her. The Romans gave them back to the goddess; but again the publicani by force seized on the revenue that was got from them; but Artemidorus, as he says himself, being sent to Rome, recovered the lakes for the goddess; and the city of Ephesus set up his golden (gilded) statue in the temple. Pliny (v. 29) seems to say that there were two rivers Selenuntes at Ephesus, and that the temple of Diana lay between them. But these rivers have nothing to do with the lakes, which were on the north side of the Caystrus, as the French editor of Chandler correctly observes; and Pliny has probably confounded the river and the lakes. The mountain Gallesus (*Aleman*) separated the territory of Ephesus, north of the Caystrus, from that of Colophon. When Hannibal fled to Asia, he met king Antiochus near Ephesus (Appian, *Syr.* c. 4); and when the Roman commissioners went to Asia to see Antiochus, they had a good deal of talk with Hannibal while they were waiting for the king, who was in Pisidia. Antiochus, during his war with the Romans, wintered at Ephesus, at which time he had the design of adding to his empire all the cities of Asia. (Liv. xxxiii. 38). Ephesus was then the king's head-quarters. The king's fleet fought a battle with the fleet of the Romans and Eumenes at the port Corycus, "which is above Cyssus" (Liv. xxxvi. 43); and Polyxenidas, the admiral of Antiochus, being defeated, fled back to the port of Ephesus (B. C. 189). [CASYSTES.] After the great defeat of Antiochus at Magnesia, near Sipylus, by L. Cornelius Scipio, Polyxenidas left Ephesus, and the Romans occupied it. The Roman consul divided his army into three parts, and wintered at Magnesia on the Maeander, Tralles, and Ephesus. (Liv. xxxvii. 45). On the settlement of Asia after the war, the Romans rewarded their ally Eumenes, king of Pergamum, with Ephesus, in addition to other towns and countries. When the last Attalus of Pergamum died (B. C. 133) and left his states to the Romans, Aristonicus, the son of an Ephesian woman by king Eumenes, as the mother said, attempted to seize the kingdom of Pergamum. The Ephesii resisted him, and defeated him in a naval fight off Cyme. (Strab. p. 646). The Romans now formed their province of Asia (B. C. 129), of which Ephesus was the chief place, and the usual residence of the Roman governor. One of the Conventus Juridici was also named from Ephesus, which became the chief town for the administration of justice, and of a district which comprised the Caesarienses, Metropolitae, Cilbiani inferiores et superiores, Mysomacedones, Mastaurenses, Briullitae, Hypaepeni, Dioshieritae." (Pliny, *H. N.* v. 29).

When Mithridates entered Ionia, the Ephesii and other towns gladly received him, and the Ephesii threw down the statues of the Romans. (Appian, *Mithrid.* c. 21). In the general massacre of the Romans, which Mithridates directed, the Ephesii did not respect their own asylum, but they dragged out those who had taken refuge there and put them to death. Mithridates, on his visit to western Asia, married Monime, the daughter of Philopoemen of Stratonicea in Caria, and he made Philopoemen his bailiff (*ἐπίσκοπος*) of his town of Ephesus. But the Ephesii, who were never distinguished for keeping on one side, shortly after murdered Zenobius, a general of Mithridates, the same who carried the Chians off. [CHIOS.] L. Cornelius Sulla, after his victories over Mithridates, punished the Ephesii for their treachery. The Roman summoned the chief men of the Asiatic cities to Ephesus, and from his tribunal addressed them in a speech, in which, after rating them well, he imposed a heavy contribution on them, and gave notice that he would treat as enemies all who did not obey his orders. This was the end of the political history of Ephesus.

Ephesus was now the usual place at which the Romans landed when they came to Asia. When Cicero (B. C. 51) was going to his province of Cilicia, he says that the Ephesii received him as if he had come to be their governor (*ad Att.* v. 13). P. Metellus Scipio, who was at Ephesus shortly before the battle of Pharsalia, was going to take the money that had been deposited from ancient times in the temple at Ephesus, when he was summoned by Cn. Pompeius to join him in Epirus. After the defeat of Brutus and Cassius at Philippi, M. Antonius paid a visit to Ephesus, and offered splendid sacrifices to the goddess. He pardoned the partisans of Brutus and Cassius, who had taken refuge in the temple, except two; and it may have been on this occasion that he issued that order in favour of the rogues of Ephesus which Augustus repealed. Antonius summoned the people of Asia, who were at Ephesus represented by their commissioners, and, after recapitulating the kindness that they had experienced from the Romans, and the aid that they had given to Brutus and Cassius, he told them that he wanted money; and that as they had given his enemies ten years' taxes in two years, they must give him ten years' taxes in one; and that they should be thankful for being let off more easily than they deserved. The Greeks made a lamentable appeal to his mercy, urging that they had given Brutus and Cassius money under compulsion; that they had even given up their plate and ornaments, which had been coined into money before their eyes. Antonius at last graciously signified that he would be content with nine years' taxes, to be paid in two years. (Appian, *B. C.* v. 4, &c.) It was during this visit that Antonius, according to Dion Cassius (xlviii. 24), took the brothers of Cleopatra from their sanctuary in the temple of Diana at Ephesus, and put them to death; but Appian (*B. C.* v. 9) says that it was Arsinoë, Cleopatra's sister, and that she was taken from sanctuary in the temple of Artemis Leucophryne at Miletus. Appian's account is the more trustworthy, for he speaks of the priest of Ephesus, "whom they call Megabyzus," narrowly escaping the vengeance of Antonius, because he had once received Arsinoë as a queen. Before the sea-fight at Actium the fleet of M. Antonius and Cleopatra was collected at Ephesus, and he came there with Cleopatra. After the battle of Actium, Caesar Octavianus permitted Ephesus and Nicaea, the chief cities of Asia and Bithynia, respectively to dedicate temples to the deified dictator Caesar.

Strabo terminates his description of Ephesus with a list of the illustrious natives, among whom was Heraclitus, surnamed the Obscure; and Hermodorus, who was banished by the citizens for his merits. This is the Herm dorus who is said to have assisted the Roman Decemviri in drawing up the Tables. (Dig. 1. 2. 2. § 4.) Hipponax the poet was also an Ephesian, and Parrhasius the painter. Strabo also mentions Apelles as an Ephesian, but that is not certain. Of modern men of note he mentions only Alexander, surnamed the Light, who was engaged in public affairs, wrote history, and astronomical and

geographical poems in hexameter verse. Strabo does not mention Callinus, and it would seem, that as he speaks of him elsewhere, he did not take him to be an Ephesian; and, among the men nearer his own time, he has not mentioned the geographer Artemidorus in this passage, though he does mention Artemidorus, the same man, as being sent to Rome about the lakes and the revenues from them. Accordingly, Koray and Groskurd suppose that the name Artemidorus has dropped out of the MSS. of Strabo, and that Strabo must have mentioned him with Alexander the Light.

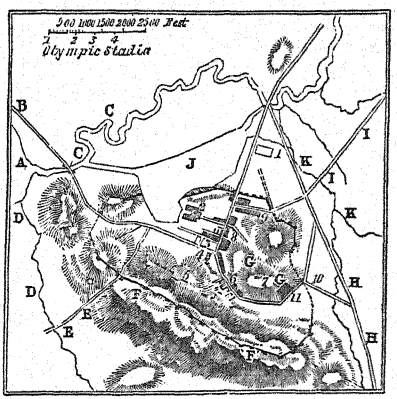
When Strabo was at Ephesus, in the days of Augustus, the town was in a state of great prosperity. The trade of Ephesus had extended so far, that the minium of Cappadocia, which used to be carried to Sinope, now went to Ephesus. Apameia, at the source of the Marsyas, was the second commercial place in the Roman province of Asia, Ephesus being the first, for it was the place that received all the commodities from Greece and Italy. (Strab. pp. 540, 577.) There was a road from Ephesus to Antiocheia on the Maeander, through Magnesia on the Maeander, Tralles, and Nysa. From Antiocheia the road went to Carura [CARURA], on the borders of Caria and Phrygia. From Carura the road was continued to Laodiceia, Apameia, Metropolis, Chelidonii (a corrupt word, which is supposed to represent Philomelium), and Tyriaeum; then it ran through Lycaonia through Laodiceia, the Burnt, to Coropassus; and from Coropassus, which was in Lycaonia, to Garsaura in Cappadocia, on the borders; then through Soandus and Sadakora to Mazaca [CAESAREA], the metrotropolis of the Cappadocians; and from Mazaca through Herphae to Tomisa in Sophene. (Strab. pp. 647, 663.)

It does not appear from Strabo how the Ephesii managed the affairs of the town in his time. He speaks of a senate (*γερουσία*) being made by Lysimachus, and the senate with certain persons called the Epicleti managed the affairs of the city. We may conclude that it had a Boule, and also a Demus or popular assembly. A town clerk of Ephesus (*γραμματεύς*), a common functionary in Greek cities, is mentioned. (*Acts of the Apost.* xix. 35.) An imperfect inscription, copied by Chishull (*Travels in Turkey*, &c. p. 20), shows that there was an office (*ἀρχεῖον*) in Ephesus for the registry of titles within the territory.

In the time of Tiberius there were great complaints of the abuses of asyla. The Ephesii (Tacit. *Ann.* iii. 61) were heard before the Roman senate in defence of the asylum of Artemis, when they told the whole mythical story of the origin of the temple; they also referred to what Hercules had done for the temple, and, coming nearer to the business, they said that the Persians had always respected it, and after them the Macedonians, and finally the Romans. Plutarch (*De vitando aere alieno*, c. 31) says that the temple was an asylum for debtors, and it is probable that the precincts were generally well filled. In the reign of Nero, Barea Soranus, during his government of Asia, tried to open the port, which the bad judgment of the king of Pergamum and his architects had spoiled. (Tacit. *Ann.* xvi. 23.)

When St. Paul visited Ephesus (*Acts of the Apost.* xix.), one Demetrius, "a silversmith which made silver shrines for Diana, brought no small gain unto the craftsmen." He called his men together, and showed them that their trade was in danger from the preaching of Paul, who taught "that they be no gods, which are made with hands; so that not only this our craft is in danger to be set at nought; but also that the temple of the great goddess Diana should be despised, and her magnificence should be destroyed, whom all Asia and the world worshippeth." The town clerk, by a prudent and moderate speech, settled the tumult. Among other things, he told them that the image of Diana fell down from Jupiter. Pliny (xvi. 40) mentions an old wooden statue of Diana at Ephesus. Licinius Mucianus, a contemporary of Pliny, had examined it, and he said that it had never been changed, though the temple had been restored seven times. The representative of the Asiatic goddess was not that of the huntress Artemis of the Hellenes. Müller observes that, "Artemis, as the guardian of the Ephesian temple, which, according to the myth, was founded by the Amazons, appears in an Asiatic Amazonian costume. The worship of her image, which was widely spread, and in the later imperial period repeated innumerable times in statues and on coins, is connected with the Hellenic representations of Artemis by no visible link." (*Handbuch der Archaeologie.*) The old statue that fell down from Jupiter may have been a stone, an aërolite; and the wooden statue that Mucianus saw, some very rude piece of work. According to Minucius Felix (c. 21), the Ephesian Diana was represented with many breasts. (See the notes on Tacit. *Ann.* iii. 61, ed. Oberlin.)

The apostle established a Christian church at Ephesus, and we learn from what he said to the elders of the church of Ephesus, when they met him at Miletus (*Acts*, xx. 17—31), that he had lived there three years. He afterwards addressed a letter to the Ephesians, which forms part of the canonical New Testament. In the book of Revelations (ii. 1, &c.) the church of Ephesus is placed first among the seven churches of Asia. The heathen and the Christian church of Ephesus subsisted together for some time. The great festival called *τὸ κοινὸν Ἀσίας* was held in several of the chief towns in turn, of which Ephesus was one. In A. D. 341 the third general council was held at Ephesus. The Asiarchs who are mentioned in the Acts of the Apostles (xix. 31), on the occasion of the tumult in Ephesus, are probably, as Schleusner says, the representatives from the cities of Asia, who had the charge of the religious solemnities; or they may have been the Asiarchs of Ephesus only. Under the Christian emperors Ephesus has the title of *ἡ πρώτη καὶ μεγίστη μητρόπολις τῆς Ἀσίας*.



The remains of Ephesus are partly buried in rubbish, and overgrown with vegetation. They are near a place now called *Ayasaluk*. These remains have been visited and described by many travellers, but it is difficult without a plan of the ground to understand the descriptions. Spon and Wheler visited the place in 1675, and described it after the fashion of that day (vol. i. p. 244). The ruins have also been described by Chishull (*Travels in Turkey*, &c. p. 23, &c.), and at some length by Chandler (*Asia Minor*, c. 32, &c.), and by many other more recent travellers. The disappearance of such a huge mass as the temple of Diana can only be explained by the fact of the materials having been carried off for modern buildings; and probably this and other places near the coast supplied materials for Constantinople. The soil in the valley has also been raised by the alluvium of the river, and probably covers many old substructions. The

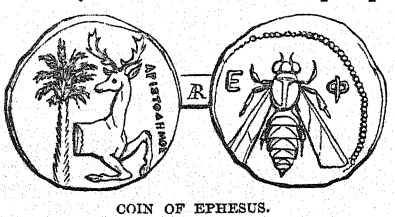
temple of Ephesus, being the centre of the pagan worship in Asia, would be one of the first to suffer from the iconoclasts in the reign of Theodosius I., when men in black, as Libanius calls them, overturned the altars, and defaced the temples. When the great Diana of the Ephesians was turned out of her home, the building could serve no other purpose than to be used as a stone quarry.

Chandler found the stadium of Ephesus, one side of which was on the hill which he identifies with Prion, and the opposite side which was next to the plain was raised on arches. He found the length to be 687 feet. He also describes the remains of the theatre, which is mentioned in the tumult which was caused at Ephesus by St. Paul's preaching. Fellows (*Asia Minor*, p. 274) observes that there can be no doubt about the site of the theatre. Chandler saw also the remains of an odeum or music hall. There are the remains of a temple of the Corinthian order, which was about 130 feet long, and 80 wide. The cella was built of massive stones. The columns were 4 feet 6 inches in diameter, and the whole height, including the base and capitals, above 46 feet. The shafts were fluted, and of a single piece of stone. The best preserved of these columns that Chandler saw was broken into two parts. The frieze contained a portion of bold sculpture, which represented some foliage and young boys. The quarries on Prion or Pion, for the name is written both ways, supplied the marble for the temples of Ephesus. Prion, as Strabo has it, was also called Lepre Acte; it was above the city of Strabo's time, and on it, as he says, was part of the wall.

Hamilton (*Researches*, &c. vol. ii. p. 24), one of the latest travellers who has visited Ephesus, spent several days there. He thinks that the site of the great temple is in some "massive structures near the western extremity of the town, which overlook the swamp or marsh where was the ancient harbour." This is exactly the spot where it ought to be according to Strabo's description. The place which Hamilton describes is "immediately in front of the port, raised upon a base thirty or forty feet high, and approached by a grand flight of steps, the ruins of which are still visible in the centre of the pile." Hamilton observes that "brick arches and other works have also been raised on various portions of the walls; but this was probably done by the Christians after the destruction of the temple and the removal of the columns by Constantine, when a church was erected on its ruins." The supposition that the basement of the temple has been buried by the alluvium of the Cayster is very properly rejected by Hamilton, who has pointed out the probable site. Pliny describes a spring in the city, and names it Callipia, which may be the Alitaea of Pausanias. Hamilton found a beautiful spring to the north of the harbour; the head of the spring was about 200 yards from the temple. The distance of the temple, supposed to be near the port, from the old city on the heights seems to agree with the story in Herodotus (i. 26). The position of the tomb of Androclus, as described by Pausanias, is quite consistent with this supposed site of the great temple. Hamilton observes that the road which Pausanias describes "must have led along the valley between Prion and Coressus, which extends towards Magnesia, and is crossed by the line of walls erected by Lysimachus. The Magnesian Gates would also have stood in this valley, and must not be confounded with those which are in the direction of *Aiasaluck*." Hamilton supposes that the Olympieium may have stood in the space between the temple of Artemis and the theatre in the neighbourhood of the agora, where he found the remains of a large Corinthian temple, which is that which Chandler describes.

Hamilton describes the Hellenic wall of Lysimachus as extending along the heights of Coressus "for nearly a mile and three quarters, in a SE. and NW. direction, from the heights immediately to the S. of the gymnasium to the tower called the Prison of St. Paul, but which is in fact one of the towers of the ancient wall, closely resembling many others which occur at various intervals. The portion which connected Mount Prion with Mount Coressus, and in which was the Magnesian Gate, appears to have been immediately to the east of the gymnasium." The wall is well built. Hamilton gives a drawing of a perfect gateway in the wall, with a peculiar arch. He observed also another wall extending from the theatre over the top of Mount Prion, and thence to the eastern extremity of the stadium. He thinks that this may be the oldest wall. Besides this wall and that supposed to be Lysimachus', already described, he found another wall, principally of brick, which he supposes to have been built by the Byzan-

PLAN OF EPHESUS.*



A. Harbour, now filled up.
B. Road to Colophon.
CC. River Caystrus.
DD. River Cenchrius.
EE. Road to Samos.
FF. Coressus.
GG. Prion.
HH. Road to Magnesia.
II. Road to Sardes and Smyrna.
J. Inner harbour, now a swamp.
KK. River Selinus.
1. Temple of Artemis of Epheus.
2. Great building belonging to the harbour, incorrectly supposed to be the temple of Artemis.
3. Agora surrounded by pillars.
4. Corinthian temple.
5. Tombs.
6. Odeium.
7. Olympieium.
8. Large theatre.
9. Stadium.
10. Magnesian gates
11. Gymnasium.

* This plan is from Kiepert, and will be useful to the readers of this article; but the writer does not suppose that every spot here indicated can be considered as rightly fixed yet.

tines when the town had diminished in size: "considerable remains of this may still be traced at the foot of Mount Coressus, extending from near the theatre westward to the port and temple of Diana." There are remains of an aqueduct at Ephesus. Spon and Wheler also describe a series of arches as being five or six miles from Ephesus on the road to Scala Nova, with an inscription in honour of Diana and the emperors Tiberius and Augustus.

Hamilton copied a few inscriptions at Ephesus (vol. ii. p. 455). Chandler copied others, which were published in his "Inscriptiones Antiquae," &c. In the "Antiquities of Ionia," vol. ii., there are views of the remains of Ephesus, and plans. Some of the coins of Ephesus of the Roman period have a reclining figure that represents the river Cayster, with the legend Εφεσιων Καυστρος. Arundell (*Discourses in Asia Minor*, vol. ii.) has collected some particulars about the Christian history of Ephesus. The reader may also consult the "Life and Epistles of St. Paul" by Conybeare and Howson, vol. ii. p. 66, &c.

The name of the village of *Aiasaluck* near Smyrna is generally said to be a corruption of Ἅγιος Θεόλογος, a name of St. John, to whom the chief Christian church of Ephesus was dedicated (Procop. *de Aedif.* v. 1). But, as Arundell observes, this is very absurd: and he supposes it to be a Turkish name. Tamerlane encamped here after he had taken Smyrna. The name is written *Ayazlic* by Tamerlane's historian Cherefeddin Ali (French Translation, by Petis de la Croix, vol. iv. p. 58). It has been conjectured that Tamerlane destroyed the place, but his historian says nothing about that. Ephesus had perished before the days of Tamerlane [G. L.]

COIN OF EPHESUS.

EPHRAIM. 1. One of the twelve tribes of Israel. [PALAESTINA.]

2. (Ἐφραίμ), a city named only by St. John (xi. 54), without any clue to its position, except that it was ἐγγὺς τῆς ἐρήμου, probably the wild and rocky wilderness of Judea, north-east of Jerusalem, usually so designated in the New Testament. This position would answer well enough to the situation assigned it by Eusebius (*Onomast. s. v.* Ἐφρών), who describes it as a large village eight miles distant from Jerusalem to the north, where, however, St. Jerome reads 20 miles. In confirmation of this is the mention of the small town of Ephraim, in connection with Bethel, by Josephus (*B. J.* iv. 9. § 9), and the desert is probably the same which is called in Joshua (xviii. 12) the wilderness of Beth-aven, and Mount Bethel in viii. 24. (comp. xvi. 1.) (Reland, *Palaest.* pp. 376, 377.) Dr. Robinson believes it to be the same as "Ephraim with the towns thereof," which Abijah took from Jeroboam (cir. B. C. 957), also mentioned in connection with Bethel (2 *Chron.* xiii. 19). Assuming St. Jerome's statement of the distance to be correct, he identifies Ephraim with "the lofty site of the modern *El-Taiyibeh*, situated two hours NE. of Bethel, and six hours and twenty minutes NNE. of Jerusalem (reckoning three Roman miles to the hour), adjacent to and overlooking the broad tract of desert country lying between it and the valley of the Jordan." (Robinson, *Harmony of the Four Gospels*, note on pt. vi. § 93.) He finds it also in the Ophrah of Benjamin mentioned in Josh. xviii. 23, 1 Sam. xiii. 17. Possibly, also, "Mount Ephron," mentioned in the northern border of the tribe of Judah, may be the mountain district of Benjamin, deriving its name from this city. (*Josh.* xv. 9.)

3. A woody country on the east of Jordan in Gilead, where the decisive battle between David and his revolted son was fought, one of whose oaks proved fatal to Absalom. (2 *Sam.* xviii. 6.) [G. W.]

EPHYRA (Ἐφύρη), the name of several ancient cities in Greece. Meineke (ad Steph. B. p. 275) connects the word with ἐφοράω, and others suppose it to be equivalent to ἐχυρά (Curtius, *Peloponnesos*, vol. ii. p. 593); but the meaning of the word can only be a matter of conjecture.

EPHYRA (Ἐφύρη). 1. The ancient name of Corinth. [CORINTHUS.]

2. A town of Elis, situated upon the river Selleeis, and the ancient capital of Augeias, whom Hercules conquered. (Hom. *Il.* ii. 659, xv. 531: see below, No. 4.) Strabo describes Ephyra as distant 120 stadia from Elis, on the road to Lasion, and says that on its site or near it was built the town of Oenoë or Boeonoa. (Strab. viii. p. 338, where, for the corrupt κειμένη τῇ ἐπιθαλασσίωνα, we ought to read, with Meineke, κειμένη τῇ ἐπὶ Λασίωνα.) Stephanus also speaks of an Ephyra between Pylos and Elis, Pylos being the town at the junction of the Ladon and the Peneius. (Steph. B. *s. v.* Ἐφύρα.) From these two accounts there can be little doubt that the Ladon, the chief tributary of the Peneius, is the Selleeis, which Strabo describes as rising in Mount Pholoë. Curtius places Ephyra near the modern village of *Klisura* which lies on the Ladon, about 120 stadia from Elis, by way of Pylos. Leake supposes, with much less probability, that the Selleeis is the Peneius, and that Ephyra was the more ancient name of Elis. (Curtius, *Peloponnesos*, vol. i. p. 39, seq.; Leake, *Morea*, vol. i. pp. 6, 7.)

3. A village of Sicyonia, mentioned by Strabo, along with the river Selleeis, as situated near Sicyon. Ross conjectures that some ruins situated upon a hill about 20 minutes south-east of *Suli* represent the Sicyonian Ephyra. (Strab. viii. p. 338; Ross, *Reisen im Peloponnes*, p. 56.)

4. A town of Thesprotia in Epeirus, afterwards called CICHYRUS, according to Strabo. Thucydides describes it as situated in the district Elaeatis in Thesprotia, away from the sea; and it further appears from his account, compared with that of Strabo, that it stood not far from the discharge of the Acheron and the Acherusian lake into the port called *Glycys Limen*. (Thuc. i. 46; Strab. vii. p. 324.) It is placed by Leake and other modern travellers at a church, formerly a monastery of St. John, distant 3 or 4 miles direct from *Porto Fanári:* the church stands on remains of Hellenic walls of polygonal masonry.

The Thesprotian Ephyra appears to be the town mentioned in two passages of the Odyssey (i. 259, ii. 328). The Ephyri, mentioned in a passage of the Iliad (xiii. 301), were supposed by Pausanias to be the inhabitants of the Thesprotian town (Paus. ix. 36. § 3); but Strabo maintained that the poet referred to the Thessalian Ephyra (Strab. ix. p. 442). Some commentators even supposed the

Ephyra on the Selleeis (Hom. *Il.* ii. 659, xv. 531) to be the Thesprotian town, but Strabo expressly maintains that Homer alludes in these passages to the Eleian town. [No. 2.] (Strab. vii. p. 328; comp. viii. p. 338.) Pausanias represents Cichyrus as the capital of the ancient kings of Thesprotia, where Theseus and Peirithous were thrown into chains by Aïdoneus; and its celebrity in the most ancient times may also be inferred from a passage of Pindar (Paus. i. 17. § 4; Pind. *Nem.* vii. 55.) (Leake, *Northern Greece*, vol. iii. p. 7, vol. iv. pp. 53, 175.)

5. A town of Thessaly, afterwards called Cranon or Crannon. [CRANON.]

6. A town of the Agraei in Aetolia, of uncertain site. (Strab. viii. p. 338.)

7. An island in the Argolic gulf, supposed by Leake to be *Spétzia*. (Plin. iv. 12. s. 19; Leake, *Peloponnesiaca*, p. 294.)

EPICNEMI'DII LOCRI. [LOCRI.]

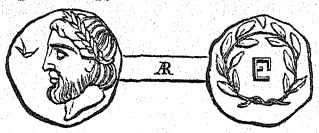
EPICTE'TUS PHRYGIA. [PHRYGIA.]

EPIDAMNUS. [DYRRHACHIUM.]

EPIDAURUS (Ἐπίδαυρος, Ptol. ii. 16. § 4, *Peut. Tab.*; Epidaurum, Plin. iii. 22, Geog. Rav.: *Ragusa-Vecchia;* Illyric, *Zaptal*), a maritime city of Illyricum, of which no notice occurs till the civil war between Pompeius and Caesar, when having declared in favour of the latter, it was besieged by M. Octavius. The opportune arrival of Vatinius relieved it. (Hirt. *B. Alex.* 44, 45.) Under the Romans it became a colony (Plin. *l. c.*); and, as in the cities of the same name in Peloponnesus, Asclepius was the principal deity of the Illyrian town. Constantianus, acting for Justinian in the Gothic War, occupied Epidaurus with his fleet. (Procop. *B. G.* i. 7; Le Beau, *Bas Empire*, vol. viii. p. 335.) It was afterwards destroyed, but there is some uncertainty as to the date of that event: it appears that the fugitives established themselves at Rausium, which in time was altered into *Ragusa*. (Const. Porph. *de Adm. Imp.* 29.) *Ragusa-Vecchia* no longer contains any remains of Epidaurus, and all memorials of its site are confined to inscriptions, fragments of walls, coins, and other things found by excavation. (Wilkinson, *Dalmatia and Montenegro*, vol. i. p. 373; Neigebaur, *Die Südslaven*, p. 82; Schafarik, *Slav. Alt.* vol. ii. p. 272; Engel, *Gesch. von Ragusa*, p. 44.) [E. B. J.]

EPIDAURUS (Ἐπίδαυρος: *Eth.* Ἐπιδαύριος), a town on the eastern coast of Peloponnesus, in the district called Argolis under the Romans. Throughout the flourishing period of Grecian history it was an independent state, possessing a small territory (Ἐπιδαυρία), bounded on the west by the Argeia, on the north by the Corinthia, on the south by the Troezenia, and on the east by the Saronic gulf. Epidaurus is situated on a small peninsula, which projects from a narrow plain, surrounded on the land side by mountains. In this plain the vine is chiefly cultivated, as it was in the time of Homer (ἀμπελόεντ' Ἐπίδαυρον, Hom. *Il.* ii. 561). North of the peninsula is a well protected harbour; south of it, an open roadstead. The original town was confined to the peninsula, which is 15 stadia in circumference. (Strab. viii. p. 374.) The town also extended upon the shore both north and south of the peninsula, and embraced the small promontory which forms the southern extremity of the northern harbour. Epidaurus is accurately described by Strabo (*l. c.*) as situated in a recess of the Saronic gulf, looking towards the NE., and shut in by high mountains.

Epidaurus possessed only a small territory; but various circumstances contributed to make it a place of importance at an early period. Of these the principal was its temple of Asclepius, situated at the distance of five miles from the city, of which we shall speak presently. Epidaurus lay near Aegina and the other islands in the Saronic gulf, and nearly opposite the harbours of Athens, from which it was distant only a six hours' sail. It was likewise nearly due east of Argos, from which there was a highway to Epidaurus, forming the chief line of communication between Argos and the Saronic gulf. Epidaurus was said by Aristotle to have been originally a Carian settlement. Hence it was called Epicarus. Strabo relates that its more ancient name was Epitaurus. (Strab. *l. c.*; Steph. B. *s. v.* Ἐπίδαυρος; Eustath. *ad Hom. Il.* ii. 561.) It was afterwards colonised by Ionians. According to Aristotle, it was colonised by Ionians from the Attic tetrapolis, in conjunction with the Heracleidae on their return to Peloponnesus (*ap. Strab. l. c.*); but it is more in accordance with the generally received legend to suppose that Epidaurus had been previously colonised by Ionians, and that these latter were expelled by the Dorian invaders. Indeed, this is the statement of Pausanias, who relates that at the time of the Dorian invasion Epidaurus was governed by Pityreus, a descendant of Ion, who surrendered the country without a contest to Deiphontes and the Argives, and himself retired to Athens with his citizens. (Paus. ii. 26. § 1, seq.) Deiphontes is represented as the son-in-law of Temenus, who obtained Argos as his share of the Dorian conquests, having married Hyrnetho, the daughter of Temenus. The misfortunes of Deiphontes afforded materials for the tragic poets. (*Dict. of Biogr.* art. *Deiphontes.*) Whatever truth there may be in these legends, the fact is certain that the Dorians became masters of Epidaurus, and continued throughout the historical period the ruling class in the state. At an early period Epidaurus appears to have been one of the chief commercial cities in the Peloponnesus. It colonised Aegina, which was for a long time subject to it. [AEGINA, p. 33, a.] It also colonised, near the coasts of Asia Minor, the islands of Cos, Calydnus, and Nisyrus. (Herod. vii. 99.) But as Aegina grew in importance, Epidaurus declined, and in the sixth century B. C. almost all the commerce of the mother-city had passed into the hands of the Aeginetans.



Epidaurus was originally governed by kings, the reputed descendants of Deiphontes; but, as in most of the other Grecian states, monarchy was succeeded by an oligarchy, which was in its turn superseded for a time by a tyranny. Amongst the tyrants of Epidaurus was Procles, whose daughter Melissa was married to Periander, tyrant of Corinth; and when Procles resented the murder of his daughter by Periander, the latter marched against his father-in-law and led him away into captivity after taking Epidaurus. (Herod. iii. 50—52.) After the abolition of the tyranny the government of Epidaurus again reverted to the oligarchy, who retained possession of it during the whole historical period. For this reason the Epidaurians were always firm allies of Sparta, and severed their connection with their mother-city, Argos, since the latter had adopted a democratical constitution. Of the exact form of the Epidaurian government we have no particulars. We only read of magistrates called Artynae, who were presidents of a council of 180 members. (Plut. *Quaest.*

Graec. 1.) The original inhabitants of the country were called Κονίποδες or *dusty-feet*, and cultivated the land for their Dorian masters in the city. (Plut. *l. c.*; Hesych. *s. v.* Κονίποδες; Müller, *Dor.* vol. ii. pp. 57, 151, transl.) In the Peloponnesian War (B. C. 419) the Argives made war upon the Epidaurians and attempted to take their city, but they were repulsed and obliged to retreat into their own territories. (Thuc. v. 53—57.) In the time of the Romans, Epidaurus was little more than the harbour of the temple of Asclepius. Pausanias gives only a brief account of its public buildings. He mentions a temple of Athena Cissaea on the acropolis; temples of Dionysus, Artemis, and Aphrodite, in the city; a sacred enclosure of Asclepius in the suburbs; and a temple of Hera on a promontory at the harbour, which promontory is doubtless the one forming the northern entrance to the harbour, and now called *C. Nikolao.* (Paus. ii. 29. § 1.) The name of Epidaurus is still preserved in the corrupted form of *Pidhavro*, which is the name of a neighbouring village. The foundations of the ancient walls may be traced in many parts along the cliffs of the peninsula. Here Dodwell noticed some fragments of columns, and a draped statue of a female figure, forming apparently the cover of a sarcophagus. The sea has encroached upon the shore on either side of the peninsula, and some remains of the outer city may still be seen under water.

The temple of Asclepius was situated at the distance of 5 miles west of Epidaurus on the road to Argos. (Liv. xlv. 28.) It was one of the most celebrated spots in Greece, and was frequented by patients from all parts of the Hellenic world for the cure of their diseases. The temple itself was only a small part of the sacred spot. Like the Altis at Olympia, and the Hierum of Poseidon at the Isthmus, there was a sacred enclosure, usually called the grove (ἄλσος) of Asclepius, and containing several public buildings. It stood in a small plain entirely surrounded by mountains. (Paus. ii. 27. § 1.) The sacred enclosure was "less than a mile in circumference ; it was confined on two sides by steep hills, and on the other two by a wall, which appears to have formed a right angle in the lowest and most level part of the valley, and is still traceable in several places." (Leake.) The recollection of the sacred character of this valley has been preserved down to the present name. It is still called *Hierón* (ἱερόν), or the Sanctuary ; and it is a curious circumstance that the village, through which the road leads to the Hieron, bears the name of *Koróni*, evidently derived from Coronis, the mother of Asclepius, and which it must have preserved from ancient times, although the name is not mentioned by ancient writers. Of the mountains surrounding the sanctuary the highest lies to the north : it is now called *Bolonidiá*, and bore in ancient times the name of TITTHIUM (Τίτθιον), because the child of Coronis, which was exposed upon this mountain, was here suckled by a goat. (Paus. ii. 26. § 4, 27. § 7.) Mount CYNORTIUM (Κυνόρτιον, Paus. ii. 27. § 7), on which stood a temple of Apollo Maleatas, is probably the hill in the south-east of the valley, above the theatre, on the way to Troezen. Pausanias also mentions a hill called CORYPHAEUM, on the summit of which was a temple of Artemis Coryphaea. It appears to have been the height in the south-west of the valley, since some believed that an olive tree on the ascent to the mountain was the boundary of the territory of Asine. (Paus. ii. 28. § 2.) The buildings in the sacred grove are described by Pausanias. He mentions first the temple of Asclepius, containing a chryselephantine statue of the god, the work of Thrasymedes of Paros, and half the size of the temple of Zeus at Olympia. The god sat upon a throne, holding a staff in one hand, and resting the other upon the head of a serpent ; a dog lay at his feet. On one side of the temple there were dormitories for those who came to consult the god. Near the temple was the Tholus, a circular building of white marble, built by Polycleitus of Argos, and containing pictures by Pausias. In the sacred enclosure there was a theatre, also built by Polycleitus, which Pausanias considered particularly worthy of attention. The other objects within the sacred enclosure specified by Pausanias were temples of Artemis, Aphrodite, and Themis, a stadium, a fountain covered with a roof, and several works erected by Antoninus Pius before he became emperor of Rome, of which the most important were the bath of Asclepius, a temple of the gods called Epidotae, a temple dedicated to Hygieia, Asclepius, and Apollo surnamed the Aegyptian, and a building beyond the sacred enclosure for the reception of the dying and of women in labour, because it was unlawful for any one to die or to be born within the sanctuary. (Paus. ii. 27.) A festival was celebrated in the sacred grove in honour of Asclepius with musical and gymnastic games : it took place every four years, nine days after the Isthmian games. (Schol. *ad Pind. Nem.* iii. 145 ; Plat. *Ion*, init. ; *Dict. of Ant.* art. *Asclepieia.*) The site of the sacred enclosure is now covered with ruins, which it is difficult for the most part to assign to any definite buildings. The position of the Tholus is clearly marked by its foundations, from which it appears that it was about 20 feet in diameter. In its neighbourhood are some foundations of a temple, which was probably the great temple of Asclepius. The ruins of the theatre are the most important. Leake observes that this theatre is in better preservation than any other temple in Greece, except that which exists near *Trametzús* in Epirus, not far from *Ioánnina.* " The orchestra was about 90 feet in length, and the entire theatre about 370 feet in diameter : 32 rows of seats still appear above ground in a lower division, which is separated by a diazoma from an upper, consisting of 20 seats. Twenty-four scalae, or flights of steps, diverging in equidistant radii from the bottom to the top, formed the communications with the seats. The theatre, when complete, was capable of containing 12,000 spectators." Of the stadium there remain the circular end and a part of the adjacent sides, with 15 rows of seats. Near it are the ruins of two cisterns and a bath.

When L. Aemilius Paulus visited Epidaurus in B. C. 167 after the conquest of Macedonia, the sanctuary was still rich in gifts presented by those who had recovered from diseases ; but it had been robbed of most of these votive offerings before the time of Livy. (Liv. xlv. 28.) It suffered most from the depredations of Sulla at the same time that he robbed the temples of Olympia and Delphi. (Diod. *Exc.* p. 614, ed. Wess.) It is described by Strabo as a place renowned for the cure of all diseases, always full of invalids, and containing votive tablets descriptive of the cures, as at Cos and Tricca. (Strab. viii. p. 374.)

Of the worship of Asclepius by the Epidaurians, of his sacred snakes, and of the introduction of his worship into Rome and other places, an account is given elsewhere. (*Dict. of Biogr.* art. *Aesculapius.*) (Dodwell, *Tour through Greece*, vol. ii. p. 255; Leake, *Morea*, vol. ii. p. 416; Boblaye, *Recherches*, &c. p. 54, seq.; Curtius, *Peloponnesos*, vol. ii. p. 416, seq.)

COIN OF EPIDAURUS.

EPIDAURUS LIME'RA (Ἐπίδαυρος ἡ Λιμηρά), a town on the eastern coast of Laconia, situated at the head of a spacious bay, formed by the promontory *Kremidhi*, on the north, and the promontory of *Monemvasia*, on the south. It was a colony from Epidaurus in Argolis, and is said to have been built in consequence of an intimation from Asclepius, when an Epidaurian ship touched here on its way to Cos. (Paus. iii. 23. § 6.) Its foundation probably belongs to the time when the whole of the eastern coast of Laconia, as far as the promontory Malea, acknowledged the supremacy of Argos. (Herod. i. 82.) The epithet Limera was considered by the best ancient critics to be given to the town on account of the excellence of its harbours, though other explanations were proposed of the word (λιμηράν .... ὡς ἀν λιμενηράν, Strab. viii. p. 368). Pausanias describes the town as situated on a height not far from the sea. He mentions among its public buildings temples of Aphrodite and Asclepius, a temple of Athena on the acropolis, and a temple of Zeus Soter in front of the harbour. (Paus. iii. 23. § 10.) The ruins of Epidaurus are situated at the spot now called *Old Monemvasia*. "The walls, both of the acropolis and town, are traceable all round; and in some places, particularly towards the sea, they remain to more than half their original height. The town formed a sort of semicircle on the southern side of the citadel. The towers are some of the smallest I have ever seen in Hellenic fortresses; the faces ten feet, the flanks twelve: the whole circumference of the place is less than three quarters of a mile. The town was divided into two separate parts by a wall; thus making, with the citadel, three interior divisions. On the acropolis there is a level space, which is separated from the remaining part of it by a little insulated rock, excavated for the foundations of a wall. I take this platform to have been the position of the temple of Athena. On the site of the lower town, towards the sea front, there are two terrace walls, one of which is a perfect specimen of the second order of Hellenic masonry. Upon these terraces may have stood the temples of Aphrodite and Asclepius. There are, likewise, some remains of a modern town within the ancient inclosure; namely, houses, churches, and a tower of the lower ages." The harbour of Zeus Soter has entirely disappeared, but this is not surprising, as it must have been artificial; but there are two harbours, one at either extremity of the bay, the northern called that of *Kremidhi*, and the southern that of *Monemvasia*.

South of Epidaurus Pausanias mentions a promontory (ἄκρα) extending into the sea, called MINOA. (Paus. iii. 23. § 11; Strab. *l. c.*) This promontory is now an island, connected with the mainland by a bridge of 14 small arches; it is not improbable that it was originally part of the mainland, and afterwards separated from it by art.

Epidaurus is rarely mentioned in history. Its territory was ravaged by the Athenians in the Peloponnesian War. (Thuc. iv. 56, vi. 105.) In the time of Strabo there appears to have been a fortress on the promontory Minoa, since he calls it a *φρούριον*. Pausanias mentions Epidaurus Limera as one of the Eleuthero-Laconian towns. (Paus. iii. 21. § 7.) Ptolemy enumerates, as separate places, Minoa, the harbour of Zeus Soter, and Epidaurus. In the middle ages the inhabitants of Epidaurus abandoned their ancient town, and built a new one on Minoa —which they now, for greater security, probably, converted for the first time into an island. To their new town, because it was accessible by only one way, they gave the name of *Monemvasia* or *Monembasia*, which was corrupted by the Franks into *Malvasia*. In the middle ages it was the most important Greek town in the Morea, and continued purely Greek in its language and customs for many centuries.

Leake remarked, about a third of a mile southward of the ruins of Epidaurus, near the sea, a deep pool of fresh water, surrounded with reeds, about 100 yards long and 30 broad, which he observes is probably the "lake of Ino, small and deep," mentioned by Pausanias (iii. 23. § 8) as 2 stadia from the altars of Asclepius, erected to commemorate the spot where the sacred serpent disappeared in the ground, after landing from the Epidaurian ship on its way to Cos. (Leake, *Morea*, vol. i. p. 210, seq.; Boblaye, *Recherches*, &c. p. 100; Curtius, *Peloponnesos*, vol. ii. p. 292, seq.)

EPIDE'LIUM (Ἐπιδήλιον), called DELIUM simply by Strabo, a small place on the eastern coast of Laconia, situated within the territories of Boeae, at the distance of 100 stadia from Cape Malea, and 200 from Epidaurus Limera. Epidelium, however, appears to have been little more than a sanctuary of Apollo, erected at the time of the Mithridatic War, when a wooden statue of the god floated to this spot from Delos, after the devastation of the island by Metrophanes, the general of Mithridates. Epidelium probably stood on Cape *Kamili*, where there are a few ancient remains. (Paus. iii. 23. § 2, seq.; Strab. viii. p. 368; Leake, *Morea*, vol. i. p. 214, seq.; Curtius, *Peloponnesos*, vol. ii. p. 298.)

EPIDII, in Britain, mentioned by Ptolemy as the people to the east of the Epidian promontory (*Mull of Cantyr*) = *Argyleshire*. [R. G. L.]

EPIDIUM, in Britain, mentioned by Ptolemy as a promontory=the *Mull of Cantyr*. [R. G. L.]

EPIEICIA (Ἐπιεικία), a fortress in Sicyonia, on the river Nemea. (Xen. *Hell.* iv. 2. § 14, iv. 4. § 13; Leake, *Morea*, vol. iii. p. 373, seq.)

EPIMARANI'TAE, an Arab tribe mentioned under this name, only by Pliny, perhaps identical with the Anariti of Ptolemy. (Plin. vi. 28; Ptol. vi. 7; Forster, *Arabia*, vol. i. pp. 62, 64, 75.) Pliny places them between the Canis flumen and the Eblitaei montes; Ptolemy, between the Melanes montes, or the promontory of the Asabi (*Cape Mussendom*), and the river Lar, at the SE. quarter of the peninsula. Mr. Forster holds the name, in both its aspects, to be an anagrammatic form of "Rhamanitae, or the sons of Raamah," deriving their origin and name from "Raamah the son of Cush" (*Gen.* x. 7; *Ezek.* xxvii. 22); and this identification is supported by the fact that the first place

mentioned by Ptolemy in the country of the Nariti, is Rhegma (Ῥεγμά), the precise form of Raamah in the LXX. He says that the tribe and province of Marah, and the town Ramah, are still found in this part of the Arabian peninsula. [G. W.]

EPIPHANEIA (Ἐπιφάνεια: *Eth.* Ἐπιφανεύς), a city of Syria, placed by Ptolemy in 69° 36′, 30° 26′, in the district of Cassiotis, in which also Antioch and Larissa were situated. The Itinerary of Antoninus places it 16 miles from Larissa, 32 from Emesa (Arethusa lying half way between it and the latter), and so 101 from Antioch of Syria. It was situated on the western bank of the Orontes, lower down the stream than Emesa (i. e. to the north), and is supposed to be identical with the ancient Hamath (2 *Sam.* viii. 9; 1 *Kings*, viii. 65; *Is.* x. 9), called also "Hamath the Great" (*Amos*, vi. 2). St. Jerome states that both Antioch and Epiphaneia were formerly named Hamath, and mentions that the first station on the road to Mesopotamia (qy. from Antioch) was in his day named Emmas, probably the modern *Hems* = Emesa. Eusebius (*Onomast. s. v.* Ἐμάθ) does not think it to be Epiphaneia near Emesa; but St. Jerome, in the same place, maintains their identity, and says that Epiphaneia was still called Hamath by the native Syrians. (Comp. *Onomast. s. v.* Aemath.) Aquila also rendered Ἐμάθ, τὴν Ἐπιφάνειαν τῆς Συρίας. (Theodoret. *Quaest.* 22 *in* 2 *King.*); and Theodoret, in common with St. Jerome, mentions both Epiphaneia and Emesa as Hamath, and says that the former was still so called. (*Comment. in Jerem.* xlvi. and iv.) Reland, however (*Palaest.* pp. 119, 120, 317), doubts the identity, and is disposed to place the Hamath of Scripture further south, and nearer to the confines of the land of Israel, as indeed Numb. xiii. 21 and other passages above referred to seem to require. This, however, would not disprove the assertion that Epiphaneia was formerly called Hamath, the proof of which rests on independent ground, and is greatly confirmed by the fact of its retaining that name among the natives in St. Jerome's time, as indeed it does to this day being still called *Hamah*, which is described by Irby and Mangles as "delightfully situated in a hollow, between and on the sides of two hills, near the west bank of the Orontes, but in itself presents nothing worthy of notice at this day." (*Travels*, p 244.) [G. W.]

COIN OF EPIPHANEIA IN SYRIA.

EPIPHANEIA (Ἐπιφάνεια: *Eth.* Ἐπιφανεύς), a city of Cilicia, which, Pliny says (v. 27), was originally called Oeniandos: he places it in the interior of Cilicia. Cicero, in his description of his Cilician campaign, says that he encamped at Epiphaneia, which was one day's journey from the Amanus. Cn. Pompeius (Appian, *Mithrid.* c. 96) settled some pirates here after he had broken up the robbers, and also at Adana and Mallus. The Table places Epiphaneia 30 M. P. east of Anazarbus [Anazarbus], and the same distance from Alexandria ad Issum. If Ptolemy's figures are right (v. 8), we may collect that he supposed Epiphaneia to be near the place which he calls the Amanicae Pylae. It is mentioned by Ammianus (xxii. 11), but he gives no information as to its position.

2. Stephanus (*s. v.*) mentions an Epiphaneia in Bithynia. [G. L.]

EPIRUS. [Epeirus.]

EPITA'LIUM (Ἐπιτάλιον: *Eth.* Ἐπιταλιεύς), a town of Triphylia in Elis, near the coast and a little south of the river Alpheius. It was identified with the Homeric Thryon (Θρύον) or Thryoessa (Θρυόεσσα), a town in the dominions of Nestor, which the poet describes as a place upon a lofty hill near the ford of the river Alpheius (Hom. *Il.* ii. 592, xi. 710, *Hymn. in Apoll.* 423; Strab. viii. p. 349.) Epitalium was an important military post, because it commanded the ford of the Alpheius and the road leading along the coast. Like the other dependent townships of Triphylia, it revolted from Elis when Agis, the Spartan king, invaded the country in B. C. 401; and when Agis returned home, after ravaging Elis, he left a garrison in Epitalium. (Xen. *Hell.* iii. §§ 25, 29.) The town was taken by Philip in the Social War, B. C. 218. (Polyb. iv. 80; Steph. B. *s. v.* Ἐπιτάλιον.) It appears to have occupied the height of *Agulenitza*. (Leake, *Morea*, vol. ii. p. 198, seq.; Boblaye, *Recherches*, &c. p. 133; Curtius, *Peloponnesos*, vol. ii. p. 88.)

EPOISSUM, in North Gallia, is placed by the Antonine Itin. on the road from Durocortorum (*Reims*) to Treveri Civitas (*Trier*). It is 22 Gallic leagues from Durocortorum to Vungus Vicus (*Vonc*), and 22 more to Epoissum (*Iptsch* or *Ivois*), now commonly called *Carignan*. *Iptsch* is the German name, which comes from Evosium or Ivosium, the name used in the middle ages. In the Notitia Imp. the place is called Epusum, and was a station for troops. [G. L.]

EPOMEUS MONS. [Aenaria.]

E'PORA (*Montoro*), a city of Hispania Baetica, on the Baetis, 28 M. P. east of Corduba, on the road to Castulo. (*Itin. Ant.* p. 403; Caro, *Ant. Hisp.* iii. c. 22; Inscr. ap. Gruter, p. 105, No. 2; Ukert, vol. ii. pt. 1, p. 379.) [P. S.]

EPORE'DIA (Ἐπορεδία: *Ivrea*), an important town of Cisalpine Gaul, situated at the foot of the Alps, on the river Duria, just at the entrance of the great valley of the Salassi, now called the *Val d'Aosta*. It was a Roman colony, founded, as we learn from Velleius, as early as B. C. 100 for the purpose of keeping the Salassi in check, and protecting the plains from their incursions; but it was not till that people had been finally subdued under Augustus that it was able to rise to prosperity. (Vell. Pat. i. 15; Strab. iv. p. 205.) Neither Pliny nor Ptolemy gives it the title of a colony, but it certainly was a place of wealth and importance, and is mentioned by Tacitus among the most considerable provincial towns of the region north of the Padus ("firmissima Transpadanae regionis municipia," Tac. *Hist.* i. 70). Pliny tells us that it was founded according to the directions of the Sibylline books, and that its name was derived from a Gaulish word signifying "a tamer of horses." Velleius is certainly in error in placing it among the Vagienni; Ptolemy correctly assigns it to the Salassi. (Plin. iii. 17. s. 21; Ptol. iii. 1. § 34.) We learn from the Itineraries that it was distant 33 miles from Vercellae. (*Itin. Ant.* pp. 345, 347.) The strength of its position at the entrance of the *Val d'Aosta*, commanding two of

the most frequented passes of the Alps, must always have given it importance in a military point of view. Thus we find that it was for some time occupied by D. Brutus after the battle of Mutina, B. C. 43, before he crossed the Alps with his army. (Cic. *ad Fam.* xi. 20, 23.) It was still a considerable town, and occupied as a military station by a body of troops, as late as the close of the 4th century. (*Not. Dign.* ii. p. 121.) The modern city of *Ivrea* is a considerable place, with near 8000 inhabitants: it contains a fine Roman sarcophagus, and some other ancient remains. [E. H. B.]

EQUA'BONA (*Coyna*), a town of Lusitania, on the left bank of the estuary of the Tagus, 12 M. P. from Olisipo (*Lisbon*), on the road to Emerita. (*Itin. Ant.* p. 416.) [P. S.]

EQUUS TUTICUS or EQUOTUTICUS (Τούτικον, Ptol. iii. 1. § 67: *S. Eleuterio*), a town of the Samnites in the territory of the Hirpini, situated on the Via Appia Trajana, 21 M. P. from Beneventum. Its name is not mentioned as an ancient Samnite city, and the first notice of it that occurs is an incidental one in Cicero (*ad Att.* vi. 1. § 1), from which we may infer that it was on the road to Brundusium. This is confirmed by the Itineraries, in all of which it appears under slight modifications of name (Equus Tuticus, *Itin. Ant.* pp. 103, 112; Equus Magnus, *Itin. Marit.* p. 610; Aequus Tuticus, *Tab. Peut.*). Great discrepancy has arisen concerning its position, partly from a confusion between the different branches of the Via Appia, which separated at Beneventum [VIA APPIA], and partly from the belief, originating with an old Scholiast on the passage, that Equotuticus (as he writes the name) was the place described by Horace (*Sat.* i. 5. 87) as

"Oppidulum quod versu dicere non est."

But it is quite clear that the poet followed a different line of route; and Equus Tuticus is placed by the Itineraries on the road from Beneventum to Aecae (*Troja*), 21 M. P. from the former city. The line of the ancient road may be traced distinctly (by the assistance of bridges, milestones, &c.), from *Benevento*, by *Buonalbergo* and *Casalbore*, to a place called *S. Eleuterio*, about 8 miles N. of *Ariano*, and 2 from *Castel Franco*, where inscriptions and other ancient remains have been found; among others, a Roman milestone which wants the numerals, but the distance agrees exactly with the 21 miles of the Itinerary from Beneventum. The intermediate station of Forum Novum (Forno Novo, *Itin. Hier.* p. 610), placed by the Jerusalem Itinerary 10 miles from Beneventum, and 11 from Equus Tuticus, must have been at *Buonalbergo*. (Mommsen, *Topografia degli Irpini*, in *Bullett. d. Inst.* 1847, p. 170, 1848, pp. 7, 8.) It is probable that Equus Tuticus never enjoyed municipal rank: its name is not found in Pliny among the towns of the Hirpini, and at a later period it was certainly annexed to the territory of Beneventum. (Mommsen, *l. c.* p. 170.) This explains the expression of the Itinerary that it was on the confines of Campania ("Equotutico, ubi Campania limitem habet," *Itin. Ant.* p. 111. See the art. CAMPANIA, p. 494). If the Tuticum of Ptolemy be the same with Equus Tuticus, he has altogether misplaced it. [E. H. B.]

ERACTUM (Ἤρακτον, Ptol. iii. 5. § 30), a town on the frontier of Dacia between the Tyras and the mountains of the Bastarnae, the position of which cannot be made out. [E. B. J.]

ERAE (Ἔραι), a place on the coast of Ionia, mentioned by Thucydides (viii. 19), in the vicinity of Lebedus and Teos. It was fortified strong enough to keep out the Athenians, who attacked it. (Thuc. viii. 20.) Strabo (p. 644) mentions Erae as a small town belonging to Teos; but though the reading Ἔραι has been received into some texts of Strabo, some of the MSS. are said to have Γέραι, and Casaubon has kept that reading in his text. (See Groskurd, *Transl. Strab.* vol. iii. p. 23, note.) There seems some confusion about the name Gerae, Gerraidae (Strabo), and the harbour Geraesticus (Liv. xxxvii. 27), on which Groskurd's note may be consulted. Palmerius conjectured that the name Erae, which he takes to be the true name of the place, is corrupted into Agra in Scylax (p. 37). Chandler (*Asia Minor*, c. 26) supposed the modern site of Gerae to be *Segigeck* (as he writes it), 8 hours from Smyrna. There is a view of the place in the "Ionian Antiquities." Chandler describes some remains of antiquity there. Some of the inscriptions found at this place were published by Chishull and some by Chandler. *Segigeck* is at the head of a fine bay. There is a good note on Gerae in the French edition of Chandler's Travels (vol. i. p. 420).

Hamilton (*Researches*, &c. vol. ii. p. 11) describes *Sighajik* as a snug harbour, and he seems to conclude correctly that it is Livy's Geraesticus, which Livy describes as the port of Teos "qui ab tergo urbis est," and thus distinguishes it from the harbour, "qui ante urbem est." (Liv. xxxvii. 29.) The consideration of the inscriptions found at *Sighajik* belongs to the article TEOS. If we suppose Gerae to be the true reading in Strabo, we may identify Gerae and Geraesticus; but there is a difficulty about Erae in Thucydides, for his text does not enable us to determine exactly where it is, though it seems to have been not far from Teos. Proper names are not always right in the text of Thucydides, and this is probably one example. [G. L.]

ERANA (ἡ Ἔρανα), a town in Messenia, mentioned by Strabo as lying upon the road between Cyparissia and Pylos. It was, probably, near the promontory Cyparissium. According to Strabo, it was erroneously identified by some with the Homeric Arene. (Strab. viii. pp. 348, 361; Leake, *Morea*, vol. i. p. 426, seq.)

ERANA, a place in Cilicia. Cicero (*ad Fam.* xv. 4), after leaving Epiphaneia [EPIPHANEIA], ascended the Amanus, and he took Erana, a place not of the character of a village, but of a city, and the capital of the nation. He also took Sepyra and Commoris. The sites of these places are unknown, but they were in eastern Cilicia, on some part of Mount Amanus. [G. L.]

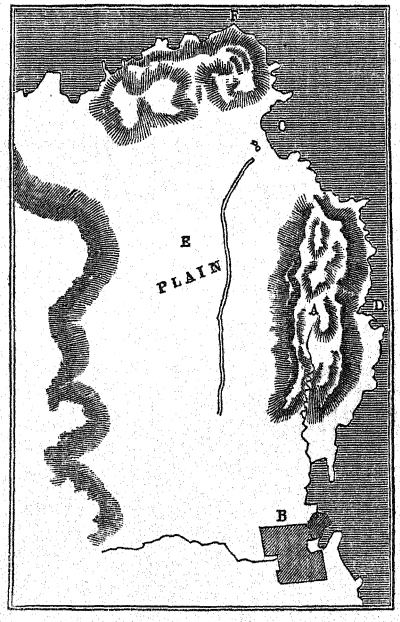
ERANNABOAS (Ἐραννάβοας, Arrian, *Ind.* 4; Plin. vi. 18. s. 22), a river which flowed into the Ganges at Palimbothra (*Patna*). There has been much discussion as to what river is indicated by this name. It seems, however, most likely that it is the same as the Sonus (*Soane*), though Arrian and Pliny both speak of two rivers which they call respectively Erannoboas and Sonus. The name is derived from the Sanscrit *Hyranyavâhas*, the poetical title of the Sonus. (See Ritter, *Erdkunde*, v. p. 508; Rennell, *Mem. in Hindostan*, p. 50.) It is clear, from the context, that Strabo knew of the existence of this river (xv. p. 702), though he does not mention its name. [V.]

ERASI'NUS (Ἐρασῖνος). 1. A river of the Argeia. [ARGOS, p. 201, a.]

2. A river of ATTICA. [ATTICA, p. 323, b.]

3. Another name of the Buraicus in Achaia. [ACHAIA, p. 13, b.]

ERAVISCI. [ARAVISCI.]



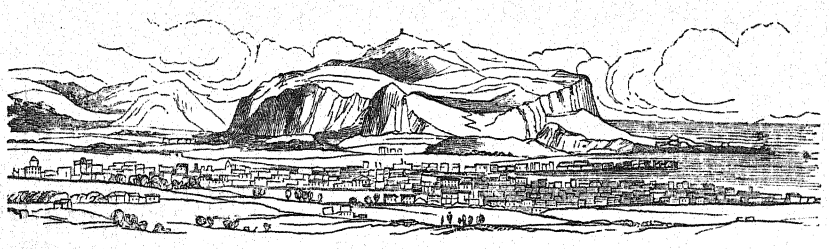
ERBESSUS or HERBESSUS (Ἔρβησσός, Pol., Steph. B., Ptol.; Ἑρβησσός, Diod.; Herbessus, Liv., Cic., Plin.: *Eth.* Ἑρβησσῖνος, Philist. ap. Steph. B., Herbessensis), the name of two cities in Sicily. It has been frequently attempted to limit the name of Erbessus to the one, and Herbessus to the other; but this distinction cannot be maintained, and the aspirated or unaspirated forms appear to be used indiscriminately.

1. A town or fortress not far from Agrigentum, which was made use of by the Romans during the siege of that city, B. C. 262, as a place of deposit for their provisions and military stores. (Pol. i. 18.) At a later period of the siege, Hanno the Carthaginian general made himself master of the place, and was thus enabled to reduce the Romans to great difficulties by cutting off their supplies. (Pol. *l. c.*) But after the fall of Agrigentum the Carthaginians were no longer able to maintain possession of Erbessus, which was abandoned by the inhabitants, probably from fear of the Roman vengeance. (Diod. xxiii. 9. p. 503.) These are the only notices which appear to refer to the town in question; it was probably a place of inferior importance, and a mere dependency on Agrigentum. Its exact site cannot be determined; but Fazello is probably right, in regard to its general position, in placing it near the upper course of the Halycus.

2. A city in the E. of Sicily, on the confines of the territories of Leontini and Syracuse. It was evidently a place of more importance than the preceding one, and may therefore be fairly assumed to be the place meant where no further designation is added. It is first mentioned in B. C. 404 as a city of the Siculi, which had furnished assistance to the Carthaginian army during the siege of Syracuse, and was in consequence one of the first places against which Dionysius turned his arms after the conclusion of peace with Carthage. (Diod. xiv. 7.) But the sudden defection of his own troops recalled him in haste to Syracuse; and some years after we find Erbessus still maintaining its independence, and concluding a treaty with Dionysius. (Id. *ib.* 78.) No further notice of it is found till the time of Agathocles, when it was occupied by that tyrant with a garrison, which in B. C. 309 was expelled by the citizens with the assistance of the Agrigentines and their allies under Xenodicus. (Id. xx. 31.) In the Second Punic War Erbessus is again mentioned; it was the place to which Hippocrates and Epicydes fled for refuge from Leontini, and from whence they succeeded in exciting the defection first of the Syracusan force sent against them, and ultimately of the city itself. (Liv. xxiv. 30, 31; Paus. vi. 12. § 4.) Erbessus on this occasion espoused the Carthaginian alliance, but was soon recovered by Marcellus. (Id. 35.) We have no account of its fortunes under the Roman rule, but it was probably a mere dependency of Syracuse, as the name is not once mentioned by Cicero. The Herbessenses, however, reappear in Pliny as an independent community; both he and Ptolemy place them in the interior of the island, but afford no further clue to the position. (Plin. iii. 8. s. 14; Ptol. iii. 4. § 13; Philist. ap. Steph. B. *s. v.*)

From the passages of Diodorus and Livy it is clear that Erbessus was situated inland from Syracuse, and not very remote from Leontini: hence the site suggested by Fazello at a place called *Pantalica*, opposite to *Sortino*, about 16 mile W. of Syracuse, is at least a plausible conjecture. The site in question is now wholly desolate, and retains no ruins, but presents a curious assemblage of subterranean dwellings excavated in the cliffs of solid but soft calcareous rock, similar to those in the *Val d'Ispica* near *Modica*. The date of these excavations is very uncertain, though they are generally regarded as of great antiquity. (Fazell. *de Reb. Sic.* x. 2. p. 454; Amic. *Lex. Top. Sic.* vol. ii. p. 176.) [E. H. B.]

ERCTA or ERCTE (ἡ Ἐρκτή, Pol.; Ἑρκτή, Diod.), a mountain on the N. coast of Sicily, in the immediate neighbourhood of Panormus, now called *Monte Pellegrino*. It is a remarkable isolated mountain mass, rising to the height of 1950 feet above the sea, which washes its foot on the E. and N., while on the other two sides it rises abruptly from the plain near Panormus, a broad strip of which separates it entirely from the mountains on the W. of that city. It thus constitutes a kind of natural fortress, being bounded on three sides by lofty perpendicular cliffs, the only approach being on the S. side, facing the town of *Palermo*, where a steep zigzag road has been constructed in modern times, leading up to the convent of *Sta. Rosalia*, near the summit of the mountain, a shrine now visited by crowds of pilgrims, whence the name of *Monte Pellegrino*. No mention is found of the locality before the time of Pyrrhus, when it was occupied by the Carthaginians as a fortress or fortified post, but was taken by assault by the Epeirot king. (Diod. xxii. 10, Exc. H. p. 498.) Its chief celebrity, however, dates from the First Punic War, towards the



PLAN OF MOUNT ERCTA.

A. Mountain of Ercta, now *Monte Pellegrino*.
B. Modern city of *Palermo*, on the site of Panormus.
C. Bay of *Mondello*.
D. Bay of *Sta. Maria*.
E. Plain, extending from *Palermo* to *Mondello*.
F. *Capo di Gallo*.

close of which Hamilcar Barca, finding himself unable to keep the field against the Romans, suddenly established himself with his whole army in this mountain fortress, where he maintained himself for nearly three years, in spite of all the efforts of the Romans to dislodge him. A Roman camp was established about 5 stadia from Panormus, for the purpose of covering that city, which was scarcely more than a mile and a half from the foot of the mountain. Hamilcar on his part fortified the only available approach, and skirmishes took place almost daily between the two armies. Polybius has left us a detailed and accurate account of the peculiar character of the locality; but he overrates its extent when he reckons the summit of the mountain as not less than 100 stadia in circuit. The upper part of it, he tells us, was capable of cultivation, and possessed abundance of fresh water; while it commanded a small but secure port, which enabled Hamilcar to carry on his maritime expeditions, with which he ravaged the coasts both of Sicily and Italy. (Pol. i. 56, 57; Diod. xxiii. 20, Exc. H. p. 506.) The determination of this port is the only topographical difficulty connected with Ercte. Arnold (*Hist. of Rome*, vol. ii. p. 613) supposes it to have been the small bay of *Mondello*, between *Monte Pellegrino* and *Capo di Gallo*; but this could hardly have been effectually commanded from Ercte, and it is more probable that the small cove of *Sta. Maria*, on the E. side of the mountain, is the one meant. Polybius speaks of the mountain being accessible at three points only; but two of these must have been mere paths, very steep and difficult. Besides the approach from *Palermo*, there are in fact only two breaks in the line of cliffs, one of which leads directly down to the cove of *Sta. Maria*. The accompanying plan (copied from Capt. Smyth's survey), and outline view, will give a clear idea of the nature of this mountain fortress. (Cluver. *Sicil.* p. 277; Amic. *ad Fazell.* vii. 6. p. 318; Swinburne's *Travels*, vol. ii. p. 209, &c.)

Mannert has erroneously transferred the site of Ercte to the headland now called *Capo S. Vito*, nearer to Eryx and Drepana than to Panormus; but Polybius's testimony to its close proximity to the latter town is perfectly distinct. [E. H. B.]

VIEW OF MOUNT ERCTA.

ERDINI, in Ireland, mentioned by Ptolemy as occupants of the western side of Ireland next to the Venniani (*Donegal*), and north of the *Nagnat* (Con*naught*) = the parts about Loch *Erne* = *Fermanagh*. [R. G. L.]

EREBINTHODES, an island in the Propontis, which Pliny mentions with Elaea and other unknown islets. [ELAEA.] [G. L.]

E'RESUS or ERESSUS (Ἔρεσος: *Eth.* Ἐρέσιος, Ἐρεσιεύς), so called from Eresus the son of Macar. (Steph. B. *s. v.*) Eressus, as it is in the text of Strabo (p. 618), was a city of Lesbos, situated on a hill, and reaching down to the sea. From Eressus to Cape Sigrium is 28 stadia, as the MSS. have it, which Casaubon (ed. Strab.) has changed to 18. It was on the west side of the island, and its ruins are said to be at some little distance from a place now called *Eresso*, which is situated on a hill. Eressus joined Mytilene and other towns in Lesbos in the revolt from the Athenians during the Peloponnesian War (B. C. 428); but it was compelled to surrender to Paches, the Athenian commander, shortly after. (Thuc. iii. 25, 35.) There was a fresh revolt from Athens (B. C. 412), and a fresh subjugation. (Thuc. viii. 23.) It revolted a third time shortly after (Thuc. viii. 100), and was besieged by Thrasybulus with an Athenian force, but he was obliged to give up the siege to follow the Peloponnesians to the Hellespont. In B. C. 392 Thrasybulus lost many ships in a storm off Eresus, but he recovered the town, with other places in Lesbos, for the Athenians. (Diod. xiv. 94.) Eresus is mentioned by Pliny (v. 31) as one of the existing cities of Lesbos.

Eresus was the birthplace of Tyrtamus, to whom his master Aristotle gave the name of Theophrastus. Phanias, another of Aristotle's pupils, was also a native of Eresus. According to the poet Archestratus, in his Gastronomia, quoted by Athenaeus (iii. p. 111), if ever the gods eat flour, they send Hermes to buy it at Eresus.

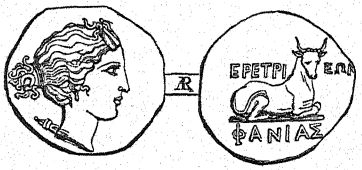
The name of the town on the coins is said to be always ΕΡΕΣΙΩΝ, with one Σ. [G. L.]

ERE'TRIA. 1. (Ἐρέτρια: *Eth.* Ἐρετιεύς, fem. Ἐρετρίς, Ἐρετριάς: *Adj.* Ἐρετρικός, Ἐρετριακός), one of the most ancient, and next to Chalcis the most powerful city in Euboea, was situated upon the western coast of the island, a little south of Chalcis, and at the south-western extremity of the extensive and fertile plain of Lelantum. The Eretrians are represented as Ionians (Herod. viii. 46), and were supposed to have come from Eretria in Attica. (Strab. viii. p. 447; respecting the Attic Eretria, see ATHENAE, p. 294.) It seems, however, that the population was not purely Ionic, and, accordingly, some writers related that it had been colonised from the Triphylian Macistus in Elis. (Strab. *l. c.*) Strabo relates that it was formerly called Melaneis and Arotria.

At an early period Eretria was one of the chief maritime states in Greece, and attained a high degree of prosperity and power. Andros, Tenos, and Ceos, as well as other islands, were at one time subject to Eretria. (Strab. viii. p. 448.) According to some accounts, they took part in the colonisation of Cromae [CROMAE, p. 716], and they founded some colonies upon the peninsula of Chalcidice. Eretria is mentioned by Homer. (*Il.* ii. 537.) The mili-

tary strength of the state was attested by an inscription, preserved in the temple of the Amarynthian Artemis, about a mile from the city, recording that in the procession to that temple the Eretrians had been accustomed to march with 3000 hoplites, 600 horsemen, and 60 chariots. (Strab. *l. c.*)

Eretria and Chalcis were early engaged in war with each other. These wars seem to have been occasioned by disputes respecting the division of the plain of Lelantum, which lay between the two cities. (Strab. *l. c.*) In one of these early wars some of the most powerful states of Greece, such as Miletus and Samos, took part. (Thuc. i. 15; Herod. v. 99; Spanheim, ad Callim. *Del.* 289.) In gratitude for the assistance which the Eretrians had received on this occasion from Miletus, they sent five ships to the Athenian fleet which sailed to support Miletus and the other Ionic cities in their revolt from Persia, B. C. 500. (Herod. *l. c.*) But this step caused their ruin; for, in B. C. 490, a Persian force, under Datis and Artaphernes, sent to punish the Athenians and Eretrians, laid siege to Eretria, which was betrayed to the Persians after they had invested the place for six days. The town was razed to the ground, and the inhabitants carried away to Persia; but their lives were spared by Darius, who allowed them to settle in the Cissian territory. (Herod. vi. 125.) The old town continued in ruins, but a new town was rebuilt a little more to the south, which soon became a place of considerable importance. In B. C. 411, the Athenians were defeated by the Spartans in a sea-fight off the harbour of Eretria; and those of the Athenians who took refuge in Eretria, as a city in alliance with them, were put to death by the Eretrians, who therefore joined the rest of the Euboeans in their revolt from Athens. (Thuc. viii. 95.)



After the Peloponnesian War we find Eretria in the hands of tyrants. One of these, named Themison, assisted the exiles of Oropus in recovering possession of their native city from the Athenians in B. C. 366. (Diod. xv. 76; comp. Dem. *de Cor.* p. 256; Xen. *Hell.* vii. 4. § 1.) Themison appears to have been succeeded in the tyranny by Plutarchus, who applied to the Athenians in B. C. 354 for aid against his rival, Callias of Chalcis, who had allied himself with Philip of Macedon. The Athenians sent a force to his assistance under the command of Phocion, who defeated Callias at Tamynae; but Phocion, suspecting Plutarchus of treachery, expelled him from Eretria. [See *Dict. of Biogr.* vol. i. p. 429.] Popular government was then established; but shortly afterwards Philip sent a force, which destroyed Porthmus, the harbour of Eretria, and made Cleitarchus tyrant of the city. Cleitarchus governed the city in Philip's interests till B. C. 341, when Cleitarchus was expelled by Phocion, who had been sent into Euboea on the proposition of Demosthenes for the purpose of putting down the Macedonian interest in the island. [*Dict. of Biogr.* vol. i. p. 784.] Eretria was subsequently subject to Macedonia; but in the war with Philip V. it was taken by the combined fleets of the Romans, Attalus, and Rhodians, upon which occasion a great number of paintings, statues, and other works of art fell into the hands of the victors. (Liv. xxxii. 16.) After the battle of Cynoscephalae, Eretria was declared free by the Roman senate. (Polyb. xviii. 30.)

Eretria was the seat of a celebrated school of philosophy founded by Menedemus, a native of this city, and a disciple of Plato. [*Dict. of Biogr.* vol. ii. p. 1037.] The philosophers of this school were called Eretrici (Ἐρετρικοί, Strab. x. p. 448; Diog. Laërt. i. 17, ii. 126; Athen. ii. p. 55, d.; Cic. *Acad.* ii. 42, *de Orat.* iii. 17, *Tusc.* v. 39.) The tragic poet Achaeus, a contemporary of Aeschylus, was a native of Eretria. It appears from the comic poet Sopater that Eretria was celebrated for the excellence of its flour (ap. Athen. iv. p. 160).

Strabo says that Old Eretria was opposite Oropus, and the passage across the strait 60 stadia; and that New Eretria was opposite Delphinium, and the passage across 40 stadia (ix. p. 403). Thucydides makes the passage from Oropus to New Eretria 60 stadia (viii. 95). New Eretria stood at *Kastri*, and Old Eretria in the neighbourhood of *Vathý*. There are considerable remains of New Eretria. "The entire circuit of the ruined walls and towers of the Acropolis still subsist on a rocky height, which is separated from the shore by a marshy plain. At the foot of the hill are remains of the theatre, and in the plain a large portion of the town walls, with many foundations of buildings in the inclosed place. The situation was defended to the west by a river, and on the opposite side by a marsh." (Leake, *Northern Greece*, vol. ii. pp. 443, 445.)

The territory of Eretria extended from sea to sea. Between Old Eretria and New Eretria was AMARYNTHUS; south of Old Eretria, TAMYNAE; and further south, PORTHMUS. In the interior were DYSTUS and OECHALIA.

The annexed coin represents on the obverse the head of Artemis, who was worshipped in the neighbouring town of Amarynthus: the bull on the reverse probably has reference to the brazen bull which the Eretrians dedicated at Olympia. (Paus. v. 27. § 9; Eckhel, vol. ii. p. 324.)

COIN OF ERETRIA IN EUBOEA

2. A town of Thessaly, in the district Phthiotis, near Pharsalus. It was here that Quintius Flamininus halted at the end of the first day's march from Pherae towards Scotussa, in B.C. 197. Leake places it at the village of *Tjanglí*, where he found the ruined walls of an ancient city. "A long and narrow table-summit formed the citadel, of which the lower courses of the walls still exist in their whole circuit. The town walls are still better preserved, and are extant in some parts on the eastern side to the height of 18 or 20 feet. Here also are two door-ways still perfect." (Strab. ix. p. 434, x. p. 447; Polyb. xviii. 3, Liv. xxxiii. 6, xxxii. 13; Steph. B. *s. v.* Ἐρέτρια; Leake, *Northern Greece*, vol. iv. p. 466.)

ERE'TUM (Ἠρητόν: *Eth.* Ἠρητῖνος: *Grotta Marozza*), a town of the Sabines, situated on the Via Salaria, at its junction with the Via Nomentana, a short distance from the Tiber, and about 18 miles from Rome. From the mention of its name by Virgil among the Sabine cities which joined in the war against Aeneas (*Aen.* vii. 711), we may presume that it was considered as an ancient town, and one of some importance in early times; but it never bears

any prominent part in history, though from its position near the frontiers of the Sabine and Roman territories, and on the line by which the former people must advance upon Rome, it was the scene of repeated conflicts between the two nations. The first of these occurred in the reign of Tullus Hostilius, during the war of that monarch with the Sabines (Dionys. iii. 32); his successor Tarquinius Priscus also defeated the Etruscans, who had taken advantage of the friendly disposition of the Sabines to advance through their territory, at Eretum (Id. iii. 59, iv. 3); and Tarquinius Superbus gained a decisive victory over the Sabines in the same neighbourhood. (Id. iv. 51.) Under the Roman republic also we find two victories recorded over the Sabines at the same place, the one by the consuls Postumius and Menenius in B. C. 503, the other by C. Nautius in B. C. 458. (Id. v. 46; Liv. iii. 29.) During the decemvirate also the Sabines established their headquarters at Eretum, from whence they ravaged the Roman territory. (Liv. iii. 38; Dionys. xi. 3.) It is again mentioned in the Second Punic War as the place from whence Hannibal diverged to attack the shrine of Feronia in Etruria, during his advance on Rome (or, according to others, on his retreat) by the Salarian Way. (Liv. xxvi. 11.) But though its position thus brings it frequently into notice, it is clear that it was, under the Roman dominion at least, a very inconsiderable place. Strabo says it was little more than a village, and Valerius Maximus terms it "vicus Sabinae regionis." Pliny does not even mention it among the towns of the Sabines, nor is its name found in the Liber Coloniarum: hence it is almost certain that it did not enjoy municipal privileges, and was dependent on one of the neighbouring towns, probably Nomentum. But its name is still found in the Itineraries as a station on the Salarian Way, and it must therefore have continued to exist as late as the fourth century. From this time all trace of it disappears. (Strab. v. p. 228; Val. Max. ii. 4. § 5; *Itin. Ant.* p. 306; *Tab. Peut.*) The position of Eretum has been a subject of much dispute, though the data furnished by ancient authorities are sufficiently precise. The Itineraries place it 18 miles from Rome; and Dionysius in one passage (xi. 3) calls it 140 stadia (17½ miles) from the city, though in another place (iii. 32) he gives the same distance at only 107 stadia. Strabo adds that it was situated at the point of junction of the Via Salaria and Via Nomentana; a circumstance which could leave no doubt as to its position, but that there is some difficulty in tracing the exact course of the Via Salaria, which appears to have undergone repeated changes in ancient times. [VIA SALARIA.] Hence Chaupy was led to fix the site of Eretum at a place called *Rònane*, where there were some Roman ruins near a bridge called the *Ponte di Casa Cotta*, but this spot is not less than 21 miles from Rome; on the other hand, *Monte Rotondo*, the site chosen by Cluverius, is little more than 15 miles from Rome, and could never by possibility have been on the Via Nomentana. The hill now known as *Grotta Marozza*, on the left hand of the Via Nomentana, rather more than 3 miles beyond Nomentum, has therefore decidedly the best claim: it is, according to Nibby, by actual measurement 17½ miles from Rome, and it is probable that the ancient Via Salaria did not follow the same line with the modern road of that name, but quitted the valley of the Tiber near *Monte Rotondo*, and joined the Via Nomentana near the spot above indicated. There are no ruins at *Grotta Marozza*, but the site is described as well-adapted for that of a town of small extent. (Cluver. *Ital.* p. 667; Chaupy, *Maison d'Horace*, vol. iii. pp. 85—92; Nibby, *Dintorni di Roma*, vol. ii. pp. 143—147; Gell, *Top. of Rome*, p. 202.) At a short distance from this hill are some sulphureous springs now known as the *Bagni di Grotta Marozza*, which are in all probability those anciently known as the AQUAE LABANAE, the Λαβανὰ ὕδατα of Strabo, who describes them as situated in the neighbourhood of Eretum. (Strab. v. p. 238.) [E. H. B.]

ERE'ZII, are placed by Pliny (v. 30) in Mysia, and thus mentioned: "Apolloniatae a Rhyndaco amne, Erezii, Miletopolitae;" from which we conclude that the place was about Apollonia and Miletopolis. It is remarked (Plin. *H. N.* ed. Hard. *Notae*, &c. ad lib. v. no. lxxxiv.) that all the MSS. of Pliny have Eresii. The correction seems probable enough, for the reasons there given. The Table has a name Argesis on the road from Pergamum to Cyzicus, and 35 from Pergamum. Cramer (*Asia Minor*, vol. i. p. 58) considers this the same place as the Argiza of Hierocles (*Synecd.* p. 663), which seems probable. He would also identify it with Pliny's Erezii, which may be true, but is not quite so certain. [G. L.]

ERGA. [LERGETES.]

ERGASTE'RIA, a place in Mysia, on the road from Pergamum to Cyzicus, and 440 stadia from Pergamum. "Galen, in proceeding to Ergasteria from Pergamum, remarked a great quantity of metallic substance, which he calls molybdaena, Galen, *de Medicam. Simp.* ix. 22." (Leake, *Asia Minor*, p. 271.) [G. L.]

ERGAVI'CA. [CELTIBERIA.]

ERGE'TIUM (Ἐργέτιον: *Eth.* Ἐργετῖνος), a city of Sicily, mentioned by Stephanus of Byzantium (*s. v.*) on the authority of Philistus. No mention of it is found in history, but the Ergetini are enumerated by Pliny among the inland towns of Sicily of stipendiary condition. (Plin. iii. 8. s. 14.) It is evidently the same place called by Silius Italicus (xiv. 250) Ergētum, where the MSS. give the variations Ergentum and Hergentum, and this renders it probable that the Sergentium (Σεργέντιον) of Ptolemy (iii. 4. § 13) is only another form of the same name. The site assigned by this last author would agree fairly well with that of a place called *La Cittadella*, at the foot of the lofty hill now crowned by the town of *Aidone*. According to Fazello, considerable ruins of an ancient city were in his time visible on this spot, which he erroneously identifies with those of Herbita. (Fazell. x. 2. p. 445; Cluver. *Sicil.* p. 338.) [E. H. B.]

ERGI'NUS (Ἔργινος), a tributary of the river Hebrus in Thrace, the modern *Erkene*. (Apollon. Rhod. i. 217; Pomp. Mel. ii. 2; Plin. iv. 18.) This seems to be the same river as the one called by some authors *Regina* (Ῥηγῖνα; Leo Armen p. 434; comp. also Strab. vii. p. 331). [L. S.]

ERGISCE (Ἐργίσκη), a town of Thrace, apparently in the neighbourhood of Doriscus, but its site is unknown. (Aeschin. *in Ctes.* p. 396, ed. Reiske; Dem. *de Cor.* p. 234, *de Halon.* p. 85.)

ERIBOEA. [ERIBOLUM.]

ERIBOLUM or ERIBOLUS (Ἐρίβωλον, Dion Cass.; Ἐριβόλα, Ptol. v. 1) is placed by the Table, under the name of Eribulo, south of the bay of Astacus, with the numeral XII., and north of Nicaea. It is Hyribolum in the Jerusalem Itin. Leake, in

his map of Asia Minor, places it, under the name of Eribolus, at the head of the gulf of Astacus, which agrees with Dion Cassius (Epit. Xiph. lxxviii. 39), who speaks of it as a naval station opposite to Nicomedia. According to some authorities, the site is *Karamusal*; others call the site *Erekli* or *Eregli*. The figure of a house in the Table indicates a town, perhaps with warm springs. [G. L.]

ERICI'NIUM, a town of Perrhaebia in Thessaly, situated near the frontiers of Histiaeotis. Its site is uncertain, but Leake conjectures that it stood at *Lefthero-khóri*, though there are no ancient remains at this place. (Liv. xxxvi. 13, xxxix. 25; Leake, *Northern Greece*, vol. iv. p. 315.)

ERICUSA. [AEOLIAE INSULAE.]

ERI'DANUS ('Ηριδανός) was the name given by the Greeks to the PADUS or Po, the great river of Northern Italy. The appellation was adopted from them by the Roman poets, and hence is occasionally used even by Latin prose writers. (Virg. *Georg.* i. 481; Ovid. *Met.* ii. 324; Propert. i. 12. 4; Martial, iii. 67. 2; &c.) But there is good reason to believe that the name was not in the first instance applied to the Padus, but belonged to quite a different region of Europe, and was some time before it acquired the signification in which it was afterwards employed. The name of the Eridanus appears in the earliest Greek authorities inseparably connected with the well-known fable of the sisters of Phaethon, and the trees that wept tears of amber. This myth appears to have been already known to Hesiod (Hygin. 154; Hesiod, *Fr.* 184. ed. Markscheffel), who in his extant works notices the Eridanus among the Greek rivers of the world (*Theog.* 338): but we have no idea of the geographical position which he assigned it. The current opinion in the days of Herodotus appears to have been that the Eridanus was a river in the more westerly regions of Europe, but flowing into the sea on the north of that continent. (Herod. iii. 115.) The historian, however, rejects this notion, and treats both the name and existence of the Eridanus as a mere fiction of the Greek poets: a view adopted at a much later period by Strabo (v. p. 215). The vagueness of the notions entertained concerning its situation is farther proved by the fact that, according to Pliny, Aeschylus spoke of the Eridanus as a river of Iberia, and identified it with the Rhodanus. (Plin. xxxvii. 2. s. 11.) According to Hyginus, Pherecydes was the first who identified the Eridanus with the Padus. (Hygin. 154.) Euripides evidently adopts the same view, as he connects the former river with the shores of the Adriatic (Eur. *Hipp.* 737); and this opinion seems to have become gradually established among the Greeks. Scylax, writing about the middle of the 4th century B.C., distinctly places the river Eridanus in the land of the Veneti, and there is no doubt that the Padus is the river which he meant. (Scyl. p. 6. § 19.) The same view was henceforth adopted by all the geographers except Strabo, who, not choosing to admit the identity of the two rivers, rejects altogether the Eridanus as a mere fiction, as well as the islands of the Electrides, supposed to be situated at its mouth (Strab. v. p. 215; Pol. ii. 16; Scymn. Ch. 391—397; Plin. iii. 16. s. 20, xxxvii. 2. s. 11; Dionys. Per. 289—293; Diod. v. 23; Paus. i. 3. § 6, v. 14. § 3.)

The real fact appears to be, that the name of Eridanus was originally applied by the Greeks to a great river *in the north of Europe*, on the shores of which amber was produced, and of which some vague report had reached them through means of the traders who brought the amber itself from the shores of the Baltic to the head of the Adriatic. It is idle to inquire what the river really meant was; whether the Oder or Vistula, at the mouths of which amber is now found in the greatest quantity, or some other river of the N. of Germany. The name *Eridanus* is evidently closely connected, if not identical, with that of *Rhodanus*, and it is probable enough that *Rhenus* is only another form of the same word. (Latham, *Germania*, p. 13.) Hence, in the vague geographical notions of the early Greeks, one great river was easily confounded with another. Aeschylus, as already mentioned, identified the Eridanus and Rhodanus: while Apollonius Rhodius, writing at a much later period, but evidently following some earlier poet, describes the two rivers as arms of the same great stream, another portion of which flowed into the ocean. (Apoll. Rhod. iv. 596, 627, 628.) Amber appears to have been brought in very early times (as it still was in the days of Pliny) overland from the shores of the Baltic to those of the Adriatic; here it was purchased by the Phoenicians and early Greek traders: whence it came to be regarded, by a very natural error, as a production of the country, and the name of the Eridanus being inseparably connected with the production of amber, the Greeks gave the name to the great river that forms so conspicuous a feature of this part of Italy. The gum-like nature of the substance itself evidently gave rise to the fable of its distilling or exuding from trees, which was afterwards applied by the poets and mythographers to the poplars that adorned the banks of the Padus, now assumed to be the true Eridanus. (Cluver. *Ital.* pp. 390—393; Wernsdorf, *Exc.* ii. *ad Avien. Or. Marit.*)

The origin and history of the connection between the Eridanus and Padus have been given at some length, on account of its important bearing on the progress of ancient geography: the geographical account of the latter river and its tributaries is given under the head of PADUS.

Several ancient writers placed near the mouth of the mythical Eridanus certain islands which they called the ELECTRIDES INSULAE ('Ηλεκτρίδες νῆσοι), on the shores of which it was said that much amber was found, from whence their name was derived. But as there are in fact no islands in this part of the Adriatic, except those actually formed by the mouths of the Padus, Strabo and Pliny reject altogether the existence of the Electrides as fabulous, while other writers seem to have sought them among the numerous groups of islands which line the opposite shore of the Adriatic. (Strab. v. p. 215; Plin. xxxvii. 2. s. 11.) As much of the amber collected in the Baltic is really found in the islands at the mouths of the great rivers, it is not impossible that some obscure tradition of this fact may have given rise to the name of the Electrides, which were subsequently transferred, together with the Eridanus itself from the Baltic to the Adriatic. [E. H. B.]

ERI'DANUS, a river of Attica, a tributary of the Ilissus. [ATTICA, p. 323, a.]

ERIGON ('Ερίγων, Strab. vii. pp. 327, 330; 'Ερίγωνα, Ptol. iii. 13. § 8), the great W. branch of the river Axius, which, having its source in the Paeonian mountains, took a NE. course till its junction with the main stream at no great distance from Stobi. (Liv. xxxix. 53.) It is now called by the Bulgarians *Zrna Rjeka*, and by the Turks *Kutjuk Karâ-Su*. (Comp. Leake, *Northern Greece*, vol. iii. pp. 268, 275.) The geography of the basin of

this river is so imperfectly known that its course cannot be traced. [E. B. J.]

ERINEIA (Ἐρίνεια), a town in Megaris, in which was a monument of Autonoë, daughter of Cadmus. As it appears to have stood inland on the northern part of the isthmus, Leake places it at *Kúndura*. (Paus. i. 44. § 5; Leake, *Northern Greece*, vol. ii. p. 408.)

ERI'NEUS or ERI'NEUM. 1. (Ἐρινεός, Ἐρινεόν: *Eth.* Ἐρινεάτης, Ἐρινεεύς), one of the towns of the tetrapolis of Doris, described by Strabo as lying below the town of Pindus: it probably stood upon the river of the latter name. (Strab. viii. p. 362, ix. p. 427; Thuc. i. 107; Scymn. Ch. 591; Ptol. iii. 15. § 15; Steph. B. *s. v.*; Tzetz. *ad Lycophr.* 741; Schol. *ad Pind. Pyth.* i. 121; Mel. ii. 3; Plin. iv. 7. s. 13; Leake, *Northern Greece*, vol. ii. p. 91, seq.)

2. (Ἐρινεόν), a town of Phthiotis in Thessaly, mentioned only by Strabo. Its site is uncertain, but Leake conjectures that the remains on the left bank of the Enipeus near *Koklobáshi* may be those of Erineum. (Strab. ix. p. 434; Leake, *Northern Greece*, vol. iv. p. 471).

3. The sea-port of Rhypes in Achaia. [RHYPES.]

ERI'NEUS (Ἐρινεός), a small river on the E. coast of Sicily, between Syracuse and Helorum. It is mentioned by Thucydides (vii. 80, 82), from whom we learn that it was the second river crossed by the Athenians in their disastrous retreat from Syracuse, and intermediate between the Cacyparis and Asinarus. Hence it can be no other than the small stream now called the *Miranda*, which flows into the sea just to the N. of the modern town of *Avola*, and is hence frequently called *Fiume di Avola*. It is distant about 6 miles from the Cacyparis (*Cassibili*), and the same distance from the Asinarus (*Falconara*). (Smyth's *Sicily*, p. 176; Cluver. *Sicil.* p. 184.) It is evidently the same river which is called by Ptolemy (iii. 4. § 8.) Ὄρινος or Ἔρινος. [E. H. B.]

ERISANE. [LOBETANI.]

ERI'TIUM, a town of Perrhaebia in Thessaly, appears to have been near Cyretiae, since it was taken along with the latter town by M. Baebius in B. C. 191. (Liv. xxxvi. 13.) Leake places it at *Paleókastro*, a village above *Sykiá*, on the left bank of the *Vúrgaris*, a river of Tripolitis. In the church of St. George, which occupies the site of the ancient Cyretiae, Leake noticed an inscribed stone, on which the name of Apollodorus is followed by a word beginning EPH, which he conjectures with much probability may be the place called Eritium by Livy. (Leake, *Northern Greece*, vol. iv. pp. 310, 313).

ERIZA (τὰ Ἔριζα: *Eth.* Ἐριζηνός). The Roman general Cn. Manlius, after reaching the river Chaus [CHAUS], came to Eriza, a city which he took by assault. Livy (xxxviii. 14) does not say what was the time of the march from the Chaus to Eriza; but his narrative shows that Eriza was between the Chaus and the Indus. The Erizeli of Ptolemy (v. 2), it is supposed by some critics, are the Erizeni, and that the name should be written so; but Ptolemy's Erizeli are in a different place. Pliny (x. 43) speaks of a "regio Erizena" in Asia, by which he means the province of Asia. The ethnic name Erizeni appears on a rare medal, which also contains the name KAOC—the river Chaus. We need not infer from this that Eriza was on the Chaus, because there are many instances of towns being thus designated, though they were several miles distant from the river. Eriza became a town of episcopal rank. [G. L.]

ERIZE'LI. [ERIZA.]

ERNAGINUM (Ἐρνάγινον), is placed by Ptolemy (ii. 10) among the towns of the Salyes in Gallia Narbonensis. In the Itins. it is the first station from Arelate (*Arles*). Though the distances in the Itins. do not quite agree, the site of the place seems to be *St. Gabriel*. D'Anville states that a marble has been found at *St. Gabriel* with the inscription Ernaginenses. *St. Gabriel* is a hamlet on the road from *Arles* to *Tarascon*. [G. L.]

ERNODU'RUM, a town in Gallia, which the Antonine Itin. places on a road from Burdigala (*Bordeaux*) to Augustodunum (*Autun*). The road passes through Avaricum (*Bourges*); and 13 Gallic leagues from *Bourges*, on the *Bordeaux* side of *Bourges*, was Ernodurum. The next place to Ernodurum, on the *Bordeaux* side, is Argentomagus. The place was called Ernotorum in the middle ages. The termination "durum" indicates a river, and the site of Ernodurum is fixed at *St. Ambroise*, at the passage of the river *Arnon*, a branch of the *Cher*. [G. L.]

ERO'CHUS (Ἔρωχος), a Phocian town, destroyed by the army of Xerxes. Its position is uncertain. (Herod. viii. 33.)

ERPEDITANI, in Ireland, another name of the Erdini. [ERDINI.] [R. G. L.]

ERU'BRUS, is a small branch of the Mosella, mentioned by Ausonius (*Mosella*, 359):—

"Te rapidus Gelbis, te marmore clarus Erubrus."

The Erubrus is the *Ruver*, a small stream that flows into the *Mosel* a little below *Trier*. [G. L.]

ERYMANDRUS or ERYMANTHUS (Ἔρυμάνδρος, Arrian, *Anab.* iv. 6; Ἐρυμάνθος, Polyb. xi. 32; Plin. vi. 23. s. 25; Curt. viii. 9. § 20), the principal river of Drangiana, which rises in the lower range of the Paropamisan mountains, and, after flowing through Arachosia and Drangiana, enters the lake *Zarah*. Its present name is *Ilmend* or *Hilmend*. The name of the river is not given by Ptolemy. M. Burnouf has supposed it to be the Arachotus; but Professor Wilson believes the Arachotus to have been one of the tributaries of the Helmend, and probably the modern *Arkand-ab*. (Wilson, *Ariana*, pp. 156, 157.) Arrian supposed, incorrectly, that it was lost in the sands; he places on its banks a tribe called Euergitae, whom Professor Wilson suspects are really the Agriaspae. The modern river is described by Pottinger in his travels in *Baluchistan*. It appears to be of great size, and carries down with it a great body of water. (Pottinger, *Baluchistan*, p. 405.) [V.]

ERYMANTHUS (Ἐρυμανθός), a lofty range of mountains on the frontiers of Arcadia, Achaia, and Elis. It formed the western point of the northern barrier of Arcadia; and Mt. Lampeia, which extends southwards, is a portion of the range. The two principal heights are now called *O'lonos* and *Kalé-foni*, the former being 7297 feet above the level of the sea, and the latter 6227 feet. From Erymanthus four rivers rise,—the Eleian Peneius, the Arcadian Erymanthus, and the Peirus and Selinus of Achaia. The river Erymanthus, which is a tributary of the Achelous, is spoken of under the latter name. [ACHELOUS.] Mount Erymanthus is celebrated in mythology as the haunt of the fierce boar destroyed by Hercules. (Strab. viii. pp. 343, 357; Paus. v. 7. § 1, viii. 24. § 4, seq.; Hom. *Od.* vi. 104; Apollod. ii. 5; Leake, *Morea*, vol. ii. p.

253, *Peloponnesiaca*, pp. 203, 204, 224; Boblaye, *Recherches*, &c. pp. 118, 124; Curtius, *Peloponnesos*, vol. i. pp. 17, 384.).

ERYMNAE (Ἐρυμναί: *Eth.* Ἐρυμναῖος), a town of Lycia, on the authority of the *Lyciaca* of Alexander. (Steph. B. *s. v.*) [G. L.]

ERYTHEIA INSULA. [GADES.]

ERYTHI'NI (Ἐρυθῖνοι), a place on the coast of Paphlagonia, mentioned in the Homeric poems (*Il.* ii. 855). It has been supposed, however, that the whole of the passage on the Paphlagonians and their towns was an interpolation of later times, and that the old poet was unacquainted with the Euxine and its coasts. (Schlegel, *de Geogr. Hom.* p. 135; Broska, *de Geogr. Myth.* p. 58.) Strabo (xi. p. 545) fixed the position of the town upon two rocks, called, from their colour, Ἐρυθρῖνοι. (Comp. *Anon. Peripl.* p. 6.) It was situated 90 stadia E. of Amastris, and 60 stadia N. of Cromna. [E. B. J.]

ERYTHRAE (Ἐρυθραί: *Eth.* Ἐρυθραῖος), an ancient town in Boeotia, mentioned by Homer, and said to have been the mother-city of Erythrae in Boeotia. (Hom. *Il.* ii. 499; Strab. ix. p. 404). It lay a little south of the Asopus, at the foot of Mount Cithaeron. The camp of Mardonius extended along the Asopus from Erythrae and past Hysiae to the territory of Plataea. (Herod. ix. 15, 25.) Erythrae is frequently mentioned by other authorities in connection with Hysiae. It was in ruins in the time of Pausanias. Leake places it to the eastward of *Katzúla* at the foot of the rocks, where are some foundations of Hellenic walls, together with a church containing a Doric column and its capital. (Thuc. iii. 24; Eurip. *Bacch.* 751; Xen. *Hell.* v. 4. § 49, where it is called Ἐρυθρά; Paus. ix. 2. § 1; Steph. B. *s. v.*; Leake, *Northern Greece*, vol. ii. p. 329.)

3. A town of the Locri Ozolae, probably the harbour of Eupalium. (Liv. xxviii. 8; Steph. B. *s. v.*; Leake, *Northern Greece*, vol. ii. p. 618.)

ERYTHRAE (Ἐρυθραί: *Eth.* Ἐρυθραῖος), "a city of the Ionians" (Steph. B. *s. v.*), on the authority of the *Asia* of Hecataeus; to which the compiler adds,—"and it was called Κνωπούπολις, from Cnopus." Erythrae was one of the Ionian cities. (Herod. i. 142.) According to the legend told by Pausanias (vii. 3. § 7), the place was originally settled by Erythrus, the son of Rhadamanthus, from Crete; and the city was occupied, together with Cretans, by Lycians, Carians, and Pamphylians. While all these people were living together in Erythrae, Cleopus the son of Codrus, having collected from all the cities of Ionia such as he could from each, introduced them into the place, to live with the Erythraei. Strabo (p. 633) has the tradition of Cnopus, an illegitimate son of Codrus, founding Erythrae. According to Casaubon, the MSS. of Strabo have the name "Cnopus," which he would alter to "Cleopus;" but perhaps "Cleopus" in Pausanias should be corrected. Polyaenus (viii. 43) has the story of Cnopus, and how, by a stratagem, he got possession of Erythrae, after killing the inhabitants; a story which has the advantage over that of Pausanias in probability, for we can conceive a general massacre of the original inhabitants of Erythrae and the seizure of their town, better than the story of Cnopus and his men walking in to live together with the original people. Hippias of Erythrae, in the second book of his Histories of his native place, told a story of the murder of Cnopus and the usurpation of his power by Ortyges, and of the extravagant tyranny and violent death of Ortyges; which Athenaeus has preserved (vi. p. 259). The early history of Erythrae, like that of most of the Ionian towns in Asia, was unknown. Strabo, in another place (p. 404), calls it a settlement from Erythrae in Boeotia.

Strabo (p. 644) describes Erythrae as being in the peninsula which he calls the peninsula of the Teians and the Erythraeans. He places the Teians on the south of the isthmus, and the Clazomenii on the north side [CLAZOMENAE]; and the Erythraei dwell within it. The boundary between the Erythraea and Clazomenae was the Hypocremnus. On the south, Erae or Gerae [ERAE] belonged to the Teians. The peninsula lying west of a line drawn from Gerae to Hypocremnus must be supposed to be the Erythraean territory. As we proceed north and west from Gerae we come to Corycus [CORYCUS; CASYSTES], then another harbour named Erythras; and, after it, several others. After Corycus was a small island, Halonnesus, then Argennum, a promontory of the Erythraea, and the nearest point to Chios. [ARGENNUM.] On the west side of the Erythraean peninsula is a capacious bay, in which Erythrae is situated, opposite to the island of Chios; and there were in front of Erythrae four small islands called Hippi. The rugged tract which lies north of a line drawn from Erythrae to the Hypocremnus was called Mimas, a lofty mountain region, covered with forests, and abounding in wild animals. It contained a village, Cybellia, and the north-western point was called Melaena, where there was a quarry for millstones. Pliny describes Mimas as running out "CCL M. P.," which is a great blunder or error in his text, whatever way we take it: he adds that Mimas sinks down in the plains that join it to the mainland; and that this level of 7½ Roman miles Alexander ordered to be cut through by joining the two bays, and so he intended to insulate Erythrae and Mimas. Pliny doubtless found the story somewhere; and possibly among other grand things that the Macedonian king talked of, this may have been one. The rugged insulated territory of the Erythraei produced good wheat and wine.

Herodotus (i. 142) makes four varieties or dialects of language among the Ionians; and the dialect of Chios and Erythrae was the same. The geographical position of Erythrae, indeed, places it among the insular rather than the continental states of Ionia. The neighbourhood of Chios and Erythrae and the sameness of language did not make the people the best friends always, for there is a story of a war between them (Herod. i. 18) at an early period. This may be the war to which Anticleides alluded in his *Nosti* (Athen. ix. p. 384). The Erythraei furnished eight ships to the confederate Ionian fleet which was defeated in the battle before Miletus, B. C. 494 (Herod. vi. 8), but the Chians had 100 ships. Erythrae afterwards became a dependency of Athens, for a revolt of Erythrae is mentioned by Thucydides (viii. 23) B. C. 412, in the twentieth year of the Peloponnesian War.

After the close of the war with Antiochus, the Romans rewarded the Chians, Smyrnaeans, and Erythraeans, with some territory in return for their services on the Roman side. (Liv. xxxviii. 39; Polyb. xxii. 27.) Parium on the Propontis was a colony from Erythrae (Paus. ix. 27. § 1); but Strabo makes it a joint settlement of the Erythraeans, Milesians, and the island of Paros (p. 588.)

Erythrae was famed in ancient times for a wise woman, Sibylla, as Strabo calls her; and in the

time of Alexander there was another who had like prophetic gifts, and her name was Athenais. (Comp. Paus. x. 12. § 7; Tacit. *Ann.* vi. 12.) Contemporary with Strabo was Heracleides of Erythrae, a physician of the school of Herophilus. Though Erythrae never was a town of great note, it existed for a long time, and there are coins of Erythrae to a late period of the Roman empire. The coins anterior to the Roman period are said to be very scarce.

The exact position of Erythrae is well ascertained. It is now called *Ritri*, and it stands on the south side of a small peninsula, which projects into the bay of Erythrae. Pliny (v. 29) mentions a stream called Aleos, which he seems to place near Erythrae (xxxi. 2). But the name of the river on the coins of Erythrae is Axus. Erythrae contained a very ancient temple of Hercules, whom the Erythraei worshipped under the name of the Hercules of the Idaei Dactyli; and also the Tyrians, as Pausanias discovered (vii. 5. § 5; ix. 27. § 8). Strabo (p. 613) says, that Hercules Ipoctonos "was worshipped by the Erythraeans who dwell about Melius, for the 'ips' is an insect that damages the vines; and this was the only country that was free from this plague." The name Melius in this passage has been, perhaps, correctly altered to Mimas. There was also a temple of Athena Polias at Erythrae: the goddess was a large wooden figure seated. The remains of Erythrae are described by Chandler (*Asia Minor*, cc. 25, 26.); and lately by Hamilton (*Researches*, &c., vol. ii. p. 6). "It is situated in a small alluvial plain at the mouth of the river Aleus, some of the sources of which are in the town itself. The city faces the west, and the whole extent of the Hellenic walls may be distinctly traced, from the commencement near the harbour, at the southern extremity of the town, to the northern point, where they terminate on a lofty rock of trachyte." (Hamilton.) "The walls are well built in the isodomous style, except a small part of that which traverses the plains, and they consist either of blue marble or red trachyte." There are remains of several gateways, and outside of them also remains of ancient tombs in various styles. Near the chief source of the Aleus there are "many remains of aqueducts, walls, terraces, and foundations of buildings with temples." (Hamilton.) One of these remains is a wall supporting a terrace 38 feet in length, "the lower part of which consisted of a beautiful specimen of cyclopian architecture, the angles of the different blocks being cut very sharp, while upon it was reared a superstructure in the isodomous style, built with great regularity." (Hamilton.) He conjectures that the site may have been that of the temple of Hercules, and that three large Ionic capitals of red trachyte, which were lying in the water-course, may have belonged to it.

The acropolis of Erythrae is within 200 yards of the shore; it is a mass of red trachyte, and stands quite detached in the centre of the plain. The remains of a large theatre are still visible, on the north side of it, excavated in the solid rock. Near the mouth of the Aleus there are some remains of the port, and traces of an aqueduct. The inscriptions copied by Hamilton at *Ritri* are printed in his Appendix, vol. ii. One of the inscriptions that he dug out was the architrave of a door, "on which was a dedication to Minerva or the sibyl Athenais, by a person whose name appears to be Artaxerxes." This is not quite a correct explanation, for the inscription clearly contains a dedication to Athenaea Poliuchus.

Thucydides (viii. 24) mentions Pteleon and Sidussa as two forts or walled places within the territory of Erythrae; and Pliny mentions Pteleon, Helos, and Dorium as near Erythrae. There was also a place called Embatum [EMBATUM] in the Erythraean territory.

Mela (i. 17) names a place Coryna in the Erythraean peninsula; but it is doubtful what he means. The promontory Mesate of Pausanias (vii. 5. § 6) appears to be the double point which extends from the southern part of the Erythraean peninsula northward, separating what we may call the bay of Erythrae from the strait of Chios. [G. L.]

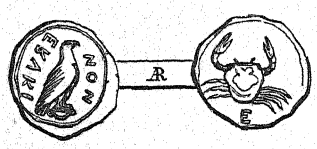
COIN OF ERYTHRAE.

ERYTHRAEA. [ERYTHRAEUM.]

ERYTHRAEUM (Ἐρυθραῖον ἄκρον, Ptol. iii. 17. § 4), a promontory on the SE. coast of Crete. The town of ERYTHRAEA, which, from its mention by Florus (iii. 7) along with Cydonia and Cnossus as submitting to Metellus, must have been a place of importance, probably was situated near the promontory of the same name. (Hoeck, *Kreta*, vol. i. pp. 426, 429.) [E. B. J.]

ERYTHRAEUM MARE. [RUBRUM MARE.]

ERY'THRUM (Ἔρυθρόν: *El-Natroun*, Ru.), a village (*κώμη, Stadiasm.*), or place (*τόπος*, Ptol.), on the coast of Cyrenaica, between Darnis and Nanstathmaus. (Synes. *Ep.* 51, 67; Ptol. iv. 4. § 5; *Stadiasm.*; Steph. B.) Its ruins are considerable; and it occupied a favourable site at the mouth of one of the most considerable streams of the district. (Beechey, p. 478; Barth, pp. 461, 496.) [P. S.]



ERYX (Ἔρυξ: *Eth.* Ἐρυκῖνος, Erycīnus: *S. Giuliano*), the name of a city and mountain in the W. of Sicily, about 6 miles from Drepana, and two from the sea-coast. The mountain (MONS ERYX, Plin. iii. 8. s. 14; but MONS ERYCUS, Cic. *Verr.* ii. 47; Tac. *Ann.* iv. 43), now called *Monte S. Giuliano*, is a wholly isolated peak, rising in the midst of a low undulating tract, which causes its elevation to appear much more considerable than it really is, so that it was regarded in ancient as well as modern times as the most lofty summit in the whole island next to Aetna (Pol. i. 55; Mel. ii. 7. § 17; Solin. 5. § 9), though its real elevation does not exceed 2184 English feet. (Smyth's *Sicily*, p. 242.) Hence we find Eryx alluded to by Virgil and other Latin poets as a mountain of the first order of magnitude, and associated with Athos, Aetna, &c. (Virg. *Aen.* xii. 701; Val. Flacc. ii. 523.) On its summit stood a celebrated temple of Venus or Aphrodite, founded, according to the current legend, by Aeneas (Strab. xiii. p. 608; Virg. *Aen.* v. 759), from whence the goddess derived the surname of Venus Erycina, by which she is often mentioned by Latin writers. (Hor. *Carm.* i. 2. 33; Ovid, *Heroid.* 15. 57, &c.) Another legend, followed by Diodorus, ascribed the foundation both of the temple and city to an eponymous

hero named Eryx, who was said to have received Hercules on his visit to this part of Sicily, and contended with that hero in a wrestling match, but was vanquished by him. This Eryx was a son of Aphrodite and Butes, a king of the country, and is hence repeatedly alluded to by Virgil as a brother of Aeneas, though that poet does not refer to him the foundation of the city. (Diod. iv. 23, 83; Virg. *Aen.* v. 24, 412, &c.; Serv. *ad loc.*) The legends which connected it with Aeneas and a Trojan chief named Elymus evidently pointed to what we learn from Thucydides as an historical fact, that Eryx as well as Segesta was a city of the Elymi, a Sicilian tribe, which is represented by almost all ancient writers as of Trojan descent. (Thuc. vi. 2; Strab. xiii. p. 608.) It does not appear to have ever received a Greek colony, but became gradually Hellenised, like most other cities of Sicily, to a great extent; though Thucydides (*l. c.*) still speaks of the Elymi, including the people of Eryx and Segesta, as barbarians. Nothing is known of its history previous to that period, but it seems probable that it followed for the most part the lead of the more powerful city of Segesta, and after the failure of the Athenian expedition became a dependent ally of the Carthaginians. In B. C. 406, a sea-fight took place between a Carthaginian and a Syracusan fleet off the neighbourhood of Eryx, in which the latter was victorious. (Diod. xiii. 80.) On occasion of the great expedition of Dionysius to the W. of Sicily, in B. C. 397, Eryx was one of the cities which joined the Syracusan despot just before the siege of Motya, but it was speedily recovered by Himilco in the following year. (Id. xiv. 48, 55.) It again fell into the hands of Dionysius shortly before his death (Id. xv. 73), but must have been once more recovered by the Carthaginians, and probably continued subject to their rule till the expedition of Pyrrhus (B. C. 278). On that occasion it was occupied by a strong garrison, which, combined with its natural strength of position, enabled it to oppose a vigorous resistance to the king of Epeirus. It was, however, taken by assault, Pyrrhus himself leading the attack, and taking the opportunity to display his personal prowess as a worthy descendant of Heracles. (Diod. xx. 10, Exc. H. p. 498.) In the First Punic War we find Eryx again in the hands of the Carthaginians, and in B. C. 260 their general Hamilcar destroyed the city, removing the inhabitants to the neighbouring promontory of Drepanum, where he founded the town of that name. (Id. xxiii. 9.) The old site, however, seems not to have been wholly deserted, for a few years later we are told that the Roman consul L. Junius made himself master by surprise both of the temple and the city. (Id. xxiv. 1; Pol. i. 55; Zonar. viii. 15.) The former seems to have been well fortified, and, from its position on the summit of the mountain, constituted a military post of great strength. Hence probably it was that Hamilcar Barca, suddenly abandoning the singular position he had so long held on the mountain of Ercte, transferred his forces to Eryx, as being a still more impregnable stronghold. But though he surprised and made himself master of the town of Eryx, which was situated about half-way up the mountain, he was unable to reduce the temple and fortress on the summit, the Roman garrison of which was able to defy all his efforts. Meanwhile Hamilcar maintained his position in the city, the remaining inhabitants of which he transferred to Drepana; and though besieged or blockaded in his turn by a Roman army at the foot of the mountain, he preserved his communications with the sea, and was only compelled to abandon possession of Eryx and Drepana when the great naval victory of Lutatius Catulus over the Carthaginians forced that people to sue for peace, B. C. 241. (Pol. i. 58; Diod. xxiv. 8. p. 509; Liv. xxi. 10, xxviii. 41.)

From this time the town of Eryx sinks into insignificance, and it may even be doubted whether it was ever restored. Cicero alludes to the temple, but never notices the town; and Strabo speaks of it as in his day almost uninhabited. Pliny, indeed, enumerates the Erycini among the municipal communities of Sicily; but the circumstance mentioned by Tacitus, that it was the Segestans who applied to Tiberius for the restoration of the temple, would seem to indicate that the sanctuary was at that time dependent, in a municipal sense, on Segesta. (Cic. *Verr.* ii. 8, 47; Strab. v. p. 272; Plin. iii. 8. s. 14; Tac. *Ann.* iv. 43.) No trace of the subsequent existence of the town of Eryx is found; the remaining inhabitants appear to have settled on the summit of the hill, where the modern town of *S. Giuliano* has grown up on the site of the temple. No remains of the ancient city are extant; but it appears to have occupied the site now marked by the convent of *Sta. Anna*, about half-way down the mountain. (Smyth's *Sicily*, p. 243.)

The temple, as already mentioned, was generally connected by popular legend with the Trojan settlements in this part of Sicily; if any value can be attached to these traditions, they would point to its being an ancient seat of Pelasgic worship, rather than of Phoenician origin, as supposed by many writers. Even those authors who represent it as founded before the time of Aeneas relate that it was visited by that hero, who adorned it with splendid offerings. (Diod. iv. 83; Dionys. i. 53.) It is certain that the sanctuary had the good fortune to be regarded with equal reverence by the Phoenicians, Carthaginians, Greeks, and Romans. As early as the time of the Athenian expedition to Sicily (B. C. 415), we learn from Thucydides that it was rich in vessels and other offerings of gold and silver, of which the Segestans made use to delude the Athenian envoys into a belief of their wealth. (Thuc. vi. 46.) The Carthaginians appear to have identified the Venus Erycina with the Phoenician goddess Astarte, and hence showed her much reverence; while the Romans paid extraordinary honours both to the goddess and her temple, on account of their supposed connection with Aeneas. They were, indeed, unable to prevent their Gaulish mercenaries from plundering the temple at the time of its capture by Junius (Pol. ii. 7); but this appears to have been the only occasion on which it suffered, and its losses were quickly repaired, for Diodorus speaks of it as in a flourishing and wealthy condition. The Roman magistrates appointed to the government of Sicily never failed to pay a visit of honour to this celebrated sanctuary; a body of troops was appointed as a guard of honour to watch over it, and seventeen of the principal cities in Sicily were commanded to pay a yearly sum of gold for its adornment. (Diod. iv. 83; Strab. v. p. 272; Cic. *Verr.* ii. 8.) Notwithstanding this, the decay of the city, and declining condition of this part of Sicily generally, appears to have caused the temple also to be neglected: hence in A. D. 25 the Segestans applied to Tiberius for its restoration, which that emperor, according to Tacitus, readily undertook "ut consanguineus," but did not carry into effect, leaving

it to Claudius to execute at a later period. (Tac. *Ann.* iv. 43; Suet. *Claud.* 25.) This is the latest mention of it that occurs in history; and the period of its final decay or destruction is unknown. At the present day the site is occupied by a castle, converted into a prison; a small portion of the substructions, built of very large and massive stones (whence they have been erroneously called Cyclopian), is all that remains of the ancient edifice; but some fine granite columns, still existing in other parts of the town, have doubtless belonged originally to the temple. It has been already mentioned that the temple itself was surrounded by fortifications, so as to constitute a strong fortress or citadel, quite distinct from the city below: a coin struck by C. Considius Nonianus* (in the first century B. C.) represents the temple itself, with this fortified peribolus, enclosing a considerable portion of the mountain on which it stands; but little dependence can be placed on the accuracy of the delineation. There was also a temple at Rome dedicated to Venus Erycina, which stood just outside the Colline Gate (Strab. v. p. 272); but the representation on the coin just cited is evidently that of the original Sicilian temple. The coins of the city of Eryx have types allusive to the worship of Venus, while others present a close analogy to those of Agrigentum, indicating a connection between the two cities, of which we find no explanation in history. (Eckhel, vol. i. p. 208; Torremuzza, *Num. Sic.* pl. 30.) [E. H. B.]

COIN OF ERYX.

ESDRAE'LA (Ἐσδραηλά), the classical form of the Hebrew name JEZREEL, which Eusebius places between Scythopolis and Legio. (*Onomast. s. v.*) In Judith (Ἐσδρήλων, iii. 11) it is placed near Dotaea or Dothaim, and in the Itinerarium Hierosolymitanum (where it is called Stradela) it is said to be 12 miles from Scythopolis, and 10 from Maximopolis, or Legio. Its modern name is *Zerin*, and it is situated on a rocky ridge extending from east to west in the great plain of Esdraelon, towards its southern extremity, and a little to the north of Mount Gilboa. It was the ancient capital of the kingdom of Israel, and is infamous in the history of Ahab and Jezebel. (1 *Kings*, xxi.) It belonged to the tribe of Issachar (*Josh.* xix. 18), and was known among the crusaders as "Parvum Gerinum." It is most celebrated for its noble plain, noticed in the next article; its fountain (1 *Sam.* xxix. 1) rises in the valley directly under the village at the NE. (Robinson, *Bib. Res.* vol. iii. pp. 163—167.) [G. W.]

ESDRAELON VALLIS v. CAMPUS (τὸ μέγα πεδίον Ἐσδρηλών, *Judith*, i. 8), the same as the valley of JEZREEL (*Josh.* xvii. 16; *Judges*, vi. 33; *Hosea*, i. 5.), a very extensive and fertile plain, shut in between the mountain ranges of Samaria and Mount Carmel on the SE. and of Galilee on the N., extending from the Mediterranean sea at the gulf of Caipha, to the valley of the Jordan, with occasional interruptions from the smaller ranges of Gilboa and Little Hermon, and Mount Tabor rising in solitary grandeur between the latter and the mountains of Samaria. This plain is watered, through its greatest extent, by the river Kishon and its tributaries; and is distinguished in its various parts by different names, e. g. the valley of Megiddo [LEGIO] (2 *Chron.* xxxv. 22); μέγα πεδίον Λεγεῶνος, or simply μέγα πέδιον, like the valley of the Jordan (1 *Maccab.* xii. 49; Josephus ap. Reland, *Palaest.* p. 366); or μέγα πεδίον Σαμαρείτιδος (*ib.* p. 368). It is now known among the natives as "*Merij Ibn 'Amir*." (Robinson, *Bib. Res.* vol. iii. pp. 227—230.) [G. W.]

E'SIA. [ISARA.]

E'SSUI. Caesar, in B. C. 54, distributed his troops in winter quarters in various places at some distance from one another. He placed (*B. G.* v. 24) L. Roscius, with one legion, among the Essui. A large force of Galli, from the states called Armoric, assembled to attack Roscius in his winter camp, but were deterred by hearing unfavourable news of the rising of the Galli in other parts (v. 53). This fact, combined with what is said in the other chapter, shows that the Essui were between the Seine and Loire, and not far from the Armoric states. In the passage of Caesar (v. 24) there is no MSS. variation in the name "Essuos." In *B. G.* ii. 34, Caesar speaks of the Sesuvii as one of the Armoric or maritime states; and though there are MSS. variations in the form "Sesuvii," all the readings make the name begin with "Ses." In *B. G.* iii. 7, the Sesuvii are again mentioned with the Curiosolites and the Veneti; but in that passage there is a reading "Esubios," and other varieties. It seems very likely that the Essui, Sesuvii, and Esubii are the same, and that they occupied the diocese of *Seéz*, which borders on that of *Mans* and *Evreux*.

Walckenaer (*Géog.*, &c. i. 398) places the Essui between the Nervii and the Remi, and near a place called *Esch* on the river *Sure*. But the narrative of Caesar (v. 53) shows that this conclusion is false. [G. L.]

ESTIO'NES (Ἐστίωνες), a Vindelician tribe, on the river Iller, with the capital Campodunum (Strab. iv. p. 206; comp. CAMPODUNUM.) [L. S.]

ESUBIA'NI. [VESUBIANI.]

ESURIS (Ru. near *Ayamonte*), the last city to the W. on the coast of Hispania Baetica, stood on the left (E.) side of the mouth of the Anas. (*Itin. Ant.* pp. 425, 431; Florez, *Esp. S.* vol. xiv. p. 206; Ukert, vol. ii. pt. 1. p. 339.) [P. S.]

ETAM (Ἦταν), a place in Judaea mentioned by Josephus, 50 stadia from Jerusalem, very pleasant in its fine gardens, and abounding in rivulets of water, to which the great king Solomon was accustomed to resort. (*Ant.* viii. 7. § 3.) It must obviously be the place celebrated in the book of Ecclesiastes (ii. 5, 6), and in the Canticles; and the Rabbinical notices of the fountain of Etam from which waters were conveyed by aqueducts to Jerusalem, teach us to look for the site between Bethlehem and Hebron. Accordingly we find the name perpetuated among the natives to this day, and assigned to gardens the largest and most luxuriant that are to be met with in the mountain region of Judaea. The three well-known pools of Solomon, on the road to Hebron, are situated at the head of a valley

* This coin is figured in the Biographical Dictionary, vol. ii. p. 1207; but, owing to the imperfect condition of the specimen figured, does not exhibit the pediment of the temple.

called *Wady Etân;* and the aqueduct which derives its supply of water from these tributary fountains, has its proper commencement below the lowest of the pools, from whence it runs along the western side of *Wady Etân* to Bethlehem. In the bed of the valley, below the aqueduct, is another copious fountain, *'Ain Etân*, and around this fountain are the gardens just mentioned. (Williams, *Holy City*, vol. ii. p. 500.) The aqueduct by which this water is conducted to Jerusalem was constructed by Pontius Pilate, the Roman procurator. (Joseph. *B. J.* ii. 9. § 4.)

The rock Etam (Ἠτάμ) in the history of Samson, although in the tribe of Judah, was probably in no way connected with the foregoing, and cannot now be identified. (*Judges*, xv. 8, 11.) [G. W.]

ETANNA, a place in Gallia Narbonensis, appears in the Table on a road from Augustum through Condate to Geneva. It lies between Augustum and Condate. [CONDATE, 8.] Etanna appears to be *Yenne* or *Jenne*. [G. L.]

ETEIA (Ἤτεια), a town of Crete. Pliny (iv. 20) places a town of this name (some of the MSS. and the old text have Elea or Eleae), between Phalasarna and Cisamus. [E. B. J.]

ETEOCRETES. [CRETA, p. 704.]

ETEO'NUS (Ἐτέωνος: *Eth.* Ἐτεώνιος), a town of Boeotia, mentioned by Homer, who gives it the epithet of πολύκνημος, lay to the right of the Asopus. Strabo says that it was afterwards called Scarphe. It probably lay between Scolus and the frontier of the territory of Tanagra. (Hom. *Il.* ii. 497; Strab. ix. pp. 408, 409; Stat. *Theb.* vii. 266; Steph. B. *s. v.*; Leake, *Northern Greece*, vol. ii. p. 332.)

ETHO'PIA, a town or fortress of Athamania, situated on a hill commanding Argithea, the capital of the country. It contained a temple of Jupiter Acraeus. (Liv. xxxviii. 2; Leake, *Northern Greece*, vol. iv. p. 525, seq.)

ETIS (Ἦτις), a town in the S. of Laconia, the inhabitants of which were removed to Boeae. (Paus. iii. 22. § 11; Steph. B. *s. v.*)

ETOCETUM, in Britain, mentioned in the second Itinerary as being 12 miles from *Pennocrucium* (*Penkridge*), on the road from the Vallum to Portus Rutupis (*Richborough*), in the direction of London. Probably, *Wall* in Staffordshire. [R. G. L.]

ETOVISSA. [EDETANI.]

ETRU'RIA, one of the principal divisions of Central Italy, bounded on the N. by the Apennines, on the E. by the Tiber, and on the W. by the Tyrrhenian Sea.

I. NAME.

It is almost universally called Etruria by the Latin writers of the best times: though the form TUSCIA is often found in later writers (Lib. Colon. p. 211; Ammian. xxvii. 3, &c.): and appears in the later ages of the Roman Empire to have become the official designation of the district in question, whence it is of frequent occurrence on inscriptions, and is found in the Notitia, and the Itineraries. (*Not. Dign.* ii. p. 63; *Itin. Ant.* p. 289; *Tab. Peut.*; Orell. *Inscr.* 1100, 1181, &c.) Hence it passed into general use in the middle ages, and is still preserved in the modern appellation of *Toscana* or *Tuscany*. On the other hand, the people were called indifferently Etruscans, ETRUSCI, or Tuscans, TUSCI; both of which forms are used without distinction by Livy, Varro, and other writers of the best age: though Tuscus and Tusci appear to be the most ancient forms, and perhaps the only ones in use in the time of Cato or Plautus. The Greeks on the contrary universally called them TYRRHENIANS or TYRSENIANS (Τυῤῥηνοί, Τυρσηνοί), and thence named their land TYRRHENIA (Τυῤῥηνία); a custom which they retained even under the Roman Empire: though the geographers sometimes render the Latin name by Ἐτροῦσκοι or Τοῦσκοι (Strab. v. p. 219; Ptol. iii. 1. §§ 4, 47): and very late writers, such as Zosimus and Procopius, adopt Τουσκία for the name of the country (Zosim. v. 41; Procop. *B. G.* i. 16). The forms Hetruria and Hetruscus, as well as Thuscus, which are not unfrequently found in the MSS. of Latin authors, appear to be certainly incorrect.

There is little doubt that the two forms of the Latin name, Etruscus and Tuscus, are merely two modifications of the same, and that this was originally written Turscus, a form still preserved in the Eugubine Tables. (Lepsius, *Inscr. Umbr.* tab. i. b.) It is easy to go a step further and identify the Turscus or Tursicus of the Romans with the Τυρσηνός of the Greeks, a conclusion which has been generally adopted by modern scholars, though denied by some philologers. (Müller, *Etrusker*, vol. i. p. 100; Niebuhr, vol. i. not. 219, 244, p. 112; Abeken, *Mittel-Italien*, p. 126.) The inquiry as to the origin and derivation of these names must be deferred till we come to consider the national affinities of the Etruscans themselves. But one point of the highest importance has been preserved to us by Dionysius, namely, that the *native* name of the people was different from all these, and that they called themselves Rasena or Rasenna (Dionys. i. 30, where the editions have Ῥασένα, but the best MSS. give the form Ῥασέννα. See Schwegler, *Röm. Gesch.* vol. i. p. 255, note 8).

II. PHYSICAL GEOGRAPHY.

The general limits of Etruria have been already indicated: its more precise boundaries appear to have been generally recognised and clearly defined. On the NW. it was bounded by the river Macra (*Magra*), which separated it from Liguria: from the banks of that river to the sources of the Tiber, the main chain of the Apennines formed the boundary between Etruria and Cisalpine Gaul: while the Tiber from its source (or a point very near its source) to its mouth constituted the eastern limit of Etruria, dividing it first from Umbria, afterwards from the Sabines, and lastly from Latium. The length of the sea-coast from the mouth of the Macra to that of the Tiber is estimated by Pliny at 284 Roman miles, and by Strabo at 2500 stadia (312½ M. P.), both of which estimates exceed the truth: the actual distance is little more than 200 geographical or 250 Roman miles. The Maritime Itinerary gives 292 M. P., which, after allowing for the subdivision into a number of small distances, closely agrees with the statement of Pliny. (Plin. iii. 5. s. 8; Strab. v. p. 222; *Itin. Marit.* pp. 498—501.) The eastern frontier, formed by the course of the Tiber, has a length of about 180 R. miles, without taking account of the minor windings of the river: the greatest breadth of Etruria is justly estimated by Strabo (*l. c.*) at something less than half its length.

The region thus limited is extremely varied in its character, the tracts in the northern and north eastern districts, immediately on the slope of the high Apennines, being very mountainous; while the greater part of the central region between the Arnus and the Tiber is occupied by masses and groups of great

hills, many of them rugged, and attaining to a considerable elevation, though hardly any can be said to assume the rank of mountains, with the exception of the lofty *Monte Amiata*, which forms the centre of a volcanic group, in the very heart of the province, and rises to the height of 5794 feet above the level of the sea. There are, however, considerable level tracts of rich alluvial soil, the most important of which are those on the banks and at the mouth of the Arnus; the valley of the Clanis, which connects the basin of that river with that of the Tiber; and a spacious tract along the coast, between the hills of the interior and the sea, now known as the *Maremma*. This last district is of very various width and irregular extent, owing to the manner in which the hills encroach upon it and throw out bold arms or detached masses quite down to the coast, of which the most conspicuous are the promontory of Populonium or *Piombino*, and the Mons Argentarius. With these exceptions, the coast is for the most part low and flat, with extensive marshes in some parts, which render the whole tract of the *Maremma* noted for its unhealthiness, a character it seems to have already earned as early as the days of the younger Pliny, and which was sometimes unjustly extended to the whole of Etruria. (Plin. *Ep.* v. 6. § 2; Sidon. Apoll *Ep.* i. 5.)

It is very difficult to group the ranges of mountains or hills, with which almost the whole of Etruria is occupied, into any system of geographical arrangement. The two great valleys of the Arnus and the Tiber, the one having a general direction from E. to W., the other from N. to S., may be considered as forming the key to the geography of the country. Both these important streams rise in the central range of the Apennines, at no very great distance from one another, and follow for some space a nearly parallel direction, until the Arnus makes an abrupt turn near Arretium, and flows from thence towards the NW. till within a few miles of Florence, when it turns again, and pursues a course nearly due W. from thence to the sea. From the point where the Arnus thus suddenly turns off at Arretium, the remarkable trough-like depression or valley of the Clanis (the *Val di Chiana*) extends nearly S. as far as Clusium, from whence its waters find their way to the Tiber: thus separating the general mass of the Etrurian hills from those on the W. bank of the Tiber. So level is this singular valley that its stagnant waters may be led off at pleasure either into the Arnus on the N., or the Tiber on the S. [CLANIS.]

The portion of Etruria N. of the Arnus is occupied principally by the offshoots and ranges of the Apennines, the main chain of which forms its northern boundary, while it sends off towards the S. several minor ranges or arms, some of them however of elevation little inferior to the central chain. Of these the most conspicuous are the lofty and rugged group now called the *Alpi Apuani*, which separates the valley of the Macra from that of the Ausar (*Serchio*); a second, of inferior elevation, which separates the basin of *Lucca* from that of *Pistoja*, and sends out its ramifications to the banks of the Arnus between Pisa and Florence; thirdly, the range which separates the basin of *Pistoja* and valley of the *Ombrone* from that of the *Sieve*; fourthly, the much more lofty range, now called *Prato Magno*, which intervenes between the lower valley of the Arnus and its source, and causes the great bend of that river already noticed; and, lastly, the ridge called *Alpe della Catenaja*, which separates the upper valley of the Arnus from that of the Tiber. This last range (which rises in its highest point to 4590 feet) is continued by the great hills that extend at the back of Arretium and Cortona to the banks of the lake Trasimene and Perusia, and are thence prolonged, though on a still diminishing scale, along the W. bank of the Tiber. Between these successive ranges and the Arnus, and, in some cases, almost enclosed by the mountains, lie several basins or valleys, affording a considerable extent of fertile plain, for the most part so perfectly level as to be subject to frequent inundations, and (in ancient times especially) abounding in marshes and great pools or lakes of stagnant water. Such are, besides the plain at the mouth of the Arnus and Ausar, the basin in which was situated the city of Luca, the nearly similar valley of Pistoria, and that in which stands the city of *Florence*, the modern capital of Tuscany.

S. of the Arnus, almost the whole breadth of Etruria is occupied by a range of hills, or, more correctly speaking, by a broad tract of hilly country, extending from the valley of the Clanis to the sea, and from the banks of the Arnus to the mouth of the Umbro. The greater part of these hills, many of which rise to a height of not less than 2000 feet, and some even considerably exceed 3000, belong to the formation termed by geologists the Subapennine, and present comparatively easy declivities and gently sloping sides, forming a marked contrast to the bold abrupt forms of the central Apennines. At the same time, they may all be considered as dependent upon the same system; though much broken and diversified, their ranges preserve a general parallelism to the direction of the central chain of the Apennines from NW. to SE. But about 40 miles S. of *Siena* there rises a range of a totally different character, and almost wholly isolated from the hills to the N. of it, — the volcanic group of which *Monte Amiata* already noticed is the centre, and the *Monte Labro* and *Monte di Radicopani* form the two extremities; the general direction of this range is nearly from E. to W. A short distance S. of this again (nearly on the present confines of Tuscany and the Papal States) commences the great volcanic tract which occupies almost the whole of Southern Etruria, and is directly connected with that of Latium and the *Campagna di Roma*. This district includes the extinct volcanic craters of the *Lago di Bolsena* (Lacus Vulsiniensis), *Lago di Vico* (Lacus Ciminus), and *Lago di Bracciano* (Lacus Sabatinus), all of them now occupied by lakes, as well as the smaller *Lago di Martignano* (Lacus Alsictinus) and the now dry basin of *Baccano*. None of these volcanic foci of eruption have been in a state of activity within historical memory, though of very recent date in a geological sense. Nor do any of the volcanic hills of Southern Etruria rise to any considerable elevation, like the Alban hills of Latium; but the range or tract of which the Mons Ciminus is the centre, forms a kind of hilly barrier extending, from E. to W., from the Tiber nearly to the sea-coast, which bounds the view of the Roman Campagna, and was for a long time the limit of the Roman arms. [CIMINUS MONS.]

The low tract of the *Maremma* already noticed extends between the hills of the interior and the sea: it may be considered as commencing a little to the N. of the mouth of the Caecina, and extending from thence as far as Centumcellae (*Civita Vecchia*);

but it is far from presenting an unbroken and uniform plain, and rather forms a succession of basins between the uplands and the sea, separated by intervening ridges of hills, which descend in places quite to the sea-coast, and constitute the natural limits of these separate districts, now known as the *Maremma di Volterra*, *Maremma di Grosseto*, &c. Of these, the last-mentioned, which may be called the basin of the *Ombrone* (Umbro), and extends along the coast from the promontory of Populonium to the Mons Argentarius, is the most extensive. S. of Centumcellae the hills descend quite to the sea-coast, and continue to skirt it at a very short distance, till within a few miles of the Tiber.

The minor rivers of Etruria may be readily classed into three groups: 1. those which fall into the Arnus; 2. those which fall into the Tiber; and 3. those which flow direct to the sea. 1. Of the first group it is singular that not a single ancient name has been preserved to us, except that of the AUSER or *Serchio*, which now no longer joins the Arnus, but pursues its own course to the sea. The most important tributaries of the *Arno* are the *Sieve* and the *Ombrone* from the N., and the *Elsa* and *Era* on the S. side. 2. Of the affluents of the Tiber, the only considerable one which joins it from the W. or Etruscan bank is the CLANIS already mentioned, together with its tributary the Pallia or *Paglia* (Pallia, *Tab. Peut.*): several small streams, however, bring down to it the waters of the Etruscan hills; but the only one of which the ancient name is recorded is the CREMERA, between Rome and Veii. 3. The rivers which discharge their waters directly into the sea are more numerous and considerable. Proceeding S. from the mouth of the Arnus, we find: the CAECINA (*Cecina*), which watered the territory of Volaterrae; the UMBRO (*Ombrone*), which flowed beneath the walls of Rusellae, and is the most considerable stream between the Arno and the Tiber; the Albinia (*Albegna*), between Portus Telamonis and Cosa; the Armina or Armenta (Arnine, Armine, *Itin. Marit.* p. 499; Armenta, *Tab. Peut.*), now called the *Fiora*, which constitutes the modern boundary between Tuscany and the Roman States; the Marta (*Tab. Peut.*; *Itin. Ant.* p. 291), still called *Marta*, which carries off the waters of the lake of *Bolsena*, and flows beneath the walls of Tarquinii; and the MINIO (*Mignone*), a small stream, but better known than the preceding from the mention of its name in Virgil (*Aen.* x. 183). Besides these, the name of the Ossa (*Osa*), a very small stream between the Albinia and Portus Telamonis, is recorded by Ptolemy (iii. 1. § 4); and that of the Alma (*Alma*), also a trifling rivulet, between the Umbro and Populonium, by the Maritime Itinerary (p. 500). N. of the Arnus, the Aventia and Vesidia of the Tabula may probably be identified with the river *Lavenza*, which descends from the mountains of *Carrara;* and the *Versiglia*, which flows from those of *Serravezza*.

Of the lakes of Etruria the most considerable is the LACUS TRASIMENUS, still called the *Lago Trasimeno* or *Lago di Perugia*, about 36 miles in circumference, and celebrated for the great victory of Hannibal over the Romans in B.C. 217; next to this in magnitude is the LACUS VOLSINIENSIS, or *Lago di Bolsena*, so called from the city of the same name, a crater-formed lake, as well as the more southerly LACUS SABATINUS (*Lago di Bracciano*) and the much smaller LACUS CIMINUS (*Lago di Vico*) and LACUS ALSIETINUS (*Lago di Martignano*). The LAKE OF CLUSIUM, on the contrary (*Lago di Chiusi*), was a mere stagnant accumulation of water connected with the river Clanis: and the APRILIS LACUS, or Prelius Lacus of Cicero, was a kind of lagoon or marshy pool on the sea-coast, not far from the mouth of the Umbro, now called the *Paduli di Castiglione*. Several similar lagoons or marshy lakes exist at different points along the coast of Etruria, of which the ancient names have not been preserved; as well as on the N. side of the Arnus, where the *Paduli di Fucecchio* and *Lago di Bientina* are evidently only the remains of far more extensive waters and marshes, which previously occupied this part of Etruria. [ARNUS.] The Vadimonian Lake (LACUS VADIMONIS), noted as the scene of two successive defeats of the Etruscans by the Romans, is a mere sulphureous pool of very small extent, now called the *Laghetto* or *Lago di Bassano*, a few miles from the town of *Orte* (HORTA) and close to the Tiber.

The most prominent physical features of the *coast* of Etruria are the promontory of POPULONIUM, and that of the MONS ARGENTARIUS, which seems to have been better known to the Romans by the name of Promontorium Cosanum: the latter is a remarkable, detached, and almost insulated mountain, joined to the mainland only by two narrow strips of sand. Several small islands are situated off the coast of Etruria, and between that country and Corsica. Of these by far the most considerable is ILVA, called by the Greeks Aethalia, celebrated for its iron mines, and separated from the promontory of Populonium by a strait only six miles wide. S. of Ilva lay the small low island of PLANASIA (*Pianosa*) and the still smaller OGLASA (*Monte Cristo*). Off the promontory of Cosa were IGILIUM (*Giglio*) and DIANIUM (*Giannuti*): and N. of Ilva, between the mouth of the Arnus and Corsica, lay URGO or Gorgon (*Gorgona*) and Capraria (*Capraja*). Besides these Pliny mentions several smaller islets, probably mere rocks, of which Maenaria may probably be identified with *Meloria*, immediately opposite to the port of *Livorno;* Columbaria *may* be *Palmajola*, in the straits between Ilva and the mainland; and Barpana and Venaria may be the small islets off the Portus Telamonis now called the *Formiche di Grosseto*. (Plin. iii. 6. s. 12.) But these last identifications are merely conjectural.

III. ORIGIN AND NATIONAL AFFINITIES OF THE ETRUSCANS.

There are few problems that have in modern times more exercised the ingenuity of scholars and philologers than that of the origin of the Etruscan nation, and few upon which opinions still remain more divided. Without attempting to notice all the various hypotheses that have been advanced and derivations that have been found for this remarkable people, it will be necessary to review the most important of them, beginning with the statements found in ancient authors on the subject.

The opinion generally received in ancient times, and almost universally adopted by Roman writers, ascribed to the Etruscans a *Lydian* origin. The earliest authority for this statement is that of Herodotus, who relates it according to the tradition reported to him by the Lydians. Their account (mixed up with many fabulous and legendary details) was, in substance, that a certain Atys, king of Lydia, had two sons, Lydus and Tyrsenus, the one of whom had remained in Lydia and given name to

the people of that country; the other, having been compelled by a great famine to emigrate with one-half of the existing population of Lydia, had ultimately settled in the land of the Umbrians, and given to his people the name of Tyrseni. (Herod. i. 94.) The internal improbabilities of this narrative are obvious: and the fables with which it is mingled, as well as the introduction of the eponymous heroes Lydus and Tyrrhenus, impart to it a strongly mythical character. But the same tradition appears to have been related with some little variation by several other authors (Dionys. i. 28), among the rest by Timaeus (*Fr.* 19. ed. Didot), and is alluded to by Lycophron (*Alex.* 1351). It was also adopted by many Greek writers of later times, and, as already mentioned, became almost universally received among the Romans. (Scymn. Ch. 220; Strab. v. p. 219; Plut. *Rom.* 2; a long list of Roman authorities is collected by Dennis, *Etruria*, vol. i. p. xxxii.) We have, unfortunately, no means of knowing whether it existed as a national tradition among the Etruscans themselves, or, as appears more probable, was merely adopted by them, in the same manner as the legend of Aeneas and the Trojan colony was by the Romans.

But this view of the subject seems to have been far less generally received at the earliest period of historical research. We learn from Dionysius (i. 28) that Xanthus the Lydian historian (an elder contemporary of Herodotus) made no mention of this colonisation of Tyrrhenia, though he mentioned other less important settlements of the Lydians; and that he represented the two sons of Atys as being named Lydus and *Torrhebus*, and giving name to the two tribes of Lydians and *Torrhebians:* this latter name is known to us from other sources as that of an Asiatic people bordering upon the Lydians. (Steph. Byz. *s. v.* Τορρηβός). Hence it seems very probable that the legend related to Herodotus had confounded the two nations of Tyrrhenians and Torrhebians. On the other hand, Hellanicus represented the Tyrrhenians of Etruria as *Pelasgians*, whom he described, according to the custom of the logographers, as migrating direct from Thessaly to Italy, where they first founded the city of Spina near the mouth of the Padus, and thence pressed through the interior of the peninsula, and established themselves in Tyrrhenia. (Hellan. *Fr.* 1. ed. Didot; Dionys. i. 28.) Dionysius himself, the only author of a later period who rejects the Lydian tradition, discards the view of Hellanicus also, and says that the Etruscans in his day were wholly distinct from every other people in their language, as well as manners, customs, and religious rites; hence he inclines to consider them as an aboriginal or autochthonous people. (*Id.* i. 30).

Among modern authors, many have adopted the Lydian tradition as an historical fact, and have sought to support it by pointing out analogies and resemblances in the manners, religious rites, and architecture of the Etruscans with those of the Lydians and other nations of Asia Minor. (Dennis, *Etruria*, vol. i. p. xxxvii. &c.; Newman, *Regal Rome*, p. 100.) Others, while they reject this tradition, but admit the strongly oriental character of many of the customs and institutions of the Etruscans, have derived them from the Phoenicians, Egyptians, and other oriental nations: while Micali, a modern Tuscan writer of celebrity, is content to acquiesce in the opinion of Dionysius, that the Etruscans were an indigenous people of Italy, at the same time that he regards many of their arts and institutions as imported directly from Egypt. (Micali, *Antichi Popoli Italiani*, vol. i. c. 7. pp. 99, 140, &c.)

Niebuhr was the first to point out that the population of Etruria was of a mixed character, and that in all inquiries into its origin we must discriminate between two different races, which existed simultaneously in the country, during the period when we have any knowledge of its history. Of these two elements the one he regards as Pelasgic, composing the bulk of the population, especially of the more southern parts of Etruria, but existing in a state of serfdom or vassalage, having been conquered by a nation of invaders from the north, descending in the last instance from the mountains of Rhaetia. It is this conquering race whom he considers as the true Rasena, or Etruscans properly so called, while the name of Tyrrhenians (applied by the Greeks to the whole people) belonged of right only to the Pelasgic or subject population. The Rasena thus formed a dominant aristocracy, which however gradually became mingled into one people with the subject race, in the same manner as the Normans and Saxons in England. (Niebuhr, vol. i. pp. 109—142, *Lect. on Rom. Hist.* vol. i. pp. 57—67.)

The theory of C. O. Müller is in fact nothing more than an ingenious modification of the Lydian tradition of Herodotus, so contrived as to adapt it to the fact (which he recognises in common with Niebuhr and most recent inquirers) of the Pelasgic origin of a large part of the population of Etruria. He considers the Tyrrhenians of Italy to be identical with those Tyrrhenian Pelasgians (Τυρσηνοὶ Πελασγοί, Soph. *Fr.* 256), the existence of which as a sea-faring people on the islands and coasts of the Aegaean Sea is a fact attested by many ancient authors. [PELASGI.] A body of these Pelasgians he supposes to have been settled on the coast of Lydia, where they obtained the name of Tyrrhenians from a city of the name of Tyrrha; and that, being compelled at a later period to emigrate from thence, they repaired to the coasts of Etruria, where they founded the cities of Tarquinii and Agylla, and gradually acquired so much influence as to impart to the whole people whom they found there the name of Tyrrhenians. This previously existing population he supposes to have been the Rasena or Etruscans proper, and inclines with Niebuhr to derive them from the mountains of Rhaetia. (Müller, *Etrusker*, vol. i. *Einleit.* c. 2, *Hetrurien, in Kl. Schr.* vol. i. pp. 136—140.)

Of the more recent theories, that of Lepsius (*Tyrrhenische Pelasger in Etrurien*, 8vo. Leipzig, 1842) deserves especial mention. He discards altogether the hypothesis of a separate nation of Rasena, and considers the Etruscans as resulting from a mixture of the invading Pelasgians with the Umbrians, who, according to several authorities, previously occupied the country afterwards known as Etruria.

To the above speculations must be added the results of recent inquiries into the *language* of the ancient Etruscans. Unfortunately, the materials which exist for these are so scanty as to afford a very insecure basis for ethnological conclusions. The greater part of the inscriptions extant are merely sepulchral, and contain therefore but a very few words, besides proper names. A single inscription preserved at *Perugia* extends to 46 lines: but has hitherto defied all attempts at its interpretation. But the researches of recent philologers, and a careful comparison of this Perugian inscription with a few shorter ones, which have been discovered in the more southerly parts of Etruria, seem to justify the fol-

lowing conclusions: — 1. The Etruscan or Tuscan language is one radically different from the other languages of Italy by which it was surrounded. This is in accordance with the express statement of Dionysius (i. 30) and with several passages of the Roman writers which represent the Tuscan as a language wholly unintelligible to the Latins. (Liv. ix. 36; Gell. xi. 7). 2. A comparison with the Eugubine Tables proves it to be quite distinct from the Umbrian, its nearest neighbour, though they would seem to have had words and inflections common to the two, a circumstance which would naturally arise from their proximity, and still more probably from the subjection of a part of the Umbrians by the Etruscans. 3. It contains unquestionably a Greek or Pelasgic element: this is found so much more strongly in some inscriptions, discovered in the southern part of Etruria, as to raise a suspicion that they are almost purely Pelasgic. (Lepsius, *Tyrrhen. Pelasger*, pp. 40—43; Donaldson, *Varronianus*, pp. 166—170.) This, however, does not apply to the Perugian inscription, or others found in the more central and northern parts of the country. The existence of this Pelasgian or old Greek element explains the partial success of Lanzi in his elaborate attempt to interpret the Etruscan language by means of Greek analogies (*Saggio di Lingua Etrusca*, 3 vols. 8vo. Rome, 1789), while its total failure as a whole proves the main ingredients of the language to be radically different. 4. Besides these two partial elements, one akin to the Umbrian, the other to the old Greek, there exists a third, probably the most important of all, wholly distinct from both, and which may be called the Rasenic element, being in all probability the language of the Etruscans properly so called. Of this we can only assert, in the present state of our knowledge, that although distinct from the Pelasgic or Greek family of languages on the one hand, and from that of the Umbrians, Oscans, and Latins on the other, there are good reasons for believing it to belong to the same great family, or to the class of languages commonly known as the Indo-Teutonic. Some arguments have lately been brought forward to show that its nearest affinities are with the Gothic, or Scandinavian group. (Klenze, *Philol. Abhandl.* p. 64, note; Schwegler, *Röm. Gesch.* vol. 1. pp.172, 268; Donaldson, *Varronianus*, chap. v.)

The result of these philological inquiries is in accordance with, and strongly confirms, that of the latest historical researches. Both alike point to the inference that the Etruscans were a mixed people: that the bulk of the population, at least of Southern Etruria, was a Pelasgic race, closely akin to the people who formed the substratum of the population of Latium, as well as of Southern Italy, but who appear to have been the most cultivated and civilised of the early Italian races, and to have preserved most strongly many peculiarities of their original character and institutions; but that this people had been subdued, before the period when they first figure in Roman history, by a more warlike race from the north, who established their dominion over the previously existing population, whom they reduced to the condition of serfs (πενεσται, Dionys. ix. 5.): the conquerors retained their own language, though not without modification, as well as their sacerdotal and aristocratic institutions, while they received to a great extent the arts and civilisation of the people whom they conquered. A third element which must not be overlooked in the population of Etruria, was that of the Umbrians, who, according to the general tradition of antiquity, were the original inhabitants of this part of Italy. (Plin. iii. 5. s. 8, 14. s. 19; Müller, *Etrusker*, vol. i. p. 102.) They are generally represented as subdued or expelled by the Etruscans, but Pliny says that they were driven out by the Pelasgians, and these in their turn by the Etruscans. In either case it cannot be supposed that the whole people would be expelled or exterminated, and there is reason to believe that the subject Umbrians always continued to form a considerable ingredient in the population of Northern Etruria, as the Pelasgians did in that of the south. (Lepsius, *l. c.* pp. 27—34; Schwegler *l. c.* p. 270.)

The period, as well as the circumstances, of these successive migrations and conquests are wholly unknown to us. Hellanicus (*ap. Dionys.* i. 28) represented the Pelasgians as invading the land afterwards called Tyrrhenia from the north, and establishing the seat of their power first at Croton (Cortona), from whence they gradually spread themselves over the whole country. There can be no doubt that the same course was pursued by the later invaders, the Rasena: but it is remarkable, on the other hand, that there exist numerous traditions and mythical legends which point in the opposite direction, and represent the S. of Etruria, especially Tarquinii, as the centre from whence emanated all that was peculiar in the Etruscan rites, customs, and institutions. (Müller, *Etrusker*, vol. i. pp. 72, 73.) The name of Tarquinii itself, and that of its eponymous hero Tarchon, who was represented in some accounts as the founder of all the twelve cities of Etruria (Strab. v. p. 219), present strong analogies with those of the Tyrrhenians and Tyrsenus. These traditions have been frequently used as arguments to show that the Pelasgian or Tyrrhenian population came by sea and settled first on the coast, from whence it extended its influence over the interior. But we know that the Tyrrhenians were at an early period spread over the coasts of Latium and Campania as well as those of Etruria: and there is nothing improbable in the fact that their settlements in a maritime and fertile tract were really the first to attain to that degree of culture and civilisation which ultimately became common to all the Etruscan cities. The difference of these two classes of traditions, pointing to two different quarters for the birth-place of the Etruscan polity and their national institutions, may perhaps proceed from the combination of two national elements in the people who were collectively designated by the Romans as Etruscans or Tuscans, and by the Greeks as Tyrrhenians. But it is impossible for us to separate, in the historical traditions or legends that have been transmitted to us, the part that refers to the Etruscans properly so called, from what belongs to the Tyrrhenians or Pelasgic races. The same difficulty continually presents itself with regard to their sacred rites, political institutions, arts, manners, and customs.

The connection of the Rasena or conquering race of Etruscans with the Rhaetians, admitted both by Niebuhr and Müller, rests principally on the authority of a passage of Livy, in which he tells us that the Alpine nations, particularly the Rhaetians, were undoubtedly of Tuscan origin, but had lost their ancient civilisation from the nature of the country, retaining only the language, and even that much corrupted. (Liv. v. 33.) The same thing is told us by Pliny and

Justin, who add that the Rhaetians were driven into the mountains when the plains of Northern Italy were invaded by the Gauls. (Plin. iii. 20. s. 24; Justin, xx. 5.) A modern author has attempted (not altogether without success) to prove the same thing by an examination of the local names and appellations still existing in the country of the Grisons and the Tyrol (Steub, *über die Urbewohner Rhätiens*, Munich, 1843), and several philologers consider the names Rhaeti and Rasena to be connected with one another. Assuming the correctness of Livy's statement, on a point with which, as a native of Patavium, he was likely to be well acquainted, that the Rhaetians really spoke a language closely akin to that of the Etruscans, it is certainly most probable that the relation between them was the converse of that stated by Pliny and Justin, and that it was from the Rhaetian Alps that the Rasenic invaders descended into the plains of Northern Italy, and from thence advanced into Etruria properly so called. This hypothesis, however, by no means renders it necessary to assume that the Rhaetian Alps were their *original* abode, but merely that it was from thence they first invaded Italy.

IV. History of Etruria.

1. *Early history and greatness of Etruria.* — Our knowledge of the history of Etruria, during the most flourishing period of the nation, is extremely vague and imperfect; and the few facts recorded to us, with the exception of the wars of the Etruscans with the Romans, are almost wholly devoid of chronological data. But the general fact of their early power and prosperity, and the extent of their empire, is sufficiently attested. Livy tells us that before the period of the Roman dominion the power of the Etruscans was widely extended both by sea and land: the amount of their influence both on the shores of the Upper and Lower Sea was sufficiently proved by the name of Tyrrhenian or Tuscan given to the latter, and that of Adriatic to the former, from the Tuscan colony of Adria. They are said to have formed two principal states or communities, the one on the S. side of the Apennines, in the country commonly known as Etruria, the other on the N. of those mountains, in the great plains of the Padus, where we are told that they extended their dominion quite to the foot of the Alps, with the exception of the territory of the Veneti. (Liv. v. 33; Strab. v. p. 219; Schol. Veron. *ad Aen.* x. 200.) Each of these states was composed of twelve principal cities, of which those on the N. of the Apennines were regarded as colonies of those in Etruria Proper (Liv. *l. c.*), though others considered them as Pelasgian settlements, emanating from the city of Spina near the mouth of the Padus (Diod. xiv. 113).

The existence of this Etruscan state in the country N. of the Apennines may be regarded as an unquestionable historical fact, though we are wholly unable to determine the period of its establishment. But those writers who adopt the hypothesis of the Rhaetian or northern origin of the Etruscans naturally regard these settlements in the plains of the Padus as *prior* in date, instead of subsequent, to their establishment S. of the Apennines. The Etruscans maintained their ground in this part of Italy until they were expelled or subdued by the invading Gauls; but though their national existence was at this time broken up, it is probable that in many other cities of Cisalpine Gaul, as we are told was the case in Mantua (Virg. *Aen.* x. 203; Plin. iii. 19. s. 23), they continued to form no inconsiderable part of the population. The only cities, however, in this part of Italy which are expressly noticed as of Tuscan origin are Felsinâ, afterwards called Bononia, Mantua, and Adria, to which may doubtless be added Melpum, a city known to us only by the notice of its destruction. Ravenna also appears to have been at one period a Tuscan city. (For a further account of the Etruscan settlements in this part of Italy and the history of their subjugation, see Gallia Cisalpina). There is reason to believe that during the same period the Etruscans had extended their power along the coast of the Adriatic, and occupied, or at least established colonies in, the country afterwards known as Picenum. Here the second Adria was in all probability a Tuscan foundation, as well as the city of the same name already mentioned [Adria]: both the name and origin of Cupra in the same region, are designated as Etruscan. (Strab. v. p. 241; Müller, *Etrusker*, vol. i. p. 145).

At the same time as the Etruscan power was thus extended towards the N. so far beyond the limits within which it was afterwards confined, it appears to have attained a corresponding extension on the S. also. Though our accounts of the Etruscan settlements in this direction are still more vague and indefinite than those of their dominion in the north, there is no doubt of the fact that they had at one period established themselves in the possession of the greater part of Campania, where, according to Strabo, they founded twelve cities in imitation of the confederacy of Central Etruria. (Strab. v. p. 242; Pol. ii. 17.) It is impossible to determine the names of all these: Capua, called by the Tuscans Vulturnum, was the chief among them: Nola also is referred by several authorities to a Tuscan origin, and several minor cities in the plain must certainly have been occupied, if not founded, by the same people. To these may be probably added the maritime towns of Pompeii, Herculaneum, Surrentum, Marcina, and Salernum, all of which are described as at one period or other Tyrrhenian towns, though it is possible that in some of these cases Tyrrhenian *Pelasgians*, rather than Etruscans, are meant. (Strab. v. pp. 247, 251; Müller, *Etr.* vol. i. p. 168.) The Etruscans, however, never made themselves masters of the Greek cities on the coast, Cumae, Dicaearchia, and Neapolis, though they continued to occupy the rest of Campania till they were themselves reduced by the Samnites. [Campania.] The period of their first establishment in these countries is very uncertain, the date assigned by Cato for the foundation or occupation of Capua differing by more than three centuries from that adopted by other authors. (Vell. Pat. i. 7.) Müller follows the view of these last authorities, and refers the first establishment of the Etruscans in Campania to a period as early as B.C. 800: Niebuhr, on the contrary, adopts the statement of Cato, and considers the Etruscan dominion in Campania as of brief duration and belonging to a comparatively late period. The account preserved by Dionysius of the attack on Cumae, about B.C. 525, by a great host of barbarians, among whom the Tyrrhenians (Etruscans) took the lead, may in this case be regarded as marking the first appearance of that people in this part of Italy. (Dionys. vii. 3; Niebuhr, vol. i. pp. 75, 76; Müller, *Etr.* vol. i. pp. 166, 172.)

Contemporary with this great extension of the Etruscan power by land was the period of their maritime and naval supremacy. Numerous state-

ments, of Greek writers especially, attest that the Tyrrhenians were a bold and hardy race of navigators; they are repeatedly mentioned as fitting out great fleets for naval warfare, and exercising an almost undisputed supremacy over the sea which derived from them the name of the Tyrrhenian; while their expeditions on a smaller scale had earned for them a disgraceful reputation as pirates and corsairs. It is probable that these habits were principally confined to the southern Etrurians: the circumstance that Populonium was the only maritime city further north renders it evident that the inhabitants of Central and Northern Etruria were not a seafaring people; and there is great reason to suppose that these maritime enterprises originated with the Pelasgian population of the south, and continued to be carried on almost exclusively by them, not only after they had fallen under the dominion of the Rasena, but even after their subjection to the power of Rome. The circumstance that these piratical habits were common to the Tyrrheno-Pelasgians of the islands and shores of the Aegaean Sea is an argument in favour of this hypothesis; we find also the inhabitants of Antium, who appear to have been of Tyrrhenian or Pelasgic origin, and closely connected with the people of Southern Etruria [ANTIUM], following the same course, and addicted both to navigation and piracy. (Strab. v. p. 232.)

The few chronological data we possess prove the naval power of the Etruscans to have extended over a period of considerable duration. The first distinct mention of it that occurs in history is in B. C. 538, on occasion of the Phocaean settlement at Alalia in Corsica, when the Tyrrhenians and Carthaginians combined their fleets to expel the new colonists, each nation furnishing 60 ships of war; and though defeated in the sea-fight that ensued, they attained their object of compelling the Phocaeans to quit the island. (Herod. i. 166, 167.) Their piratical expeditions must, however, date from a much earlier period. We find them engaged in maritime hostilities with the Greek colonists of Lipara soon after its foundation (Diod. v. 9; Strab. vi. p. 275; Paus. x. 11. § 3, 16. § 4); and Ephorus even represented the fear of the Tyrrhenian pirates as one of the causes which long prevented the Greeks from establishing colonies in Sicily (Ephor. *ap. Strab.* vi. p. 410). At a later period we find Anaxilas, despot of Rhegium (B. C. 494—476), fortifying the Scyllaean rock for the purpose of preventing the Tyrrhenian pirates from passing the Straits of Messana. (Strab. vi. p. 257.) Shortly after this, the maritime power of the Etruscans sustained a severe blow by the great defeat of their fleet, combined with that of the Carthaginians, by Hieron of Syracuse, who had been called in by the Cumaeans to their assistance, B. C. 474. (Diod. xi. 51; Pind. *Pyth.* i. 136—146.) The union on this occasion, as well as in the expedition against Alalia, of the Etruscan and Carthaginian fleets seems to show that these people were in general on friendly terms, and we learn from an incidental notice that they had concluded treaties regulating their respective navigation and commerce in the Mediterranean (Arist. *Pol.* iii. 5), while they evidently regarded the Greeks as interlopers and common enemies. But after the great battle of Cumae, we hear no more of any direct enterprises on the part of the Etruscans against the Greek cities: the growing power of those of Sicily in particular enabled them, on the contrary, to assume the offensive, and in B. C. 453 the Syracusan commanders Phayllus and Apelles, sent out to punish the Tyrrhenian piracies, ravaged the coasts of Etruria, together with those of Corsica and Aethalia (Ilva), with a fleet of 60 ships, and even made themselves masters of the latter island, from which they carried off a great booty. (Diod. xi. 88.) Hence it was evidently the hostile feeling of the Tyrrhenians against Syracuse which led them to send an auxiliary force to the support of the Athenians in Sicily, B. C. 414. (Thuc. vi. 89, 105, vii. 53.) Thirty years later, B. C. 384, Dionysius of Syracuse made an expedition in person to the coast of Etruria, where he landed in the territory of Caere, and plundered the wealthy temple of Pyrgi. (Diod. xv. 14; Pseud.-Arist. *Oeconom.* ii 21.) By this time it is clear that the great power of the Etruscans was much broken: the Gauls had expelled them from the fertile plains on the banks of the Padus; the Samnites had conquered their Campanian settlements; and the cities of Central Etruria were engaged in an arduous struggle against the Gauls in the N., and the Romans in the S. The capture of Veii by the latter, which took place in the same year with the fall of Melpum, N. of the Apennines, B. C. 396, may be regarded as the turning-point of Etruscan history. The Tyrrhenians are, however, still mentioned by Greek historians as sending auxiliaries or mercenaries, sometimes to the assistance of the Carthaginians, at others to that of Agathocles, as late as B. C. 307. (Diod. xix. 106, xx. 61, 64.)

During the period of the naval greatness of the Etruscans, they appear to have founded colonies in the island of Corsica, and exercised a kind of sovereignty over it: this was probably established after the expulsion of the Phocaean colonists, and we find the island still mentioned near a century later, B. C. 453, as in a state of dependence on the Etruscans. (Diod. xi. 88.) With the decline of their naval power it appears to have passed into the hands of the Carthaginians. The evidences of their having extended similar settlements to Sardinia, are far from satisfactory. (Müller, *Etrusker*, vol. i. p. 183.) Strabo, indeed, speaks distinctly of that island having been occupied by *Tyrrhenians* prior to the arrival of Iolaus and the sons of Hercules (Strab. v. p. 225); but it is very doubtful whether any historical value can be attached to a statement referring to so mythical a period, and we have no account of Etruscan or Tyrrhenian colonies, properly so called, in the island. The attempts that have been made to prove the existence of an Etruscan population in Sardinia from the works of art discovered there, especially the curious architectural monuments called *Nuraghe*, will be considered elsewhere. [SARDINIA.]

2. *Wars and relations of Etruria with Rome.* — The history which has been preserved to us of Etruria in its relations to Rome, has much more appearance of a chronological and authentic character than the scattered notices above referred to: but, unfortunately, a critical examination proves it to be almost equally fragmentary and uncertain, for the three first centuries after the foundation of the city. The Roman traditions concur in representing the Etruscan state (i. e. the twelve cities of Etruria Proper) as already constituted and powerful at the period of the foundation of Rome; nor is there any reason to question this fact, though there appear good grounds for supposing that it did not attain to its greatest power till a later

period. The position of Rome itself on the immediate frontiers of Latium and Etruria, necessarily brought it into relations with the Etruscans from the very earliest periods of its existence. Accordingly we find Romulus himself, as well as Tullus Hostilius, represented as engaged in wars with the Veientines, the Etruscan state whose territory immediately bordered on that of the rising city. (Liv. i. 15, 27, 30.) That a part of the population of Rome itself was of Tuscan origin, is attested by numerous ancient traditions, though the time and circumstances of its settlement are very variously reported. In the legendary history of Rome we find three principal points of contact with Etruria: 1. the traditions connected with Caeles Vibenna, an Etruscan chieftain, who is represented as a kind of *Condottiere*, or leader of an independent mercenary force, and not the chief magistrate or general of any of the Etruscan states. He is said to have brought with him a considerable body of Tuscan troops, who settled on the Caelian hill (Mons Caelius), which derived its name from their leader. (Tac. *Ann.* iv. 65; Fest. v. *Caelius*, p. 44, v. *Tuscus Vicus*, p. 355; Varr. *L.L.* v. 8. § 46; Dionys. ii. 36.) But the period to which this immigration is referred was very uncertain, some assigning it to the reign of Tarquinius Priscus, which view appears to have been confirmed by the Tuscan annals cited by the emperor Claudius (See Orelli, *Exc. ad Tac. Ann.* xi.), others carrying it back to the age of Romulus. Tacitus himself considers the settlement of the Tuscans in the quarter which bore from them the name of Tuscus Vicus as connected with the same event, though Livy and other writers referred this to the expedition of Porsena. (Liv. ii. 14; Fest. p. 355.) 2. The traditions which point to the establishment of an Etruscan dynasty at Rome under the later kings, represented in the narrative of the received history by the reigns of the two Tarquins. It is remarkable that Dionysius represents the elder Tarquin as establishing his supremacy over the whole of Etruria, after a war of nine years' duration (iii. 59—62), an event of which neither Livy nor Cicero takes the least notice, and which cannot be regarded as historically true; but it seems probable that the rule of the Tarquins in Rome was coincident with the period of the greatest power of the Etruscans, and that at this time their sway was extended not only over Rome itself, but a great part of Latium also. (Niebuhr, vol. i. pp. 383—387.) Müller, with much plausibility, regards the dominion of the Tarquinii at Rome as representing a period during which the *city* of Tarquinii had established its power over the other cities of Etruria, as well as over Rome itself. (Müller, *Etrusker*, vol. i. pp. 118—122; *Biogr. Dict.* art. TARQUINIUS.) To the period of Etruscan domination at Rome were assigned, by universal tradition, the great architectural works of the Cloaca Maxima and the Capitol, which strongly resembled similar constructions in the cities of Etruria itself. 3. A little later than the period of the Tarquins occurs a somewhat similar extension of the Etruscan power under Porsena, king of Clusium. There is, perhaps, no part of the Roman history that bears more manifest marks of falsification than the legends connected with this prince: traditions of a wholly different kind were, however, preserved, which leave little doubt that he really conquered Rome (*Biogr. Dict.* art. PORSENA), and extended his dominion over a great part of Latium, until his conquests were checked at Aricia, by the assistance of the Greeks of Cumae. This last fact, which is placed by Dionysius about 506 B.C., and was, in all probability, derived from Cumaean chronicles, may fairly be depended upon as historical. (Dionys. vii. 5.)

From the brief notices above given (the fuller development of which in this place is obviously impossible), it may fairly be inferred that the period when the Etruscan power was at its height, so far as we gather from the Roman traditions, was during the second and third centuries of the city, or about 620 — 500 B.C.; a result which accords with that previously derived from other sources. It is remarkable that after the war with Porsena, the Roman annals make no mention of hostilities with the Etruscans for above twenty years; and when they recommence (B.C. 483), it is the Veientines alone with whom the arms of the republic were engaged. The petty wars between these two neighbouring states were continued, with occasional interruptions and intervals of repose, for a period of nearly ninety years, till they ended in the capture of Veii by Camillus, B.C. 396. Throughout this whole interval we do not find that the other cities of Etruria lent any efficient aid to the Veientines: even when the progress of the Roman arms threatened Veii with destruction, the efforts of the Capenates and Faliscans to induce the other cities of the league to espouse its cause proved unavailing, while they served only to draw down the vengeance of Rome upon themselves.

The fall of Veii was the first step that marked the decline of the Etruscan power in their central dominions, or Etruria Proper. Previous to that event they had already lost the greater part, if not the whole, of their possessions N. of the Apennines: the fall of Melpum, one of the most considerable of their cities N. of the Padus, is said to have been precisely contemporary with that of Veii. (Corn. Nep. *ap. Plin.* iii. 17. s. 21.) Before the same period, also, the Samnites had wrested from them the fertile plains of Campania, and the central Etrurians now stood alone, assailed by the growing power of Rome in the S., and exposed to the formidable attacks of the Gauls on their northern frontier. It was probably the danger that threatened them from this quarter that prevented their cities from combining to resist the Roman arms, which in consequence continued to gain ground in Southern Etruria. Capena appears to have fallen into the power of Rome shortly after Veii: Falerii, though not conquered, was compelled to sue for peace; and already before the Gaulish invasion, B.C. 390, the Romans had carried their arms as far as Sutrium, and engaged in hostilities with the powerful city of Volsinii. (Diod. xiv. 98, 109; Liv. v. 24, 27, 31, 32.) Even that great calamity only interrupted their progress for a short time: we find them, within a few years after, not only carrying on warfare against the Etruscans in the neighbourhood of Sutrium and Nepete, but establishing Roman colonies in both those towns, which became in consequence an important barrier against the power of Etruria. In the subsequent wars it was sometimes Tarquinii, at others Volsinii (at this time one of the most powerful cities of Central Etruria), that took the lead; but in B.C. 351 the Tarquinians concluded a truce for forty years, which appears to have been observed on both sides: and it was not till 311 that mention again occurs of an Etruscan war. The next year (B.C. 310) was rendered remarkable by the passage of the Ciminian

forest, a barrier never before crossed by the Roman arms. On this occasion the whole Etruscan confederacy appears to have really taken part in the war: the Perusians, Cortonans, and Arretians are mentioned as concluding a separate peace, and the combined forces of the other Etruscans were defeated by Q. Fabius Maximus at the Vadimonian lake,— a battle which, according to Livy (ix. 39), gave the first decisive blow to the ancient power of Etruria. The constant progress of the Roman arms is marked in subsequent campaigns by the circumstance that their victories were gained near Rusellae and Volaterrae (Liv. x. 4, 13),— places far in advance of the scene of their earlier wars. A brief period now ensued, during which the Etruscans and Umbrians united with the Samnites, and even with their ancient enemies the Senonian Gauls, against the rising power of Rome; but their efforts were unsuccessful, and two great defeats of the combined forces— the one at Sentinum in Umbria, B. C. 295, the other, in B. C. 283, at the same Vadimonian lake which had already proved disastrous to the Etruscans— appear to have finally crushed the power of that people. They were, however, still in arms two years later, when the consul Q. Marcius Philippus celebrated a triumph for the last time over the Etruscans in general (de Etrusceis, Fast. Triumph.). The following year, B. C. 281, the Volsinians and Volcientes alone protracted the now hopeless contest, and were at length reduced to submission. (Fast. Triumph. *l. c.*) But as late as B. C. 265, the Volsinians were once more in arms; and though this contest appears to have arisen out of civil disturbances in their own city, the statement of Florus (i. 21) is probably correct, that they were the last of all the Italian states that accepted the supremacy of Rome. This event occurred the very year before the commencement of the First Punic War. The causes that led the Faliscans, who had so long been friendly to Rome, to engage in a hopeless contest with that formidable power, after the close of the war with Carthage, B. C. 241, are wholly unknown to us. (Liv. *Epit.* xix.; Eutrop. ii. 28.)

3. *Etruria under the Romans.*—We have no detailed account of the last years of the contest between Etruria and Rome, the leading events of which have been just recapitulated: and we are almost wholly in the dark as to the terms on which the several cities were received to submission, and the relations which in consequence subsisted between them and the dominant republic. That the terms were in general favourable, and that the Etruscan cities for the most part enjoyed a more privileged position than the generality of the Italians, may be inferred from various circumstances. In the Second Punic War they continued uniformly faithful to the Romans, and are mentioned as taking the lead in furnishing voluntary supplies towards fitting out the fleet of Scipio, in a manner that clearly indicates their semi-independent position. (Liv. xxviii. 45.) It is probable that most of them retained the rank of "allied cities" (civitates foederatae). Roman colonies were established only in the S. of Etruria, with the exception of Pisae and Luca (Liv. xl. 43, xli. 13), which were obviously founded as a barrier against the Ligurians, not with a view of controlling the Etruscans themselves. Hence, it is a complete mistake to suppose, as many writers have done, that the Roman conquest put an end to the national existence of Etruria: its inhabitants retained until a much later period their language, arts, religious rites, and national peculiarities. The immediate neighbourhood of the imperial city doubtless became early Romanised, but it was not till towards the close of the Republic that the same process was extended to the more distant portions of the country. The Etruscans were admitted to the Roman franchise in B. C. 89: they had taken no part in the general revolt of the Italians in the preceding year, but, after the war had continued for above a year, their fidelity began to waver, and the Romans hastened to forestal their defection by granting them the full rights of citizens. (Appian, *B. C.* i. 49.) In the civil wars of Marius and Sulla they were among the first to espouse the cause of the former (*Ib.* 67), and adhered to it steadfastly, long after the rest of his partisans had been subdued; the almost impregnable fortress of Volaterrae having defied the arms of Sulla himself for nearly two years (Strab. v. p. 223; Cic. *pro Rosc.* 7). Hence, the whole weight of the vengeance of Sulla fell upon Etruria; and the manner in which he ravaged the country during the war, followed up by the confiscations of property, and the numerous military colonies which he established in different parts of the country, gave the death-blow to the nationality of Etruria. Other events contributed in rapid succession to the same result: the northern districts of Etruria became the head-quarters of the revolt of Catiline [FAESULAE], and in consequence suffered a second time the ravages of civil war; while Caesar, and the triumvirs after his death, followed up the policy of Sulla, by establishing military colonies throughout the land, until there came to be scarcely a city of Etruria whose territory had not been thus assigned to new settlers. (Lib. Colon. pp. 211—225; Zumpt, *de Coloniis*, pp. 251, 253, 303.) The civil war of Perusia, B. C. 41, appears to have been closely connected with these changes, and the capture and destruction of that city crushed the last effort of the Etruscans to revive their expiring nationality. (Propert. ii. 1, 29.)

But notwithstanding all these calamities there appears to have still remained a strong element of the native Etruscan race. The language had not fallen altogether into disuse, down to a late period of the Roman empire: many extant monuments and works of art belong to the same epoch; and inscriptions attest that the Etruscans not only retained a municipal organisation, but that the "Quindecim Populi Hetruriae" still formed a kind of league or confederacy,— probably, however, only for sacred objects. (Orell. *Inscr.* 96, 3149; Müller, *Etrusker*, vol. i. pp. 357, 358.) For administrative purposes Etruria constituted the seventh region of Italy, according to the division of Augustus: in the reign of Constantine it was united into one province with Umbria, an arrangement which appears to have subsisted as late as A. D. 400, when we find in the Notitia a "Consularis Tusciae et Umbriae" (*Notit. Dign.* p. 63; Böcking, *ad loc.* p. 430; Mommsen, *Die Lib. Col.* p. 207.) A new distinction, however, occurs under the later Roman empire, between "Tuscia suburbicaria" and "Tuscia annonaria" (Amm. Marc. xxvii. 3. § 1; Mommsen, *l. c.*), of which the latter appears to have comprised the district N. of the Arnus: hence the expression met with in later writers, such as Cassiodorus and Jornandes, of "Tuscia utraque" (Cass. *Var.* iv. 14; Jorn. *de Reb. Get.* 60; Geogr. Rav. iv. 29). It was not till a much later period that the distinction was established between *Tuscany*, in the modern sense of the term, and the provinces adjoining Rome, including

Viterbo, *Bolsena*, and *Corneto*, which are now subject to the Papal dominion. The foundation of this division seems to have been laid during the period of the Lombard rule.

V. Political Constitution.

Imperfect as is our information concerning the history of Etruria, — its internal history especially, — we cannot wonder that our knowledge of its government and political institutions should be very incomplete. All ancient writers concur in representing the Etruscans as not united into one regular state under a national government, but forming a confederacy of twelve cities, each of which was a sovereign and independent state, possessing not only the right of internal self-government, but that of making war or peace on its own account. They were indeed in the habit of holding general assemblies of deputies from all the cities, analogous to those of the Latins at the Lucus Ferentinae, and which took place in like manner at a national sanctuary called the Fanum Voltumnae, the site of which cannot be determined with certainty. These meetings, which were held regularly once a year, appear to have been in the first instance rather of a religious than a political character; and the election of a head priest or pontiff, to officiate in the name of the twelve cities of Etruria (Liv. v. 1), must have had reference to these annual solemnities. They became, however, the usual occasion for deliberating on all political matters affecting the common welfare of the Etruscan nation; and besides these regular assemblies, it was not unusual to hold extraordinary ones at the same place, if any unusual emergency called for them. (Liv. ii. 44, iv. 23, 25, 61, v. 1, vi. 2, x. 16; Müller, *Etrusker*, ii. 1.) It is, however, manifest that the decisions of this congress were not considered binding upon the several states, which we find in many instances acting wholly independently; and we have no evidence that, even in time of war, there was any supreme authority established and recognised throughout the confederacy, though there must necessarily have been some general appointed to the chief command of the combined armies when actually in the field.

The cities which composed the league of Central Etruria or Etruria Proper (the only one with which we are here concerned) are universally reckoned as twelve in number: and Livy expressly tells us that the same number of cities was established in the territory N. of the Apennines in imitation of this parent league. (Liv. iv. 23, v. 33; Dionys. vi. 75; Strab. v. p. 219.) But no ancient writer has preserved to us a list of the cities that composed the confederacy, and it is impossible to determine with certainty which were the sovereign twelve, there being considerably more than that number of names that would seem to have an equal claim to the distinction. Hence the lists proposed by modern writers have varied greatly: the cities that appear to have the most unquestionable claim to be included are Tarquinii, Veii, Volsinii, Clusium, Volaterrae, Vetulonia, Perusia, Cortona, and Arretium: to these may probably be added Caere and Falerii: but the claims of Faesulae, Rusellae, Pisae, and Volci are nearly equally strong. Populonium, which appears to have been a powerful and flourishing city, is generally rejected as having been a colony of Volaterrae, but it is certain that it was at one period an independent state, and the same may be said of Capena, Luna, and several other towns in Etruria. It is probable indeed that, as in the case of the Achaean League, while the number was always preserved, the constituent members varied, from time to time, with the rise and fall, the growth and decay, of the different Etruscan cities. (Niebuhr, vol. i. pp. 118—121; Müller, *Etrusker*, vol. i. pp. 344—355; Dennis, *Etruria*, vol. i. p. xxviii.) But besides these, we find several other towns in Etruria which appear on different occasions as assuming an independent position and acting like sovereign states: the nature of the relations between these and the heads of the League are wholly unknown to us. But, so fully recognised was the existence of the regular confederacy, that the "Twelve states of Etruria" (duodecim Etruriae populi) was become a common designation for the whole Etruscan nation, like the "triginta populi Latini" for that of the Latins.

Of the internal government and constitution of the several Etruscan cities we know little more than that it was essentially aristocratic, and that the dominant body, like the patricians at Rome in the early days of the city, fortified their political power by sacerdotal influence, retaining in their own hands the exclusive possession of all the sacred offices and the discharge of the numerous and complicated functions and observances of their religious ritual. It is apparently this aristocratic body in each city which is commonly designated by Roman writers as the "Principes," and it appears that it was they alone who assisted at the general councils of the nation already mentioned. (Liv. ii. 44, vi. 2, x. 16.) The exact meaning of the term Lucumo, an Etruscan word which appears to have designated certain members of this privileged order, cannot now be determined. It is not unfrequently misunderstood by Roman writers as a proper name, while others use it as equivalent to nobles in general (Censorin. 4. § 13; Val. Max. *de Nom.* § 18), and others again regard it as corresponding to a chief magistrate or even king (Serv. *ad Aen.* ii. 278). The genuine Etruscan form seems to have been Lauchme (Müller, *Etr.* vol. i. p. 363), whence Propertius uses the form Lucmo (v. 1. 29). Besides this privileged body, there must have existed, at least in the towns of Etruria, a commonalty or free population analogous to the plebeians at Rome, but whose political power seems to have been very limited. The mass of the country population was composed of serfs (πενεσται), in all probability the descendants of the conquered people, the Umbrians and Pelasgians: these Penestae were led out to battle, like the Spartan Helots, by their respective lords, the nobles of the superior race. (Dionys. ix. 5; Niebuhr, vol. i. p. 121; Müller, *Etrusker*, vol. i. pp. 377, 378.) It is probable that the account of the civil dissensions at Volsinii, which are said to have thrown the political power into the hands of the *slaves*, must refer to a somewhat similar class of vassals or dependents (Niebuhr, vol. i. p. 124), but the version transmitted to us is too vague to be of much value.

The earliest traditions concerning Etruria, especially those of a mythical character, make frequent mention of *kings* of the several cities, of which Porsena, king of Clusium, is one of the latest instances. But in the period of the wars of Etruria with Rome the regal dignity had been abolished throughout the Etruscan cities, and an aristocratical government with annual chief magistrates established, probably not much unlike that of Rome in the first years of the republic. So strong, indeed, was at this time their objection to the monarchical form of govern-

ment that they even refused to assist the Veientines against Rome, because they had returned to it, and placed themselves again under the rule of a king. (Liv. v. 1.) Tolumnius, also, is called *king* of Veii about 40 years earlier. (*Id.* iv. 17.)

VI. Religion.

The Etruscans were celebrated beyond almost any other people of antiquity for their devotion to their national religion, and for the zeal and scrupulous care with which they practised the various observances of its rites and ceremonies. Livy calls them "gens ante omnes alias eo magis dedita religionibus, quod excelleret arte colendi eas" (v. 1). Hence they became the instructors of the Romans in many of their religious rites, and that people adopted from them a considerable part of what was in later ages received as the established national religion of Rome. Hence arises one great difficulty in regard to all inquiries into the Etruscan religion, that, as we have no account of it in its native purity, it is almost impossible to say what was truly Tuscan, and to separate it from other elements with which it had become in later ages intimately blended. Equally difficult is it to determine the precise extent and influence of the Greek religion upon that of Etruria. Much of what appears common to the two was probably derived through the Pelasgic population of Southern Etruria, but the fact appears incontestable that the operation of direct Hellenic influences at a much later period may be extensively traced in the Etruscan mythology. This is particularly obvious in the works of art which have been discovered in Etruria, and here the difficulty is still increased by the great influence which Hellenic *art* undoubtedly exercised over that of the Etruscans, irrespective of any direct religious operation. [See below, p. 868.] Hence this class of monuments, which, considering the vast numbers of them that have been preserved, would seem likely to throw so much light upon the subject, can only be employed with the utmost caution. It is impossible here to enter into the discussion of this abstruse and complicated subject: a few leading results only can be briefly stated.

1. The Etruscan religious system was not one wholly foreign to the other nations of Italy: it had many points in common with those especially of the Sabines and Latins; and though in many cases this may arise from the confusion of later writers, and the impossibility of distinguishing, in the 7th and 8th centuries of the Roman state, which of its religious institutions were really derived from Etruria, it seems impossible to doubt that the Etruscan mythology really contained much that was common to the two people just mentioned, and that had been derived by all three from some common source.

2. Some portions of the Etruscan mythology and religion unquestionably point to an Eastern origin. The number and importance of these evidences of Oriental influence have been greatly exaggerated by those writers who have insisted on the Lydian, or other Oriental, extraction of the Etruscans; but the existence of such an element in their religious system cannot be denied; though it is a question how far it proves in any particular case *direct* transmission from an oriental source.

3. There are not wanting indications which would connect the religious mythology of Etruria with that of the northern nations of Europe. The name of *Aesar*, which was the Etruscan appellation for the gods in general (Suet. *Aug.* 97), at once recals the *Asar* of the Scandinavians (Müller, vol. ii. p. 81; Donaldson, *Varronianus*, p. 151); and much of the gloomy worship of the infernal deities, which forms so prominent a part of the Etruscan religion, presents a strong similarity with the northern mythology. (Gerhard, *Die Gottheiten der Etrusker*, p. 17.)

4. But whatever extent may be allowed to these last sources of influence, a much greater one was exercised by the Pelasgic element of the Etruscan people. With every reasonable allowance for the operation of later Hellenic ideas, and especially for the introduction on works of art of foreign deities, and a different cycle of mythology, there remains a pervading similarity with the religious system of the early Greeks, which can hardly be accounted for otherwise than by referring them to a common Pelasgic origin. From the same source, probably, proceeded much of that which we find common to the southern Etruscans and to their neighbours in Latium.

Of the special deities that were worshipped by the Tuscans, the most important were *Tina* or *Tinia*, corresponding to the Latin Jupiter; *Cupra*, who was identified with Juno; and Minerva, whose name was the same in the Tuscan language, and appears on Etruscan monuments as *Menerfa*. These three deities seem to have been regarded as the chief gods, whence we are told that every Etruscan city had three temples dedicated to them (as was the case in the Capitol at Rome), and three gates which bore their names. (Serv. *ad Aen.* i. 422). Besides these, we find particularly mentioned as Etruscan deities, and bearing names of clearly Etruscan origin: *Vertumnus*, whose worship seems to have especially prevailed at Volsinii, from whence it was transferred to Rome; *Nortia*, the Etruscan goddess of Fortune, also worshipped at Volsinii, apparently identical with the Fortuna of Antium and Praeneste; and *Voltumna*, whose sanctuary was the meeting-place of the whole Etruscan nation. To these must be added, partly from notices of ancient writers, partly from extant monuments: Vulcan, whose Etruscan name, as we learn from works of art, was *Sethlans*, the special object of worship at Perusia; Mercury, called by the Etruscans *Turms*, a name of frequent occurrence on mirrors; Venus, who appears in similar works under the name of *Turan*; Mantus, probably a genuine Etruscan name, and one of the principal infernal deities; Vedius or Vejovis, also an infernal power; Summanus, the god of nocturnal thunder, and one of the rulers of the shades. These two last *names* are Latin, and perhaps the deities themselves belong properly to Latium. *Ancharia*, who was the tutelary goddess of Faesulae, and *Horta*, who gave name to the town of that name near the foot of Soracte, are, apparently, mere local divinities, but of native Tuscan origin. Apollo and Hercules, whose names are written on Etruscan bronzes *Aplu* or *Apulu*, and *Herecle* or *Hercle*, would seem to be foreign divinities that had originally no place in the mythological system of Etruria, though their worship was at a later period extensively diffused in that country; and the same thing was still more clearly the case with the Greek Bacchus, though there existed an Etruscan divinity named *Phuphluns* with whom he appears to have been identified or confounded. On the other hand, *Usil* (Sol), the god of the sun, and *Losna* or Luna, as they bear native names, were probably also genuine Etruscan deities. The worship of Janus at Falerii, of Silvanus and Inuus at Caere, and of Saturnus at Saturnia (called

by the Tuscans Aurinia), is also attested by Roman writers, but the Etruscan names of these deities are unknown to us.

Besides these names of individual divinities, a few more general notices of the Etruscan mythology have been preserved to us, which bear more distinctly the stamp of its peculiar national character. Such is the statement, that, in addition to the supreme deity, Tinia or Jupiter, there were twelve other divinities, six male and six female, whose proper names were unknown, but who were termed collectively the Dii Consentes, and formed the counsellors of Tinia; they were regarded as presiding over the powers of nature, and not eternal, but destined to perish at some future time with the natural order of things over which they presided. Notwithstanding the statement that their real names were unknown, the more powerful of the divinities above enumerated seem to have been generally ranked among the Consentes. (Arnob. *adv. Nat.* iii. 40; Varr. *R. R.* i. 1; Müller, *Etr.* vol. ii. pp. 81—86; Gerhard, *l. c.* pp. 22, 23.) But superior to these, and to Tinia himself, were certain mysterious deities, called the Dii Involuti, apparently somewhat analogous to the Fates, who were supposed to exercise an irresistible controlling power over the gods themselves, while their own names and attributes remained unknown. (Arnob. *l. c.*; Seneca, *Nat. Qu.* ii. 41.) Another class of divinities which is expressly referred to the Etruscan religion are the Dii Novensiles, the nine deities to whom alone the power of hurling the thunderbolts was conceded; this classification appears to have had no reference to that of the Consentes, but must have included many of the same gods. (Plin. ii. 53; Arnob. iii. 38.)

Of purely Etruscan origin also was the doctrine of the Genii, of such frequent occurrence in the Roman religion, though the Etruscan word corresponding to the Latin Genius is unknown. As the Genius was the tutelary or presiding spirit of every individual man, so were the Lares those of the house or family; the word Lar is unquestionably Etruscan, and the Lasa or Lara, a kind of fortune or attendant genius (often represented on works of art under the form of a winged female figure), appears to be connected with the same notion. This idea of a class of intermediate beings, inferior to the true gods, but the immediate agents through which the affairs of mankind were controlled (imperfectly developed in the Greek Daemones), appears to have pervaded the whole Etruscan system of religious faith. It reappears in their conceptions of the infernal powers, where we find, besides the gloomy Mantus (the Pluto of their mythology), and the corresponding female deity, Mania, the numerous class of the Dii Manes, — "the *good* gods" as they were called by a natural euphemism,—who are aptly compared with the Lares and Genii of the upper world. (Serv. *ad Aen.* iii. 63, vi. 743; Gerhard, *l. c.* pp. 13—16.) The *name* of these is probably Latin, but the worship of them certainly prevailed in Etruria. Etruscan works of art abound in representations of infernal spirits or furies, sometimes as female figures, winged and armed with serpents, at others under forms the most hideous and horrible; one of these, characterised by his commonly bearing a great hammer, and apparently representing the messenger of death, bears in several instances the Greek name of Charon (ΧΑΡΥΝ), a clear proof how much the mythologies of the two nations have become intermingled on extant works of art. On the other hand, we find on these the genuine Etruscan names of *Leinth*, *Mean*, *Snenath*, *Nathum*, and *Munthuch*, all applied to deities of unknown power, but apparently goddesses of fate or destiny. (For fuller details concerning the religious system of the Etruscans, see Müller, *Etrusker*, vol. ii. book 3, ch. 3, 4; Gerhard, *Die Gottheiten der Etrusker*, Berlin, 1847.)

The Etruscan religion was especially characterised by the number and minuteness of its ritual observances, and particularly by those which had reference to the different modes of divination. Hence Etruria is called by Arnobius "genitrix et mater superstitionis." (Arnob. vii. 26.) To interpret the divine will, and to avert the divine wrath, were the objects which they proposed to themselves in their various religious ceremonies, and the modes of doing this constituted what was termed by the Romans the "disciplina Etrusca." This system had, according to the native tradition, been first revealed by a miraculous youth named Tages, who sprung out of the earth in the territory of Tarquinii, and had from thence been diffused throughout the twelve states of Etruria, where it was preserved and transmitted by the families of the Lucumones or chief nobles. (Cic. *de Div.* ii. 23; Censorin. 4. § 13; Fest. v. *Tages;* Lucan. i. 636.) Many of its rules were (in later times at least) committed to writing, but much was still preserved by oral tradition; and the exclusive possession of these precepts, without which no political or public affairs could be transacted, was one of the great engines of power in the hands of the sacerdotal aristocracy of Etruria. Hence the young nobles were trained up by a long course of study to the possession of this hereditary knowledge; and even after Etruria had fallen into dependence upon Rome, it was thought necessary to provide by special regulations for its perpetuation. (Cic. *de Div.* i. 41, *de Legg.* ii. 9, *ad Fam.* vi. 6· Tac. *Ann.* xi. 15.)

The modes of divination were principally three: 1. By augury, or observation of the flight of birds, a practice common to all the early nations of Italy, as well as in a less degree to the most ancient Greeks. 2. By inspection of the entrails of victims, a mode also familiar to the Greeks, and practised by other Italian nations, but which appears to have been reduced to a more systematic form and regular body of rules by the Etruscans than by any other people. On this account we find the Romans throughout all periods of their history consulting the Etruscan Haruspices. (Liv. v. 15, xxv. 16, xxvii. 37; Cic. *Cat.* iii. 8, *de Div.* ii. 4; Lucan, i. 584.) But though the name of these functionaries appears to be certainly connected with this peculiar branch of divination (Müller, *Etr.* vol. ii. p. 12), they did not confine themselves to it, but undertook to interpret portents and prodigies of all descriptions. 3. The divination from thunder and lightning was more peculiarly Etruscan than either of the two preceding modes. Its principles were embodied in certain books called *libri fulgurales* and *tonitruales*, which appear to have been still extant in the time of Cicero (Cic. *de Div.* i. 33; Lucret. vi. 380); and some of the numerous distinctions which they established between the different kinds of thunderbolts (of which there were eleven in all) have been preserved to us. (Plin. ii. 52, 53.) But this doctrine, like most others of the same kind, appears to have contained much that was secret and abstruse, and this formed part of the Disciplina Etrusca which was transmitted by oral, and often hereditary, tradition. Even under the Roman empire the art of the Haruspices

appears to have remained principally in the hands of the Etruscans; but it had fallen to a great degree into disrepute, and, though an attempt was made by the emperor Claudius to restore it (Tac. *Ann.* xi. 15), it gradually sunk into contempt, and the Tuscan Haruspex was regarded, like the Chaldaean astrologer, as a mere vulgar impostor. The superstition itself, however, continued down to the latest ages of the empire, and is mentioned in A. D. 408 during the wars of Alaric in Italy. (Zosim. v. 41.)

VII. *Arts and Sciences.*

It is especially from the still extant monuments and works of art discovered in Etruria that there has arisen in modern times a high, and in some degree certainly exaggerated, notion of the civilisation of the ancient Etruscans. But all accounts agree in representing them as by far the most cultivated and refined people of ancient Italy, and especially devoted to the practice of arts and handicrafts of various kinds. (Athen. xv. p. 700, c.; Heraclid. 16.) It was from them that the Romans confessedly derived many of the arts and inventions that conduced to the comfort of daily life, as well as many objects of luxury and magnificence. To the latter class belong the ornamental attire worn in the triumphal processions, — themselves probably an Etruscan custom (Appian, viii. 66), —as well as by the kings and chief magistrates of Rome: the Toga picta, the Praetexta, the golden Bulla, the ivory curule chair, &c. (Diod. v. 40; Flor. i. 5; Macrob. *Sat.* i. 6; Liv. i. 8; Strab. v. p. 220.) The numerous objects of an ornamental character found in the Etruscan tombs fully confirm the testimony of ancient writers to their proficiency in this branch of art, while the paintings on the walls of some of their sepulchres afford some insight into their habits of daily life, and lead us to infer that they were really, as represented by the Greeks, a luxurious and sensual people. The account of their abandoned vices and profligacy given by Theopompus (*ap. Athen.* xii. p. 517) is obviously much exaggerated; but Virgil also bears testimony to the general belief in their habits of debauchery (*Aen.* xi. 736; see also Plaut. *Cistell.* ii. 3, 20). Diodorus, however, represents these luxurious and voluptuous habits as belonging to the degeneracy of the Etruscans, consequent on their long prosperity, and characteristic therefore only of their decline. (Diod. v. 40.) And it must always be borne in mind that almost all the extant works of art belong to a late period of their national existence. They were especially noted for their devotion to the pleasures of the table, whence we find the Etruscans ridiculed in Roman times for their corpulence. ("*Pinguis* Tyrrhenus," Virg. *G.* ii. 193; "*Obesus* Etruscus," Catull. 39. 11.)

In the higher departments of art, it is clear that the Etruscans had made great progress in architecture, sculpture, and painting. 1. Of Etruscan *Architecture* our knowledge is really but very limited. The so-called Tuscan order of architecture, as applied to the construction of temples and similar edifices, is really nothing more than a modification of the Doric, which it resembles too closely to have had a separate and independent origin. The principal difference was in the greater width between the columns, which admitted only of the use of timber instead of stone for the architrave; and in the arrangement of the cella, which occupied only half the length of the interior area of the temple. The general effect was, according to Vitruvius, unfavourable; the temples built according to the Tuscan order (of which there were several at Rome, including that of Jupiter in the Capitol) having a low and heavy aspect. This must have been aggravated by the custom, characteristic of the Tuscan architecture, of loading the outside of the pediment with statues. (Vitruv. iii. 3. § 5, iv. 7; Plin. xxxv. 12. s. 45, 46; Müller, *Arch. d. Kunst.* § 169.) The external architectural decorations of some of the Etruscan sepulchres (especially the façades of those hewn in the rock at *Castel d'Asso*, *Norchia*, &c.) present the same close approximation to the Hellenic, and particularly the Doric, style. The existing monuments of Etruscan architecture are confined to works of a more massive and simple description, among which the most remarkable are the fragments of their city walls, especially those of Faesulae, Volaterrae, Cortona, and Rusellae. In all these instances the masonry, which is of the most massive character, is composed of large irregular blocks, not united with cement, but rudely squared, and laid in horizontal courses. There is, however, little doubt that the difference of construction between these Etruscan walls and those of Latium and the Central Apennines is not a national characteristic, but results merely from the difference of material—the walls of Cosa and Saturnia, which are composed of the hard limestone of the Apennines, being of the same polygonal construction with those of the Latin and Volscian cities. (Specimens of both styles of construction are figured by Micali, *Popoli Antichi Italiani*, pl. 9—12.)

Of their edifices for the exhibition of games, such as theatres or amphitheatres, we have no distinct knowledge: they could hardly have been without something of the kind, as we are told that both the theatrical exhibitions of the Romans, and their gladiatorial combats, were derived from the Etruscans, who moreover delighted in horse-races and pugilistic contests. (Liv. i. 35, vii. 2; Athen. iv. p. 153; Val. Max. ii. 4. § 4; Tertull. *de Spect.* 5.) But the theatre at Faesulae (repeatedly referred to by Niebuhr as a great Etruscan work), and the amphitheatre at Sutrium, to which very exaggerated importance has been attached by some writers, are in all probability Roman works of comparatively late date. The Etruscans appear to have paid especial attention to the more practically useful objects of architecture, such as the laying out of streets and sewers. Of their skill in the latter, the Cloaca Maxima at Rome—the construction of which is universally attributed to the Etruscan monarchs of the city—is a striking example: the same monument proves also that they were acquainted at a very early period with the true principle of the arch, and possessed great skill in its practical application. Closely connected with this class of works were those for the drainage and outlet of stagnant waters by subterranean emissaries or tunnels,—an art for which the Etruscans appear to have been early celebrated. Of their domestic architecture we can judge only from some of their sepulchres, which bear unquestionable evidence of being intended to imitate, as closely as possible, the abodes of the living. (Dennis, *Etruria*, vol. i. p. lxvi.) But the common tradition of the Romans represented the Atrium, the most peculiar feature in the construction of a Roman house, as an Etruscan invention; and hence the most ancient and simple form of it was called Tuscanicum. (Varr. *L. L.* v. 33. § 161; Vitruv. vi. 3; Diod. v. 40.)

The sepulchres of the Etruscans have attracted

so much attention as to require a brief notice. They present many varieties in their construction and decoration, so that none of these styles can be fixed upon as peculiarly national or characteristic. They are sometimes chambers hewn out in a cliff or wall of solid rock, occasionally with architectural decorations cut in the same (*Castel d'Asso*, *Bieda*, *Norchia*); more frequently without such ornaments, or with a mere door cut in the rock: sometimes subterranean chambers surmounted by tumuli, either of loose earth and stones, or built up with masonry into a more regular form (Tarquinii, Volaterrae); often mere chambers sunk in the earth without any trace of such superstructure: again these chambers are sometimes circular, sometimes square; the entrances not unfrequently arched or vaulted, while the chamber itself is usually flat-roofed, and often has the ceiling adorned with beams and coffers, in imitation of the abodes of the living. The internal walls of some of the tombs are adorned with paintings, and this decoration is found both in those hewn in the rock, and those sunk beneath the level of the soil: it is, however, peculiar to Southern Etruria, and is by no means general even there. In one respect the sepulchres of Etruria are distinguished from those of the Romans, that they are always *subterranean*, never mere structures raised for the purpose of containing the tomb; there are in many instances, as already mentioned, *superstructures* of an architectural kind, but the actual chamber in which the dead bodies are deposited is sunk beneath these, often at a considerable depth below the surface. The account preserved to us by Pliny (xxxvi. 13. s. 19) of the tomb of Porsena is certainly exaggerated and fabulous in its details and dimensions, but had doubtless some foundation in truth; and some analogies to it have been remarked in the existing remains of several Etruscan monuments. (Dennis, vol. ii. p. 389.) A labyrinth, such as is said to have existed at the base of this tomb, has been also discovered in the *Poggio Gajella*, near *Chiusi*. [CUSIUM.]

2. Of Etruscan *Sculpture*, in the stricter sense of the term, as confined to works carved out of stone or wood, we hear but little from ancient authors; and the existing remains, though numerous, are mostly of inferior interest, from the late period to which they belong. Of this class are especially the numerous sarcophagi and urns or chests for ashes found at *Volterra*, *Perugia*, and *Chiusi*, the fronts of which are adorned with reliefs, generally representing subjects from the Greek mythology or poetical history, while on the lid is a recumbent figure of the deceased personage. These urns are carved in a soft sandstone or alabaster, and are for the most part of indifferent execution, and certainly belong to a declining period of art, though bearing unquestionable evidence of Greek influence, both in the subjects chosen and in the mode of their treatment. There remain, however, a few statues of figures in a sitting position, found only at *Chiusi*, which present a much more archaic character: as well as certain *cippi* or *stelae* with figures in a very low, almost flat, relief, and a strong rigidity or severity of style resembling the Egyptian. (Dennis, vol. ii. pp. 336—338; Micali, *Pop. Ant. Ital.* pl. 54—58.) But the Etruscans excelled in many other branches of the *Plastic Arts*, and especially in all kinds of works in bronze. Their skill in this department is celebrated by many ancient authors, and is attested also by specimens still extant. The "Tuscanica signa," which, according to Pliny (xxxiv. 7. s. 16), were dispersed not only over all Italy, but other parts of the world also, were principally of this material: and so numerous were they, that the city of Volsinii alone was said to have contained two thousand bronze statues. (*Ibid.*) They were characterised by a stiff, archaic style of art, resembling the early Greek or what has been called the Aeginetan style, but which seems to have been retained in Etruria for a much greater length of time than in Greece. Some of the extant specimens, however, present more freedom of design and great beauty of execution. The best examples of Etruscan works of art of this character are the celebrated She-Wolf in the Capitol, the Chimaera in the gallery at Florence, the "Arringatore" or Orator in the same collection, and a statue of a boy in the museum at Leyden. (All these are figured by Micali, *Ant. Pop. Ital.* pl. 42—44.)

Innumerable smaller figures in bronze have been found in Etruria, and evidently represent the "Tyrrhena sigilla" of the Romans (Hor. *Ep.* ii. 2. 181; Tertull. *Apol.* 25): besides these, they were particularly celebrated for their bronze candelabra, which were eagerly sought after both by Greeks and Romans (Athen. xv. p. 700), and of which many beautiful specimens still remain; as well as for a variety of other ornamental utensils in the same material. (*Ib.* i. p. 28. b.; Micali, *ib.* pl. 32—41.) Another branch of art which appears to have been peculiarly Etruscan, was that of the engraved bronze mirrors (erroneously termed Paterae), of which some hundreds have been discovered, and no doubt can exist of their being of native Etruscan manufacture, the inscriptions which occur on them being uniformly in Etruscan characters; their style of execution, however, varies greatly, and is often of a very rude description. (Gerhard, *über die Metallspiegel der Etrusker*, Berlin, 1838.) Nor were they less skilful workmen in other metals; their embossed cups of gold were celebrated among the Greeks, even in their best days, and the beauty of their necklaces and other ornamental goldsmith's work is sufficiently proved by existing specimens.

Not less celebrated were the Etruscan works in earthenware or *Terra Cotta*. These were not confined to small objects, such as vases or domestic utensils, but included whole figures and statues, many of them of large size, with which they adorned the exterior, as well as the interior, of their temples. Hence the custom was introduced at Rome, where even the temple of Jupiter in the Capitol was in early times surmounted by earthenware statues of Tuscan manufacture. (Vitruv. iii. 3. § 5; Cic. *de Div.* i. 10; Plut. *Popl.* 13; Plin. xxxv. 12. s. 45.) Closely connected with this branch of art was the Etruscan pottery, in the manufacture of which they undoubtedly excelled; but the only descriptions of works of this kind that can be regarded as of true native origin are the red ware of Arretium, which seems to have been much used in Roman times, and the black ware of Clusium, adorned with figures in relief, many of them of a grotesque and strongly oriental character. [CLUSIUM.] The *painted vases*, on the contrary, which have been found in great numbers at Clusium, Tarquinii, and especially of late years at Vulci, though commonly known by the name of ETRUSCAN vases, bear unquestionable evidence of Greek origin. This is proved by their perfect similarity, and, in many cases, even identity, with similar works found in Campania,

the south of Italy, and Sicily, as well as in Greece itself; and by the fact that they uniformly represent subjects taken from the Greek mythology or heroic legends, and bear, inscribed on them, Greek names and words as well as in several instances the names of Greek artists: but while it is now generally admitted that this branch of art was a foreign importation, it is a still a disputed question whether the vases themselves were of foreign manufacture, or were made in Etruria by Greek artists settled there. The latter opinion has been maintained by Millingen and Gerhard; the former by Müller, Bunsen, Kramer, and Thiersch. (Müller, *Arch. d. Kunst.* § 177, *Kl. Schriften*, vol. ii. pp. 692—708; Gerhard, *Rapporto sui Vasi Volcenti*, in the *Ann. d. Inst. Arch.* 1831; Bunsen, in the same *Annali*, for 1834; Millingen, *On the late Discoveries in Etruria*, in the *Trans. of Roy. Soc. of Lit.* 1830 and 1834; Kramer, *über den Styl u. die Herkunft der bemahlten Griechischen Thongefässen*, Berlin, 1837; Thiersch, *über die Hellenischen bemahlten Vasen*, 1841; Abeken, *Mittel-Italien*, pp. 289—300.)

3. Of the skill of the Etruscans in *Painting* we can judge only from the specimens remaining in their sepulchres, the walls of many of which, especially at Tarquinii, Caere, and Clusium, are decorated with paintings. These are of very unequal merit: some of very rude design, and fantastic in their colouring; others showing much more progress in the art, though retaining a stiffness and formality of character akin to the style of the earliest Greek works, the influence of which is as unquestionable upon this as upon other branches of Etruscan art. The custom of thus adorning the interior of their sepulchres appears, however, to have continued down to a late period, and some of the painted tombs found at Tarquinii belong, without doubt, to the period of the Roman dominion. (Dennis, vol. i. pp. 303—306.)

The character of Etruscan art in general is well summed up by K. O. Müller in the remark that it was rather receptive than creative, and that it always retained the marks of a plant of exotic growth, which, not being indigenous to the soil, began to fade and decline as soon as the vivifying rays of Greek influence were withdrawn from it. (Müller, *Kl. Sch.* vol. i. p. 208; *Arch. d. Kunst.* § 178.)

Of the proficiency of the Etruscans in the more useful arts appertaining to ordinary life, there can be no doubt. They were noted for their skill in agriculture; and not only knew how to turn to the best account the natural fertility of the soil, but, by great works of drainage, and regulating the course of rivers, to bring under profitable cultivation tracts like those at the mouths of the Padus and the Arnus, which would otherwise have been marshy and pestilential. The Etruscans are also generally regarded as the parents, or first inventors, of the peculiar modes of limitation and division of land in use among the Romans: an art which was indeed closely connected with the rules of the "disciplina Etrusca" appertaining to augury. (Hygin. *de Limit.* p. 166, *Fragm. de Limit.* p. 350.) The iron mines of Ilva, as well as the copper mines of the interior of Etruria itself, were worked by them from a very early period; and their skill in metallurgy was obviously connected with their proficiency in the more ornamental arts of working in bronze, gold, &c. Arretium, especially, seems to have been the seat of considerable manufacturing industry, and, at the time of the Second Punic War, was capable of furnishing a vast quantity of arms and armour to the fleet of Scipio. (Liv. xxviii. 45.) The abundance of copper, probably, also gave rise to the peculiar system of coinage in use among the Etruscans, as well as the other nations of Central Italy, and which must certainly have been of native origin, being wholly opposed to that in use among the Greeks. The Etruscan coinage, like the early Roman, was exclusively of copper, or rather bronze; and the coins themselves, which were of a large size, were cast in moulds instead of being struck with a die. (Müller, *Etrusker*, vol. i. pp. 303—308; Eckhel, vol. i. pp. 85—89.) This early introduction of coined money, as well as the accounts of their naval power, sufficiently proves that the Etruscans must have carried on an extensive commerce, but we have very little account of its details. Their luxurious habits of life would necessarily conduce to the same result, and we learn that they maintained close relations of amity with the Sybarites in Southern Italy, as well as with the Carthaginians. (Arist. *Pol.* iii. 5; Athen. xii. p. 519, b.)

The art of writing was represented by the traditions of the Etruscans themselves as introduced from Greece, and recent researches have led to the same result,—that the Etruscan alphabet was received by them directly from the Greeks, and not, as has been contended by some modern writers, from a common Oriental source. (Müller, *Etr.* vol. ii. pp. 290—309; Mommsen, *Unt. Ital. Dial.* pp. 3—7, 40.) But the Etruscans introduced, in the course of time, some changes in the forms and values of the letters; while, on the other hand, they retained down to the latest period the mode of writing from right to left, which had been early abandoned by the Greeks. Hence, even in the days of Cicero, their books were, as Lucretius phrases it, read *backwards*. ("Tyrrhena *retro* volventem carmina frustra," Lucr. vi. 381.) Of their literature we have no remains, and it may well be doubted whether they ever had anything worthy of the name. Besides their ritual books of various kinds, the "Libri Fulgurales" (alluded to by Lucretius in the above passage), "Libri Augurales," &c., the only works of which we find any mention are Histories or Annals (cited by Varro and by the emperor Claudius), but which appear to have been compiled as late as the second century B. C.; and Tragedies written by one Volnius, a native Etruscan, who seems to have flourished not long before the time of Varro, so that his literary attempts were evidently not of a truly national character. (Varr. *L. L.* v. 55; Id. *ap. Censorin.* 17. § 6.)

The scientific attainments of the Etruscans appear to have been almost confined to those branches of study directly connected with their religious rites and ceremonies, such as the observance of astronomical and meteorological phenomena, the calculation of eclipses, the regulation of the calendar, &c. Their doctrine of Saecula, or ages of varying length, was very peculiar (Censorin. 17. §§ 5, 6; Plut. *Sull.* 7): ten of these ages they regarded as the period allotted to the duration of their nation; and they even went so far as to assign a limit (like the Scandinavians) to the existence of the world, and of the gods themselves. (Varro, *ap. Arnob.* iii. 40.) It was from the Etruscans that the Romans derived their peculiar mode of dividing the months by the Ides, Nones, &c. (Macrob. *Sat.* i. 15; Varr. *L. L.* vi. 28.) Of unquestionable Etruscan origin was also the Roman system of numerals, which has been transmitted

through the latter people down to our own times. In the divisions of their money, weights, and measures, as well as in many of their other institutions, we trace a predilection for the duodecimal system, which was adopted from them by the Romans.

(For fuller information concerning the arts and sciences of the Etruscans, as well as their institutions, religious rites, &c., the reader may consult the work of C. O. Müller, *Die Etrusker*, 2 vols. 8vo. Breslau, 1828; and an excellent abridgment by the same author in the article *Hetrurien*, in Ersch and Gruber's *Encyc'opaedia*, 1830, republished in Müller's *Kleine Schriften*, vol. i. pp. 129—219: also Micali, *Storia degli Antichi Popoli Italiani*, 3 vols. Florence, 1832; and Abeken, *Mittel-Italien*, 8vo. Stuttgart, 1843. The extant monuments and remains are fully described by Dennis, *Cities and Cemeteries of Etruria*, 2 vols. 8vo. Lond. 1848. Illustrations of the works of art will be found in the plates to Micali's work above cited, and in his *Monumenti Inediti*, 1844. A more numerous suite is given in the older work of Dempster, *Etruria Regalis*, 3 vols. fol. 1723—1767, and by Inghirami, *Monumenti Etruschi*, 7 vols. 4to. 1821—1826; also in the *Monumenti Inediti* published by the *Instituto di Corrispondenza Archeologica* at Rome, a work of which the text or *Annali* also contains much valuable information concerning Etruscan antiquities.)

VIII. Topography.

The physical features of Etruria have been already described, and it therefore only remains to notice the towns, which may be enumerated according to the natural divisions of the country. 1. N. of the Arnus were: Luna, Luca, Pisae, Pistoria, Faesulae, and Florentia, all considerable towns, which are described in separate articles. Besides these, we find in Ptolemy (iii. 1. § 47) the names of Viracelum, supposed to be *Verrucola* in the upper valley of the *Serchio*, and Bondelia, which cannot be identified: but he places in this part of Etruria also a colony of the name of Lucus Feroniae, which cannot therefore be the same place with the one mentioned by Pliny and other writers in Southern Etruria: but it is very doubtful whether this is not a mere error on the part of Ptolemy. [Feroniae Lucus.] 2. Between the Arnus and the Umbro were: Sena, Volaterrae, Populonium, and Rusellae, together with several smaller places or ports on the coast, which must have been dependencies of the inland cities: viz. Portus Pisanus, Portus Herculis Labronis or Liburni, Vada Volaterrana, Portus Faleria, and Portus Trajanus. 3. In the valley of the Clanis, or between that river and the Tiber, were the four powerful cities of Arretium, Cortona, Clusium, and Perusia. 4. S. of the Umbro and proceeding from that river to the Tiber were the important cities of Volsinii, Vetulonia, Cosa, Vulci, Tarquinii, Caere, Veii, and Falerii. But besides these there were in this part of Etruria a number of other towns, some of them scarcely inferior to those just mentioned, others known to us from the occurrence of their names in the early wars of the Romans with the Etruscans, others again whose names are found only in Pliny or Ptolemy, but which are proved by existing remains to have been places of consideration, and ancient Etruscan sites. Of these the following must be mentioned. Between the Umbro and the Marta were Saturnia, Suana, Statonia, Sudertum, and Tuscania. Eba, mentioned only by Ptolemy (iii. 1. § 49), is placed by him within the same limits: and the Verentum or Vesentum of Pliny (iii. 5. s. 8) may probably be placed near the *Lake of Bolsena*. Further to the S. were Ferentum, Blera, Sutrium, Nepete, Forum Cassii, Forum Clodii, Sabate, and Capena: and in the valley of the Tiber, N. of Falerii, were Fescennium, Horta, Polimartium, and Herbanum. Along the coast (proceeding from the mouth of the Umbro to that of the Tiber) were the Portus Telamonis, Portus Herculis or Cosanus, Graviscae, Centumcellae, Castrum Novum, Pyrgi, Alsium, Fregenae, and the Portus Augusti at the mouth of the Tiber. This southern portion of Etruria contained also numerous watering-places, which were frequented in the time of the Roman dominion, and probably at an earlier period also, on account of their mineral waters: among these may be mentioned the Aquae Apollinares, Aquae Passeris, and Aquae Tauri, at which last a considerable town had grown up, so that the "Aquenses Taurini" are enumerated by Pliny (iii. 5. s. 8) among the municipal communities of Etruria. The Aquae Caeratanae also had given rise to a town, which in Strabo's time was better peopled than the ancient city of Caere (Strab. v. p. 220), of which it nevertheless continued a dependency, as did the Aquae Populoniae and Aquae Volaterranae of the respective cities from which they derived their name. Martial alludes (vi. 42) to the abundance and fashionable repute of these Etruscan watering-places in his time. Two other sites which must be placed also in this part of Etruria were the Fanum Voltumnae, the meeting-place of the federal assemblies of the Etruscans; and the Lucus Feroniae, which seems to have been situated near the foot of Soracte.

In the above enumeration of Etruscan towns, the mere stations or obscure villages on the high roads, known only from the Itineraries, have been omitted. Their names will be found in the articles of the Viae on which they were situated. Of these, there were three great high roads proceeding from Rome and traversing Etruria almost in its whole extent. 1. The Via Aurelia, which led from Rome to Alsium, and from thence followed the line of the seacoast as closely as possible all the way to Pisae, and from thence to Luna, where it was joined by the Via Clodia. 2. The Via Cassia led from Rome through the heart of Etruria by Sutrium, Vulsinii, and Clusium to Arretium, from whence it was continued across the mountains to Bononia (Cic. *Phil.* xii. 9; Liv. xxxix. 2), while another branch led from Arretium to Florentia, and thence by Pistoria to Luca. This last line is called in the Itinerary of Antoninus the Via Clodia, and that name, though not mentioned by Cicero, seems to have in later times become the prevalent one (Orell. *Inscr.* 3143). 3. The Via Clodia, properly so called, was intermediate between the other two; and led by Blera, Tuscania, Saturnia, Rusellae, and Sena, to Florentia, where it joined the preceding route. There is, however, some confusion between the two, which is discussed under the articles Via Cassia and Via Clodia. Besides these, the first part of the Via Flaminia, from the Mulvian bridge till it recrossed the Tiber near Ocriculum, lay through Etruria; as well as the Via Amerina, which branched off from the Cassia at Baccanae, and led through Nepe and Falerii to Ameria. [Ameria.] [E. H. B.]

ETYMANDRUS (Ἐτύμανδρος), a river in Drangiana, usually written Erymandrus. [Erymandrus.]

EUASPLA (Εὐάσπλα, Arrian, *Anab.* iv. 24), a river in Bactriana. Alexander marched to its banks, and probably crossed it, though this fact is not mentioned. It is most likely the *Khonar* or *Kâma* river, and in size little more than a mountain torrent. The rivers in this part of the country have been variously identified by different scholars. Lassen thinks it the same as the Choaspes, the name being half Greek, half Sanscrit, Euaspes, that is, *Su-aspa;* Reichard takes it to be the *Alishona*, a tributary of the *Kâbul* river; Ritter (*Erdkunde*, vol. iii. p. 421) and Thirlwall (*Hist. of Greece*, vol. vii. p. 6) consider it the same as the Coas or Choes. The character of the country, and of the tribes with whom Alexander came in contact in this part of his march, inclines us to think the opinion of Wilson (*Ariana*, p. 188), that it is represented by the *Khonar*, is, on the whole, the best. (See also Elphinstone, *Kâbul*, p. 328; Court. *J. As. Soc. Beng.*, April, 1839.) [V.]

EUBOEA (Εὔβοια: *Eth.* Εὐβοιεύς, Εὐβοεύς, fem. Εὐβοΐς: *Adj.* Εὐβοϊκός, Euboicus, Euboeus: *'Egripo* or *Negropont*), the largest island in the Aegaean sea, lying along the coasts of Attica, Boeotia, Locris, and the southern part of Thessaly, from which countries it is separated by the Euboean sea, called the Euripus in its narrowest part. It is a long and narrow island. According to Strabo, its length from N. to S., from the promontory Cenaeum to the promontory Geraestus, is about 1200 stadia, and its greatest breadth 150 stadia. (Strab. x. p. 444.) Pliny describes it as 150 miles in length, and 365 miles in circuit; as in one place more than 40 miles in breadth, and nowhere less than two. (Plin. iv. 12. s. 21.) But these measurements are far from accurate. The real length of the island from N. to S. is about 90 miles; its extreme breadth is 30 miles, but in one part it is not more than 4 miles across.

Throughout the whole length of Euboea there runs a range of mountains, forming as it were the back-bone of the island, which may be regarded as a continuance of the range of Ossa and Pelion, and of that of Othrys. In several parts of the island these mountains rise to a great height. *Mt. Delphi*, on the eastern coast, is 7266 feet above the sea. These mountains consist of grey limestone, with a considerable quantity of clay-slate.

The interior of Euboea has never been thoroughly explored by any modern traveller; and the best description of its physical features is given in the "Penny Cyclopaedia" by a writer well acquainted with the island, to whose account we are chiefly indebted for the following remarks. The northern end of the island, facing the coast of Thessaly and the Pagasaean gulf, is of considerable width. Its north-western extremity is a small peninsula, terminating in the promontory CENAEUM (Κήναιον: *Lithádha*), and containing a mountain called *Lithádha*, which rises to the height of 2837 feet above the sea. Immediately south of the isthmus, which connects this peninsula with the mass of the island, is Mount TELETHRIUS (Τελέθριος, Strab. x. p. 445), 3100 feet high, on the west coast opposite Locris: at the foot of this mountain upon the coast are some warm springs, called *Thermá*, which were celebrated in antiquity. [AEDEPSUS.] From Telethrius the mountains spread out across the island to the eastern coast, and contain several elevations above 2000 feet in height. Along the foot of these mountains, opposite Thessaly, is the fertile plain of Histiaea. Upon this northern coast was the promontory Artemisium, off which the Greeks gained their celebrated naval victory over the Persians, B. C. 480. [ARTEMISIUM.] South of Telethrius there is high land along the western coast as far as *C. Politikâ;* and one of the mountains between these limits, called *Kandili*, is 4200 feet high. South of *C. Politikâ*, and extending south of Chalcis, is a fertile and extensive plain, bounded on the north and north-east by the high mountains which extend to the eastern coast; this plain, which is the largest in the island, was called LELANTUM in antiquity, and was divided between the rival cities of Chalcis and Eretria. The centre of the mountain mass, which bounds this plain, is *Delphi*, already mentioned: it was called in ancient times DIRPHYS or DIRPHE (Δίρφυς, Steph. B. *s. v.*; Δίρφη, Eurip. *Herc. Fur.* 185). South of Chalcis there is for some distance a track of low land along the western coast, backed however by lofty mountains. South of Eretria is the plain of *Alivéri*, after which there appear to be no longer plains of any size. The whole of the southern end of the island is filled by a mass of mountains, presenting a dangerous coast to mariners: the highest elevation of these mountains, called OCHE (Ὄχη) in antiquity, now *Mt. Elias*, is 4748 feet above the level of the sea. On the summit of Mt. Oche are the ruins of a very ancient temple, of which a description and drawings are given by Mr. Hawkins in Walpole's *Travels* (p. 288, seq.). The south-eastern extremity of the island was called CAPHAREUS or CAPHEREUS (Καφήρευς), now *Kavo Doro* or *Xylofágo:* the south-western extremity was named GERAESTUS (Γεραιστός), now *Mandili*. The dangerous part of the coast, called the Coela or "Hollow," appears to have been a little north of the promontory Geraestus. [COELA.]

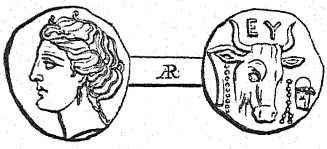
The eastern side of Euboea is much more rocky than the western coast. On the eastern side the rocks rise almost precipitously from the water, and are rarely interrupted by any level spot, except towards the northern end. "Fragments of wreck are found at the height of 80 feet perpendicular, washed up by the heavy sea which a north-east wind throws into this bay. These winds, which always blow very strong, are called by the Greeks 'meltem,' probably a corruption of 'mal tiempo.' In addition to this, the Dardanelles current, preserving the course communicated to it by the direction of that strait, sets strong to the south-west into this bay (between the promontories Caphareus and Chersonesus), and renders it a most dangerous coast: no vessel once unbayed here can escape destruction. The current being deflected to the southward, sweeps round *C. Doro* (Caphareus), frequently at the rate of three miles an hour. Port *Petries* is the only refuge which this coast offers, and so little has hitherto been known of this shore that even this shelter has only recently been discovered. Along the whole extent of this coast, which is upwards of 100 miles, there are only five or six villages near the shore."

It was believed by the ancient writers that Euboea was originally connected with the opposite coast of Greece, and was separated from the latter by an earthquake. (Plin. iv. 12. s. 21; comp. Strab. i. p. 58, x. p. 447.) The channel between the northern end of Euboea and the opposite coast of Thessaly, now called *Trikeri* from the Thessalian town of this name, is an average width of about 4 miles, though in one part it contracts to not quite 1½ mile. Upon rounding the promontory Cenaeum, off which lie the small rocky islands called Lichades, and turning to

the southward, is the bay of *Tálanda*, so called from the Boeotian town of this name. "A remarkable feature in this part of the channel is the amazing depth of water under Mt. Telethrius, where, for about 12 or 15 miles, there is no bottom with 220 fathoms within half a mile of the shore; but from this point the water shoals gradually towards *Egripo* (Chalcis). Towards the north-west extremity of this shore there is a very safe and excellent harbour, now called Port *Ghialtra* (formerly Port Kalos)." At Chalcis the Euboean sea contracts into a narrow channel, called the Euripus, only 40 yards across. An account of this channel, and of the extraordinary tides which here prevail, is given elsewhere. [CHALCIS.] South of the Euripus are several islands along the Euboean shore, which afford good anchorage. Of these the most important are Glauconnesus, Aegiliae, and the islands Petaliae. (Plin. iv. 12. s. 21; Strab. x. p. 444.)

Euboea is deficient in water. There is not a stream in the whole island into which the smallest boat can enter. Those streams of which the names are mentioned, are:—CALLAS (Καλλάς, Strab. x. p. 445), on the north coast, flowing into the sea near Oreus;—CEREUS (Κηρεύς) and NELEUS (Νηλεύς), of uncertain position, of which it is recorded that the sheep drinking the water of the Cereus became white, while those drinking the water of the Neleus became black (Strab. x. p. 449; Plin. xxxi. 9. s. 2; Antig. Caryst. *Hist. Mirab.* 84);—LELANTUS, flowing through the plain of this name (Plin. iv. 12. s. 21);—and BUDORUS (Βούδωρος, Ptol. iii. 12. s. 25), flowing into the sea on the east coast by Cerinthus.

In the plains of Euboea a considerable quantity of corn was grown in antiquity; and there is excellent pasture for sheep in the summer, on the slopes of the mountains. These mountain-lands appear in ancient times to have belonged to the state, and were let out for pasture to such proprietors as had the means of supporting their flocks during the winter. The mountains are said to contain copper and iron, and the marble quarries of Carystus in the southern part of the island were among the most celebrated in Greece. At the present day a light red wine is made from the vines grown in the northern plains of the island; while the plains towards the south are generally cultivated with corn and olives.



Euboea, like many of the other Grecian islands, is said to have borne other names in the most ancient times. Thus, it was called Macris, from its great length in comparison with its breadth. (Strab. x. p. 444.) It was also named Hellopia, properly a district near Histiaea in the northern part of the island, from Hellops, the son of Ion;—Oche, from the mountain of this name in the south of the island;—and Abantis, from the most ancient inhabitants of the island. (Strab. *l. c.*; Plin. iv. 12. s. 21.) It is observed by Strabo that Homer (*Il.* ii. 536) calls the inhabitants of the island Abantes, though he gives to the island itself the name of Euboea. Hesiod related that the name of Abantis was changed into Euboea from the cow Io, who was even said to have given birth to Epaphus in the island. (Hes. *ap. Steph. B. s. v.* Ἀβαντίς; Strab *l. c.*) It would be idle to inquire into the origin of these Abantes. According to Aristotle, they were Thracians who passed over to Euboea from the Thracian town of Abae; while others, in accordance with the common practice, derived their name from an eponymous hero. (Strab. *l. c.*) The southern part of the island was inhabited by Dryopes, who are expressly said to have founded Styra and Carystus (Herod. viii. 46; Thuc. vii. 57) but in the historical period the Abantes had disappeared from Euboea. Herodotus relates that the Abantes assisted in colonising the Ionic cities of Asia Minor. (Herod. i. 146.)

In the historical times most of the cities of Euboea were inhabited by Ionic Greeks; and the Athenians are said to have taken the chief part in their colonisation. Euboea was divided between six or seven independent cities, of which CHALCIS and ERETRIA, on the western coast in the centre of the island, were the most important. In the northern end of the island were situated HISTIAEA, afterwards called Oreus, on the coast opposite Thessaly; DIUM, AEDEPSUS, ATHENAE DIADES, OROBIAE, and AEGAE, on the west coast opposite Locris; and CERINTHUS, on the east coast. In the southern end of the island were DYSTUS, STYRA, and CARYSTUS. There were also a few smaller places dependent upon these cities, of which a list is given under the names of the cities to which they respectively belonged. All the above-mentioned cities occur in the Iliad, with the exception of Athenae Diades. Scylax mentions only four cities—Carystus, Eretria, Chalcis, and Hestiaea.

As Euboea never formed one political state, it is impossible to give a general history of the whole island without repeating what is mentioned under each city. It is therefore only necessary to mention here a few leading facts, referring for the details of the history to other articles. At a very early period Chalcis and Eretria were two of the most important cities in Greece. They possessed an extensive commerce, and founded colonies upon the coasts of Macedonia, Italy, and Sicily, and in the islands of the Aegaean. They continued in a flourishing condition down to the expulsion of the Peisistratidae from Athens, when the Chalcidians joined the Boeotians in making war upon the Athenians. But for this they paid dearly; for the Athenians crossed over to Euboea, defeated the Chalcidians, and divided their lands among 4000 Athenian colonists, B. C. 506. [CHALCIS.] Eretria was destroyed by the Persians in B. C. 490, in consequence of the aid which the Eretrians had rendered to the Ionians, in their revolt from Persia two years previously: and although the city was subsequently rebuilt near its former site, it never recovered its former power. [ERETRIA.] After the Persian wars the whole of Euboea became subject to the Athenians, who regarded it as the most valuable of all their foreign possessions. It supplied them with a considerable quantity of corn, with timber and fire-wood, and with pasture for their horses and flocks. In B. C. 445 the whole island revolted from Athens, but it was speedily reconquered by Pericles. In B. C. 411, shortly after the Athenian misfortunes in Sicily, Euboea again revolted from Athens, and its cities continued for a time independent. But when Athens recovered its maritime supremacy, the influence of the Athenians again became predominant in Euboea, in spite of the Thebans, who attempted to bring it under their sway. The Athenians however were no longer able to exercise the same sovereignty over the Euboean cities, as they had done during the flourishing period of their empire; and accordingly they did not interfere to put down the tyrants who had established themselves in most of the cities shortly before the time of Philip of Macedon. This monarch availed him-

self of the overtures of Callias, the tyrant of Chalcis, to establish his influence in the island; which virtually became subject to him after the battle of Chaeroneia. From this time Euboea formed a part of the Macedonian dominions, till the Romans wrested it from Philip V., and restored to its cities their independence, B. C. 194. (Liv. xxxiv. 51.) The Euboean cities remained faithful to the Roman alliance during the war with the Aetolians (Liv. xxxv. 37, 39), but Chalcis fell into the hands of Antiochus when he crossed over into Greece (Liv. xxxv. 50, 51). Under the Romans, Euboea was included in the province of Achaia.

In the middle ages Euboea was called *Egripo*, a corruption of Euripus, the name of the town built upon the ruins of Chalcis. The Venetians, who obtained possession of the island upon the dismemberment of the Byzantine empire by the Latins, called it *Negropont*, probably a corruption of *Egripo*, and *ponte*, a bridge. The island now forms part of the modern kingdom of Greece. (Comp. Fiedler, *Reise durch Griechenland*, vol. i. p. 420, seq.; Leake, *Northern Greece*, vol. ii. p. 252, seq.; Pflugk, *Rerum Euboicarum Spec.*, Gedani, 1829.)

COIN OF EUBOEA.

EUBURIA'TES. [LIGURIA.]

EUCA'RPIA (Εὐκαρπία: *Eth.* Εὐκαρπεύς, Eucarpenus), a town in Phrygia, not far from the sources of the Maeander, on the road from Dorylaeum to Apameia Cibotus; it was situated in a very fertile district, to which it is said to have been indebted for its name. The vine especially grew there very luxuriously. (Steph. B. *s. v.*; Strab. xii. p. 576.) Under the Roman dominion Eucarpia belonged to the *conventus* of Synnada, to the southwest of which city it was situated. (Plin. v. 29; comp. Ptol. v. 2. § 24; Hierocl. p. 666; Geogr. Rav.) Both Arundell (*Discov. in As. Min.* i. p. 136) and Kiepert place Eucarpia at no great distance from *Segiclar*, but its exact site is unknown. [L. S.]

COIN OF EUCARPIA.

EUCRATI'DIA (Εὐκρατιδία, Strab. xi. p. 516; Ptol. vi. 11. § 8; Steph. B. *s. v.*), a town in Bactriana, named after the king Eucratides. It has not been found possible to identify it with any modern site. [V.]

EUDEIELUS. [ASPLEDON.]

EUDIERU, a castle in Thessaly, on the southern side of Mt. Olympus, described by Livy as distant 15 miles from the Roman camp between Azorus and Doliche, in the direction of Ascuris and Lapathus. It is identified by Leake with *Konispoli*. (Liv. xliv. 3; Leake, *Northern Greece*, vol. iii. pp. 351, 417, 418.)

EUDIPHUS (Εὔδιφος), a town of Cappadocia, in what is called the Pontus Polemoniacus (Πόντος Πολεμωνιακός, Ptol. v. 6. § 10; Geogr. Rav., where it is called *Eudipis*.) [L. S.]

EUDO'CIA (Εὐδοκία), the name of four different towns in Asia Minor mentioned in the *Synecdemus* of Hierocles: one situated in Phrygia Pacatiana; the second in Pamphylia, in the neighbourhood of Termessus; the third in Lycia; and the fourth in Cappadocia. The last had formerly belonged to the Anatolian Thema, but was incorporated with Cappadocia by Leo VI. (Constant. Porph. *de Admin. Imp.* 50.) [L. S.]

EUDOSES, a people of Germany, mentioned only by Tacitus (*Germ.* 40), were one of the tribes of the Suevi, and probably dwelt in *Mecklenburg*.

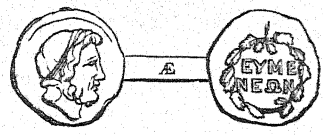
EUDOXIOPOLIS [SELYMBRIA.]

EUESPE'RIDAE. [HESPERIDAE].

EUGA'NEI, a people of Northern Italy, who play but an unimportant part in historical times, but appear at an earlier period to have been more powerful and widely spread. Livy expressly tells us (i. 1) that they occupied the whole tract from the Alps to the head of the Adriatic, from which they were expelled by the Veneti. And it is quite in accordance with this statement that Pliny describes Verona as inhabited partly by Rhaetians, partly by Euganeans, and that Cato enumerated 34 towns belonging to them. (Plin. iii. 19. s. 23, 20. s. 24.) They appear to have been driven by the Veneti into the valleys of the Alps on the Italian side of the chain, where they continued to subsist in the time of Pliny as a separate people, and had received the Latin franchise. But they must also have occupied the detached group of volcanic hills between Patavium and Verona, which are still known as the Euganean Hills (*Colli Euganei*), a name evidently transmitted by uninterrupted tradition, though not found in any ancient geographer

Lucan indeed speaks of the "Euganeus collis," which he associates with the baths of Aponus, and it is probable that the "Euganei lacus" of Martial refer to the same waters. (Lucan, vii. 192; Martial, iv. 25. 4.) The latter author in another passage gives the name of Euganean to the town of Ateste at the foot of the same hills, and Sidonius Apollinaris applies the epithet of "Euganeae chartae" to the writings of Livy. (Id. x. 93; Sidon. Apoll. *Paneg. Anthem.* 189.) Hence it is evident that the tradition of their having previously occupied these regions survived long after their expulsion by the Veneti. According to Cato, the mountain tribes of the Triumpilini and Camuni, considerably further west (in the *Val Camonica* and *Val Trompia*) were also of Euganean race (*ap.* Plin. iii. 20. s. 24).

We have no indication of the national affinities of the Euganeans. Ancient writers appear to have regarded them as a distinct race from the Veneti and from the Rhaetians, as well as from the Gauls who subsequently invaded this part of Italy; but from what stock they proceeded we have no account at all. The notion of their *Greek* descent (Plin. *l. c.*) was evidently a mere etymological fancy, based upon the supposed derivation of their name from εὐγενεῖς, "the well-born."



The chief tribe of the Euganei was called, according to Pliny, Stoeni or Stoni, a name which is also found in Strabo among the minor Alpine tribes (Στόνοι, Strab. iv. p. 204), but we have no clue to their position. [E. H. B.]

EUHY'DRIUM, a town in Thessaly laid waste by Philip, is supposed by Leake to have been situated upon a conspicuous insulated height on the left bank of the Enipeus, on the road from *Petrinó* to *Férsala*. (Liv. xxxii. 13; Leake, *Northern Greece*, vol. iv. pp. 492, 493.)

EUIA (Εὐΐα), a town of the Dassaretae (Ptol. iii. 13. § 32), the position of which is unknown. It was here that the undaunted Eurydice, daughter of Amyntas, and wife of Arrhidaeus, was abandoned by her troops and fell into the hands of Polysperchon and Olympias. (Diod. xviii. 11.) [E. B. J.]

EULAEUS (ὁ Εὔλαιος, Strab. xv. p. 728; Diod. xix. 19; Arrian, vii. 7; Plin. vi. 23. s. 26), a river of Susiana, which rises in the mountains to the east of that province, in the district called *Dinarún*, and, after passing the modern town of *Shuster*, flows into the Tigris by means of an artificial canal called the *Haffar*. Its present name is *Karún*. There have been some difficulties about the identification of the ancient Eulaeus, caused chiefly by the confusion which prevails in many of the ancient geographical notices of the rivers of Susiana, and the Choaspes and Coprates having been by some confounded with it. [CHOASPES.] Its principal tributary was the Coprates, now called the river of *Dizful*, which falls into it a little above the town of *Ahwaz*. (Selby, *Ascent of Karún*, in *I. R. Geogr. Soc.* vol. xiv. pt. ii.) In the lower part of its course it probably represents the ancient Pasitigris. (Rawlinson's Map, *I. R. Geogr. Soc.* vol. ix. pt. i.) Strabo, on the authority of Polycleitus, makes the Tigris, Choaspes, and Eulaeus end their courses in a marsh, and thence flow on to the sea; and remarks on the peculiar lightness and purity of its water (xv. pp. 728—735; compare remarks on the same subject by Lieut. Selby, *I. R. Geogr. Soc.* xiv. p. 223). Pliny speaks of the lakes made by the Eulaeus and Tigris near Charax (vi. 23, 26), and adds that the Eulaeus, whose source was in Media, separated Susiana from Elymais (vi. 27. s. 31). Where, however, he states subsequently in the same chapter that it flowed round the citadel of Susa, he is mistaking it for the Coprates, or, more strictly, for a small stream now called the *Shapúr* river, the ancient name of which, however, has not been preserved. In like manner, Pliny is probably in error when he makes the Eulaeus flow through Messabatene. This district is almost certainly the present *Mah-Sabaden* in Laristán, which is drained by the *Kerkhah* (Choaspes), and not by the Eulaeus. There can be no doubt that, in ancient times, the Eulaeus had a direct channel to the sea, which Lieut. Selby (*l. c.* p. 221) states to be at *Khór Bámushír*, about three miles to the E. of the *Shat-al-Arab*, or *Basrah* river. The same may be gathered from Arrian's account of the movements of Alexander, who states that Alexander the Great, having placed the main body of his infantry under the command of Hephaestion to be led to the Persian gulf, himself descended by the Eulaeus to the sea; that, having arrived at its mouth, he thence proceeded by the sea to the Tigris, leaving some of his ships to follow the canal which joined the Eulaeus and Tigris; and that then he ascended the Tigris (vii. 7). Ptolemy speaks of the mouths of the Eulaeus, and gives it a double source in Media and Susiana (vi. 3. 2). This view may perhaps be reconciled, by supposing the Median source to refer to the Coprates (*Dizful*), and the Susianian to the proper Eulaeus or *Karún*. Ptolemy, however, places the mouth of the river much too far to the E., and appears to have confounded it, in this instance, with either the Hidypnus (*Ierráhí*) or the Oroatis (*Tab*). There seems no reason to doubt that the name itself is a Graecised form of the Chaldee ULAI (*Daniel*, viii. 2, 16); though, as we have shown above, the Eulaeus could not in strictness be said to be the river of Susa. [V.]

EUMENEIA (Εὐμένεια: *Eth.* Εὐμενεύς: *Ishékle*), a town of Phrygia, situated on the river Glaucus, on the road from Dorylaeum to Apameia. (Plin. v. 29; Strab. xii. 576; Hierocl. p. 667.) It is said to have received its name from Attalus II., who named the town after his brother and predecessor, Eumenes II. (Steph. B. *s. v.*) Ruins and curious sculptures still mark the place as the site of an ancient town. (Hamilton, *Researches*, &c. vol. ii. p. 165.) On some coins found there we read Εὐμενέων Ἀχαίων, which seems to allude to the destruction of Corinth, at which troops of Attalus were present. The district of the town bore the name *Eumenetica Regio*, mentioned by Pliny (*l. c.*). (Comp. Franz, *Fünf Inschriften u. fünf Städte in Kleinasien*, p. 10, foll.) [L.S.]

COIN OF EUMENEIA.

EUONYMI'TAE (Ἐυωνυμῖται, Ptol. iv. 7. § 33; Steph. B. p. 288, *s. v.*; Agathemer. *Geogr. Min.* ii. 5; Plin. vi. 35. § 29). Of these people, and of the district occupied by them, the accounts in the ancient geographers are conflicting. One fact alone concerning them seems ascertained, that they dwelt, as their name imports, on the west or *left* bank of the Nile. Stephanus of Byzantium says that the Euonymitae were an Egyptian people situated on the borders of Aethiopia; Agathemerus places them above the Second Cataract; while Pliny, on the authority of Nero's surveyors (exploratores), describes them as living on the northern frontier of Aethiopia near the island Gagaudes. Herodotus, however (ii. 30), says that the Automoli, or that portion of the war-caste of Egypt which abandoned its country in the reign of Psammetichus, were called *Asmach*, and that this word signifies in the Coptic language those whose station is on the king's *left* hand. Diodorus (i. 67), indeed, ascribes the desertion of the warriors to their anger at having been transferred by Psammetichus, during an invasion of Syria, from the right wing of the Egyptian army, their hereditary post, to the left. If these etymologies can be at all relied upon, it seems not unlikely that the Euonymitae were permitted by the king of Aethiopia to settle in a district bordering both on Egypt and Meroe, in which position they might be serviceable to their adopted country in its wars with the Pharaohs of Memphis. [W. B. D.]

EUPAGIUM (Εὐπάγιον), a town in the mountainous district of Acroreia in Elis, of unknown site. (Diod. xiv. 17.)

EUPA'LIUM (Εὐπάλιον, Strab., Thuc.; in some edits. of Thuc. written Εὐπόλιον; Eupalium, Liv.; Εὐπαλία, Steph. B. *s. v.*; Eupalia, Plin. iv. 3. s. 4; *Eth.* Εὐπαλιεύς), one of the chief towns of Western Locris, situated near the sea, and between Naupactus and Oeantheia. (Strab. ix. p. 427, x. p. 450.) It was the place chosen by Demosthenes for the de-

posit of his plunder, in B. C. 426; and it was shortly afterwards taken by Eurylochus, the Spartan commander, along with Oeneon. (Thuc. iii. 96, 102.) After the time of Alexander the Great, Eupalium fell into the hands of the Aetolians; and Philip, when he made a descent upon the Aetolian coast in B. C. 207, landed at Erythrae, which is described by Livy as near Eupalium. (Liv. xxviii. 8.) This Erythrae was probably the port of Eupalium. Leake supposes Eupalium to have stood in the plain of *Marathiá*, opposite to the islands *Trisónia* or *Trazónia*, where some ruins of an ancient city still exist on the eastern side of the plain, at no great distance from the sea. (Leake, *Northern Greece*, vol. ii. pp. 617, 618.)

EUPATO'RIA. [AMISUS].

EUPATO'RIUM. [TAURICA CHERSONESUS.]

EUPHO'RBIUM, a town in Phrygia, between Synnada and Apameia, on the spot of the modern *Sandukli* (Leake, *Asia Minor*, p. 165), formed, together with the towns of Metropolis, Peltae, Acmonia, and some others, the conventus of Apameia. (Plin. v. 29; comp. Geogr. Rav.) It seems, like Eucarpia, to have received its name from the fertility of its territory. (Comp. Hamilton, *Researches in Asia Minor*, vol. ii. p. 169.) [L. S.]

EUPHRANTA or EUPHRANTAS TURRIS (Εὐφράντας πύργος, Strab. xvii. p. 836; Εὐφράντα πύργος, Ptol. iv. 3. § 14; Εὐφραντεῖ, *Stadiasm.* p. 452: *Kasr-Safran*, Ru.), a fortress, and apparently also a town, near the bottom of the Great Syrtis. According to Strabo, it was the boundary between the Carthaginian territory and the dominions of the Ptolemies. Adjacent to it was a good harbour, the only one on this part of the coast. By this and other circumstances noticed by the ancients, it is identified with *Kasr-Safran*, where are still to be seen the large ruins of a tower of massive masonry. (Della Cella, p. 50; Barth. pp. 340, 369.) [P. S.]

EUPHRATENSIS. [COMMAGENE.]

EUPHRATES (ὁ Εὐφράτης, Εὐφήτης), the river of Western Asia, which, with its twin-stream the Tigris, forms the third among the systems of double rivers, which are so peculiarly characteristic of the Asiatic continent, and have had such an important influence on its civilisation and political organisation.

1. *The Name.* — The Euphrates, as it was universally called by the Greek and Roman writers, obtained among the Hebrews the name of "The great river" which was to be the E. boundary of the land granted by Jehovah to the children of Abraham (*Deut.* i. 7), and did actually become the natural limit of the Hebrew monarchy under David. The Prophets when they use it to denote figuratively the Assyrian power, speak of it emphatically as "the river." (*Is.* viii. 5; *Jer.* ii. 18.) The word which still survives in the modern *Frat* or *Fŏrát*, bore the signification of "fertility" (Joseph. *Antiq.* i. 1. § 3; comp. Winer, *Realwörterbuch*, *s. v.*; Rosenmüller, *Handbuch*, vol. i. pt. i. p. 189.) According to Pliny (v. 20) it did not assume the epithet of Euphrates till it had broken through the defile formed by the E. extremity of Mons Amanus. In the earlier part of its course, as far as Elegia, it was called PYXIRATES, and, afterwards, while working its circuitous course through Taurus, OMIRAS. Of its two great sources in the mountains of Armenia, the W. is now called *Karâ-Sú*, the E. *Murád-cháï*, which rises on the S. slope of *Alá Tágh*, a mountain about 9000 feet high, and from its size, ought, perhaps, to be considered as the principal stream. The confluence of these two streams, after forming with the Tigris one tidal channel, receives the appellation of *Shatt-el-'Arab*.

2. *Comparative Geography.* — In comparing the statements of the ancients with modern researches and inquiry, it is important to bear in mind that none of the maps describing the course of the river, previous to the publication of the results obtained by Colonel Chesney's expedition, are to be trusted. We are indebted to his work (*Exped. Euphrat.*, London, 1850) for the first accurate and complete survey of the geography of this river-basin. Before entering upon the more precise details which have been supplied by Strabo, Pliny, Ptolemy, and others, it may be serviceable to cast a glance at the history of the progress of discovery of the banks of this mighty stream, which is connected in the earliest and most venerable records with the origin and cradle of the human race, — is linked with the most important events in the history of mankind, as forming the dividing-line for great empires, races, and tongues, — and is, probably, destined in after ages to become again one among the chief of the thoroughfares of the world.

According to Herodotus (i. 180) the Euphrates flowed from Armenia, being large, deep, and swift, discharging itself into the Erythraean sea. The river was navigable from Babylon upwards for those willow boats (i. 194), the counterparts of which, the modern *Kúfah* or basket boats, now float upon the Tigris and Lower Euphrates.

The expedition of the Ten Thousand, which brought the Greeks into contact with the Persian Empire, considerably enlarged the circle of their ideas respecting the Euphrates; and several modern travellers have borne testimony, from personal observation, to the accuracy of Xenophon's description, even at the present day. The army crossed the Euphrates at the ford of Thapsacus, which appears to have been the best known and most frequented passage down to B. C. 100. The breadth of the river here was 4 stadia. (*Anab.* i. 4. § 11.) After crossing the Euphrates, Cyrus proceeded for nine days' march along its left bank till he came to its affluent, the river Araxes or Chaboras, which divided Syria from Arabia. Still advancing along the banks of the river, he entered the Desert where there was no cultivation or even any tree, nothing but wormwood and various aromatic shrubs. (*Anab.* i. 5. § 1.) The country along the left bank of the river, as far as Pylae, being full of hills and narrow valleys, presented many difficulties to the movements of an army. Pylae, it would seem, marked the spot where the desert country N. of Babylonia, with its undulations of land and steep river banks, was exchanged for the fat and fertile alluvial soil of Babylonia Proper. After Cunaxa, the Greeks quitted the Euphrates, nor did they come within sight of it till they reached the E. branch (*Murád-Chaï*), at a point where the water was not higher than the navel, and as they were told, not far from its sources. (*Anab.* iv. 5. § 2.) Koch (*Zug der Zehn Tausend*, pp. 88—93) is at issue with Colonel Chesney and Mr. Ainsworth as to the point where a ford could be found in mid-winter with snow on the ground. Colonel Chesney (vol. ii. p. 229) asserts that no passage could take place till they reached 39° 10′ N. lat. Koch, whose opinion is preferred by Mr Grote (*Hist. of Greece*, vol. ix. p. 159), holds that the river would be fordable a little above its confluence with the *Tscharbahur* about lat. 39° 3′.

The third period of history which throws light upon the Euphrates system is the Macedonian Expedition into Asia, B. C. 331. Alexander marched through Phoenicia and Syria to the Euphrates, and following the footsteps of Cyrus, crossed the river at the Zeugma of Thapsacus, which derived its name from the bridge originally constructed for the transport of Alexander's army. (Arrian, *Anab.* iii. 8; Q. Curt. iv. 9; comp. Dion Cass. xi. 17; Kinneir, *Geog. Mem.* p. 316). Local tradition has transmitted the fact of the passage of *Iskender Acbár*, and there is the additional fact, that, tempted by the advantages of the situation, he ordered the city of Nicephorium (*Rhakkah*) to be built. In pursuance of his great plan of fusing the West with the East by the promotion, through Greek influence, of a union between different nations from the Nile to the Euphrates, the Jaxartes, and the Indus, the ancient city of Babylon in the East was intended by Alexander to be one of the metropolitan cities of the Macedonian universal empire. To carry out this design, as the course of the Lower Euphrates was hitherto unknown, Nearchus and other followers of Alexander, were despatched to collect materials: and the narrative preserved by Arrian, of the daring voyage of Nearchus to the estuary of the Euphrates, is the most valuable record of antiquity, by which an idea can be formed of the former condition of the Delta of that river and of Susiana. The fleet finished its course at Diridotes (Teredon), a port which was not unknown, as it was frequented by the Arabian merchants, who brought hither their frankincense and other spices for sale. Teredon or Diridotes, the foundation of which has been assigned to Nebuchadnezzar (comp. Abyd. *ap. Scal. Emend. Temp.* p. 13), was a village at the mouth of the Euphrates, at a distance, according to the reckoning of the Macedonian navigator, of 3300 stadia from Babylon (Arrian, *Ind.* xii.). The position of this place has been fixed at *Jebel Sandm*. a gigantic mound near the Pallacopas branch of the Euphrates, considerably to the N. of the embouchure of the present Euphrates. The fleet, in following the windings of the channel, might be carried much beyond the *Shatt el 'Arab*, which is easily missed, and thus might have reached the supposed mouth of the Pallacopas, opposite to the island of *Boobian* (comp. Chesney, *Exped. Euphrat.* vol. ii. p 355; Ainsworth, pp. 185—195).

At the dissolution of the Macedonian empire considerable inland intercourse and traffic was encouraged by the Seleucidae; nor can it be doubted but that the marks of population and industry which have been found on the banks of the Euphrates should be referred to the two centuries of their dominion, when the course of the river would be better protected than when it became the boundary-line between Rome and the Parthians. The great highway from Asia Minor to the cities of Persia, which crossed the Zeugma of the Euphrates, and which in later times bore the imposing name of the "road of peace" ("Zeugma Latinae Pacis iter," Stat. *Silv.* iii. 2. 137), though improved and strengthened by the Romans when their power was established through the whole of Mesopotamia, was probably laid down on the lines which were in use at the time of the Seleucid princes. (Comp. Merivale, *Hist. of the Romans under the Empire*, vol. i. p. 517.) The Roman soldiers first crossed the Euphrates under Lucullus, when the passage, in consequence of an accidental drought, was rendered much easier (Plut. *Lucull.* 24); and in the fatal expedition of Crassus seven legions and 4000 horse took the passage of Thapsacus. (Plut. *Crass.* 20.) Augustus was contented to make the Euphrates the E. boundary of the Roman empire; nor was that frontier advanced, except during the short interval of the Eastern conquests of Trajan. Under Hadrian the Roman boundaries again receded within the Euphrates. The campaigns of Trajan, Severus, Julian, Belisarius, Chosroes, and Heraclius, illustrate in a very interesting manner many points in the geography of the banks of this river; but the consideration of them does not fall within the scope of the present article. It may, however, be observed, that Napoleon, when foiled before the walls of *'Akká* of his projected march upon India, had conceived the plan of pursuing the steps of Trajan and Julian.

3. *Physical Geography.* — Strabo (xi. p. 527) and Pliny (v. 20), among the ancients, have given a general view of the course of the Euphrates, while, as has been observed above, the narrative of the voyage of Nearchus gives the best account of the then state of the embouchure of the river. It must, however, be recollected that considerable changes have, even in the historic period, taken place in the configuration of the soil of the lower districts, in consequence of the great amount of alluvial matter brought down by the Euphrates to the Delta of the Persian Gulf. Nor is this the only circumstance which makes it difficult, in any satisfactory manner, to reconcile the positions of the ancients with modern investigations, — as changes have also been effected by art. The great extent of the plain of Babylonia is everywhere altered by artificial works: mounds arise upon the otherwise uniform level; walls, and mud ramparts and dykes, intersect each other; elevated masses of friable soil and pottery are succeeded by low plains, inundated during the greater part of the year; and the old beds of canals are to be seen in every direction. Further researches may throw great light on the comparative geography of the course of the Lower Euphrates: till then, it may be better to hold our judgment in suspense. It is, however, probable, both from the statements of the ancients and the physical indications of the soil, that the united waters of the Euphrates and the Tigris at no very remote period emptied themselves into the gulf by several distinct mouths; one of which was at Teredon, according to Nearchus, — the mouth of the Euphrates; the other the Pasitigris of Pliny, probably the *Shatt-el-'Arab*.

The extent of the basin of the Euphrates, notwithstanding the great length of the river (1780 English miles), has been estimated at not more than 108,000 geographical miles. (Ainsworth, *Researches*, p. 109.) The ancients correctly placed the sources of this river in Taurus, on the W. slopes of the elevated plateau of *I'rán*. At *Kebban Ma'den* the two branches unite, and the Euphrates assumes an imposing character, struggling to make good its original course towards the Mediterranean ("Ni obstet Taurus in nostra maria venturus," Pomp. Mela, iii. § 5), but still pressing against the Tauric chain at the elbow made by *Malatiyah* (Melitene), till it finally forces a passage through Taurus. After precipitating itself through this gap, the Euphrates winds through chalk hills of a moderate elevation, while its waters and those of the Tigris converge and surround Mesopotamia. It was in this district that the fords of the river were made, and the passages of *Sumeisát*, *Rúm Kala'h*, *Bir*, and *Hammám*, have

been identified with the ancient Zeugma of Samosata, Commagene, Birtha, and Thapsacus, respectively. In the line of the river Euphrates the limits of the upper district terminate to the W. at the hills of *Mesjid Sandabiyah*, and to the E. at the hilly district N. of *Felujah*, including the Pylae of Xenophon. Here the Euphrates ("rapidus Euphrates," Stat. *Silv.* ii. 3. 136) plunges into the low-lying level plains of Babylonia, with the force of its current much diminished; as in the alluvial depressions it is often not a mile an hour, while in its upper course it averages from three to four miles. The current of the Tigris, notwithstanding its traditionary fame for swiftness, does not average more than a mile and a half an hour. After passing the ruins of Babylon, the river appears to become smaller than in its upper course, and was eventually supposed to lose itself in the marshes of *Lamlim* (comp. Polyb. ix. 43), but, extricating itself from them, unites its waters with those of the Tigris at *Kurnâh;* and the two streams, forming one channel by the name of *Shatt-el-'Arab*, discharge themselves into the sea by the town of *Basrah*. Below the *Shatt-el-'Arab*, Pliny (vi. 29) notices 1. the point at which the mouth of the Euphrates had issued formerly into the gulf, "locus ubi Euphratis ostium fuit," D'Anville's "ancien lit de l'Euphrate;" 2. FLUMEN SALSUM, the narrow salt-water channel which separates the low-lying island of *Boobian* off the mouth of the old bed of the Euphrates from the mainland; 3. PROMONTORIUM CHALDONE, the great headland at the entrance of the bay of *Dooat-el-Kuzma*, from the S. opposite *Pheleche* island; and 4. a tract along a sea broken into gulfs, "voragini similius quam mari," extending for 50 M. P. as far as the river ACHANA (comp. Forster, *Hist. Geog. of Arabia*, vol. ii. p. 212).

The permanent flooding of the Euphrates is caused by the melting of the snow on the mountains along the upper part of its course. This takes place about March, and increases till the end of May, when it is usually at its greatest height. (Colonel Chesney, *Exped. Euphrat.;* Ainsworth, *Researches;* Ritter, *Erdkunde*, vols. x. xi.; Layard, *Nineveh and Babylon.*) [E. B. J.]

EUPILIS LACUS, a small lake in the N. of Italy, at the foot of the Alps, S. of the Lacus Larius, and nearly intermediate between its two arms. Pliny speaks of it as giving rise to, or rather receiving and transmitting, the river Lambrus, still called the *Lambro*. There are now two small lakes, called the *Lago di Pusiano*, and *Lago d'Alserio*, which communicate with the *Lambro*, and are separated only by a low marshy tract, so that they probably in the days of Pliny constituted one larger lake. (Plin. iii. 19. s. 23; Cluver. *Ital.* p. 410.) [E. H. B.]

EUPO'LIUM. [EUPALIUM.]

EUPO'RIA (Εὐπορία), a city of Macedonia (Steph. B.), and a station on the road from Heracleia to Philippi which passed round the S. side of Lake Prasias or Cercinitis; according to the Tabular Itinerary, 17 M. P. from Heracleia. This distance, combined with the name, seems to indicate that it stood at a ferry across the lake; perhaps at the spot where the lake first begins to narrow three or four miles to the NW. of Amphipolis; but more probably on the W. side of the lake, because Ptolemy (iii. 13. § 35) reckons it among the cities of Bisaltia. (Leake, *Northern Greece*, vol. iii. p. 228.) [E. B. J.]

EUPYRIDAE. [ATTICA, p. 326, a.]

EURIPUS. [CHALCIS; EUBOEA.]

EURO'MUS (Εὔρωμος: *Eth.* Εὐρωμεύς), a town in Caria, at the foot of Mount Grion, which runs parallel with Latmus, was built by one Euromus, a son of Idris, a Carian. (Strab. xiii. pp. 636, 658; Steph. B. *s. v.*; Polyb. xvii. 2; Liv. xxxii. 33, xxxiii. 30, xlv. 25.) Under the Roman dominion Euromus belonged to the conventus of Alabanda. (Plin. v. 28.) Ruins of a temple to the north-west of Alabanda are considered by Leake to belong to Euromus. (*Asia Min.* p. 237.) [L. S.]

EURO'PA (Εὐρώπη, Herod. et alii; Εὐρώπεια, Εὐρωπία (ī), Soph. *ap. Steph. B.: Eth.* Εὐρωπαῖος, fem. Εὐρωπίς.) Europe is that portion of the globe which constitutes the NW. division of the Old or Great Continent. Its proper boundaries are, to the N. and W., the Atlantic and Arctic Oceans; to the S., the Mediterranean sea; while to the E. an imaginary line drawn through the Archipelago, the Straits of the Dardanelles, the Sea of Marmora, and the Black sea, as far as the western extremity of Mount Caucasus, is its conventional limit on the side of Asia. From thence the supposed line runs along the Caucasian chain, in an ESE. direction, crosses the Caspian sea, and follows the course of the river Ural and the Uralian Mountains until it terminates at the mouth of the river *Kara*. The most northern point of the mainland of Europe is in lat. 71° 6′ N., its most southern in 36° N.; or, respectively, *C. Nord Kyn*, and the *Punta de Tarifa* in Spain. Its most western point is in long. 9° W., and its most eastern in 60° 20′ E.; or, respectively, *C. St. Vincent*, and a spot in the Uralian Mountains W. of *Ekatarinberg*. The surface of Europe is calculated at about 3,900,000 square miles; and a line drawn from *C. St. Vincent* to the mouth of the river *Kara* on the Frozen Ocean would measure a little above 3000 miles. These limits, however, apply to Europe at the present day, and include a space far exceeding any dimensions ascribed to it even by the best informed of ancient writers. In one respect, indeed, as regards this portion of the Great Continent, modern science and the imperfect knowledge of the early cosmographers singularly coincide. Herodotus and his contemporaries considered, and perhaps rightly, the whole of the earth then known as one single continent, representing Europe, Asia, and Africa as so many divisions of it. Science, on the other hand, looking to the geological continuity of the globe, considers the parts of the old continent as merely forming one organic whole, separable indeed for political purposes, but really connected with each other by common structural and ethnological properties.

The tripartite division of the old continent, with which we are so familiar, was, as regarded the ancients, an arrangement of comparatively recent date. The earliest cosmographers believed that the terraqueous globe consisted of two nearly elliptical hemispheres, surrounded by the great river Oceanus. The Hebrews, even in the 1st century B. C., maintained Palestine to be the centre of the world: and the Greeks ascribed a similar position to their oracles at Delphi or Dodona. By the former the regions west and north of the Great Sea—the Mediterranean—were denominated the Land of Javan and the Islands: and the poet of the Iliad and Odyssey does not include in his catalogue of countries the name of either Asia or Europe. (Steph. B. *s. v. Asia.*) Asia, indeed, in Homer, signifies merely an alluvial district near the Lydian river Cayster (*Il.* ii. 461); and Libya is confined to a small portion of the NE.

corner of Africa (*Od.* iv. 351). The geography of the ancients, like their physical science, was founded less upon observation, than upon fanciful cosmogonical correspondences. They imagined that the earth was divided into certain similar parts, of which those of the northern hemisphere answered generally to those of the southern: that, for example, as the Nile flowed in a northerly direction, so the Ister flowed south; and that the globe was encompassed by certain zones or belts of which two were uninhabitable from cold, and one from heat. Nor were these theories the only obstructions to more accurate acquaintance with the extent and configuration of the earth. The most adventurous navigators, the Phoenicians, both of Tyre and Carthage, jealously concealed the course of their voyages as commercial secrets: the Greeks who settled on the coasts of the Mediterranean and Black seas rarely penetrated far into the interior: the conquests of Alexander, which disclosed so much of Asia, scarcely affected Europe: and the best informed of the ancient writers on geography—those of Alexandria—had few, if any, means of ascertaining what regions extended beyond the Carpathian mountains, on the one hand, or the Persian gulf, on the other. The Romans were properly the first surveyors of Europe: yet their knowledge did not extend beyond Jutland, or the western bank of the Vistula. But within those limits, public roads issuing from the forum traversed every province of the empire; colonial towns superseded the rude hamlets of the Gauls and Iberians; and Italian merchants pervaded every district from Teviotdale to the Lilybaean promontory, and from the Atlantic Ocean to the mouths of the Danube. Yet even the Romans were timid navigators: they were content to import amber from the coasts of the Baltic, but never explored the gulfs and bays of that sea itself. They but imperfectly surveyed the shores of Spain and Gaul, preferred long journeys by land to compendious sea-voyages, and to the last regarded the western ocean with a kind of superstitious awe. (Flor. ii. 17. § 192.)

Europe, then, as it was known to the ancients, does not correspond with the modern continent either as respects its boundaries, its divisions, its physical aspect, or its population. We shall examine these points in succession, but must inquire first into the origin of the name itself.

I. *Name.*—The earliest mention of Europe by Greek writers, as a division of the globe, occurs in the Homeric Hymn to Apollo (vv. 250, 251. and 290, 291), where it is distinguished from Peloponnesus and the Greek islands. Aeschylus (*Fragm.* 177) alludes to a threefold partition of the earth, and mentions the river Phasis, in the region of Mount Caucasus, as the boundary between Asia and Europe, and the Columns of Hercules, at the opposite extremity of the continent, as its boundary on the side of Libya. Libya and Europe, indeed, are sometimes represented as one continent. (Agathem. *Geograph.* ii. 2; Sall. *B. Jug.* 17; Lucan, ix. 411). Respecting the origin of the name Europa various hypotheses have been started. (1). The vulgar opinion, sanctioned by the mythologers, was, that our continent derived its appellation from Europa, "the broad-browed" daughter of the Phoenician king Agenor. But such an etymology satisfied neither geographers generally, nor Herodotus in particular, who indeed wonders (iv. 45) how it should have come to pass that the three main divisions of the earth took their names from three females respectively—Asia, Libya, and Europa. The connection of Europe with Phoenicia is obvious: Tyrian and Sidonian mariners were the earliest explorers of the bays and coast of the Mediterranean, and among the first colonisers of its principal islands and its western shores. They were the first also who passed through the Columns of Hercules, surveyed the coasts of Spain and Gaul, and entered the German Ocean and perhaps the Baltic sea. And the name Europa bears a close resemblance to the Semitic word *Oreb* — the land of sunset. (Bochart, *Phaleg.* 34.) Such an appellation the Phoenicians of Asia might justly give to the regions westward of the Aegean, even as the Italian navigators, in the middle ages, looking from the opposite quarter, denominated the eastern extremity of the Mediterranean the Levant, or the region of sunrise. (2). Agathemerus (*Geograph.* i. 1. p. 3) says that Eurus, the SE. wind, is the root of Europa: and Heyd (*Etymol. Versuch.* p. 33) derives the name from εὐρύς, and ἀπία, a Scythian word denoting, as he says, the earth or land generally. Perhaps, however, the most satisfactory explanation of the term is that of Hermann (*ad Hom. Hymn. l. c.*); at least, it is less vague than any of the foregoing. The poet is speaking of the inhabitants of Peloponnesus and the islands, and Europe; of the latter, as distinct apparently from the former two. The Homerid bard was most probably a Greek of Asia Minor. Now, within a few hours' sail from the Asiatic mainland, and within sight of the islands of Thasus and Samothracia, stretched the long and deeply embayed line of the Thracian shore — an extent of coast far exceeding that of any of the Greek islands, or even of Peloponnesus itself. Europe, then, as Hermann suggests, is the Broad Land (εὐρὺς ἄψ), as distinguished from the Aegean islands and the peninsula of Pelops. It is remarkable too that, under the Byzantine empire, one among the six dioceses of Thrace was called Europa, as if a vestige of the original designation still lingered on the spot. It may here be noticed that in mythical genealogy Europa is the wife of Zeus, while Asia is the sister or wife of Prometheus: and thus apparently the line of Zeus and the Olympian divinities is connected with our continent; and the line of Prometheus, Epimetheus, Atlas, &c., or the Titanic powers, with Asia and Libya.

II. *Boundaries.*—These have varied considerably at different epochs. We have already seen that Europe and Libya were at one time regarded as the same continent. The gradual discovery and distinction of Europe on charts, and in the language of the learned or the vulgar, arose from two opposite impulses of mankind—commerce and conquest. In the former the Phoenicians took the lead, in the latter the Greeks; but both of these nations yield to the Romans as discoverers of Europe, inasmuch as they explored the inland regions, while the Greeks and Phoenicians, unless attracted, as in the case of Iberia, by the mineral wealth of the interior, planted their colonies and emporia on the verge only of the Mediterranean and Atlantic.

We shall perhaps best understand the progress of discovery by a reference to the accounts of the earliest cosmographers, among whom must be included Homer. (Strab. *Proleg.* 1. p. 2.)

1. About 800 B. C., then, the earth seems to have been generally regarded as an irregular ellipse, of which the northern and upper segment comprised

the islands of the Aegean sea, Peloponnesus, Hellas, Thracia, Thrinacria, or the three-cornered island Sicily, and a small portion of the boot of Italy, south of a line drawn between the Sinus Scylaceus and the Sinus Hipponiatis. Near the western verge of the Great Sea were the isles of the Sirens and Elysium, and far to the NE. the land of Ogygia. The ellipse was encompassed by the river Oceanus. This was the primitive Europe, as it was known to the contemporaries of Homer. The author of the Homeric poems was indeed acquainted with the countries around the Aegean, and in some degree also with the southern coast of the Euxine. But when, as in the Odyssey, he mentions more westerly regions, he deals at best in vague rumours, which, if derived through investigation at all, were probably the legends of Phoenician and Etruscan mariners, partly credulous themselves, partly desirous to exclude the Greeks from their trade and settlements in the west of Sicily.

2. Three hundred years afterwards the historian Hecataeus described the globe as an irregular circle, of which the northern hemisphere contained Europa, with a very uncertain frontier on the side of Asia. Some advance, however, in knowledge had been made in the meanwhile. The Iberians, Celts, and Scythians occupied respectively Spain, Southern Gaul, the districts between the sources of the Rhine and the Ister, and the S. Danubian plateau. The northern limit of Thrace was supposed to be conterminous with an unexplored and uninhabitable Arctic region. Italy was not as yet known by any single name, but was designated, according to its races, as the land of the Tyrrhenians, Ausonians, and Oenotrians. On the other hand, although the Mediterranean was still denominated the Great Sea, — by which name is implied ignorance of the Atlantic Ocean, — the Euxine, the Ionian, and Adriatic seas had attained their permanent titles. Northern Greece, Peloponnesus, and the Mediterranean islands were intimately known. The Cyclopes and Laestrygonians had vanished from the shores of the latter, and even, in the NE., the coasts of the Palus Maeotis were defined with tolerable accuracy.

3. Herodotus, who had both travelled extensively himself, and possessed the advantage of consulting the descriptions of his predecessors, Hellanicus, Hecataeus, &c., surpassed them all in his knowledge of particular regions. Yet he was much better acquainted with Western Asia and Aegypt than with Europe generally, to which indeed, if he does not confound it with Asia, he assigns a breadth greatly disproportioned to its true dimensions. He places the region of frost far below the Baltic sea, and represents the river Oceanus as the general boundary of the land. He seems also to have given the Danube a southerly inclination, in order that it may correspond with the northerly course of the Nile. The globe itself he conceived as elliptical rather than spheroidal.

4. Even Eratosthenes, who composed his great work about B. C. 200, and Strabo, who probably had before him the recent surveys of the Roman provinces, made by order of Augustus after B. C. 29, entertained very imperfect notions of the extent of Europe to the north. Of Russia and the Baltic regions generally they knew nothing. The Roman negotiatores, who next to the legions made their way into the heart of every conquered land, did not, until another generation had passed, venture beyond the Elbe or the Weser. The campaigns of Drusus Nero in B. C. 12—9, and of his son Germanicus in 14—16 A. D., first contributed to a more exact acquaintance with central Europe. Pliny the elder was attached to one of the legions of Drusus, and both himself gives a lively account of the Regio Batavorum, and probably imparted to Tacitus many details which the historian inserted in his Treatise on the Germans. It is worthy of remark that, in the interval between the composition of his Germania and the Annals, Tacitus extended and improved his knowledge of the localities and manners of the Teutonic races. His names of tribes and their weapons are amended frequently in the later of these works. Ptolemy the geographer, who wrote about A. D. 135 and in the reign of Hadrian, mentions a considerable number of tribes and places N. of the Roman province of Dacia, as far N. apparently as Novogorod, which were unknown to former cosmographers. But his notices of these regions scarcely extend beyond mere names, which, both as respects their orthography and their relative situations, cannot possibly be identified with any known districts or tribes. The work of Ptolemy itself is indeed both fragmentary and corrupt in its text: yet even if we possessed the whole of it, and more correct manuscripts, we should probably gain little more accurate information. His statements were in the main, as regards those obscure tracts, derived from the vague and contradictory reports of Roman traders, who would naturally magnify the ferocity of the races they visited, and the dangers and privations they had undergone. During the progress of migration southward, as the barriers of the Roman empire successively receded, the population of the lands north of the Tanais, the Volga, and the Caspian sea, both in Europe and Asia, was constantly fluctuating, and its undulations stretched from China to the Atlantic. As race pressed upon race, with a general inclination towards the line of the Pyrenees, the Alps, and the Balkan, the landmarks of geography were effaced, and tribes which Pliny and Tacitus had correctly seated between the Elbe and the Vistula were pushed onward, if they continued to exist independently, into the Alpine regions, or as far westward as the Loire and Garonne. The barbarians indeed, who seized upon Gaul and Iberia after the 4th century A. D., brought with them some knowledge of the regions which they had quitted. But this knowledge was scarcely available for geographical purposes, even when it was not altogether vague and traditionary. It was needful that the great flood of migration should subside in fixed localities before certainty could be obtained. After the fall of the empire, two very different classes of men helped to complete the details of European geography: (1) the Scandinavian pirates, whose voyages extended from the German Ocean to the Black sea; and (2) the missionaries of the Greek church, the first real explorers of the tracts vaguely designated by the ancients as Scythia and Sarmatia. About the 9th century A. D. these pious men had penetrated into the interior of Russia, and brought the Sarmatian tribes into correspondence with the church of Constantinople. Civilisation, and with it a more regular survey of these regions, followed in their track. The preachers of the gospel were stimulated by their zeal to fresh discoveries; and their converts were attracted by the luxuries of the capital. In the same century Charlemagne extended the knowledge of Northern Europe by his crusade against the Saxon heathens; Alfred the

Great contributed to the same end by his expedition into the Baltic sea, and compiled from the journals of Other a succinct account of those countries, as well as of the sea-coast of Prussia. In the 13th century that region was annexed to Christendom by the victories of the knights of St. John. From that epoch dates the complete discovery of the European continent from Lapland to the Straits of Gibraltar.

To trace the course of geographical knowledge in Europe southward of its principal mountain-chains, we must revert to the series of Roman conquests in their chronological order. The Romans were, as we have remarked already, the first accurate surveyors of the continent. In the interval between the first and second Punic wars, Illyricum was humbled (B. C. 219) and the eastern shore of the Adriatic laid open to European intercourse. Their advance north of the Rubicon and the Magra was more gradual, yet colonies had been established as outposts among the Boian and Insubrian Gauls before the commencement of the Second Punic War. Epirus and Macedonia were reduced to the form of provinces in B. C. 167, and Illyricum finally broken up into three cantons in the year following. Even in the most flourishing period of the Macedonian empire, Illyricum and Epirus had been very imperfectly explored, and were regarded by the Greek republics as but one degree removed from barbarism. Before B. C. 149 the Romans had begun to attack the Gauls in the Alps, and gradually made themselves masters of the coasts of Dalmatia, of Liguria as far as Spain, and the entire island of Corsica. The Iberian peninsula was first completely subjugated by the Cantabrian wars of Augustus, B. C. 19, although Baetica and Tarraconensis, with the greater portion of Lusitania, had long before received Roman praetors for their governors. By far, however, the most important contributions to geographical knowledge ensued from Caesar's campaigns in Gaul, B. C. 58—50. These opened Europe from the maritime Alps to the Atlantic Ocean, and from the Massilian gulf to the Straits of Dover. Thenceforward the Rhine became one of the boundaries of the empire, and the German races were brought into direct collision with Rome. Beyond that river, indeed, the Romans made little or no progress, since it was the policy of the emperors, bequeathed to them by Augustus, and acted upon for nearly a century by the prudence or indolence of his successors, not to extend further the limits of their dominions. Noricum, Pannonia, Rhaetia, and Vindelicia were, however. humbled or reduced by the lieutenants of Augustus, and the arts of Rome were carried into the Tyrol, Styria, and the territories of modern Austria. In the reigns of Claudius and Vespasian the British islands were annexed to the circle of Roman provinces, and for nearly three centuries recruited its legions and paid tribute to its exchequer. The last important acquisition on the European mainland was Trajan's conquest of Dacia (A. D. 81), by which the frontiers of the empire were carried beyond the Danube, and the yoke of Italy was so firmly impressed upon the vanquished, that to this day the Wallachians entitle themselves in their own language the *Romini*. From the friths of Forth and Clyde, a line drawn across the modern Netherlands to the Crimea will pretty accurately represent the north-eastern verge of the Roman empire in Transalpine Europe. Beyond it the conquerors possessed little, if any, knowledge of the various Teutonic, Celtic, and Sclavonian races who then roved over the great central plateau between the N. bank of the Seine and the Carpathian hills; but within that line their dominion was firmly secured by fortified camps, and flourishing colonies, and above all by the roads and bridges which connected the most distant provinces with Italy and the capital. These acquisitions were indeed the fruits of six centuries of nearly uninterrupted war, and could have been made only by a people who preferred arms to commerce, and who, by fresh encroachments upon their neighbours, were perpetually imposing upon themselves the necessity of securing new military frontiers for their dominions. The aspect of Europe, as known to the Greeks, was widely different. Of Gaul and Iberia they knew little more than the tracts contiguous to Massilia and Emporia in the north, and to Gades and Tartessus in the south. With the Alpine tribes they were wholly unacquainted, and never more than temporarily subjugated the barbarians on their own frontiers—the mountain-races who from Illyricum to the Euxine were constantly at war with the kings of Epirus and Macedon. At its utmost extent, therefore, the Europe of the Greeks was bounded by the mountain-chain which runs north of Thrace, Italy, and Iberia, and constituted scarcely a third part of the modern continent.

The boundaries of this segment were on the eastern side long undefined. The Mediterranean and the Atlantic were indeed definite barriers; and the regions beyond the great mountain-chain were presumed to be trackless wilds, uninhabitable from cold. Even Polybius (iii. 37, xxxiv. 7, 8, *seq.*), in this respect, was not more enlightened than Herodotus; and Strabo and his contemporaries in the Augustan age conceived the German Ocean and the southern curve of the Baltic to be the proper limits of the continent. In Pliny (iv. 13. s. 17, 16. s. 30) and in Ptolemy (ii. 11. § 33, iv. 6. § 4) we meet with the earliest hints of the Scandinavian regions, which, however, those geographers regarded as groups of islands, rather than continuations of the mainland. The boundary between Asia and Europe shifted, with the increase of knowledge, slowly to the west, thereby contracting the supposed breadth of the latter continent. It was originally placed on the right bank of the Caucasian Phasis or Hypanis, next at the Cimmerian Bosporus, and finally determined by an imaginary line drawn along the river Tanais, and across the Euxine, the Hellespont, and the Aegean sea. The Tanais and Hellespont, says Dionysius (*Perieg.* 14, 15), divide Asia from Europe. Procopius, indeed (*B. Goth.* v. 6), recurs to the earlier opinion, that the Phasis was the proper eastern limit.

The dimensions of Europe were, consequently, much misunderstood by the ancient geographers. Herodotus imagined it to be of greater length than Asia and Libya combined. Even Strabo, with far superior means of ascertaining the fact at his disposal, represents Africa as smaller than Europe, and Africa and Europe together as of less extent than Asia alone. Agathemerus (*Geogr.* i. 7) was the first to assign more correct relative proportions to the subdivisions of the old continent. These erroneous computations indeed arose, in some measure, from the exclusion of nearly the whole of modern Russia and Scandinavia from the calculation. We now know that Africa is more than thrice the size of Europe, and Asia more than four times as large.

Herodotus (iv. 45) complains that no one had discovered whether Europe were an island or not, inasmuch as its northern and eastern portions were unexplored. Some rumours, indeed, of islands NW. of

the mainland had in his time reached the civilised portions of the world, through the voyages of the Carthaginians to the Cassiterides, Cornwall, and the Scilly islands. But these enterprising navigators, who could have given the Greeks so much information respecting the western shores of the continent, jealously guarded the secrets of their voyages, and contributed but little to the science of geography. That Punic manuals of navigation existed is rendered probable by the facts that the Carthaginians possessed a literature, and that their treatises on agriculture were deemed of sufficient importance by the Romans to be translated into the Latin language: and it is not likely that they should have entrusted their fleets to the mere traditionary and empirical skill of successive generations of pilots. But their knowledge perished with them; and the Greeks, excellent as they have been in all ages as navigators of the narrow seas, were rarely explorers of the main ocean. For shore-traffic, indeed, Europe is the best calculated of continents, since it presents by far the greatest extent of coast-line, and hence is described by Strabo (ii. 126) as πολυσχημονεστάτη, or the most variously figured of the earth's divisions. To a Greek, Europe, bounded on the north by a curve of mountains, and springing forth by three main projections into the seas southward of its mountain-bases, presented the aspect of three pyramidal peninsulas of land, — Iberia, Italia, Hellas (to which Polybius adds a fourth in Thrace and a fifth in the Crimea), — respectively resting upon the Pyrenees, the Alps, and the Balkan range. This supposed configuration was the theme of frequent comment among the ancient cosmographers, and the source of many ingenious theories regarding the agencies of fire or water in producing them. But it is intelligible only when we remember the limits in which Europe, as known to the Greeks, was confined. To an ancient navigator, however, sailing from a port in Asia Minor to the Columns of Hercules, this configuration would necessarily be a subject of remark, since he would pass alternate projections of land and the deeply embayed gulfs of the Aegean, Ionian, and Tuscan seas, and witness, as it seemed to him, successive confirmations of his preconceived notions of the form of the continent. In these respects, as well as in the more undulating character of its shore, Europe presented a marked contrast to both Asia and Africa. Yet the Greeks, ever on the alert for physical analogies, discovered a similar distribution of land and water in the Arabian peninsula and the seas which bound it, as well as in the long valley of the Nile; and they thus arrived at the conclusion, not only that this phenomenon was repeated in every zone, but also that the earth was constructed on a system of parallelisms, so that the northern and southern hemispheres were nearly counterparts of each other.

III. *The Climate and Products of Europe.* — The climate of central Europe affected the progress of discovery northward. The mean temperature of Spain, Italy, and Greece was lower than at the present day; while Gaul and Germany experienced almost the rigours of an Arctic winter. In their wars with Rome we find Gaulish clans, accustomed to a colder and more bracing atmosphere, exhausted by the heat of modern Lombardy, although that region is not now sensibly warmer than the south of France. But central Europe was, for many centuries, as regards its climate, what Canada is at the present day. The vast forests and morasses of Gaul and Germany were, until nearly the 9th century of our era, unfelled and undrained, and aggravated the cold and humidity of the northern sides of the Alps and Pyrenees. Nor was the southern flank of these mountains unaffected by the same causes. The Romans, even in their Italian wars, rarely took the field before the month of April, since they dreaded encountering the snow-storms of the Apennines, and the floods which at the melting of the ice converted the feeders of the Tiber into rapid torrents. The snow lay then periodically on Mt. Soracte, and the Sabellian herdsmen found fresh pastures as late as July in the upper valleys of the Abruzzi. Ovid, in the epistles which he wrote in exile, describes the cold of the Euxine and its adjacent coasts as a modern traveller would describe the temperature of Stockholm and the Baltic, and in the latitude of Saxony the legions of Drusus and Germanicus endured many of the hardships of a Russian winter. (Tac. *Ann.* i. 60, ii. 24.) We may indeed suspect that the legionaries owed some of their ill-success in the German wars less to the inclemency of the elements, than to the skill or valour with which they were opposed. Yet the horns of the moose-deer which are occasionally dug up in the fens of Southern Germany attest the presence of Arctic animals in those regions, and the tribute of furs imposed by the Romans upon their Rhenish provincials imply a temperature far below the ordinary climate of the same regions at the present time.

Upon the climate and productions, however, of those portions of Europe with which they were better acquainted, of Europe south of the Alps and Pyrenees, the ancients expatiated with pride and admiration. They ascribed to its soil and temperature generally, that golden mean which is most conducive to the increase, the health, and the physical and moral development of the human species. Europe, they alleged, was happily seated between the zones of insufferable heat and cold. It was exempt from the fiercer animals and the more noxious reptiles of the neighbouring continents. Asia and Africa were more abundantly endowed with the luxuries with which man can dispense — with gems, silks, aromatics, and ivory; but Europe produced more uniformly than either of them the necessaries which are indispensable to his health, strength, and safety — corn, wine, and oil, timber and stone, iron and copper, and even the more precious metals, gold and silver. (Strab. ii. pp. 126, 127.) The Scythians and Germans, indeed, were but scantily provided with these adjuncts of life and civilisation; nature had reserved her boons for the more refined and intelligent natives of the south. Greece was in these respects highly favoured: the horses of Thessaly, the corn of Boeotia, the figs and olives of Athens, the vineyards of Chios and Samos, were celebrated throughout the world. But Italy, in the estimation of its children at least, was the garden, as well as the mistress, of the world. (Varro, *R. R.* i. 2; Columell. *R. R.* iii. 7; Plin. iii. 1, seq.; Virg. *Georg.* i. 136, seq.) Its several provinces were distinguished each by its peculiar gifts — Campania by its wines, Tarentum by its fleeces, Etruria by its rich pastures, and Cisalpine Gaul by its cerealia. By its central position in the Mediterranean, Italy was enabled to impart to less favoured regions its own products, and to attract to itself the gifts of other lands — the minerals of Iberia, the hides, the timber, the herds, and horses of Gaul, the marbles and the fruits of Greece, and the beauty and strength

of the British Celts. In Europe, also, it was easy to acclimatise the fruits and animals of other regions. The almond, oleander, the cherry, the acacia, and syringa were imported from Asia Minor; the vine and apricot, from Armenia; from Persia, many species of the numerous genus Pomum,—the orange, peach, citron, &c.; while the fig, olive, and date-palm, the damask rose and the mulberry, had been transplanted from Libya and Syria. The European shores of the Mediterranean exhibit also many families of African plants, and the flora of Sicily and Baetica combine the productions of the temperate and tropical zones. Of these additions to the food or luxury of man, not a few were imported into Europe by the Greek or Roman conquerors of the East. Nor were these accessions confined to the districts which at first received them. To its Roman masters Gaul and the Rhenish provinces owed the vine, a finer breed of sheep, and several kinds of domestic poultry. The olive was carried from Greece to Spain, and the race of Gaulish horses improved by intermixture with the swifter and more delicately limbed varieties of Numidia and Arabia. Finally, the silkworm, whose productions scandalised the economists and philosophers of Rome by draining Italy of its gold and by adding new incentives to extravagance, was naturalised in Greece and Italy in the 6th century of our era, and by its introduction gave a new impulse to European manufactures.

IV. *Population of Europe.*—The history of the population of Europe belongs in part to the description of the several portions of it; and, as a whole, is both too speculative and too extensive an inquiry for a sketch like the present. Neither are our materials for such an investigation either abundant or satisfactory. Our only guides on this point, beyond some doubtful resemblances of manners and customs, and some data founded upon the structure of language, are Greek and Roman writers. But the prejudice which led the Greeks to regard all unhellenic races as barbarous was very unfavourable to ethnological science; and even when they treat of pre-historic races, they throw a mythological veil over the records of early colonisation. The movements of mankind from the east were, in their conceptions, either regulated by a god, like Dionysus, or by the son of a god, like Heracles. The Romans, again, were satisfied with incorporating races among their provincials, and incurious about their origin or physical characteristics. The Greeks also, inhabiting the SE. corner of Europe, and watching the movements of their own colonies alone, or at most gleaning the reports of Phoenician and Etruscan mariners, often purposely involved in fable, always, it is probable, exaggerated, imagined that the main stream of European population had flowed generally across the Aegean sea from the coasts of Asia Minor, with occasional interruptions or admixtures from Phoenicia and Aegypt. They were unaware of the fact which modern ethnology has brought to light, that the course of immigration was rather from central Asia to central Europe, by a route lying north of the Euxine sea and intersecting the great rivers which flow eastward and southward from the Alps and Russia. They traced the origin of music and song to Thrace, but they did not know, or would not admit, that the population of Hellas itself was derived quite as much from Thrace as from the Lesser Asia. Three main streams of population intermingling with each other in certain localities, yet sufficiently distinct for definition, may be discerned: (1). The Celts and Cimmerians, who entered our continent from the steppes of the Caucasus, and, passing round the head of the Black sea, spread themselves over the whole of Europe, and permanently settled in the west. (2). The Sclavonians, or, as the ancients denominated them, Scythians and Sarmatians, who occupied the east of Europe, where they are found beside the earliest Celtic colonies. The river Oder, however, seems to have been the western limit of the Sclavonians. Thence, without establishing themselves in the Alps, they turned in a southerly direction, since they contributed largely to the population of both Greece and Italy. (3). The Teutons—who arrived at different epochs: (1). as Low Germans, from the regions between the Oxus and Jaxartes, and established themselves in the NW. of Europe, and (2) as High Germans, who, displacing the Celts and Sclavonians, occupied the middle-highlands of Germany, and in the historic period are found east of the Rhine and north of the Danube. The whole plateau of central Europe, however, was perpetually undergoing a change in its population from the flux and reflux of these principal elements; and when towards the close of the 1st century B.C. the Roman legions passed the Rhine and entered the Hercynian forest, they found both Celts and High and Low Germans arrayed against them from the Helvetian *pagi* to the frontiers of Bohemia. The Iberian peninsula alone may serve for an example of the admixture of races in the European continent. In it we can trace no less than six waves of immigration. (1). The Celtic, pushed to its western barrier by the encroachments of the Sclavonians and Teutons; (2). the Iberian, whose language, as it appears in the modern Basque dialect, indicates a Celto-Finnish origin, and consequently a derivation of the Iberian people itself from the remote eastern steppes of Asia: the Celtiberi, as their name imports, were a hybrid race formed by the fusion of the two; (3). the Liby-Phoenicians of the south, who were introduced by the Carthaginians; and (4) an Italian element brought in by the Romans. A fifth variety was occasioned by the irruption of the northern tribes—Vandals, Visigoths, and Suevi—in the 5th century A.D., by which movement a High and Low German element was added to the original population. Lastly, in the 8th century A.D., with the Arabian conquest came an infusion of Semitic blood. The Greek colonies—Saguntum and Emporium,—founded by Zacynthians and Massilians respectively, were scarcely so permanent or so important as to affect materially the population of Spain.

V. *Languages of Europe.* — Of the dialects spoken in ancient Europe we know even less than of its ethnography. The educated Romans used two languages familiarly, their own and the Greek; the Greeks, one only: and both alike, in general, contemned all other idioms as unworthy the attention of civilised men. Their communication with foreigners was carried on through the medium of interpreters, and a few instances only are recorded of a Greek (Corn. Nep. *Themist.* c. 10) or a Roman (Ovid, *Ep. ex Pont.* iv., *Ep.* 13) undergoing the drudgery of learning a foreign tongue. On the other hand, the dialects of the other races of Europe, being neither refined nor preserved by a native literature, gradually vanished. The Celtic gave place in the Gaulish and Spanish provinces of Rome to the general employment of Latin: and even the Germans beyond the Rhine acquired the speech of their enemies

(Tac. *Ann.* i. 58, ii. 10). The confusion, or indeed the obliteration, of tongues was further accelerated by the collection within the Roman empire of soldiers or slaves from nearly every region of the world. It was easier for these aliens to forego their own vernacular dialects and to acquire the common language of their masters, than to communicate with each other in a *lingua franca* compounded of the most opposite varieties of speech. How easily a common language might supersede a native idiom appears from two remarkable cases in ancient history. (1). The Jews, after the foundation of Alexandria, generally adopted the Greek tongue in all their "cities of dispersion" west of Palestine. Their sacred books were translated into Hellenic, and that idiom was employed even in the service of their synagogues. (2). The Etruscans, for at least six centuries after the foundation of Rome, regulated the more solemn ceremonies and expounded the more startling prodigies of the Roman people. Yet the Romans themselves rarely acquired the language of their sacerdotal instructors, and Latin was the organ of communication for all the tribes between the Tiber and the Magra. This prevailing influence of two languages in the more civilised portions of ancient Europe, combined with the circumstance that nearly all our knowledge of its various races is derived from Roman or Greek writers, who, when they touched upon philology at all, either perverted it or made themselves ridiculous, throws an almost impenetrable cloud over the subject of the original dialects of Europe. A few broad lines and a few probable analogies are all that modern linguistic science is able to contribute towards elucidating a subject which, if clearly understood, would explain also, in a great degree, the movements, the interweaving, and the final position of the European races. The Sclavonian race, at one time, extended from the Adriatic to the Arctic sea, comprising the Sarmatae, Roxolani, from whom the Russians derive their name, the Illyrians, Pannonians, and Veneti, &c. Westward of Modern Saxony their progress was arrested by the Celts: in prehistoric times, indeed, the Celts may be described generally as the occupiers of the western half of the continent north of the Alps and Pyrenees, and the Sclavonians of the eastern. Both were respectively either interpenetrated or pushed onward by the third great stream of immigrants from Asia — the Teutonic family of nations. The Sclavonians indeed maintained themselves east of the Vistula, although even here they were encroached upon by Low German and even Mongol races, which the ancients described under the general appellation of Scythians. The Celts were more effectually displaced by the Teutons, and in historic ages were found in large masses in Gaul and the British islands alone. Yet even in these, their ultimate retreats, they yielded to the stronger and better organised races which followed their steps — to the Franks, a High German people, in Gaul; and to the Saxons, a Low German people, in Britain. There was indeed a perpetual shifting, interweaving, advance, and even, in some cases, retrocession of the central population of the continent. Among the Germans, as described by Tacitus, are to be found Celtic tribes: in Celtic Britain long strips of territory, as well in the interior as on the coast, were occupied by Teutons: the Sclavonians regained Bohemia from the High Germans; and the Gauls, who in the 4th century B. C. sacked Rome and Delphi, in the same generation established themselves between the Magra, the Rubicon, and the Alps, from which region they expelled Germans and Sclavonians. The basis of the original population of Greece and Italy was Pelasgian; at least, Pelasgians were the first national element which history acknowledges, or to which concurrent traditions point. So much of the population of Hellas as did not enter Europe from the sea-bord was derived from Thrace, and Thrace was peopled by Sclavonians. The most archaic forms of the Hellenic and Latin languages indicate such an original, and the traditions of the Greeks and the Latins equally confirm this supposition; for the former point to the Hyperborean regions — i. e. to the north of the range of Ossa and Olympus—as the cradle of their race (Diod. ii. 47. p. 198, Dindorf.; Clem. Alex. *Strom.* 1. p. 225), and the latter derive the royal line of Alba and Rome from Mysia and the Troad. Arcadians, too,—i. e. Pelasgians,—were settled on Mount Palatine before the arrival of colonists from Asia: and the subject population of Etruria bears numerous traces of a Pelasgian origin. The races of Western Asia and Eastern Europe were long identical, and we have already seen that no actual boundary for many ages was known between these divisions of the Great Continent. As the earliest stream from central Asia, the Sclavonian, occupied both sides of the Aegean sea, and spread over Pontus and Colchis, and round the head of the Euxine as far as Mount Haemus, we are probably justified in recognising a Sclavonian population throughout the region that intervened between the Taurian chain and the western coast of Italy, and in ascribing the Pelasgian inhabitants of the Hellenic and Ausonian peninsulas to the Sclavonian stem. In both instances, indeed, it was early and materially affected by Celtic and Teutonic admixtures. Finally, the Hellenes, a High German race, predominated in Greece; and Low German tribes, to which the Sabellian stock belonged, in Italy. The southern coasts of the Mediterranean were more nearly affected by Semitic immigrations from Phoenicia and Carthage than the interior of the continent, but not so much as to affect materially the stronger germs of population — whether Sclavonian, Celtic, or Teutonic.

The principal mountains and rivers of Europe are described under their respective heads, or in the general account of the countries to which they belong. We must, however, before closing our sketch of the NW. division of the Great Continent, briefly advert to some features of its geological system.

VI. *Geological Features.* — Since we are treating more especially of Europe as it was known to the ancients, it will be expedient to restrict our survey of its river and mountain-system to the boundaries assigned to the continent by geographers unacquainted with nearly two-thirds of it,—the whole of Scandinavia, and the greater portion of Russia. In fact, the Europe of the ancients, if we require definite accounts of it, is nearly conterminous with the European provinces of Rome. Nor by such exclusion do we omit, as respects Europe generally, any material feature or element of its configuration; for the Scandinavian Alps are separated from the body of the European mountains by the great NE. plains, and the Grampian Highlands, with their English and Welsh branches, are also an insulated group; whereas all the mountains of central and Southern Europe, from Calpe to the Bosporus, and from Aetnà to the northern flank of the Carpathians, constitute in reality but one system, which custom has divided into certain principal masses or

families. The great mountain-zone which forms the base of the three or five southern peninsulas of Europe, and from which its principal northern rivers descend, commences with the promontory of Artabrum (*C. Finisterre*), and is terminated by the Hellespont and Propontis. Of this rocky girdle the highest points are the *Pic du Midi* in the Pyrenees, rising 11,271 feet above the level of the sea; Mont Blanc, 16,800 feet; and the summits of Mt. Haemus or the Great Balkan. All the other groups or chains, whether, like the Carpathians, running up the centre of the continent, or, like the Apennines and the Spanish and Greek mountains, descending to its southern extremities, are to be regarded, whatever their relative dimensions may be, as secondaries only of the principal zone,—its spurs or buttresses. To the southward these protuberances run for the most part in parallel ridges, such as the sierras of Spain, and the elliptical hollows of the Apennines; or, like Mount Haemus, they are split into narrow but profound fissures, into which the light of day scarcely penetrates. In Spain and Italy the mountains in general decline gradually as they approach the Mediterranean, whereas the Grecian ranges project strongly into the sea, and re-appear in the numerous rocky islands which stud the Aegean. The general geological features of this zone are, in the Iberian mountains, granite, crystalline strata, and primary fossiliferous rocks. On each side of the central chain of the Alps calcareous rocks form two great mountain-zones, and rise occasionally to an altitude of ten or twelve thousand feet. Crystalline schists of various kinds generally constitute the pinnacles of the Alpine crest and its offsets. The Apennines and the Sicilian mountains are mostly calcareous rocks. Secondary limestones occupy a great portion of the high land of Eastern Europe. Beginning from the western extremity of this zone, we find that the northern or Gaulish side of the Pyrenees is the more precipitous and abrupt, and its summits so notched and ragged that from the plains below they appear like the teeth of a saw, whence the term *Sierra* (Mons Serratus) has been appropriated to the Iberian mountains, where this conformation especially prevails. On the Spanish side, the Pyrenees descend towards the Ebro in gigantic terraces separated by deep precipitous valleys. The greatest breadth of the Pyrenean range is about 60 miles, and its length 270.

On the northern flank, the most conspicuous offsets of the zone are the volcanic mountains of Auvergne and the Cevennes. These, indeed, are the link between the more elevated masses of Western and Eastern Europe. The projections of the Cevennes extend to the right bank of the Rhone, and the Jura mountains of the Alpine range. The northern provinces of France form a portion of that immense plain, which, without taking into account smaller eminences and undulations, extends from the Seine to the shores of the Baltic and the Black seas, through Belgium, Prussia, Poland, and Russia.
